A weekly talk on current literature topics of special interest. Students present journal articles for discussion.

ME.440.811. Neuroscience Cognition I.
This is the first half of a 4-quarter course on the cellular and molecular basis of neural function and the neural basis of perception, cognition, and behavior. Topics covered in this half include (1) development and structure of the nervous system, (2) cellular neurophysiology, (3) neural signaling and coding, and (4) audition, vocalization, and language. Lectures will be presented by faculty in the Neuroscience, Neurology, Biomedical Engineering, Psychology, and Cognitive Science departments. The course will also include discussion sections based on current literature and several neurotechniques sessions designed to familiarize student with current experimental approaches in cellular, systems and molecular neurosciences. This course is required of all students in the Neuroscience Graduate Program.

ME.440.812. Neuroscience Cognition II.
This is the second half of a 4-quarter course on the cellular and molecular basis of neural function and the neural basis of perception, cognition, and behavior. Topics covered in this half include (1) perception of objects, space, and self, (2) movement and balance, (3) learning and memory, (4) neurological and psychiatric disorders, and (5) global function in the nervous system. Lectures will be presented by faculty in the Neuroscience, Neurology, Biomedical Engineering, Psychology, and Cognitive Science Departments. The course will also have a laboratory component. This course is required of all students in the Neuroscience Graduate Program.

The mammalian brain is an information processing system without parallel. It excels at recognizing objects and substances, reconstructing space, making decisions, and controlling complex behaviors. The neural mechanisms underlying these abilities are studied by a large community of systems and cognitive neuroscientists. This research has generated a rapidly evolving field of high-profile discoveries and lively debates between competing laboratories. Our course aims to convey a clear sense of this field by focusing on current experimental and conceptual controversies regarding organization and function in the primate nervous system. Each week will focus on a different topic presented by two or more recent papers (selected by an instructor) reflecting timely questions or opposing points of view. Students will present the papers informally and directly debate over the relative merits of the conflicting view points.

ME.440.814. Research in Neuroscience (BCMB).
Thesis Research.

ME.440.816. Topics in Cortical Plasticity.
Experience-dependent changes in cortical synapses and circuits are critical for proper development of the nervous system and for memory storage. This course will focus on recent findings on fundamental mechanisms of plasticity from synapses to circuit level through discussions of recent research papers.

ME.440.817. Psychedelics.
In this course we will explore the history and uses of psychoactive compounds, the neurobiological basis of their activity, and their potential for healing. Along the way we will attempt to debunk some of the most common myths about this especially controversial class of drugs. Each session, one student will take the lead in discussing the assigned primary research articles (except for 2-3 documentary film sessions, which will take up the whole period). Beyond didactic learning, this graduate level course is designed to hone students' skills in oral presentations, critical thinking, as well as composition and editing of manuscripts.
In order to become successful scientists, graduate students need to learn much more than just how to design, perform, and interpret experiments. Graduate students need to learn many professional norms and practices central to a successful scientific career. Most importantly, graduate students need to learn about what constitutes scientific misconduct and about proper behavior involving issues of authorship and various conflicts of interest. Students need to learn about rules, regulations, and ethics relating to animal and human experimentation. Further, they need to learn about how to choose a lab, keep proper records, deliver presentations, and seek funding. Finally, they need to learn the complex relationship between scientists and society.

ME.440.820. Circuits and Brain Disorders.
The course is designed to serve as an introduction to neurodegenerative disorders of the nervous system, and is intended to provide a balance of basic neurobiology, clinical presentation, biomarkers, genetics, and therapeutic approaches. One of the goals would be to highlight the distinct circuitry that is most impacted by each disorder. The curriculum includes: (1) one lecture per week and (2) a coordinated journal club once per week.
AS.100 (HISTORY)

AS.100.102. The Medieval World. 3 Credits.
This course will explore selected topics in the political, economic, social, and intellectual history of Western Europe in the period between the fall of the Roman Empire and the thirteenth century. Special emphasis will be given to understanding the ways in which medieval society functioned as a peasant civilization, compelled to reorganize itself after the almost total collapse of the ancient world, and to the interplay between material and cultural forces in the processes of social organization.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.103. Early Modern Europe & the Wider World. 3 Credits.
This course surveys the history of Europe and its interactions with Africa, the Americas, and Asia during the early modern period (c. 1400-1800). Topics include: the Renaissance, the Reformation, International Relations and Warfare, Colonialism, the Enlightenment, and the Age of Revolutions.
Area: Humanities, Social and Behavioral Sciences

AS.100.104. Modern Europe and the Wider World. 3 Credits.
The Modern European World familiarizes students with key moments, ideas, communities, individuals, and movements which have formed European History since the Revolutionary era.
Area: Humanities, Social and Behavioral Sciences

AS.100.109. Making America: Black Freedom Struggles to 1896. 3 Credits.
From slave revolts on the West African coast to national conventions and civil war, people of African descent have defined freedom and struggle in terms of kinship, diasporic connection, and fighting antiblack violence. This course explores the arc of that history and its role in the making of America.
Area: Humanities, Social and Behavioral Sciences

AS.100.110. Making America: Mastery & Freedom, 1609-1789. 3 Credits.
Early America from the arrival of Europeans to the US constitution. Covers transatlantic empires and their rivalries; formation of Anglo-American settler societies based on slavery and patriarchal households; conflict with Native Americans; the revolutionary era and its tensions between republican principles of freedom and independence and persisting, even deepening, gender and racial inequalities.
Area: Humanities, Social and Behavioral Sciences

AS.100.111. Making America: Race, Radicalism, and Reform. 3 Credits.
This course examines race and social movements in America from the Revolution to 1921.
Area: Humanities, Social and Behavioral Sciences

AS.100.112. Modern Latin America. 3 Credits.
From Simón Bolívar to the Mothers of the Plaza de Mayo to the Zapatistas, this course asks what it means to be Latin American through the lenses of state formation, artistic expression, and international relations.
Area: Humanities, Social and Behavioral Sciences

AS.100.113. History of Brazil. 3 Credits.
Area: Humanities

AS.100.114. Introduction to History of Africa (since 1880). 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.123. Introduction to African History: Diversity, Mobility, Innovation. 3 Credits.
An introduction to African history with emphasis on diversity, mobility, and innovation. Considers both early and modern times.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.129. Introduction to Modern Jewish History. 3 Credits.
Jewish history 1750-present in Europe, the Near East, the US, Israel; the challenges of modernity and new forms of Jewish life and conflict from Enlightenment and emancipation, Hasidism, Reform and Orthodox Judaism to capitalism and socialism; empire, nationalism and Zionism; the Holocaust. Extensive attention to US Jewry and State of Israel.
Area: Humanities, Social and Behavioral Sciences

AS.100.130. Freshman Seminar. 3 Credits.
Freshman Seminar course. Topics vary by term.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.135. Freshman Seminar: In the Land of Others: Minorities in the Pre-Modern Mediterranean. 3 Credits.
This course examines the history of ethno-religious minorities in the Mediterranean during the Later Middle Ages and the Early Modern Period.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.140. Freshman Seminar: Displacement: A History of U.S. Cities from Urban Renewal to Gentrification. 3 Credits.
"Displacement" explores historical conflicts over urban planning, clearance, and redevelopment. Students will conduct archival research and contribute to an online exhibit that develops the histories of displaced Baltimore neighborhoods.
Area: Humanities, Social and Behavioral Sciences

AS.100.154. Modern Mexico from the Alamo to El Chapo. 3 Credits.
In this course we will use popular depictions of Mexico’s heroes and villains, tragedies and triumphs to delve into both the nation's history and the importance of thinking historically.
Area: Humanities, Social and Behavioral Sciences

AS.100.163. Modern European History Through Film, 1789 to 1991. 3 Credits.
This course examines the history of Western Europe from the French Revolution through to the end of the Cold War. It examines such themes as revolutions and democratization, the origins of egalitarianism, the spread of secularism, the post-war reshaping and modernization of Western culture and political policies (European and otherwise), Europe’s role in the fall of the Ottoman Empire, and decolonization. Films depicting key periods and events will be used to complement readings.
Area: Humanities

AS.100.170. Chinese Cultural Revolution. 3 Credits.
The Cultural Revolution was Mao Zedong's last attempt to transform Chinese society spiritually and structurally. The events of this period were marked by social upheaval, personal vendettas, violence, massive youth movements, and extreme ideological pressure. This course will explore the Cultural Revolution from a variety of perspectives, focusing on the relationship between events in China from 1966-1976, and their interpretation in China and the West during the Cultural Revolution decade and since. (Previously offered as AS.100.219 and AS.100.236 )
Area: Humanities, Social and Behavioral Sciences
AS.100.180. Themes and Concepts in Jewish History. 3 Credits.
The course will introduce the student to the main themes and debates in Jewish historiography.
Area: Humanities, Social and Behavioral Sciences

AS.100.193. Undergraduate Seminar in History. 3 Credits.
The first semester of the two-semester sequence required for majors, this course introduces students to the theory and practice of history. Following a survey of approaches to the study of the past and an introduction to research methods, students undertake original research and write an extended essay. Intended for history majors and prospective majors.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.194. Undergraduate Seminar in History. 3 Credits.
The second semester of the two-semester sequence required for majors, this course further introduces students to the theory and practice of history. Students write an essay based on original research.
Prerequisite(s): AS.100.193
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.202. Conflict and Co-Existence: The Early Modern Mediterranean. 3 Credits.
This course explores the dynamic and fluid world of the early modern Mediterranean (1453-1650), where Christians, Jews, and Muslims met, fought, traded with, and enslaved each other.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.216. Reformation and Counter Reformation Europe. 3 Credits.
This course explores the series of religious and political conflicts that make up what are known now as the Reformation and Counter-Reformation in Europe.
Area: Humanities, Social and Behavioral Sciences

AS.100.230. Bones, Blood, and Ecstasy: Religious Culture in Western Christendom, 1100-1700. 3 Credits.
Explores religious culture in medieval and early modern Europe, with an emphasis on spiritual beliefs and practices, relics, miracles, pilgrimage, and saint-making. Emphasis on reading and discussing written sources and visual culture.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.232. American Dreams: The Middle Class in U.S. History. 3 Credits.
Why does so much of America consider itself middle class? And how did we get that way? "American Dreams" traces that history from 19th century elites to 20th century suburbia.
Area: Humanities, Social and Behavioral Sciences

AS.100.233. History of Modern Germany. 3 Credits.
There is more to Germany than beer, BMWs, and Bayern Munich. We explore politics, culture, economics and society to understand Germany and its role within Europe from the 18th century to the 'Refugee Crisis' and immigration today.
Area: Humanities, Social and Behavioral Sciences

AS.100.234. The Making of the Muslim Middle East, 600-1100 A.D. 3 Credits.
A survey of the major historical transformations of the region we now call the "Middle East" (from late antiquity through the 11th century) in relation to the formation and development of Islam and various Muslim empires. Cross-listed with Near Eastern Studies and the Program in Islamic Studies.
Area: Humanities, Social and Behavioral Sciences

AS.100.238. Expansion and the Early U.S. Republic. 3 Credits.
This course will introduce students to some major issues and problems in the history of the Early U.S. Republic, c. 1750 to 1815, by focusing on the theme of "expansion."
Area: Humanities, Social and Behavioral Sciences

AS.100.241. American Revolution. 3 Credits.
This course provides an intensive introduction to the causes, character, and consequences of the American Revolution, the colonial rebellion that produced the first republic in the Americas, and set in motion an age of democratic revolutions in the Atlantic world. A remarkable epoch in world history, the revolutionary era was of momentous significance.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.242. Pop History from King Arthur to Game of Thrones. 3 Credits.
This course explores the use of history for cultural & political purposes in the Anglo-American world from 1500-today. Students will examine how real and imaginary histories have functioned as political propaganda, catalysts of national identity, and weapons in culture wars. The course draws on a range of media, including text, YouTube, video games, podcasts, and movies.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.243. China: Neolithic to Song. 3 Credits.
This class offers a broad overview of changes in China from Neolithic times through the Song Dynasty (roughly from 5000 BCE through the 13th century CE) and will include discussion of art, material culture, and literature as well as politics and society. Close readings of primary sources in discussion sections and extensive use of visual material in lectures will help students gain firsthand perspective on the materials covered. Not open to students who have previously taken AS.100.208. Cross listed with East Asian Studies
Area: Humanities, Social and Behavioral Sciences

AS.100.244. The Power and Politics of Clothing in American History. 3 Credits.
This course explores the power of clothing and the politicization of appearances at moments of deep political and social unrest in American history (18th-20th centuries).
Area: Humanities, Social and Behavioral Sciences

AS.100.248. Japan in the World. 3 Credits.
An introduction to Japan's history from 1700 to the present, with emphasis on the influences of an increasing global circulation of ideas, goods, and people in early modern and modern times. Topics include samurai, nation-building, gender, imperialism, World War II, the postwar economy, and contemporary popular culture.
Area: Humanities, Social and Behavioral Sciences
AS.100.249. From Darwin to Babar: Animals and Humans in Historical Perspective. 3 Credits.
This course explores perspectives on the animal/human boundary from the eighteenth century through today. Topics will include biological classification, mosquito-borne diseases, animal rights movements, evolutionary theory, colonialism, Nazism, and conservation.
Area: Humanities, Social and Behavioral Sciences

AS.100.252. Invisible Borders: Exchanges and Migrations in the Modern Mediterranean. 3 Credits.
This course explores the patterns of movement formed and transgressed by empire, trade, sex tourism, cultural exchange, war, and nationalism, starting from the nineteenth century to the present-day refugee crisis.
Area: Humanities, Social and Behavioral Sciences

AS.100.256. Prostitution in a Global Perspective, 1750-2012. 3 Credits.
This course examines topics such as the ‘medical model’ of prostitution regulation, the rise of international anti-prostitution, and the responses of modern nationalists to sex work in a global context.
Area: Humanities, Social and Behavioral Sciences

AS.100.257. From Voice to Parchment: Media and Communication before the Printing Press, 800-1440. 3 Credits.
Epic traditions, call to Crusade, public curses, music of the troubadours: this course examines oral tradition and music—the ‘viral media’ of pre-modern Europe—while tracing the impact of new recording technologies: early musical notation, manuscripts, and book production.
Area: Humanities, Social and Behavioral Sciences

AS.100.258. Theorizing Marriage in the United States: Historical and Present Considerations. 3 Credits.
This course provides a historical and theoretical overview regarding thinking about marriage. Students will think critically about how matrimony has changed over time, and marriage in contemporary culture.
Area: Humanities, Social and Behavioral Sciences

AS.100.260. Boom, Bust, and the Rise of Financial Capitalism in America, 1700-1900. 3 Credits.
This course explores how legal, social, and political contestation shaped the development of American financial capitalism. The course also focuses on how financial crises precipitated change throughout American history.
Area: Humanities, Social and Behavioral Sciences

AS.100.265. The Medieval City. 3 Credits.
This course focuses on the development and growth of medieval cities in western Europe. Students will explore the various functions of cities, uses of urban space, and challenges they faced.
Area: Humanities, Social and Behavioral Sciences

AS.100.266. Jewish and Christian mysticism in the Middle Ages and the Early Modern Period. 3 Credits.
This course will trace the historical development of Jewish and Christian mysticism between the 12th and the 17th centuries.
Area: Humanities, Social and Behavioral Sciences

AS.100.270. Europe since 1945. 3 Credits.
In this class we focus on such topics as the transatlantic alliance, the Cold War divide, the arms race, détente, migration, European integration and the EU from the end of World War II until today. We will discuss academic literature, movies, documentary films, textual and visual primary sources, and more.
Area: Humanities, Social and Behavioral Sciences

AS.100.272. Online: Prostitution in a Global Perspective, 1750 to Present. 3 Credits.
This course examines topics such as the ‘medical model’ of prostitution regulation, the rise of international anti-prostitution, and the responses of modern nationalists to sex work in a global context. *This course will view films complementary to the subject but it is not considered a Film Studies course. Therefore, montages and mise-en-scène will not be discussed.
Area: Humanities

AS.100.273. A Comparative History of Jewish and Christian Mysticism. 3 Credits.
This course will trace the historical development of Jewish and Christian mysticism between the 11th and the 19th centuries.
Area: Humanities, Social and Behavioral Sciences

AS.100.282. Race & Power in Modern South Africa. 3 Credits.
Overview of modern South African history, with a focus on the origins of the racial state and the development of black liberation movements.
Area: Humanities, Social and Behavioral Sciences

AS.100.283. Making and Unmaking Queer Histories, 1800-Present. 3 Credits.
Making and unmaking queer histories introduces students to some of the major themes and historical developments which shape contemporary understandings of past queer lives and communities in the United States and Western Europe since the nineteenth century.
Area: Humanities, Social and Behavioral Sciences

AS.100.289. Medicine in an Age of Empires, 1500-1800. 3 Credits.
How did medicine emerge as a distinctive body of knowledge and a profession in the early modern period? The answers lie in the histories of disease, empire, and global commerce.
Area: Humanities, Social and Behavioral Sciences

AS.100.290. Radical Spain: Social Movements from the Spanish Empire to the Catalan Crisis. 3 Credits.
This course examines different radical movements such as anarchism, facism, nationalism and feminism in the context of Spanish history from the nineteenth century to the twenty-first century.
Area: Humanities, Social and Behavioral Sciences

AS.100.293. Undergraduate Seminar in History. 3 Credits.
The first semester of the two-semester sequence required for majors; this course introduces students to the theory and practice of history. Following a survey of approaches to the study of the past and an introduction to research methods, students undertake original research and write an extended essay. Intended for history majors and prospective majors.
Area: Humanities, Social and Behavioral Sciences

AS.100.294. Undergraduate Seminar in History. 3 Credits.
The second semester of the two-semester sequence required for majors; this course further introduces students to the theory and practice of history. Students write an essay based on original research.
Area: Humanities, Social and Behavioral Sciences
AS.100.295. American Intellectual History since the Civil War. 3 Credits.
Readings in American social thought since 1865, ranging across developments in philosophy, literature, law, economics, and political theory.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.301. America after the Civil Rights Movement. 3 Credits.
This course explores the history of late twentieth-century America by examining the social, economic, and political legacies of 1960s civil rights protest for the 1970s, 1980s, and 1990s.
Area: Humanities
Writing Intensive

AS.100.303. Old Regime and Revolutionary France. 3 Credits.
Examines the history of France from the reign of Louis XIV to the French Revolution, focusing on early modern society, popular culture, absolutism, the Enlightenment, overseas empire, and the French and Haitian Revolutions.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.304. Myth and History in Medieval Europe. 3 Credits.
Can a myth be history? This class examines how medieval historians used myths to shape, debate, and even forge their past, and how they redefined history writing in the process.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.305. Peter to Putin: Survey. 3 Credits.
Seminar on modern Russia. No midterm and no final. 6 short weekly journals, two short papers, and two small quizzes.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.306. America and the Great War, 1898-1920. 3 Credits.
This small, discussion-oriented course covers the period from the Spanish-American War through the end of WWI and the Red Scare that more or less ended in 1920.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.308. Introduction to the History of Jewish Mysticism. 3 Credits.
The course will familiarize the student with the history of the main phenomena of Jewish mysticism from the ancient times to the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.310. The French Revolution. 3 Credits.
Political, social, and cultural history of one of the great turning-points in European history. Previously offered as AS.100.204.
Area: Humanities, Social and Behavioral Sciences

AS.100.312. The Transatlantic Slave Trade, c. 1450-1850. 3 Credits.
The course explores the origins, organization and abolition of the transatlantic slave trade c. 1450-1850. It delves into the historiographical debates over the impact of the trade on the development of Africa, Europe and the Americas in the early modern period.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.316. American Foreign Policy in the Age of Human Rights. 3 Credits.
American Foreign Policy in the Age of Human Rights examines competing narratives about the origins of modern international human rights, and explores how those narratives historically informed American foreign policy from the American Revolution up to the present, with an emphasis on the twentieth century.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.318. The Rise and the Fall of the Modern City: An Environmental History Perspective. 3 Credits.
This course explores how environmental history analyzes the transformations of cities in the West from 1750 to the early 2000s. An emphasis will be placed on historiographical debates and concepts, but also on agency and relations of power. The course also analyze how the environment is a construct, a production of discourses, representations, and debates.
Area: Humanities, Social and Behavioral Sciences

AS.100.320. Writing U.S. Empire. 3 Credits.
Attends to the composition and interpretive problems raised by studying the history of American imperialism, 1880s-1930s.
Writing Intensive

AS.100.322. The Domestic Slave Trade in Antebellum America. 3 Credits.
An introduction to the domestic slave trade of the 19th century United States. Topics will include the scale of the trade, its impact on enslaved families and redistributive justice/reparations.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.323. America in the 1960s. 3 Credits.
The years between 1959, when the course begins, and 1971, when it ends, were tumultuous and divisive. This course explores the political, racial, and cultural struggles of a half century ago.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.325. Images of War in the 19th and 20th Centuries. 3 Credits.
This course examines the changing face of war in photographs, propaganda posters, comics, and film from the American Civil War to the 'war on terror.'
Area: Humanities, Social and Behavioral Sciences

AS.100.326. From Blood Feud to Black Death: European Society in the High Middle Ages, 1000-1400. 3 Credits.
Explores the development of society and institutions in the medieval west including kingship and law, religion and difference, gender and ideology. Looks closely at social responses to change and adversity.
Area: Humanities, Social and Behavioral Sciences

AS.100.327. Gender and Sexuality in Reformation and Counter-Reformation Europe. 3 Credits.
This course will discuss the centrality of gender, sexuality, and gendered rhetoric to the genesis and development of the Protestant Reformation and Catholic Counter-Reformation in Europe.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.100.328. Caged America: Policing, Confinement, and Criminality in the 'Land of the Free'. 3 Credits.
This course focuses on the evolution of law enforcement practices, the history of federal and state prison systems, and the ways in which Americans have understood and reacted to crime.
Area: Humanities, Social and Behavioral Sciences

AS.100.329. Russian Imagination in Three Revolutions. 3 Credits.
Russian Literature and the arts in Revolutions of 1905, 1917, and Stalin era to 1941. Req: 6 journals of 350 words, 2 papers 1250, 2 quizzes. No midterm or final.
Area: Humanities, Social and Behavioral Sciences

AS.100.330. National Identity in 20th Century China & Japan. 3 Credits.
Using primary sources, including literature and film, we will explore the changing ways in which ideologues, intellectuals, and ordinary citizens defined national identity in 20th century China and Japan.
Area: Humanities, Social and Behavioral Sciences

AS.100.331. Reading through Things: Early Modern Chinese Medicine, Technology, and Art. 3 Credits.
This course introduces the history of late imperial China from the perspective of medicine, technology, and the arts.
Area: Humanities, Social and Behavioral Sciences

AS.100.332. Persecution and Toleration in Early Modern Europe. 3 Credits.
Explores hostilities and fears provoked by religious diversity and deviance from orthodoxy in early modern Europe. Outlines theories, practices, and limits of early modern religious tolerance and intolerance.
Area: Humanities, Social and Behavioral Sciences

AS.100.333. Making Money in the Atlantic World. 3 Credits.
The history of money is a history of power exercised by states, institutions, and individuals. It is also a history of the structural possibilities and constraints faced by people in the past. We will address making, using, and conceptualizing money in the early modern Atlantic World, a time and a place of expanding empires, extractive enterprises, and changing categories of difference like race, gender, and class.
Area: Humanities, Social and Behavioral Sciences

AS.100.334. Billie Holiday and American Culture. 3 Credits.
A course examining introducing students to the life, times and music of Billie Holiday. We will read biographies, autobiographies, novels, and listen to music.
Area: Humanities, Social and Behavioral Sciences

AS.100.335. The American West. 3 Credits.
This course explores the expansion and creation of an American West—and its inhabitants—from the Constitution to the end of the nineteenth century.
Area: Humanities, Social and Behavioral Sciences

AS.100.336. The United Kingdom? A Cultural History of Four Nations, 1707-Present. 3 Credits.
This course delves into the variegated, often divergent national politics, social landscapes, and cultural shifts in England, Scotland, Wales, and Ireland since Britain's Acts of Union in 1707.
Prerequisite(s): AS.100.101 OR AS.100.102 OR AS.100.103[OR AS.100.104
Area: Humanities, Social and Behavioral Sciences

AS.100.338. Displacement: A History of U.S. Cities from Urban Renewal to Gentrification. 3 Credits.
This course explores historical conflicts over urban planning and public health. Working with the Baltimore City Archives, we will piece together histories of Baltimore residents displaced by urban renewal and the social contexts in which they lived. Tours of Baltimore will consider whether recent strategies have addressed the legacies of racism and classism in urban development.
Area: Humanities, Social and Behavioral Sciences

AS.100.341. Historical Performance in the Age of the Troubadours and Trouvères. 3 Credits.
This seminar examines the practices of musical and theatrical performance in the era of the trouvères and troubadours, “the long thirteenth century.” We look at the context in which trouvère song was composed, performed, and transmitted in manuscript form. Students will also sing trouvère music, and while a knowledge of musical notation is not strictly necessary, it is helpful. The culmination of the course will be a concert and recording session. A final paper based on primary sources about an aspect of medieval performance is required.
Area: Humanities, Social and Behavioral Sciences

AS.100.346. Soviet-American Cold War. 3 Credits.
The focus will be on Soviet-American interactions, Cold-War Cultures, and the impact on both societies.
Area: Humanities, Social and Behavioral Sciences

AS.100.347. Early Modern China. 3 Credits.
The history of China from the 16th to the late 19th centuries.
Area: Humanities, Social and Behavioral Sciences

AS.100.348. 20th-Century China. 3 Credits.
A survey of the history of China from the late Qing era to the early People's Republic.
Area: Humanities, Social and Behavioral Sciences

AS.100.349. Entertaining America: Popular Culture from Blackface to Broadcast. 3 Credits.
"Entertaining America" will trace the history of popular culture in the United States, starting in the 1830s, when blackface minstrelsy initiated a new wave of commercial performance, and ending in the 1920s, when records, films, and radio ushered in the era of mass culture.
Area: Humanities, Social and Behavioral Sciences

AS.100.350. Capital before Capitalism: Economic Debates in the British Empire, 1600-1800. 3 Credits.
This course explores the events, ideas, and debates that shaped economic thought in early modern Britain and its empire before the advent of Capitalism.
Area: Humanities, Social and Behavioral Sciences
AS.100.352. Age Of Pasternak. 3 Credits.
This course concerns Russian literature and the arts, including ballet, from the 1910s to the 1950s. Two short papers, journals, two quizzes, and no midterm or final. 
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.353. Youth and Youth Movements during 20th Century: Germany, Britain, and the U.S. 3 Credits.
Through texts, music, and films, this course examines the rise of 'youth' as a social and cultural category in a variety of forms, ranging from spontaneous (such as Rock’n’Roll and Techno) to state-organized (Hitler Youth). 
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.354. Playing in the White: Black Writers, the Literary Colorline and Writing Whiteness. 3 Credits.
This course will turn to known and not-so-known black writers during the early to mid-twentieth century who defied literary expectation and wrote stories that featured or focused on whiteness. We will consider what whiteness offered black writers and the political work that their literary experimentations did for a white American publishing industry. 
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.355. Sex and Society in Early Modern Europe. 3 Credits.
This course will examine how early modern views on the body, gender, and sexuality shaped beliefs about the abilities and rights of women and men. 
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.356. W.E.B. Du Bois and the Problem of the Color-Line. 3 Credits.
This seminar will introduce students to the ideas and legacy of the renowned American scholar, journalist, and activist, W.E.B. Du Bois (1868-1963), asking students to locate Du Bois in his historical context and in our own. Through readings and discussions of his key works in various forms, we will assess Du Bois's impact on major debates in American politics, African-American affairs, and academic disciplines like sociology and history. We will track changes in Du Bois's thinking over time, including in his views of racism, class, gender, liberalism, radicalism, imperialism, and war. Finally, we will consider the ways in which Du Bois's work continues to shape our understanding of these issues and debates in contemporary American society. 
Area: Humanities

AS.100.357. Panic and Liberation: The Politics of Sex in 20th Century Europe. 3 Credits.
This course examines the 20th century history of sexual attitudes, desires, behaviors, identities, communities, and movements in Western Europe (most notably, Germany, France, and the United Kingdom). 
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.358. Black Code Studies: Black History and Digital Media. 3 Credits.
This course explores doing histories of people of African descent in an age of digital and social media. The focus will be on African-descended communities in the United States, but content will range across time and space. Examples include: West African digital art communities; the use of slave trade databases to write Caribbean history; and the use of social media in social justice organizing from Paris to Baltimore. Students will explore questions of blackness, race, ethnicity, sex and sexuality, violence and justice while creating digital content using platforms like Wordpress, Omeka, Twitter, and Tumblr. Students will be evaluated on their acquisition of African American and Afro-Diasporic history; their knowledge of digital and social media platforms; and their ability to creatively and accurately relate the histories of blackness and black people to their representation and discussion online. 
Area: Humanities, Social and Behavioral Sciences

AS.100.359. Gender, Patriarchy, and the English Revolution. 3 Credits.
This course explores the varied experiences of gender and gender roles in seventeenth-century Britain and analyzes how these roles were challenged, changed, and sometimes upended during the English Revolution (1642-1660). 
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.360. The Modern British World: Imperial Encounters, Regimes, and Resistance, from the American Revolution to the present. 3 Credits.
The Modern British World introduces some of the major themes and contestations tied to Britain's rise to global dominance and its ultimate decline as an imperial power. 
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.361. Age of Tolstoy. 3 Credits.
Tolstoy and his era, 1820s to 1910s. Topics include state and politics, empire, the Russian identity, and forms of cultural expression. Students consider 'War and Peace' and other masterworks. 
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.362. Children and Childhood in the Middle Ages. 3 Credits.
Seminar on the history of childhood and ideas of childhood around the medieval Mediterranean; themes include child custody; medieval education and punishment; parent-child private letters; child mortality and the arts of bereavement/consolation. Cross-listed with the Program in Islamic Studies and Near Eastern Studies. 
Area: Humanities, Social and Behavioral Sciences

AS.100.363. The Development of the Sabbatian Movement. 3 Credits.
This course examines the development of Sabbatianism, the most important messianic movement in the history of Judaism. We shall discuss the messianic claims of Sabbatai Tsevi, the spread of religious fervor among the Jews of Middle East, Europe, and North Africa, rabbinic opposition to the movement, and shall compare it to similar phenomena in Islam and Christianity. Special attention will be paid to reading of primary Sabbatian sources in English translation. 
Area: Humanities, Social and Behavioral Sciences

AS.100.364. Sacriligious Jews: Accusations of Ritual Crime in Pre-Modern Europe. 3 Credits.
This course will examine the history of the accusations of the Jews of ritual crime (blood libel, host desecration etc.) in pre-modern Europe. 
Area: Humanities, Social and Behavioral Sciences
AS.100.365. Culture & Society in the High Middle Ages. 3 Credits.
History 100.365 will consist of two lectures a week and one discussion section. Readings focus when possible on primary sources. It will cover the social, economic, political and intellectual development of medieval society, beginning with the rise of feudal society, the development of medieval courtly culture, primarily the creation of epic and romance literature in the various courts of Europe; the creation of universities and the intellectual revival of Europe in the form of scholasticism; the re-emergence of trade and, with it, the rise of a middle class, the political development of royal authority which was tantamount to the creation of the modern national state and finally, the emergence of heresy and new forms of spirituality in the late Middle Ages to combat it, especially with the creation of the Dominican and Franciscan monastic orders.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.368. History of Colombia 1800-present. 3 Credits.
This seminar examines the key moments in the history of Colombia from its independence in 1810 and the construction of a Liberal Republic. The course will concentrate on the crucial political events that have defined Colombia up until the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.369. Themes and Concepts in Jewish History. 3 Credits.
The course will introduce the student to the main themes and debates in Jewish historiography from the 19th century to the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.371. Modernity, Catastrophe, and Power in Jewish History: 1881 to the Present. 3 Credits.
Jewish history, politics, and culture across a century of enormous transformations and transformative encomiums in Europe, the US, and the Middle East. Topics include: impacts on Jewish life of World War I, the Russian Revolution, and the post-imperial reordering of the Eastern Europe and the Middle East; Zionism and other modes of Jewish contestatory politics; the consolidation of American Jewry; Nazism and the Holocaust in Europe; formation and development of the State of Israel; the global reordering of Jewish life amid cross-currents of the Cold War, conflict in the Middle East, and success in the US. Substantial attention to recent and contemporary history including the dramatic changes in Israeli society and politics over the past forty years and the ongoing Israeli-Palestinian conflict.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.373. Crime, Punishment, Felony and Freedom: Law and Society in Pre-Modern England. 3 Credits.
Using legal texts as a window into English society, we will address the changing nature of royal power, trial by jury, treason, felony, and the freedoms enshrined in the Magna Carta.
Area: Humanities, Social and Behavioral Sciences

AS.100.374. Conquest, Conversion, and Language Change in the Middle Ages. 3 Credits.
Examines case-studies of imperial conquests (Islamic, Mongol, reconquista, early colonialism) and attendant changes in religion (Christianization; Islamization) and in language (Arabization; transition from Latin to European vernaculars) across medieval Eurasia.
Area: Humanities, Social and Behavioral Sciences

AS.100.375. Histories of Women and the Vote. 3 Credits.
The year 2020 will mark 100 years since the 19th Amendment guaranteed American women the right to vote. Or did it? This course will examine the long history of women’s voting rights in the United States, including the story that extends from a convention at Seneca Falls, NY to a constitutional amendment. It will also examine alternative stories, especially those of women of color whose campaigns for the vote did not end in 1920— and continue until today.
Area: Humanities, Social and Behavioral Sciences

AS.100.376. The Haitian Revolution in Global Perspective. 3 Credits.
An advanced undergraduate seminar tracing the history of the Haitian Revolution from its origins in the early modern Atlantic world to its global impact and continuing legacies in the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.377. The Age of Reason on the Silver Screen: Cinematic Representations of the Enlightenment. 3 Credits.
This course will discuss the problem of historical representation on the basis of an analysis of movies depicting the Age of the Enlightenment.
Area: Humanities, Social and Behavioral Sciences

AS.100.378. Race and Capitalism in the City. 3 Credits.
This course examines the intersections of race and capital in U.S. cities since 1800. In addition to classroom lectures and exercises involving various kinds of digital media, students will participate in walking tours exploring the particular conjunctures of race and economic development in Baltimore as manifested through the histories of slavery, segregation, and post-1960s urban growth. Students will also gain practice communicating their ideas through blog posts, policy briefings, and other modes of reporting.
Area: Humanities

AS.100.382. Early Modern African Atlantic. 3 Credits.
This course examines the history of West and Central Africa and its diasporic people and cultures during the early modern period (c. 1400-1750) in disparate parts of the Atlantic world, including Europe, Latin America, the Caribbean, and Anglo-America. Themes include: West and Central African political and religious cultures; trans-Atlantic slavery; African Christianity; and the question of cultural survivals.
Area: Humanities, Social and Behavioral Sciences

AS.100.384. Intoxicated: Commodities & Globalization in the Early Modern World. 3 Credits.
Each week we examine a commodity that defined a new era of global connectivity in the centuries after 1492, including money, medicines, slaves, and fashion.
Area: Humanities, Social and Behavioral Sciences

AS.100.386. The Cold War as Sports History. 3 Credits.
Sport is key to understanding the Cold War. We will investigate how the Cold War has shaped sports, the Olympic movement, the role of athletes and international competitions and how sports relate to race, gender, and class. We will discuss the ways in which sports confirm and consolidate but also challenge and change social structures and opportunities of self-fulfillment and social advancement.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.387. Everyday Life in the Medieval Middle East. 3 Credits.
Explores the daily lives of non-elites in the medieval Middle East—food; housing; clothes; marriage and divorce; urban festivals—through primary documents (e.g. letters, court records) and artifacts (e.g. clothing). Prerequisite for enrollment: Students must have taken one history course.
Area: Humanities, Social and Behavioral Sciences
AS.100.389. History of Law and Social Justice. 3 Credits.
Cause lawyering aims to change the status quo. This course examines histories of this approach to social justice, from battles against the slave trade to contemporary campaigns for marriage equality.
Area: Humanities, Social and Behavioral Sciences

AS.100.390. The Medieval Crusades: Cultural Convergence and Religious Conflict, 1000-1400. 3 Credits.
This course explores the origins of the idea of crusading, examines the experiences of those who traveled east, and analyzes the cultures of contact that developed ca. 1095 and 1291.
Area: Humanities, Social and Behavioral Sciences

AS.100.391. Impeachments and Beyond: Law, Justice, and Politics in Latin America. 3 Credits.
Students taking this course will explore the intersections of the legal and political histories in Latin America, from indigenous legalities to current constitutional thought, corruption scandals, and lawfare.
Prerequisite(s): Students cannot enroll in this course if they have taken/ passed AS.100.237.
Area: Humanities, Social and Behavioral Sciences

AS.100.392. The Art of Lying: Lie, Dissimulation, and the 'Fake News' in Pre-modern Europe. 3 Credits.
The course will examine the early modern attitudes to lie and dissimulation.
Area: Humanities, Social and Behavioral Sciences

AS.100.393. Love, Death, and the Afterlife in the Medieval West. 3 Credits.
Attitudes towards love, death or the afterlife. These readings are analyzed in tandem with major historical developments, including the rise of Christianity, the emergence of feudal society and chivalric culture, the crusading movement, and the social breakdown of the fourteenth century.
Area: Humanities, Social and Behavioral Sciences

AS.100.394. Brazilian Paradoxes: Slavery, Race, and Inequality in Brazil (from a Portuguese Colony to the World's 8th Largest Economy). 3 Credits.
Place of contrasts, Brazil has a multi-ethnic cultural heritage challenged by social and racial inequalities. Its political life remains chaotic. We will examine these problems through Brazilian history and culture.
Area: Humanities, Social and Behavioral Sciences

AS.100.395. History of Global Development. 3 Credits.
This course explores development as an ideology and a practice. From colonialism to the Cold War to contemporary NGOs, we will interrogate the history of our attempts to improve the world.
Area: Humanities, Social and Behavioral Sciences

AS.100.396. Images of Postwar Japan. 3 Credits.
This seminar explores Japan's changing place in the world in the decades following World War II, with an emphasis on analyzing visual media such as photographs, films, advertisements, and comic books. Topics include relations with the U.S. and other countries in East Asia, particularly the two Koreas; the atomic bombings of Hiroshima and Nagasaki; and the global contexts for an expanding Japanese consumerism in the late 20th century.
Area: Humanities, Social and Behavioral Sciences

AS.100.397. Decolonization and Citizenship in Africa, 1945-2015. 3 Credits.
Critically explores issues of decolonization and citizenship in Africa from WWII to the present. Emphasis on political inclusion and exclusion, and violence, fostered by nationalist movements and postcolonial African governments.
Area: Humanities

AS.100.403. Law & Custom in Colonial Africa. 3 Credits.
Examines how colonial rule transformed African legal systems, while Africans used European law for political resistance and personal gain. Research project based on colonial South African court records.
Area: Humanities, Social and Behavioral Sciences

AS.100.404. John Locke. 3 Credits.
Seminar style course in which John Locke's major works will be read intensively, together with some of his contemporaries' works, and select scholarly interpretations.
Area: Humanities, Social and Behavioral Sciences

AS.100.408. Theorizing the Age of Enormity: Social Theory and the History of the 20th Century. 3 Credits.
We will read and analyze key works of social and critical theory produced in relation to 20th and 21st century problems of state and society, nationalism, empire, totalitarianism, genocide, capitalism, political order, gender, race, sexuality, secularism, religion, environmental catastrophe. Possible readings include Weber, Du Bois, Adorno, Arendt, Foucault, Balibar, Beckamong others.
Area: Humanities, Social and Behavioral Sciences

AS.100.413. London 1580-1830: The History of Britain's capital city. 3 Credits.
Seminar-style class analyzing the social, cultural, gender, religious, economic, and political history of London from Shakespeare's time through revolutions, plague, fire, and commercial, colonial, and industrial expansion.
Area: Humanities, Social and Behavioral Sciences

AS.100.414. Love, Death, and the Afterlife in the Medieval West. 3 Credits.
Romantic love, it is often claimed, is an invention of the High Middle Ages. The vocabulary of sexual desire that is still current in the twenty-first century was authored in the twelfth and thirteenth, by troubadours, court poets, writers like Dante; even by crusaders returning from the eastern Mediterranean. How did this devout society come to elevate the experience of sensual love? This course draws on primary sources such as medieval songs, folktales, the "epic rap battles" of the thirteenth century, along with the writings of Boccaccio, Saint Augustine and others, to understand the unexpected connections between love, death, and the afterlife from late antiquity to the fourteenth century. Each week, we will use a literary or artistic work as an interpretive window into cultural attitudes towards love, death or the afterlife. These readings are analyzed in tandem with major historical developments, including the rise of Christianity, the emergence of feudal society and chivalric culture, the crusading movement, and the social breakdown of the fourteenth century.
Area: Humanities, Social and Behavioral Sciences

AS.100.415. The Holocaust in Jewish History and in Global Culture. 3 Credits.
Key works on the history of Nazi Germany's murder of European Jewry during the Second World War; Jewish responses; the recasting of Jewish and global thought in relation to this signal event; genocide and 'ethnic cleansing' since the Holocaust.
Area: Humanities, Social and Behavioral Sciences
AS.100.416. History through Things: Objects, Circulation, and Encounters in the Medieval World. 3 Credits.
Objects from the past offer a powerful window into a set of experiences not recorded in texts. We will follow objects and things as they appear in lists, letters, and descriptions, as they travel surprising routes, and bring to life the medieval world before 1400.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.417. Capitalism, Socialism, and Democracy. 3 Credits.
This course examines the ideas of Joseph A. Schumpeter, the father of entrepreneurial studies. Each student will develop a perspective on the history of capitalism and socialism.
Area: Humanities, Social and Behavioral Sciences

AS.100.418. Comparative Slavery: Haiti and Brazil. 3 Credits.
Haiti is born after a powerful slave insurrection (1804). Brazil was the last country to abolish slavery (1888). Why did these slave societies, which shared many common characteristics, have such different histories?
Area: Humanities, Social and Behavioral Sciences

AS.100.421. Sex, Law and Islam. 3 Credits.
ISIS, "virgins" in paradise, the sexual slavery of Yazidi women…. This course will use anthropological and historical studies to examine the long history of how rules and understandings about sex, sexuality, and gender have mattered in how people think about Islam.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.422. Society & Social Change in 18th Century China. 3 Credits.
What did Chinese local society look like under the Qing Empire, and how did it change over the early modern era?
Area: Humanities, Social and Behavioral Sciences

AS.100.423. Multiethnic Japan. 3 Credits.
An advanced undergraduate seminar on the intertwined histories of race, ethnicity, and empire in Japan and its former colonies from the early twentieth century to the present.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.424. Women & Modern Chinese History. 3 Credits.
This course examines the experience of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women's experiences for their own political and social agendas.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.426. Popular Culture in Early Modern Europe. 3 Credits.
Witchcraft, magic, carnivals, riots, folk tales, gender roles, fertility cults and violence especially in Britain, Germany, France, and Italy.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.430. Gender and Sexuality in African History. 3 Credits.
An upper-level history reading seminar with a focus on histories of gender and sexuality in colonial and postcolonial Africa.
Area: Humanities, Social and Behavioral Sciences

AS.100.433. Free Speech and Censorship in the United States. 3 Credits.
This undergraduate research seminar will examine censorship laws, practices, and debates from the eighteenth century to the present. In addition to discussing common readings, each student will choose a censorship case to research and present to the class.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.438. The City Victorious: Medieval Cairo. 3 Credits.
What was medieval Cairo like? Students explore urban life in this imperial capital (969-1517), including food and market habits; relations between Jews, Christians, and Muslims; patronage; plague, drought, and famine. Pre-requisite for enrollment: Students must have taken two history courses.
Area: Humanities, Social and Behavioral Sciences

AS.100.441. Migration and the Americas. 3 Credits.
From the Spanish Conquest to contemporary debates in the US, this course looks at the great diversity of migrations that have shaped life in the Americas.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.442. The Intellectual History of Capitalism, 1900 to present. 3 Credits.
This course examines shifting understandings of the philosophical foundations, political implications, and social effects of the market economy since the early twentieth century.
Area: Humanities, Social and Behavioral Sciences

AS.100.444. Migrants and Refugees in Africa. 3 Credits.
A history of forced and voluntary migration and displacement in Africa, its causes and consequences, with a focus on refugees and labor migrants since 1960.
Area: Humanities, Social and Behavioral Sciences

AS.100.456. Getting Medieval? Public Violence in the Middle Ages. 3 Credits.
Traditional studies and popular culture often consider violence as a hallmark of medieval life and hence, present it as a fundamental difference between a ‘brutal and violent’ Middle Ages and a ‘civilized and humane’ (Western) modernity. To evaluate these claims and images, we will examine different forms of violence in medieval societies—European and Middle Eastern—especially (i) martydom, (ii) communal violence, and (iii) public punishment. After exploring the specific cultural meanings of these practices, we will re-examine those modern polemics that invoke ‘the medieval’ (often vis-à-vis non-Western traditions and societies).
Area: Humanities, Social and Behavioral Sciences

AS.100.478. Japan from its Peripheries. 3 Credits.
An advanced undergraduate seminar on the history of modern Japan from the perspective of regions and people often considered as belonging to its geographical, cultural, social, and political peripheries.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.482. Historiography of Modern China. 3 Credits.
Reading and discussion of major approaches to Chinese history by Western, Chinese, and Japanese scholars and intellectuals, and of the cultural attitudes and policies they foster.
Area: Humanities, Social and Behavioral Sciences
AS.100.486. Jim Crow in America. 3 Credits.
This course explores the history, politics, and culture of legalized racial segregation in the United States between the mid-nineteenth and twentieth centuries—a regime commonly known as “Jim Crow.”
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.488. The Caribbean World, 1450-1850. 3 Credits.
The Caribbean was the key focal point of overseas European expansion in the early modern world. This course traces developments in the region from the Tainos to Toussaint Louverture.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.490. Writing Power, or Dueling in Print with Light Sabers: An RIC Seminar on Scholarly Composition. 3 Credits.
A first-of-its-kind seminar hosted by the Program in Racism, Immigration, and Citizenship, this course explores the practice of composition for professional writers. It considers the “light” and “dark” sides of clear, direct scholarly writing and intentional, academic obfuscation, respectively. Attendees will also learn strategies and potential hazards that accompany the written description of power in the Humanities and Social Sciences.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.494. Senior Honors Seminar. 1 Credit.
A two-semester coordinating seminar for history majors writing senior honors theses. Admission is granted by instructor only after the student has selected a faculty thesis advisor. AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis.
Prerequisite(s): AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.495. Senior Honors Seminar. 1 Credit.
The Senior Honors Seminar is a coordinating seminar for senior history majors who are writing senior honors theses and wish to graduate with departmental honors. To be taken concurrently with AS.100.508, Senior Thesis.
Corequisite(s): AS.100.508
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.497. The Year 1968: Rebels, Revolutions & the Right-Wing Backlash. 3 Credits.
The sixties were a decade of unrest, failed revolutions, and fundamental change across Europe and the US. We will look at how these years changed the world through the lens of national case studies and community engagement.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.498. History of the Family & Gender in the United States. 3 Credits.
Topics include: history of emotions; politics of sexuality and marriage; impact of race, ethnicity, and class on family life; women and gender inequality. Primarily colonial era through the early twentieth century, with some attention to contemporary politics of family, gender, and sexuality.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.499. Film and Propaganda in Nazi Germany. 3 Credits.
By examining a range of cinematic works—from explicitly ideological pseudo-documentaries to entertainment films—this course will explore the transmission of propaganda into the everyday culture of Nazi Germany.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.501. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.502. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.507. Senior Thesis. 3 Credits.
Two semesters. Senior thesis writers will undertake research in primary materials that will explore a significant historical issue or problem. The DUS will confirm admission as soon as the student has selected a faculty thesis advisor; the outside deadline for confirmation is May 1. AS.100.507 is to be taken concurrently with AS.100.494 Senior Honors Seminar.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.508. Senior Thesis. 3 Credits.
This seminar is required for senior history majors who are writing senior honors theses and wish to graduate with departmental honors.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.535. Independent Study. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.536. Independent Study. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.594. Internship - Summer. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.599. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.602. The French Revolution.
Introduces graduate students to the rich historiography of the French Revolution. Topics include: revolutionary origins, political culture and radicalization, citizenship, violence, family & gender, the search for stability after the Terror, global revolution, Napoleon's Brumaire coup.
Area: Humanities, Social and Behavioral Sciences
Area: Humanities, Social and Behavioral Sciences

AS.100.604. Readings in the Early U.S. Republic/Nineteenth Century.
Readings in the Early U.S. Republic/Nineteenth Century

AS.100.605. Modern Britain & the British Empire.
Modern Britain and the British World is a graduate seminar which familiarizes students with major themes and historiographic debates in Modern British and Modern British Imperial History.
Area: Humanities, Social and Behavioral Sciences

AS.100.606. South African History and Historiography.
Reading seminar in the history and historiography of South Africa from the late precolonial period through the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.607. Consumer Revolution in Global Perspective.
First semester of year-long seminar examining transformations in European consumption from 1650 to 1800. Topics include cultural theory; fashion, gender, and social identity; capitalism, retail, and credit; Enlightenment and the public sphere; political economy; overseas empire; globalization; and the Atlantic revolutions.
Area: Humanities, Social and Behavioral Sciences

AS.100.608. The Consumer Revolution in Global Perspective.
Second semester of year-long seminar examining transformations in European consumption from 1650 to 1800. Topics include capitalism and consumption; political economy; fashion, gender, and identity; Enlightenment and the public sphere; globalization; empire and colonization; and the Atlantic revolutions.
Area: Humanities, Social and Behavioral Sciences

AS.100.609. ‘Baroque’ as a Historical Category.
This seminar will discuss the use of the concept of the ‘Baroque’, as developed in the history of art, architecture, and music, as a category of historical periodization.
Area: Humanities, Social and Behavioral Sciences

AS.100.611. Kabbalah and the Enlightenment: Reading 'The Manuscript' Found in Saragossa.
The course will discuss the European Enlightenment’s attitude to the Jewish esoteric lore. As a lens to discuss this topic, we shall use Jan Potocki’s novel "The Manuscript Found in Saragossa".
Area: Humanities, Social and Behavioral Sciences

A reading seminar on the interconnected histories and historiographies of Japan and Korea in the nineteenth and twentieth centuries.
Area: Humanities, Social and Behavioral Sciences

AS.100.614. Seminar in Modern Chinese History.
A seminar covering major milestones in research on late imperial and modern Chinese history, primarily in English. Open to undergraduates with the permission of the instructor.
Area: Humanities, Social and Behavioral Sciences

AS.100.615. States, Scribes, and Archives: Medieval Arabic Documentary Cultures.
A historical survey of the bureaucratic practices of medieval Islamic states (in comparative perspective); includes close readings of primary official documents, e.g. petitions, edicts, fiscal receipts, and administrative reports.
Area: Humanities, Social and Behavioral Sciences

AS.100.618. Historiography of Law and Empire.
Reading seminar covering recent work on the history of law in the context of empire. Emphasis on colonial rule in Africa, with some attention to Asia and the Americas.
Area: Humanities, Social and Behavioral Sciences

AS.100.619. Early Modern France.
The second part of a two-semester sequence, this seminar examines the history of France and its empire from the seventeenth century to the French Revolution.
Area: Humanities, Social and Behavioral Sciences

AS.100.620. Early Modern France.
The first part of a two-semester sequence, this seminar examines the history of France and its empire from the seventeenth century to the French Revolution.
Area: Humanities, Social and Behavioral Sciences

AS.100.621. Historiography of the Western European 1970s and 1980s.
How have historians grappled with the quite recent past? We will explore histories of the 1970s and 1980s, with a focus on France, Germany, and the UK, as well as transnational and post-decolonization approaches.
Area: Humanities, Social and Behavioral Sciences

AS.100.622. Religion in Modernity: Theories and Histories.
Drawing on key works in classic and contemporary social theory of religion and secularity as well as historical, ethnographic, and sociological monographs, this course investigates some scholars’ answers to the question of why we might want to take ‘religion in modernity’ as an object of study (or not), what kinds of roles and importance religion (or various institutions, impulses, practices, and ideas connected to major faith traditions) has/have arguably enjoyed in an arguably global modernity often imagined as intrinsically secular, whether and how it matters that the category of religion itself may be a modern invention intertwined with specifically Christian-European and European imperial and colonial projects, whether and how we should take “secularism” or “secularity” as our object of study no less than or more than religion, what special kinds of research agendas and assumptions the empirical study of ‘religion’ and its workings and significance in modern political and cultural life might demand, what sorts of scholarly value it might add, and how the answers to those questions change when we look to a global present which is sometimes framed as post-secular. A more theoretically and comparatively oriented first part of the course will give way to focused attention on historical, sociological, and ethnographic monographs, with much attention to European, North American, and Near Eastern histories and societies, but ample room for students interested in East Asian, South Asian, African, and Latin American religious formations to investigate those literatures and bring to bear in class discussion. Readings likely include Weber, Bergson, Asad, Charles Taylor, de Vries, Lambek, Das, Roger Friedland, Wuthnow, Margaret Jacobs, Blackbourn, Mahmood, Susan Harding, William Connolly, Chidester, Bryan Turner.
Area: Humanities, Social and Behavioral Sciences

AS.100.625. The Right and the Far Right in Western Europe, 1870 to the Present.
We will explore both classic and new histories of right-wing and far-right political movements.
Area: Humanities, Social and Behavioral Sciences

AS.100.627. Histories of Development.
Reading seminar on the history of development as both ideology and practice in the nineteenth and twentieth centuries.
Area: Humanities, Social and Behavioral Sciences
AS.100.630. Modern European Imperialism and the History of Sex and Sexuality.
This reading seminar will explore how the history of sexuality has shaped recent historiographies of European empires.

AS.100.631. Ibero-Atlantic History.
A reading seminar on the history and historiography of the Portuguese and Spanish empires c. 1600-1900.
Area: Humanities

AS.100.632. Capetian France: Documents, Devotions and Sovereign Authority.
Through a careful study of texts and objects produced for and by the Capetian rulers during the thirteenth century we will interrogate the creation of the French state, the cultivation of royal ideology, and its practice of sovereign power.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.635. Topics in European Imperial History.
This graduate reading course covers key topics in European Imperial History, c. 1600-1900.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.638. Reading Seminar in Early Modern History.
This is a graduate seminar devoted to reading of sources and scholarship on the Early Modern Period.
Area: Humanities, Social and Behavioral Sciences

AS.100.639. Topics in the History and Sociology of Nationalism.
Advanced topics in the history and sociology of nationalism, with special attention to questions of childhood and education in the age of the nation-state; memory and memory-conflicts; nation and European overseas empire. Open to undergraduates with permission of instructor.
Area: Humanities, Social and Behavioral Sciences

AS.100.640. 20th-Century European Imperial and Transnational Histories.
This course will look at recent historiography on extranational approaches to 20th-century European histories, with a focus on France, the United Kingdom, USSR/Russia, and Germany.
Area: Humanities, Social and Behavioral Sciences

AS.100.641. Global Catholicism in the Early Modern Period.
Explores religious culture in medieval and early modern Europe, with an emphasis on spiritual beliefs and practices, relics, miracles, pilgrimage, and saint-making. Emphasis on reading and discussing written sources and visual culture. Graduate students only.
Area: Humanities, Social and Behavioral Sciences

AS.100.643. Jewish Paths Through Modernity.
Intensive introduction to the key trends and trajectories in modern Jewish history and the major themes in Jewish historiography. Intended to serve both graduate students outside the Jewish history field and graduate students pursuing a field in modern Jewish history.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.644. Approaches to Brazilian History.
A reading seminar on the history and historiography of Brazil (colonial and national periods). Open to undergraduates with the permission of the instructor.
Area: Humanities, Social and Behavioral Sciences

AS.100.645. Race, Law, History.
This seminar examines the relationship of law to the construction of race and inequality in US history, investigating the legal archive through the perspectives of critical race theory and critical legal history. Course can be taken a maximum of two times.
Area: Humanities, Social and Behavioral Sciences
Area: Social and Behavioral Sciences

AS.100.646. Marvels and Wonder in medieval Arabic Culture.
Explores the concept of marvels in different genres of medieval Arabic culture: Qur'anic exegesis; travel literature; 'ethnography'; cosmography and geography; marvels of the natural world (e.g. hermaphrodites); Muslim views of pre-Islamic ('pagan') monuments.
Area: Humanities, Social and Behavioral Sciences

Explores mechanisms of political power and the rise of the state in Europe during the High Middle Ages by analyzing royal ideology, administrative growth, legal change, and cultural production.
Area: Humanities, Social and Behavioral Sciences

AS.100.653. Africa in the Twentieth Century.
Reading seminar emphasizing key developments in the historiography of Colonial and Postcolonial Africa.
Area: Humanities, Social and Behavioral Sciences

AS.100.655. Reading Koselleck.
The course will be devoted to close reading of the works of Reinhardt Koselleck.
Area: Humanities, Social and Behavioral Sciences

AS.100.657. Reading Koselleck.
The course will be devoted to close reading of the works of Reinhardt Koselleck.
Area: Humanities, Social and Behavioral Sciences

AS.100.661. Racial Literacy in the Archives.
This course explores how to use race as a historical category of analysis, and teaches attendees how to locate how historical actors deploy race and racism to make claims, organize labor and identities, and imagine political possibility.
Area: Humanities, Social and Behavioral Sciences

The course explores the rise of heresy and holiness as categories during the Middle Ages. It traces the advent of religious movements, the effects of religious reform, the centralization of ecclesiastical authority, the rise of vernacular spirituality and dissent, and analyzes the historiographical and methodological approaches to the study of medieval religion.
Area: Humanities, Social and Behavioral Sciences

AS.100.666. Topics in Modern Jewish History.
Continuation of AS.100.668 Colloquium in Modern Jewish History.
Area: Humanities, Social and Behavioral Sciences
AS.100.671. Play and Violence in Medieval France.
Since the work of Geertz, Huizinga, Bakhtin and Caillois, among others, the intersection of play and violence has been a focal point for historians, anthropologists, literary scholars, even psychologists. This seminar traces the twin themes of violence and play as instantiated by the fighting classes in the High Middle Ages, beginning with the emergence of the tournament and the crusading movement in the eleventh century. By examining sources in Old French and Latin, we will contextualize music, dances, comedies, and contests that accompanied the violent rituals around which French aristocratic life revolved. Course may not meet weekly.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.672. Medieval Materialities: Objects, Ontologies, Texts and Contexts.
We will use the meanings and methodologies of “materiality” to examine the medieval world, by analyzing objects, texts, networks, patterns of circulation and appropriation, aesthetics and enshrinement, production and knowledge communities.
Area: Humanities, Social and Behavioral Sciences

AS.100.679. Medieval Materialities II: Objects, Ontologies, Texts and Contexts.
We will use the meanings and methodologies of “materiality” to examine the medieval world, by analyzing objects, texts, networks, patterns of circulation and appropriation, aesthetics and enshrinement, production and knowledge communities.
Area: Humanities, Social and Behavioral Sciences

AS.100.680. Reading Seminar in Atlantic History 1600-1800.
This reading seminar will highlight some of the major new works and wide-ranging genres in this lively, stimulating field.

AS.100.681. Research Seminar in Atlantic History, 1600-1800.
Writing workshop for graduate students at all stages presenting work in progress. Discussion of theories, methods, and challenges of graduate student writing.
Area: Humanities, Social and Behavioral Sciences

AS.100.682. Research Seminar in the Atlantic World, 1500-1810.
This seminar selectively explores the emergence and subsequent growth of the Atlantic basin as a site for exchange among and within the continents of Europe, Africa, and the Americas in the early modern era.

AS.100.683. Graduate Reading Seminar in Early American History.
A probing look at various genres and classics ranging from Native Americans to the Early Republic.
Area: Humanities, Social and Behavioral Sciences

AS.100.684. Research Seminar in the Atlantic World, 1500-1810.
A graduate level seminar in social and cultural history in the 19th and 20th centuries.

AS.100.685. Problems in U.S. Social & Cultural History.
A graduate level seminar in social and cultural history in the 19th and 20th centuries.

AS.100.686. Problems in American Society and Culture.
An intensive graduate seminar exploring various topics in US social and cultural history, focusing on the period from the late 19th century to the late 20th century.

AS.100.690. Neoliberalism.
Readings on the history, theory, and politics of neoliberalism, from midcentury to the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.692. Graduate Reading Seminar in Early American History.
A probing look at various genres and classics ranging from Native Americans to the Early Republic.
Area: Humanities, Social and Behavioral Sciences

AS.100.693. Problems in U.S. Social & Cultural History.
A graduate level seminar in social and cultural history in the 19th and 20th centuries.

AS.100.694. Problems in American Society and Culture.
An intensive graduate seminar exploring various topics in US social and cultural history, focusing on the period from the late 19th century to the late 20th century.

AS.100.695. Neoliberalism.
Readings on the history, theory, and politics of neoliberalism, from midcentury to the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.696. Problems in American Society and Culture.
An intensive graduate seminar exploring various topics in US social and cultural history, focusing on the period from the late 19th century to the late 20th century.

AS.100.697. American Intellectual History.
Readings on late nineteenth- and twentieth-century American and transatlantic social theory.

AS.100.699. Neoliberalism.
Readings on the history, theory, and politics of neoliberalism, from midcentury to the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.700. American Intellectual History.
Readings on late nineteenth- and twentieth-century American and transatlantic social theory.

AS.100.702. European Empires in the Indian Ocean.
A reading overview of Portuguese, Dutch, English and French empire in the Indian Ocean.
Area: Humanities, Social and Behavioral Sciences

AS.100.703. Nationhood and Nationalism: theory, historiography, sociologies.
Theories, historiographies, and sociologies of nationhood and nationalism. Nationhood as institutional form, practical category, and site of contestation. Nationalisms and nationalist movements, nation-states and nationalizing states, borderlands, memory struggles. The subjectivities generated by nationalism and national conflict, including forms of national minorityhood. Recent work on national indifference, nation and empire, nation and religion, and supranationalisms and internationalisms.
Area: Humanities, Social and Behavioral Sciences

AS.100.707. The Black World.
This course explores the practice of writing and reading the history of African Americans and the wider African Diaspora. Participants will share written work and do close readings of primary and secondary texts exploring the black experience in Europe, Asia, Africa, and the Americas. Continuation of AS.100.707.
Area: Humanities, Social and Behavioral Sciences

AS.100.708. The Black World II.
This course explores the practice of writing and reading the history of African Americans and the wider African Diaspora. Participants will share written work and do close readings of primary and secondary texts exploring the black experience in Europe, Asia, Africa, and the Americas.

AS.100.711. Approaches to International, Transnational and Global History.
Graduate students will read and analyze classic as well as recent works of International, Transnational and Global History.
Area: Humanities, Social and Behavioral Sciences

AS.100.713. Black Womanhood.
What does a usable history of black womanhood (black queer and trans womanhood inclusive) look like? Black women's history across time and space.
Area: Humanities, Social and Behavioral Sciences

AS.100.716. Cultural Theory For Historians.
An examination of modern cultural theories, with emphasis on mass culture and consumerism. Authors include Simmel, Kracauer, Benjamin, Horkheimer, Adorno, Barthes, Debord, Bourdieu, and de Certeau.

AS.100.721. Topics In African History.
Critical readings on selected themes in African history and historiography.

AS.100.724. Sex and Slavery.
Research and methods in the field of sexuality and slavery studies. Graduate students may take this course up to two times.
Area: Humanities, Social and Behavioral Sciences

AS.100.725. Sex and Slavery II.
Research and methods in the field of sexuality and slavery studies. Part 2: Caribbean & African Continent.
Area: Humanities, Social and Behavioral Sciences

AS.100.729. Reading Seminar: British America and the Early United States in Atlantic Perspective.
Introduction to the history and historiography on British North America and the United States.
AS.100.730. Reading Seminar: British America and the Early United States in Atlantic Perspective.
Continuation of AS.100.729 for students conducting field exams.

A reading seminar in colonial African history; the focus may be on French African empire.

AS.100.733. Reading Qing Documents.
Open to advanced undergraduates with at least one semester of Classical Chinese. This course has several objectives. First and foremost, it is a hands on document reading class designed to familiarize students with the skills, sources, and reference materials necessary to conduct research in Qing history. To that end, we will spend much of our time reading documents. At the same time, we will engage in problem solving exercises designed to develop and enhance basic research skills. Finally, several important archive-based secondary works in the secondary literature are available on reserve for your reference. These works demonstrate the ways in which historians have recently applied archival skills (and materials).

AS.100.735. Early Modern Britain and the Early Modern British Empire.

AS.100.736. Early Modern Britain and the Early Modern British Empire.

AS.100.738. Women, Genders and Sexualities.
In May 2020, Johns Hopkins will host the meeting of the Berkshire Conference on Women, Gender and Sexualities, a gathering of 1200 scholars from across the world. Our seminar will use the Berkshire Conference program to organize a set of readings that will anticipate the panels, roundtables, performances, and plenaries that will be on campnus between May 28 and 31, 2020. Attendance at the conference is not required, but it is recommended.
Area: Humanities, Social and Behavioral Sciences

AS.100.744. Twentieth Century France and the French Empire.
We will explore major recent work in the history of France, with particular attention to transnational and imperial questions.

AS.100.749. Social Theory for Historians: Marx, Durkheim, Weber.
An examination of the works of Marx, Durkheim, and Weber, as examples of the Hegelian, positivist, and hermeneutic traditions of social theory.

AS.100.751. Early Modern European Intellectual History.
Area: Humanities, Social and Behavioral Sciences

AS.100.753. Modern American Seminar.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in 20th century history. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Area: Humanities, Social and Behavioral Sciences

AS.100.755. Modern American Seminar.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in 20th century history. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.756. Reading Seminar in Chinese History.
A seminar covering recent work on late imperial and modern Chinese history, primarily in English.
Area: Humanities, Social and Behavioral Sciences

AS.100.757. Cultural Histories of Late Imperial China.
This reading seminar will introduce graduate students and advanced undergraduates (by permission) to recent studies of Late Imperial and Republican China that can (by various standards) be classified as works of cultural history.
Area: Humanities, Social and Behavioral Sciences

AS.100.759. Arabic Historical Writing in the Middle Ages.
The course examines various genres of Arabic historical writing during the high and late Middle Ages (10th-15th c.). All primary readings are in English/French translation (no Arabic required).
Area: Humanities, Social and Behavioral Sciences

AS.100.761. History of Capitalism.
Readings on the history of capitalism since the mid-nineteenth century, with an emphasis on the American context.

AS.100.762. History and Historiography of 19th France in Europe and the World.
This course will look at recent historiography on France and the French empire, notably in North Africa. We will pay particular attention to transnational and imperial questions.

AS.100.765. Problems in Women and Gender Studies.
An exploration of recent work in women's and gender history, focusing on some of the following: sexuality, cultural production, politics, family formation, work, religion, difference, and civic orders.

AS.100.766. Problems in the History of Women & Gender.
An exploration of recent work in modern European and US women's and gender history, focusing on some of the following: sexuality, cultural production, politics, family formation, work, religion, differences, and civic orders. A continuation of AS.100.765.
Area: Humanities, Social and Behavioral Sciences

AS.100.769. Gender History Workshop.
Workshop for presentation of works-in-progress on the history of women, gender, and/or sexuality, including drafts of dissertation chapters, research papers, talks, and proposals. Students in disciplines other than history are welcome.

AS.100.770. Gender History Workshop.
Workshop for presentation of works-in-progress on the history of women, gender, and/or sexuality, including drafts of dissertation chapters, research papers, talks, and proposals. Students in disciplines other than history are welcome. Graduate students only.
Area: Humanities, Social and Behavioral Sciences

AS.100.781. The Seminar.
This course features presentations from invited speakers. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.782. The Seminar.
This course features presentations from invited speakers. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.783. Seminar: Medieval Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Medieval European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.110 (MATHEMATICS)

AS.110.105. Precalculus. 4 Credits.
This course starts from scratch and provides students with all the background necessary for the study of calculus. It includes a review of algebra, trigonometry, exponential and logarithmic functions, coordinates and graphs. Each of these tools will be introduced in its cultural and historical context. The concept of the rate of change of a function will be introduced.
Area: Quantitative and Mathematical Sciences

AS.110.106. Calculus I (Biology and Social Sciences). 4 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, functions of several variables, linear systems, applications for systems of linear differential equations, probability distributions. Many applications to the biological and social sciences will be discussed.
Area: Quantitative and Mathematical Sciences

AS.110.107. Calculus II (For Biological and Social Science). 4 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, functions of several variables, linear systems, applications for systems of linear differential equations, probability distributions. Applications to the biological and social sciences will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Area: Quantitative and Mathematical Sciences

AS.110.108. Calculus I (Physical Sciences & Engineering). 4 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, polar coordinates, parametric equations, Taylor’s theorem and applications, infinite sequences and series. Some applications to the physical sciences and engineering will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Area: Quantitative and Mathematical Sciences

AS.110.109. Calculus II (For Physical Sciences and Engineering). 4 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, polar coordinates, parametric equations, Taylor’s theorem and applications, infinite sequences and series. Some applications to the physical sciences and engineering will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Area: Quantitative and Mathematical Sciences

AS.110.113. Honors Single Variable Calculus. 4 Credits.
This is an honors alternative to the Calculus sequences AS.110.106-AS.110.107 or AS.110.108-AS.110.109 and meets the general requirement for both Calculus I and Calculus II (although the credit hours count for only one course). It is a more theoretical treatment of one variable differential and integral calculus and is based on our modern understanding of the real number system as explained by Cantor, Dedekind, and Weierstrass. Students who want to know the ‘why’s and how’s’ of Calculus will find this course rewarding. Previous background in Calculus is not assumed. Students will learn differential Calculus (derivatives, differentiation, chain rule, optimization, related rates, etc), the theory of integration, the fundamental theorem(s) of Calculus, applications of integration, and Taylor series. Students should have a strong ability to learn mathematics quickly and on a higher level than that of the regular Calculus sequences.
Area: Quantitative and Mathematical Sciences

AS.110.201. Linear Algebra. 4 Credits.
Prerequisite(s): Grade of C- or better in AS.110.107 OR AS.110.109 OR AS.110.113 OR AS.110.202 OR AS.110.302, or a 5 on the AP BC exam.
Area: Quantitative and Mathematical Sciences

AS.110.202. Calculus III. 4 Credits.
Calculus of functions of more than one variable: partial derivatives, and applications; multiple integrals, line and surface integrals; Green’s Theorem, Stokes’ Theorem, and Gauss’ Divergence Theorem.
Prerequisite(s): Grade of C- or better in AS.110.107 OR AS.110.109 OR AS.110.113 OR AS.110.201 OR AS.110.212 OR AS.110.302, or a 5 or better on the AP BC exam.
Area: Quantitative and Mathematical Sciences

AS.110.211. Honors Multivariable Calculus. 4 Credits.
This course includes the material in AS.110.202 with some additional applications and theory. Recommended for mathematically able students majoring in physical science, engineering, or especially mathematics. AS.110.211-AS.110.212 used to be an integrated yearlong course, but now the two are independent courses and can be taken in either order.
Prerequisite(s): Grade of C- or better in (AS.110.201 or AS.110.212)
Area: Quantitative and Mathematical Sciences

AS.110.212. Honors Linear Algebra. 4 Credits.
This course includes the material in AS.110.201 with additional applications and theory, and is recommended only for mathematically able students majoring in physical science, engineering, or mathematics who are interested in a proof-based version of linear algebra. This course can serve as an introduction to Proofs (IP) course. Prerequisites: Grade of B+ or better in 110.107 or 110.109 or 110.113, or a 5 on the AP BC exam.
Area: Quantitative and Mathematical Sciences

AS.110.225. Problem Solving Lab. 2 Credits.
This course is an introduction to mathematical reason and formalism in the context of mathematical problem solving, such as induction, invariants, inequalities and generating functions. This course does not satisfy any major requirement, and may be taken more than once for credit. It is primarily used as training for the William Lowell Putnam Mathematics Competition. Area: Quantitative and Mathematical Sciences.

AS.110.301. Introduction to Proofs. 4 Credits.
This course will provide a practical introduction to mathematical proofs with the aim of developing fluency in the language of mathematics, which itself is often described as “the language of the universe.” Along with a library of proof techniques, we shall tour propositional logic, set theory, cardinal arithmetic, and metric topology and explore "proof relevant" mathematics by interacting with a computer proof assistant. This course on the construction of mathematical proof will conclude with a deconstruction of mathematical proof, interrogating the extent to which proof serves as a means to discover universal truths and assessing the mechanisms by which the mathematical community achieves consensus regarding whether a claimed result has been proven.
Area: Quantitative and Mathematical Sciences
AS.110.302. Differential Equations and Applications. 4 Credits.
This is a course in ordinary differential equations (ODEs), equations involving an unknown function of one independent variable and some of its derivatives, and is primarily a course in the study of the structure of and techniques for solving ODEs as mathematical models. Specific topics include first and second ODEs of various types, systems of linear differential equations, autonomous systems, and the qualitative and quantitative analysis of nonlinear systems of first-order ODEs. Laplace transforms, series solutions and the basics of numerical solutions are included as extra topics. Prerequisites: Grade of C- or better in 110.107 or 110.109 or 110.113, or a 5 on the AP BC exam. Area: Quantitative and Mathematical Sciences.
Prerequisite(s): Grade of C- or better in AS.110.107 or AS.110.109 or AS.110.113 or AS.110.201 or AS.110.202 or AS.110.211 or AS.110.212, or a 5 on the AP BC exam.
Area: Quantitative and Mathematical Sciences

AS.110.304. Elementary Number Theory. 4 Credits.
The student is provided with many historical examples of topics, each of which serves as an illustration of and provides a background for many years of current research in number theory. Primes and prime factorization, congruences, Euler's function, quadratic reciprocity, primitive roots, solutions to polynomial congruences (Chevalley's theorem), Diophantine equations including the Pythagorean and Pell equations, Gaussian integers, Dirichlet's theorem on primes.
Prerequisite(s): Grade of C- or better in (AS.110.201 or AS.110.212)
Area: Quantitative and Mathematical Sciences

AS.110.311. Methods of Complex Analysis. 4 Credits.
This course is an introduction to the theory of functions of one complex variable. Its emphasis is on techniques and applications, and it serves as a basis for more advanced courses. Functions of a complex variable and their derivatives; power series and Laurent expansions; Cauchy integral theorem and formula; calculus of residues and contour integrals; harmonic functions.
Prerequisite(s): Grade of C- or better in (AS.110.202 or AS.110.211)
Area: Quantitative and Mathematical Sciences

AS.110.328. Non-Euclidean Geometry. 4 Credits.
For 2,000 years, Euclidean geometry was the geometry. In the 19th century, new, equally consistent but very different geometries were discovered. This course will delve into these geometries on an elementary but mathematically rigorous level.
Area: Quantitative and Mathematical Sciences

AS.110.375. Introduction to Mathematical Cryptography. 4 Credits.
An Introduction to Mathematical Cryptography is an introduction to modern cryptography with an emphasis on the mathematics behind the theory of public key cryptosystems and digital signature schemes. The course develops the mathematical tools needed for the construction and security analysis of diverse cryptosystems. Other topics central to mathematical cryptography covered are: classical cryptographic constructions, such as Diffie-Hellman key exchange, discrete logarithm-based cryptosystems, the RSA cryptosystem, and digital signatures. Fundamental mathematical tools for cryptography studied include: primality testing, factorization algorithms, probability theory, information theory, and collision algorithms. A survey of important recent cryptographic innovations, such as elliptic curves, elliptic curve and pairing-based cryptography are included as well. This course is an ideal introduction for mathematics and computer science students to the mathematical foundations of modern cryptography.
Area: Quantitative and Mathematical Sciences

AS.110.401. Introduction to Abstract Algebra. 4 Credits.
An introduction to the basic notions of modern abstract algebra and can serve as an introduction to Proofs (IP) course. This course is an introduction to group theory, with an emphasis on concrete examples, and especially on geometric symmetry groups. The course will introduce basic notions (groups, subgroups, homomorphisms, quotients) and prove foundational results (Lagrange's theorem, Cauchy's theorem, orbit-counting techniques, the classification of finite abelian groups). Examples to be discussed include permutation groups, dihedral groups, matrix groups, and finite rotation groups, culminating in the classification of the wallpaper groups. Prerequisites: Grade of C- or better in 110.201 or 110.212
Area: Quantitative and Mathematical Sciences
Prerequisite(s): Grade of C- or better in (AS.110.201 or AS.110.212)
Area: Quantitative and Mathematical Sciences

AS.110.405. Real Analysis I. 4 Credits.
This course is designed to give a firm grounding in the basic tools of analysis. It is recommended as preparation (but may not be a prerequisite) for other advanced analysis courses and may be taken as an Introduction to Proofs (IP) course. Topics include the formal properties of real and complex number systems, topology of metric spaces, limits, continuity, infinite sequences and series, differentiation, Riemann-Stieltjes integration. Prerequisites: Grade of C- or better in 110.201 or 110.202 or 110.211
Prerequisite(s): Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211)
Area: Quantitative and Mathematical Sciences

AS.110.406. Real Analysis II. 4 Credits.
This course continues AS.110.405 with an emphasis on the fundamental notions of modern analysis. Sequences and series of functions, Fourier series, equicontinuity and the Arzela-Ascoli theorem, the Stone-Weierstrass theorem, functions of several variables, the inverse and implicit function theorems, introduction to the Lebesgue integral. Area: Quantitative and Mathematical Sciences

AS.110.407. Honors Complex Analysis. 4 Credits.
AS.110.407. Honors Complex Analysis. 4.00 Credits. This course is an introduction to the theory of functions of one complex variable for honors students. Its emphasis is on techniques and applications, and can serve as an Introduction to Proofs (IP) course. Topics will include functions of a complex variable and their derivatives; power series and Laurent expansions; Cauchy integral theorem and formula; calculus of residues and contour integrals; harmonic functions, as well as applications to number theory and harmonic analysis. Area: Quantitative and Mathematical Sciences.
This is not an Introduction to Proofs course (IP) and may not be taken as a first proof-based mathematics course except at the discretion of the instructor. This course satisfies a core requirement of the mathematics major as a second analysis course, and is a core requirement for honors in the major.
Prerequisite(s): AS.110.405 OR AS.110.415
Area: Quantitative and Mathematical Sciences

AS.110.411. Honors Algebra I. 4 Credits.
An introduction to the basic notions of modern algebra for students with some prior acquaintance with abstract mathematics. Elements of group theory: groups, subgroups, normal subgroups, homomorphisms. Generators and relations, free groups, products, abelian groups, finite groups. Groups acting on sets, the Sylow theorems. Definition and examples of rings and ideals.
Prerequisite(s): Grade of C- or better in AS.110.212 OR AS.110.304 OR AS.110.113 OR AS.110.405 OR AS.110.415 OR AS.110.407 OR AS.110.413 OR AS.110.421
Area: Quantitative and Mathematical Sciences
AS.110.412. Honors Algebra II. 4 Credits.
This is a continuation of 110.411 Honors Algebra I. Topics studies include principal ideal domains, structure of finitely generated modules over them. Introduction to field theory. Linear algebra over a field. Field extensions, constructible polygons, non-trisectability. Splitting field of a polynomial, algebraic closure of a field. Galois theory: correspondence between subgroups and subfields. Solvability of polynomial equations by radicals. Prerequisites: Grade of C- or better in 110.201 or 110.212. Area: Quantitative and Mathematical Sciences.

Prerequisite(s): Grade of C- or better in AS.110.411
Area: Quantitative and Mathematical Sciences

AS.110.413. Introduction To Topology. 4 Credits.
Topological spaces, connectedness, compactness, quotient spaces, metric spaces, function spaces. An introduction to algebraic topology: covering spaces, the fundamental group, and other topics as time permits.

Prerequisite(s): Grade of C- or better in (AS.110.202 OR AS.110.211)
Area: Quantitative and Mathematical Sciences

AS.110.415. Honors Analysis I. 4 Credits.
This highly theoretical sequence in analysis is reserved for the most able students. The sequence covers the real number system, metric spaces, basic functional analysis, the Lebesgue integral, and other topics.

Area: Quantitative and Mathematical Sciences

AS.110.416. Honors Analysis II. 4 Credits.

Prerequisite(s): Grade of C- or better in AS.110.415
Area: Quantitative and Mathematical Sciences

AS.110.417. Partial Differential Equations. 4 Credits.
Area: Quantitative and Mathematical Sciences

AS.110.421. Dynamical Systems. 4 Credits.
This is a course in the modern theory of Dynamical Systems. Topic include both discrete (iterated maps) and continuous (differential equations) dynamical systems and focuses on the qualitative structure of the system in developing properties of solutions. Topics include contractions, interval and planar maps, linear and nonlinear ODE systems including bifurcation theory, recurrence, transitivity and mixing, phase volume preservation as well as chaos theory, fractional dimension and topological entropy. May be taken as an Introduction to Proofs (IP) course. Prerequisites: Grade of C- or better in 110.201 or 110.212 OR 110.202 or 110.211 and 110.302 Area: Quantitative and Mathematical Sciences

Prerequisite(s): Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211) AND 110.302
Area: Quantitative and Mathematical Sciences

AS.110.422. Representation Theory. 4 Credits.
This course will focus on the basic theory of representations of finite groups in characteristic zero: Schur's Lemma, Mashiack's Theorem and complete reducibility, character tables and orthogonality, direct sums and tensor products. The main examples we will try to understand are the representation theory of the symmetric group and the general linear group over a finite field. If time permits, the theory of Brauer characters and modular representations will be introduced.

Prerequisite(s): Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.401 OR AS.110.411)
Area: Quantitative and Mathematical Sciences

AS.110.433. Introduction to Harmonic Analysis and Its Applications. 4 Credits.
The course is an introduction to methods in harmonic analysis, in particular Fourier series, Fourier integrals, and wavelets. These methods will be introduced rigorously, together with their motivations and applications to the analysis of basic partial differential equations and integral kernels, signal processing, inverse problems, and statistical/machine learning.

Prerequisite(s): (AS.110.201 OR AS.110.212 OR EN.550.291 OR EN.553.291) AND (AS.110.202 OR AS.110.211) AND (AS.110.405 OR AS.110.415)
Area: Quantitative and Mathematical Sciences

AS.110.435. Introduction to Algebraic Geometry. 4 Credits.
Algebraic geometry studies zeros of polynomials in several variables and is based on the use of abstract algebraic techniques, mainly from commutative algebra, for solving geometric problems about these sets of zeros. The fundamental objects of study are algebraic varieties which are the geometric manifestations of solutions of systems of polynomial equations. Algebraic geometry occupies a central place in modern mathematics and has multiple conceptual connections with diverse fields such as complex analysis, topology and number theory. This course aims to provide to an undergraduate student majoring in mathematics the fundamental background to approach the study of algebraic geometry by providing the needed abstract knowledge also complemented by several examples and applications.

Area: Quantitative and Mathematical Sciences

AS.110.439. Introduction To Differential Geometry. 4 Credits.
Theory of curves and surfaces in Euclidean space: Frenet equations, fundamental forms, curvatures of a surface, theorems of Gauss and Maimardi-Codazzi, curves on a surface; introduction to tensor analysis and Riemannian geometry; theorema egregium; elementary global theorems.

Prerequisite(s): Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.100.211)
Area: Quantitative and Mathematical Sciences

AS.110.441. Calculus on Manifolds. 4 Credits.
This course provides the tools for classical three-dimensional physics and mechanics. This course extends these techniques to the general locally Euclidean spaces (manifolds) needed for an understanding of such things as Maxwell's equations or optimization in higher dimensional contexts, eg. in economics. The course will cover the theory of differential forms and integration. Specific topics include Maxwell's equations in terms of 4D Lorentz geometry, vector (in particular, tangent) bundles, an introduction to de Rham theory, and Sard's theorem on the density of regular values of smooth functions. The course is intended to be useful to mathematics students interested in analysis, differential geometry, and topology, as well as to students in physics and economics.

Area: Quantitative and Mathematical Sciences
AS.110.443. Fourier Analysis. 4 Credits.
Prerequisite(s): Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211)
Area: Quantitative and Mathematical Sciences

AS.110.445. Mathematical and Computational Foundations of Data Science. 4 Credits.
We will cover several topics in the mathematical and computational foundations of Data Science. The emphasis is on fundamental mathematical ideas (basic functional analysis, reproducing kernel Hilbert spaces, concentration inequalities, uniform central limit theorems), basic statistical modeling techniques (e.g. linear regression, parametric and non-parametric methods), basic machine learning techniques for unsupervised (e.g. clustering, manifold learning), supervised (classification, regression), and semi-supervised learning, and corresponding computational aspects (linear algebra, basic linear and nonlinear optimization to attack the problems above). Applications will include statistical signal processing, imaging, inverse problems, graph processing, and problems at the intersection of statistics/machine learning and physical/dynamical systems (e.g. model reduction for stochastic dynamical systems).
Area: Quantitative and Mathematical Sciences

AS.110.446. Introduction to Statistical Learning, Data Analysis and Signal Processing. 4 Credits.
Introduction to high dimensional data sets: key problems in statistical and machine learning. Geometric aspects. Principal component analysis, linear dimension reduction, random projections. Concentration phenomena: examples and basic inequalities. Metric spaces and embeddings thereof. Kernel methods. Nonlinear dimension reduction, manifold models. Regression. Vector spaces of functions, linear operators, projections. Orthonormal bases; Fourier and wavelet bases, and their use in signal processing and time series analysis. Basic approximation theory. Linear models, least squares. Bias and variance tradeoffs, regularization. Sparsity and compressed sensing. Multiscale methods. Graphs and networks. Random walks on graphs, diffusions, pagerank. Block models. Spectral clustering, classification, semi-supervised learning. Algorithmic and computational aspects of the above will be consistently in focus, as will be computational experiments on synthetic and real data. Linear algebra will be used throughout the course, as will multivariable calculus and basic probability (discrete random variables). Basic experience in programming in C or MATLAB or R or Octave. Recommended Course Background: More than basic programming experience in Matlab or R; some more advanced probability (e.g. continuous random variables), some signal processing (e.g. Fourier transform, discrete and continuous). Co-listed with EN.553.416
Prerequisite(s): Grade of C- or better in (AS.110.201 OR AS.110.212)
Area: Quantitative and Mathematical Sciences

AS.110.503. Undergraduate Research in Mathematics. 1 - 4 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.110.586. Independent Study. 0 - 4 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.110.587. DRP Independent Study. 1 Credit.
Directed Reading Program (DRP) Independent Study.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
Area: Quantitative and Mathematical Sciences

AS.110.595. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.110.599. Independent Study. 0 - 3 Credits.
Area: Quantitative and Mathematical Sciences

AS.110.601. Algebra.
An introductory graduate course on fundamental topics in algebra to provide the student with the foundations for number theory, algebraic geometry, and other advanced courses. Topics include group theory, commutative algebra, Noetherian rings, local rings, modules, rudiments of category theory, homological algebra, field theory, Galois theory, and non-commutative algebras.
Area: Quantitative and Mathematical Sciences

AS.110.602. Algebra.
An introductory graduate course on fundamental topics in algebra to provide the student with the foundations for Number Theory, Algebraic Geometry, and other advanced courses. Topics include group theory, commutative algebra, Noetherian rings, local rings, modules, and rudiments of category theory, homological algebra, field theory, Galois theory, and non-commutative algebras. Recommended Course Background: AS.110.401-AS.110.402
Area: Quantitative and Mathematical Sciences

AS.110.605. Real Variables.
Measure and integration on abstract and locally compact spaces (extension of measures, decompositions of measures, product measures, the Lebesgue integral, differentiation, $L^p$-spaces); introduction to functional analysis; integration on groups; Fourier transforms.
Area: Quantitative and Mathematical Sciences

AS.110.607. Complex Variables.
Analytic functions of one complex variable. Topics include Mittag-Leffler Theorem, Weierstrass factorization theorem, elliptic functions, Riemann-Roch theorem, Picard theorem, and Nevanlinna theory. Recommended Course Background: AS.110.311, AS.110.405
Area: Quantitative and Mathematical Sciences

AS.110.608. Riemann Surfaces.
Abstract Riemann surfaces. Examples: algebraic curves, elliptic curves and functions on them. Holomorphic and meromorphic functions and differential forms, divisors and the Mittag-Leffler problem. The analytic genus. Bezout's theorem and applications. Introduction to sheaf theory, with applications to constructing linear series of meromorphic functions. Serre duality, the existence of meromorphic functions on Riemann surfaces, the equality of the topological and analytic genera, the equivalence of algebraic curves and compact Riemann surfaces, the Riemann-Roch theorem. Period matrices and the Abel-Jacobi mapping. Jacobi inversion, the Torelli theorem. Uniformization (time permitting).
AS.110.615. **Algebraic Topology.** Polyhedra, simplicial and singular homology theory, Lefschetz fixed-point theorem, cohomology and products, homological algebra, Kähler and universal coefficient theorems, Poincaré and Alexander duality theorems.

AS.110.616. **Algebraic Topology.** Polyhedra, simplicial and singular homology theory, Lefschetz fixed-point theorem, cohomology and products, homological algebra, Kähler and universal coefficient theorems, Poincaré and Alexander duality theorems.

Area: Quantitative and Mathematical Sciences

AS.110.617. **Number Theory.** Topics in advanced algebra and number theory, including local fields and adeles, Iwasawa-Tate theory of zeta functions and connections with Hecke's treatment, semisimple algebras over local and number fields, adele geometry.

Area: Quantitative and Mathematical Sciences

AS.110.618. **Number Theory.** Topics in advanced algebra and number theory, including local fields and adeles, Iwasawa-Tate theory of zeta-functions and connections with Hecke's treatment, semi-simple algebras over local and number fields, adele geometry.

Area: Quantitative and Mathematical Sciences

AS.110.631. **Partial Differential Equations I.** An introductory graduate course in partial differential equations. Classical topics include first order equations and characteristics, the Cauchy-Kowalewska theorem, Laplace's equations, heat equation, wave equation, fundamental solutions, weak solutions, Sobolev spaces, maximum principles. Prerequisite(s): Grade of C- or better in AS.110.605

AS.110.632. **Partial Differential Equations II.** An introductory graduate course in partial differential equations. Classical topics include first order equations and characteristics, the Cauchy-Kowalewska theorem, Laplace's equation, heat equation, wave equation, fundamental solutions, weak solutions, Sobolev spaces, maximum principles. The second term focuses on special topics such as second order elliptic theory.

AS.110.633. **Harmonic Analysis.** Fourier multipliers, oscillatory integrals, restriction theorems, Fourier integral operators, pseudodifferential operators, eigenfunctions. Undergrads need instructor's permission.

Area: Quantitative and Mathematical Sciences

AS.110.635. **Microlocal Analysis.** Microlocal analysis is the geometric study of singularities of solutions of partial differential equations. The course will begin by introducing the geometric theory of (Schwartz) distributions: Fourier transform and Sobolev spaces, pseudo-differential operators, wave front set of a distribution, elliptic operators, Lagrangean distributions, oscillatory integrals, method of stationary phase, Fourier integral operators. The second semester will develop the theory and apply it to special topics such as asymptotics of eigenvalues/eigenfunctions of the Laplace operator on a Riemann manifold, linear and non-linear wave equation asymptotics of quantum systems, Bochner-Riesz means, maximal theorems.

AS.110.637. **Functional Analysis.**

AS.110.643. **Algebraic Geometry.** Affine varieties and commutative algebra. Hilbert's theorems about polynomials in several variables with their connections to geometry. General varieties and projective geometry. Dimension theory and smooth varieties. Sheaf theory and cohomology. Applications of sheaves to geometry; e.g., the Riemann-Roch theorem. Other topics may include Jacobian varieties, resolution of singularities, geometry on surfaces, connections with complex analytic geometry and topology, schemes.

AS.110.644. **Algebraic Geometry.** Affine varieties and commutative algebra. Hilbert's theorems about polynomials in several variables with their connections to geometry. General varieties and projective geometry. Dimension theory and smooth varieties. Sheaf theory and cohomology. Applications of sheaves to geometry; e.g., the Riemann-Roch Theorem. Other topics may include Jacobian varieties, resolution of singularities, geometry on surfaces, schemes, connections with complex analytic geometry and topology. Area: Quantitative and Mathematical Sciences

AS.110.645. **Riemannian Geometry.** Differential manifolds, vector fields, flows, Frobenius' theorem. Differential forms, deRham's theorem, vector bundles, connections, curvature, Chern classes, Cartan structure equations. Riemannian manifolds, Bianchi identities, geodesics, exponential maps. Geometry of submanifolds, hypersurfaces in Euclidean space. Other topics as time permits, e.g., harmonic forms and Hodge theorem, Jacobi equation, variation of arc length and area, Chern-Gauss-Bonnet theorems.

AS.110.646. **Riemannian Geometry.** The goal is to give a self-contained course on mean curvature flow, starting with the basic linear heat equation in Euclidean space and -- hopefully -- getting to topics of current research. Mean curvature flow is a geometric heat equation that shares many properties with Ricci flow, harmonic map heat flow, Yang-Mills flow and the Navier-Stokes equations. Recommended Course Background: AS.110.605 and an undergraduate course in differential geometry; AS.110.645 and AS.110.631

AS.110.675. **High-Dimensional Approximation, Probability, and Statistical Learning.** The course covers fundamental mathematical ideas for certain approximation and statistical learning problems in high dimensions. We start with basic approximation theory in low-dimensions, in particular linear and nonlinear approximation by Fourier and wavelets in classical smoothness spaces, and discuss applications in imaging, inverse problems and PDE’s. We then introduce notions of complexity of function spaces, which will be important in statistical learning. We then move to basic problems in statistical learning, such as regression and density estimation. The interplay between randomness and approximation theory is introduced, as well as fundamental tools such as concentration inequalities, basic random matrix theory, and various estimators are constructed in detail, in particular multi scale estimators. At all times we consider the geometric aspects and interpretations, and will discuss concentration of measure phenomena, embedding of metric spaces, optimal transportation distances, and their applications to problems in machine learning such as manifold learning and dictionary learning for signal processing.

Area: Quantitative and Mathematical Sciences

AS.110.707. **Functional Analysis.**

AS.110.711. **Topics in Topos Theory.** Reading course to discuss Topics in Topos Theory

AS.110.712. **Topics in Mathematical Physics.**
AS.110.722. Topics in Homotopy Theory.  
The course will focus on recent developments in homotopy theory, such as Galois theory for $E_n$ ($n \geq 2$) ring-spectra, and on connections with number theory; in particular, work of Bhatt, Hesselholt, Lurie, Scholze and others on topological Hochschild homology and its applications to geometry over the p-adic complex numbers.  
Area: Quantitative and Mathematical Sciences

AS.110.724. Topics in Arithmetic Geometry.  
Topics around the subject of Arithmetic Geometry will be covered in this course.  
Area: Quantitative and Mathematical Sciences

AS.110.726. Topics in Analysis.  
The topics covered will involve the theory of calculus of Functors applied to geometric problems like Embedding theory. Other related areas will be covered depending on the interest of the audience.  
Area: Quantitative and Mathematical Sciences

AS.110.727. Topics in Algebraic Topology.  
AS.110.728. Topics in Algebraic Topology.  
AS.110.731. Topics in Geometric Analysis.  
AS.110.733. Topics In Alg Num Theory.  
AS.110.735. Topics In Hodge Theory.  
AS.110.737. Topics Algebraic Geometry.  
AS.110.738. Topics Algebraic Geometry.  
Introduction to toric varieties. This class is a general introduction to toric varieties. Toric varieties are special kinds of algebraic varieties which can be described by lattices and convex sets. They provide a rich source of concrete examples in complex geometry or mathematical physics. If time permits, we discuss in the end the stability of toric embeddings. Students should know basic notions of algebraic geometry (schemes, sheaves, linear systems), as covered in AS.110.643.  
Area: Quantitative and Mathematical Sciences

AS.110.741. Topics in Partial Differential Equations.  
AS.110.742. Topics In Partial Differential Equations.  
In this course we will be discussing some dispersive evolution equations, primarily the nonlinear Schrodinger equation. Topics will include well-posedness theory, conservation laws, and scattering. The course will be accessible to students who have not taken graduate partial differential equations or functional analysis.  
AS.110.745. Introduction to Curvature Flows.  
AS.110.749. Topics in Differential Geometry.  
In this class, we will study Aaron Naber and Jeff Cheeger’s recent result on proving codimension four conjecture. We plan to talk about some early results of the structure on manifolds with lower Ricci bound by Cheeger and Colding. We will prove quantitative splitting theorem, volume convergence theorem, and the result that almost volume cone implies almost metric cone. Then we will discuss regularity of Einstein manifolds and the codimension four conjecture.  
Area: Quantitative and Mathematical Sciences

AS.110.750. Topics in Representation Theory.  
Area: Quantitative and Mathematical Sciences

AS.110.756. Topics in Algebra.  
This will be a course in commutative algebra. Topics may include: Noetherian rings and modules, the Nullstellensatz, Hilbert basis theorem, localization, integrality, Noether normalization, primary decomposition, DVRs, Dedekind domains, dimension theory, smoothness and regularity, and homological methods.  
Area: Quantitative and Mathematical Sciences

AS.110.757. Topics in Stochastic Dynamical Systems.  
The course will present an introduction to stochastic dynamical systems and some applications in model reduction and data assimilation. The main focus will be on stability and ergodicity of stochastic dynamical systems, including stochastic differential equations driven by white and fractional noise, and their numerical approximations. We will then discuss model reduction, focusing on Mori-Zwanzig formalism and approximation of the generalized Langevin equation, and methods on the parametric inference of related stochastic systems. Data assimilation and stochastic control will also be briefly introduced.  
Area: Quantitative and Mathematical Sciences

AS.110.790. Seminar in Complex Geometry.  
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.  
Area: Quantitative and Mathematical Sciences

AS.110.793. Seminar in Topology.  
For graduate students only. Presentations of current research papers by faculty, graduate students and invited guest speakers.  
Area: Quantitative and Mathematical Sciences

AS.110.794. Seminar in Category Theory.  
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.

Area: Quantitative and Mathematical Sciences

AS.110.800. Independent Study-Graduates.  
Area: Quantitative and Mathematical Sciences

AS.110.801. Thesis Research.
AS.130 (NEAR EASTERN STUDIES)

AS.130.101. Ancient Near Eastern Civilizations. 3 Credits.
Review of important issues in ancient Near Eastern history and culture from the Neolithic era to the Persian period. Included will be an examination of the Neolithic agricultural revolution, the emergence of cities, states and writing, and formation of empires. Cultures such as Sumer and Akkad, Egypt, the Hittites, Israelites, Assyrians, Babylonians, and Persians will be discussed.
Area: Humanities

AS.130.105. Freshman Seminar: Sex, Drugs, and Rock & Roll in Ancient Egypt. 3 Credits.
This seminar explores the social roles of sexuality, alcohol, other drugs, music, fragrance, and sensuality in secular and religious areas of Egyptian life, largely but not exclusively during the New Kingdom, ca. 1500 to 1000 B.C. The ancient attitudes towards these elements will be explored through the ancient textual sources in translation and the artistic representations.
Area: Humanities Writing Intensive

AS.130.106. Freshman Seminar: Ancient Empires. 3 Credits.
Freshman OnlyA case-study approach to the political, social, and cultural history of one of the Near Eastern states commonly described as an "empire," such as the Akkadian Empire, the Neo-Assyrian Empire, the Neo-Babylonian Empire, or the Achaemenid (Persian) Empire. Individual classes mix a discussion of theoretical issues relevant to the study of ancient empires with close attention to primary sources.
Area: Humanities Writing Intensive

AS.130.111. Freshman Seminar: Cleopatra's Egypt. 3 Credits.
Egypt in the time of Cleopatra was a fascinating mix of peoples and cultures. Jews, Greeks, and other ethnic groups lived in this unique landscape along with the native Egyptians. In this class we will consider the rich civilization and complex history of Egypt during the reign of this legendary Queen.
Area: Humanities Writing Intensive

AS.130.119. Ancient Medicine. 3 Credits.
A survey of medicine and medical practice in the ancient Near East and, to a lesser extent, the Aegean world. The abundant sources range from magical spells to surprisingly "scientific" treatises and handbooks. Readings are selected from translations of primary sources in the writings of ancient Egypt, Mesopotamia, Israel, Greece, and Rome. Topics will include the sources of our knowledge, the nature of medical practitioners, medical treatment, and surgery; beliefs about disease and the etiology of illness; concepts of contagion and ritual purity.
Area: Humanities Writing Intensive

AS.130.123. Myths and Monsters in Mesopotamia. 3 Credits.
This course is an introduction to the religion of ancient Mesopotamia (3000-500 BC) through its myths and legends. We will approach Mesopotamian religion through both the textual and archaeological record. Although the focus will be on the myths and legends of Mesopotamia, we will also discuss rituals, magic, and household religion. By the end of this course, students should be familiar with the chief deities of the Mesopotamian pantheon, important texts pertaining to these deities, and the material culture of Mesopotamian religion.
Area: Humanities

AS.130.124. Texts, Tablets, and Tweets: The Sociolinguistics of Writing. 3 Credits.
This course examines the evolution of writing and the relationship between speech and writing in ancient and modern societies. We will examine the ways in which orthography, scripts, and the visual components inherent to written language (e.g., scripts, fonts, emoticons, diacritics etc.) are used to create and/or project certain social identities in these new written spaces. A primary aim of this course is to generate discussion regarding the ways in which writing in all of its forms—at the institutional, group, and individual level, in official documents, in emails, texts, tweets, and graffiti, using standardized and non-standard orthographies, in both regulated and unregulated spaces—can be a social and often political act of identity. The writing assignments for the course will encourage you to consider the ways in which writing can be harnessed to express social identities. You will work as a group to develop your own writing system and present it to the class. This will hone your creative and critical thinking skills and give you practice collaborating on a project. You will also research and conduct an original analysis on a corpus of writing.
Area: Humanities

AS.130.126. Gods and Monsters in Ancient Egypt. 3 Credits.
A basic introduction to Egyptian Religion, with a special focus on the nature of the gods and how humans interact with them. We will devote particular time to the Book of the Dead and to the 'magical' aspects of religion designed for protective purposes.
Area: Humanities

AS.130.127. A Good Scribe & Learned Man: Wisdom & Knowledge in Ancient Egypt. 3 Credits.
Already in Antiquity, the Egyptians had a reputation for wisdom and 'secret' knowledge. But what was the reality behind this reputation? Who was a 'wise man' or 'wise woman' in Egypt? How did they organize and teach scientific ideas and concepts? How did they compose, maintain, and transmit the 'books' containing their canon of knowledge? From the abundant ethical, scientific, literary, magical, and religious writings of the Egyptians we will attempt to understand what wisdom and knowledge meant to the Ancient Egyptians.
Area: Humanities Writing Intensive

AS.130.129. Freshman Seminar: The Art of War and Peace in Ancient Mesopotamia. 3 Credits.
Ancient Mesopotamia, modern-day Iraq, Syria, and Iran, is the "cradle of civilization." It witnessed new inventions previously unknown to the ancient world: urban cities, writing systems, kingship, and empires. This course examines the close relationship between war and peace and art in ancient Mesopotamia (ancient Sumer, Babylonia, and Assyria) from 3500 to 539 BCE. During the semester students will be introduced to the art, architecture, and archaeology of ancient Mesopotamia. This course is aimed at students without a previous background in art historical or archaeological approaches to Mesopotamia, but more advanced students are welcome.
Area: Humanities
AS.130.131. It's Alive! Statues in Ancient Egypt. 3 Credits.
Statues in ancient Egypt were extremely powerful images. Following the appropriate rituals, a statue could eat, breath, smell, and see. Wealthy men and women, including the king and his high officials, commissioned statues of themselves to erect in temples and their tombs. This allowed them to benefit from offerings set in front of the statues and essentially live forever. Throughout their history, the Egyptians also carved statues of prisoners, servants, and deities. In this class, we will explore a variety of statues from throughout ancient Egyptian history. How did the Egyptians use statues, and why did they create these objects? Do the answers to these questions vary for different types of statues? In considering this, we will discuss manufacturing techniques, subject matter, style, and the relationship between text and image. However, we will also examine other topics that may at first seem to be less obviously related, including mummmification, religion and magic in ancient Egypt, temples and tombs, and funerary beliefs. In order for students to directly analyze statues, we will take advantage of Baltimore’s museums and visit collections of Egyptian art throughout the semester.
Area: Humanities

AS.130.133. From Hebrews to Jews: The Development of Jewish Identity in the Ancient World. 3 Credits.
What happened to the ten lost tribes of Israel? Was Abraham Jewish? How far back can Jewish ethnicity be traced using genetic research? These questions and more will be topics of discussion as we explore the development of Jewish identity, beginning with the first evidence of a people called “Israel” in the 13th century BCE and ending with the destruction of the Second Temple in 70 CE. The class will start with a discussion of different types of identity, including ethnic, religious, and cultural identities, as well as how identity can vary between members of the same community. We will also consider how ancient peoples can be studied using textual and archaeological sources. Then we will take a loosely diachronic approach to the development of Jewish identity, from the elusive origins of the Israelites to their existence as a monarchical state under rulers such as King David; from their forced displacement under the Assyrian empire to the Diaspora caused by the Romans. Using primary and secondary source materials, we will assess the key developments in group identity that took place at these times and the factors which influenced them.
Area: Humanities

AS.130.135. Pyramids, Temples and Tombs. 3 Credits.
Introduction to the monuments and culture of Egypt from 3500 B.C. to 100 A.D. From the pyramids at Giza to Hellenistic Alexandria, this course surveys in slide illustrated lectures the remains of one of the world’s greatest early cultures.
Area: Humanities
Writing Intensive

AS.130.138. Jerusalem: The Holy City. 3 Credits.
This course will survey the cultural history of Jerusalem over three millennia, primarily as the symbolic focus of three faiths: Judaism, Christianity, and Islam. The course content will focus on the transformation of sacred space as reflected by literary and archaeological evidence by examining the artifacts, architectural monuments, and iconography in relation to written sources. The creation of mythic Jerusalem through event and experience will be examined. Course requirements will focus on the development of advanced writing skills and critical thinking.
Area: Humanities

AS.130.139. Stargazing and Reading the Future: Science and Magic in Ancient Egypt. 3 Credits.
Is astrology science? Is ancient medicine magic? What is the logic of divination? I invite you to explore the answers with me by traveling back in time to ancient Egypt, a place where knowledge from the ancient Mediterranean world once converged. We will start by bridging the difference between science and magic and establishing the importance of contextualization in cross-culture studies. The topics range from the birth of astronomy, the language and logic of dream books to gynecological texts’ connections with love magic.
Area: Humanities

AS.130.140. Hebrew Bible / Old Testament. 3 Credits.
The Bible is arguably the most read and yet most misinterpreted book of all time, one of the most influential and yet most misapplied work of literature. The Hebrew Bible (Old Testament) is Scripture to Jews and Christians yet also a rich collection of literature w/ numerous literary genres that has been highly influential on secular Western culture. At its core, it is our most important literary source that (when wed with archaeology) helps us to understand the people and culture of Iron Age Israel and Judah. This is an introductory course surveying of the books of the Hebrew Bible (Old Testament) giving primary attention to the religious ideas they contain and the ancient contexts in which they were composed. Topics include: The Academic Study of Religion, Ancient Creation Accounts, Ancestral Religion, The Exodus and Moses, Covenant, Tribalism and Monarchy, The Ideology of Kingship, Prophecy, Priestly Sources, Psalms, Wisdom Literature, and Apocalyptic Thought.
Area: Humanities

AS.130.147. What My Soul Said To Me. 3 Credits.
“What My Soul Said to Me” will be focused on looking at the mortuary culture in Middle Kingdom Egypt through various types of evidence. By looking at the funerary culture of this age, students will learn about the funerary culture of Egypt during this period and will also become more familiar with the Middle Kingdom period in general. More importantly, students will be encouraged to think about larger topics involved in archaeological and historical studies, while using Middle Kingdom period Egypt as a setting to focus those discussions. This course is aimed at students without a previous background in archaeology or Egyptology, but more advanced students are welcome.
Area: Humanities
and what is at stake when we uncritically consume an image of the past. 

engage with the complex, yet fundamental, question of who owns culture focusing on the commoditization of ancient Egyptian culture in Western investigations of ancient Egypt known as "Egyptomania," collecting and displaying ancient Egyptian material culture. We will also investigate the popularization of ancient Egypt and the writing of history as well as the ethics of historical and contemporary contexts. In addition to focusing on the development of technologies as "objects" (stone tools, pottery, metals, etc.), we will study non-material technologies, that arose as solutions to practical problems and have altered the world in important ways (agriculture, animal domestication, writing, etc.). This course approaches past technologies from a number of different perspectives: (1) by learning about particular anthropological and archaeological case studies, (2) by engaging with scholarship focusing on major theoretical and philosophical themes, (3) by engaging with ethnographic research, both in the form of articles and in the form of documentaries, and (4) by means of thought experiments and debates. This course will benefit humanities, social science, and science-oriented students who have an interest in understanding the inner-workings of two important aspects of human societies: technology and economy.

Area: Humanities

AS.130.149. 'Egyptomania': A Consumer's Guide to Ancient Egypt. 3 Credits.

Chances are you've heard of Cleopatra and the curse of King Tut's tomb. You may have even met a mummy or two, whether in the flesh or on the silver screen. Even today, 5,000 years after the dawn of Egyptian civilization—and half-way around the globe—the land of the pharaohs continues to fascinate the Western world. But, how is it that ancient Egypt came to be so deeply entrenched in Western culture? This course considers the history of Western interaction with ancient Egypt and examines the consequences of laying claim to a culture that is not one's own. We will approach our study through the lens of consumption, both material and cultural, situating these phenomena within their historical and contemporary contexts. By engaging with both primary and secondary sources, we will consider the power relations embedded in Egyptian archaeology and the writing of history as well as the ethics of collecting and displaying ancient Egyptian material culture. We will also investigate the popularization of ancient Egypt known as "Egyptomania," focusing on the commoditization of ancient Egyptian culture in Western media and merchandise. By the end of the class, students will be able to engage with the complex, yet fundamental, question of who owns culture and what is at stake when we uncritically consume an image of the past.

Area: Humanities

AS.130.148. Freshman Seminar: The Development of Useful Things: A Comparative Approach to the Study of Technology and Economy in the Ancient World. 3 Credits.

This archaeology course will provide an overview of technological developments in the ancient world (from the Neolithic period to the beginning of the first millennium CE) and will explore their effects on the organization of economies and societies. Each week we will discuss a technological innovation and assess its impact on the societies that introduced it. This course will focus primarily on developments and case studies from the ancient Near Eastern and eastern Africa. We will depart from this trajectory to engage in relevant comparisons with developments occurring in other areas of the ancient world. Throughout the course, social aspects of technologies will be explored alongside economic aspects. In addition to focusing on the development of technologies as "objects" (stone tools, pottery, metals, etc.), we will study non-material technologies, that arose as solutions to practical problems and have altered the world in important ways (agriculture, animal domestication, writing, etc.). This course approaches past technologies from a number of different perspectives: (1) by learning about particular anthropological and archaeological case studies, (2) by engaging with scholarship focusing on major theoretical and philosophical themes, (3) by engaging with ethnographic research, both in the form of articles and in the form of documentaries, and (4) by means of thought experiments and debates. This course will benefit humanities, social science, and science-oriented students who have an interest in understanding the inner-workings of two important aspects of human societies: technology and economy.

Area: Humanities

Area: Humanities

AS.130.170. Diplomacy and Conflict in the Ancient Middle East. 3 Credits.

The Middle East is home to the invention of agriculture, cities, and writing. It is also in the Middle East that we find evidence of humanity's earliest diplomatic activity in, for instance, the actual letters sent by ancient kings to one another, the treaties drawn up after their conflicts, and the inscriptions that commemorate their conquests. In this course, we examine texts such as these to explore questions such as: How do we characterize the international system of the ancient Middle East? Does this system change over the approximately two millennia for which we have documentation? Is it better to approach ancient diplomacy through present-day eyes or in the context of ancient world-views? Is an understanding of diplomacy in the ancient Middle East relevant to our understanding of modern international relations? All texts read in translation.

Area: Humanities

AS.130.174. Scientists and Soothsayers: The Pursuit of Knowledge in Ancient Egypt. 3 Credits.

The ancient world viewed Egypt as a repository of wisdom and learning, and even today, Egypt possesses in the modern consciousness a reputation for secret knowledge. From within Egypt, a diverse corpus of texts meant to record and transmit knowledge have survived and attest to Egyptian "scholarship." This course will focus on what kinds of knowledge belonged to this written tradition (3000 BCE to 300 CE) and how those texts reflected broader social and cultural norms. This course will also consider, where relevant, the relationship between the intellectual traditions of Egypt and other societies of the ancient world, particularly Greece and Mesopotamia. Strong correlations between the Egyptian material and modern intellectual and scientific traditions, such as mathematics, astronomy, and medicine exist; but magic, divination, and religion were often treated in the same systematic, critical manner by the Egyptians. Thus the course will challenge modern understandings of science, and modern dichotomies such as rational versus irrational. After a brief introduction to Egypt, the first few weeks will concern who created these texts, who had access to them, and their physical and intellectual milieu. Then, each week will cover a particular area of knowledge, its primary sources, social and multicultural context, and its relationship to the theoretical themes of the course.

Area: Humanities

AS.130.177. World Prehistory: An Anthropological Perspective. 3 Credits.

How and why did our nomadic hunting and gathering ancestors become farmers? What led agricultural societies to build cities, develop writing, and religion? How did early states develop, and what role did war play in development? This course surveys prehistory and ancient history from the origins of human culture to the emergence civilization. Although prehistory and ancient history yield evidence of tremendous cultural diversity this course emphasizes common elements of past human experience, culture, and culture change. These include the origins of modern humans and their adjustment to a variety of post-ice age environments, shifts from hunting and gathering to agricultural lifeways, and the initial development of the world's earliest cities and civilizations.

Area: Humanities, Social and Behavioral Sciences
AS.130.202. Ancient Mythology. 3 Credits.
This course explores the mythology of the ancient Near East from the invention of writing in Sumer in 3000 B.C. until the conquest of Alexander the Great near the end of the first millennium B.C. Mythological texts from Mesopotamia, Egypt, Anatolia, the Levant, and the Bible will be read from a comparative perspective. Special attention is paid to the origin and development of the epic, culminating in the great Epic of Gilgamesh, but considerable time is also given to the vast mythological and historical literature, and such diverse genres as love poetry, proverbs, humorous dialogues, Omens, and legal and medical texts. All readings are in English translation.
Area: Humanities

AS.130.203. Archaeology of Africa: From Human Origins to the Emergence of Civilizations. 3 Credits.
This course examines Africa's ancient past from the emergence of biologically modern humans, ancient hunter-gatherers, the earliest animal herding and farming populations, to cities and civilizations. While Egypt plays an undeniably central role in world history, this course concentrates in particular on ancient geographies other than Egypt.
Area: Humanities

AS.130.205. Tutankhamun and His Time. 3 Credits.
The reign of Tutankhamun ended a period of fascinating upheaval in ancient Egypt, when a king attempted to stamp out the traditional gods and introduce monotheism. He changed the art of Egypt radically and built a new city from which to rule. This course covers the second half of the 14th century B.C., including the time of the heretic king Akhenaten, his wife Nefertiti, and his possible son Tutankhamun who ruled over all Egypt as a boy. So many questions still exist about this time and so many surprising ideas have been put forward to explain them. We will pursue as many as we can. Illustrated lectures will combine with group and individual presentations by students, supplemented with videos and online discussions with scholars who study this time period.
Area: Humanities

AS.130.206. Distilling the Ancients: An Anthropological Approach to Alcohol in the Ancient World. 3 Credits.
The consumption of alcohol is one of the oldest known human practices. Almost every culture has some type of mind-altering beverage that influences and shapes many facets of society. This course is a cross-cultural examination of the power and significance of alcohol in the ancient world. From the Neolithic to the Classical symposium to the Egyptian festival, the importance of communal drinking—alcohol or otherwise—is a unifying factor across the ancient world. This class will unpack the impact and significance of alcohol across a wide-range of ancient cultures, and examine what the study of alcohol might reveal about ancient societies. This includes alcohol as medicine, its religious and ritual functions, alcohol as a community unifier (and divider) and identity builder, and its practical and economic uses. Students will apply anthropological and archaeological theories to understand why, how, and to what effect humans drink.
Area: Humanities

AS.130.214. The Origins of Civilization: A Cross-Cultural Perspective. 3 Credits.
One of the most significant transformations in human history was the "urban revolution" in which cities, writing, and social classes formed for the first time. In this course, we compare five areas where this development occurred: China, Mesopotamia, the Indus Valley, Egypt, and Mesoamerica (Mexico/Guatemala/Honduras/Belize). In each region, we review the physical setting, the archaeological and textual evidence, and the theories advanced to explain the rise (and eventual collapse) of these complex societies.
Area: Humanities, Social and Behavioral Sciences

AS.130.216. History of the Jews in Modern Times, from the Middle Ages to 1917. 3 Credits.
A broad survey of the significant political and cultural dynamics of Jewish history in the Medieval, Early-Modern, and Modern Eras.
Area: Humanities

AS.130.218. Language and Society. 3 Credits.
We all use language every day—not just to communicate information, but to communicate who we are. How does this work? What do our language choices tell others about us? This course will consider some of the ways in which language and society are entangled—both the ways that different social categories are encoded in language, and the ways that groups of people use language to define themselves. Along the way, the course will address questions of dialect, diglossia, multilingualism, style, language planning, politeness, language and gender, language and power, and more. This course is designed for students without a background in linguistics. During the semester students will learn the basic research methods used by sociolinguists, then complete a project on a topic of their choosing.
Area: Humanities

AS.130.244. The Archaeology of Animals: An Introduction to Zooarchaeology. 3 Credits.
This course is intended to introduce students to the discipline of zooarchaeology, the study of animal remains from archaeological sites. Humans have long depended on their animal counterparts not only for nutritional value, but for their economic, symbolic, and social value, making the study of animals in the human past deeply revealing of the entangled worlds that humans and animals lived in together. In service of this investigation, zooarchaeology, or the study of animal remains from archaeological sites, has developed interdisciplinary techniques in order to address archaeological questions. Zooarchaeology has the ability to provide insight into ancient human behavior around the world including economic strategies, dietary practices, religious observances, ecological interactions, and more. The course will introduce students to the basics of archaeological investigation and the identification of faunal osteological remains on archaeological sites, as well as some of the basic tools and techniques used to derive meaningful conclusions from primary data. Students will be introduced to the principles of comparative anatomy and the major elements of mammalian, avian, and fish skeletons. Students will also be taught to recognize significant markers for taphonomy, sex, butchery, age, and pathology and how this information is used to generate archaeological knowledge. Supplementary readings that help illustrate the application of these techniques to archaeological interpretation will be provided and discussed in class.
Area: Humanities
AS.130.259.  Ancient Science.  3 Credits.
A survey of scientific practices and technological innovations in the ancient world, including astronomy, medicine, law, and divination. Special attention will be devoted to the relationship between magic and science during the periods covered.
Area: Humanities, Social and Behavioral Sciences

AS.130.300.  History of Ancient Mesopotamia.  3 Credits.
A survey of the history of Sumer, Babylonia, and Assyria.
Area: Humanities

AS.130.301.  History of Ancient Syria-Palestine.  3 Credits.
A survey of the history of Ancient Syria and Canaan, including Ancient Israel.
Area: Humanities

AS.130.302.  History: Ancient Syria-Palestine II.  3 Credits.
A survey of the history of Ancient Syria and Canaan, including ancient Israel. Taught with AS.134.661. Cross-listed with Jewish Studies.
Area: Humanities

AS.130.303.  Cleopatra's Egypt: Ptolemaic-Roman Egypt.  3 Credits.
This lecture course is a survey of the history, society, and culture of Graeco-Roman Egypt. We will concentrate on Ptolemaic Egypt (ca. 332-30 B.C.), but will also devote some time to Roman Egypt, especially to the subjects of the decline of paganism and spread of Christianity in Egypt.
Area: Humanities

AS.130.304.  Ancient Egypt /Africa.  3 Credits.
Recent excavation and research have shed light on several ancient cultures of the Nile and its tributaries. We will look at the available archaeological and textual (all Egyptian) evidence for these societies and their interactions with Egypt between 3500 and 300 B.C. We will also discuss research aims and methods employed now and in the past in Egypt and the Sudan.
Area: Humanities

AS.130.330.  The Garden of Eden.  3 Credits.
References to the story of the Garden of Eden can be found in every significant issue of our time, from sex to politics, from race to the environment. The course will examine the story itself as well as how it's been interpreted, leading up to today. Enthusiastic participation required.
Area: Humanities

Writing Intensive

AS.130.334.  Egyptian Funerary Arts in the Archaeological Museum.  3 Credits.
This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum's website and present their results for inclusion in the museum cataloguing project.
Area: Humanities

AS.130.341.  Traditionalism vs. Orthodoxy in the Modern Era: The Case of Judaism.  3 Credits.
During the Modern Era in European history, the Traditionalist Jewish civilization of Europe that had evolved over many centuries went into deep crisis. The new political, social, and intellectual realities which characterized Modernity seriously challenged, overwhelmed, and indeed threatened to destroy the Jewish Traditionalist culture and society. In response, different Traditionalist thinkers and communities evolved a number of strategies for surviving in a modern environment, strategies that unexpectedly transformed Traditionalism into something different, which came to be called Orthodox Judaism. This course explores this process of transformation, which has had an important impact on Jewish life in the modern and post-modern eras. Cross-listed with Jewish Studies.
Area: Humanities

AS.130.343.  Dead Sea Scrolls-English.  3 Credits.
A survey of the manuscripts found at Qumran and other sites near the Dead Sea.
Area: Humanities

AS.130.346.  Introduction to the History of Rabbinic Literature.  3 Credits.
Broadly surveying classic rabbinic literature, including the Talmud and its commentaries, the legal codes and the response, this seminar explores the immanent as well as the external factors that shaped the development of this literature, the seminal role of this literature in Jewish self-definition and self-perception, and the role of this literature in pre-modern and modern Jewish culture.
Area: Humanities

AS.130.348.  Religious Law Wrestles With Change: The Case of Judaism.  3 Credits.
Description: "How does a religious system which defines its ancient laws as God-given and unchangeable apply them to radically different and changing social, political and intellectual situations? This course explores the literature of 'Questions and Answers' (She'elot u-Teshuvot), the Jewish legal responsa which have struggled to match Jewish religious law to modern life for fifteen centuries. A sweeping survey of Jewish history as revealed by one of its most impenetrable yet fascinating sources. Cross-listed with Jewish Studies.
Area: Humanities

AS.130.353.  Space Archaeology: An Introduction to Satellite Remote Sensing, GIS and GPS.  3 Credits.
This course introduces technologies archaeologists use to map ancient landscapes. These include Geographic Information Systems (GIS) mapping software, advanced Global Positioning System (GPS) receivers, and various types of satellite imagery. Taught together with AS.131.653.
Area: Natural Sciences, Social and Behavioral Sciences

AS.130.354.  Archaeological Method and Theory.  3 Credits.
Climate change, population growth, war - what questions do archaeologists ask about the ancient past, how do they collect relevant evidence, and how do they arrive at satisfying answers to their questions? This course will review major theoretical currents in archaeology including evolutionary, cultural-historical, processual and post-processual approaches and discuss the future of archaeology as a scientific and humanistic discipline. Basic techniques for analyzing major categories of artifacts such as lithics, ceramics, archaeobotanical, and zooarchaeological materials will also be introduced.
Area: Humanities, Social and Behavioral Sciences
AS.130.364. Archaeology of Arabia. 3 Credits.
This course examines the archaeology of the Arabian Peninsula from the earliest Paleolithic in the region (c. 1.5 million years ago) through the first few centuries of the Islamic era (c. 1000 AD). We will review basic geology and environmental conditions, examine the development of animal herding and crop cultivating lifeways, and scrutinize the rise of ancient South Arabian complex societies and civilizations. Co-listed with AS.131.664.
Area: Humanities

AS.130.368. Nomads, Tyrants and Kings: Water in the Ancient Near East. 3 Credits.
This course explores economic and social histories of water in the ancient Near East. It examines water’s diverse roles in ancient Mesopotamian, Egyptian, Levantine and South Arabian agriculture, politics, ritual and religion, including water’s interconnected significance in Judaism, Christianity, and Islam. Taught jointly with AS.131.615.
Area: Humanities

AS.130.373. Prophets and Prophecy in the Bible. 3 Credits.
From thundering voices of social justice to apocalyptic visionaries, biblical prophets have been revered by Jews, Christians and Muslims for thousands of years. They have inspired civic leaders such as Martin Luther King Jr. yet also provided fodder for modern charlatans promising a utopian future. Yet who were these individuals (orators? politicians? diviners? poets?) and what was the full range of their message as set against the Realpolitik world of ancient Israel, Iraq, Egypt, Syria and Jordan?
Area: Humanities

AS.130.376. Ancient Magic and Ritual. 3 Credits.
This course will introduce students to the vast body of rituals that were practiced and performed in antiquity, with a particular emphasis on rituals from ancient Mesopotamia, Egypt, and the Hebrew Bible. In addition to examining rituals from a comparative perspective, anthropological and sociological studies of ritual will be read and discussed to shed light on the social, cultural, and political significance of ritual in the ancient world and beyond.
Area: Humanities

AS.130.378. Geoarchaeology: Applications of Earth Science to Archaeology. 3 Credits.
Geoarchaeology is a multidisciplinary subfield that applies the tools and techniques of earth science to understand ancient humans and their interactions with environments. This course examines basic topics and concepts, including archaeological site formation, paleo-environmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar.
Area: Natural Sciences, Social and Behavioral Sciences

AS.130.379. The Development of Useful Things: Technology and Economy in the Ancient World. 3 Credits.
This course provides an overview of technological developments in the ancient world, by foregrounding the development of objects (stone tools, pottery, metals) and of non-material technologies (agriculture, animal domestication, writing).
Area: Humanities

AS.130.381. Elementary Akkadian. 3 Credits.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language. Co-listed with AS.132.600.
Area: Humanities

AS.130.382. History of Mesopotamia II. 3 Credits.
A survey of the history of Sumer, Babylonia, and Assyria.
Area: Humanities

AS.130.383. Elementary Akkadian II. 3 Credits.
An introduction to the paleography, grammar, and lexicon of the Akkadian language, and the reading of simpler texts in that language.
Area: Humanities

AS.130.384. Old Kingdom Art. 3 Credits.
This course will explore the artistic expression of Egyptian culture from the 3rd through the 6th Dynasties, ca. 2700-2100 B.C. Tombs, temples, statuary, and two-dimensional wall decoration provide a large visual vocabulary of Egyptian concepts. This class will look at these elements, separately and in combination in order to consider the intentions behind the art and evaluate the degree to which religious and ideological symbolism, known from later Egyptian art, should be understood in the early pyramid-building era.
Area: Humanities

AS.130.387. The Poetics of Biblical Prose and Verse. 3 Credits.
An exploration of how ancient Israelite techniques of literary textual and inter-textual patterning contributes to cohesion and meaning in biblical prose and verse. Attention will be given to the distinguishing characteristics of Hebrew verse in relation to prose, and to a range of different kinds of prose in Israelite literature. These poetics will be exemplified in close readings of selected texts from the Hebrew Bible in English.
Area: Humanities

AS.130.388. Elementary Sumerian. 3 Credits.
An introduction to the paleography, grammar and lexicon of the Sumerian language, and the reading of simpler texts in that language.
Area: Humanities
AS.130.389. Elementary Sumerian II. 3 Credits.
An introduction to the paleography, grammar and lexicon of the Sumerian language and the reading of simpler texts in that language.
Area: Humanities

AS.130.395. Being in Ancient Egypt: Ethnicity, Sexuality, and Gender. 3 Credits.
What was it like to live in ancient Egypt? At first this question may seem deceivingly straightforward. But with further thought, its complexity becomes clear. Who are we concerned with? How the king lived? A poor farmer? His wife or children? A foreign immigrant? Moreover, what is our evidence for life in Egypt? Do all of the sources support similar interpretations? This course will begin to tackle these questions by considering the experiences of different people in ancient Egypt.
Area: Humanities

AS.130.400. Introduction To Middle Egyptian. 3 Credits.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2055-1650 B.C.). In the second semester, literary texts and royal inscriptions will be read. Course meets with AS.133.600.
Area: Humanities

AS.130.401. Introduction To Middle Egyptian. 3 Credits.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2055-1650 B.C.). Co-listed with AS.133.601.
Prerequisite(s): AS.130.400 or equivalent.
Area: Humanities

AS.130.420. Seminar in Research Methods in Near Eastern Studies: Religion and Science. 3 Credits.
This writing intensive seminar examines the relationship between religion and science in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, and through engagement with scholarly literature pertaining to the topic of the course, students will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Humanities
Writing Intensive

AS.130.440. Elementary Biblical Hebrew. 3 Credits.
Introduction to the grammar, vocabulary, and writing system of biblical Hebrew.
Area: Humanities

AS.130.441. Elementary Biblical Hebrew. 3 Credits.
Survey of grammar and reading of simple texts. (Credit given only on completion of AS.130.440 and AS.130.441). May not be taken on a satisfactory/unsatisfactory basis.
Area: Humanities

AS.130.442. Readings - Hebrew Prose. 3 Credits.
Reading of biblical Hebrew prose, especially from the Pentateuch, Joshua, Judges, Samuel, and Kings. Cross-listed with Jewish Studies.
Area: Humanities

AS.130.443. Reading Of Hebrew Prose. 3 Credits.
Reading of Biblical Hebrew prose, especially from the Pentateuch, Joshua, Judges, Samuel, and Kings.
Area: Humanities

AS.130.446. Readings - Hebrew Narrative and Poetry. 3 Credits.
Intermediate readings in a variety of narratives with some exposure to poetic text.
Area: Humanities

AS.130.447. Readings - Hebrew Narrative and Poetry. 3 Credits.
Intermediate readings in a variety of narratives with some exposure to poetic text. A continuation of AS.130.446.
Area: Humanities

AS.130.501. Readings & Research. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service.
Registration &gt; Online Forms.

AS.130.504. Independent Study. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service.
Registration &gt; Online Forms.

AS.130.505. Independent Study-Archaeology Fieldwork. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service.
Registration &gt; Online Forms.

AS.130.506. Independent Study-Archaeology Fieldwork. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service.
Registration &gt; Online Forms.

AS.130.510. Archaeology Major Honors Thesis I. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service.
Writing Intensive

AS.130.511. Archaeology Major Honors Thesis II. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service.
Registration &gt; Online Forms.

AS.130.550. Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service.
Registration &gt; Online Forms.

AS.131.600. Seminar Near Eastern History: Egypt.
Seminar in Near Eastern History: Mesopotamia

A three-year history cycle required of all graduate students and forming the core of our graduate program. One year each will be devoted to Egyptian history, Mesopotamian history, and Syro-Palestinian history.

AS.131.613. Archaeology of Africa: From Human Origins to the Emergence of Civilizations.
This course examines Africa’s ancient past from the emergence of biologically modern humans, ancient hunter-gatherers, the earliest animal herding and farming populations, to cities and civilizations. While Egypt plays an undeniably central role in world history, this course concentrates in particular on ancient geographies other than Egypt.
Area: Humanities

Topic varies but can include the archaeology of Mesopotamia, Syria, or Palestine, or thematic discussions (e.g., on ideology, state collapse, etc.).

AS.131.635. Seminar: Near East Archaeology.
Topic varies but can include the archaeology of Mesopotamia, Syria, or Palestine, or thematic discussions (e.g., on ideology, state collapse, etc.).
Area: Humanities
AS.131.653. **Space Archaeology: An Introduction to Satellite Remote Sensing, GIS and GPS.**
This course introduces technologies archaeologists use to map ancient landscapes. These include Geographic Information Systems (GIS) mapping software, advanced Global Positioning System (GPS) receivers, and various types of satellite imagery. Taught together with AS.130.353. Area: Natural Sciences, Social and Behavioral Sciences

AS.131.654. **Advanced Archaeological Method and Theory.**
Climate change, population growth, war - what questions do archaeologists ask about the ancient past, how do they collect relevant evidence, and how do they arrive at satisfying answers to their questions? This course will review major theoretical currents in archaeology including evolutionary, cultural-historical, processual and post-processual approaches and discuss the future of archaeology as a scientific and humanistic discipline. Basic techniques for analyzing major categories of artifacts such as lithics, ceramics, archaeobotanical, and zooarchaeological materials will also be introduced. Area: Humanities, Social and Behavioral Sciences

AS.131.657. **Geographic Information Systems in Archaeology.**
Applications of GIS in archaeology have recently expanded dramatically and GIS has now become an indispensable tool for archaeological research worldwide. This course will introduce the major applications of Geographic Information Systems (GIS) in archaeology. These include the history of GIS in archaeology, air photography and satellite imagery, predictive modeling, hydrological modeling, viewsheds, and least-cost routes. It will grapple with theoretical issues manifest in archaeological GIS including conflicts between environment and social understandings of the ancient past, and will foster discussion of issues that affect outcomes of analyses including spatial scale and boundary delineation choices that can dramatically influence results. Students will learn the basics of ESRI's ArcGIS software. Taught with AS.130.357. Area: Humanities, Natural Sciences

AS.131.664. **Archaeology of Arabia.**
This course examines the archaeology of the Arabian Peninsula from the earliest Paleolithic in the region (c. 1.5 million years ago) through the first few centuries of the Islamic era (c. 1000 AD). We will review basic geology and environmental conditions, examine the development of animal herding and crop cultivating lifeways, and scrutinize the rise of ancient South Arabian complex societies and civilizations. Co-listed with AS.130.364.

AS.131.678. **Geoarchaeology: Applications of Earth Science to Archaeology.**
Geoarchaeology is a multidisciplinary subfield that applies the tools and techniques of earth science to understand ancient humans and their interactions with environments. This course examines basic topics and concepts, including archaeological site formation, paleoenvironmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar. Area: Natural Sciences, Social and Behavioral Sciences

AS.131.800. **Readings & Research.**
AS.131.801. **Readings And Research.**
Area: Humanities

AS.131.848. **Dissertation Research.**

AS.131.849. **Dissertation Research.**

AS.132.600. **Elementary Akkadian.**
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language.

AS.132.601. **Elementary Akkadian II.**
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language. Undergraduates admitted to this course earn 4.5 credits per semester. Area: Humanities

AS.132.606. **Intermediate Akkadian Texts.**
In this course a selection of intermediate level Akkadian texts from different genres and period will be read, analyzed and discussed. To build on skills learned in Introduction to Akkadian, specific emphasis will be placed on understanding more advanced grammatical forms and learning how to critically use research tools like the Chicago Assyrian Dictionary and von Soden's Akkadisches Handwoerterbuch. Area: Humanities

AS.132.607. **Intermediate Akkadian Texts.**
In this course a selection of intermediate level Akkadian texts from different genres and period will be read, analyzed and discussed. To build on skills learned in Introduction to Akkadian, specific emphasis will be placed on understanding more advanced grammatical forms and learning how to critically use research tools like the Chicago Assyrian Dictionary and von Soden's Akkadisches Handwoerterbuch.

AS.132.608. **Akkadian Letters.**
This course introduces students to letters written in the Akkadian language from a variety of historical periods. Recommended course background: AS.132.600 and AS.132.601. Area: Humanities

AS.132.609. **Seminar in Research Methods in Near Eastern Studies: Religion and Science.**
This writing intensive seminar examines the relationship between religion and science in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, and through engagement with scholarly literature pertaining to the topic of the course, students will develop skills in specific research skills such as critical reading, analysis, and interpretation.

Area: Humanities

Writing Intensive

AS.132.612. **Advanced Akkadian.**
Students read texts in the original Akkadian cuneiform with attention to their philological, archaeological, historical, and literary features. The seminar topic varies from semester to semester but usually consists either of texts of various genres from a single period (e.g., Neo-Assyrian) or texts of various period from a single genre (e.g., letters). Area: Humanities

AS.132.630. **Akkadian Literary & Religious Texts.**
Students will read a variety of Akkadian texts commonly described as literary in the original cuneiform.

AS.132.631. **Literature and Religious Texts.**

AS.132.644. **Treaties And Diplomacy.**
Reading treaties and related materials in Akkadian.

AS.132.700. **Elementary Sumerian.**
An introduction to the paleography, grammar and lexicon of the Sumerian language, and the reading of simpler texts in that language. Area: Humanities

AS.132.701. **Elementary Sumerian II.**
Area: Humanities
AS.133.640. Late Egyptian Texts.
An introduction to the grammar and texts of Late Egyptian.
Area: Humanities

AS.133.646. Demotic Texts.

AS.133.647. Demotic Texts.
Area: Humanities

AS.133.648. Intro To Coptic.

AS.133.649. Advanced Coptic.
In this class we will read Coptic texts of various genres.

AS.133.706. Egyptian Funerary Arts in the Archaeological Museum.
This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum’s website and present their results for inclusion in the museum cataloguing project.

AS.133.750. Seminar in Egyptian Art and Archaeology: The Amarna Period.
This course will look at the period from the end of the reign of Amenhotep III through that of Horemheb, ca. 1350 to 1300 B.C. Social, religious, and political aspects of the period will be the focus with an emphasis on understanding how radical changes to societal structure, the economy, and foreign policy may have been and what the evidence for this is.

AS.133.751. Seminar in Egyptian Technology: Theban Tombs.
This course will explore the artistic expression of Egyptian culture from the 3rd through the 6th Dynasties, ca. 2700-2100 B.C. Tombs, temples, statuary, and two-dimensional wall decoration provide a large visual vocabulary of Egyptian concepts. This class will look at these elements, separately and in combination in order to consider the intentions behind the art and evaluate the degree to which religious and ideological symbolism, known from later Egyptian art, should be understood in the early pyramid-building era.

AS.134.101. GOD 101: The Early History of God - Origin, Character, Practice. 3 Credits.
In a world of big ideas, there is none larger than that of God. Divinity is an ever-present topic for both religious devotees and hard core secularists—for anyone who embraces the humanities or ponders what makes us human. Humans are, for better and worse, homo-religious (humans who practice religion) as much as homo-sapiens. But what do we know of God historically? How do we go about reconstructing divinity from ancient texts and archaeology? How do we best walk back in time to understand ancient Middle Eastern cultures that gave birth to notions of the divine that have come down to today’s Judaism, Christianity and Islam? This course looks synthetically at the vast topic of God—exploring questions of historical origin, how God was characterized in literature (mythic warrior, king, parent, judge, holy, compassionate) and how God was represented in iconography, both materially and abstractly. Secondly, how did belief intersect with practice? Using the indow of divinity, this course will peer into the varieties of religion experience, exploring the royal use of religion for power, prestige and control balanced against the intimacy of family and household religion. It will probe priestly prerogatives and cultic status, prophetic challenges to injustice, and the pondering of theodicy by poetic sages.
Area: Humanities
AS.134.400. Northwest Semitic Epigraphy. 3 Credits.
This course will provide an introduction to West Semitic dialects as reflected in inscriptions from the first millennium BCE. We will survey the grammar (phonology, morphology, syntax, and lexicon) of epigraphic Hebrew, Phoenician, and known Transjordanian languages (Moabite, Ammonite, Edomite). We will also discuss the methodological challenges inherent to the study of script evolution, scribalism, and the reconstruction of NWS languages through the study of inscriptions. This course will also introduce students to scholarship outside of the field of NWS and Hebrew Bible on literacy, the study of visual grammar, and the socio-semiotic approach to the study of writing.
Area: Humanities

AS.134.408. The Book of Ezekiel. 3 Credits.
A rapid reading course aimed at increasing proficiency in reading the Hebrew text of the book of Ezekiel. Various aspects of translation and interpretation will be studied (e.g., grammar, textual criticism, Philology) including literary, historical, and theological questions.
Area: Humanities

AS.134.450. Seminar in Hebrew: Archaic Biblical Poetry. 3 Credits.
Area: Humanities

AS.134.604. The Book of Job.
Reading the Hebrew text of the book of Job with attention to philology, textual criticism, and various aspects of interpretation.
Area: Humanities

Translation, textual, philological, prosodic, literary and thematic analysis of Isaiah 40-55, with focus on how Hebrew verse as distinct from prose is constructed.
Area: Humanities

AS.134.606. The Deuteronomistic History and the Construction of Israelite Identity.
The Deuteronomistic History is one of the most enduring and influential theories in modern biblical scholarship. Though this theory has been criticized in recent years and no longer enjoys unanimous support, it still serves as a baseline for many scholars in the field. Whether one chooses to accept or reject this theory, discussion of its history and merits raises essential questions concerning the formation of the Hebrew Bible. This includes ancient conceptions of authorship and editing practices, the development of Israelite religious ideology, and the dating of many biblical texts. This course introduces the student to the basic history of the Deuteronomistic History as a scholarly construct, while at the same time engaging in the primary Hebrew texts. Students will read and translate biblical Hebrew for the first half of the class. During the second half of class, students will discuss and evaluate the applicability of each approach to passages in particular and the Deuteronomistic History as a whole. Special focus will be on recent criticism and defense in order to explore its continued viability.
Area: Humanities

AS.134.607. Texts, Tablets, and Tweets: The Sociolinguistics of Writing.
This course examines the evolution of writing and the relationship between speech and writing in ancient and modern societies. We will examine the ways in which orthography, scripts, and the visual components inherent to written language (e.g., scripts, fonts, emoticons, diacritics etc.) are used to create and/or project certain social identities in these new written spaces. A primary aim of this course is to generate discussion regarding the ways in which writing in all of its forms—at the institutional, group, and individual level, in official documents, in emails, texts, tweets, and graffiti, using standardized and non-standard orthographies, in both regulated and unregulated spaces—can be a social and often political act of identity. The writing assignments for the course will encourage you to consider the ways in which writing can be harnessed to express social identities. You will work as a group to develop your own writing system and present it to the class. This will hone your creative and critical thinking skills and give you practice collaborating on a project. You will also research and conduct an original analysis on a corpus of writing.
Area: Humanities

A rapid reading course aimed at increasing proficiency in reading the Hebrew text of the book of Ezekiel. Various aspects of translation and interpretation will be studied (e.g., grammar, textual criticism, Philology) including literary, historical, and theological questions. Cross-listed with Jewish Studies.

AS.134.610. Historical Hebrew Grammar.
Phonology and morphology of Biblical Hebrew.

AS.134.612. Qumran Aramaic.
Readings in the Aramaic texts from Qumran, such as the Prayer of Nabonidus, the Genesis Apocryphon, Targum of Job, and the Enochic literature. Basic ability to read Aramaic is necessary.
Area: Humanities

AS.134.621. Textual Criticism.
An introduction to the ancient witnesses of the biblical text and the principles of textual criticism.

AS.134.623. Pentateuch.
This course surveys the linguistic and literary structure of the Pentateuch. A second and equally important focus will be the history of scholarship and its broader impact on the study of the history and religion of ancient Israel and Judah.
Area: Humanities

AS.134.650. Seminar in Hebrew: Book of Jeremiah I.
Translation and analysis of selected texts in Biblical Hebrew giving attention to advanced features of grammar and syntax. Topic: 'Book of Jeremiah I'.

AS.134.652. Seminar in Ancient Israelite Religion.
Topics include history of scholarship, methodology, representations of deity, the aniconic tradition, solar Yahwism, sacred space, blood rituals, passover, royal cult, family religion, divination, prophecy, incantations, etc.

AS.134.655. Comparative Semitics.
Comparative and historical analysis of the Semitic languages in their Afro-Asiatic context.

AS.134.660. History of Ancient Syria/Palestine.
A survey of the history of Ancient Syria and Canaan, including Ancient Israel.
AS.134.661. History: Ancient Syria-Palestine II.
A survey of the history of Ancient Syria and Cannan, including Ancient Israel.
Area: Humanities

AS.134.720. Ugaritic I.
A year-long course studying Ugaritic language and literature. The first semester will focus on grammar and translating a representative selection of mythological texts. The second semester will concentrate on ritual texts. The course will also be epigraphic in nature using both conventional and digital techniques.

AS.134.721. Ugaritic II.
A continuation of AS.134.720 with emphasis on the mythological and ritual texts from Ugarit. A digital epigraphy lab will also form part of the course.
Area: Humanities

AS.134.744. Survey Of Aramaic Texts.
Area: Humanities

An advanced course in Aramaic devoted to the study of Old Aramaic inscriptions. We will be translating and analyzing a selection of texts from Northern Syria (e.g. Bar-Rakib; Hadad; Kuttamuwa, Nerab, Panamuwa, Sefire, Zakkur), Southern Syria (e.g. Bar-Hadad/Melqart Stela, Hazael, Tel Dan) and Northern Mesopotamia (e.g. Tell Fakhariah). Students will be expected to vocalize such texts as a study in historical and comparative linguistics and to clarify their understanding of the morphology and syntax.
Area: Humanities
AS.136 (ARCHAEOLOGY)

AS.136.101. Introduction To Archaeology. 3 Credits.
An introduction to archaeology and to archaeological method and theory, exploring how archaeologists excavate, analyze, and interpret ancient remains in order to reconstruct how ancient societies functioned. Specific examples from a variety of archaeological projects in different parts of the world will be used to illustrate techniques and principles discussed.
Area: Humanities, Social and Behavioral Sciences
AS.140 (HISTORY OF SCIENCE, MEDICINE, AND TECHNOLOGY)

AS.140.105. History of Medicine. 3 Credits.
Course provides an overview of the medical traditions of six ancient cultures; the development of Greek and Islamic traditions in Europe; and the reform and displacement of the Classical traditions during the Scientific Revolution.
Area: Humanities, Social and Behavioral Sciences

AS.140.106. History of Modern Medicine. 3 Credits.
The history of Western medicine from the Enlightenment to the present, with emphasis on ideas, science, practices, practitioners, and institutions, and the relationship of these to the broad social context.
Area: Humanities, Social and Behavioral Sciences

AS.140.108. Freshman Seminar: Culture, Communication & Technology. 3 Credits.
This seminar traces the evolution and impact of oral transmission, writing, print, photography, film, and electric and electronic media of communication from antiquity to the present. Readings, films, discussion.
Area: Humanities, Social and Behavioral Sciences

AS.140.129. Freshman Seminar: Johns Hopkins Medicine. 3 Credits.
Johns Hopkins medicine has set the standards since the late 19th c. Learn how Hopkins reinvented medical education, public health, and hospital care and meet the people behind the famous names.
Area: Humanities, Social and Behavioral Sciences

AS.140.137. Freshman Seminar: Campus Life, Now and Then. 3 Credits.
What was it that the Hopkins undergraduates of old did all day? Before the AMRs appeared on campus, where did they live? Who played lacrosse or football? Where did they study without the D-Level? What passed for campus social life in those days before women joined the student body? Were fraternity antics all just good clean fun? Any campus pranks achieve truly epic status? Join us for a look at Hopkins history through the eyes of your predecessors. Explore the university archives and work together on an on-line exhibit for Alumni Weekend on campus life through the ages at Johns Hopkins.
Area: Humanities, Social and Behavioral Sciences

AS.140.146. History of Public Health in East Asia. 3 Credits.
This course examines the history of disease, epidemics, and public health responses in East Asia from the 17th-20th centuries. This public health history emphasizes the interactions, connections, and comparisons among China, Japan, Korea, and Taiwan.
Area: Humanities, Social and Behavioral Sciences

AS.140.154. Freshman Seminar: Picture This: A Photographic History of Johns Hopkins University. 3 Credits.
Every picture tells a story, if you know how to read it. This freshman seminar will explore the history of Hopkins through images, creating interactive timelines of important themes in the university's history.
Area: Humanities, Social and Behavioral Sciences

AS.140.156. Harm City? Public Health in Baltimore, 1797 to the present. 3 Credits.
Explores the history of public health in urban America using Baltimore as example. Examines topics such as infectious diseases, mental health, sanitation, rodent control, primary care, substance abuse, and STDs using frameworks of racism, classism, poverty and inequality.
Area: Humanities, Social and Behavioral Sciences

AS.140.176. Public Health in East Asia Through Films & Documentaries. 1 Credit.
This course uses contemporary films and documentaries to address issues in public health in East Asia, past & present. Topics covered include medicine in turn-of-the-twentieth century Japan and China, revolutionary medicine, STDS, mental illness, HIV/AIDS in China, industrial pollution, the politics of universal health care insurance, and pandemics in East Asia.
Area: Humanities, Social and Behavioral Sciences

AS.140.177. Freshman Seminar: Techno-ethics. 3 Credits.
We are all familiar with bio-ethics: dealing with living subjects is an enterprise prone to ethically questionable practices, and we have learned the hard way to raise the ethical questions regarding biomedical projects. But what about technology? Can technology be unethical? Sure, one can design technologies of pain and destruction, or simply ignore regulations and make unsafe products—those technologies would be unquestionably unethical. But what if somebody comes up with new technology with the best intentions in mind? Could those technologies be ethically unsafe? In addition to learning the skills required in college, academia, and professional world, the freshman seminar on Techno-ethics will explore the ethical issues involved in technological designs. Students will learn how to identify groups of people who could be harmed by technologies, how to detect factors that may result in unethical use of technologies, and how to pay attention to social dynamics that could turn even useful technologies into a nightmare.
Area: Humanities, Social and Behavioral Sciences

AS.140.198. Technology and Environment in Japanese Films and Anime. 1 Credit.
In the course of the semester we will watch Japanese films and animation that touch upon topics of technology and environment. The list of screenings includes several blockbusters, classics in film studies, and documentaries. The course is a companion course to 140.398 "Godzilla and Fukushima," but is also open to anyone interested. Students who do not take 140.398 will be required to write a short review paper by the end of the semester.
Area: Humanities, Social and Behavioral Sciences

AS.140.227. Race, Racism and Medicine. 3 Credits.
How can we think about the interconnections between race, theories of race and the practice of medicine? Living at a moment when racial disparities in health outcomes in the United States are still very stark, this course will provide a historically grounded approach to thinking about the roles that race and racism have played in healthcare, the production of health disparities as well as the role of medicine in the development of racist thought. While much of this course will focus geographically within the United States, this class will also explore global histories of medicine, encountering questions of race and medicine in Africa, the South Pacific and Asia. In addition to the analysis of primary source documents and historical texts, students will also be introduced to theoretical approaches to the study of race and racism from W.E.B. DuBois, Sylvia Wynter, Frantz Fanon and others.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive
AS.140.231. Health & Society in Latin America & the Caribbean. 3 Credits.
Healthcare is complex in Latin America and the Caribbean, where many people supplement biomedicine with plant and diet-based remedies, as well as religious and shamanic services. This course will cover the history of health and society in Latin America and the Caribbean from 1750 to the present, covering such topics as: medicine and the Spanish inquisition; disease control and tropical medicine; the medical knowledge of enslaved and indigenous peoples; reproduction and nation-state formation; and healthcare during the Cold War and its aftermath. Throughout, we will also consider the ways in which ideas about race, gender, indigeneity, class, and disability have affected people’s access to healthcare. By the end of the course we will understand why leading scholars have referred to Latin America and the Caribbean as a “laboratory” for the production of medical knowledge. We will discover how that knowledge has been influenced by common people as well as professionals, and how it has influenced medical practice around the world. This is a discussion-based seminar course. It does not assume any previous knowledge of the history of medicine or Latin American and Caribbean history.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.301. History of Science: Antiquity To Renaissance. 3 Credits.
The first part of a three-part survey of the history of science. This course deals with the origins, practice, ideas, and cultural role of scientific thought in Graeco-Roman, Arabic/Islamic, and Medieval Latin/Christian societies. Interactions across cultures and among science, art, technology, and theology are highlighted.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.302. Rise Of Modern Science. 3 Credits.
Survey of major scientific developments from the eighteenth-century Age of Enlightenment to the Cold War era of Big Science.
Area: Humanities, Social and Behavioral Sciences

AS.140.305. From the Compass to Androids: History of Science, Technology, and Medicine in Asia. 3 Credits.
The course explores the history and cultural context of science, medicine, and technology in East Asia, from the ancient Chinese science to the latest scientific and technological developments in Japan.
Area: Humanities, Social and Behavioral Sciences

AS.140.306. Science And Religion. 3 Credits.
Science and religion are crucial influences on Western culture. This course examines their interrelations during the past 2000 years, including the Athens-Jerusalem debate, medieval theology, the Galileo affair, evolution, and current issues.
Area: Humanities, Social and Behavioral Sciences

AS.140.311. Ecology, Health, and the Environment. 3 Credits.
Explores diverse problems linking ecological, environmental and public health themes, with focus on Chesapeake region. Students’ research projects can be outside Chesapeake region.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.314. Experimental Bodies: Histories of Human Subjects Research in the 19th and 20th Centuries. 3 Credits.
This course traces the history of human subjects research as a medical and scientific practice. It will focus on the human subjects themselves, and how their experiences intersect with the histories of race, class, gender, sexuality, and disability.
Area: Humanities, Social and Behavioral Sciences

AS.140.320. Modernity on Display: Technology and Ideology at World’s Fairs. 3 Credits.
Seminar focuses on ideological at World’s Fairs over technological modernity with special emphasis upon World War II and the Cold War. Area: Humanities, Social and Behavioral Sciences

AS.140.321. Scientific Revolution. 3 Credits.
How did the Western understanding of nature change between 1500 and 1720? We'll study the period through the works of astronomers and astrologers, naturalists and magi, natural philosophers and experimentalists, doctors and alchemists & many others.
Area: Humanities, Social and Behavioral Sciences

AS.140.322. Follow the money: Science, technology, and the ‘knowledge economy’, c.1800-present. 3 Credits.
This course examines the historical emergence of knowledge-driven economies, paying special attention to the funding, development, and use of science and technology for commercial purposes.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.324. Commercializing Science: Academic Entrepreneurs from Kelvin to Venter. 3 Credits.
From the nineteenth-century physicist William Thomson (Lord Kelvin) to contemporary geneticists such as Walter Gilbert and Craig Venter, academic scientists and engineers across a broad range of disciplines have created their own companies. This course examines the motives behind these entrepreneurial ventures, the strategies employed, and the factors influencing their success.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.327. Science and Utopia. 3 Credits.
Seminar examines the changing role of science in planning the ideal community from the 17th century to the present. Readings include works by Campanella, Bellamy, H.G. Wells, Orwell, B.F. Skinner and Walt Disney.
Area: Humanities, Social and Behavioral Sciences

AS.140.328. Science and Technology in Slave Regimes. 3 Credits.
What does science and technology look like in slave regimes? This seminar explores this question from a trans-national perspective by comparing cases in the Antebellum US, Cuba, Brazil and other countries.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.339. Science & Technology in the Development of Modern Latin America. 3 Credits.
This seminar will survey the development of science and technology in modern Latin America, and explore their dynamics in the context of cultural, political, and economic forces.
Area: Humanities, Social and Behavioral Sciences

AS.140.341. Humanoid Robots in Global History. 3 Credits.
Humanoid machines reflect their creators’ ideals of humanity. Comparing examples from societies across the globe we will investigate what factors shaped these ideals, and how they manifested in technological design.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.140.342. *We Came in Peace for All Mankind*: America’s Space Program in Historical Context. 3 Credits.
For sixty years space exploration has been a fundamental part of American identity and culture, its imagery and rhetoric invoked everywhere from the Halls of Congress to movie theaters and shopping malls. When, how, and why did spaceflight become central to our nation’s sense of self? We will answer this question through a survey of the history of space exploration and, by proxy, of the United States. America’s celestial achievements are in every way a reflection of its terrestrial concerns: domestic politics, international relations, capitalism, civil rights, science, and contemporary culture.
Area: Humanities, Social and Behavioral Sciences

AS.140.346. History of Chinese Medicine. 3 Credits.
Students will study the most recent anthropological, philosophical, and historical scholarship on medicine in traditional and modern Chinese society. They will approach the topic from several angles including medical pluralism, the range of healers, domestic and literate medicine, gender, emergence of new disciplines, public health and the history of disease. The course relies on secondary sources and primary sources in English translation. Cross-listed with East Asian Studies.
Area: Humanities, Social and Behavioral Sciences

AS.140.347. History Of Genetics. 3 Credits.
Intellectual and social history of the gene concept, including Mendelism, eugenics, medical genetics, DNA, genomics, and personalized medicine.
Area: Humanities, Social and Behavioral Sciences

AS.140.351. Seminar in the History of Life Sciences. 3 Credits.
Students do research projects with faculty supervision, on topics of their choice in the history of biological or biomedical sciences. Projects are presented to class at end of semester.
Area: Humanities, Social and Behavioral Sciences

AS.140.356. Man vs. Machine: Resistance to New Technology since the Industrial Revolution. 3 Credits.
This course analyzes different episodes of “luddism” in the history of science and technology, from the destruction of textile machinery in the early 1800s up to recent controversies about biotechnology and ICT.
Area: Humanities, Social and Behavioral Sciences

AS.140.364. The City Course: Disciplinary Perspectives on Urban Life and Form. 3 Credits.
This course aims, first, at enlarging our understanding of cities by looking at them from a variety of disciplinary perspectives and, secondly, at examining the distinctive ways of thinking associated with disciplines from engineering, the sciences and medicine to anthropology, sociology, economics, archaeology, history and literature. Baltimore and cities from around the world will provide resource material. Lectures, discussions, term projects.
Area: Humanities, Social and Behavioral Sciences

AS.140.366. The American Illness Experience. 3 Credits.
What does it mean to be ill in America? How has the experience of illness in America changed across time and space, from the early 19th century to the present day, from the home, to the hospital, from the community clinic to the rural frontier? How might illness experience be different for Americans across the race, gender, and sexual orientation spectrums? How do medical providers and other caregivers relate to illness, sickness, suffering, and death? In this class we will approach these, and other questions regarding illness through a variety of methodological lenses, including literature, anthropology, sociology, and history. This course will encourage students to think critically about how trends in the history of medicine such as the rise and fall of American public hospital medicine, the regulation and standardization of medical education, improved and expanded medical technologies, and changing attitudes towards childbirth, death, and dying have impacted patient and provider experiences. Throughout the course, students will also take three field trips—to the Ronald McDonald House of Maryland, Johns Hopkins Hospital, and Gilchrist Hospice—and learn from special guests who have experienced particular illnesses as patients or providers. At least one prior course in History of Medicine is recommended but not required.
Area: Humanities, Social and Behavioral Sciences

AS.140.368. Technological Transformations. 3 Credits.
Course explores the historical development of revolutionary technologies and their transformations of the individual and society. Focus on computing, biotech, consumer goods, warfare, manufacturing, agriculture, imaging, energy, transportation, and sustainability.
Area: Humanities, Social and Behavioral Sciences

AS.140.380. Ladies in the Laboratory: Science and Gender in U.S. History. 3 Credits.
Why has science historically been so dominated by men? Why is this still true for many STEM fields today? We will explore the answers to these questions in this course, as well as look at a broader history of women and gender in science in the United States. Because education continues to be crucial in pushing people into or out of scientific careers, this course will also feature a large focus on K-12, college, and graduate science education.
Area: Humanities, Social and Behavioral Sciences

AS.140.381. History of Reproduction. 3 Credits.
This course investigates the history of reproduction in American medicine, science, politics, and culture. It explores changing ideas about reproductive bodies, sexuality, and the family as well as practices of contraception, conception, and childbirth.
Area: Humanities, Social and Behavioral Sciences
AS.140.388. History of the Earth and Environment. 3 Credits.
The earth we know today is very different from that which scientists debated little more than 100 years ago. While scientists today hold the earth to be roughly 4.5 billion years old, at the turn of the 20th century there was little agreement about the earth’s age, and geologists’ estimates did not exceed 100 million years. And while today scientists agree that the continents sit atop lithospheric plates that move and interact, giving rise to volcanoes, earthquakes, mountain ranges, and deep ocean trenches, the earth of the 19th-century was one that was slowly cooling and shrinking. In addition to getting older and less static, the earth of the 20th century also yielded up some of its uniqueness, as it ceased to be the only planet under the purview of those fields that would collectively become known as the earth and planetary sciences.

A Cold War program in planetary exploration of the Moon, Mars and Venus extended inquiry into the other rocky bodies of the solar system and placed what was known about the earth into a broader context. Finally, an environmental movement and the discovery of anthropogenic climate change showed the earth to be more vulnerable and susceptible to human activities than previously imagined. These changes not only affected our intellectual understanding of the earth, they also came along with changes in the way we as a society conceptualize the nature of global problems, their causes and their impacts. In this course we will examine our changing view of the earth and the world in the 20th century with a focus on the interrelatedness of science, society, and culture.

Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.390. Science and Technology in Latin America. 3 Credits.
The course surveys the development of western science and technology in Hispanic America (1492 to the present). We begin studying the hybridization of scientific practices between European and Native American cultures during the early colonial era and end with the transfer of technologies and industrialization of the 20th century. We emphasize the role on scientific and technology in state formation, the acculturation of foreign ideas in colonial and postcolonial societies, and the role of intellectual elites in modernization programs.

Area: Humanities, Social and Behavioral Sciences

AS.140.391. Individualized Medicine from Antiquity to the Genome Age. 3 Credits.
A seminar for advanced undergraduates. We explore the notion of the individual in medicine over twenty-five centuries, from the Hippocratic to the invention of the case study during the Renaissance to the current JHU medical curriculum. The history of medicine survey, AS.140.105 or AS.140.106, is recommended though not required. Graduate students are welcomed but should expect to do additional work and readings.

Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.393. Technology and the Making of the Modern World. 3 Credits.
This course critically examines the role of technology in some of the main developments that have shaped the modern world, ranging from industrialization and globalization processes to the rise of new political ideologies and gender patterns. This course is co-taught by an instructor from the Smithsonian Institution and will include a public history research project.

Area: Humanities, Social and Behavioral Sciences

AS.140.394. Heredity, Eugenics, and Society. 3 Credits.
In this course, we will examine the ways in which concepts of the gene, heredity, and innateness have both shaped and been shaped by society over the last two-plus centuries. Topics under discussion may include: eugenics, biological determinism, scientific racism, human breeding programs, genetics and gender, genetics and intelligence, genetic engineering including CRISPR, assisted reproductive technologies, sociogenomics, and polygenic risk scores. Term paper. AS.140.106 recommended.

Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.395. Prosthetics and Technologies of Disability. 3 Credits.
The purpose of prosthetics seems to be fairly straightforward—to restore function that was lost due to the loss of a body part. According to this logic, the quality of prosthetics is measured in its ability to replicate lost human function and restore individuals with disabilities to normalcy. And indeed, numerous disability technologies enrich the experience of individuals in need of them. At the same time, these very technologies are often perceived as a marker of something abnormal, or, by the nature of their design prove to be an obstacle for mobility and access. Therefore, as much as prosthetics and other technologies of disabilities improve the quality of life, they also led to stigmatization, marginalization, and exclusion. By looking at prosthetics and disability in a variety of historical contexts, we will learn what kind of ideas of ‘normalcy’ they reflect, and how they shape the experience of individuals who use them.

Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.398. Godzilla and Fukushima: Japanese Environment in History and Films. 3 Credits.
Japan is often described as “nature-loving,” and is considered to be one of world leaders in environmental protection policies. Yet current environmental successes come on the heels of numerous environmental disasters that plagued Japan in the past centuries. Juxtaposing Japanese environmental history and its reflection in popular media, the course will explore the intersection between technology, environment, and culture. Students are encouraged to enroll in AS.140.198, “Technology and Environment in Japanese Films and Anime” (1 credit) to attend movie screenings accompanying the course.

Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.401. The Knowledge City: from Silicon Valley to Bloomberg’s New York. 3 Credits.
This seminar will explore the increasingly productive relationship between research universities and urban and regional development in the period after World War II to the present. Working with the faculty, participants will be expected to develop a research paper. Discussion, presentations, lectures.

Area: Humanities, Social and Behavioral Sciences

AS.140.411. Senior Research Seminar. 2 Credits.
Area: Humanities, Social and Behavioral Sciences

AS.140.412. Research Seminar. 2 Credits.
Departmental Majors Writing a Senior Thesis Only
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.140.415. Thinking Through Things and Thinking Things Through. 3 Credits.
Combining hands-on experience of using historical instruments with primary sources analysis, the students will reconstruct the ways in which artifacts channeled human perception of their environment.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.417. Earth Stewardship: A History of Environmentalism in the Atomic Age. 3 Credits.
Explores the history of environmentalism and the roots of modern concepts of sustainability, resilience, and Earth Stewardship. Focuses especially on problems emerging after 1945. Students will do research projects, with options for doing traditional expository writing or a creative arts project.
Area: Humanities, Social and Behavioral Sciences

AS.140.423. Science and Science Fiction in Global Perspective. 3 Credits.
What can we learn from science fiction about the history of science and technology? What ideas about science do Sci-Fi novels manifest? Is the relationship between science and science fiction always the same, across different time periods and geographical areas? This course will explore these questions by taking a comparative perspective. Each meeting we will read a Sci-Fi novel from Europe, America, South and East Asia, and discuss it in conjunction with historical writing about relevant scientific developments. Reading Sci-Fi novels from 17th-century Germany, 19th-century England and India, and 20th-century Japan, China, Korea and the US, the students will explore how actual scientific developments were reflected in fiction, and what fictional depictions say about the aspirations and anxieties provoked by new technologies.
Writing Intensive

AS.140.435. Ways of Knowing: New Histories of Science, Medicine, and Technology. 3 Credits.
What does it mean for science to have a history? Comparing newer approaches with classic works, we will explore different strategies for placing science, medicine, and technology in social context.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.441. Metaphor in Science and Medicine. 3 Credits.
Science and medicine are permeated by metaphors. Generated by every domain of human experience, these metaphors embed scientific and medical thought in historically specific times, places, experiences, issues, attitudes and cultures. We will explore the dynamics of metaphorical thinking and examine such specific examples as "The Great Chain of Being," Darwin's "struggle for existence" and "natural selection," the "reflex" from Descartes to Pavlov to cybernetics, body and mind as clock, factory and computer; illness as imbalance and invasion, and the metaphorical associations of tuberculosis and cancer.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.461. Scripta Manent: Manuscript Cultures East and West. 3 Credits.
This seminar looks at manuscripts both as physical objects and as cultural products, through an analysis of their ways of production, material features, and uses in different cultures and contexts. Meetings will be devoted to the codicology, paleography, and philology of manuscripts with a particular focus on the Greek, Latin, Arabic, Hebrew and Judaeo-Arabic traditions. Indian, Chinese and Japanese contexts will complement the focus of the seminar and provide elements of comparison and wider framing. The seminar will also address recently developed digital tools for the study of manuscripts and provide students with a set of skills and tools for approaching and using manuscript material effectively. The seminar will include hands-on sessions, with viewing of original manuscripts from the rich collections of the Sheridan Libraries and the Walters Art Museum.
Area: Humanities, Social and Behavioral Sciences

AS.140.501. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.140.502. Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

The goal of the seminar is to learn a variety of approaches to the historical investigation of science, medicine, and technology. Students will learn to identify, investigate, and analyze different primary sources, and compare the use of different methods and analytic frameworks for their interpretation. At the same time, students will practice general organization, note-taking, and writing techniques essential for successful completion of a research project.

AS.140.609. Technology and Labor.
In recent years historians, anthropologists, and sociologists of technology show increasing interest in questions of human labor. Adding to the literature that explores emergence, production, and use of technology, the new direction seeks to uncover and to analyze human labor that is necessitated by emerging technologies, and that is often concealed by them. The course will cover several classic works but will mainly focus on recent exciting scholarship that explores the relationship between technology and labor.

AS.140.641. Departmental Colloquium.
Reports by staff members, students, and invited speakers.

AS.140.642. Colloquium.
Reports by faculty, students, and invited speakers.

AS.140.661. Scripta Manent: Manuscript Cultures East and West.
This seminar looks at manuscripts both as physical objects and as cultural products, through an analysis of their ways of production, material features, and uses in different cultures and contexts. Meetings will be devoted to the codicology, paleography, and philology of manuscripts with a particular focus on the Greek, Latin, Arabic, Hebrew and Judaeo-Arabic traditions. Indian, Chinese and Japanese contexts will complement the focus of the seminar and provide elements of comparison and wider framing. The seminar will also address recently developed digital tools for the study of manuscripts and provide students with a set of skills and tools for approaching and using manuscript material effectively. The seminar will include hands-on sessions, with viewing of original manuscripts from the rich collections of the Sheridan Libraries and the Walters Art Museum.
AS.140.663. Crossing Boundaries: Studies in Comparative History. Course takes a comparative look at how scientific ideas, practices, methods, technologies are translated across disciplinary, institutional, and national borders.

AS.140.665. History of Science and Technology in Asia. Graduate level discussion of major historiography of science and technology in East Asia.

AS.140.666. Technology in Context. The course will explore topics in the history of technology focusing on a variety of methodologies pertinent to the subject.

AS.140.669. Special Topics in the History of the Physical Sciences. This seminar will focus upon the history of the physical sciences.

AS.140.670. Special Topics in the History of Physics in Higher Education. This seminar will focus upon the history of the establishment of physics in US higher education 1870-1940. Readings, discussion, papers

AS.140.671. The Cold War in Global Perspective. This seminar will examine the processes of modernization in colonial and imperial situations from the early modern period through the late twentieth century. It will examine the processes both from the point of view of the metropole and of the local population in the British, Spanish, Portuguese, Japanese, Russian, German, American, Dutch and Belgian colonial and imperial situations, and the Ottoman Empire / Turkey.

AS.140.673. The Modern Synthesis in Historical Perspective. Research seminar in history of evolutionary biology

AS.140.674. Science and Medicine in Early Modern Atlantic World Culture. How were changes in scientific and medical ideas reflected in cultural products of the early modern Atlantic world? We will study these ideas as they appeared in literary genres such as poetry, utopias, natural histories and travel narratives. Likewise, we will examine the visual culture of the Atlantic space for clues about changing conceptions about the natural world. Our expedition will encompass Anglophone, French and Hispanic regions, and will pay careful attention to hybrid cultural products that reflect the interaction between indigenous cultures and the (changing) European understanding of the natural world.

AS.140.675. Ford and Fordism: Science, Technology, and Culture in Industrial Society. Seminar will examine the development of an industrial culture in the early 20th century. Topics will include the role of science in the second Industrial Revolution, culture and industrial spirit, the impact of technology and science on the arts and representations of science and technology in museums and popular culture.

AS.140.676. Environmental Engineering in Historical Perspective. Restricted to graduate students in History of Science and Technology who are completing fields.

AS.140.678. Catching Up: Responses to Technical Change in the 19th and 20th Centuries. This research seminar focuses on varieties of paths to modernity by nations in the 19th and 20th centuries as driven by technological change. The approach will be comparative and its reach global. The emphasis will be on preparing a research paper by semester's end.

AS.140.705. History of Science: Antiquity To Renaissance. The first part of a three-part survey of the history of science. This course deals with the concepts, practice, and the cultural roles of scientific thought from classical antiquity to the time of Copernicus. Topics include the pre-Socratics, the systems of Plato and Aristotle and their continuing influence, Islamic science, Latin medieval scholasticism and the universities, and Renaissance hermeticism/natural magic. Interactions across science, art, technology, and theology are highlighted. Lecture meets with AS.140.301

AS.140.708. Rise of Modern Science. Survey of history of science, 18th-20th c. Students are encouraged to attend lectures for 140.302, but seminar may be taken without attending those lectures.

AS.140.710. Scientific Revolution. Reading intensive seminar that studies the events and ideas that transformed western science from Medieval natural philosophy to the experimental sciences (1500-1720s). Lecture meets with AS.140.321.

AS.140.802. Directed Readings & Diss.

AS.140.803. Independent Study-Summer.

AS.140.812. Directed Readings & Diss.

AS.140.832. Directed Readings & Diss.

AS.140.836. Directed Readings & Diss.

AS.140.842. Directed Readings & Diss.

AS.140.843. Directed Reading & Dissertation.

AS.140.844. Directed Reading & Dissertation.

AS.140.845. Directed Readings and Dissertation.

AS.140.854. Directed Readings & Diss.

AS.140.863. Directed Reading and Dissertation.

AS.140.864. Directed Readings and Dissertation.

AS.140.874. Directed Readings & Diss.

AS.140.876. Directed Reading & Dissertation.

AS.140.877. Directed Reading & Dissertation.

AS.140.878. Directed Readings and Dissertation.

AS.140.894. Directed Readings & Diss.

AS.140.896. Directed Readings & Diss.
AS.145 (MEDICINE, SCIENCE AND THE HUMANITIES)

AS.145.101. Death and Dying in Art, Literature, and Philosophy: Introduction to Medical Humanities. 3 Credits.
In this course, four essential aspects of the theme of death and dying will be examined: Death and Medicine; Emotional Responses to Death; Burying and Commemorating the Dead; and Conceptions of Death. Specific topics relating to each of these aspects will be covered include illness and causes of death; prevention of death; suicide; death and grief; burial practices; mourning the dead; public commemoration of the dead; life after death; and death and rebirth. Students will explore these topics from a historical-anthropological perspective with Paul Delnero, a specialist in the history and culture of the ancient Near East (Near Eastern Studies); from a literary perspective, by reading and writing poetry relating to these subjects with the acclaimed poet James Arthur (Writing Seminars); and from a musical perspective, through direct encounters with the music and creative process of the award-winning composer, Michael Hersch (Peabody).
Area: Humanities
Writing Intensive

AS.145.102. The Cosmic Imagination: How Literature Changes Our Understanding of the Universe. 3 Credits.
Since time immemorial humankind has looked to the skies for clues as to our origins, our destiny, and the nature of existence itself. In some ways, one of the hallmarks of western science has been a story of viewing the cosmos in ever-greater clarity and detail. Yet the very nature of the universe—its massive size, the distance and obscurity of its farthest reaches—requires the active intervention of our imaginations to picture it, no matter how powerful the technologies we use. In this course we will look at how western cultures from the middle ages to the present have deployed the literary and philosophical imagination to try to grasp the ungraspable, and how those attempts in some cases helped prepare intellectuals and scientists to make very real advances in understanding the universe.
Prerequisite(s): Students may not take and receive credit for AS.145.102 and AS.211.102.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.145.103. Men, Women, and Melancholy: Premodern Physiologies of Madness. 3 Credits.
Definitions of madness change over time. From Antiquity through the Early Modern period, Melancholia was the predominant form of mental illness, thought to be caused by an imbalance in the bodily humors, resulting in an excess of black bile. The disturbed physiology adversely affected the imagination, which, with memory and intellect, was one of the three functions of the soul. Only gradually did imagination come to be identified with deliberate creativity: from about 1400 to 1800, there were two stereotypical victims of melancholia: male intellectuals and female witches. The disruption of society by witch-hunting was even more radical than the rise of the ‘man of genius.’ At stake were definitions of psychology (‘science of the soul’) and reality (whether witches and demons interacted ‘in the body’ or only ‘in the imagination’). Readings from Plato to Freud.
Area: Humanities
Writing Intensive

AS.145.104. Science, Medicine, Media. 3 Credits.
Much of our understanding of science and medicine is filtered through what we casually refer to as “the media”: newspapers, magazines, television shows, films, and electronic social media. But the scientific world relies on its own media to produce and circulate knowledge: from scientific journals and conferences, to agar plates and petri dishes, cloud chambers and electrophoresis gels. Medical technologies from the stethoscope to the echocardiogram likewise mediate the perception of the body in health and disease, and increasingly our own understanding and perception of our bodies and our health is mediated via screens, scans, images — without which we cannot “imagine” our selves anymore. Students will learn several tools to critically assess the technologies that mediate our knowledge of our own bodies and the broader world.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.145.105. Freshman Seminar. 3 Credits.
Freshman Seminar Course. Topics will vary semestery. See class search for information for the current term.
Area: Humanities
Writing Intensive

AS.145.110. Exploring Medical Careers. 1 Credit.
Many people are unaware of the diversity of medical and health careers. This program introduces scientific knowledge and promotes awareness of a variety of medical and health careers, for example, multiple specialties of physicians, physician assistant, nurse careers, professional therapists (physical, occupational, respiratory, radiation), clinical nutritionist, pharmacist, genetic counselor, medical laboratory scientist, veterinarian, clinical trial professionals, clinical social worker, and public health related careers. Taught by diverse healthcare professionals currently working at Johns Hopkins Hospital System, students will gain meaningful scientific knowledge and practical career knowledge by participating in lectures, labs, hands-on/simulation activities, interviews, and workshops.
Area: Natural Sciences

AS.145.117. Freshman Seminar: Heart Matters. 3 Credits.
To the human imagination, the heart is more than a muscle and thumping pump keeping us alive. From the Renaissance to the present, writers have helped us make sense of our bodies, in health and in illness or pain. Our aim will be to trace the historical, cultural and subjective meanings our minds have given to this “sublime engine.” Our materials will involve a constellation of attentive readings of a literature involving poems, modern fiction as well as recent scientific prose.
Area: Humanities
Writing Intensive
AS.145.201. Clues: Unreasoning the Medical Mystery. 3 Credits.
Pioneering authors of detective fiction, including Edgar Allen Poe, Arthur
Conan Doyle, and Pauline Hopkins, often used medical doctors and
themes in their mystery plots. It’s no coincidence that medicine and
crime fiction share a vocabulary of clues, evidence, and diagnosis. The
mystery genre was integrally tied to the rise of scientific medicine as a
respected profession. Indeed, classic detective stories are practically
propaganda for the scientific method, showing readers how the powerful
tools of observation and inference can solve any problem. Over the
course of the 20th century, not only doctors, but also psychologists,
social scientists and historians adopted the authoritative stance of the
detective in constructing or reconstructing facts. However, as we study
Sherlock Holmes and his modern proteges, such as TV doctor Gregory
House, we will analyze how ‘medical mystery’ narratives can limit our
thinking about problems and solutions in medicine. We will consider post-
modern detective stories that offer alternatives to the ‘Holmsian’ model
for understanding the complex clinical realities of today.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.145.215. Representations of Pain and Suffering in Contemporary
Culture. 3 Credits.
What does it mean to experience pain or encounter the suffering of
another person in our post-truth era? This course explores the changing
representation of pain and suffering in contemporary film, fiction, creative
non-fiction, science and technology. Through analyses and close-readings
of a variety of primary and secondary sources, we will consider the
different ways twentieth- and twenty-first-century historical, cultural,
and media representations have mediated pain and suffering. Such
investigations allow us to understand the workings of pain in the present.
Area: Humanities
Writing Intensive

AS.145.217. Neurofictions: History and Literature of the Mind
Sciences. 3 Credits.
Neuroscience has a long way to go from mapping neural connections to
a precise account of memory, emotion, and consciousness. But the limits
of science have never stopped us from imagining its possible futures.
Engaging two centuries of debate in the mind sciences and in western
culture at large, this course looks at historical attempts to explain and
control human consciousness. By placing each period’s scientific texts in
dialog with contemporaneous science fiction — from Edgar Allan Poe to
Ursula K. Le Guin — we discover how theories about the brain can shape
society while at the same time responding to social contexts.
Area: Humanities

AS.145.219. Sherlock Holmes and Culinary Crime. 3 Credits.
A light-hearted course that explores the world of detective stories.
Through an examination of the mystery genre from its Victorian roots
through the modern period, students will research the techniques of
detection and methods of analysis used by some of the most famous
detectives. This course is for anyone who enjoys good food and
investigation.
Area: Humanities

AS.145.301. Naturalizing the Human Body in Early Modern France: the
Confrontation of Literature, Science and Politics. 3 Credits.
Literature in early modern Europe was essential to the naturalizing of
the human body, a partner in the reshaping of the cultures and disciplines
around it. This course looks at several shifts within major literary works
of the 17th and 18th centuries, a time of great intellectual upheaval, a
moment when the interpenetration of the literary, scientific and political
cultures was such that “art for art’s sake” would have been considered
irresponsible. The primary goals of the course are to allow students to
understand the intrinsic literary value of the texts, but equally to show
how that literary activity, both of writing and of reading, was the vehicle
for the elaboration of the modern mind set. We will focus on three cases:
vision, the body’s “economy” and Body of the State, and the “scandal”
of smallpox vaccination. Texts will include, for example, extracts from:
Newton's Opticks, Cyrano de Bergerac's The States and Empires of the
Sun, Montesquieu’s Persian Letters and Spirit of the Laws, Voltaire's
English Letters, Rousseau's The New Eloise, Laclos’ Dangerous Liaisons,
Guillotine's text inventing the guillotine. For more information, please see
the full course description at http://www.wilda.org/Courses/CourseVault/
Undergrad/Naturalizing/Description.html. This course and texts will be in
English, but readings will also be available in French.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.145.401. In Search of the Human: Ways of Remembering. 3 Credits.
Studying narrative as a way of understanding the complex emotions
associated with illness and the lifecycle has long been recognized
as an important part of clinical training. This course focuses on
autobiographical memory as a particularly important part of forming
a personal narrative. These memories can offer foundations on which
to build an approach to life and its challenges, and they can also be
constraining. The course readings will illustrate how authors of fiction
and scientists have grappled with the task of remembering and studied
the configurations of autobiographical recollection.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.145.502. Medicine, Science & the Humanities Internship. 3 Credits.
An internship in Medicine, Science & the Humanities approved by the
director of the program.
Prerequisite(s): You must request Independent Academic Work using
the Independent Academic Work form found in Student Self-Service:
Registration & Online Forms.
Area: Humanities, Social and Behavioral Sciences

AS.145.510. Medicine, Science & the Humanities Independent
Research. 1 - 3 Credits.
This course is for students in the Medicine, Science & the Humanities
doing independent research. Course can be taken up to 3 credits with
approval from the director.
Prerequisite(s): You must request Independent Academic Work using
the Independent Academic Work form found in Student Self-Service:
Registration & Online Forms.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.145.511. Medicine, Science & the Humanities Independent
Research. 1 - 3 Credits.
This class is for the MSH majors completing their research project.
Instructor approval required.
Prerequisite(s): You must request Independent Academic Work using
the Independent Academic Work form found in Student Self-Service:
Registration & Online Forms.
Area: Humanities, Social and Behavioral Sciences
AS.145.512. Medicine, Science and the Humanities Independent Research. 1 - 3 Credits.
This course is for students in the Medicine, Science & the Humanities doing independent research. Course can be taken up to 3 credits with approval from the director.
AS.150 (PHILOSOPHY)

AS.150.100. Philosophy of Sport. 3 Credits.
This is a course introduces students to philosophical methods by bringing them to bear on the topic of sports and games. We will explore questions about what it is for a certain practice to be a game or a sport (the metaphysics of sport) as well as questions about fair play, performance enhancement, gender equity, and commercialism and corruption in sports (the ethics of sports).
Area: Humanities
Writing Intensive

AS.150.101. Freshman Seminar: Climate Ethics. 3 Credits.
It is no secret that the threat of global climate change raises difficult scientific, technological, and policy questions. However, the threat of global climate change also raises profound ethical questions. For instance, what do present generations owe future generations? Who if anyone should bear more of the burden of mitigating climate change—rich countries or individuals, those more historically responsible for greenhouse gas emissions, those who currently emit the most, or some other group? What exactly is the right distribution? What do residents of relatively-unaffected countries owe to those displaced by climate change? Are we obligated to accept them as refugees, or is it permissible to refuse them entry? Do those countries most responsible for climate change owe reparations to those most affected by it? Do oil companies? Although these and other ethical questions have figured less prominently in public debate and discussions by policymakers in recent years, they are arguably more important because more fundamental: after all, it is ultimately our ethical stances that determine which scientific, technological, and policy questions we think matter and how we think about them. In this class, we will focus on these and other, related ethical questions raised by the threat of global climate change, connecting them where possible with related questions in political philosophy, ethics, and policy.
Area: Humanities

AS.150.109. Philosophy of Information and Data. 3 Credits.
Information and data have become a large part of almost every industry. From technology companies to marketing, from physics to the newsroom, the collection, analysis and interpretation of information and data is central. However, there are a number of philosophical issues that arise in such interpretation. In this course we will investigate these issues. Topics will include foundational issues in information theory, statistical paradigms and probability and the epistemology of machine learning. Emphasis will be placed on critical thinking and clear argumentation.
Area: Humanities, Natural Sciences

AS.150.111. Philosophic Classics. 3 Credits.
The course introduces students to philosophy by critically examining selected texts in the Western philosophical tradition. Philosophers whose ideas will be examined include Plato, Descartes, Rousseau and Nietzsche.
Area: Humanities
Writing Intensive

AS.150.112. Philosophical Problems. 3 Credits.
An introduction to philosophy through several central problems. This year's topics are free will, death, time, and race.
Area: Humanities

AS.150.116. Mortal Questions. 3 Credits.
What is the meaning of life? Is the question well-formed? What does living well require? Does death give human life meaning? What does it mean to say that life is 'absurd'? Are we free to do as we choose? What should we make of human nature or the human condition in light of the great and ever more pervasive technological advances of the present epoch? Will we transform our nature? In light of threats of environmental catastrophes spurred by global warming, nuclear war and the like, what do we make of our daily lives and the activities that compose them? Do those equipped with the relevant capacities and apprised of the relevant information bear a moral obligation to the communities of which they are members? Crucially, these questions require us to reflect deeply on our human values. To address these questions, we will read selected works of philosophers ranging in time from Plato to the present – including both analytic and continental philosophers, men and women, the canonized and otherwise.
Area: Humanities
Writing Intensive

AS.150.118. Introduction to Formal Logic. 3 Credits.
An introduction to symbolic logic and probability. In the first two parts of the course we study formal ways of determining whether a conclusion follows from its premises. Included are truth-functional logic and predicate logic. In the third part we study the basic rules of probability, and learn how to make probability calculations and decisions in life. Co-listed with AS.150.632 (for graduate students) (01-F 11:00-11:50am).
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.122. Mortal Questions. 3 Credits.
What is the meaning of life? Is the question well-formed? What does living well require? Does death give human life meaning? What does it mean to say that life is ‘absurd’? What is free will, and do we have it? What should we make of human nature or the human condition in light of the great and ever more pervasive technological advances of the present epoch? Will we transform our nature? In light of threats of environmental catastrophes spurred by global warming, nuclear war and the like, what do we make of our daily lives and the activities that compose them? Are we living as we ought to? Crucially, these questions and others like them require us to reflect deeply on our human values. To address these questions, we will read selected works of philosophers ranging in time from Plato to the present.
Area: Humanities

AS.150.130. Dystopian Dreams - Utopian Ideals. 3 Credits.
In this course, we will be exploring fundamental questions of philosophy through the lenses of dystopias (in film, television, and literature) as well as utopias (in literature and philosophy). What is human nature? Do we still have duties if the world goes crazy? And do our lives maintain their meaning if we give up the notion of God? In this course, we'll be holding up dystopian and utopian mirrors to delve into questions about our everyday reality.
Area: Humanities
AS.150.135. Freshman Seminar: The Philosophy of Race and Racism. 3 Credits.
The twin specters of race and racism have perennially dominated nearly every aspect of American social, economic, and political life. In this course, we will try to appreciate the nature and scope of this dominance by addressing fundamental questions about the nature, functions, and manifestations of race and racism in contemporary American life. Topics include: the 'metaphysics' of race, conditions of racial membership, the moral harms introduced by racism, the psychology of racial bias, and institutional forms of racism.
Area: Humanities, Social and Behavioral Sciences

AS.150.136. Philosophy & Science: An Introduction to Both. 3 Credits.
Philosophers and scientists raise important questions about the nature of the physical world, the mental world, the relationship between them, and the right methods to use in their investigations of these worlds. The answers they present are very different. Scientists are usually empiricists, and want to answer questions by experiment and observation. Philosophers don't want to do this, but defend their views a priori. Why? Can both be right? Readings will present philosophical and scientific views about the world and our knowledge of it. They will include selections from major historical and contemporary figures in philosophy and science. The course has no prerequisites in philosophy or science.
Area: Humanities, Natural Sciences

AS.150.140. Minds, Bodies, and Persons. 3 Credits.
This course is a philosophical exploration of the mind and its relation to the body, personhood, and artificial intelligence. First, we will consider competing definitions of the mind and how it fits into the world. From here, we will engage with the concept of human personhood through an examination of what it takes to remain the same person over time. We will also be considering whether machines could ever have minds in the same way that human persons do, as well as the metaphysical and practical implications of mind uploading. Through testing the boundaries of cognition and personhood through technology, we hope to bring the relationship between minds, bodies, and persons into clearer focus.
Area: Humanities

AS.150.191. Freshman Seminar: Feminism. 3 Credits.
Historical and contemporary readings in feminist philosophy.
Area: Humanities Writing Intensive

AS.150.193. Philosophy of Language Seminar: Proper Names and Definite Descriptions. 3 Credits.
In talking with each other, we often use proper names like 'Juliet' and definite descriptions like 'The most beautiful fresco in Italy' to pick out persons and objects in our world. But what do these expressions mean exactly? In this seminar, we'll slowly and carefully work through some classic philosophical texts that address this issue. These texts will provide an introduction to the philosophy of language, and to analytic philosophy in general.
Area: Humanities Writing Intensive

AS.150.194. Freshman Seminar: Skepticism Ancient and Modern. 3 Credits.
Can we gain knowledge of reality, or is everything a matter of opinion? Does it matter? Why do we want (or need) knowledge anyway? Questions like this have been the stock in trade of philosophical skeptics throughout the entire history of our Western philosophical tradition. This class will involve close readings of some classic works on the topic of skepticism with a view to understanding some of the main arguments for (and against) skepticism: how they work and how they may have changed over time. Readings include selections from Sextus Empiricus, Descartes, Hume and Wittgenstein.
Area: Humanities Writing Intensive

AS.150.196. Freshman Seminar: Being A Good Person. 3 Credits.
In this seminar we explore the virtue ethics tradition and its pursuit to figure out what it means to be a good person. We creatively read the canonical tradition as well as less familiar texts in race & gender studies as well as fiction.
Area: Humanities Writing Intensive

AS.150.201. Introduction To Greek Philosophy. 3 Credits.
A survey of the earlier phase of Greek philosophy. Socrates, Plato, and Aristotle will be discussed, as well as two groups of thinkers who preceded them, usually known as the pre-Socratics and the Sophists.
Area: Humanities

AS.150.205. Introduction to the History of Modern Philosophy. 3 Credits.
An overview of philosophical thought in the seventeenth and eighteenth centuries. We shall focus on fundamental questions in epistemology (knowledge, how we acquire it, its scope and limits), metaphysics (the ultimate nature of reality, the relation of mind and body, free will), and theology (the existence and nature of God, God's relation to the world, whether knowledge of such things is possible): all questions that arose in dramatic ways as a result of the rise of modern science. The principal philosophers to be discussed are Descartes, Locke, Hume and Kant, though we shall also make the acquaintance of Spinoza, Leibniz and Berkeley.
Area: Humanities

AS.150.206. Introduction to Ethics. 3 Credits.
How should one live? Can we establish firmly the truth of moral claims? Or is morality an invention of society? We will be exploring the works of Aristotle, Kant, and Mill, as well as looking into some more contemporary readings. Further, we will be making connections and discussing how the questions relate to bioethics and business.
Area: Humanities

AS.150.207. Philosophy and Schizophrenia. 3 Credits.
Area: Humanities, Natural Sciences, Social and Behavioral Sciences

AS.150.210. Minds, Consciousness, and Computers. 3 Credits.
This course is a philosophical exploration of the mind and its relation to the body, personhood, and artificial intelligence. First, we will consider competing definitions of the mind and how it fits into the world. We will also be considering whether machines could ever have minds in the same way that human persons do, as well as the metaphysical and practical implications of mind uploading.
AS.150.215. Business Ethics. 3 Credits.
What is a responsible business practice? Do corporations have responsibility as 'moral agents'? What is the relation between business and environment? In this course we will investigate the relationship between business practices and ethical thinking by analyzing and assessing philosophical arguments about the moral status of business. We will start by reading philosophical texts that offer an analysis of moral practices, decision-making procedures, and moral theories. In particular, we will read historical text by Aristotle, Hume, Adam Smith, Mill, Marx, and Keynes. Then we will see how these philosophical concepts and theories can be applied to the contemporary world of business. The main goal of this course is to critically evaluate the philosophical foundations and justifications for business and economic systems, and how these apply to specific issues as workplace discrimination, ethics of advertising, environmental destruction and consumer protection.
Area: Humanities

AS.150.216. Minds and Machines. 3 Credits.
The course is a philosophical introduction to the topic of artificial intelligence. We will examine such questions as whether machines can think and whether we can build robots that have emotions, personalities and a sense of self. In doing so, we will touch upon a closely connected question: is the human mind itself a machine?
Area: Humanities, Natural Sciences

AS.150.219. Introduction to Bioethics. 3 Credits.
Introduction to a wide range of moral issues arising in the biomedical fields, e.g. physician-assisted suicide, human cloning, abortion, surrogacy, and human subjects research. Cross listed with Public Health Studies.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.150.220. Introduction to Moral Philosophy. 3 Credits.
An introduction to moral philosophy through in-depth and critical reading of selected texts from the history of philosophy. The philosophers whose texts will be discussed include Plato, Aristotle, Kant and Nietzsche.
Area: Humanities

AS.150.223. Formal Methods of Philosophy. 3 Credits.
For better or for worse (and we think better), during the last century or so, philosophy has become infused with logic. Logic informs nearly every area of philosophy; it is part of our shared language and knowledge base. Vast segments of literature, especially in contemporary analytic philosophy, presuppose basic competence in logic and a familiarity with associated formal methods, particularly set theoretical. The standard philosophy curriculum should therefore guarantee a minimum level of logic literacy, thus enabling students to read the literature without it seeming like an impenetrable foreign tongue. This course is an introductory survey of the formal methods that a contemporary philosopher should be familiar with. It is not mathematically demanding in the way that more advanced courses in metalogic and specialized topics may be. The emphasis is on basic comprehension, not on mathematical virtuosity.
Area: Humanities

AS.150.231. Philosophical Intuitions. 3 Credits.
At least according to a prevalent conception, analytic philosophers frequently appeal to intuitions - immediate opinions we come to have about cases or claims. In this course, we will discuss three questions that naturally arise: (1) How can we define intuitions and what underlies them? (2) Do philosophers really appeal to intuitions as frequently as many seem to think? (3) Which role should intuitions play in philosophy?
Area: Humanities, Social and Behavioral Sciences

AS.150.235. Philosophy of Religion. 3 Credits.
Can one prove or disprove the existence of God? What is the relation between reason and faith? Are science and religion at odds with one another? We will consider historically significant discussions of these questions as well as important contemporary writings.
Area: Humanities

AS.150.236. Contemporary Moral Issues. 3 Credits.
In this course, we will discuss ethical controversies related to some of the issues currently debated in the public sphere: homosexuality, sexism, racism, immigration, abortion, cloning, genetic enhancement, war, terrorism, torture, and others. Our goal will be to explore how major philosophical theories in ethics approach these controversies, and how they can help us understand and resolve these controversies.
Area: Humanities

AS.150.237. Foundations of Modern Political Philosophy. 3 Credits.
This course is an introduction to modern political philosophy through an intensive study of the classic texts. The focus will be on the nature and limits of political authority under modern social conditions. Authors included are Machiavelli, Hobbes, Locke, Rousseau and Mill.
Area: Humanities

AS.150.238. Philosophy, Science Fiction, and Human Nature. 3 Credits.
This is an introduction to philosophy through themes in science fiction. Particular emphasis will be on philosophical questions related to what it means to be a human such as personal identity, free will, the nature of mind, and the nature of knowledge.
Area: Humanities
Writing Intensive

AS.150.240. Intro-Political Philosop. 3 Credits.
Area: Humanities
Writing Intensive

AS.150.245. Philosophy of Mind. 3 Credits.
Our minds are often thought to be exhaustively and intimately known to us. Despite this philosophers deeply disagree about the natures of the mental states and events which make up our minds. And there is equally little agreement as to what makes such states and events count as mental in the first place. This course will investigate the nature of different aspects of mind and their interrelations. Students will explore debates and puzzles about the nature of perception, memory, imagination, dreaming, pain and bodily sensation, emotion, action, volition and those states commonly classed as propositional attitudes: knowledge, belief, desire and intention. This will put us in a position to ask what if anything unifies such phenomena as mental.
Area: Humanities

AS.150.253. Introduction to Philosophy of Psychology. 3 Credits.
Psychology is the study of mind and behavior, and philosophy of psychology is the study of the foundations of psychology. Foundational issues in psychology addressed by philosophy of psychology come in the form of the following questions. What is the nature of mental representation? What is the basic architecture of the mind, and is it innate? Can psychological theories proceed in abstraction from the environment? The purpose of this course is to introduce students to these and related questions and the various answers they’ve been given.
Area: Social and Behavioral Sciences
AS.150.254. Philosophy and Memory. 3 Credits.
This course is designed as a survey of the major philosophical questions about memory, with a particular emphasis on the way in which these questions are affected by recent empirical evidence from psychology and the neurosciences. The course is divided into four main parts, exploring the topics of concern.1. Memory and Representation2. Memory and Reconstruction3. Memory, Time and Personal Identity4. Memory, Ethics and Politics In addressing these questions, we will read some of the major philosophical works concerning memory published in the last 100 years, but we will also investigate the emerging theoretical and experimental paradigms coming from psychology and the neurosciences. Area: Humanities, Social and Behavioral Sciences

AS.150.256. Is There Progress in Science?. 3 Credits.
In this class we will consider the problems related to the progress of science. First, we will discuss the problem of theory change: is there a way to compare different scientific paradigms and to assess their progressiveness? Next, we will deal with a more specific question: does history of science provide evidence that our best current theories are approximately true? Indeed, are we even justified in thinking that our scientific theories gradually approach truth?

AS.150.260. Introduction to Metaphysics. 3 Credits.
Metaphysics addresses fundamental questions about the nature and structure of reality. This course will offer an introduction to metaphysics, and a survey of metaphysical debates about topics including time, causation, personal identity, God and free will. Area: Humanities

AS.150.269. Freshman Seminar: Philosophy of Human Rights. 3 Credits.
This course introduces students to the methods of philosophical inquiry and writing via an exploration of philosophical questions about the foundations of human rights, the modern human rights culture, and the relationships between human rights, civil rights, group rights, and women’s rights. No background in philosophy will be assumed, as the aim of the course is to teach philosophical methods while examining the language and practice of human rights, which have been central to the post-WWII global order. Area: Humanities Writing Intensive

AS.150.300. Prometheus Editorial Workshop. 1 Credit.
Prometheus is an international undergraduate philosophy journal published by students at Johns Hopkins University. The purpose of the journal is to promote philosophic discourse of the highest standard by offering students an opportunity to engage in open discussion, participate in the production and publication of an academic journal, and establish a community of aspiring philosophers. Students enrolled in this workshop will act as the staff readers for the journal. For more information, please visit www.prometheus-journal.com. Prerequisite: MUST have taken one philosophy course. Area: Humanities

AS.150.301. Majors Seminar: Truth. 3 Credits.
A philosophical exploration of the nature of truth, looking at different theories of truth and related questions about science, morality, logic and rational disagreement. Area: Humanities

AS.150.304. The Ethics of Human Experimentation. 3 Credits.
This course will explore ethical theory, key historical events, and operational requirements of research involving human beings. Weekly discussions will focus on seminal literature and case studies that highlight conceptual and practical challenges related to informed consent; research ethics review; risk/benefit analysis; justice/fairness; globalization of research; participation of vulnerable populations; clinical equipoise; obligations to research participants and communities during studies and after research is completed; and deception in psychological and behavioral research. The course will also explore the emergence and development of the rules governing the protection of human subject research. Area: Humanities

AS.150.307. Plato’s Phaedrus. 3 Credits.
This is a reading course. Together we will do a close reading of one of Plato’s masterpieces, the Phaedrus. We will also use this text to address general questions of interpretation, such as how to approach a philosophical classic, how to discern its underlying idea, etc. Area: Humanities

AS.150.316. Puzzles and Paradoxes. 3 Credits.
The course is a survey of puzzles and paradoxes of truth, belief, knowledge, meaning, confirmation, rational action, and vagueness. Specific puzzles and paradoxes include, among others: Russell's paradox, the Liar paradox, Moore's paradox, the Skeptical paradox, Newcomb's paradox, and the Sorites paradox. Besides being fun to think about, these puzzles and paradoxes touch on many areas of philosophy, including philosophy of language, logic, metaphysics, and epistemology. When introducing each puzzle or paradox, attention will be paid to its history and significance. In addition to this exposure to some of the many domains of philosophy, students will gain analytical skills applicable well beyond philosophy. Area: Humanities

AS.150.317. Undergraduate Seminar for Philosophy Majors: Can Everything Be Explained?. 3 Credits.
We will study various philosophical theories about the nature of explanation, reduction, and speculation. Area: Humanities

AS.150.325. Philosophy of Oppression and Resistance. 3 Credits.
Human social structures can be oppressive in either explicit or covert forms, even in societies highly committed to just democratic ideals. The course will investigate what it means for an individual, practice, or institution to be oppressive, and will explore the concrete mechanisms which can underlie racialized and gendered forms of oppression in particular. Special attention will be given to the political and moral problems raised by hate speech, pornography, propaganda, ideology, and material inequality. Finally, we will discuss how social agents can resist explicit and covert oppression in a way that is conducive to the realization of just ideals. Area: Humanities Writing Intensive

AS.150.326. Philosophy of Art: A Historical Introduction. 3 Credits.
A reading of a number of important texts from the history of philosophy dealing with topics in the philosophy of art. Particular attention will be given to the German aesthetic tradition, and especially to Hegel's aesthetics, although the most important ancient Greek contributions will be considered as well. In particular, we will read Plato, Aristotle, Plotinus, Kant, Schiller, early German Romanticism, and Hegel, as well as selected secondary literature. No previous coursework in philosophy or history of art is required. Area: Humanities
AS.150.328. Plato’s Myths. 3 Credits.
Rather than writing long treatises, Plato wrote dialogues. These play-like works construct a conversation into which the reader is drawn. Plato’s characters might be well-known for offering rigorous arguments, but they often tell each other, and the reader, quite fanciful stories. While philosophers tend to give more attention to the arguments, we will focus on the stories. We will encounter stories about the city of Atlantis, the Greek gods, love, the soul, and the afterlife.
Area: Humanities

AS.150.330. Decisions, Games & Social Choice. 3 Credits.
We investigate rational decision making at the individual and group level. In the first section of the course on decision theory, we consider how a single rational agent will act in a choice situation given her knowledge, or lack thereof, about the world and her particular risk profile. In the second section on game theory, we explore different kinds of competitive and cooperative strategic interactions between agents, and we define different kinds of solutions, or equilibria, of these games. We also apply game theory to the study of morality, convention, and the social contract. In the final section of the course on social choice theory, we turn to group decision making with a focus on the impossibility results of Arrow and Sen.
Area: Humanities

AS.150.331. Themes from the Philosophy of Religion. 3 Credits.
Religion has always been a contested and extensively debated topic throughout the history of philosophy, and the topics from the philosophy of religion are still relevant today. In this course, we will look at several of those topics: what is religion? Do we have reason to believe or not believe in God? How does God relate to the world (or are there many Gods)? How can we understand religious practice? And what role (if any) should religion play in our society?
Area: Humanities

AS.150.340. The Philosophy of Psychology. 3 Credits.
This course will explore a range of philosophical issues in cognitive psychology. Topics include the nature of psychological explanation, the computational theory of mind, the relationship between psychology and neuroscience, consciousness, intentionality, nativism/empiricism, and mental architecture. This course is intended for both philosophy students and any student interested in the mind-brain sciences.
Area: Humanities

AS.150.351. The Philosophy of Race and Racism. 3 Credits.
The twin specters of race and racism have perennially dominated nearly every aspect of American social, economic, and political life. In this course, we will try to appreciate the nature and scope of this dominance by addressing fundamental questions about the nature of, functions, and manifestations of race and racism in contemporary American life. Topics include: the ‘metaphysics’ of race, conditions of racial membership, the moral harms introduced by racism, the psychology of racial bias, and institutional forms of racism.
Area: Humanities, Social and Behavioral Sciences

AS.150.355. Philosophy of Law. 3 Credits.
In this course we will examine major issues in the philosophy of law, including the nature of law, the role of the Constitution in legal decisions, and the justification of punishment. No previous knowledge of law or philosophy is required.
Area: Humanities

AS.150.356. Political Philosophy and Public Health Ethics. 3 Credits.
In 2015, Rand Paul generated controversy by insisting that parents should have complete discretion over whether to vaccinate their children. When pressed to come up with a defense for this policy, Paul replied, ‘The state doesn’t own your children. Parents own the children, and it is an issue of freedom and public health.’ His rationale for his policy proposal and the responses to it hint at several fundamental questions about the role of the State as it pertains to producing health, as well as more practically oriented questions concerning policy. In this seminar, we will consider both sorts of questions. We will consider the merits of and objections to various policies such as cigarette bans, mandatory seatbelt or helmet laws for motorists, taxes for sugary beverages, and prohibitions of the private sale of organs. We will also ask more philosophical questions: When discussing public health, what constitutes ‘the public’? And how should we connect public health and policy measures to salient concepts such as legitimacy, justice, coercion, manipulation, paternalism, autonomy, liberty, privacy, and parental rights? In asking these questions, both at the level of policy and more philosophically, we will engage with a variety of political theories, including various strands of feminism, anarchism, libertarianism, perfectionism, critical race theory, leftist theories, broadly consequentialist theories, and public reason liberalism. Must have some background in philosophy or bioethics.
Prerequisite(s): AS.150.219 OR AS.150.220 OR AS.150.237 OR AS.150.240
Area: Humanities

AS.150.400. Simone de Beauvoir. 3 Credits.
Seminar on Beauvoir’s moral philosophy, covering the major works of the 1940s. Readings will include selections from The Blood of Others, Pyrrhus and Cineas, All Men are Mortal, The Ethics of Ambiguity, and The Second Sex. Open to graduate students and advanced undergraduates. (Beginning undergraduates should contact Professor Kosch.) No prerequisites.
Area: Humanities
Writing Intensive

AS.150.401. Greek Philosophy: Plato and His Predecessors. 3 Credits.
A study of pre-Socratic philosophers, especially those to whom Plato reacted, also an examination of major dialogues of Plato with emphasis upon his principal theses and characteristic methods. Cross-listed with Classics.
Area: Humanities
Writing Intensive

AS.150.402. Aristotle. 3 Credits.
A study of major selected texts of Aristotle.
Area: Humanities
Writing Intensive

AS.150.403. Hellenistic Philosophy. 3 Credits.
A study of later Greek philosophy, stretching roughly from the death of Aristotle to the Roman imperial period. Epicureans, Stoics, and Skeptics will be the main philosophical schools examined.
Area: Humanities
Writing Intensive

AS.150.404. The Idea of Power. 3 Credits.
The Idea of Power surveys seminal texts in the history of political thought on the nature, promise, and dangers of political and social power; it also critically engages contemporary texts on race and gender power relations.
Area: Humanities
AS.150.407. Enlightenment and Alienation. 3 Credits.
Why does the increase in enlightenment not correlate with an increase in morality and happiness? Jean-Jacques Rousseau raised this question in the middle of the 18th century and it remains a pressing question today. The course will examine the issue in Rousseau, Hegel, Marx, and Adorno, as well as in the contemporary work of Richard Moran and Rahel Jaeggi.
Area: Humanities

AS.150.408. The Ethics of Climate Change. 3 Credits.
In this course we consider ethical issues related to climate change and climate change policy. These include issues about how we ought to distribute the burden of mitigation and adaption, what we owe to future generations and to the non-human world, and about our responsibilities as individuals (with respect, for example, to our diets). We briefly consider geoengineering and issues related to the widespread reliance on cost-benefit analyses in climate policy.
Area: Humanities

AS.150.409. Wittgenstein On Certainty. 3 Credits.
Wittgenstein's On Certainty consists of four notebooks containing remarks on knowledge, certainty, doubt and truth. In this course, we will undertake a close study of Wittgenstein's notes, critically examining competing interpretations of Wittgenstein's ideas and the different use of those ideas have been taken up in current debates about philosophical skepticism.
Area: Humanities

AS.150.410. The Philosophy of Afrofuturism I. 3 Credits.
The main goal of speculative fiction is to render a familiar world slightly unfamiliar to then ask familiar questions in new ways. Afrofuturism as a genre of sci-fi, fantasy, and horror written by and about black people, applies this ethic to the problems of race, broadly speaking. In this course we survey major texts to philosophically inquire into phenomena like incarceration, Slavery and its lingering effects, and colonialism among other themes.
Area: Humanities

AS.150.412. Kant's Critique of Practical Reason. 3 Credits.
A historical and systematic study of Kant's ethics and philosophy of religion, with special attention to his Critique of Practical Reason.
Area: Humanities

AS.150.417. Kant's 'Critique Of Pure Reason'. 3 Credits.
An examination of the philosophy of Immanuel Kant, with emphasis on The Critique of Pure Reason.
Area: Humanities

AS.150.418. Hermeneutics and Critical Theory. 3 Credits.
An introduction to two of the most important and influential schools in twentieth-century German philosophy. This course examines the works of four leading representatives of these schools, i.e. Heidegger, Gadamer, Horkheimer, and Habermas.
Area: Humanities

AS.150.419. Kant's Critique/Judgment. 3 Credits.
This course will examine closely and in detail the aesthetic and teleological parts of Kant's third masterpiece, The Critique of the Power of Judgment.
Area: Humanities

AS.150.420. Mathematical Logic I. 3 Credits.
Mathematical Logic I (H,Q) is the first semester of a year long course. It introduces the two notions of validity and provability for both sentential logic and first-order predicate logic, showing in each case that there is a system of derivation such that any argument is valid if and only if the conclusion is provable from the premises. The result is non-trivial since validity is a semantic notion involving the preservation of truth, while a proof is a finite syntactic object whose correctness can be effectively decided. The goal of the course, however, is to learn how to formulate mathematical theories in first-order logic and to explore various of their properties (or lack thereof) such as completeness, decidability, axiomatizability, finite axiomatizability, and consistency. The course concludes with a brief introduction to model theory and the interpretability of one theory in another, which is the basis for relative consistency proofs in mathematics.
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.421. Mathematical Logic II. 3 Credits.
Gödel's two incompleteness theorems regarding, first the Euclid set a precedent for the codification of mathematics by axiomatizing the set of geometric truths. An obvious question that arises is whether all branches of mathematics are axiomatizable, especially fundamental ones, such as arithmetic. In the late nineteenth century, what became known as Peano arithmetic was proposed as an axiomatization. The essential feature of an axiomatization is that, although one might have an infinite number of axioms, as does Peano arithmetic, one must have a decision procedure for determining whether a given proposition is or is not an axiom. In 1931, Gödel proved the astounding result that, not only is Peano arithmetic incomplete in the sense that it does not entail all arithmetic truths, but any attempted axiomatization of arithmetic is incomplete, and thus the set of arithmetic truths must be undecidable. Subsequently, Alfred Tarski showed the set of arithmetic truths is not even definable. Also, by finding a finitely axiomatizable undecidable subtheory of Peano arithmetic, Alonzo Church was able to show that there is not even an effective procedure for determining whether a given sentence is a logical truth. Finally, in his 1931 paper, Gödel argued a second incompleteness theorem, viz., that any theory strong enough to express its own consistency, as he showed Peano arithmetic to be, cannot prove its own consistency unless it is inconsistent. We will cover these and other results that have had a profound effect on the foundations of mathematics. It remains an open question whether so basic a theory as Peano arithmetic is consistent.
Prerequisite(s): AS.150.420
Area: Humanities, Quantitative and Mathematical Sciences
AS.150.422. Axiomatic Set Theory. 3 Credits.
A development of Zermelo-Fraenkel set theory (ZF), including the axiom of choice (ZFC), a system in which all of mathematics can be formulated (i.e., entails all theorems of mathematics). Although, we’ll do an exposure to transfinite ordinals and cardinals in general so that you can get a sense for how stupendously “large” these can be, the main thrust concerns certain simple, seemingly well-posed conjectures whose status appears problematic. For example, the Continuum Hypothesis (CH) is the conjecture that the cardinality of the real numbers is the first uncountable cardinality, i.e., the first cardinality greater than that of the set of natural numbers. Equivalently, there is no uncountable subset of real numbers strictly smaller in cardinality than the full set of reals. (You’d think that if there were one, you would be able eventually to find such.) Cantor thought that CH is true, but could not prove it. Gödel showed, at least, that if ZFC is consistent, then so is ZFC+CH. However, Paul Cohen later proved that if ZFC is consistent, then so is ZFC + the negation of CH. In fact, CH could fail in astounding many ways. For example, the cardinality of the continuum could be (weakly) inaccessible, i.e., of a cardinality that cannot even be proved to exist in ZFC (although the reals can certainly be proved to exist in ZFC). So, are there further, intuitively true axioms that can be added to ZFC to resolve the cardinality of the continuum, and CH is definitely true or false? Or, as Cohen thought, does CH simply lack a definite truth value?
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.423. Theory of Knowledge. 3 Credits.
An advanced introduction to the central problems, concepts and theories of contemporary philosophical epistemology (theory of knowledge). Topics to be explored will include: what is knowledge (and why do we want it?); theories of justification (foundationalism, the coherence theory, etc.); externalism and internalism in epistemology; skepticism, relativism and how to avoid them. Reading from contemporary sources.
Area: Humanities

AS.150.426. Philosophy and Disability. 3 Credits.
In this course, we will consider various philosophical issues related to disability. What counts as a disability? What obligations do we have, both as individuals and as a society, to people with disabilities? What counts as respecting people with disabilities, and what counts as unjustifiable discrimination against them?
Prerequisite(s): AS.150.219 OR AS.150.220
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.150.427. Aristotelian Philosophical Psychology. 3 Credits.
What did philosophy of mind look like before Descartes? It centered on study of the soul (psuche), or philosophical psychology. This course will focus on Aristotle’s view of the soul, its functions, and its relation to matter (hylomorphism), as well as the development of his thought by later ancient and medieval Aristotelians, including Alexander of Aphrodisias, Averroes, and Aquinas. Will conclude with examination of some renewed interest in Aristotle relative to contemporary philosophy of mind.
Area: Humanities

AS.150.428. Spinoza’s Theological Political Treatise. 3 Credits.
The course is an in-depth study of Spinoza’s Theological-Political Treatise. Among the topics to be discussed are: Spinoza’s Bible criticism, the nature of religion, philosophy and faith, the nature of the ancient Hebrew State, Spinoza’s theory of the State, the role of religion in Spinoza’s political theory, the freedom to philosophize, the metaphysics of Spinoza’s Theological-Political Treatise, and finally, the reception of the TTP.

AS.150.429. Topics in Logic: Ontology and Knowledge Representation. 3 Credits.
Knowledge representation deals with the possible structures by which the content of what is known can be formally represented in such a way that queries can be posed and inferences drawn. Ontology concerns the hierarchical classification of entities from given domains of knowledge together with the relations between various classes, subclasses, or individuals. The main framework in which we will work is that of description logics, which are decidable fragments of varying degrees of first order predicate logic. In ontology development we will examine RDF (Resource Description Framework), its extension to RDFS, and OWL (Web Ontology Language), and use the software Protegé for specific applications. Finally, we will take a look at query languages such as SPARQL (SPARQL Protocol and RDF Query Language).
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.430. Hegel’s Phenomenology of Spirit. 3 Credits.
An in-depth study of Hegel’s masterpiece, the Phenomenology of Spirit. We will be concentrating on the first half of the text.

AS.150.433. Philosophy of Space & Time. 3 Credits.
Is space an entity that exists independently of matter (substantivalism), or is it only an abstraction from spatial relations between bodies (relationism)? Is there a lapse of time even when nothing changes, or is time only a measure of motion? Are motion and rest contrary properties or states of a body, or are there only changes in the positions of bodies relative to one another? Philosophers and physicists have disputed these questions from antiquity to the present day. We survey the arguments and attempt to find a resolution. But there are further questions. What is the significance of incongruent counterparts (left hands vs. right hands)? Is there a fact of the matter as to the geometry of space (flat, hyperbolic or elliptical), or as to whether space-like separated events occur at the same time? What is the principle of relativity? Does Einstein’s theory have consequences for the substantivalist/relationist debate? What is the status of spacetime in current physics and cosmology? Why does time but not space have a “direction”? Are past, present and future objective features of reality, or are they merely “stubborn illusions”? Does time flow? If not, how do we account for our sense of the passage of time?
Area: Humanities, Natural Sciences

AS.150.434. Formal Methods of Philosophy. 3 Credits.
For better or for worse (and we think better), during the last century or so, philosophy has become infused with logic. Logic informs nearly every area of philosophy; it is part of our shared language and knowledge base. Vast segments of literature, especially in contemporary analytic philosophy, presuppose basic competence in logic and a familiarity with associated formal methods, particularly set theoretical. The standard philosophy curriculum should therefore guarantee a minimum level of logic literacy, thus enabling students to read the literature without it seeming like an impenetrable foreign tongue. This course is an introductory survey of the formal methods that a contemporary philosopher should be familiar with. It is not mathematically demanding in the way that more advanced courses in metalogic and specialized topics may be. The emphasis is on basic comprehension, not on mathematical virtuosity. Co-taught with AS.150.223 Formal Methods of Philosophy.
Area: Humanities
AS.150.435. Maimonides' Guide of the Perplexed & Political Theology. 3 Credits.
The seminar is an in-depth study of Maimonides' magisterial work, the Guide of the Perplexed. Special attention will be given to Maimonides' views about the political functions of religion. We will also read modern commentaries and responses to the Guide, by Leibniz, Spinoza, and Salomon Maimon.
Area: Humanities

AS.150.436. Philosophy of Gender. 3 Credits.
In this class we will examine philosophical questions about gender, and about the intersections between gender and other social categories including race, class and sexuality. We will focus specifically on questions about the metaphysics of gender and other social categories.
Area: Humanities

AS.150.437. KANT'S Opus Postumum. 3 Credits.
Why did Kant, after he had completed the three Critiques, work on a book with the title, Transcendental from the Metaphysical Foundations of Natural Science to Physics — better known as his Opus postumum? Why did this project eventually come to include ethics and result in a revision of Kant's transcendental philosophy? Questions like these will be answered by means of a close study of Kant's text, and by relating the text to (a) his Metaphysical Foundations of Natural Science and (b) to his ethical writings from the critical period.
Area: Humanities

AS.150.440. The Making of Black Lives Matter. 3 Credits.
This course explores the history of black thought that informs the ethics of the contemporary movement for black lives.
Area: Humanities

Writing Intensive

AS.150.442. The Philosophy of Ludwig Wittgenstein. 3 Credits.
We will read Wittgenstein's two great works: Tractatus Logico-Philosophicus (1921) and Philosophical Investigations (1953). We may also devote some time to his late, unpublished work, Uncertainty.
Area: Humanities

AS.150.444. The Logic of Spinoza's Ethics. 3 Credits.
One of the unique aspects of Spinoza's major work, the Ethics, is its formal or 'geometric' structure. The book is written following the model of Euclid's Elements, with Definitions, Axioms, Propositions, and Demonstrations. In this seminar, we scrutinize the deductive structure of the Ethics and some of its earlier drafts. We consider the role and epistemic status of the definitions and axioms, attempt to provide rigorous reconstructions of some of its key propositions, and also investigate the possibility of alternative routes between these propositions.
Area: Humanities

AS.150.448. The Religion of Morality. 3 Credits.
In the wake of the Enlightenment criticism of traditional forms of religion, philosophers attempted to give religion a rational basis by equating it with moral practice. We will examine this religion of morality with the goal of determining whether it can vindicate its claim to be a genuine religion.
We will read texts by Rousseau, Kant, Fichte, Hegel and Emerson.
Area: Humanities

AS.150.452. Freedom of Will & Moral Responsibility. 3 Credits.
What are freedom of the will and moral responsibility? Are they compatible with determinism or naturalism? This course will examine various philosophers' answers to these questions.
Area: Humanities

Writing Intensive

AS.150.455. Ethics And Animals. 3 Credits.
Area: Humanities

Writing Intensive

AS.150.457. Color and Color Perception. 3 Credits.
An examination of philosophically relevant discussions of the nature of color and color perception, from both historical and contemporary perspectives.
Area: Humanities

AS.150.458. The Biggest Hits in Philosophy of Science (20th and 21st Centuries). 3 Credits.
Readings from Duhem, Carnap, Hempel, Popper, Quine, Kuhn, Feyerabend, van Fraassen, and others who got us where we are in the field today. Quine said: Philosophy of science is philosophy enough. Is it?
Area: Humanities, Social and Behavioral Sciences

AS.150.459. Counterfactual Reasoning, Normative & Descriptive Aspects. 3 Credits.
Counterfactual reasoning is reasoning about what would be the case if things had been other than they are: If it had been sunny and so I didn't run into that store for cover from the rain, maybe I would never have met my future partner! How ought one to reason counterfactually? How do people in fact do it? Counterfactual reasoning might seem like a narrow topic, but it is of fundamental importance to both scientific and everyday inquiry, where it is intimately connected to the use of imagination, planning for the future, assessment of and learning from the past, providing explanations, understanding fictions, and constructing experiments. This course will explore both normative and empirical aspects of counterfactual reasoning, drawing upon readings in philosophy, psychology, and linguistics. An overarching goal of this course is to arrive at a better understanding of counterfactuality that is informed by research across these different disciplines.
Area: Humanities

AS.150.460. Rawls and His Critics. 3 Credits.
John Rawls was the most important moral and political thinker of the 20th century. In this course we will look at his two main works, A Theory of Justice and Political Liberalism, along with some of the more influential criticisms of his ideas. Main topics will include the derivation of principles of justice, the role of the good in liberal political theory, and the nature of reasonable pluralism.
Area: Humanities

AS.150.462. Islamic Political Philosophy. 3 Credits.
An introduction to the history of Islamic political philosophy, primarily focused on two flashpoints of encounter between the religion of Islam and other philosophical/political systems—an early one with ancient Greek philosophy (especially in the works of Plato and Aristotle), and a period of interface with modern Western secular political thought, from the late 19th century to present. Our goal will be to try to understand some of the varying responses in each period as Muslim thinkers seek authentic engagement with external and internal trends, both religious and philosophical. The focus will be on primary texts from philosophically engaged thinkers (who may or may not consider themselves philosophers).
Area: Humanities

AS.150.465. The Biggest Hits in Philosophy of Science (20th and 21st Centuries). 3 Credits.
Readings from Duhem, Carnap, Hempel, Popper, Quine, Kuhn, Feyerabend, van Fraassen, and others who got us where we are in the field today. Quine said: Philosophy of science is philosophy enough. Is it?
Area: Humanities, Social and Behavioral Sciences

AS.150.467. Color and Color Perception. 3 Credits.
An examination of philosophically relevant discussions of the nature of color and color perception, from both historical and contemporary perspectives.
Area: Humanities

AS.150.469. Counterfactual Reasoning, Normative & Descriptive Aspects. 3 Credits.
Counterfactual reasoning is reasoning about what would be the case if things had been other than they are: If it had been sunny and so I didn't run into that store for cover from the rain, maybe I would never have met my future partner! How ought one to reason counterfactually? How do people in fact do it? Counterfactual reasoning might seem like a narrow topic, but it is of fundamental importance to both scientific and everyday inquiry, where it is intimately connected to the use of imagination, planning for the future, assessment of and learning from the past, providing explanations, understanding fictions, and constructing experiments. This course will explore both normative and empirical aspects of counterfactual reasoning, drawing upon readings in philosophy, psychology, and linguistics. An overarching goal of this course is to arrive at a better understanding of counterfactuality that is informed by research across these different disciplines.
Area: Humanities

AS.150.472. Islamic Political Philosophy. 3 Credits.
An introduction to the history of Islamic political philosophy, primarily focused on two flashpoints of encounter between the religion of Islam and other philosophical/political systems—an early one with ancient Greek philosophy (especially in the works of Plato and Aristotle), and a period of interface with modern Western secular political thought, from the late 19th century to present. Our goal will be to try to understand some of the varying responses in each period as Muslim thinkers seek authentic engagement with external and internal trends, both religious and philosophical. The focus will be on primary texts from philosophically engaged thinkers (who may or may not consider themselves philosophers).
Area: Humanities
AS.150.463. The Value of Humanity and Nature. 3 Credits.
We start by posing a question: who, or what, has standing in the moral community? First we consider an appealing answer—humanity—then we consider whether moral status extends to nonhuman animals and the environment. We will focus on the notion of being valuable, and how it relates to moral considerability. No background in philosophy is required.
Area: Humanities
Writing Intensive

AS.150.464. Hegel's Philosophy of Right. 3 Credits.
This course will be a close reading of G.W.F. Hegel's Philosophy of Right. Some of the main topics for discussion will be the relation of law and morality, the dependence of the political philosophy on Hegel's Logic, and the relation of individual and social conceptions of freedom.
Area: Humanities

AS.150.466. Recent Work in Skepticism. 3 Credits.
We all take it for granted that perceptual experience yields knowledge of the world around us. But in the first of his Meditations on First Philosophy, Descartes invents a new and puzzling thought experiment. He imagines an Evil Demon with the power to manipulate the total course of his (Descartes’s) experience, so that what he naturally takes to be experience of the world around him is really a kind of perpetual dream: a simulation or virtual reality, as we might way today. Descartes’s problem, which has made its way into popular culture through films like those in the “Matrix” series, remains a source of philosophical puzzlement. While no one believes that skeptical hypotheses like Demon or computer deception are true, it is not easy to say how we can exclude them. Given that the deception is systematic, it seems that any "evidence" I cite could itself be part of the simulation. So how do I (or could I) know (for sure) that I’m not the victim of the Deceiver or the Matrix? We shall examine some of the latest attempts to respond to Descartes’s challenge. Does the “How could I know?” question admit of a theoretical answer, or is the question itself somehow ill-posed? Can we answer it without making significant concessions to skepticism? Exploring such questions should teach us some interesting lessons about knowledge (or the concept of knowledge).
Area: Humanities

AS.150.467. Philosophic Logic. 3 Credits.
This course is a survey of various topics in philosophical logic. We begin with a review of the model theory of classical first-order logic (FOL). In our first unit, we will then move beyond the standard existential and universal quantifiers of FOL and consider generalized quantifiers, substitutional quantifiers, and plural quantification. In our second unit, we investigate the theory of propositional modal logic, considering its syntax, semantics, proof theory, and some of its applications. In our fourth unit, we inquire into the nature and normativity of logical validity.
Area: Humanities

AS.150.473. Classics of Analytic Philosophy. 3 Credits.
A reading of some of the classic philosophical works in 20th Century Analytic Philosophy, beginning with G. Frege and ending with V.O. Quine.
Area: Humanities

AS.150.474. Justice and Health. 3 Credits.
Course will consider the bearing of theories of justice on health care. Topics will include national health insurance, rationing and cost containment, and what justice requires of researchers in developing countries.
Area: Humanities

AS.150.476. Philosophy and Cognitive Science. 3 Credits.
This year’s topic is perception. Questions will include: In what ways might perceptual states be like and unlike pictures? Does what we believe affect what we perceive? Is linguistic comprehension a kind of perception?
Area: Humanities, Social and Behavioral Sciences

AS.150.479. The Ethics of Making Babies. 3 Credits.
In this class, we will investigate many aspects of the ethics of making babies, asking not only which children we should create and how we should create them, but whether we should make any more people at all. Investigating these questions will take us through large chunks of moral theory, bioethics, and public health ethics. For more information, or to request permission of the instructor (for those who do not meet the prerequisite requirements), email Travis Rieder at trieder@jhu.edu.
Recommended Course Background: One course in ethics or bioethics, or permission of the instructor.
Area: Humanities

AS.150.480. Death and Dying. 3 Credits.
What is death? How should we think about death? How should we think about it? How should we treat those who are dying including ourselves? This course will examine these and other philosophical questions.
Area: Humanities
Writing Intensive

AS.150.481. Hobbes' Leviathan. 3 Credits.
Thomas Hobbes’ Leviathan is a masterpiece of modern political philosophy. This class is an in-depth study of that work.
Area: Humanities

AS.150.482. Food Ethics. 3 Credits.
Eating is an essential human activity: we need to eat to survive. But how should we eat? In this course, we consider such ethical questions as: Is it morally wrong to make animals suffer and to kill them in order to eat them? What is the extent of hunger and food insecurity, in this country and globally, and what should we as individuals do about it? Should the government try to influence our food choices, to make them healthier?
Area: Humanities

AS.150.483. Evidence, Foundations of Probability, and Speculation. 3 Credits.
The course examines major theories about the meaning of evidence and probability, and in terms of these provides answers to the questions "What is a scientific speculation?" and "When, if at all, is speculating important or even legitimate in science?" No preview study of evidence or probability is required.
Area: Humanities

AS.150.485. Descartes and Spinoza. 3 Credits.
Descartes and Spinoza are two of the leading philosophers of the modern period. In the class we will study the works of both figures. Special attention will be assigned to Spinoza’s early works.
Area: Humanities

AS.150.486. Moral Imagination. 3 Credits.
This course explores the relationship between moral principles and how we use imagination to put or fail to put principles to work. We will read widely and eclectically in exploring this relationship.
Area: Humanities
AS.150.487. Fundamental Principles of Philosophical Rationalism. 3 Credits.
At the center of Leibniz rationalist metaphysics are four interrelated philosophical principles: (1) The Law of Non-Contradiction, (2) The Principle of Sufficient Reason (roughly, the claim that everything must have a reason), (3) The Identity of Indiscernibles (roughly, the claim that there are no two perfectly similar things), and (4) The Predicate in Subject Principle (the claim that in every true proposition the concept of the predicate is somehow contained in the concept of the subject). In this class we will study these four principles, i.e., their modal strength, range, justification, and interrelations both in early modern philosophy (Leibniz, Spinoza, and Clarke), and in contemporary philosophy (Della Rocca, Sam Levey, Dasgupta, Max Black).
Area: Humanities

AS.150.491. American Philosophy: Pragmatism. 3 Credits.
Studies of major figures in the history of American philosophy beginning with the 19th century. The course focuses on the development of pragmatism in the work Peirce, James and Dewey. Other philosophers, such as Royce and Mead, may also be studied.
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.492. Plato's Republic. 3 Credits.
This course will be a close reading of Plato's Republic, with special attention to the parallel of city and soul, the relevance of metaphysics to politics, and the relation of aristocracy, democracy and tyranny.
Area: Humanities

AS.150.498. Modal Logic and Its Applications. 3 Credits.
In the first part of the course, we'll investigate the theory of modal logic, considering its syntax, semantics, and proof theory. We'll then turn to some its philosophical applications: epistemic logic, counterfactuals, deontic logic, intuitionistic logic, and the metaphysics of time.
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.511. Directed Study. 3 Credits.
Individual study of special topics, under regular supervision of a faculty member. Special permission is required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms. Writing Intensive

AS.150.512. Directed Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.150.551. Honors Project. 3 Credits.
See departmental major adviser.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.150.552. Honors Project. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.150.600. Reason Virtue and the Good.
This is a course in theoretical ethics structured around the topics of reason, virtue, and the good. Questions include: Are there types of value? What is it to value something? Is there a property good? What would it mean for goodness to be relational rather than non-relational? What is the ground of excellence? How is excellence related to the good? Should we understand virtue on the model of perception? Is there an important difference between facts and values? Is there something distinctive about practical reason? What is the role of the good in intentional action?
Area: Humanities

An introduction to the major theories of probability and to theories of evidence. There are no mathematical or philosophical pre-requisites.
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.604. Graduate Seminar in the Philosophy of Science: The Big Issues.
Readings from Duhem, Carnap, Hempel, Popper, Quine, Kuhn, Feyerabend, van Fraassen, and others who, in the 20th and 21st centuries, got us where we are in the field today. And Quine added: philosophy of science is philosophy enough. Is it?
Area: Humanities, Social and Behavioral Sciences

AS.150.606. Seminar on Skepticism - Ancient &amp; Modern.
Course will focus on ancient skepticism as a way of life, and on the role of epistemological argument in skepticism so conceived. The seminar will end with a brief look at early modern reactions to ancient skepticism.

AS.150.607. Graduate Seminar: Knowledge and Perception.
How does perception reveal the world, if it does? Why have philosophical reflections on perception often led to skepticism? For background, we will start with readings from Ayer and Austin (on the sense-datum theory), and Sellars (on the Myth of the Given). We will then spend time on contemporary 'disjunctive' accounts of perceptual consciousness, with readings from McDowell, Travis and (possibly) others.
Area: Humanities

AS.150.608. Graduate Seminar-Speculation: Scientific and Philosophical.
Some say that speculation whether in science or philosophy, should be avoided at all costs (e.g., Descartes, Newton). Others say that speculation is okay as long as it is followed by argument or evidence (e.g., Popper). Still others encourage one to freely speculate in the absence of argument or evidence (e.g., Feyerabend). Are any of these views right? What is speculation, and is it subject to any universal standards? What is evidence, and is it subject to universal standards? Readings will be from authors mentioned above and from quite a few others. We will look at some very general influential philosophical=scientific speculations, such as the claim that nature is simple and that everything is explainable, as well as some more specific ones.
Area: Humanities

AS.150.609. Fichte, Schelling and Spinoza.
Spinoza constituted a major philosophical interlocutor for both Fichte and Schelling. In this class we will study the critical reception of Spinoza by the two philosophers. Among the topics we intend to discuss are: freedom, God, the concept of substance, the nature of thought, and reason. Recommended Course Background: Previous acquaintance with Spinoza's ethics.
Area: Humanities

AS.150.610. Virtue Ethics.
A study of recent work in virtue ethics.
AS.150.612. The Birth of German Idealism.
This course will mainly consist of close readings of the work F.H. Jacobi, J.G. Fichte, and F.W.J. Schelling. We will focus on the issues of freedom and systematicity in the transformation of Kant's critical philosophy through the influence of Spinoza.
Area: Humanities

AS.150.618. Martin Heidegger, Being and Time: Integral Reading and Current Perspectives II.
Starting with a brief overview and recapitulation of themes discussed in its Introduction and Division One, this jointly will focus on Division Two of Being and Time and bring phenomenological, hermeneutic, and deconstructive as well as analytic, epistemological, and pragmatist methods and viewpoints to bear upon this modern classic.
Area: Humanities

AS.150.619. Topics in Hegel's Philosophy: The Philosophy of Right.
This course will be a close reading of G.W.F. Hegel's Philosophy of Right. Some of the main topics for discussion will be the relation of law and morality, the dependence of the political philosophy on Hegel's Logic, and the relation of individual and social conceptions of freedom.
Area: Humanities

AS.150.620. Political Philosophy.
A high level review of key thinkers in contemporary political thought.
Area: Humanities
Writing Intensive

AS.150.625. Fatalism and the Logic of Unconditionals.
Since the early eighties, there has been a growing movement away from traditional truth-centric theories of meaning and consequence towards more information-oriented accounts. Given these relatively new developments, I think the time is ripe for reconsidering one of the oldest arguments in philosophy: the 'Idle Argument' for fatalism. This notorious argument survives in Cicero's De Fato from 44BC but the version that we will focus on in the seminar is based on Dummett's classic 'Bringing About the Past' [1964].
Area: Humanities

AS.150.622. Formal Logic.
An introduction to symbolic logic and probability. In the first two parts of the course we study formal ways of determining whether a conclusion of an argument follows from its premises. Included are truth-functional logic and predicate logic. In the third part we study the basic rules of probability, and learn how to make probability calculations and decisions in life.' Co-listed with AS.150.118 (for undergraduate students) (01-F 11:00-11:50am).
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.632. Kant's Opus Postumum.
This research seminar examines the reasons that led Kant to revise his transcendental philosophy late in life. Special attention to problems in the Metaphysics of Nature and the Metaphysics of Morals. Students should be familiar with Kant's theoretical and practical philosophy.

AS.150.633. Spinoza and Hegel.
Spinoza and Hegel are two of the greatest philosophers of the modern period. Both philosophers are bold and difficult, and both exerted a decisive influence on later developments of Western philosophy. In this class, we will attempt to reconstruct a philosophical dialogue between the two philosophers. Topics to be discussed include: the nature of philosophy, basic ontology, kinds of knowledge, negation and contradiction, freedom, the reality of time, teleology and human history, the role and value of the state.
Area: Humanities

AS.150.645. Truthmakers.
An investigation into the metaphysics and semantics of truthmakers and their application in various areas of philosophy.
Area: Humanities

AS.150.653. Seminar: Philosophy of Physics.
The Hole Argument. There's a rather simple argument that if the structure of spacetime is not absolute, but is dynamically influenced by physical fields, then determinism is impossible, i.e., unless one thinks that isomorphic models of the theory represent the same physical situation. Various rationales have been given for such identification, some metaphysical, some mathematical, some referential, some operational. For example, among the metaphysical, some have appealed to essentialism, counterpart theory, or haecceity. Others see the hole argument as a specialization of the general permutation arguments given by Quine, Davidson, and Putnam respectively for the relativity of reference, the inscrutability of reference, and internal realism. Still others appeal either to the practices of applied mathematics or to dependent type theory. Yet others invoke the operational foundations (in terms of observables). Detailed knowledge of spacetime theories or physics is not presupposed. To be sure, some formal tools are needed (e.g., the notions of isomorphism and permutation) but these will be introduced on an as needed basis.
Area: Humanities

AS.150.656. Practical Reason in German Idealism.
In this course we will examine the development of idealist theories of practical reason. We will read Kant's Critique of Practical Reason, Fichte's System of Ethics, and selections from Hegel's writings.
Area: Humanities

AS.150.657. Philosophy of Language.
We will investigate one or more specialized topics in formal semantic and pragmatics.

AS.150.666. Explanation in Science and Metaphysics.
Questions about the nature of metaphysical explanation are central to contemporary metaphysics. These questions are relevant to similar debates in philosophy of science about the nature of scientific explanation. In this seminar we will examine questions about the nature and role of metaphysical explanation, specifically focusing on the comparison between metaphysical explanation and scientific explanation.
Area: Humanities, Social and Behavioral Sciences

AS.150.668. Graduate Seminar on Essence.
An exploration of historical and contemporary work on the metaphysics of essence, and related questions about modality, explanation, identity and the Principle of Sufficient Reason. Readings will include work from Aristotle, Spinoza, Kripke and Fine. This course is open to upper level undergraduate students with the permission of the instructor.
Area: Humanities

AS.150.676. Graduate Seminar: Current Topics in Philosophy.
Rather than having a set topic, the point of this seminar is to stay up-to-date with the current philosophy literature by working through 1-2 recently published papers each week. The papers covered will depend on the research interests of the seminar participants (and my own).
Area: Humanities

AS.150.677. Moral Imagination.
This course explores the relationship between moral principles and how we use imagination to put or fail to put principles to work. We will read widely and eclectically in exploring this relationship.
Area: Humanities
AS.150.678. Social Construction.
An exploration of the metaphysics of social construction, examining different theories of social construction and related questions about social ontology, scientific realism and the boundaries of metaphysics.
Area: Humanities

AS.150.688. Philosophy of Psychology.
An examination of recent philosophical and empirical work on perception and consciousness.
Area: Humanities

AS.150.810. Independent Study.

AS.150.811. Directed Study.
Please see AS.150.810 for section numbers to use when registering.

AS.150.812. Directed Study.
Please see AS.150.810 for section number to use when registering.

AS.150.821. Research Seminar in Language and Mind.
A workshop for current departmental research in language and mind.
Permission required.
Area: Humanities

AS.150.822. READINGS AND SKILLS IN CONTEMPORARY PHILOSOPHY
PART I.
This course provides skills training for a successful career in philosophy, through engagement with cutting-edge contemporary work across a wide-range of areas of philosophy. As a class, we will choose accessible articles of general interest recently published in top journals. Each student will be responsible for presenting one of these articles to the class and leading discussion, with guidance from the instructors. All students will be required to carefully and closely read each paper for each class, and come prepared to discuss it in depth. The aim of this part of the course is to learn how to read and analyze articles, present work, and engage in constructive philosophical discussion. After presenting the paper, each presenter will be required to write a short reply to it, in the style of the relevant journal. As a class, we will then engage in a mock review process, crafting anonymous referee reports, revising replies in the light of these, and discussing these as editors. The aim of this part of the course is to gain knowledge and skills relevant to writing philosophy and successful publication. The course is open to 1st and 2nd year students. It will meet every other week in both the fall and the spring semesters; each semester is worth 2 credits and students are required to enroll in both. Grading will be based predominantly on participation and effort. Upper-year graduate students may audit the course by permission of the instructors, conditional on their commitment to attend and engage as full members of the class; if student numbers are high, priority with respect to presentations will be given to 1st and 2nd year students.
Area: Humanities
AS.171 (PHYSICS & ASTROPHYSICS)

AS.171.101. General Physics: Physical Science Major I. 4 Credits. First semester of a two-semester sequence in general physics covers mechanics, heat, sound, electricity and magnetism, optics, and atomic physics. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Course Background: A grade of C- or better in either AS.171.105 OR AS.171.103 OR AS.171.105 OR AS.171.107 OR EN.530.103)
Area: Engineering, Natural Sciences

AS.171.102. General Physics: Physical Science Major II. 4 Credits. Second semester of a two-semester sequence in general physics covers mechanics, heat, sound, electricity and magnetism, optics, and atomic physics. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Course Background: A grade of C- or better in either Physics I or the first semester of Intro to Mechanics I (AS.171.101 OR AS.171.103 OR AS.171.105 OR AS.171.107 OR EN.530.103)
Area: Engineering, Natural Sciences

AS.171.103. General Physics I for Biological Science Majors. 4 Credits. First semester of two-semester sequence in calculus-based general physics, tailored to students majoring in one of the biological sciences. In this term, the topics covered include the basic principles of classical mechanics and fluids as well as an introduction to wave motion. Recommended Corequisites: (AS.173.111) AND (AS.110.106 or AS.110.108 or AS.110.113). Midterm exams are given at 8am Tuesdays, so students must leave their schedules open at this time in order to be able to take these exams.
Area: Engineering, Natural Sciences

AS.171.104. General Physics/Biology Majors II. 4 Credits. This two-semester sequence is designed to present a standard calculus-based physics preparation tailored to students majoring in one of the biological sciences. Topics in electricity & magnetism, optics, and modern physics will be covered in this semester. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Course Background: A grade of C- or better in AS.171.101 or AS.171.103; Corequisite: AS.110.109, AS.173.112.
Area: Engineering, Natural Sciences

AS.171.105. Classical Mechanics I. 4 Credits. An in-depth introduction to classical mechanics intended for physics majors/minors and other students with a strong interest in physics. This course treats fewer topics than AS.171.101 and AS.171.103 but with greater mathematical sophistication. It is particularly recommended for students who plan to take AS.171.201-AS.171.202 or AS.171.309-AS.171.310. Recommended Corequisites: AS.173.115 and AS.110.108
Area: Engineering, Natural Sciences

AS.171.106. Electricity and Magnetism I. 4 Credits. Classical electricity and magnetism with fewer topics than 171.101-103, but with greater mathematical sophistication. Particularly recommended for students who plan to take AS.171.201-AS.171.202. Recommended Course Background: A grade of C- or better in AS.171.105; Corequisite: AS.173.116, AS.110.109
Area: Engineering, Natural Sciences

AS.171.107. General Physics for Physical Sciences Majors (AL). 4 Credits. This two-semester sequence in general physics is identical in subject matter to AS.171.101-AS.171.102, covering mechanics, heat, sound, electricity and magnetism, optics, and modern physics, but differs in instructional format. Rather than being presented via lectures and discussion sections, it is instead taught in an ‘active learning’ style with most class time given to small group problem-solving guided by instructors. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Corequisites: (AS.173.111) AND (AS.110.106 or AS.110.108 or AS.110.113)
Area: Engineering, Natural Sciences

AS.171.108. General Physics for Physical Science Majors (AL). 4 Credits. This two-semester sequence in general physics is identical in subject matter to AS.171.101-AS.171.102, covering mechanics, heat, sound, electricity and magnetism, optics, and modern physics, but differs in instructional format. Rather than being presented via lectures and discussion sections, it is instead taught in an ‘active learning’ style with most class time given to small group problem-solving guided by instructors. Recommended Course Background: A grade of C- or better in either Physics I or the first semester of Engineering Mechanics (AS.171.101 OR AS.171.103 OR AS.171.105 OR AS.171.107 OR EN.530.103)
Area: Engineering, Natural Sciences

AS.171.113. Subatomic World. 3 Credits. Introduction to the concepts of physics of the subatomic world: symmetries, relativity, quanta, neutrinos, particles and fields. The course traces the history of our description of the physical world from the Greeks through Faraday and Maxwell to quantum mechanics in the early 20th century and on through nuclear physics and particle physics. The emphasis is on the ideas of modern physics, not on the mathematics. Intended for non-science majors.
Area: Natural Sciences

AS.171.118. Stars and the Universe: Cosmic Evolution. 3 Credits. This course looks at the evolution of the universe from its origin in a cosmic explosion to emergence of life on Earth and possibly other planets throughout the universe. Topics include big-bang cosmology; origin and evolution of galaxies, stars, planets, life, and intelligence; black holes; quasars; and relativity theory. The material is largely descriptive, based on insights from physics, astronomy, geology, chemistry, biology, and anthropology.
Area: Natural Sciences

AS.171.125. It's not magic, it's physics: Extraordinary Experiments. 3 Credits. Students will learn key concepts of everyday physics through experimentation. They will design, build, and run experiments themselves. The course will be graded on participation and a graded final presentation.
Area: Natural Sciences

AS.171.133. Black Holes and Other Compact Objects: For Non-Majors. 3 Credits. This is a lecture and discussion course aimed at undergraduate students who are not physics and astronomy majors. The topic of the lectures will be a basic overview of the qualitative properties of and historical work on compact astrophysical objects (such as black holes, neutron stars, white dwarfs) and related phenomena.
Area: Natural Sciences
AS.171.201. **Special Relativity/Waves.** 4 Credits.
Course continues introductory physics sequence (begins with AS.171.105-AS.171.106). Special theory of relativity, forced and damped oscillators, Fourier analysis, wave equation, reflection and transmission, diffraction and interference, dispersion. Meets with AS.171.207.
Area: Engineering, Natural Sciences

AS.171.202. **Modern Physics.** 4 Credits.
Course completes four-semester introductory sequence that includes AS.171.105-AS.171.106 and AS.171.201. Planck’s hypothesis, de Broglie waves, Bohr atom, Schrodinger equation in one dimension, hydrogen atom, Pauli exclusion principle, conductors and semiconductors, nuclear physics, particle physics.
Area: Natural Sciences

AS.171.204. **Classical Mechanics II.** 4 Credits.
Principles of Newtonian and Lagrangian mechanics; application to central-force motion, rigid body motion, and the theory of small oscillations. Recommended Course Background: AS.110.108 and AS.110.109, AS.110.202, AS.171.201, or AS.171.309. AS.110.201 or equivalent is strongly recommended.
Area: Natural Sciences

AS.171.205. **Introduction to Practical Data Science: Beautiful Data.** 3 Credits.
The class will provide an overview of data science, with an introduction to basic statistical principles, databases, fundamentals of algorithms and data structures, followed by practical problems in data analytics. Recommended Course Background: Familiarity with principles of computing.
Area: Natural Sciences, Quantitative and Mathematical Sciences

AS.171.207. **Special Relativity.** 1 Credit.
Three-week introduction to special relativity for students who elect to take AS.171.209 in place of AS.171.201.
Area: Natural Sciences

AS.171.301. **Electromagnetic Theory II.** 4 Credits.
Static electric and magnetic fields in free space and matter; boundary value problems; electromagnetic induction; Maxwell’s equations; and an introduction to electrodynamics.
Area: Natural Sciences

AS.171.303. **Quantum Mechanics I.** 4 Credits.
Fundamental aspects of quantum mechanics. Uncertainty relations, Schrodinger equation in one and three dimensions, tunneling, harmonic oscillator, angular momentum, hydrogen atom, spin, Pauli principle, perturbation theory (time-independent and time-dependent), transition probabilities and selection rules, atomic structure, scattering theory. Recommended Course Background: AS.110.302 or AS.110.306. 
Prerequisite(s): (AS.171.204 ) AND ( AS.110.201 OR AS.110.212 ) AND ( AS.110.202 OR AS.110.211 )
Area: Natural Sciences

AS.171.304. **Quantum Mechanics II.** 4 Credits.
Area: Natural Sciences

AS.171.309. **Wave Phenomena with Biophysical Application.** 4 Credits.
Introduction to wave phenomena, primarily through study of biophysical probes that depend on the interaction of electromagnetic radiation with matter. Topics include Fourier Analysis; standing waves; sound and hearing; diffraction and crystallography; geometrical and physical optics – the physics of modern light microscopy; quantum mechanics – how living things absorb light; NMR and MRI. Occasional laboratory exercises are included.
Area: Natural Sciences

AS.171.310. **Biological Physics.** 4 Credits.
Introduces topics of classical statistical mechanics. Additional topics include low-Reynolds number hydrodynamics and E&M of ionic solutions, via biologically relevant examples.
Area: Natural Sciences

AS.171.312. **Statistical Physics/Thermodynamics.** 4 Credits.
Undergraduate course that develops the laws and general theorems of thermodynamics from a statistical framework.
Prerequisite(s): Calculus II (AS.110.107 or AS.110.109 or AS.110.113 ). It is recommended that students have also taken Quantum Mechanics (AS.171.303), Linear Algebra (AS.110.201 or AS.110.212) and Calculus III (AS.110.202 or AS.110.211)
Area: Natural Sciences

AS.171.313. **Introduction to Stellar Physics.** 3 Credits.
Survey of stellar astrophysics. Topics include stellar atmospheres, stellar interiors, nucleosynthesis, stellar evolution, supernovae, white dwarfs, neutron stars, pulsars, black holes, binary stars, accretion disks, protostars, and extrasolar planetary systems. Recommended Course Background: AS.110.108-AS.110.109, AS.171.202
Area: Natural Sciences

AS.171.314. **Introduction to Galaxies and Active Galactic Nuclei.** 3 Credits.
This course will introduce student to the physics of galaxies and their constituents: stars, gas, dust, dark matter and a supermassive black hole in the central regions.
Area: Natural Sciences

AS.171.321. **Introduction to Space, Science, and Technology.** 3 Credits.
Topics include space astronomy; remote observing of the earth, space physics, planetary exploration, human space flight, space environment, orbits, propulsion, spacecraft design, attitude control and communication. Crosslisted by Departments of Earth and Planetary Sciences, Materials Science and Engineering and Mechanical Engineering. Recommended Course Background: AS.171.101-AS.171.102 or similar; AS.110.108-AS.110.109.
Area: Engineering, Natural Sciences

AS.171.324. **Statistical thinking and data analysis.** 3 Credits.
We live in a data-rich world where the flux of information increases exponentially. We will learn how to think statistically and see patterns and structure in many systems around us: news reports, images, cities, social networks, etc. We will learn how to use this knowledge to make decisions and predictions. We will explore correlations, patterns, entropy, fractals. This course will allow students to better understand the complex world we live in. It involves some python coding. Junior, senior and graduate students only
Area: Natural Sciences
AS.171.405. Condensed Matter Physics. 3 Credits.
Undergraduate course covering basic concepts of condensed matter physics: crystal structure, diffraction and reciprocal lattices, electronic and optical properties, band structure, phonons, superconductivity and magnetism. Co-listed with AS.171.621 Recommended Course Background: AS.171.304, AS.110.201-AS.110.202.
Area: Natural Sciences

AS.171.406. Condensed Matter Physics. 3 Credits.
Area: Natural Sciences

AS.171.408. Nuclear and Particle Physics. 3 Credits.
Basic properties of nuclei, masses, spins, parity. Nuclear scattering, interaction with electromagnetic radiation, radioactivity, Pions, muons, and elementary particles, including resonances. Recommended Course Background: AS.171.303
Area: Natural Sciences

AS.171.410. Physical Cosmology. 3 Credits.
This course provides an overview of modern physical cosmology. Topics covered include: the contents, shape, and history of the universe; the big bang theory; dark matter; dark energy; the cosmic microwave background; Hubble’s law; the Friedmann equation; and inflation. Recommended Course Background: (AS.171.101-AS.171.102), or (AS.171.103-AS.171.104), or (AS.171.105-AS.171.106), or (AS.171.107-AS.171.108), or equivalent.
Area: Natural Sciences

AS.171.411. Light and Optics. 3 Credits.
What is light? How does it propagate and interact with matter? How do we use it to transmit information? How does technology make use of light? This course is designed for majors in physics as well as other science and engineering departments.
Area: Engineering, Natural Sciences

AS.171.416. Numerical Methods for Physicists. 4 Credits.
Area: Natural Sciences, Quantitative and Mathematical Sciences

AS.171.425. Group Theory in Physics. 3 Credits.
Introduction to finite and Lie groups, representations and applications to quantum mechanics, condensed matter physics, and other fields of physics; selected topics from differential geometry and algebraic topology. Recommended Prerequisite: AS.171.304
Area: Natural Sciences

AS.171.430. Introduction to Quantum Field Theory. 3 Credits.
Quantum Field Theory marries the principles of special relativity with quantum mechanics and provides a remarkably consistent description of a wide variety of phenomena, ranging from the theory of elementary particles to processes in condensed matter physics. It is an essential element in the toolkit of every physicist. In this course, we provide an introduction to this vast topic and aim to provide an intuitive understanding of this field. We will start by learning how to think about quantum mechanics in a manner consistent with special relativity (the Klein Gordon and Dirac equations), learn how to estimate relativistic quantum processes (Feynman diagrams), analyze nonsensical infinities that arise in these theories (Renormalization) and conclude with an overview of the Standard Model of Particle Physics (QCD and Electroweak theory). The course is aimed at introducing the student to how physicists think about these issues and it is a stepping stone to graduate study in this topic.
Prerequisite(s): AS.171.304
Area: Natural Sciences

AS.171.501. Independent Research- Undergraduate. 3 Credits.
Students may register for independent research with a faculty member in the Department of Physics and Astronomy. A research plan should be sent to the Director of Undergraduate Study before the add/drop date that includes project details, the number of hours of effort each week and the number of credits. This course may not be used for one of the two electives required for a BA, but one semester of research may be used as one of four focused electives in a BS program.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.171.502. Undergraduate Independent Research. 0 - 3 Credits.
Research done in senior year in conjunction with experimental equipment of intermediate laboratory or as special project in research group. Credit for independent study given to junior and senior students who act as tutors.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.171.503. Senior Thesis. 3 Credits.
Preparation of a substantial thesis based upon independent student research, supervised by at least one faculty member in Physics and Astronomy. This course may only be taken for credit during one semester. However, students are expected to have engaged in their research project during previous semesters through 171.501-502, summer research, etc. This course may not be used as one of the two electives required for a BA, but can be used as one of the four focused electives in a BS program. Open to senior department majors only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.171.504. Senior Thesis. 0 - 3 Credits.
Preparation of a substantial thesis based upon independent student research, supervised by at least one faculty member in Physics and Astronomy.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.171.507. Independent Research. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.171.597. Independent Research. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.171.603. Electromagnetic Theory.
Classical field theory, relativistic dynamics, Maxwell's equations with static and dynamic applications, boundary-value problems, radiation and propagation of electromagnetic waves, advanced topics in electrodynamics in media and plasmas

AS.171.605. Quantum Mechanics.
Review of wave mechanics and the Schrodinger equation, Hilbert space, harmonic oscillator, the WKB approximation, central forces and angular momentum, scattering, electron spin, density matrix, perturbation theory (time-independent and time-dependent), quantized radiation field, absorption and emission of radiation, identical particles, second quantization, Dirac equation.
AS.171.606. Quantum Mechanics.
Review of wave mechanics and the Schrodinger equation, Hilbert space, harmonic oscillator, the WKB approximation, central forces and angular momentum, scattering, electron spin, density matrix, perturbation theory (time-independent and time-dependent), quantized radiation field, absorption and emission of radiation, identical particles, second quantization, Dirac equation. Recommended Course Background: AS.171.303 and AS.171.304

Topics in applied mathematics used by physicists, covering numerical methods: linear problems, numerical integration, pseudo-random numbers, finding roots of nonlinear equations, function minimization, eigenvalue problems, fast Fourier transforms, solution of both ordinary and partial differential equations. Undergraduate students may register online for this course and will be assigned 3 credits during the add/drop period.

AS.171.611. Stellar Structure and Evolution.
Basic physics of stellar structure and evolution will be discussed with emphasis on current research.

AS.171.612. Interstellar Medium and Astrophysical Fluid Dynamics.

AS.171.613. Radiative Astrophysics.
A one-term survey of the processes that generate radiation of astrophysical importance. Topics include radiative transfer, the theory of radiation fields, polarization and Stokes parameters, radiation from accelerating charges, bremsstrahlung, synchrotron radiation, thermal dust emission, Compton scattering, properties of plasmas, atomic and molecular quantum transitions, and applications to astrophysical observations.

AS.171.618. Observational Astronomy.
How do we observe the Universe at each wavelength and what do we see? This course will present the knowledge required for astronomical observations across the entire spectrum. For each wavelength range (gamma rays, X-rays, UV, visible, IR, radio) we will discuss the type of detector used, the range of possible observations and current open questions. We will also discuss the dominant astronomical and terrestrial sources across the spectrum, and study the differences between ground- and space-based observations.

An advanced graduate level course that emphasizes the importance of molecules in astrophysical environments as diverse as interstellar clouds, circumstellar outflows, cometary comae, and active galactic nuclei. Topics will include the chemistry and photochemistry of astrophysical molecules; molecular excitation; astrophysical masers; interstellar molecular clouds; interstellar shock waves; circumstellar outflows; cometary comae; molecular accretion disks.

This sequence is intended for graduate students in physics and related fields. Topics include: metals and insulators, diffraction and crystallography, phonons, electrons in a periodic potential, transport. Co-listed with AS.171.405

This sequence is intended for graduate students in physics and related fields. Topics include superconductivity, magnetism, metal-insulator transitions, low dimensional materials, quantized Hall effect.

AS.171.625. Experimental Particle Physics.
For graduate students interested in experimental particle physics, or theory students, or students from other specialties. Subjects covered: experimental techniques, including particle beams, targets, electronics, and various particle detectors; and a broad description of high energy physics problems. Undergraduate students may register online for this course and will be assigned 3 credits during the add/drop period.

AS.171.627. Astrophysical Dynamics.
This is a graduate course that covers the fundamentals of galaxy formation, galactic structure and stellar dynamics and includes topics in current research.

AS.171.629. First Year Research.

AS.171.630. First Year Research.

Introduction to finite and Lie groups, representations and applications to quantum mechanics, condensed matter physics, and other fields of physics; selected topics from differential geometry and algebraic topology.
Area: Natural Sciences

AS.171.641. Second Year Research.

AS.171.642. Second Year Research.

AS.171.644. Exoplanets and Planet Formation.
A graduate-level introduction to the properties of the solar system, the known exoplanet systems, and the astrophysics of planet formation and evolution. Topics also include the fundamentals of star formation, protoplanetary disk structure and evolution, exoplanet detection techniques, and the status of the search for other Earths in the Galaxy. Upper-level undergraduates may enroll with the permission of the instructor.

AS.171.646. General Relativity.
An introduction to the physics of general relativity. Principal topics are: physics in curved spacetimes; the Equivalence Principle; the Einstein Field Equations; the post-Newtonian approximation and Solar System tests; the Schwarzschild and Kerr solutions of the Field Equations and properties of black holes; Friedmann solutions and cosmology; and gravitational wave propagation and generation.
Area: Natural Sciences

Cells are actively-driven soft materials – but also efficient sensors and information processors. This course will cover the physics of those cellular functions, from the mechanics of DNA to the sensing of chemical signals. Questions answered include: How does polymer physics limit how quickly chromosomes move? Why do cells use long, thin flagella to swim? What limits the accuracy of a cell’s chemotaxis? Some experience with partial differential equations required. No biology knowledge beyond the high school level necessary. Some problem sets will require minimal programming.
Area: Natural Sciences

This course covers the basic theory of planetary atmospheres as applied to extrasolar planets. The fundamental physical processes related to the structure, composition, radiative transfer, chemistry and dynamics of planetary atmospheres are covered, with an emphasis on those related to observable exoplanet properties. We also provide an overview of the observational techniques of exoplanetary atmospheres and discuss the habitability of exoplanets.
Area: Natural Sciences
AS.171.697. Astro-Particle Physics.
Topics include: Dark matter, dark energy, ultra-high energy cosmic rays, neutrino astrophysics, black holes, WIMPS, sterile neutrinos, axions, gamma ray bursts, particle acceleration, cosmic backgrounds, dark energy equation- of-state. Senior undergraduates with permission.

AS.171.698. Physics Beyond the Standard Model.
The Standard Model of particle physics has withstood every direct experimental test, explaining physics from sub nuclear to cosmological length scales. But, we know that it is not a complete theory. It fails to explain observational facts such as the nature of dark matter and dark energy. The theory is also beset by theoretical problems such as the hierarchy, strong CP, cosmological constant and the black hole information problem. Attempts to explain these puzzles have not been successful. In this course, we will highlight the main obstacles towards solving these problems and discuss new approaches to these problems, both from the experimental and theoretical point of view.
Area: Natural Sciences

AS.171.701. Quantum Field Theory.
Introduction to relativistic quantum mechanics and quantum field theory. Canonical quantization; scalar, spinor, and vector fields; scattering theory; renormalization; functional integration; spontaneous symmetry breaking; Standard Model of particle physics.

AS.171.702. Quantum Field Theory II.
Introduction to relativistic quantum mechanics and quantum field theory. Recommended Course Background: AS.171.605-AS.171.606 or equivalent.

AS.171.703. Advanced Statistical Mechanics.
Brief review of basic statistical mechanics and thermodynamics. Then hydrodynamic theory is derived from statistical mechanics and classical treatments of phase transitions, including Ginzburg-Landau theory.

Course covers phase transitions and critical phenomena. Building on the ideas of spontaneous symmetry breaking and scale invariance at a critical point we develop Landau’s theory of phase transitions and the apparatus of renormalization group using both analytic and numerical techniques for studying interacting systems.

In September 2015, one hundred years after Einstein’s prediction of the existence of gravitational waves, the LIGO/Virgo collaboration detected the gravitational radiation produced by the merger of two black holes, marking the beginning of a new era in astronomy. This course will review the theory of gravitational waves, the main astrophysical and cosmological sources of gravitational radiation, and the modeling of these sources through numerical and analytical techniques. We will discuss how present and future gravitational wave detections on Earth and in space can be used to study the astrophysics of compact objects (such as black holes and neutron stars) and to test Einstein’s theory of general relativity.
Area: Natural Sciences

In the past decade there’s been an explosion of progress in machine learning, using models with billions of parameters that learn from enormous datasets. These models present an exciting opportunity for physicists interested in investigating how and why they work. This course will provide an introduction to the subject, including aspects of learning theory, neural network architectures, optimization, statistics, and information theory.
Area: Natural Sciences

AS.171.750. Cosmology.
Review of special relativity and an introduction to general relativity, Robertson-Walker metric, and Friedmann equation and solutions. Key transitions in the thermal evolution of the universe, including big bang nucleosynthesis, recombination, and reionization. The early universe (inflation), dark energy, dark matter, and the cosmic microwave background. Development of density perturbations, galaxy formation, and large-scale structure.

AS.171.752. Black Hole Astrophysics.
Black holes are the central engines for a wide variety of astrophysical objects: Galactic X-ray sources, active galactic nuclei, stellar tidal disruptions, and the black hole mergers that are the only directly-detected gravitational wave sources (as of this writing). Although the mass distribution of astrophysical black holes spans at least eight orders of magnitude and their circumstances can vary tremendously, the physical processes relevant to them are often closely related. This class will present the most important of them: relativistic orbits; accretion dynamics, the structure of accretion flows, and their radiation mechanisms; relativistic jet launching; binary black hole dynamics and gravitational wave radiation.

AS.171.753. String Theory.
Area: Natural Sciences

AS.171.755. Fourier Optics and Interferometry in Astronomy.
A course for advanced undergraduate and beginning graduate students covering the principles of optics and image formation using Fourier Transforms, and a discussion of interferometry and other applications both in radio and optical astronomy.

This course is designed for graduate students interested in learning the language, techniques, and problematic of modern quantum many-body theory as applied to condensed matter physics.

AS.171.782. Advanced Particle Theory: Quantum Gravity.
Advanced course on the AdS/CFT correspondence and its relationship with contemporary research topics.
Area: Natural Sciences

AS.171.732. Elementary Particle Physics.
Description TBA
AS.171.783. Black Hole Physics.

General Relativity predicts its own demise in the existence of singular black hole solutions. There have been mounting astrophysical evidence that black holes do exist in nature. Thus they are not just pathologies of the theory but fundamental objects in gravity; indeed, most of the research in the field aims to resolve various paradoxes and puzzles that emerge when one tries to understand physics inside or outside black holes. The goal of this course is to elucidate these paradoxes and puzzles. First, we will study the classical properties of black holes in general relativity such as horizons, causal history, singularity theorems, area theorems and black hole mining. Next, we will study semi-quantum and quantum properties such as black hole thermodynamics, Hawking radiation, black hole evaporation. We will also explore modern results and perspectives on the fundamental physics of black holes that are necessary for current research. A background in general relativity and quantum field theory is recommended for the course.

AS.171.784. Advanced Particle Theory: 'What to Expect at the LHC'.

The course will focus on scenarios and principles for new particle physics that can be tested at the CERN Large Hadron Collider and other particle experiments.

AS.171.785. Advanced Particle Theory: Dark Matter.

The overwhelming evidence that dark matter exists and that it is not part of the fundamental theory of matter (the standard model) suggests the need for a graduate course. I will cover what is known and not known about dark matter, being specific enough to open lines of inquiry. I will cover what the rules of quantum field theory would allow it to be and how it could interact with us. I will go over possible mechanisms that explain the generation of dark matter in our universe in the first place. In addition, I will go over the ways to potentially discover (interact with) it directly. The first half or more of the course should be mostly accessible to advanced graduate students in astrophysics and high-energy particle experimentalists. The last half/third will be more field-theory oriented.

Area: Natural Sciences

AS.171.802. Independent Research-Graduate.

AS.172.203. Contemporary Physics Seminar. 1 Credit.

This seminar exposes physics majors to a broad variety of contemporary experimental and theoretical issues in the field. Students read and discuss reviews from the current literature, and are expected to make an oral or written presentation. Recommended Course Background: AS.171.101-AS.171.102, AS.171.103-AS.171.104, or AS.171.105-AS.171.106.

Area: Natural Sciences

AS.172.601. Department Colloquium.

AS.172.604. Joint JHU/STScI Colloquium.

A joint JHU Department of Physics and Astronomy and Space Telescope Science Institute Colloquium Series.

AS.172.633. Language Of Astrophysics.

Survey of the basic concepts, ideas, and areas of research in astrophysics, discussing general astrophysical topics while highlighting specialized terms often used compared to physics.

AS.172.722. Hot Topics in Astrophysics.

AS.172.732. CAS Research Seminar.

AS.172.751. Elementary Particle Physics Seminar.

AS.172.752. Elementary Particle Physics Seminar.

AS.172.753. Advanced Particle Theory Seminar.

AS.172.754. Advanced Particle Theory Seminar.

AS.173.111. General Physics Laboratory I. 1 Credit.

Experiments are chosen from both physical and biological sciences and are designed to give students background in experimental techniques as well as to reinforce physical principles. Corequisite: AS.171.101, AS.171.103, or AS.171.105.

Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

Area: Natural Sciences

AS.173.112. General Physics Laboratory II. 1 Credit.

Experiments are chosen from both physical and biological sciences and are designed to give students background in experimental techniques as well as to reinforce physical principles. Recommended Course Background: AS.173.111; Corequisite: AS.171.102.

Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

Area: Natural Sciences

AS.173.115. Classical Mechanics Laboratory. 1 Credit.

Experiments chosen to complement the lecture course Classical Mechanics I, II AS.171.105-AS.171.106 and introduce students to experimental techniques and statistical analysis. Corequisite: AS.171.105.

Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

Area: Natural Sciences

AS.173.116. Electricity and Magnetism Laboratory. 1 Credit.

Experiments chosen to complement Electricity and Magnetism AS.171.106 and introduce students to experimental techniques and statistical analysis.

Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

Area: Natural Sciences

AS.173.308. Advanced Physics Laboratory. 3 Credits.

A broad exposure to modern laboratory procedures such as holography, chaos, and atomic, molecular, and particle physics.

Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

Area: Natural Sciences

Writing Intensive
AS.180 (ECONOMICS)

AS.180.101. Elements of Macroeconomics. 3 Credits.
An introduction to the economic system and economic analysis, with emphasis on total national income and output, employment, the price level and inflation, money, the government budget, the national debt, and interest rates. The role of public policy. Applications of economic analysis to government and personal decisions. Prerequisite: basic facility with graphs and algebra.
Area: Social and Behavioral Sciences

AS.180.102. Elements of Microeconomics. 3 Credits.
An introduction to the economic system and economic analysis with emphasis on supply and demand, relative prices, the allocation of resources, and the distribution of goods and services, theory of consumer behavior, theory of the firm, and competition and monopoly, including the application of microeconomic analysis to contemporary problems.
Area: Social and Behavioral Sciences

AS.180.203. Faculty Research in Economics. 1 Credit.
This course will consist of a series of informal lectures by various professors in the Department of Economics. Each lecture will consist of a description of a professional research project which he/she has undertaken over the course of his/her professional career.
Prerequisite(s): AS.180.101 and AS.180.102, both may be taken concurrently.

AS.180.210. Migrating to Opportunity? Economic Evidence from East Asia, the U.S. and the EU. 3 Credits.
Increased mobility of people across national borders, whether by choice or by force, has become an integral part of the modern world. Using a comparative perspective and an applied economics approach, the course explores the economic and political determinants, and (likely) consequences of migration flows for East Asia, the US and the EU. Lectures, assignments and in class discussions, will be built around the following topics: i) migrants’ self-selection; ii) human capital investment decision-making; iii) remittance decisions and effects; iv) impacts on labor markets of both receiving and sending countries; and v) the economic benefits from immigration. Overall, the course will give students perspective on the why people choose or feel compelled to leave their countries, how receiving countries respond to migrants’ presence, and the key economic policy concerns that are influencing the shaping of immigration policy in East Asia, the US, and the EU.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.214. The Economic Experience of the BRIC Countries. 3 Credits.
In 2001, Jim O’Neill, the Chief Economist at Goldman Sachs, coined the acronym BRIC to identify the four large emerging economies, Brazil, Russia, India and China. These economies have since had an amazing run, and have emerged as the biggest and fastest growing emerging markets. In this course, we look at the economic experiences of the BRIC countries for the past 50 years. We discuss the reasons that have contributed to their exceptional growth rates, with particular emphasis on their transformation into market economies. We also analyze the challenges that these countries continue to face in their development process.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.217. Game Theory in Social Sciences. 3 Credits.
Game Theory is the study of multiple person decision problems in which the well-being of a decision maker depends not only on his own actions but also on those of others. Such problems arise frequently in economics, political science, business, military science and many other areas. In this course, we will learn how to model different social situations as games and how to use solution concepts to understand players’ behavior. We will consider various examples from different fields and will play several games in class. The emphasis of the class is on the conceptual analysis and applications and we will keep the level of mathematical technicalities at the minimum -- high school algebra and one term of calculus will be sufficient. Students who took AS.180.117 are not eligible to take AS.180.217.
Prerequisite(s): Students may not have previously taken AS.180.117.; AS.180.102 or instructor permission
Area: Social and Behavioral Sciences

AS.180.221. The Informal Economy: Who Wins, Who Loses, and Why We Care About It. 3 Credits.
The informal economy is one of the most complex economic and political phenomena of our time. It exists in rich and poor countries alike, currently employs almost half of the world’s workers, about 1.8 billion people, and totals to economic activity of around $10 trillion. If the informal economy were an independent nation, it would be the second-largest economy in the world, after the United States and before China. In today’s globalizing environment, are informal economies a poverty trap or an engine of growth? Do they stimulate entrepreneurship and popular empowerment, or promote exploitation? How does an improved understanding of the size and organization of informal economies affect service provision, social policy or taxation? What are the implications of the informal economy for social cohesion and popular politics? The proposed course will address these (as well as other) questions related to the informal economy to offer students an understanding of such complex phenomenon from a variety of perspectives. The course will comprise three parts. Part 1 will explore the complexities of the informal economy, and the effects of informalities on policies of inclusive growth. Part 2 will draw on empirical evidence and comparative case studies to examine informal economies in various regions, including Africa, East Asia, North and South America, and Europe, highlighting variations in activities, relations with the state, global integration and economic outcomes. Finally. Part 3 will discuss the ongoing economic policy shift from punitive measures to accepting informality as a virtual space through which citizens flow from job-seeker to compliant entrepreneurs.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.228. Economic Development. 3 Credits.
A comprehensive survey of economic behavior by households, farms and firms in poor countries and the role of and for governments. Discussions include measurement of income levels, economy-wide equilibrium, sources of growth, agriculture and industry, international trade and investment, savings, population, fertility, education, health, income distribution and public finances. Applies economic theory rigorously to interpret and evaluate the economic experience of poor countries. Diagnostic test on Elements of Economics is required in the second week. Grading based on 3 exams and one paper.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences
Writing Intensive
AS.180.231. Debates in Macroeconomics. 3 Credits.
This course covers some of the more contentious current debates in macroeconomics. Topics include: the recent tax reform (who gains and for how long?); unconventional monetary policies (have they helped?); modern monetary theory (sound doctrine or hokum?); secular stagnation (the right diagnosis?); backlash against globalization (warranted? unprecedented?); immigration (economic bane or boon?); rising income inequality (causes? consequences? pervasiveness?). Students will use the tools of economics to analyze these and other pressing issues. Though definitive answers may prove elusive, sound economic analysis can shed considerable light, not least by unmasking the political biases that often drive protagonists on both sides of these debates.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.233. Economics of Transition and Institutional Change. 3 Credits.
This course will introduce students to the comparative analysis of institutions of existing capitalist systems and to the historical evolution of those institutions. By comparing the economic systems of different nations, we will try to reveal the institutional setups that either contribute or hinder economic performance. We will also examine the process of countries transforming their economies and investigate the factors that determine the differences in reforms' outcomes between countries.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences
Writing Intensive

AS.180.238. Rethinking Economics After the Great Recession. 3 Credits.
The financial crisis that began in the United States in 2007 threw virtually the entire world into recession. This class will look at the causes of the crisis and at how it unfolded. It will look into the conventional wisdom of economists, circa 2006, and why that wisdom proved to be so wrong. It will examine the financial innovations that contributed to the crisis, at the reasons financial regulators were blindsided, and at the reforms enacted after the crisis.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences
Writing Intensive

AS.180.239. Urban Economics. 3 Credits.
This course introduces students to the major ideas of modern urban economics focused on the causes and consequences of urban economic growth, urban poverty and a city's quality of life. We will analyze basic questions such as: Why is Silicon Valley in Silicon Valley? Why did Beijing become so polluted? Why is crime high in Baltimore? Why does rich San Francisco face a homelessness challenge? The role of federal, state, and local government in urban life will be explored.
Prerequisite(s): AS.180.102
Area: Social and Behavioral Sciences

AS.180.240. JHU Bologna: History of Banking. 3 Credits.
Economics course offered on the JHU Summer Program in Bologna. Permission required. Must be taken for a letter grade. Open to students on the JHU/Bologna summer program only.
Area: Social and Behavioral Sciences

AS.180.241. International Trade. 3 Credits.
Theory of comparative advantage and the international division of labor: the determinants and pattern of trade, factor price equalization, factor mobility, gains from trade and distribution of income, and theory and practice or tariffs and other trade restrictions. Recommended Course Background: AS.180.101.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.242. International Monetary Economics. 3 Credits.
This course presents International Monetary Economics theory and applies it towards gaining an understanding of recent events and current policy issues. The theory presented in this course covers a broad range of topics including exchange rate determination, monetary and fiscal policy in an open economy, balance of payments crisis, the choice of exchange rate, and international debt. The insights provided by these theoretical frameworks will enable us to discuss topics such as the global financial crisis, global financial imbalances, the Chinese exchange rate regime, and proposed changes in the international financial architecture.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.244. Market Design. 3 Credits.
We will study how the rules of a market impact behavior, and in turn whether this behavior leads to (un)desirable outcomes. We will cover how the lessons learned from both successful and failing markets have been used by economists to design new markets. It will help us address questions such as: (i) Can economics help with the shortage of donated kidneys? (ii) How should a ride share service assign cars to clients? (iii) Can changing the way school seats are assigned change the welfare of students in a city? The material is intended to be as accessible as possible, keeping the mathematical technicalities to a minimum (i.e. one-term of calculus would be sufficient).
Prerequisite(s): AS.180.102
Area: Social and Behavioral Sciences

AS.180.246. Environmental Economics. 3 Credits.
This course presents a broad overview of the key issues in modern environmental economics with a focus on understanding and solving urban pollution challenges in developed and developing nations. This course explores how cities and nations can achieve the 'win-win' of economic growth and reduced urban pollution. Special attention is paid to the incentives of households, firms and governments in reducing the production of pollution. The course examines a number of pollution challenges including; air, water, noise, garbage and the global challenge of climate change.
Area: Humanities
AS.180.248. Financial Writing and Analysis. 3 Credits.
There is an immense chasm between economic and financial commentary in academic discussions and that provided by private sector analysts and the press. Some of the difference is merely semantic, but much of the difference has real substance. Academic and nonacademic commentators tend to simply write off the other as being clueless in some way. Sorting out which bits of each style of analysis are most valuable and synthesizing them into a coherent commentary is a rare and valuable skill. This is a hands-on course with a goal of building skills reading and writing commentary in financial economics. The course begins critically studying commentary regarding prominent topics in the news over the recent months and then moves to writing ‘explainer’ pieces for publication on the Center for Financial Economics blog. Students will work in teams both analyzing commentary, and writing and critiquing the work of fellow students.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences
Writing Intensive

AS.180.252. Economics of Discrimination. 3 Credits.
This course examines labor market discrimination by gender, race and ethnicity in the United States. What does the empirical evidence show, and how can we explain it? How much of the difference in observed outcomes is driven by differences in productivity characteristics and how much is due to discrimination? How have economists theorized about discrimination and what methodologies can be employed to test those theories? What has been the impact of public policy in this area; how do large corporations and educational institutions respond; and what can we learn from landmark lawsuits? The course will reinforce skills relevant to all fields of applied economics, including critical evaluation of the theoretical and empirical literature, the reasoned application of statistical techniques, and analysis of current policy issues.
Prerequisite(s): AS.180.102
Area: Social and Behavioral Sciences
Writing Intensive

AS.180.260. Real Estate Economics and Finance. 3 Credits.
An introduction to the economic analysis of real estate markets. Various perspectives will be considered, including individual homeowners and renters, investors and financiers, and policymakers. Topics include the determinants of property valuations, financing considerations, real estate development, and analysis of real estate as an investment class. The course qualifies as an elective for the Financial Economics Minor.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.261. Monetary Analysis. 3 Credits.
This course analyzes the financial and monetary system of the U.S. economy and the design and implementation of U.S. monetary policy. Among other topics, we will examine the role of banks in the economy, the term structure of interest rates, the stock market, the supply of money, the role of the Federal Reserve in the economy, the objectives of monetary policy in the United States and current monetary policy practice.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.263. Corporate Finance. 3 Credits.
This course is an introduction to the financial management of a corporation. Students study the following broad questions. How should a firm decide whether to invest in a new project? How much debt and equity should a firm use to finance its activities? How should a firm pay its investors? How do taxes affect a firm’s investment and financing decisions? What determines the value of a firm? The emphasis throughout the course is on the economic principles that underlie answers to these questions.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.266. Financial Markets and Institutions. 3 Credits.
Understanding design and functioning of financial markets and institutions, connecting theoretical foundations and real-world applications and cases. Basic principles of asymmetric information problems, management of risk. Money, bond, and equity markets; investment banking, security brokers, and venture capital firms; structure, competition, and regulation of commercial banks. Importance of electronic technology on financial systems.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.268. Seminar on Financial Regulation. 3 Credits.
This course examines regulation of the financial system in the United States and its effects on the economy. It considers proposals for reform and the ongoing implementation of the Dodd-Frank Act of 2010. A major part of the course will be student research projects and class discussion of the projects.
Area: Social and Behavioral Sciences

AS.180.280. The History and Future of the Hedge Fund Industry. 3 Credits.
The precursors to modern hedge funds began more than 50 years ago, but in the 1990s the hedge fund, or alternative investments, industry began a period of rapid growth and evolution. With growth came controversy. Some argue that hedge funds, by allowing immense amounts of capital to be rapidly and freely deployed, play a vital role in pushing prices toward the efficient markets ideal. Others claim that hedge funds may accentuate speculative price dynamics, threatening the stability of the financial sector. While many hedge funds claim to offer outstanding returns to investors, data suggest that many clients end up paying high fees for unspectacular results. This course examines these and other controversies, while tracing the history of the alternative investments industry over the last 25 years.
Prerequisite(s): AS.180.101 AND AS.180.102 AND (AS.180.266 OR AS.180.263 OR AS.180.367)
Area: Social and Behavioral Sciences
AS.180.285. Information and Investing Seminar. 3 Credits.
The course will seek to discuss and illuminate the information (news reports, industry reports, government statistics, and proprietary indicators) that investors use to make investment decisions. The course will be conducted in the framework of a weekly investment committee format wherein information is processed to maximize an investment portfolio’s return to risk. Each class will be conducted in two parts. The first part will require students to share with the class information gathered from their assigned specialty (e.g.: fixed income, equities, emerging markets, commodities) and the second part will require group interaction as to what decisions need to be made to a hypothetical portfolio in order to maximize objectives. The course will require regular reading of financial and economic news as well as numerous assigned industry and academic research related to global finance. Other: this course will require quite a bit of reading and regular interaction in group discussion and with the instructor.
Prerequisite(s): AS.180.280 or permission of instructor Kevin Heerdt or Robert Barbera
Area: Social and Behavioral Sciences

AS.180.289. Economics Of Health. 3 Credits.
Application of economic concepts and analysis to the health services system. Review of empirical studies of demand for health services, behavior of providers, and relationship of health services to population health levels. Discussion of current policy issues relating to financing and resource allocation.
Prerequisite(s): AS.180.102
Area: Social and Behavioral Sciences

AS.180.301. Microeconomic Theory. 4.5 Credits.
An introduction to the modern theory of allocation of resources, starting with the theories of the individual consumer and producer, and proceeding to analysis of systems of interacting individuals, first in the theory of exchange, then to systems which include production as well.
Prerequisite(s): AS.180.102 AND (AS.110.106 OR AS.110.107 OR AS.110.108 OR AS.110.109) OR equivalent; AS.180.101 may be taken concurrently.
Area: Social and Behavioral Sciences

AS.180.302. Macroeconomic Theory. 4.5 Credits.
The course provides a treatment of macroeconomic theory including a static analysis of the determination of output, employment, the price level, the rate of interest, and a dynamic analysis of growth, inflation, and business cycles. In addition, the use and effectiveness of monetary and fiscal policy to bring about full employment, price stability, and steady economic growth will be discussed.
Prerequisite(s): AS.180.101 and (AS.110.106 or AS.110.107 or AS.110.108 or AS.110.109); AS.180.102 can be taken at the same time as AS.180.302.
Area: Social and Behavioral Sciences

AS.180.303. Topics in International Macroeconomics and Finance. 3 Credits.
The course will review selected topics in international macroeconomics and finance. The topics for the Fall of 2019 include: financial globalization; international portfolio diversification; capital account liberalization and the choice of the exchange rate regime in emerging markets; the global financial safety net; macroeconomic adjustment in the euro area.
Prerequisite(s): AS.180.101 AND AS.180.102 AND AS.180.302
Area: Social and Behavioral Sciences

AS.180.309. Economics of Uncertainty and Information. 3 Credits.
In this course we’ll discuss the theory of decision making in the face of risk, the theory of risk aversion and its applications to financial and insurance markets. Building on the theory of individual decision making under risk, we will study the economic implications of asymmetric information, the type of market failures produced by adverse selection and moral hazard problems, and the models that were advanced to analyze these problems, including incentive contracts, screening and signaling equilibria.
Prerequisite(s): AS.180.301 OR AS.180.401

AS.180.310. Economics Of Antitrust. 3 Credits.
This course explores the economic rationale for, and consequence of, antitrust laws. In addition to economic analysis we will study landmark antitrust cases.
Prerequisite(s): AS.180.301 OR AS.180.401
Area: Social and Behavioral Sciences
Writing Intensive

AS.180.312. Evaluating Public Policy: Experimental and Quasi-Experimental Research Design in Social Science. 3 Credits.
The purpose of the course is to show how experimental, quasi-experimental and non-experimental methods can be used to advance scientific knowledge about topics in economics. It will teach students the empirical techniques required to analyze experimental and non-experimental data to draw causal inference. The course will begin with a primer on the use of experimental methods in economics, specifically in the context of evaluating welfare programs and labor market policies. Students will then proceed to learn the empirical methods that can be employed to establish cause and effect, both when data is obtained through a randomized control trial (experimental data), or when randomization occurs naturally (quasi-experimental data). The tools and topics that are covered will not only be relevant to economics students, but will also be of interest to students from other social science departments.
Prerequisite(s): AS.180.301 AND (EN.550.420 OR EN.550.310 OR EN.550.412 OR EN.550.113 OR EN.550.211 OR EN.550.311 OR EN.550.430 OR EN.550.435 OR EN.550.111 OR AS.280.345)
Area: Social and Behavioral Sciences
Writing Intensive

AS.180.314. Mathematical Economics. 3 Credits.
This course traces the extent to which modern economic theory, particularly as it pertains to pure competition in market and non-market games under the rationality postulate.
Prerequisite(s): AS.180.301
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
AS.180.315. Housing Problems and Policy: An Economics Perspective. 3 Credits.
This course uses economic theory and econometric research approaches as a lens on housing issues and policy. Housing is at the center of the effects of segregation and the Great Recession, and bears a significant connection to the labor market as well. This course briefly explores microeconomic theory specifically relevant to the housing market, then uses readings from academic social science literatures to dive deeper into these issues and others. Finally, students will examine public housing policies, using the literature and proposing statistical techniques to assess their effectiveness. The course will improve the understanding and use of basic econometric techniques with respect to policy questions as well as the ability to critically read academic literature.
Prerequisite(s): (AS.180.301 OR AS.180.401) AND (EN.550.420 OR EN.550.310 OR EN.550.112 OR EN.550.113 OR EN.550.211 OR EN.550.311 OR EN.550.430 OR EN.550.435 OR EN.550.111 OR AS.280.345)
Area: Social and Behavioral Sciences

AS.180.317. Economics of Fixed Income Instruments. 3 Credits.
Students study economic principles and state-of-the-art mathematical models used to value fixed income securities and their derivatives. The course emphasizes advanced practical applications as well as theory. Students will develop their own computer code to price fixed-income instruments and evaluate their risks. Students must be familiar with both statistics and differential equations.
Prerequisite(s): AS.180.301 AND (EN.550.111 OR EN.550.112 OR EN.550.310 OR EN.550.420 OR EN.550.430) AND (AS.110.302 OR EN.550.291) or permission of the instructor
Area: Social and Behavioral Sciences

AS.180.334. Econometrics. 3 Credits.
Introduction to the methods of estimation in economic research. The first part of the course develops the primary method employed in economic research, the method of least squares. This is followed by an investigation of the performance of the method in a variety of important situations. The development of a way to handle many of the situations in which ordinary least squares is not useful, the method of instrumental variables, concludes the course.
Prerequisite(s): AS.180.301 OR AS.180.401, may be taken concurrently; One semester of calculus, AS.280.345 OR EN.540.305 OR EN.553.211 OR EN.553.111 OR EN.553.310 OR EN.553.311 OR EN.553.420 OR EN.560.435 OR EN.560.348 OR EN.553.112
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.180.336. Macroeconomic Strategies. 3 Credits.
Will sketch out a strategy for anticipating economic turning points. Business cycle basics, monetary policy/financial market/real economy interactions will be reviewed. Long-term growth issues will be explored.
Prerequisite(s): AS.180.101 AND AS.180.102 AND AS.180.302 or instructor permission.
Area: Social and Behavioral Sciences

AS.180.338. Political Economy and Development. 3 Credits.
Good governance is associated with desirable outcomes across countries and societies: higher life satisfaction, greater income per capita, lower child mortality, longer life expectancy, less disease, etc. But these statistical associations in the data are not sufficient to establish either that good governance truly causes such societal outcomes, or what types of policies produce them. This course asks: What are the determinants of good governance? Is good governance ‘good’ beyond its intrinsic desirability? If so, how? We use a data-driven approach, focusing on quantitative empirical methods and their applications to policy. The goal is to develop skills to be savvy consumers, as well as producers, of policy-relevant evidence related to issues of governance, in rich and poor countries alike. Topics will include: democracy, corruption, conflict, culture, mass media, quotas, and foreign aid.
Prerequisite(s): (AS.180.301 OR AS.180.401) AND AS.180.334
Area: Social and Behavioral Sciences

AS.180.345. Rationality: Meaning and Measurement. 3 Credits.
Economists generally work with a number of classic models of how people behave in different contexts. These models (such as utility maximization and expected utility maximization) are widely used because they are tractable and elegant, but are they also accurate models of human behavior? In this course, we will examine the axiomatic foundations of these models, explore their implications for choice behavior, and discuss the empirical and experimental strategies economists have developed to test these models.
Prerequisite(s): AS.180.301
Area: Social and Behavioral Sciences

AS.180.351. Labor Economics. 3 Credits.
The course discusses various issues in labor markets from the perspective of economic theory. We first study the major forces at work that shape labor market behavior; firms’ labor demand and workers’ labor supply. Then we discuss the equilibrium behavior of employment and wages. Using these tools, we also cover various applied topics in labor economics, such as minimum wage regulations, male-female wage differentials, human capital investment, worker mobility, and unemployment.
Prerequisite(s): AS.180.301 OR AS.180.401
Area: Social and Behavioral Sciences

AS.180.352. Public Economics. 3 Credits.
This course explores issues related to expenditure and tax policies of governments, as well as views regarding the purpose of government and criteria for evaluating government actions. The course also includes a discussion of how group or collective choices are made within society, how environmental policies affect the level of pollution, and the importance of public debt.
Prerequisite(s): AS.180.301 OR AS.180.401
Area: Social and Behavioral Sciences

AS.180.354. Econometrics of Unobservables. 3 Credits.
Empirical data may not contain all the variables suggested by economic theories. This course introduces methodologies to identify and estimate economic models containing unobservables. Recommended Course Background: AS.180.301 and AS.180.334.
Area: Social and Behavioral Sciences
AS.180.355. Economics of Poverty/Inequality. 3 Credits.
This course focuses on the economics of poverty and inequality. It covers the measurement of poverty and inequality, facts and trends over time, the causes of poverty and inequality with a focus on those related to earnings and the labor market, and public policy toward poverty and inequality, covering both taxation and government expenditure and programs. By the nature of the material, the course is fairly statistical and quantitative. Students should have an intermediate understanding of microeconomic concepts. Basic knowledge of regression analysis is also helpful.
Prerequisite(s): AS.180.301
Area: Social and Behavioral Sciences

AS.180.357. Numerical Simulations For Merger and Competition Policy. 3 Credits.
This course discusses several empirical and numerical methods used in economics and then applies them to the analysis of recent antitrust issues. Specifically, we learn estimation of demand and supply, and computation of equilibrium of oligopolistic models. Then, we apply these methods to simulating mergers, which were recently proposed or already took place in the US and Europe. We evaluate the welfare impact of these mergers. To perform these analyses, we use STATA and MATLAB, but prior knowledge of these software is not required. If time allows, we will also cover other topics in antitrust, such as detecting collusion/cartels.
Prerequisite(s): AS.180.102
Area: Social and Behavioral Sciences

AS.180.361. Rich Countries, Poor Countries. 3 Credits.
Why are some countries rich while some other countries poor? Why does a country's income per person generally grow over time? We try to analyze these questions using the theoretical and empirical growth literature. We will study seminal growth models, and also try to explain cross-country income differences in terms of factors like geography, institutions and global integration. Knowledge of regression analysis (including instrumental variables estimation) is required.
Prerequisite(s): AS.180.302 AND (AS.180.334 OR AS.180.434)
Area: Social and Behavioral Sciences

AS.180.363. Sex, Drugs and Dynamic Optimization: The Economics of Risky Behavior. 3 Credits.
We apply the tools of economic analysis to understand behaviors that are enjoyable today, but may have negative consequences in the future.
Prerequisite(s): (AS.180.301 OR AS.180.401) AND AS.180.302; AS.180.334 can be taken concurrently.
Area: Social and Behavioral Sciences

AS.180.365. Topics in Macroeconomics. 3 Credits.
This course builds on AS.180.302 (Macroeconomic Theory) to consider the leading macroeconomic controversies of today (such as the appropriate monetary and fiscal policies of the Federal Reserve and U.S. Government). The classes will include frequent student presentations.
Prerequisite(s): AS.180.302
Area: Social and Behavioral Sciences

AS.180.367. Investment-Portfolio Management. 3 Credits.
Prerequisite(s): (AS.180.301 OR AS.180.401) AND (EN.550.111 OR EN.550.112 OR EN.550.310 OR EN.550.311 OR EN.550.420 OR EN.550.430)
Area: Social and Behavioral Sciences

AS.180.368. Managerial Economics and Business Strategy. 3 Credits.
Seminar on quantitative concepts, decision-making, and strategy in business organizations. Overall context is ‘value’ – how it is measured and maximized long term. Microeconomic theory of the firm, competitive analysis, corporate finance.
Prerequisite(s): (AS.180.301 OR AS.180.401) AND (EN.550.111 OR AS.180.367 OR AS.180.263 ) or permission of the instructor.
Area: Social and Behavioral Sciences

AS.180.371. Industrial Organization. 3 Credits.
Investigation of firm behavior in markets characterized by imperfect competition. Imperfect competition lies in between monopoly and perfect competition and characterizes most major industries in modern capitalist economies. Central issues to be covered in the course include what determines the intensity of competition? What determines the extent of entry and exit? How is it that some firms consistently dominate their industries?
Prerequisite(s): AS.180.301 OR AS.180.401
Area: Social and Behavioral Sciences

AS.180.389. Social Policy Implications of Behavioral Economics. 3 Credits.
Economists increasingly incorporate insights from psychology into models of rational decision-making. Known as ‘behavioral economics’, this line of research considers how, for example, emotions, rules-of-thumb, biased beliefs and time-inconsistent preferences influence how we make choices. Behavioral economics increasingly pervades policy discussions on topics as diverse as: obesity, the role of media, subprime mortgages and voting patterns. Behavioral models are certainly novel, but do they help us to design superior social policies? With the goal of preparing students to address this question, this course (1) provides a thorough overview of the main contributions of behavioral economics, highlighting departures from more traditional economic models and (2) emphasizes how behavioral economic models might (or might not) improve how we think about social policy.
Prerequisite(s): AS.180.301 OR AS.180.401; AS.180.334 OR AS.180.434 can be taken concurrently.
Area: Social and Behavioral Sciences

AS.180.390. Health Economics & Developing Countries. 3 Credits.
Benefits of good health and its costs. Health demand and supply in poor countries. Welfare economics of Public Health. This is a writing seminar. There are some lectures on how to write a paper and on the substance of the economics of international health but the focus and only assignment is a 40-page paper by each student under the supervision of the instructor.
Prerequisite(s): AS.180.301 or AS.180.401; Students may not take AS.180.390 if they took AS.180.391.
Area: Social and Behavioral Sciences
Writing Intensive

AS.180.391. Economics of China. 3 Credits.
Discussion of the economic experience of Post-War China, primarily emphasizing topics rather than historical narrative: agriculture, industry including corporate governance and public enterprises, international trade, population, migration, education, health, public finances among other topics. This course is writing intensive and the only assignment for the course is a 40 page paper on some aspect of the Chinese economy to be done under the close supervision of the instructor. The course is not primarily a lecture course, although there will be some lectures on how to do a paper and on the substance of the Chinese economic experience.
Prerequisite(s): AS.180.301 OR AS.180.401; Students may not take AS.180.390 if they took AS.180.391.
Writing Intensive
**AS.180.401. Advanced Microeconomic Theory. 3 Credits.**
This course covers roughly the same material as Microeconomic Theory 180.301 but in a more formal and mathematically rigorous way. You can use either 180.301 or 180.401 to satisfy the requirement for the economics major. 180.301 and 180.401 are offered during the same time slot, so the logistics of switching from 180.301 to 180.401 should be seamless, should you decide to make the switch. This course is suitable for those students who prefer a more formal treatment of economic theory and who are planning to take some of the more technically demanding electives in economics at a later stage. NOTE: you may not take both 180.301 and 180.401.

**Prerequisite(s):** You may not take both AS.180.401 and AS.180.301. AS.180.102 and any two semesters of calculus (or equivalent).

**Area:** Social and Behavioral Sciences

**AS.180.434. Advanced Econometrics. 3 Credits.**
This is a faster-paced and more intensive version of Econometrics 180.334. You can use either 180.334 or 180.434 to satisfy the requirement for the economics major. This course is suitable for those students who prefer a more technical treatment of econometric methodologies. NOTE: Students may not take both 180.334 and 180.434.

**Prerequisite(s):** Students may only receive credit for either AS.180.334 or AS.180.434; AS.180.301 or AS.180.401, one semester of linear algebra, one semester of calculus, AS.280.345 or EN.580.305 or EN.550.211 or EN.550.111 or EN.550.301 or EN.550.420 or EN.560.435 OR EN.560.348.

**Area:** Quantitative and Mathematical Sciences, Social and Behavioral Sciences

**AS.180.501. Independent Study. 0 - 3 Credits.**

**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

**AS.180.502. Independent Study. 0 - 3 Credits.**

**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

**AS.180.521. Research in Economics. 2 Credits.**

The assignment in this course is to complete the initial stages of research for the Senior Honors Thesis in Economics. Students will work independently under the supervision of a research/thesis advisor. The contact (in spring of Junior year) should be the course instructor listed for this course. He/she will coordinate registration and grade-reporting, and will also be available to discuss research ideas and to help put students in touch with possible thesis advisors. Open to Senior and Junior Economics majors. Note: This course can not be counted as one of the five elective economics courses required for the Economics major.

**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

**AS.180.522. Senior Thesis. 3 Credits.**

Students enrolled in this course will complete the Senior Honors Thesis under the supervision of a thesis advisor (who will have been chosen by the student prior to registration for AS.180.521). The formal course instructor will be in charge of overseeing registration and submitting grades. He/she will also be available for discussions of progress or problems on the thesis. Please note that your thesis advisor can be any faculty member in the Department of Economics, and need not be the same person as the course instructor. (This course cannot be counted as one of the 5 elective economics courses required for the Economics Major.)

**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

**AS.180.595. Economic Internship. 1 Credit.**

**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

**AS.180.597. Research. 3 Credits.**

**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

**AS.180.599. Independent Study. 3 Credits.**

**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

**AS.180.600. General Equilibrium Theory.**

The mathematical theory of general static equilibrium. The course will emphasize the formal mathematical expression of economic ideas and the ability to give a loose economic intuition a coherent logical meaning. Different mathematical structures in general equilibrium theory will be isolated and discussed. The text will be Debreu’s book ‘Theory of Value’. Recommended Course Background: AS.110.106, AS.180.301, and AS.180.302 or permission of the instructor.

**Area:** Social and Behavioral Sciences

**AS.180.601. Consumer & Producer Theory.**

The course will cover decision theories relevant to economics and their related analytical tools. We aim to discuss the following topics: standard theories of firm and consumer behavior; decision making under risk; revealed preference analysis; monotone comparative statics; bounded rationality.

**AS.180.603. Macroeconomic Theory I.**

A comprehensive treatment of macroeconomic theory, including static analysis of aggregate output employment, the rate of interest, and the price level; aggregative theory of investment, consumption, demand and supply of money; empirical work on aggregative relationships.

**AS.180.604. Macroeconomic Theory II.**

First term: a comprehensive treatment of macroeconomic theory, including static analysis of aggregate output employment, the rate of interest, and the price level; aggregative theory of investment, consumption, demand and supply of money; empirical work on aggregative relationships. Second term: the macrodynamic theory of growth, cycles, unemployment and inflation, and selected subjects.
AS.180.605. Advanced Macroeconomics I.
Topics of recent research in macro-economics. Content will vary from year to year. Likely topics include implicit contract theory, search theory and unemployment, disequilibrium macroeconomic models, monetary policy and the control of inflation, contract-based rational expectations models, imperfect competition in macrodynamic models, business cycle models, empirical tests of rational expectations models, theories of investment behavior, and debt neutrality. Open to 2nd year Grad Students and up.
Prerequisite(s): AS.180.603

AS.180.606. Advanced Macroeconomics II.
Topics of recent research in macroeconomics. Prof. Ball's course covers nominal rigidities, dynamic-consistency theories of inflation, inflation inertia and the costs of disinflation, monetary policy, costs and benefits of price stability, benefits of output stabilization, alternative policy rules, measuring inflation, unemployment, efficiency-wage theories, the behavior of the NAIRU, macro in middle-income countries, high inflation and stabilization, currency crises. Prof. Carroll's course analyzes implications of the buffer-stock and habit formation theories of consumer behavior for comovement of aggregate variables and asset pricing. The models are applied to study the phenomena of declining U.S. saving rate, the dynamic relationship between savings rates and growth, and the equity premium puzzle.
Prerequisite(s): AS.180.603

AS.180.607. Macroeconometrics I.
The course is an attempt to provide a framework for discussing the techniques that are used in macroeconometric analysis. Generally the bias that it has is one of looking at these from the perspective of someone analyzing macroeconomic data for policy analysis. Consequently, many of the applications considered are drawn from the type of research conducted in central banks and finance ministries. Its emphasis is therefore upon the issues raised by the analysis of time series of macro-economic data. Today there is an emerging literature that looks at micro-economic data as well as conducting cross-country studies. We will tend to ignore that material as the methods used in such research are essentially those of micro-econometrics, although sometimes with adjustments made to reflect the nature of macro-economic time series.
Prerequisite(s): AS.180.633

AS.180.608. Macroeconometrics II.
This course will cover a range of topics in time series econometrics and empirical macroeconomics and finance that arise in current research and policy analysis. Key topics include GMM estimation, filtering, forecasting, structural VARs, and modeling stock and bond returns. It assumes a knowledge of the basics of time series econometrics. Both theoretical and empirical work will be included. Bayesian simulation methods that are very important in current research methods will be emphasized. This course should be taken by people with an interest in either empirical macro or empirical finance and may be helpful in searching for a dissertation topic.
Prerequisite(s): AS.180.623
Corequisite(s): AS.180.623

AS.180.609. Core Mathematics for Economics.
This course will develop the necessary mathematical language and tools that are to be regarded as a pre-requisite for graduate study in economics at Johns Hopkins. Specifically, the course will focus on set theory, linear algebra and real analysis.
Area: Social and Behavioral Sciences

AS.180.611. Economics of Uncertainty.
This course offers a review of subjective expected utility theory of decision making under uncertainty and choice based subjective probabilities. It also explores the motivation for the recent developments of non-expected utility theories under risk and under uncertainty. It examines the role of completeness and awareness in these theories as well as the theories of menu choice and random choice behavior.
Area: Social and Behavioral Sciences

This course traces the extent to which modern economic theory, particularly as it pertains to pure competition in market and non-market games under the rationality postulate, is grounded in the language of probability and measure theory. Special attention will be paid to the formal expression of ideas such as economic and numerical negligibility, on the one hand, and diffuseness and conditional independence of information, on the other. Towards this end, the course will develop rigorous formulations of basic ideas of (conceptual rather than computational) probability and apply them: first, to develop the fundamental theorems of welfare economics, including the core theorems; and second, to large anonymous and non-anonymous games as well as to finite-agent games with private information. The course will be self-contained from the technical point of view but will presuppose a level of mathematical maturity that ought typically to be achieved by taking courses such as AS.180.615 and AS.180.601

This course concerns dynamic optimization in both continuous and discrete time. More specifically, it develops Pontryagin's maximum principle and the Euler-Lagrange conditions in the calculus of variations, on the one hand, and the basic tools of deterministic dynamic programming, on the other. The course will be self-contained from the technical point of view but will presuppose a level of mathematical maturity that ought typically to be achieved by taking a course such as AS.180.600.

AS.180.622. Game Theory.
The topics covered include solutions concepts such as dominance, rationalizability, Nash equilibrium, correlated equilibrium, subgame perfect equilibrium and Perfect Bayesian equilibrium. We will discuss both static and dynamic games and games of complete and incomplete information.
Prerequisite(s): AS.180.623

AS.180.623. Economics of Information.
The course introduces the economic issues associated asymmetric information and analyses the institutions and mechanisms designed to mitigate the resulting inefficiencies. Topics include: Adverse selection; moral hazard; incentive contracts; and mechanism design.
Prerequisite(s): AS.180.600 AND AS.180.601

Area: Social and Behavioral Sciences
Writing Intensive
AS.180.626. Computational Methods.
This class will introduce students to the computational tools that are used to get things done in scientific research. Such tools include, but are not limited to, unix bash shell scripting, LaTeX/Beamer, virtual machines, git and github, tools for parallel computation, cloud services, and others. Brief treatments of special-purpose tools (like Mathematica for symbolic math) will conclude this part of the class. After this introduction, the course will involve an intensive introduction to the use of the Python language for scientific computation purposes, including a discussion of why Python dominates other choices like Matlab and Julia. The final third of the course will apply the tools in a practical application to a specific problem identified jointly between the instructor and the student. There is no required text; readings will be assigned in class. (The characteristic that distinguishes this class from alternatives is that this class will not teach specific algorithms nor frontier computational techniques; rather, it aims to expose students to a broad set of tools that they will use regularly thereafter).
Area: Social and Behavioral Sciences

AS.180.632. Topics in Applied Microeconomics.
This course teaches methods for using micro-data to recover structural parameters of microeconomic models. We cover static models, but focus largely on single-agent dynamic programming, including “full solution” methods along with innovations that permit circumvention of daunting computational tasks. Additional topics will be partially based on students’ interests, but will likely include: general equilibrium models, static and dynamic games, matching models, unobserved heterogeneity, structural methods with experimental data and biased expectations.
The goal is to teach students to use structural methods in their own research, and so we will delve into the nuts and bolts of structural work, examining how researchers actually get from raw data to results. This includes: how the sub-sample for analysis is chosen, how the model is specified, how the programming problem is solved, which moments are generated, how these are matched to the analogous moments in the data and, importantly, how identification is established.

Mathematical models of economic behavior and the use of statistical methods for testing economic theories and estimating economic parameters. Subject matter will vary from year to year; statistical methods, such as linear regression, multivariate analysis, and identification, estimation and testing in simultaneous equation models, will be stressed.
Prerequisite(s): AS.180.636

AS.180.634. Panel Data Models & Applications.
This course is a reading course for the panel data models in the economics department. We will focus on econometric theories that are commonly used in panel data analysis, although many of these techniques can be applied to other areas as well. In addition, we will discuss applications of these theories. The course material will start form chapter 10 & 11 in Wooldridge's book which covers linear panel data models. And then we discuss the discrete choice models from chapter 7 of Hsiao's book. After these, we will try to read papers related to panel data models.

AS.180.636. Statistical Inference.
Theory and applications of statistical inference. Topics include probability and sampling, distribution theory, estimation, hypothesis testing, and simple regression analysis. Statistical applications will be drawn from economics. Limited to graduate students in Economics except by permission of the chair. Recommended Course Background: AS.110.201, AS.110.302

AS.180.637. Microeconometrics I.
This is an advanced graduate course on major econometric techniques and models that are used in empirical microeconomics. The first half of the course introduces econometric theories of nonlinear extremal estimation, nonparametric estimation, and semiparametric estimation. The second half of the course illustrates applications of these theories to limited dependent variable models, selection models, and endogenous treatment models with unobserved heterogeneity.
Prerequisite(s): AS.180.601 AND AS.180.622 AND AS.180.633 AND AS.180.636

AS.180.638. Microeconometrics II.
This course is the second in the microeconometrics sequence in the Economics Department. It will introduce a selection of models and techniques that are useful when a researcher wants to estimate a structural model, i.e. a model derived from economic theory. Structural models that try to incorporate restrictions derived from economic theory are used in empirical IO, but also in quantitative marketing research, labor economics and other fields that consider individual decision making. No attempt will be made to be comprehensive. Instead we will focus on a few areas that have been well-researched in recent years: dynamic discrete choice, microeconomic models with latent variables, program evaluation, the empirical analysis of auctions and nonseparable models. Some topics will be included only if time permits. The models and methods developed for these areas are relevant for other cases. The emphasis is on the interaction between economic theory and econometrics.
Basic issues are specification and (nonparametric) identification, computational problems and the use of simulation, semiparametric estimation to avoid functional form and distributional assumptions that cannot be derived from economic theory.
Prerequisite(s): AS.180.601 AND AS.180.622

AS.180.640. Topics in Economic Theory.
In this course we will discuss a variety of topics in Economic Theory that are either not covered or only partially covered in the regular courses. Topics may include Individual and Social Choice Theory, Auctions Theory, Medical Decision Making. For each subject there will be introductory lectures followed by readings and students’ presentations of recent contributions.
Prerequisite(s): AS.180.601 AND AS.180.622
Area: Social and Behavioral Sciences

This is a graduate course in international trade. It will develop basic analytical tools and frameworks used in the general equilibrium analysis of international trade. Recent research topics will be discussed in the second half of the course.
Prerequisite(s): AS.180.601 AND AS.180.603

AS.180.642. International Monetary Economics.
A link between the balance of payments and asset accumulation/decumulation, microeconomics of international finance and open-economy macroeconomics. The section on open-economy macroeconomics covers approaches to balance-of-payments adjustments, theories of exchange rate determination and monetary, fiscal, and exchange-market policies under fixed and flexible rate regimes.

AS.180.643. Topics of Game Theory.
This course covers topics such as repeated games, dynamic games, bargaining and strategic communication.
Prerequisite(s): AS.180.622
Area: Social and Behavioral Sciences
AS.180.645. Topics in Economic Theory.
The course will cover matching markets, which typically deal with assignment problems with and without the use of transfers. Examples of these include school choice, course allocation, and organ exchange. We will cover the theoretical underpinnings, field applications, and empirical evaluations of these markets.
Area: Social and Behavioral Sciences

AS.180.646. Revealed Preference and Comparative Statics.
The overall theme of this course is the observable implications of optimizing choice. We will cover the theory of monotone comparative statics and supermodular games. We also discuss results in the revealed preference literature, such as Afriat’s Theorem, that deal with the consistency of data with different canonical models. The course is useful to students doing research in pure or applied theory, where comparative statics tools/insights are often needed for model building. It could also be interesting to those with an empirical focus who would like to know more about revealed preference approaches to testing models and drawing inferences from them.
Area: Social and Behavioral Sciences

This course studies the theory of asset trading in which agents hold different information and/or beliefs. Foundational papers as well as recent ones will be covered, with applications both within and outside of Finance. Topics include: information aggregation via prices; rational expectations equilibrium; market micro-structure; large auctions; herding/information cascades/price bubbles; dynamic models and learning.
Area: Social and Behavioral Sciences

AS.180.648. Topics in Applied Microeconomics.
This course will cover popular research designs in applied microeconomics, from reduced-form approach to structural estimation. The first half of this course will be devoted to studying methodologies in reduced-form approach and the second half will be about structural estimation. Students must be familiar with at least one programming language of own choice (python, matlab, R, Julia, Fortran, C/C++) and statistical package (STATA, R) to solve problem sets in this course. The course will introduce various papers related to unobserved heterogeneity in applied microeconomics literature. Basic programming skills are needed for dynamic programming in this course.
Prerequisite(s): AS.180.600 AND AS.180.601
Area: Social and Behavioral Sciences

This course will introduce structural approach in applied microeconomics, with emphasis on models including endogenous unobservable heterogeneity. The first half of this course will cover popular estimators, such as simulated method of moments, indirect inference, conditional choice probability estimator. The course will cover both single agent problem and multi-agents problem, potentially including endogenous unobservable heterogeneity. The second half of this course will discuss multiple decision maker problem, so-called collective model, and family formation and dissolution model, and cultural economics.
Area: Humanities

AS.180.651. Labor Economics I.
Theories of the allocation of time and supply of labor, human capital, demand for labor, market equilibrium, and income distribution. As time allows, other topics, such as unemployment, unions, and compensating differences are discussed. Corequisite: AS.180.601

AS.180.662. Asset Pricing.
This course is an introduction and guide to the most important issues in asset pricing. It begins with classic concepts such as the Capital Asset Pricing Model and the Arbitrage Pricing Theory and continues through continuous-time dynamic no-arbitrage models. It covers both basic theory and classic empirical research. Recommended Course Background: AS.180.604, AS.180.633, AS.180.636 or instructor’s permission.

AS.180.672. Industrial Organization.
First term: This course covers methods in applied empirical Industrial Organization. The focus will be on the use of econometric analysis and data both for descriptive and measurement purposes, and to test the predictions of economic theories. The course will cover demand estimation, cost and production function estimation, and estimation of auction models. Second term: The emphasis in this course is on empirical analysis of firm behavior. The first part of the course focuses on models of the internal organization of the firm. The second part considers empirical analysis of firm behavior in markets, with an emphasis on the “new industrial economics.”
Prerequisite(s): AS.180.601

AS.180.673. Advanced Economics of Labor.
This course is for graduate students at the 3rd year and above who wish to participate in a semester in-depth readings and discussion topics in labor economics and in econometric methods typically used in labor economics and in many other applied microeconomics fields. Students will have to participate in discussions of materials in each class. The topics covered in each semester are partly a function of student interest and their dissertation topics.
Area: Social and Behavioral Sciences

AS.180.690. Advanced Econometrics.
Advanced econometric techniques are often essential to innovative empirical work, but finding and implementing the right methods for a particular problem poses formidable challenges. This course/seminar aims to address these challenges by combining lectures and discussions of foundational econometric methods in areas of student interest (whether those interests be specific for thesis work or more speculative) with examples of implementation, including software development, in more of a ‘workshop’ environment. The emphasis will be on drawing on the resources of econometric theory to address specific empirical issues while at the same time developing implementation skills.

This course is for students working on the dissertation for the Ph.D. in Economics. It is graded pass-fail. 
Area: Social and Behavioral Sciences

This is a weekly seminar series that brings in speakers from other universities to present their research in the field of applied microeconomics. Graduate Students only.
Writing Intensive

This is a seminar series devoted to the presentation of research in microeconomic theory, typically by speakers from outside the department. Graduate students only.

This course features lectures by economists from other universities. They present research findings at the frontier of the field. Graduate students only.
The purpose of this seminar is to train students to do research in economics. This course is for second year graduate students in the PhD program in Economics. For Graduate Students Only.

AS.180.698. Research/Teaching Practicums.  
The purpose of the Ph.D. program in economics is to train students to teach and to do research in economics. This course is for graduate students in the Ph.D. program in economics to obtain graduate credit for work off campus that provides training and the development of skills in teaching and/or research. Before the practicum is begun, the graduate student must identify a sponsoring faculty member or seek permission from the student's faculty adviser. The faculty member or adviser must sign a form that certifies that graduate credit will be granted, verifies the nature of the work to be performed by the student, and explains how the practicum helps to fulfill a degree requirement. Once completed, the sponsoring faculty member or adviser submits a grade of pass or fail for the student. The course may be used for curricular practical training. Economic majors /Graduate students only.

AS.180.899. Independent Study.
AS.190.101. Introduction to American Politics. 3 Credits.
This course examines the ideals and operation of the American political system. It seeks to understand how our institutions and politics work, why they work as they do, and what the consequences are for representative government in the United States. Emphasis is placed on the federal government and its electoral, legislative, and executive structures and processes. As useful and appropriate, attention is also given to the federal courts and to the role of the states. The purpose of the course is to understand and confront the character and problems of modern government in the United States in a highly polarized and plebiscitary era.
Area: Social and Behavioral Sciences

AS.190.102. Introduction To Comparative Politics. 3 Credits.
To understand politics, the sound bites of the modern media take us only so far. In this course, we will take a step back and implement an intellectually rigorous method. Scholars of comparative politics use the method of comparison in order to illuminate important political phenomena of our times. Following this method, we will embark on a scholarly tour of the world and compare the politics of various countries. We will also trace these politics back to their historical sources. We will work from the assumption that there is something to be gained from such comparisons across space and time.
Area: Social and Behavioral Sciences

AS.190.108. Contemporary International Politics. 3 Credits.
An introduction to international politics. Emphasis will be on continuity and change in international politics and the causes of war and peace. The first half of the course will focus on events prior to the end of the Cold War, including the Peloponnesian War, the European balance of power, imperialism, the origins and consequences of WWI and WWII, and the Cold War. The second half will focus on international politics since 1990, including globalization, whether democracies produce peace, the impact of weapons of mass destruction, terrorism, and the prospects for peace in the 21st century. Theories of realism and liberalism will also be considered. This course was previously AS.190.209.
Area: Social and Behavioral Sciences

AS.190.109. Politics of East Asia. 3 Credits.
This course examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. We analyze two enduring themes of classic and contemporary scholarship in comparative politics: development and democracy. The purpose is to introduce students to the various schools of thought within comparative politics as well as to the central debates concerning East Asian politics.
Area: Social and Behavioral Sciences

AS.190.110. American Politics in Film. 3 Credits.
This course uses film to explore a central question in American politics: what is the relationship between the public and those who endeavor to represent them? Over the course of several weeks, we will address this question by viewing Mr. Smith Goes to Washington, A Face in the Crowd, The Candidate, Wag the Dog, and The Ides of March. We will use these films to discuss how political institutions, the media, and money shape our politics. We will also consider how the representation of politics in film has changed over time.
Area: Social and Behavioral Sciences

AS.190.111. Introduction to Global Studies. 3 Credits.
This course surveys scholarly approaches to processes, relations, institutions, and social structures that cross, subvert, or transcend national borders. The course will also introduce students to research tools for global studies. Students who have taken Contemporary International Politics 190.209 or International Politics 190.104 may not register.
Area: Social and Behavioral Sciences

AS.190.137. Freshman Seminar: Choosing a President. 3 Credits.
This fall, as they have done every four years for more than 230 years, Americans will elect a president. Presidential elections are one of the more peculiar rituals in American politics, but they are enormously consequential. In this course we will track the 2020 presidential campaign in real time while exploring the history and politics of presidential elections and considering how presidential elections affect other aspects of American politics. The course will involve a combination of reading and writing with hands-on research and exploration projects.
Area: Social and Behavioral Sciences

AS.190.180. Introduction to Political Theory. 3 Credits.
This course serves as an introduction to the study of political thought. Political thought critically considers what we think we mean when we talk about “the political”, reflections that often lead political theorists to examine not only various kinds of political regimes, institutions, and practices, but also to explore matters of ethics, morality, anthropology, history, and biology. This particular course will focus on classical debates about freedom, equality, authority, and justice that have been revisited and revised by feminist political theorists such as Mary Wollstonecraft, Simone de Beauvoir, Audre Lorde, Catharine MacKinnon, bell hooks, Iris Marion Young, and Wendy Brown.
Area: Social and Behavioral Sciences

AS.190.204. Ancient Political Thought. 3 Credits.
The premise of this course is that a political perspective is tied up with a (meta)physical one, that is to say, with ideas about the nature of Nature and of the status of the human and nonhuman elements within it. How is the universe ordered? Who or what is responsible for it? What place do or should humans occupy within it? How ought we to relate to nonhuman beings and forces? We will read three different responses to such questions and show how they are linked to a particular vision of political life. In the first, the world into which human are born is ordered by gods whose actions often appear inexplicable: Prometheus Bound by Aeschylus, Oedipus the King by Sophocles, and Hippolytus by Euripides will represent this tragic vision of the cosmos. In the second, Plato, in Republic and in Phaedrus, the forces of reason and eros play central and powerful roles. In the third, Augustine of Hippo presents a world designed by a benevolent, omnipotent God who nevertheless has allowed humans a share in their own fate. We end the course with Nietzsche's Birth of Tragedy, which offers a perspective on these three visions of the world – the tragic, the rational, and the faithful – which will help us evaluate them in the light of contemporary political and ecological concerns.
Area: Humanities, Social and Behavioral Sciences

AS.190.205. Capital: The Best Seller. 3 Credits.
When Thomas Piketty published Capital in the Twenty-First Century, last spring, he made the rounds on talk shows just like a movie star with a new film out, or a rock star with an album about to drop. How is such an “event” possible, and what does it tell us about the book’s subject, capital? This class explores the questions Piketty’s book raises: What is capital? How does it come about, how does it function, and what are its effects?
Area: Humanities, Social and Behavioral Sciences
AS.190.207. The Power of Rhetoric. 3 Credits.
In a time when people claim language 'has no preference to facts, truths, or realities,' the power of rhetoric is both vilified and lauded in the strongest possible terms. According to some, rhetoric is responsible for the dismissal of everything from political dissent to science as a species of 'fake news'. By contrast, others argue public life cannot be repaired without a 'restoration' of rhetoric. What are these people talking about? This course will help us figure this out. Students will be introduced to the art of persuasive speech, writing, and visual media so as to be prepared to critically examine and evaluate the claims made for and about the role of language in contemporary politics. Topics will include informal logic, appeals, fallacies, figures and tropes. Among others, we will read texts by Aristotle, Austin, Barthes, Foucault, Freud, Kierkegaard, Nietzsche, and Zizek. In addition to a number of short exercises and writing assignments throughout the semester, there will be a mid-term and a final paper.

AS.190.217. Introduction to International Relations Theory. 3 Credits.
This course is a broad introduction to international relations theory in a format that encompasses lecture and discussion. We will explore mainstream theoretical perspectives and critiques of those perspectives, as well as more recent developments in the field.
Area: Social and Behavioral Sciences

AS.190.220. Global Security Politics. 3 Credits.
Contemporary and emerging technologies of nuclear (weapons, terrorism, energy) outer space (missiles, missile defense, asteroids), biosecurity (bioweapons, pandemics, terrorism) and cyber (war, spying, surveillance) and implications for security, international politics, arms control, and political freedom.
Area: Social and Behavioral Sciences

AS.190.226. Global Governance. 3 Credits.
Global problems like poverty, financial instability, human rights abuses, and climate change threaten both international order and human well-being. In the absence of a world state, these problems must be addressed by an increasingly complex, transnational network of organizations and social groups. First, we will aim to understand and explain how global problems are governed through detailed case studies of International Organizations and Non-Governmental Organizations such as the United Nations, World Bank, Intergovernmental Panel on Climate Change, Amnesty International and more. Second, we will critically evaluate the successes and failures of these organizations and explore the possibilities for improving democratic governance at the global level.
Area: Social and Behavioral Sciences

AS.190.227. U.S. Foreign Policy. 3 Credits.
This course will provide and analysis of US foreign policy with a focus on the interests, institutions, and ideas underpinning its development. While the course will offer a broader survey, the emphasis will be on important developments during the Cold War, such as the articulation of containment strategies and nuclear deterrence, and the analysis of contemporary foreign policy questions, including the problems of terrorism and failed states. In addition to security issues, attention will also be paid to significant developments in international trade policy.
Area: Social and Behavioral Sciences

AS.190.245. The Politics of Global Development. 3 Credits.
Development is often assumed to be an economic issue. In this course we examine the politics of development on a global scale. We begin by looking at the colonial and Cold War histories of development. We then use these histories to contextualise contemporary development issues that directly affect international relations such as aid and debt, humanitarianism, food security, land “grabs”, migration and indigenous rights. The course also seeks to understand the ways in which the issues underlying global development have always connected and continue to connect the peoples and polities of the Global North and Global South.

AS.190.250. Statistics for Public Policy. 3 Credits.
This course is a short, intensive supplement to Thinking Visually About Data, designed to give students a deeper understanding of the basic statistical concepts needed to inform public policy decision-making. Prerequisite(s): Cannot enroll in AS.190.250 if you have already taken EN.553.111 OR AS.230.205
Area: Quantitative and Mathematical Sciences

AS.190.281. Virtue, Labor, and Power (Classics of Political Thought II). 3 Credits.
This is not a class in the history of political thought. Instead, it is an opportunity for a selective, circumscribed, but very focused engagement with some of the most powerful and provocative texts in that history. We will read selections from six thinkers (Socrates, Machiavelli, Locke, Marx, Nietzsche, and Foucault), focusing on three themes (Virtue, Labor, and Power). These texts have all profoundly shaped the way we think about politics, and they are texts that resonate with our own political problems today.
Area: Social and Behavioral Sciences

AS.190.282. Authority and Liberty. 3 Credits.
Beginning with Plato, and using Nietzsche's history of metaphysics as a guide, this course serves as an introduction to Euro-American political thought by analyzing the philosophical foundations of political authority. In addition to works by Plato and Nietzsche, readings will include works by Kant, Mill, Hart, and Foucault.
Area: Social and Behavioral Sciences

AS.190.284. Classics of Political Theory: Political Freedom. 3 Credits.
This course investigates core questions of what constitutes political freedom, what limits on freedom (if any) should be imposed by authority, and the relationship between freedom, responsibility and political judgment. Spanning texts ancient, modern and contemporary, we shall investigate how power inhabits and invigorates practices of freedom and consent. Among the questions we will consider: Can we always tell the difference between consent and coercion? Are morality and freedom incompatible? Is freedom from the past possible? By wrestling with slavery (freedom's opposite) we will confront the terrifying possibility that slavery can be both embodied and psychic. If our minds can be held captive by power, can we ever be certain that we are truly free?
The political stakes of these problems will be brought to light through a consideration of issues of religion, gender, sexuality, civil liberties, class and race.
Area: Social and Behavioral Sciences
AS.190.300. Racial Inequality, Policy and Politics in the US. 3 Credits.
While policies were passed to ensure equal opportunity for racially subjugated Americans, the United States witnessed increasing stratification of wealth and income and deepening concentration of poverty, stagnation in closing racial gaps, and new forms of inequality posed by the striking upsurge in contact with the criminal justice system at the bottom of the skills ladder and concentration of wealth at the top. At the same time, the welfare state came under attack and faced challenges posed by an aging population, women entering the labor force, deindustrialization, and international pressures of globalization. Social spending withered in some areas while spending on citizens was increasingly likely to happen through tax expenditures and private means. This course investigates the politics around these developments and competing perspectives in debates over redistributive policies in the United States and their impact on inequality, particularly race and gender inequality. We will examine the contours of inequality and explanations for why it has expanded over the past several decades. We explore why the US is exceptional in both the level of inequality it tolerates and the generosity and types of remedies to alleviate poverty in comparison to its European counterparts and debate the role of race, unions, electoral politics and institutions. We investigate several specific cases of persistent racial inequality – concentrated poverty, segregation, and incarceration. We investigate both how policies have reinforced racial and gender divisions from a top-down perspective as well as examining under what conditions the disadvantaged contest inequality, exploring how political struggle shapes policy from the bottom-up. The last part of the course examines the consequences of inequality and social policy for representation and citizenship and how economic inequality affects political representation and responsiveness of elites to masses.
Area: Social and Behavioral Sciences

AS.190.302. How to be a Capitalist. 3 Credits.
Everyone usually assumes that they know what capitalism is and how it works. Yet some of us often make very poor choices given the framework of a capitalist system, and many of us continually express shock and outrage over outcomes and results that are perfectly reasonable (and to be expected) given the operation of capitalism. This advanced seminar will engage with readings in political theory and political economy that explore the fundamental logic of capitalism. Previous course in Political Theory or Instructor's Permission.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.306. Latin American Politics and Society in Comparative and Historical Perspective. 3 Credits.
The seminar will introduce students to the political and economic trajectories of Latin America as a whole and of individual countries, including Mexico, Brazil, Argentina, and Chile. Special attention will be paid to the long-term trajectory of the political regime (democracy versus dictatorship) and of economic development (variations in GDP per capita). Competing theories, from economic dependence to historical institutionalism, will be examined for their contribution to our understanding of Latin America’s relative economic backwardness and low quality democracies.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.307. Race, Politics and Literature. 3 Credits.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.308. Democracy and Dictatorship: Theory and Cases. 3 Credits.
The course will cover three topics: 1) The conceptualization of political regime, democracy and authoritarianism. We will also consider neighboring concepts of other macro-political structures—government, state, and administration—in order to be able to demarcate what is distinctive about the study of political regimes. 2) The characterization of political regimes in most Western and some non-Western countries, in history and today. We will centrally focus on the so called “Waves of Democratization,” but we will also consider stories with less happy outcomes, that is, processes that led to the breakdown of democracies and the installation of repressive dictatorships. 3) The explanation(s) of the stability and change of political regimes around the world. Theoretical accounts of regime change come in many flavors—emphasis on economic versus political causes, focus on agents and choices versus structures and constraints, international versus domestic factors, among others. We will consider most of them.
Area: Social and Behavioral Sciences

AS.190.311. Disposable People: Race, Immigration and Biopolitics. 3 Credits.
This course will explore theories and practices of race and immigration in order to illuminate the proliferation of populations regarded as disposable in contemporary politics. We will pay special attention to the contestable criteria used to determine eligibility for membership in the human race. We shall also examine how political power influences the relays between citizenship status and those whose lives are worthy of protection, and those who should be allowed to die.
Area: Social and Behavioral Sciences

AS.190.314. Struggles for Democracy: from the French Revolution to the Arab Spring. 3 Credits.
This course is a systematic introduction to theories of regime change, which includes episodes of democratic transitions (gradual or revolutionary) and breakdowns, as well as trajectories of regime stability, like the persistence of various types of authoritarian rule and democratic politics. Two thirds of the course will cover theories, which in comparative politics are mostly inductive constructions from historical experiences. The remaining third will be case studies of exemplary events and processes, for instance, the differentiation of political regimes in post-WWII Europe in terms of liberal, fascist, and social-democratic regimes; the convergence towards democracy in Western Europe and Latin America between 1950 and 1990, and the fragility of democracy in Tropical Africa and the Middle East.
Area: Social and Behavioral Sciences

AS.190.315. Asian American Politics. 3 Credits.
This course examines issues of political identity, political incorporation, and political participation of Asian Americans. Themes include Asian American panethnicity, the struggle for immigration and citizenship, Asian American electoral politics, political activism and resistance since the 1960s, and the impact of Asian Americans on the politics of race and ethnicity in the United States.
Area: Social and Behavioral Sciences
Writing Intensive
AS.190.317. Race and Segregated Time. 3 Credits.
This course explores how time, and not just space, is segregated along racial lines. We shall examine how racial injustices are experienced as impositions on human time, how resistance to racial inequality has often been figured in temporal terms, and what it means to think in untimely ways that challenge how the extended lifespans of racially dominant groups is contingent upon the foreshortened lifetimes of racial others. Readings will bring political theory into contact with contemporary experiences of race, such as: criminal (in)justice, environmental racism and the proliferation of human disposability. Recommended Course Background: One Political Theory course.
Area: Social and Behavioral Sciences

AS.190.318. Political Monsters. 3 Credits.
This undergraduate seminar in political theory will explore the politics of fear through the trope of political monsters. We will engage with the genre of horror as a political genre, and ask why our current time period seems to be marked by particular sorts of monsters — zombies, vampires, and others. The course will engage with a variety of texts (political tracts, literary and other fictional projects, theoretical works) along with film and television and other media. The trope of political monsters will be the vehicle through which we explore the politics of democracy, of race, of colonialism, and of capitalism.
Area: Social and Behavioral Sciences

AS.190.319. Policy & Politics Design. 3 Credits.
The study of public policy is the study of power—who has it, how it is acquired, and how policies themselves grant or diminish the power of individuals and groups. It is also the study of choice—how political actors make consequential decisions to deploy their resources in different ways, some of which enhance magnify their power while others diminish it. This class will examine the scholarly literature on how public policy is made and how it can be changed. We will also engage directly with actors seeking to change public policy, in order to integrate our academic knowledge with their practical experience.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.320. Politics Of East Asia. 3 Credits.
Examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. Topics include state-society relations, late development, nationalism, democratization, political culture, social movements, and globalization.
Area: Social and Behavioral Sciences

AS.190.321. Future of American Democracy. 3 Credits.
For the most part, observers of American politics have not considered the possibility that the American democratic regime might be at risk. But the unexpected election of Donald Trump in 2016 and the subsequent course of his presidency have occasioned a great deal of uncertainty and anxiety about whether democracy in the United States is at risk and whether American political institutions can withstand the stresses of contemporary politics. This course will use the Trump era to explore the conditions that seem to threaten the stability of the American regime. We will begin by exploring the political circumstances that led to Trump’s rise. We will then examine what we can learn from the experience of other countries about the conditions that make democracy either robust or fragile. Finally, we will consider how a set of contemporary political conditions in the United States — extreme partisan polarization, intense racial antagonism, growing economic inequality, and expanded executive power — contribute to the challenges facing American democracy today and in the future.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.325. Finding Equality in Law and Society. 3 Credits.
In this class, we will ask questions about the relationship between equality, law, and society. We will investigate how people have used law in their movements for greater equality, and ask whether law has served these movements well and how it has worked. We will pay particular attention to movements based on race, gender, and economic class.

AS.190.326. Democracy And Elections. 3 Credits.
An examination of most aspects of democratic elections with the exception of the behavior of voters. Topics include the impact of various electoral systems and administrative reforms on the outcome of elections, standards for evaluations of electoral systems, and the impact of the Arrow problem on normative theories of democratic elections.
Area: Social and Behavioral Sciences

AS.190.327. Politics of Information. 3 Credits.
Considers global and comparative politics of information, information technologies, and the Internet. Examines governance of information (ownership of information, rights to information, privacy) and governance of information technologies (domain names, social media websites, etc.).
Area: Social and Behavioral Sciences

AS.190.329. National Security-Nuclear Age. 3 Credits.
This course examines the impact of weapons of mass destruction on international politics with an emphasis on security issues. The first half of the course focuses on the history of nuclear weapons development during the Cold War and theories of deterrence. The second half of the class considers contemporary issues including terrorism, chemical and biological weapons, ballistic missile defense and proliferation.
Requirements include a midterm, final and a ten page paper.
Area: Social and Behavioral Sciences

AS.190.330. Japanese Politics. 3 Credits.
This course introduces students to the major debates and issues of postwar Japanese politics. Topics include nationalism, electoral politics, civil society, and immigration.
Area: Social and Behavioral Sciences
Writing Intensive
AS.190.331. America and the World. 3 Credits.
This course is a survey of the unique position of the United States in world politics. We will cover the broader international relations literature on the dynamics of hegemony, empire, and asymmetrical relationships, from work in the realist tradition to more critical approaches. We will also assess the importance of American domestic institutions in understanding past and contemporary developments.
Area: Social and Behavioral Sciences

AS.190.333. American Constitutional Law. 3 Credits.
This course covers enduring debates about the way the Constitution has structured the U.S. government and about which powers the Constitution assigns to the federal government and to the states. We will examine these debates in the context of American political history and thought by studying the writings of prominent participants, and landmark Supreme Court cases.
Area: Social and Behavioral Sciences

AS.190.334. Constitutional Law. 3 Credits.
Topics include executive and emergency power, racial and gender equality, and selected free speech and religious freedom issues.
Area: Social and Behavioral Sciences

AS.190.335. Imagining Borders. 3 Credits.
What is a border and why do borders matter in global politics. What do borders mean under conditions of globalization? An examination of the politics of borders, transborder flows, and networks within and across borders. The readings which come from political science and other disciplines, will include theoretical and case-specific works.
Area: Social and Behavioral Sciences

AS.190.338. Comparative Political Behavior. 3 Credits.
An introduction to the study of political behavior, emphasizing electoral behavior in democratic countries.
Area: Social and Behavioral Sciences

AS.190.339. American Racial Politics. 3 Credits.
Recommended Course Background: AS.190.214
Area: Social and Behavioral Sciences

AS.190.341. Korean Politics. 3 Credits.
This course introduces students to the historical and institutional foundations of modern South Korean politics. Topics include nationalism, political economic development, civil society, globalization, and ROK-DPRK relations.(CP)
Area: Social and Behavioral Sciences

AS.190.343. Research Seminar on Political Parties. 3 Credits.
This seminar has two basic objectives: both theoretical and empirical study of selected topics in the comparative literature on political parties, and the ultimate production of a publishable-quality (or conference-presentable-quality) paper. Topics will include (but not be limited to) the place of parties in political theory and the nature of party systems, party organization, and party behavior in the United States and other countries.
Writing Intensive

AS.190.344. Seminar In Anti-Semitism. 3 Credits.
Jews exercise a good deal of power in contemporary America. They are prominent in a number of key industries, play important roles in the political process, and hold many major national offices. For example, though Jews constitute barely two percent of America's citizens, about one-third of the nation's wealthiest 400 individuals are Jewish and more than ten percent of the seats in the U.S. Congress are held by Jews.
One recent book declared that, "From the Vatican to the Kremlin, from the White House to Capitol Hill, the world's movers and shakers view American Jewry as a force to be reckoned with." Of course, Jews have risen to power in many times and places ranging from the medieval Muslim world and early modern Spain through Germany and the Soviet Union in the 20th century. In nearly every prior instance, though, Jewish power proved to be evanescent. No sooner had the Jews become "a force to be reckoned with" than they found themselves banished to the political margins, forced into exile or worse. Though it may rise to a great height, the power of the Jews seems ultimately to rest on a rather insecure foundation.
Cross-listed with Jewish Studies. Course is open to juniors and seniors.
Area: Social and Behavioral Sciences

Writing Intensive

AS.190.346. Foundations of International Relations Theory. 3 Credits.
This course is a broad conceptual introduction to international relations theory in a format that stresses close reading and critical discussion. We will explore mainstream theoretical perspectives and critiques of those perspectives, as well as more recent developments in the field. By the end of the course, students will have a firm grasp of the core issues and debates in the field. The course is conceptually demanding; interested students should have at least completed an introductory course in political science.

AS.190.348. Business, Finance, and Government in E. Asia. 3 Credits.
Business, Finance, and Government in East Asia explores the dynamics of East Asia's economic growth (and crises) over the last fifty years. We will examine Japan's post-war development strategy, the Asian tiger economies, and China's dramatic rise. Centered on case studies of major corporations, this course examines the interplay between politics and economics in East Asia, and considers the following questions: How have businesses navigated East Asia's complex market environment? In what ways can the state foster economic development? How has the financial system been organized to facilitate investment? What are the long-term prospects for growth in the region?
Area: Social and Behavioral Sciences

AS.190.356. The Social Contract and its Discontents. 3 Credits.
This course focuses on one of the most powerful stories told in the tradition of western political theory: the story of the social contract. This story is about the constitution of legitimate political authority. It is told in many ways and each version makes different assumptions, in particular about human nature, the power of reason, the value of order, and the character of justice. We examine this often-conflicting assumptions and explore how they continue to inform the way we think about the possibilities and problems of politics. Readings include texts by Arendt, Hobbes, Locke, Rousseau, Freud, Pateman, the Federalists, Derrida, and Douglass. Final grades are based on class participation, two exams and two papers.
Area: Social and Behavioral Sciences

Writing Intensive
AS.190.366. Free Speech and the Law in Comparative Perspective. 3 Credits.
This class explores the ideas and legal doctrines that define the freedom of speech. We will examine the free speech jurisprudence of the U.S. in comparison to that of other systems, particularly the jurisprudence of the European Court of Human Rights and the Supreme Court of Canada.
Area: Social and Behavioral Sciences

AS.190.373. The Politics of Public Policy. 3 Credits.
This course is an introduction to the political structure and process of making public policy in the United States. Public policymaking is, above all, an arena in which policy professionals try to bring systematic evidence and scientific knowledge to bear to diagnose, understand, and solve social problems. At the same time, policymaking also takes place in a political environment, in which strategic and purposive actors contend for power and seek to advance their own goals and realize their own visions about how the world ought to be changed for the better. The goals that participants in the policymaking process pursue may take a variety of forms: substantive policy outcomes, of course, but also power, political advancement, or material advantage. The actors who populate the process, moreover, may disagree about the goals they seek and making policy — especially in democratic political systems — requires some means of resolving these disagreements. Actors also differ in the resources they have at their disposal to seek their goals — power, money, organization, for example, but also knowledge and expertise. Finally, policymakers cannot do anything they want in pursuit of their goals. They are constrained by the rules and structures that make up the policymaking system. These factors — actors, goals, resources, knowledge, and rules — shape the politics of policymaking and frame the strategic options available to policymakers.

AS.190.379. Nationalism and the Politics of Identity. 3 Credits.
Nationalism ties powerful organizations to political mobilization, territory, and individual loyalty. Yet nationalism is typically studied in isolation from other social formations that depend upon organizational — individual linkages. Alternative types of identity category sometimes depend similarly upon organizations that collect and deploy resources, mobilize individuals, erect boundaries, and promote strong emotional connections among individuals as well as between individuals and institutions. In this class, we study classic and contemporary works on nationalism, drawn from multiple disciplinary and analytic traditions, in the comparative context of alternative forms of identity. The focus of the class will be primarily theoretical, with no regional or temporal limitations.

AS.190.380. The American Welfare State. 3 Credits.
This course analyzes the distinctive US welfare state in historical and comparative perspective. We begin with a survey of the policy context, an historical overview from the poorhouses through the Great Society, and a tour of welfare states across the rich democracies. We then survey developments — and explain the actual workings of policy — across jobs, education, welfare, pensions, and health care. We explore the institutional and political factors behind their divergent trajectories through conservative revival and the age of Trump. Students will write a seminar paper exploring policy development over time in a program or area of their choosing. Enrollment restricted to Social Policy minors only.
Prerequisite(s): Students may take AS.190.380 or AS.360.380, but not both.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.381. Global Environmental Politics. 3 Credits.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.382. Democracy and Development: Theory and Cases. 3 Credits.
Most wealthy countries are democracies. But not all democracies are wealthy — India, Costa Rica, and Mongolia are prominent examples of poor countries with democratic regimes. The course will examine the relation between economic development and political democratization under three big questions. (a) Under what conditions, and through which mechanisms, does economic development promote democracy? (b) If economic development is not possible in the foreseeable future, how do countries achieve stable democratization? (c) Under what conditions, and through which mechanisms, does democracy foster economic development?
Area: Social and Behavioral Sciences

AS.190.384. Urban Politics & Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations.
Cross-listed with Africana Studies
Area: Social and Behavioral Sciences

AS.190.385. Urban Politics and Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations. Cross listed with Africana Studies.
Area: Social and Behavioral Sciences

AS.190.387. Parties and Elections in America. 3 Credits.
Considers how parties and elections structure political conflict, and facilitate (or not) democratic control of government. Topics include campaigns, voting behavior, election administration, money in politics, presidential nomination, and party coalitions.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.394. Comparative Politics of the Middle East and North Africa. 3 Credits.
This course examines the domestic, regional, and transnational politics of the Middle East and North Africa. The class is organized into three units. The first examines major armed conflicts — anti-colonial, intra-state, and inter-state — from 1948 through the 1990s. It uses these historical moments as windows onto key issues in Middle Eastern and North African political issues such as external intervention/occupation, human rights, sectarianism, social movements, and memory politics. Unit Two focuses on policy relevant issues such as democratization, minority populations, religion and politics, and gender. In Unit Three, students will explore the politics of the Arab Uprisings through critical reading and discussion of new (post-2011) scholarship on MENA states, organizations, and populations. Enrollment limited to Political Science and International Studies majors.
Area: Social and Behavioral Sciences
AS.190.396. Capitalism and Ecology. 3 Credits.
Capitalism and Ecology focuses on the relations between capitalism and climate during the era of the Anthropocene. How do capitalist processes of fossil extraction, consumption, production and governance contribute to the pace of climate warming, glacier flows, the ocean conveyor system, species loss and other phenomena? What are the effects and the possible modes of political response? How do the nonhuman, self-organizing processes such as glaciers, oceans and climate change on their own as they also amplify the effects of capitalist emissions? The course combines texts on capitalism and activism with those by geoscientists on how the nonhuman systems work. Books by authors in the fields of political theory, geology, anthropology, economics, philosophy and ethology will be drawn upon. Authors such as Michael Benton, Brian Fagan, Hayek, Naomi Klein, Fred Hirsch, Fred Pearce, van Dooren and Connolly are apt to be read to engage these issues. A previous course in political theory is recommended. The class is organized around student presentations on assigned readings. Two papers, 10-12 pages in length. Extensive class discussion.
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive

AS.190.398. Politics Of Good & Evil. 3 Credits.
The Politics of Good and Evil places a set of classic myths into conversation with recent philosophical and political work on existential questions. The myths include the Book of Job, Genesis (J version), two dramas by Sophocles, a selection from Augustine, and Voltaire’s Candide. Texts by Nietzsche (Thus Spoke Zarathustra), William James, (A Pluralistic Universe) and Connolly are then placed into conversation with both each other and these classic stories. Kohlberg’s The Sixth Extinction closes the class, encouraging us to think again about the relations between mythic orientations to responsibility, tragic possibility, nature/culture imbrications and the shape of contemporary life during the Anthropocene. Previous work in political theory is recommended. The course is devoted to “elemental theory”, in which diverse existential stories jostle each other and periodically disturb us, challenging us to explore new thoughts in a new world. One class presentation, two 10-12 page papers, and extensive class discussion.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.402. Environmental Racism. 3 Credits.
This is an undergraduate political theory seminar that addresses the disproportionate impact of environmental destruction on racially stigmatized populations. We shall examine the logics of power whereby the natural world is subjected to exploitation and domination, in tandem with the subordination of racial subjects historically identified as closer to nature. Likewise, we will explore political and theoretical challenges to environmental racism, such as those posed by indigenous communities, decolonial theory, and political movements contesting the intersection of racial inequalities and ecological crises.
Writing Intensive

AS.190.403. Arendt/Foucault. 3 Credits.
This upper-level undergraduate writing intensive course brings together the work of Hannah Arendt and Michel Foucault to focus on their critiques of modernity and their discussions of political change/revolution. Although Arendt and Foucault are often understood as coming from and supporting different political theoretical traditions, the course will also explore ways in which their shared debt to the work of Friedrich Nietzsche illuminates sometimes surprising commonalities and complementary positions. There is no final exam in this course but in addition to reading assignments, students will be required to write three papers.
Area: Humanities
Writing Intensive

AS.190.404. Race and Debt: Living on Borrowed Time. 3 Credits.
This is an advanced undergraduate seminar that explores how racial stigma functions as a marker of being always already in debt. In view of the legacies of settler-colonialism, imperialism and chattel slavery, how is it that those from whom so much has been taken are nevertheless regarded as perpetually in debt? We shall examine the moral, economic and racialized logics of power through which a range of political subjects come to be regarded as ungrateful “takers” as opposed to “makers,” and owing a debt to society. In so doing, we will investigate how temporality functions as a tool of power by considering how the indebted are made vulnerable to precariousness, discipline, and disposability—in effect, forced to live life on borrowed time.
Writing Intensive

AS.190.405. Food Politics. 3 Credits.
This course examines the politics of food at the local, national, and global level. Topics include the politics of agricultural subsidies, struggles over genetically modified foods, government efforts at improving food safety, and issues surrounding obesity and nutrition policy. Juniors, seniors, and graduate students only. Cross-listed with Public Health Studies.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.406. The Executive Branch. 3 Credits.
In the 19th Century America was noted for its courts, political parties and representative institutions. Today, America’s political parties and representative institutions have declined in importance while the institutions of the executive branch have increased in importance. This seminar will examine the nation’s key executive institutions and aspects of executive governance in the U.S. Students will alternate primary responsibility for week’s readings. Every student will prepare a 10-15 page review and critique of the books for which they are responsible in class.
Area: Social and Behavioral Sciences

AS.190.407. Geopolitics, Nuclear Weapons and World Order. 3 Credits.
Intensive examination of unresolved debates about the implications of nuclear weapons for world order, focusing on deterrence, strategy, arms control, multipolarity, proliferation, terrorism, and abolition, as well as roles of liberal, democratic, and constitutional political forms and popular public involvement. Readings from classic and contemporary sources.
Area: Social and Behavioral Sciences
AS.190.408. Sovereignty: Historical Perspectives and Contemporary Issues. 3 Credits.
This seminar provides an in-depth exploration of the concept of sovereignty by examining its historical development, current controversies, and its salience in international relations scholarship. Works in political theory and the international law literature will also inform our discussion. The course is open to advanced undergraduate students with previous coursework in Political Science.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.409. Research Seminar in State Politics. 3 Credits.
The United States Constitution creates a federal system that leaves a great deal of power in the hands of the individual states. Each year, the states collectively adopt nearly 20,000 new laws, an average of 400 per state, while the U.S. Congress in recent years has on average enacted hardly more than 150 new statutes. In terms of spending, state and local governments collectively spent $3 trillion dollars last year—almost as much as the federal government. The states are especially important in the realms of education, health care, environmental policy and transportation. In all these areas, to be sure, the states share power with the federal government but possess considerable discretionary authority. Despite the importance of the states, most Americans know little about them. Hardly anyone knows much about their state's executive branch or legislature. In a recent survey, most Americans couldn't say whether their state had a constitution (they all do). In this seminar we will explore some of the mysteries of state politics. Each student will develop a research project designed to discover something about the states that no one else knows.
Writing Intensive

AS.190.410. Beyond Bob Marley: Exploring the Rastafari Movement in the Greater Baltimore Area. 3 Credits.
This course uses a community based learning approach to inquire into the presence of the Rastafari community in the Baltimore area. Most people will have heard of Rastafari through the music of Bob Marley. People might not know, however, that Rastafari emerges out of and has been part of a global history of liberation struggles. This course is co-taught with a local Rastafari organization. You will be intellectually and practically equipped to take part in a project of original research on the Rastafari presence in the Baltimore region, starting with the demonization of the movement in the 1980s "war on drugs" and including the movement's response.
Area: Humanities, Social and Behavioral Sciences

AS.190.411. Political Violence. 3 Credits.
An examination of the ways in which violence has been used to secure political ends. Topics include terrorism, assassination, genocide, coups, rebellions and war itself. Students examine what makes types of political violence unique and what unites them. (Formerly AS.190.372)
Area: Social and Behavioral Sciences

AS.190.412. Nuclear Weapons and World Politics. 3 Credits.
This course examines the impact of nuclear weapons on international politics and world order. Topics to be considered include theories of deterrence, proliferation, the development of new weaponry, terrorism, defense, arms control and abolition. The effect of nuclear weapons on the existing state system and prospects for new configurations of world governance will also be addressed.
AS.190.426. Qualitative Research. 3 Credits.
This class is designed to introduce students to qualitative methodology. Practically, students will gain first-hand experience with qualitative research methods via research design, ethics review, in-depth interviewing, participant observation, and archival/primary source research. They will learn to deploy analytical techniques such as discourse analysis and process tracing. Students will also be asked to consider the merits of qualitative approaches more generally, and discuss the relative advantages of qualitative, experimental, and quantitative approaches. Questions that we will discuss include: What place should qualitative research have in a research design? Can qualitative research test hypotheses, or only generate them? Can qualitative research explain social phenomena, or only interpret them? What are the disadvantages and advantages of qualitative approaches compared to quantitative approaches? For what kinds of research questions are ethnographic techniques best suited? Is replicability possible for ethnographic field research? What criteria of evidence and analytical rigor apply on this terrain?
Area: Social and Behavioral Sciences

AS.190.427. Political Economy of Japan and Korea. 3 Credits.
This upper-level seminar examines some of the major debates and issues of postwar Japanese and South Korean political economy. Topics include nationalism, gender politics, civil society, immigration, and US-Japan-South Korea trilateral relations.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.428. The Politics of Disaster in the Middle East and Beyond. 3 Credits.
This course examines the politics of natural and man-made disasters, including war, forced migration, drought, famine, earthquakes, tsunamis, storms, and epidemics. Focusing on the Middle East, it also presents comparative cases from Africa, South and Southeast Asia, and North America. In doing so, the class will examine the unique ways that different types of disasters interact with governance structures; social and economic inequalities; medical infrastructure; gender; race and ethnicity; and political cleavages. Throughout the course, students will learn basic elements of research design and methods in addition to welcoming experienced disaster response and analysis practitioners to class. Finally, the Politics of Disaster in the Middle East and Beyond addresses some of the philosophical aspects of working in and studying disaster-affected contexts, bringing an ethical sensibility to policy-relevant analysis.

AS.190.429. The Political Bases of the Market Economy. 3 Credits.
Although “the market” is conventionally understood as separate from “politics”, the modern market economy did not arise in a political vacuum. In fact, the very separation between the economy and politics is itself the product of a politically potent set of ideas. This course is an upper-division reading seminar on the origins and evolution of the modern market economy. Readings will include Smith, Marx, Weber, Polanyi, Keynes, Hayek, Friedman, Becker, and Foucault. Recommended course background: Introduction to comparative politics OR any college-level course in social or political theory.
Area: Social and Behavioral Sciences

AS.190.430. Time and Punishment. 3 Credits.
“If you can’t do the time, don’t do the crime.” According to ask.com, this common expression was made popular in the 1970s by the theme song for the television show “Beretta.” Aside from amusing us with the irony that the star of “Beretta” was Robert Blake who was later charged with the murder of Nixie Lee Baker, the expression raises a profound issue: What is the relationship between punishment and time? This course will explore that question. Topics to be discussed include different philosophical understandings and experiences of time, views of mortality and fate, theories of punishment, specific punishments in the U.S. (including sentences of juveniles, life, death, and LWOP), as well as punishments that are not specifically meted out but are known to be the consequences of political, social, and economic circumstance. Students will read texts in criminology, political theory, philosophy, and jurisprudence, as well as a selection of Supreme Court cases, novels, and short stories. This writing intensive course is limited to undergraduates who have taken at least one “Classics of Political Thought” course (190.280, 190.281, 190.282, or 190.283).
Area: Social and Behavioral Sciences

AS.190.431. Global Climate Governance. 3 Credits.
This course will offer an in-depth study of the history and politics of global climate governance. It will examine the central actors, agreements, and policy proposals that shape climate governance.
Area: Social and Behavioral Sciences

AS.190.432. Topics in Global Security Politics. 3 Credits.
Intensive examination of catastrophic and existential risks posed by natural and technogenic sources (including nanotechnology, synthetic biology, cyberwar, artificial intelligence, asteroidal collision, climate change and space colonization) and their political implications.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.433. Race and the Politics of Punishment in the US. 3 Credits.
Contact with criminal justice has become a primary way that many Americans see and experience government, particularly those from race-class subjugated communities. Yet, our field has been slow to appreciate the development of the carceral state or to consider its manifold for citizenship. In this advanced undergraduate seminar, we will survey key debates around punishment, state violence, and surveillance, with a particular focus on research that takes institutional development, history and racial orders seriously. Why did the carceral state expand in ‘fits and starts’ and with what consequence for state-building? We explore its (racialized and gendered) relationship to other key systems: foster care, social provision, labor relations and the labor market, and immigration enforcement. A core preoccupation of this course will be to understand the ways in which the criminal justice system ‘makes race’ and how debates about crime and punishment were often debates about black inclusion and equality. How does exposure to criminal justice interventions shape political learning, democratic habits, and racial lifeworlds? In addition to policy, political discourse, and racial politics, we will employ works from a range of fields - history, sociology, law and criminology - and a range of methods (ethnography, historical analysis, quantitative and qualitative). Required books include: Khalid Muhammad’s Condemnation of Blackness: race, Crime, and the Making of Modern Urban America, Elizabeth Hinton’s From the War on Poverty to the War on Crime, David Oshinsky’s Worse than Slavery: Parchman Farm and the Ordeal of Jim Crow Justice, Bruce Western’s Punishment and Inequality in America, and Michael Fortner’s Black Silent Majority: The Rockefeller Drug Laws and the Politics of Punishment.
Writing Intensive
and will not exercise power within them. Course is open to juniors and
relative power, what territories they will occupy, and which groups will
doubts as to whether one can be a Jewish state and still be a democracy.
Lessons from the destruction of the ancient Israelite kingdoms and from
contemporary state deaths will be included. The course will conclude by
considering efforts that Israel can undertake to meet the threats it faces.
Area: Social and Behavioral Sciences

AS.190.437. Race and Ethnic Politics in the United States. 3 Credits.
Race has continued to be centrally important to American political
life and development. In this course, we will engage with
the major debates around racial politics in the United States, with
a substantial focus on how policies and practices of citizenship,
immigration law, social provision, and criminal justice policy shaped
and continue to shape racial formation, group-based identities, and
group position; debates around the content and meaning of political
representation and the responsiveness of the political system to
American minority groups; debates about how racial prejudice has shifted
and its importance in understanding American political behavior; the
prospects for contestation or coalitions among groups; the “struggle with
difference” within groups as they deal with the interplay of race and class,
citizenship status, and issues that disproportionately affect a subset
of their members; and debates about how new groups and issues are
reshaping the meaning and practice of race in the United States.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.438. Violence and Politics. 3 Credits.
This seminar will address the role of violence—both domestic and
international—in political life. Though most claim to abhor violence,
since the advent of recorded history, violence and politics have been
intimately related. States practice violence against internal and external
foes. Political dissidents engage in violence against states. Competing
political forces inflict violence upon one another. Writing in 1924, Winston
Churchill declared—and not without reason—that, ‘The story of the human
race is war.’ Indeed, violence and the threat of violence are the most
potent forces in political life. It is, to be sure, often averred that problems
can never truly be solved by the use of force. Violence, the saying goes,
is not the answer. This adage certainly appeals to our moral sensibilities.
But whether or not violence is the answer presumably depends upon
the question being asked. For better or worse, it is violence that usually
provides the most definitive answers to three of the major questions
of political life—statehood, territoriality and power. Violent struggle,
in the form of war, revolution, civil war, terrorism and the like, more than
any other immediate factor, determines what states will exist and their
relative power, what territories they will occupy, and which groups will
and will not exercise power within them. Course is open to juniors and
seniors.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.439. Advanced Topics in Global Politics: Learning Through
Research. 3 Credits.
Join a research team. In this course, students will explore topics in
global politics and methods for the conduct of inquiry in the Johns
Hopkins tradition of learning through research. Under the guidance of
the professor, students will learn about a topic from existing primary
and secondary sources, collect new empirical evidence, analyze the
evidence, and contribute to research products. Recommended for
students planning to write a thesis. Junior or Senior standing in Political
Science or International Studies or permission of instructor.
Area: Social and Behavioral Sciences
Writing Intensive
AS.190.445. Power and Wealth: Sources, Dynamics and Linkages. 3 Credits.
This seminar explores theoretical approaches to the multiple relations between political power and economic power, including pluralism, Marxism, and historical institutionalism. Major empirical transformations will provide the motivation: the rise of modern states, capitalism and social classes in Early Modern Europe, the creation of highly unequal societies in post-colonial Latin America and Africa, the varieties of Welfare State in the golden age of advanced capitalism (1950-75), and the powerful rebirth of inequality in advanced economies for the last 25 years. Theories of sources and interactions of political and economic power will be coupled with accounts of the effects of power and wealth on macroscopic change, especially democratization and economic development. Open to juniors, seniors, and graduate students.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.451. Geopolitics. 3 Credits.
Intensive exploration of theories of how geography, ecology, and technology shape political orders. Case studies of ancient, early modern, global, and contemporary topics, including European ascent, industrial revolution, tropics and North South divide, climate change, geo-engineering and global commons (oceans, atmosphere and orbital space
Writing Intensive

AS.190.452. Party Politics from the Founding to the Progressives. 3 Credits.
Though the torchlight parade has long since passed, American parties still stand in the shadow of the nineteenth-century Party Period. This course seeks to untangle the ideologies and practices of party politics from the Founding to the Progressive Era. Topics include the rise of mass parties, political violence, the coming of the Republican Party, the party politics of Reconstruction and westward expansion, corruption and the political machine, Populism, and movements for reform. We pay particular attention to comparisons between past and present, and to opportunities taken and foregone.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.455. Comparative Racial Politics. 3 Credits.
This upper-level seminar surveys the major trends and approaches to the comparative study of race in political science and critically examines the link between race and politics. Topics include race and state formation, citizenship and national membership, immigration, racial regimes, and the political economy of race. Recommended background: Courses in comparative politics, political economy, immigration, and racial politics
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.456. Politics of Transhumanism. 3 Credits.
Examination of politics of human biological and cybernetic augmentation, and replacement with focus on stratification, weaponization, collectivization, extinction and irregularation.
Writing Intensive

AS.190.471. The University and Society. 3 Credits.
In the 20th century, American universities became the envy of the world, leading in most categories of scholarly productivity and attracting students from every nation. In recent years, though, American higher education has come to face a number of challenges including rapidly rising costs, administrative bloat, corporatization and moocification. We will examine the problems and promises of American higher education, the political struggles within the university and the place of the university in the larger society. Upper classes and Grad Students only.
Area: Social and Behavioral Sciences

AS.190.473. Political Polarization. 3 Credits.
The American constitutional order, which was designed to operate without political parties, now has parties as divided as any in the democratic world. This course will examine explanations of how this happened, the consequences of party polarization for public policy and governance, and what if anything should be done about it.
Writing Intensive

AS.190.479. Imag(in)ing Cities. 3 Credits.
Cities exert a substantial degree of control over American life. Throughout the 20th and early years of the 21st Century they have been centers of industry, of social change, of political change. And in part because of their status, scholars have begun to theorize about cities. The purpose of this class is to interrogate these theories through a filmic lens. Students will be exposed to readings and then in the second half of the semester, to films about cities that implicitly and explicitly speak to and about these theories. Some coursework in urban studies preferred, though not necessary.
Area: Social and Behavioral Sciences

AS.190.480. Planetary Interdependence and World Governments. 3 Credits.
Intensive exploration of alternative global political architectures for high levels of security, ecological and internet interdependence
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.481. Conservatism and Crime. 3 Credits.
This course will examine the evolution of conservative thought on crime and criminal justice from the 1960s to the present. We will focus in particular on how the subject of crime illuminates different strains of conservatism, reveals tensions between its values of liberty, authority and anti-statism, and shows the changing approach that conservative intellectuals have had to race.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.482. Thesis Colloquium. 3 Credits.
Open to and required for Political Science majors writing a thesis. International Studies majors writing a senior thesis under the supervision of a Political Science Department faculty member may also enroll. Topics include: research design, literature review, evidence collection and approaches to analysis of evidence, and the writing process. The course lays the groundwork for completing the thesis in the second semester under the direction of the faculty thesis supervisor. Students are expected to have decided on a research topic and arranged for a faculty thesis supervisor prior to the start of the semester. Seniors. Under special circumstances, juniors will be allowed to enroll. Enrollment limit: 15.
Writing Intensive

AS.190.498. Senior Thesis. 3 Credits.
Seniors also have the opportunity to write a senior research thesis. To be eligible to write this thesis, students must identify a faculty sponsor who will supervise the project.
Area: Social and Behavioral Sciences

AS.190.601. Qualitative Research.
This class is designed to introduce students to qualitative methodology. Practically, students will gain first hand experience with qualitative research methods via research design, ethics review, in-depth interviewing, participant observation, and archival/primary source research. They will learn to deploy analytical techniques such as discourse analysis and process tracing. Students will also be asked to consider the merits of qualitative approaches more generally, and discuss the relative advantages of qualitative, experimental, and quantitative approaches. Questions that we will discuss include: What place should qualitative research have in a research design? Can qualitative research test hypotheses, or only generate them? Can qualitative research explain social phenomena, or only interpret them? What are the disadvantages and advantages of qualitative approaches compared to quantitative approaches? For what kinds of research questions are ethnographic techniques best suited? Is replicability possible for ethnographic field research? What criteria of evidence and analytical rigor apply on this terrain?
Area: Social and Behavioral Sciences

AS.190.602. Introduction to Quantitative Political Science.
An introduction to measurement and data analysis in contemporary American political science. Measurement topics will include the formation of indices and cumulative scales. Analytic topics will include sampling variations, statistical association and causation, as manifested in contingency tables and correlation and regression. Emphasis will be on fundamental concepts and assumptions, and on comprehension and evaluation of the scholarly literature. Advanced undergraduates by permission only.
Area: Social and Behavioral Sciences

AS.190.604. Foucault and Kant.
This seminar will explore Kant and Foucault comparatively across the registers of ontology, morality, epistemology, time, and politics. How does each move into and across these registers? How do the two thinkers inform and challenge one another? Texts will include: Kant, The Critique of Practical Reason, Conflict of the Faculties, Perpetual Peace and Other Essays, The Anthropology (sections); Foucault, The Order of Things (chapters), Discipline and Punish, “On the Genealogy of Ethics,” “What Was Enlightenment?”, and Subjectivity and Truth.
AS.190.605. Environmental racism.
Environmental racism has largely been understood in terms of environmental policy-making that discriminates against people of color, particularly with respect to the state-sanctioned siting of toxic waste facilities, the distribution of pollutants, food-deserts, and the exclusion of non-white peoples from leading positions in the environmental movement. This graduate seminar explores environmental racism more broadly, pushing beyond its conventional, place-based understandings and approaching the corresponding logics that produce human disposability and environmental waste from the standpoint of both space and time. Examining colonial legacies of coding racial others in terms of natural disasters, epidemics, infestations, non-human animals and dirt, we shall investigate how the natural world is subjected to exploitation and domination in tandem with the subordination of racial subjects historically identified with nature and rendered expendable. In other words, we shall illuminate the logics of power through which race-making coincides with waste-making. Accordingly, we will explore political and theoretical challenges to environmental racism in multiple registers; such as those posed by indigenous studies, decolonial thinkers and Afro-diasporic theories contesting the intersection of racial biopolitics, ecological crises and racial capitalism in an era of proliferating human disposability. Authors considered may include; Mbembe, Du Bois, Hage, Glissant, Césaire, Wynter & Chakrabarty.
Area: Social and Behavioral Sciences

AS.190.606. Nuclear Weapons and World Order.
This course examines the impact of nuclear weapons on international politics and world order. Topics to be considered include theories of deterrence, proliferation, the development of new weaponry, terrorism, defense, arms control and abolition. The effect of nuclear weapons on the existing state system and prospects for new configurations of world governance will also be addressed.

AS.190.607. Decolonizing the Episteme: Knowledge, Empire and the Academy.
What complicity does the Western academy have with empire? How might the development of certain intellectual dispositions be implicated in the challenges of imperial rule? And how might such implications have produced influential concepts and theories? In this course we will consider the ways in which - and to which - the academy's claim to epistemic privilege has a colonial provenance. Seniors permitted with instructor permission only.

AS.190.608. Influx and Efflux.
"While many contemporary philosophies of the self, and of human agency, tend to emphasize the activity of expression – the enactment or externalization of an intention, desire, will, or purpose, this course will explore the process through which the outside comes in. Influence: the default condition of intrinsically porous and relational bodies. We will examine different models of the process through which individuals are psychically and physiologically affected by forces, shapes, ideas, affects, and tendencies coming from the 'outside.' Readings include Walt Whitman's experimentation with the democratic potential of 'sympathy,' Alfred North Whitehead's theory of 'affective tone' (which focuses on unconscious and in-sensitive modes of influence), Roger Caillois's theory of the 'instinct of abandon' (developed at the time of an emergent fascism in Europe), and contemporary theories (in behavioral psychology and cognitive science) of embodied cognition."

AS.190.609. Law, Critique, Genealogy.
This course will offer a survey of classical and contemporary trends in critical theory through the prism of the law. The readings will trace the development of two modes of critical reflection emerging from Kant's philosophical project, critique and genealogy, exploring the tensions between them through the study of categories such as judgment, case, and jurisdiction. We will examine how these categories themselves reflect the question of "modernity" and the Enlightenment as that question is posed and answered by thinkers from Kant to Foucault and Habermas and beyond. To ground this study, we will focus on critical engagements with human rights, property, and institutional justice around the world. Within an arch of readings that goes from Kant to Butler, the course will include key texts by Hegel, Marx, Benjamin, Horkheimer, Adorno, Marcuse, Habermas, Foucault, and Nancy, as well as texts drawn from critical legal studies and the anthropology of law and justice. There are no prerequisites for this interdisciplinary course. To receive credit, students will be required to attend seminar, prepare for class discussions, and turn in a 20-30 page final research paper, a draft of which will be presented at a workshop at the end of the year.

What do the process philosophies of Bergson, Whitehead and Daoism have to say to political manifestos advanced by writers such as Marx and Engels, Naomi Klein, Hardt and Negri, Dziga Vertov, Haitian and French revolutionaries, Folco Portinari. How, in turn, can the latter illuminate, deform, or inform them? The readings in this seminar bounce back and forth between the cosmic politics of process philosophy and a variety of short manifestos designed to speak to the vicissitudes of today.

AS.190.612. Comparative Citizenship and Immigration Politics.
Graduate students only. Examines the contemporary political dynamics of migration, citizenship, and race concentrating on North America, Europe and East Asia. We will focus on how citizenship and immigration policies shape immigrant political identities, claims, and strategies as well as how immigrants impact public debates and policies in receiving societies.
Area: Social and Behavioral Sciences

An exploration of the political aims and tactics, and strengths and liabilities, of Dada and Surrealism, as it operated in Europe and the Americas in the years between and after the World Wars. Readings by Andre Breton, Leonora Carrington, Georges Bataille, Roger Caillois, Meret Oppenheim, College of Sociology, and others. Seniors allowed by permission of instructor only.
AS.190.614. Nietzsche and Deleuze.
This seminar examines key texts by Nietzsche and Deleuze to see how the former influenced the latter and how, where and why Deleuze breaks the Nietzschean influence. Both are known for rethinking radically agency, nature, time, ethics, culture, explanation, politics and the multiple intersections between them. Deleuze treats Nietzsche as a key figure in the “minor” tradition that challenges western “majoritarian” Christian and secular thought. Both are attuned to the role of affective communication, the severe limits of human exceptionalism in Christianity and secularism, the ubiquity of heterogeneous connections, the pursuit of affirmative attachments, the exploration of tragic possibility, and the grasp of unruly periods in nature. While reading Nietzsche might help us to understand otherwise opaque moments in Deleuze (and vice versa) Deleuze can also be said to twist and turn Nietzsche’s thought, as he pulls it to the political left, examines the global capitalist “axiomatic”, explores ‘nomadic’ science, embraces critical social movements, pursues a world of intersecting “minorities”, and emphasizes the rhizomatic character of culture/nature connections. The texts read by Nietzsche texts may include Daybreak, sections from The Gay Science, The Genealogy of Morals and sections from Will to Power. D(&G) texts may include Difference and Repetition, sections from A Thousand Plateaus, What is Philosophy? and The Fold. Untimely Interventions from Simondon, C Keller, Whitehead, L. Margulis, I Stengers, N. Lawtoo, or B. Massumi could be “folded” into the mix.

AS.190.616. American Political Development.
An examination of state-building and nation-building throughout American political history. (AP)

AS.190.618. What Was/Is Fascism?.
An examination of texts on twentieth century fascist movements and societies in relation to twenty first century movements. What roles do capitalism, imperialism, racism, democracy, the media, global processes and planetary processes play in them? To what extent does the production and exploitation of resentment shape their intensities? What rhetorical strategies mobilize such movements? What rhetorics and social movements to resist or retune such movements show promise? Texts by Hitler, Arendt, Neumann, Adorno, Marcuse, Deleuze and Kenneth Burke may be among those included. Perhaps the films “Our Hitler” and “The Conformist”, plus a couple of speeches by Donald Trump will be included. Conceptions to democracy first united to challenge fascist drive will also be explored.

Area: Social and Behavioral Sciences

AS.190.619. Great Powers in the Middle East and North Africa.
How have Great Powers shaped the history and politics of states in the Middle East and North Africa? For over a century, Great Powers have been extensively involved in the region: they established colonies, protectorates, and mandates during colonial period; afterward, they employed military force to constrain and shape regimes. Focusing primarily on Great Britain, France, and the United States, this course examines the causes and consequences of foreign military intervention from colonial conquest through the post-colonial period. Students will critically assess claims that link Great Power actions to current-day conditions in the region through evaluating contemporary scholarship and analyzing the history of selected cases.

In Twilight of the Idols/The Anti-Christ, Nietzsche famously confessed, “I am afraid we are not rid of God because we still have faith in grammar.” Drawing from scholarship identified with the Law and Literature movement as well as philosophy, jurisprudence, literary theory, and political theory, this course will engage an on-going conversation about the capacity of language to invent and enforce the expectations, regulations, and ritual formulas we know as law. Readings will include texts by classical and contemporary scholars, including Arendt, Plato, Pierce, Nietzsche, and Nancy, as well as stories by Borges, Kafka, and Melville.

Area: Social and Behavioral Sciences

AS.190.621. Poesis and Politics.
This graduate seminar will investigate how an aesthetic approach to political concepts and practices – in particular the concept of the polity and the practice of judgment – responds to, troubles, and complicates political thought. In the company of Plato, Kant, Heidegger, Arendt, and Auden, we will explore two related sets of questions. First, what are the advantages and disadvantages of figuring the polity as a work of art or as an artistic creation? Second, how might poetry play a role in politics? Students will be required to submit weekly response papers and write a final 20-30 page paper on a topic related to the course, drawing on the work of at least two of the thinker-poets discussed.

AS.190.622. Republicanism, Realism, and Liberalism.
Close reading of major texts in western political thought on violence, security and politics developed by republicans, realists and liberals.

Area: Social and Behavioral Sciences

This course focuses on the affective dimensions of law, a power that both creates and preserves the system of rules which a particular country or community recognizes as regulating the actions of its members and which it may enforce by the imposition of penalties. Two related questions will guide our examination of the affection dimensions of law: What are the grounds of law? Why do we obey law? Students will turn in response papers every week on the reading. In addition, there will be a 20-30 page paper due at the end of the semester.

Area: Social and Behavioral Sciences

AS.190.624. Postcolonial Ecologies and Planetary Temporalities.
This is an exploratory seminar in which we place recent work on postcolonial ecology and images of time into conjunction with geological and philosophical texts detailing a world of multiple, intersecting human and nonhuman temporalities. The task is to see how each set of readings can enrich and exert pressure upon the others with respect to theory and politics. Texts may include Rob Nixon, The Environmentalism of the Poor; Viveiros de Castro, The Relative Native: Indigenous Conceptual Worlds; Michael Benton, When Life Nearly Died; Donna Haraway, Staying With the Trouble; Deleuze and Guattari, What is Philosophy?; Connolly, Facing the Planetary; Glissant, The Poetics of Relation, Nabokov, A Forest of Time Writing Intensive

AS.190.625. Theories of Comparative Politics.
This seminar is intended for graduate students planning to take the comprehensive exam in comparative politics, either as a major or as a minor. In addition to exploring central methodological debates and analytic approaches, the seminar reviews the literature on state-society relations, political and economic development, social movements, nationalism, revolutions, formal and informal political institutions, and regime durability vs. transition. Graduate students only.

Area: Social and Behavioral Sciences
AS.190.626. Quantitative Methods for the Study of Politics.
This course is intended as Ph.D.-level introduction to applied statistics, with a focus on the identification of causal effects in the tradition of the Neyman/Rubin potential outcomes framework. Prior coursework in applied statistics or quantitative methods will be useful but is not required. Upon completion of the course, students will be in a position to understand and critically assess scholarship that uses instrumental variables, difference-in-differences, regression discontinuity, and other quasi- and natural-experimental research designs. Formal mathematical proof will be kept to a minimum. Students will be asked to adapt existing code and write some of their own code in R.

AS.190.627. Gilles Deleuze and Classical Theory.
What can Deleuze teach classical Eurocentric theories? And what can representatives of those traditions teach him? We will read Deleuze in relation to theorists he has examined, such as Plato, Lucretius, Spinoza, Kant, Kafka, Nietzsche and Hegel, as we seek to hear the history of political theory in a new key. Concepts and issues such as politics, history, time, culture/nature divisions, capitalism, the source of ethics, the shape of political ideals, and the nature of explanation will come up for review. The course will typically read a text from a classical thinker and then consult Deleuze's engagements with them.
Area: Social and Behavioral Sciences

A close reading of Leviathan by Thomas Hobbes (1588-1679) and Ethics by Baruch Spinoza (1632-1677), with consideration of important commentaries on these works. What conceptions of the human being, nature, reason, God, and freedom are defended and affirmed by Hobbes and Spinoza? What rhetorical strategies accompany their theories of self, ethics, social life?

AS.190.629. American Racial Politics.
Race is not a biological fact but rather a social construction. However, it is a social construction with very real consequences. Definitions of citizenship, allocation of state resources, attitudes about government and government policy, the creation of government policy, all shape and are shaped by race and racial classifications. Serving as a critical corrective to American politics treatments that ignore race, this class will examine how race functions politically in the United States. While not required, some knowledge of statistics is helpful.
Area: Social and Behavioral Sciences

Examines American social policy in comparative perspective. Special attention to issues of poverty and inequality, and their relation to the political system.

AS.190.632. The Development of American Political Institutions.
This course explores institutional development in American national politics, from the Founding until the present. It traces parties, Congress, the presidency, bureaucracy, and courts, and also examines how those institutions have interacted with one another across American history. Throughout the course, we will consider how ideas, interests, procedures, and sequence together shape institutions as they collide and abrade over time. Finally, although it hardly covers the entire corpus across the subfield, the course is also designed to prepare students to sit for comprehensive examinations in American politics.

AS.190.633. Black Political Thought.
This course will introduce you to a survey of Black political thought. Our examination will cover the time period between the latter years of the Transatlantic Slave Trade and the present. In the first two thirds of the course we will deal with primary texts (including but not limited to Incidents in the Life of a Slave Girl, The Souls of Black Folk, and The Wretched of the Earth), and in the last third we will deal with modern day attempts to wrestle with the ideas in these texts (including but not limited to Intimate Justice and Critique of Black Reason).

AS.190.634. Political Corruption.
Political corruption is widely seen to be an impediment to economic and political development and stability. But what is political corruption? The common definition of corruption as abuse of power for private gain is too vague to be of serious scholarly use. Is “abuse” culturally specific or merely a synonym for “illegal” - or even worse, for undesirable according to some unspecified standard? Does “private gain” refer only to under-the-table cash payments to a corrupt official, or does it extend to intangible private benefits, and does it extend to gains for identifiable favored groups (“club goods”) and may or may not include the corrupt official him or herself? This seminar will focus on several questions. How should political corruption be defined, and what is at stake in the choice if definition? Are there identifiable patterns to, or types of, political corruption? What conditions encourage or discourage corruption, and how might corruption be controlled or limited? What are the consequences of corruption - and are they necessarily all negative?

AS.190.635. Theories of Constitutional Governance.
This class is focused on the nature of constitutions and the way that they should and do work within a political system, with particular emphasis on the U.S. context. We will examine both normative and empirical arguments about the relationship between politics and constitutional law. More specifically, we will think about how societies and individual actors should make meaning out of constitutional texts, how they do seem to make meaning out of those texts, and the conditions that give rise to constitutional drafting and change. Graduate students only.
Area: Social and Behavioral Sciences

AS.190.636. Politics of Information and Information Technologies.
What information is and how it flows in the world are questions that are now obviously relevant to the fraught politics of today. We live in a time in which the facticity and authenticity of information is often questioned, in which the flood of “too much” information is often blamed for problematic outcomes, and in which information technologies and social media have (perhaps) upended previous expectations about how communication happens. This course explores the politics of information and information technologies from ancient times to the present, drawing from a substantial body of scholarship in political science and other fields to apply older and more recent wisdom to contemporary problems. Among the themes to be explored are: the differences between knowledge, information, and data; embodied (corporeal) information; commodification of information; securitization of information; technological change, information, and the political; information, cyberspace, and governance; and information privacy/ transparency. And, of course: “fake news,” “cyber,” and “bots.”
AS.190.637. The Colonial Constitution of the 'Human'.
This course inquires into the colonial constitution of the 'human' across philosophical, legal, political, social and economic dimensions. Special attention is paid to the ways in which sexuality, gender, race, class and faith are complicit in this constitution. The course finishes by critically considering theories of the 'post-human' from the perspective of both a colonial genealogy of the 'human' and anti-colonial claims upon humanism.
Area: Social and Behavioral Sciences

AS.190.638. Racial Capitalism.
This graduate seminar will explore the imbrication of the theory, history, and politics of the logic of race and the logic of capital.

AS.190.639. Critical IR Theories.
Generally relegated to the last week or two on the standard IR theory syllabus, critical IR theories take center stage in this course. We explore the intellectual roots of clusters of critical theories, the foundational works for each cluster, and the current debate. The course will cover Feminist IR Theory, the Practice Turn, and New Materialist IR, among other perspectives.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.640. Modes of Political Persuasion.
An examination of influential texts in Euro-American political thought, with an eye toward what each has to say about the “how-to” of political persuasion. What techniques can leaders, citizens, and theorists deploy to foster allegiance or conversion to a particular model of politics and public life? How are the powers of words, images, and feelings, especially eros, invoked and inflected? Given that being persuaded of something may or may not induce a will to enact it, what techniques are available to jump the gap between profession of ideals and undertaking of action? Texts include Aristophanes' Women Celebrating the Thesmophoria; Plato's Phaedrus and Books II and III of Republic; Machiavelli's Prince; Whitman's 'Calamus' poems, Freud's Civilization and Its Discontents, Foucault's writings on sexuality and ancient Greek ethical practices, and Beauvoir's Ethics of Ambiguity and 'Must We Burn Sade.'
Area: Social and Behavioral Sciences

Race has been and continues to be centrally important to American political life and development. In this course, we will engage with the major debates around racial politics in the United States, with a substantial focus on how policies and practices of citizenship, immigration law, social provision, and criminal justice policy shaped and continue to shape racial formation, group-based identities, and group position; debates around the content and meaning of political representation and the responsiveness of the political system to American minority groups; debates about how racial prejudice has shifted and its importance in understanding American political behavior; the prospects for contestation or coalitions among groups; the “struggle with difference” within groups as they deal with the interplay of race and class, citizenship status, and issues that disproportionately affect a subset of their members; and debates about how new groups and issues are reshaping the meaning and practice of race in the United States.
Area: Social and Behavioral Sciences
Writing Intensive

Comparative politics scholars have long identified institutions as a crucial source of cross-national variation in political life. Yet institutions are not static. We know from everyday experience that institutions change over time, sometimes quite fast. Scholars have attempted to address the problem of institutional change in various ways. Some institutionalist scholars underscore the endogenous logic of institutional evolution, whereas others resort to exogenous factors such as power. Constructivist and pragmatist scholars foreground ideas and practices as sources of institutional change. This course will explore these different strands of scholarship and attempt to reconstruct a fruitful dialogue between them.'

This course covers a series of special topics in IR theory with an emphasis on how an appreciation of practices and process provides a fresh perspective on old questions and raises new ones. The course will focus on the pertinent sociological literature and how this has been applied in IR.
Writing Intensive

AS.190.645. Black Politics.
Grad Students Only.
Area: Social and Behavioral Sciences

This graduate seminar will examine a range of indigenous political theorists and critics of settler colonialism. In so doing, we will interrogate the role of liberal Anglo-centrism in contested theories and practices of sovereignty, property rights, freedom, equality, race, sexuality and nature. Likewise, we will investigate the contention that settler colonialism is acquisitive of territory in perpetuity, as opposed to being a moment in history, in order to assess the enduring political and theoretical impact of colonial legacies. Importantly, we shall explore how the relays between indigenous cosmologies and temporalities shape theories and practices of resistance, reason, identity and political imagination. Graduate students only.

AS.190.649. The Economic and the Political.
The neoclassical paradigm of economics utterly excludes politics, yet a large swath of the subfield of "political economy" presupposes or is predicated upon that very paradigm. Neither approach can account for the distinct force of "the economic" as it continually interacts with "the political" (and the social, the cultural, etc.). This graduate seminar will be an experimental effort in exploring a whole new terrain of the economic — not another critique of the neoclassical paradigm, but the initial (re)formulation of a new approach to the economic and the political.
Area: Social and Behavioral Sciences

AS.190.650. The Theories and Politics of Rights.
Grad Students only.
Area: Social and Behavioral Sciences

AS.190.651. Policy Dynamics.
Policy dynamics is the study of changes of the political system in its entirety, from the point of view of the system's outputs--what government actually does, or fails to do. It is dynamic in that it seeks to explain changes in what matters governments feel can or must be addressed, the tools that are available to deal with problems, and the interactions of government and non-government actors that generate change. Particular emphasis will be placed on studying policy dynamics over long periods of time, including such post-enactment issues as implementation, policy feedback on political identities and group formation, and policy durability.
AS.190.652. The Politics of Money, Debt and Credit.
This course will survey recent scholarship on the politics of monetary and financial flows in the economy. We will reflect on the significance and causes of changes in underlying political economy and institutions since the mid-20th century. We will pay special attention to the rise of a new political economy often characterized as neoliberal, and we will discuss how scholars within and beyond political science make sense of these changes.

Writing Intensive

AS.190.653. Organizations.
Graduate students only. ‘Organizations are the fundamental building blocks of economic, social and political life. This course will examine how different disciplines (sociology, economics, political science) approach the problem of explaining how organizations operate, as well as exploring the structure and development of a very wide range of organizations (firms, interest groups, charitable foundations, universities, militaries, bureaucracies, international organizations, and professions).’
Area: Social and Behavioral Sciences

AS.190.654. The Development of the Conservative Movement.
The last twenty years has seen a flourishing of literature on conservatism across multiple disciplines. This course will survey that literature, placing it in a developmental context. Particular focus will be placed on the relationship between elite and mass conservatism, especially in the light of the rise of populism in the US, UK and elsewhere.
Area: Social and Behavioral Sciences

AS.190.655. Decolonizing Time and Memory.
This graduate seminar is a critical encounter with the colonial imprint on the politics of memory, temporality and race. We shall investigate the recent turn to “decolonize” virtually everything and ask what such efforts might entail given that the hallmarks of colonialism include a disavowal of the past, the capacity to set the clock to zero and begin the world anew, a linear conception of time and an abiding desire for temporal sovereignty. While investigating the possibility of decolonizing futurity, we will pay particular attention to the Promethean construction of the human race (and its constitutive others) across history. We shall confront the role of segregated temporality and mnemonic politics in modern race-making projects and their impact on the contemporary political imagination. Authors may include Nietzsche, Wynter, Fanon, Foucault, Deleuze, Anzaldúa, Baldwin, & Du Bois.
Area: Social and Behavioral Sciences

AS.190.656. Sovereignty: Historical Perspectives and Contemporary Issues.
This seminar provides an in-depth exploration of the concept of sovereignty by examining its historical development and its use in international relations scholarship. Our discussion will also be informed by works in political theory and the international law literature. The course is open to advanced undergraduate students and graduate students. Co-listed with AS.190.408
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.657. Re-Turn to Language.
A central claim of structuralism is that all systems of meaning are structured along the lines of language. Post-structuralism challenges this claim but does not dismiss it so much as probe the ways in which these systems fail and reveal interesting things about how communication may (not) take place. What is sometimes called ‘post-post-structuralism’ rejects the focus on language, emphasizing instead how meaning is generated in and by culture or with the (mostly) unacknowledged collaboration of matter. This course will revisit these claims, challenges, and refusals within the context of contemporary, philosophy, literary theory, and political thought. We will read, among others, texts by Saussure, Liev-Strauss, Lacan, Barthes, Derrida, Foucault, Kristeva, Butler, and Barad. Students will be required to submit weekly response papers and write a final 20-30 page paper on a topic related to the course.

AS.190.659. Postcolonial Political Economy.
There is currently an intermittent and under-examined relationship between postcolonial studies and critical political economy. The aim of this module is to help you to account for this relationship on your own terms. We will examine the entanglements of capitalism and colonialism by building unconventional conversations between classical political economists (as well as their 19th century successors) and thinkers and traditions invested in confronting colonialism and its legacies. We will focus primarily on regions affected by (Anglo) settler colonialism – especially the Americas and the Pacific.

What gives democratic regimes the ability to withstand challenges such as extreme polarization, racial and ethnic conflict, rising economic inequality, and institutional sclerosis and avoid the prospect of backsliding toward authoritarianism? This course will examine the problem of democratic resilience by locating the contemporary crisis of American democracy in comparative and historical perspective, bringing together literatures in comparative democratization and American politics.
Area: Social and Behavioral Sciences

AS.190.666. Political Economy Of Development.
Graduate students only.

AS.190.667. Reconstructing International Relations Theory.
In this class, we will study IR theory in a reconstructive mode. We will return to foundational texts in light of more recent theoretical developments both in IR and social thought more broadly. Our goal will be to critically assess the basic epistemological, ontological, and historical assumptions of IR theory while charting paths for its possible futures.

AS.190.670. Capitalism, Marx and the Value-Form.
This seminar will explore the capitalist value-form (Wertform) by way of a reading of Marx and a number of value-form theorists. Grad students only.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.672. Money.
What is money? And given its absolute centrality to economics and politics, shouldn’t political economy and political theory hold answers to this question? Instead, the history of both neoclassical economics and modern political thought is marked by eschewals or refusals of it or its importance. This graduate seminar will explore the theory and politics of money, through critical readings of orthodox theories, engagements with heterodox political economy, and encounters with contemporary political theory.
AS.190.675. Neoliberalism.
Readings on the history, theory, and politics of neoliberalism, from midcentury to the present.
Writing Intensive

AS.190.676. Field Survey of International Relations.
This course provides a scaffold for the study of international relations theory, organized historically and by major approaches. The focus is on close reading and discussion of exemplars of important bodies of theory. Intended for doctoral students with IR as their major or minor field. Graduate students only.
Area: Social and Behavioral Sciences

AS.190.677. Law and Politics.
As a field, Law and Politics has evolved from the study of constitutional law and judicial politics to the political behavior of judges and their associates to the study of law and society, the operation of law and courts “on the ground” in the international arena as well as in the United States, historical institutionalism, and the carceral state. In this graduate course, we will review some of the classic texts in the field, with a focus on the tension between legal institutions and democratic politics. In particular, we will examine how that tension is manifest in the foundations of the American political system and in critical reflection on contemporary practices of American democracy. Students will turn in response papers every week on the reading. In addition, there will be two 10-20 page papers due during the semester. Graduate Students Only.
Area: Social and Behavioral Sciences

AS.190.678. The Political Poetics of Walt Whitman and Henry Thoreau.
Examination of the works of Thoreau and Whitman with an eye toward how their texts engage in subjectivity-formation and the indocumentation of publics. What are the powers and limits of their practices of language, including myth-making, affirmations of nonhuman agencies, and nature-writing? Grad students only.
Area: Social and Behavioral Sciences

AS.190.681. Race and Politics of Punishment in the U.S.
Contact with criminal justice has become a primary way that many Americans see and experience government, particularly those from race-class subjugated communities. Yet, our field has been slow to appreciate the development of the carceral state or to consider its manifold impacts for citizenship. In this graduate seminar, we will survey key debates around punishment, state violence, and surveillance, with a particular focus on research that takes institutional development, history, and racial orders seriously. Why did the carceral state expand in “fits and starts” and with what consequence for state-building? We explore its (racialized and gendered) relationship to other key systems: foster care, social provision, labor relations and the labor market, and immigration enforcement. A core preoccupation of this course will be to understand the ways in which the criminal justice system “makes race” and how debates about crime and punishment were often debates about black inclusion and equality. How does exposure to criminal justice interventions shape political learning, democratic habits, and racial lifeworlds? In addition to policy, political discourse, and racial politics, we will employ works from a range of fields – history, sociology, law, and criminology – and a range of methods (ethnography, historical analysis, quantitative and qualitative). Required books include: Khalil Muhammad’s Condemnation of Blakeness: Race, Crime, and the Making of Modern Urban America, Elizabeth Hinton’s From the War on Poverty to the War on Crime, David Oshinsky’s Worse than Slavery, Parchman Farm and the Ordeal of Jim Crow Justice, Bruce Western’s Punishment and Inequality in America, and Michael Fortner’s Black Silent Majority: The Rockefeller Drug Laws and the Politics of Punishment.
Area: Social and Behavioral Sciences

AS.190.683. Research Seminar/Political Parties.
Area: Social and Behavioral Sciences

AS.190.685. Critical theory, method, and application in International Relations.
Critical theories are often taught by focusing on their various philosophical and ethical claims. But how do you “apply” critical theories in the study of International Relations? Is “method” only a “mainstream” concern? This course seeks to relate philosophy and ethics to method with a (future) eye to dissertation writing. We will consider e.g. Marxist, feminist, postcolonial, and poststructural lines of inquiry, as well as, at the same time, a range of conceptual areas of inquiry – e.g., the affective, the normative, the poetic, the phenomenological, and the material.
Area: Social and Behavioral Sciences

AS.190.687. Philosophy and the Anthropocene.
How do philosophers such as Heidegger, Whitehead, Deleuze and Braidotti help us to think about the dynamics of the Anthropocene? What do anthropologists and geoscientists such as Anna Tsing, Bruno Latour, Jason Moore, Michael Benton, Jan Zalasiewics and Wally Broecker teach those philosophies and us about the contemporary condition? Class presentations on assigned readings, seminar paper, and class discussions.
Area: Social and Behavioral Sciences

AS.190.688. Micro- and Meso-Level Approaches to Political Violence.
How is violence organized, produced, and understood? This course will introduce graduate students to advanced scholarship on political violence and will encourage students to explore the relationship between violence, agency, and structure. Central themes include: mobilization and recruitment; the emergence and behavior of armed organizations (e.g. militant groups, pro-state militias); ethnic violence; civilian targeting; gender-based violence in war; election violence; and vigilantism. The class will challenge students to critically examine violence as an outcome, political process, and as an indicator of underlying relationships and social structures.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.693. Planetary Interdependence and World Governements.
Intensive exploration of alternative global political architectures for high levels of security, ecological and internet interdependence.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.800. Independent Study.

AS.190.849. Graduate Research.

AS.190.890. Independent Study.

AS.190.893. Political Science Practicum.

AS.191.102. Diasporas in World Politics. 3 Credits.
This course explores the role of diasporas - ethnic, religious, and migrant groups - in world politics. What impact do diaspora communities have on the foreign policy of their country of residence or country of origin? What is the involvement of diaspora communities in civil wars, ethnic conflicts, and conflict resolution? How does this kind of transnationalism affect international order?

AS.191.103. The Politics of Crime and Punishment. 1 Credit.
In this class, we will ask questions about the relationship between crime, law, and punishment in modern democratic states. Students will be introduced to dominant modern approaches to understanding punishment and modern state’s power to enforce the law. In light of these theoretical approaches, we will consider the connection between criminalization, punishment, and politics in contemporary United States.
AS.191.104. Covert Action in International Politics. 3 Credits.
This course examines covert action from the Second World War up until the present. Covert action is any activity undertaken by a sponsor seeking to influence a target while remaining anonymous. We will be covering some of the more prominent examples of the use of assassinations, coup d'états bribery, blackmail, propaganda, election rigging, cyber-war, and economic sabotage. By the end of this course you should have a solid and detailed empirical knowledge of a large number of covert operations from around the world. You should be familiar with the definitions and categories for covert action and you should be able to engage with debates on the utility of covert action and the ethical and legal issues involved in using covert activities.

Writing Intensive

AS.191.106. Freshman Seminar: Mass Incarceration and American Politics. 3 Credits.
This freshman seminar examines how the United States became the world's leading jailer, the impact of mass incarceration on American politics, and the dynamics of reform. Points of emphasis include elections, federalism, and race.

Writing Intensive

AS.191.108. Introduction to Democratic Theory. 3 Credits.
Is democracy best understood as a form of government, or as 'a way of life' that opposes the inertia and failures of state institutions? What is the difference between representative democracy and participatory democracy? How have political thinkers distinguished between a democracy and a republic? Does democracy require collective identity and if so, is it necessarily exclusionary? This course explores influential answers to these questions, from Rousseau to Martin Luther King, Jr. and beyond.

Area: Humanities, Social and Behavioral Sciences

AS.191.119. Freshman Seminar: Thinking Critically through the Global South. 3 Credits.
This seminar exposes students to tools for thinking critically about life and politics by introducing them to contemporary debates in International Relations and Political Theory that have been proposed by authors from the Global South. Topics include, but are not limited to: development, postcolonial studies, environment, knowledge production, and gender and sexuality.

Area: Social and Behavioral Sciences

AS.191.201. Love in Politics, Politics in Love. 3 Credits.
In much of political science, political power is assumed to flow from fear. Using classic texts in political theory, this class will consider the existence of a different kind of political power, one flowing from love. The following questions will structure the course: What are the powers and forms of love? Are political bonds and loving bonds related? Class discussions will draw from a variety of sources, including readings by Hobbes, Nygren, Plato, Augustine, Rousseau, Engels, Jordan, and Berlant.

Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.191.205. Freshman Seminar: The Politics of Personal Life: Work, Family and Consumption. 3 Credits.
This course explores various theoretical attempts to broaden the meaning of "politics" by examining three spheres of action typically equated with "personal" life: work, family, and consumption. The following questions orient our inquiry: what does the phrase "the personal is political" mean, and what sort of political solutions does it typically endorse? What can we learn about politics by studying family dynamics? Why do Americans work so much, and how does "work ethic" discourse promote punitive social policies? What is the relationship between our everyday acts of consumption and larger political phenomena such as climate change and racialization processes? What can theories of intersectionality tell us about such dynamics?

AS.191.216. Freshman Seminar: By Any Means Necessary? Political Theories of Violence. 3 Credits.
Questions of violence are as old as questions of politics itself. Are politics and violence essentially the same or is politics fundamentally non-violent? Is violence the only way to achieve political change? Has the state been a force for eliminating violence and securing freedom or has it only created more conflict? Who gets to define what counts as violent, and for what purposes? This course engages such questions through a theoretical lens, often focusing on political actors and activists responding on the ground to these pertinent questions. It asks students to reconsider what they normally think violence, non-violence, and politics are. We will particularly investigate this angle through the lens of race and colonialism—reading such figures as Michel Foucault, Franz Fanon, Mao Zedong, Gandhi, Martin Luther King Jr., Malcolm X, Angela Davis, and Ida B. Wells—as well as focusing on histories of state formation and state violence.

Area: Social and Behavioral Sciences

Writing Intensive

AS.191.217. Freshman Seminar: International Politics from the Global South. 3 Credits.
This course focuses on the interests and preferences of developing countries in international politics. The formal and informal rules of international politics tend to favor the interests and preferences of powerful countries: richer states, with better technologies and superior military capabilities. Sometimes, however, the interests and preferences of great powers do not align with what the rest of the countries want, especially with states in the Global South. We will analyze what developing countries do to restrain the leash of powerful countries, particularly when their interests and preferences conflict. The course is divided into four main sections: a review of theories about international order and international hierarchies, tools to restrain great powers, review of strategies from countries in Latin America, Africa, and East Asia, and areas of disagreements between the Global North and the Global South.

AS.191.303. Critical Race Theory, Law, and Criminal Justice. 3 Credits.
In this course, students will gain a foundational understanding of critical race theory, including its genesis in legal theory. The course will examine its relationship and importance to social movements, including through key concepts like intersectionality. The course will also use critical race theory to grapple with law, racial segregation, and the criminal justice system in the United States.

Area: Social and Behavioral Sciences

Writing Intensive
AS.191.304. Writing Politics in an Age of Crisis. 3 Credits.
We live in an age of crisis. Social, political, and environmental disruptions both in the United States and around the world are the new normal. How do we – as individuals, citizens, and scholars – come to understand these issues? And how should we write about them? This course is designed to help students improve as writers, readers, and editors for a world where powerful young voices are more necessary than ever. The substantive focus of the course will be on the dynamics of interlinked contemporary political crises and on the responses available to individuals to address them. We will read a variety of scholarly, journalistic, and literary sources to inform our discussion and inspire our writing. However, this course is designed not as a standard seminar, but as a writing workshop. Students will write and critique a variety of pieces of different lengths and styles – including a political memo, an op-ed, a long-form critical essay, and a piece of speculative fiction - spending the majority of in-class time on peer review, presentations, and writing exercises, which they will compile into a writing portfolio. Reading will include works by Alexander Chee, Ta-Nehisi Coates, Mary Annaise Heglar, Hunter S. Thompson, James Baldwin, Dave Zirin, Elizabeth Rush, Charlotte Shane, and Teju Cole, among many others.
Area: Social and Behavioral Sciences Writing Intensive

AS.191.305. The Politics of Sound. 3 Credits.
What does politics sound like? Can sounds (sound waves, musical compositions, nonhuman voices, vocal timbres, ...) carry or even create political meaning? Listening to such questions, this course explores the role of sonic and musical figures in the political theory canon, the influence of sound on political events, as well as the involvement of the sensing human body and a more-than-human environment in public affairs. To do that, the course (1) introduces the soundscape as a methodological framework for describing politics as an aesthetic experience; (2) addresses sonic ways to conceptualize political matters, such as nationhood, civic resistance, speech, power, identity and warfare; and (3) uses sound to reimagine democratic and ecologically sustainable forms of living-together. The course combines readings in political theory with texts in cultural, sound and media studies. Multimedia resources (popular and classical music pieces, films, sound recordings, ...) accompany the theoretical discussions and relate them to contemporary events. Assignments include short presentations, a soundwalk report, and a final paper.
Area: Social and Behavioral Sciences

AS.191.307. Democracy and Political Psychology: Ideals and Realities of Democratic Citizenship. 3 Credits.
This course confronts the expectations of democratic theory regarding the way citizens should think and behave with findings from political psychology with respect to how they do think and behave. Divergences of the ideals and realities of democratic citizenship often seem quite glaring and disconcerting. What are the conclusions we should draw from such mismatches? Should we simply accept them or is there something to be done about them? Alternatively, should democracy be redefined or abdicated altogether? The course will center on the experience of the advanced industrial democracies – the places where one would presume democracy to work best. In addition to addressing substantive questions, the course also aims to equip students with approaches, methods, and techniques they can use in conducting their own empirical research.

AS.191.309. Theory of Conversation. 3 Credits.
What are the purposes of conversation, and how do we navigate these purposes? How do we excuse, justify, and explain ourselves to one another; how do we forgive each other; how do we come to agree with one another? When do we reach the conclusion that we have nothing more to say, and why? In this course, we will approach these and similar questions through the tradition of ordinary language philosophy as represented by Wittgenstein, Austin, and Cavell. We will then apply the method of ordinary language philosophy to conversations found in the plays of Beckett and Shakespeare, as well as the films of Hawks and McCarey. Students will be expected to write a short paper each week.
Area: Social and Behavioral Sciences Writing Intensive

AS.191.311. Who Are You Laughing At?! Political Theories of Pluralism and Laughter. 3 Credits.
Laughter in recent years has emerged as a key experience through which diverse political interests, beliefs, and identities form, interact, and compete with one another. From Donald Trump's claims that China, Mexico, and North Korea 'are laughing at us;' to the 2015 Charlie Hebdo attacks and the 2010 Jon Stewart rally on the National Mall, the question 'who are you laughing at?'' lies at the center of contemporary political struggles. This course puts various philosophical, historical, and literary accounts of laughter into conversation with classic and contemporary theories of pluralism to explore how practices of laughter construct, preserve, and transform barriers of political difference today.

AS.191.313. Why We Punish. 3 Credits.
A multidisciplinary exploration of the justifications and problems associated with punishment broadly defined, including prison sentences, personal acts of revenge, and military reprisals. Course texts will include international court cases, philosophical texts, and classic legal thinkers, in addition to fiction and news articles. Particular attention will be paid to when punishment is (or is not) cruel, deserved, or proportionate; when restraint should be shown; and whether it is desirable to abolish it altogether. Case studies will include the practice of solitary confinement, cycles of retaliatory violence in communal conflicts, the death penalty, and International Criminal Court efforts to punish perpetrators of war crimes and crimes against humanity. Writing intensive.
Writing Intensive

AS.191.315. The Domestic Politics of Israel. 3 Credits.
Israel's politics and history are complex, involving multiple military conflicts, domestic struggles and dynamic international relationships. This course will focus on Israel's domestic politics by tracing the story of the development of its party system and the parties composing it. A parliamentary democracy with a proportional representation electoral system, Israel's party system includes multiple parties who represent the various segments of Israeli society. What are the origins of this party system and the parties within it? What changes have they experienced and what are the factors that influence those changes? Who are the important actors and what might be motivating them? How have these parties influenced the development of Israel's domestic politics? Using both historical and statistical materials, these questions and others will serve as our guide on a journey to a better understanding of Israel's domestic politics, from its inception to the present day.
Area: Social and Behavioral Sciences Writing Intensive
AS.191.317. No Justice, No Peace: Perspectives from Post-conflict Responses. 3 Credits.
The slogan 'No Justice, No Peace' has been uttered both as a call to arms for social unrest and as a warning that a lack of perceived justice in a society will mean lack of peace. While the demand is made in a variety of contexts ranging from urban protests in response to racial injustices to states in the aftermath of protracted civil strife or state sponsored violence, a discussion of the kind of justice that is demanded with the slogan or the kind of peace that is foreseen is often missing from the public invocations of 'no justice, no peace.'This course aims to examine invocations of "no justice, no peace" and mechanisms employed to respond to its demands. As such, the course readings will explore conceptions of justice and peace envisioned in a variety of post-conflict contexts. Students will be encouraged to evaluate and question the conceptions of justice and peace and the shifts in their meanings overtime through an examination of primary sources such as U.N. resolutions, Security Council Meeting Notes, UNCHR reports, international NGO reports, international tribunal reports in addition to seminal texts on the concepts of justice, peace and reconciliation. Students will be encouraged to articulate the ways in which response mechanisms delivered or failed to deliver the promises of justice, peace and fugitive reconciliation.
Area: Social and Behavioral Sciences

AS.191.325. Environmental Social Sciences meet Environmental Fiction. 3 Credits.
The course pairs readings of critical texts addressing environmental crises with literary fiction broadly dealing with the relationship between the human and the environment. We discuss the ways narratives affect our understanding of complex global phenomena, and how the tools of literary analysis can help us unpack the rhetorics and values of both fictional and nonfictional texts.
Area: Social and Behavioral Sciences
Writing Intensive

AS.191.335. Arab-Israeli Conflict. 3 Credits.
The course will focus on the origin and development of the Arab-Israeli conflict from its beginnings when Palestine was controlled by the Ottoman Empire, through World War I, The British Mandate over Palestine, and the first Arab-Israeli war (1947-1949). It will then examine the period of the Arab-Israeli wars of 1956, 1967, 1973, and 1982, the Palestinian Intifadas (1987-1993 and 2000-2005); and the development of the Arab-Israeli peace process from its beginnings with the Egyptian-Israeli treaty of 1979, the Oslo I and Oslo II agreements of 1993 and 1995, Israel's peace treaty with Jordan of 1994, the Road Map of 2003; and the periodic peace talks between Israel and Syria. The conflict will be analyzed against the background of great power intervention in the Middle East, the rise of political Islam and the dynamics of Intra-Arab politics, and will consider the impact of the Arab Spring.
Area: Social and Behavioral Sciences

AS.191.340. Cities, Space & Power. 3 Credits.
Gentrify! 80% of people live in urban areas. These locations are key for solving political dilemmas, including climate change, class, segregation, gender & immigration. This class explores all of these through the lens of gentrification. What does 20th century urban planning have to do with it? How can I talk to my friends about gentrification in Baltimore? Find out this and more!

AS.191.344. Belonging to Nature in the Anthropocene. 3 Credits.
This course explores debates in contemporary environmental political thought concerning humanity’s relationship to nature in the Anthropocene. The Anthropocene refers to the era in which ‘human’ activity becomes a force of ‘nature’—when the impact of human activity on natural processes manifests itself in the stuff of the Earth. For many of us, these planetary transformations are hardly noticeable in day-to-day life, but they are dramatic: we are living through the Earth’s sixth mass extinction. What is our relationship to these transformations? Do we have the power to stop them, or at least to minimize their harmful effects? Course readings and films introduce multiple visions of the human/nature relationship and examine the responses they recommend to these and other questions. The political stakes of these visions are brought to light as we consider: How do visions of the human/nature relationship shape and texture core political concepts like freedom, agency, responsibility, and progress? What do they suggest about the strategies most likely to motivate action amid the uncertainty of the Anthropocene? How do these visions subtly (and not so subtly) relegate some to the realm of ‘nature’ so that others can be classified as ‘human’?
Writing Intensive

AS.191.345. Russian Foreign Policy. 3 Credits.
This course will explore the evolution of Russian Foreign Policy from Czarist times to the present. The main theme will be the question of continuity and change, as the course will seek to determine to what degree current Russian Foreign Policy is rooted in the Czarist(1613-1917) and Soviet(1917-1991) periods, and to what degree it has operated since 1991 on a new basis. The main emphasis of the course will be on Russia’s relations with the United States and Europe, China, the Middle East and the countries of the former Soviet Union—especially Ukraine, the Baltic States, Transcaucasia and Central Asia. The course will conclude with an analysis of the Russian reaction to the Arab Spring and its impact both on Russian domestic politics and on Russian foreign policy.
Area: Social and Behavioral Sciences

AS.191.347. The Political Economy of Climate Change. 3 Credits.
Scientists tell us that continued reliance on fossil fuels to drive our economies causes global warming, which in turn poses an existential threat to humanity as we know it. But the major tools of societies to steer a clean energy transition—climate and energy policies—often fail, lack ambition, and vary widely from country to country. This is puzzling: Why is it so difficult to pass meaningful policies even though the stakes are so high? How to explain the varying responses to the same problem? In this course, students study the struggle over energy and climate policies through case studies of large industrialized countries. Besides other things, we will ask why the US failed to install any kind of meaningful climate policy, if and how the problems of the EU’s carbon market can be solved, why China cancelled over 100 coal-fired power plants in 2017, and why cloudy Germany became a solar energy powerhouse.
Writing Intensive
AS.191.354. Congress and Foreign Policy. 3 Credits.
This course is an introduction to the Congressional role in foreign policy. The Constitution grants the President the authority to conduct foreign policy. Yet it also gives Congress a substantial role in the shaping of foreign policy. The distinct roles are not always clear, creating an inherent tension between these two branches of government and efforts on each side to increase their power. This class will address the "rules of the road" in conducting American foreign policy and how they change. The class will go beyond theory to include case studies that show the tension between Congress and the Administration – including the Iran Agreement, Climate Change, the use of sanctions and American policy towards Cuba. The course will include guest lecturers who work in Congress on the various aspects of foreign policy – including appropriations, intelligence, oversight and investigations. We will address the Congressional role in ratification of treaties and in declaring war. The class will consider the different ways that each branch of government approaches human rights, arms sales and sanctions. The class will also address the domestic political aspects of foreign policy – including the role of advocacy groups and special interests and the political use of Congressional investigations. Most of these classes will be in Washington, DC to facilitate guest speakers. Several classes will meet at the US Congress.
Area: Humanities, Social and Behavioral Sciences

AS.191.359. North Korea, Identity, and International Politics. 3 Credits.
This course analyzes the role of identity and foreign policy in contemporary North Korea. We begin with an overview of North Korea's political economic development and the role of national identity in state formation. We will then use those concepts to explore North Korea's relations with South Korea, China, and the United States through topics such as regime security, nuclear weapons, human rights, and social change. The course ties together academic literature, journalistic sources, and policy research with in-class activities and writing assignments. It is recommended that students have taken a survey course on International Relations (e.g., Global Security Politics, Contemporary International Politics).
Area: Social and Behavioral Sciences

AS.191.362. Covert Action in International Relation. 3 Credits.
This course introduces the use of covert action in relations between states. We will cover various cases with different sponsoring and targeted countries and from different time periods. The class ends with a review of the latest Russian covert activity against the United States.
Area: Social and Behavioral Sciences

AS.191.363. Populism and Politics. 3 Credits.
Around the world, from Italy to Brazil, and from Hungary to the United States, populist candidates are fundamentally changing the political landscape. In this course, we explore the nature of populism; investigate whether populism poses an existential threat to liberal democracy; explore the causes of the populist rise; investigate the ways in which populism is a response to demographic change; and discuss what strategies might allow non-populist political actors to push back.
Area: Social and Behavioral Sciences

AS.191.365. U.S Constitutional Law - Civil Liberties. 3 Credits.
The course is designed to introduce students to the study of civil liberties as protected by the Constitution of the United States. The emphasis will be upon those rights incorporated into the Bill of Rights and made applicable to the states through the Fourteenth Amendment. Specifically, the course will examine freedom of speech and freedom of the press – as well as freedom of freedom of thought, belief, and association. In addition, the course will address the right to privacy, the rights of those accused of crimes, and the rights and protections secured under the two clauses of the First Amendment relating to religious liberty – the Establishment Clause and the Free Exercise Clause
Area: Social and Behavioral Sciences

AS.191.372. Making Social Change. 1.5 Credits.
Aitchison Students Only.
Area: Social and Behavioral Sciences

AS.191.357. Thinking Organizationally about Politics. 3 Credits.
Aitchison Students Only.
Area: Social and Behavioral Sciences

AS.191.376. Public Policy Writing. 3 Credits.

AS.191.383. Visualizing Data. 3 Credits.
Area: Quantitative and Mathematical Sciences

AS.191.389. The Politics of Race and Ethnicity in the Postcolonial Society. 3 Credits.
The postcolonial society offers a unique terrain for the study of comparative racial politics, providing a setting for which racial and ethnic politics often take place between predominately non-white groups. In this course, students will examine contemporary understandings of the concepts of race and ethnicity and how they are deployed politically in the postcolonial society, enabling students to make deeper explications about the relationship between race, ethnicity and national inclusion as global phenomena that are the persistent and widespread legacies of colonialism, nationalism and white supremacy. Specifically, students will become familiar with the processes of colonization and decolonization – as well as postcolonial theories of resistance – that structure group politics today, drawing upon theoretical sources from Africa, Asia and the Caribbean. These theoretical and historical tools will be used to study racial and ethnic politics across a range of postcolonial cases, including Indonesia, Mauritius, Fiji, Trinidad, Colombia and Brazil.
Writing Intensive

AS.191.402. Numbers, Pictures, Politics. 3 Credits.
Aitchison students only.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
AS.191.405. Modernity and the Slaughterhouse: Labor, Violence, and Animals in Contemporary Society. 3 Credits.

Steven Pinker opens his influential bestseller The Better Angels of Our Nature with the claim that "If the past is a foreign country, it is a shockingly violent one," going on to argue that the contemporary age is one marked by relatively more peace and less violence than ever before. Drawing on a long tradition of optimist thinkers, he credits this civilized progress to a combination of the intellectual legacy of Enlightenment humanism, greater faith in scientific rationality and technological progress, a strong system of states and social institutions, and the development of democracy and the liberal market economy. For Pinker, this account holds as much for humans as it does for animals, and he goes so far as to claim the emergence of animal rights as "another rights revolution" akin to civil rights and women's rights. But does this account of modern society hold up under scrutiny? Or, more specifically, where does it fail? And how exactly does contemporary society relate to different forms of violence (against humans and animals) that it has not done away with? The historical processes described by Pinker have not only drastically changed human society, but they have also impacted how we interact with animals. The United States today produces and consumes more meat than ever, but most Americans live at an increasing geographic and perceptual distance from animals and the humans who work with them, relying on a system of industrial production and a complex division of labor. This course approaches the politics of this distribution of labor, violence, and human-animal relations from a site rarely considered in political analysis: the modern slaughterhouse. It engages with this institution as a historical and cultural object, using the story of its emergence and operation to ask broader questions about the politics of social change. We will draw on an interdisciplinary range of academic and non-academic works to explore a range of questions about the relationships between institutions and rationality, visibility and invisibility, hygiene and marginalization, and labor and society, and to examine the narratives ostensibly peaceful, liberal democracies tell themselves about violence, history, and progress.

Writing Intensive

AS.191.406. Capitalism: Politics and Political Thought in a Market Economy. 3 Credits.

The United States is a capitalist economy and we live in a capitalist world. This a fact we take for granted and therefore spend little time examining. Capitalism’ proponents attribute our society’s unprecedented wealth and technological advances to this economic system. Some go so far as to claim that modern democracy and social progress are impossible without a capitalist economy. Critics point to growing social inequality and a slew of environmental ills as proof of capitalism’s unsustainability. Some suggest that capitalism is antithetical to true democracy and human flourishing. But what exactly is capitalism? How did it evolve in the USA and how does the form capitalism takes in the United States differ from the forms it takes elsewhere? And, crucially, how is capitalism shaped by – and how does it shape – contemporary politics? And exactly is this all related to liberalism, conservatism, neoliberalism, libertarianism, socialism, and democratic socialism? This seminar is designed to help students critically approach these questions. Rather than taking simplistic pro-contra approach, this seminar will examine capitalism along four axes: as a political-economic system, a corollary set of structures and institutions, the force behind a specific form of state organization, and the determinant of how society and individuals act and see themselves. To explore these issues, we will focus on a number of contemporary political issues, with a primary geographic focus on the United States, including the following: the debates over the welfare state and socialized healthcare; unions, lobbies, and special interests; the connection between capitalism, culture, and ideology; the effects of a capitalist organization of labor of questions of race, gender, and citizenship; the commodification of the environment and other species; and the process of critique, resistance, and social change in a capitalist system. Throughout, we will discuss the theoretical and empirical arguments put forward by a historically and disciplinarily broad range of thinkers including Karl Marx, Simone Weil, John Locke, Adam Smith, Robert Nozick, Thomas Sewell, Nancy Fraser, David Graeber, Melinda Cooper, Andreas Malm, and Guy Debord, through to Alexandria Ocasio-Cortez and Elon Musk.

Writing Intensive

AS.191.415. Fear and Loathing: Writing About Contemporary American Politics. 3 Credits.

This course is focused on reading, analyzing, and, most importantly, producing writing about the American political experience and contemporary events in American politics. We will use scholarly, print, and new media sources from different sides of the political spectrum, drawing on political and literary theory to inform our discussions. We will then try to do better: Students will write and workshop a variety of pieces of different lengths and styles, spending in-class time on peer critique, presentations, and writing exercises, which they will compile into a writing portfolio. We will discuss and write op-eds, memoirs, long-form book reviews, commentary essays, and satire. Throughout, we will devote considerable class time to critique and discussion of students’ writing. Readings will include works by James Baldwin, William F. Buckley, Claudia Rankine, Hunter S. Thompson, Ta-Nehisi Coates, Alexander Chee, Angela Nagle, and Omar el Akkad. We will draw on political commentary from sources ranging from The Washington Post to Jacobin to The Onion, through to Facebook and Twitter. Throughout, we will consider a wide range of topics pertinent to writing about politics, including questions of the make-up of the public sphere and diverse audiences, the use of voice and language, the deployment of facts and rhetoric, the place of fiction and humor in political critique, and the rise of fake news and trolling.

Area: Social and Behavioral Sciences

Writing Intensive
AS.191.420. Are We Living In an Age of Collapse? 3 Credits.

This course will investigate the themes ofcivilizational crisis and collapse with the primary goal of understanding the “perfect storm” of converging crises confronting humanity in the 21st century, including earth system, economic, food and energy crises. While these crises are often studied in isolation from each other, this course will engage with more holistic approaches to study them as interrelated components of a deeper system-wide crisis in the contemporary world order. The first part will explore theories of world-systems, political ecology, and collapse in historical perspective. The second will focus on specific dimensions of the contemporary global crisis and their relations, in particular the earth system crisis, the global economic crisis, food and energy crises. The third part will then explore the implications of these crises for the future of world order by investigating possible scenarios, both for the world-system as a whole and for the United States in particular, and then by evaluating different responses and proposed solutions to our critical civilizational condition.
AS.192 (INTERNATIONAL STUDIES)

AS.192.150. States, Regimes & Contentious Politics. 3 Credits.
This course introduces students to the study of politics and political life in the world, with a particular focus on the Middle East, Latin America, and Africa. Throughout the course, we will analyze the sources of order and disorder in modern states, addressing a series of questions, such as: why did nation-states form? What makes a state a nation? Why are some states democracies while others are not? How do people organize to fight oppression? Why does conflict sometimes turn violent? What are the causes of ethnic war? Drawing on a mix of classic works and contemporary scholarship, we will discuss the answers that scholars have formulated to address these and other questions, paying special attention to research design and the quality of argumentation.
Area: Social and Behavioral Sciences

Are you planning to do a research project for your independent study class, or preparing for a grant application, or working on a big research project for a research intensive class or graduation thesis, or just wishing to improve your research skills? If so, this course is for you! Through weekly two hour sessions over ten weeks, you will receive systematic training on major research tools, resources and techniques useful for any research project in international studies, political science, and other social science subjects. By the end of the course, you will be able to come up with a viable research topic, and complete a research statement that includes an abstract, problem statement and literature review based on in-depth research utilizing tools and techniques covered in the course. The skills you learn through the course will prepare you for any future research projects and advanced studies.

AS.192.225. Economic Growth and Development in East Asia. 3 Credits.
The course offers an overview of the complexities of East Asia’s development experience from a variety of perspectives, and it is divided into three parts to allow students to develop expertise in one or more countries and/or policy arenas, while also cultivating a broad grasp of the region and the distinct challenges of “East Asia fast-paced, sustained economic growth.” Part I considers the origins of Asian economic development, analyses the common economic variables behind the region’s success, looks at the East Asian financial crisis and its lessons and assesses whether or not East Asian countries have learned them. Part II will focus on the development experiences of individual countries, with an emphasis on the ASEAN economies, NIEs, Japan and China. Part III considers topics of special interest to Asia, including trends toward greater regional economic cooperation, both in the real and financial/monetary sectors, and issues related to poverty, migration, and inclusiveness.
Area: Social and Behavioral Sciences

AS.192.270. International Migration, Diasporas and Development. 3 Credits.
International migration has emerged as one of most politically salient and contentious issues in the politics of advanced democracies. However, while the economic, political, and social impact of large immigrant inflows has prompted much debate and analysis in developed countries, the effects of emigration and diasporas on the source country are poorly understood. This seminar examines the economic and political challenges and opportunities of international migration and diasporas on countries of origin and policy options to address them. The seminar will examine a range of issues. Is the phenomenon of greater import in the current (and future) context than it has historically been and if so, why? How do selection characteristics of international migrants and reasons for leaving affect the country of origin? Why do diasporas differ in the forms of engagement with the country of origin? What explains the massive increases in financial remittances sent by immigrants to their countries of origin and what are their effects? The seminar will also examine non-pecuniary or “social” remittances, which reshape individual preferences and social norms and thereby influence economic, political, and social change. What are the human capital effects of international migration, ranging from the “brain-drain” of limited human capital to “brain-gain” effects arising from diasporic networks? How does the “long-distance” nationalism of diasporas that support more polarizing political parties and groups engaged in conflict affect international security? Finally, we will examine policies in both receiving and sending countries and how they affect outcomes in their countries as well as of migrants themselves. Are international agreements on migration feasible or will rising nationalism ensure that unilateral policies and bilateral arrangements prevail?
Area: Social and Behavioral Sciences

AS.192.280. China Under Revolution and Reform. 3 Credits.
China is an emerging world power with a long history, a rich culture, and complex political structures and processes. As a modern state, the People’s Republic of China (PRC) continues to amaze and confound observers both inside and outside its borders. More than three decades after opening its doors to the outside world, China remains as important as it is misunderstood. This course is designed to provide you with a road map to help understand the fascinating world of Chinese politics and the contemporary Chinese state. The course presumes no prior knowledge of China.
Area: Social and Behavioral Sciences

AS.192.310. Program Abroad: Populism in Comparative Perspective. 3 Credits.
International Studies elective offered on the JHU Summer Program Abroad in Bologna. Open to students on the JHU Bologna Summer Program only. Permission required.
Area: Social and Behavioral Sciences
**AS.192.315. Politics of India. 3 Credits.**

India is the world's largest democracy and its second most populous country. This course introduces core issues in the study of modern Indian politics. The class is organized around the following topics: we trace India's journey to Independence; the consolidation of democracy in the early decades; the relationship between the state and the economy; the state's institutional architecture; how political parties and electoral campaigns operate; the threats posed by corruption, criminality and dynastic politics; the role of caste and religion in shaping politics; the political and economic consequences of economic liberalization; elections; and the recent rise of right-wing hindutva in the country. The focus is on building knowledge and understanding of the Indian case. But we will also consider to what extent India's experience is reflective of more general theories of politics, and how they might change because of what India can teach us. Class sessions will be interactive, with plenty of opportunity for group discussion. The reading list is diverse and draws from political science, sociology, history, and anthropology.

Area: Social and Behavioral Sciences

Writing Intensive

**AS.192.320. Colonialism and Foreign intervention in the Middle East and Africa. 3 Credits.**

How did colonial rule and post-colonial foreign intervention shape the history and politics of states in the Middle East and Africa? The first part of this course focuses on the colonial period, examining the era of conquest, considering how and whether colonial rule differed from other types of ruling arrangements, and studying how people in colonized territories reacted to conquest and foreign rule. Part Two focuses on post-colonial foreign military interventions. Part Three considers the potential long-term consequences of colonialism and foreign intervention. The course focuses on British, French, and American imperialism. **This course is eligible for credit toward the Islamic Studies minor, but only if students relate their major research paper to Islam and also notify Prof. Lawrence at the beginning of the course of their intention to seek Islamic Studies credit.**

Area: Social and Behavioral Sciences

**AS.192.340. Refugees, Human Rights, and Sovereignty: Focus on Italy. 3 Credits.**

Summer course in International Studies offered on the JHU Summer Program in Bologna.

Area: Social and Behavioral Sciences

**AS.192.350. Capital and Climate: Italy in the Mirror of World History. 3 Credits.**

Summer course offered on the JHU Summer Abroad Program in Bologna, Italy

Area: Social and Behavioral Sciences

**AS.192.360. Modern Warfare. 3 Credits.**

This course examines modern warfare from the Second World War to the present. It takes a broad historical perspective. Strategic decision-making, the effect of war on societies, technological change, experiences of the soldier, and different concepts of warfare will be examined. Students will be introduced to critical texts and key primary source documents. The course will start with the Second World War. It will then go on to the nuclear revolution, the Korean War, and the early Cold War. From there, the subject matter will turn to examine people's war, focusing on Mao and the Chinese Civil War and then Vietnam. Next, the Arab-Israeli conflicts will be discussed before moving on to the new strategic environment of the post-Cold War world and the long war against "terrorism" in Afghanistan, Iraq, Syria, and elsewhere. Finally, the course will look at recent technological change, clashes, and new players. Throughout, special attention will be paid to the non-Western view and experience of war.

Area: Social and Behavioral Sciences

**AS.192.401. Political Violence. 2 Credits.**

This class will function predominantly as a discussion seminar that uses the case of the Lebanese Civil War to examine the causes, duration, and dynamics of civil war as well as the debates surrounding foreign intervention and peacebuilding. Themes include: ethnic violence; economic explanations for civil war; civilian targeting; intra-rebellion dynamics; sexual and gender-based violence; election violence; occupation; peacekeeping; and the Responsibility to Protect.

Area: Social and Behavioral Sciences

**AS.192.402. Military Organizations in the Middle East and North Africa. 2 Credits.**

This course will examine the diverse roles state and non-state military organizations play in MENA politics, economics, and society. Each week will use an organizational case study as a window into core themes such as military involvement in state economies, militia politics, or combatant discipline in war.

Area: Social and Behavioral Sciences

**AS.192.403. Qualitative Research. 3 Credits.**

This class is designed to introduce students to qualitative methodology. Practically, students will gain first hand experience with qualitative research methods via research design, ethics review, in-depth interviewing, participant observation, and archival/primary source research. They will learn to deploy analytical techniques such as discourse analysis and process tracing. Students will also be asked to consider the merits of qualitative approaches more generally, and discuss the relative advantages of qualitative, experimental, and quantitative approaches. Questions that we will discuss include: What place should qualitative research have in a research design? Can qualitative research test hypotheses, or only generate them? Can qualitative research explain social phenomena, or only interpret them? What are the disadvantages and advantages of qualitative approaches compared to quantitative approaches? For what kinds of research questions are ethnographic techniques best suited? Is replicability possible for ethnographic field research? What criteria of evidence and analytical rigor apply on this terrain?
AS.192.404. Democracy, Autocracy and Economic Development: Korea, Indonesia, and Myanmar. 3 Credits.
East Asia’s “miracle growth” has not gone hand in hand with a decisive move toward democracy. The course explores the reasons why democratization proceeds slowly in East Asia, and seems to be essentially decoupled from the region’s fast-paced economic growth. The course is divided into three parts. Part I introduces the specifics of East Asia’s economic development strategies as well as key concepts of democracy, authoritarianism and military rule and the tensions between these theories and the East Asian experience. Part II will focus on the economic and political development experiences of Korea, Indonesia and Myanmar in light of what discussed in Part I. Finally, Part III presents lessons emerging from the comparison of Korea’s, Indonesia’s and Myanmar’s economic and political developmental trajectories.
Area: Humanities, Social and Behavioral Sciences

AS.192.410. Kissinger Seminar on American Grand Strategy. 3 Credits.
Enrollment is at the discretion of the instructors and space in the course is limited. To apply, email a one-page resume, one-page personal statement on why you want to take the class including how it contributes to your professional interests, and a writing sample of less than ten pages to KissingerCenter@jhu.edu. Applications are due by Monday, October 21, 2019. This course is an initiative of the Henry A. Kissinger Center for Global Affairs at Johns Hopkins SAIS, meant to link SAIS with the undergraduate International Studies major at Homewood. It will expose exceptional undergraduate students to the study of grand strategy and the history of U.S. foreign policy. The bulk of the course will explore critical moments, themes, and people in the history of American grand strategy, from Washington’s Farewell Address to the statecraft of Donald Trump. The seminar will be rooted in applied history—the study of the past as a way of better understanding the challenges and opportunities of the present and future. It will also be interdisciplinary, drawing on international relations theory and contemporary policy studies. The seminar will equip students to evaluate and contribute to intense debates about the future of American grand strategy. In addition to regular classroom meetings, the course will feature events at the SAIS campus in Washington, DC, including meetings with current and former policymakers. These sessions will take place on February 10th, March 2th, April 6th, April 27th. Transportation between Homewood campus and SAIS will be provided. These sessions will be followed by a dinner hosted by the Kissinger Center.
Area: Humanities, Social and Behavioral Sciences

AS.192.415. The Battle of Ideas for the World Economy. 3 Credits.
This seminar is intended as a capstone intellectual experience for seniors and advanced juniors majoring in international studies. The course presumes some background in economics, comparative politics, and international relations. This course will hone your analytical and writing skills by exposing you to theoretically advanced forms of political economy argument in a “proposition-opposition” format. The seminar is organized around a series of thematic pairings, covering such political economy themes like free trade vs. protectionism, free market capitalism vs. socialism, democratic erosion vs. autocratic strength, hegemonic stability vs. US abdication of power, or whether the current populist wave has mainly economic or mostly cultural roots. Each segment will deal with a specific topic area. Our discussions will involve in-depth interrogations of the arguments of these ‘pro-con’ authors.
Area: Social and Behavioral Sciences
Writing Intensive
AS.194.105. Islam and its Cultural and Religious Diversity, 600-1600. 3 Credits.
While media often present Islam as a fairly univocal and compact cultural and religious system, news reports about tensions, hostility and at times open conflict within the Islamic world itself are frequent. Unity and internal diversity characterize Islam nowadays and have historical roots that have deeply shaped Islam since its very inception. This course will explore the historical origins of the dynamics of unity and diversity in Islam from the predication of Muhammad and the expansion of the first caliphate, to the formation of the Ottoman, Safavid and Mughal empires. By focusing on the historical events and the cultural production of the first millennium of Islam, this course will offer a thorough historical introduction to its cultural and religious complexity.
Area: Humanities

AS.194.201. Jews, Muslims, and Christians in the Medieval World. 3 Credits.
The three most widespread monotheisms have much more in common than is generally portrayed: a common founding figure, a partly shared succession of prophets, closely comparable ethical concerns and religious practices, a history of coexistence and of cultural, religious, social and economic interaction. This course will focus on a number of key texts and historical events that have shaped the relationships between Jews, Muslims, and Christians during the Middle Ages and contributed to their reciprocal construction of the image of the “other.” The geographical center of the course will be the Mediterranean and the Near and Middle East, a true cradle of civilizations, religions, and exchange.
Area: Humanities, Social and Behavioral Sciences

AS.194.205. Islamic Mysticism: Traditions, Legacies, Politics. 3 Credits.
For over a thousand years, the Sufi tradition has been a dynamic force in Islamic social, political and spiritual life. The tradition offers a treasure trove of devotional literature and music, philosophical treatises, contemplative practices, and institutions of social and political organization. After unpacking the politics of the term “Sufi,” we will trace the historical development of the tradition from the early ascetics in Iraq and Syria to the age of trans-national Sufi orders, with case studies from South Asia, Turkey, and the United States. We will then move into some of the key constructs of the tradition of spiritual growth and character formation: the divine-human relationship, the stages of the spiritual path, contemplative and practical disciplines, ideas of sainthood, discipleship and ethical perfection, and the psychology of love. Throughout the class, we will explore the nature of experiential language and interrogate the tradition through the lens of gender. We will also experience Sufism through ritual and music.
Area: Humanities, Social and Behavioral Sciences

AS.194.210. Race, Gender, Citizenship: Being Muslim in America. 3 Credits.
This course explores how American Muslims navigate and contest complex notions of belonging in the context of national conversations on race, gender, citizenship, and national security. With a focus on specific case studies that range from Black Muslim movements of the early twentieth century to the ongoing War on Terror, the course adds complexity to the public conversation on what it means to be Muslim—and what it means to be American. We will draw on history, ethnography, first-person narratives, films, blogs, documentaries and fiction. As a Community Engaged course, the class will include site visits and learning with and from Muslim communities in Baltimore.
Area: Humanities, Social and Behavioral Sciences

AS.194.220. The Qur’an: Text and Context. 3 Credits.
For 1400 years, the Qur’an has played a central role in Muslim intellectual, spiritual, artistic and ritual life. This course will explore the sacred scripture of Islam through its foundational ideas, history of the text and thematic development, literary style, history and methods of interpretation, and role in Muslim spiritual and ritual life. We will also explore how the Qur’an weaves through literature, music and the visual arts.
Area: Humanities, Social and Behavioral Sciences

AS.194.305. Cultures of Pilgrimage in Islam. 3 Credits.
The hajj pilgrimage to Mecca is one of the pillars of Islam. But Muslims around the world also take part in many other pilgrimages, from the massive annual Shi’a pilgrimage to Karbala to the smaller ziyarat “visits” to Sufi saint shrines, to travel to centers of Islamic learning, to pilgrimage to isolated natural features like mountains, trees, valleys. What are the theologies that propel the act of travel in Islam? How are cities, architectures, economies shaped by these cultures? And how are these traditions affected by the wars and colonial projects that plague many Muslim-majority countries in the contemporary world? Readings in this course will draw from anthropology, philosophy, Islamic interpretive texts (tafsir), and travelogues.
Area: Humanities, Social and Behavioral Sciences

AS.194.401. Themes in Medieval Islamic Thought. 3 Credits.
This seminar examines medieval Muslim thinkers who addressed themes at the intersection of theology, philosophy, science, and ethics: the definition of the nature of God’s attributes, His uniqueness, transcendence and omnipotence; human freewill and the limits of human knowledge; the nature of the world; and the relationship among reason, religion, and science. The course will look at how these and other crucial themes were addressed by major medieval philosophers and philosophical schools not only in Islam, but also in Judaism and Christianity, and highlight similarities and differences among the three major monotheistic faiths.
Area: Humanities, Social and Behavioral Sciences

AS.194.502. Independent Study. 3 Credits.
Approval Required
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.200 (PSYCHOLOGICAL & BRAIN SCIENCES)

AS.200.101. Introduction To Psychology. 3 Credits.
Do we all see colors the same way? How did so many 'good' people support the Nazi party? Do crossword puzzles really stave off Alzheimer's Disease? This course tries to answer these questions and many others, providing a comprehensive overview of the scientific study of the mind. We'll explore topics such as perception, language, memory, decision-making, creativity, love, sex, art, politics, religion, dreams, drugs, brain damage and mental illness, grappling with deep and long-standing controversies along the way. Differences between the sexes, the relationship between mind and brain, causes and consequences of racism, human uniqueness (or not) within the animal kingdom, nature vs. nurture, good and evil, consciousness. Appropriate for anyone wanting to know who and what we are as human beings (or who noticed that psychology is now on the MCAT).
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.109. Introduction to Clinical Psychology. 1 Credit.
Students will be exposed to the practice and science of Clinical Psychology. Students will learn about various clinical characteristics of psychiatric disorders and treatments available for these conditions. This class will emphasize critical thinking and analysis. It is designed to help students gain an understanding of the scientific strengths and limitations essential to becoming a good diagnostician, therapist, and researcher in the field. This course does not count towards the psychology major.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.110. Introduction to Cognitive Psychology. 3 Credits.
Introductory survey of current research and theory on topics in cognitive psychology. The course will cover a range of topics in perception, attention, learning, reasoning, and memory, emphasizing relationships among mind, brain, and behavior.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.132. Introduction to Developmental Psychology. 3 Credits.
An introductory survey of human development from the prenatal period through adolescence. The developing child is examined in terms of cognitive, social, emotional, motor, and language development.
Area: Social and Behavioral Sciences

AS.200.133. Introduction to Social Psychology. 3 Credits.
An introductory survey of social psychology. Topics include social perception, social cognition, attitudes, prejudice, attraction, social influence, altruism, aggression, and group behavior.
Area: Social and Behavioral Sciences

AS.200.141. Foundations of Brain, Behavior and Cognition. 3 Credits.
A survey of neuropsychology relating the organization of behavior to the integrative action of the nervous system. Cross-listed with Behavioral Biology and Neuroscience.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.142. Profiling Mentally Ill Mass Murderers. 1 Credit.
Mass Shootings by mentally ill are a scourge upon society. Factors like easy access to guns by dangerous mentally ill, inadequate commitment laws, the inability to predict dangerous behavior, and media frenzy contribute to an increasing death toll. This course uses case studies to highlight the role played by diagnostic assessment (suicide by cop, psychopathic behavior, PTSD, major mental disorders), inadequate prevention civil and gun policy strategies, and stigmatization of the mentally ill as dangerous. Pre-college students only.
Area: Humanities, Social and Behavioral Sciences

AS.200.159. Freshmen Seminar: Evolutionary Psychology. 1 Credit.
In this course we discuss evolutionary psychology, which is the idea that the mind can be understood as an adaptation to our ancestral environment by means of natural selection. Freshmen only. Note: This course does not count towards the Psychology major.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.161. Illusions, delusions, and other confusions. 1 Credit.
This course is suitable for all, but would be especially useful for a student who does not expect to take many (or any) additional psychology or cognitive science courses. We will explore what modern psychology has uncovered about how our intuitions concerning human nature deceive us. Freshmen Only. Note: This course does not count towards the Psychology major.
Area: Social and Behavioral Sciences

AS.200.162. Childhood Disorders & Treatments. 3 Credits.
This is an online course. The class will meet for ten weeks from May 26 through July 31 and will follow the deadlines for Term I for add/drop/withdraw and grade changes. This course examines the psychological disorders that are usually first diagnosed prior to adulthood. Some of the specific disorders that will be discussed are Attention-Deficit and Disruptive Behavior Disorders, Pervasive Developmental Disorders, Learning Disorders and Intellectual Disability. Students will become familiar with various diagnoses, etiologies, and methods of treatment. Note: This course does not count towards the Psychology major.
Area: Social and Behavioral Sciences

AS.200.163. Gamechangers: Conceptual Breakthroughs in Neuroscience. 3 Credits.
Freshman Seminar; This introductory class will highlight some of the key findings in neuroscience over the past century and a half that have revolutionized our understanding of how the brain works. The goal is to convey both the essence of, and the excitement surrounding, neuroscience breakthroughs that caused paradigm-shifts. We will also look at recent neuroscience-related headlines in popular media and unpack them from a scientific perspective. Topics covered will include "Is the brain just one big lump of tissue?", "Telephones in the brain?", "The frog with upside-down vision", "Brains vs. hard-drives", "Monkeys see=monkey do neurons", "Epigenetics, Changing the brain's wiring diagram", "Do ants have GPS?", "The science behind the movie 'Memento', "Implanting false memories into brains", "My brain sees you, but I don't", etc. For each big question, we will first examine the thinking that previously existed, and then explore the shift in thinking. Note: This course does not count towards the Psychology major.
Area: Natural Sciences

Writing Intensive
AS.200.200. Research Methods in Psychology. 4 Credits.
The goal of this course is to introduce how psychological scientists develop and test research questions about the mind and behavior. We will explore how empirical investigation differs from other ways of making discoveries and learning about the world, and how psychologists employ various methodological approaches to tackle their phenomena of interest. We will examine the relationships between research questions and research designs, the benefits and drawbacks of differing measurement and sampling approaches, the ethical implications of various research paradigms, and best practices in communicating research findings clearly and engagingly. You will have the opportunity to engage "hands-on" with the research process through interactive labs and demonstrations. Over the course of the semester, you will develop and receive feedback on a research proposal, which will serve as a foundation for the spring course "Design and Analysis for Experimental Psychology". Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
Writing Intensive

AS.200.201. Design & Statistical Analysis for Psychology. 4 Credits.
The goal of this course is to expose you to the processes of data collection, analysis, and dissemination in psychology. This course is the follow-up to "Research Methods in Experimental Psychology," and therefore will draw on the methodological principles and practices covered in the Fall semester. This course will cover a wide array of analytical techniques (i.e., statistics) that you will apply to data collected as part of a semester-long group research project. The course will also include extensive coverage of the R programming language for use in data management, analysis, and visualization. With your group members, you will collect primary research data, carry out appropriate statistical tests, compose individual research manuscripts, and collectively present a poster at an on-campus research symposium. In combination with the Fall course, this class will serve as strong preparation for those considering honors theses, joining research labs at Homewood and/or JHMI, conducting independent research projects, and ultimately pursuing careers/graduate work in experimental psychology.
Prerequisite(s): AS.200.200 (was AS.200.207)
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
Writing Intensive

AS.200.202. Forensic Psychology. 3 Credits.
The field of forensic psychology is focused on answering legal questions about the causes of human behavior. This survey course will explore the work that forensic psychologists do; their research, assessment, and clinical methods; and how their work influences lawyers, judges, and other legal practitioners. Specific topics will include mental capacity assessment, psychopathy, claims of mental distress, child custody evaluations, juvenile delinquency, forensic treatment, and forensic neuropsychological assessments.
Prerequisite(s): Students can only receive credit for AS.200.202 or AS.200.325, not both.
Area: Social and Behavioral Sciences

AS.200.204. Human Sexuality. 3 Credits.
Course focuses on sexual development, sexuality across the lifespan, gender identity, sexual attraction and arousal, sexually transmitted disease, and the history of commercial sex workers and pornography. Please note that the use of electronic devices is not permitted during this class, in order to promote the full interactive potential of this engaging seminar-style offering. Open to Juniors & Seniors within the following majors/minors: Behavioral Biology; Biology; Cognitive Science; Medicine, Science & the Humanities; Molecular & Cellular Bio; Neuroscience; Psychological & Brain Sciences; Public Health; Sociology; Study of Women, Gender, & Sexuality.
Corequisite(s): Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester.
Area: Social and Behavioral Sciences

AS.200.205. Psychological Profiling. 1 Credit.
"Psychological Profiling" focuses on strengths and limitations of psychological methods employed by forensic professionals who assist police in criminal investigations. Clinical cases of serial offenders, spree killers, disgruntled employees, police profiling, and terrorists will be studied. Legal and ethical issues will be explored, especially racial profiling controversies. We anticipate visits to the FBI Behavioral Sciences Unit at Quantico, Virginia; Baltimore County Forensic Crime Lab (with emphasis on crime scene analysis), and the Baltimore Police Profiling Program. This course does not count towards the psychology major.
Area: Social and Behavioral Sciences

AS.200.208. Animal Behavior. 3 Credits.
Examines basic principles of animal behavior (orientation, migration, communication, reproduction, parent-offspring relations, ontogeny of behavior and social organization). Evolution and adaptive significance of behavior will be emphasized.
Prerequisite(s): AS.200.141 OR Permission of Instructor.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.209. Personality. 3 Credits.
This is a survey course focused on theory and research on human personality. Topics include personality traits, motivation, unconscious processes, self-regulation, cognitive and behavioral aspects of personality, biological and evolutionary influences on personality, and dysfunctional manifestations of personality.
Area: Social and Behavioral Sciences

AS.200.211. Sensation & Perception. 3 Credits.
This course surveys how stimuli from the environment are transformed into neural signals, and how the brain processes those signals to interpret the objects and events in the world. A primary focus will be on the visual system, with additional coverage of hearing, touch, taste, and smell.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.212. Abnormal Psychology. 3 Credits.
A survey of the major syndromes of psychological disorders. Research and theory about the mechanisms, development, and diagnosis of psychopathology are emphasized.
Area: Social and Behavioral Sciences
AS.200.220. Health Studies: Application of Abnormal Psychology to Forensic Cases. 1 Credit.  
This introductory course will examine the basic diagnostic psychology principles with special application to forensic psychology. The class will focus on investigating forensic psychology queries including: Does my client have a mental illness? Why did he or she act in such a self-defeating way? Does the law require special disposition? Should my client be punished or rehabilitated? We will explore the reasons behind why a movie star would shoplift or a famous athlete would engage in a series of extra marital relationships; why a policeman would commit a series of bank robberies in broad daylight; or why someone would shoot a Congresswoman and kill and wound many others in the process. As part of this course, students will visit with doctors and lawyers (including Judges), view and analyze video and movies about forensic cases, and participate in mock trial exercises. Note: This course does not count towards the Psychology major.  
Area: Social and Behavioral Sciences  
AS.200.222. Positive Psychology. 3 Credits.  
The course will review the growing field of positive psychology and will review the research on positive human attributes such as optimism, happiness, hope, resiliency, self-esteem, altruism, empathy, and forgiveness. This course will explore the research on how such positive attributes are developed and how they relate to psychological and physical well-being.  
Area: Social and Behavioral Sciences  
AS.200.240. Industrial and Organizational Psychology. 3 Credits.  
This course provides a survey of the field of Industrial and Organizational Psychology, a scientific discipline that studies human behavior in the workplace. The course focuses on understanding the psychological bases of work behaviors, cognitions, and emotions and practices that can be implemented to create a good fit between employees’ characteristics and work demands. A number of topics are addressed in the scientist-practitioner model, including the structure/characteristics of jobs, techniques for assessing and supporting employee performance, selecting and training a workforce, and the various mechanisms that influence employee motivation and attitudes, among other topics. Real-world applications and research are emphasized throughout the course.  
Area: Social and Behavioral Sciences  
AS.200.301. History Of Psychology. 3 Credits.  
A survey of leading figures, schools, and systems in the history of psychology. The course will emphasize the development of experimental psychology in late 19th century Germany and its establishment in America at Johns Hopkins, Harvard, Chicago, and Columbia. Special topics will include the development of clinical and applied psychology and psychological testing. Enrollment limited to Juniors and Seniors only. Sophomores with instructor approval. Recommended Course Background: two prior Psychology courses.  
Area: Humanities, Social and Behavioral Sciences  
AS.200.302. Behavioral Assessment of Animal Models of Cognition and Neuropsychiatric Disorders. 3 Credits.  
What does a rat exploring its environment tell us about memory? How can a mouse help us better understand schizophrenia? This course will focus on procedures that are routinely used to study behavior in animal models of cognition and neuropsychiatric disorders. The procedures discussed will include assessments that fall into 3 broad functional domains: motor function, affective or emotional states, and cognition. Throughout the course, we will read and discuss original research articles to illustrate and compare some of the measures and results from the various procedures. Postdoc Teaching Fellowship. This is designed to be an upper level course.  
Area: Social and Behavioral Sciences  
AS.200.304. Neuroscience of Decision Making. 3 Credits.  
This course will survey the neural mechanisms of decision-making. Current experimental research and theory concerning selection, control, and evaluation of actions are examined in humans and animals. Topics will range from simple perceptual judgements to complex social behavior. The course involves a weekly lecture about a specific topic followed by a student presentation of a current research paper. Cross-listed with Neuroscience.  
Prerequisite(s): AS.080.305 AND AS.080.306 or instructor permission  
Area: Natural Sciences  
AS.200.305. Advanced Seminar in Forensic Psychology. 3 Credits.  
Forensic psychologists determine clinical diagnoses and offer expert opinions to assist court decision makers who must employ legal tests to make case determinations. This course will explore how forensic psychologists communicate with the courts via consultation, report writing, and expert testimony. Students will write forensic analyses on a variety of controversial, cutting edge forensic topics (e.g., for competence to stand trial, child abuse, civil commitment, compensation for mental injuries, sex offender commitment, insanity, fitness for duty, child custody). Recommended background: AS.200.212  
Prerequisite(s): AS.200.202  
Area: Natural Sciences, Social and Behavioral Sciences  
Writing Intensive  
AS.200.307. Medical Psychology. 3 Credits.  
Medical Psychology is a specialization within clinical psychology that focuses on the application of psychological theories, research, and techniques to physical health problems and health promotion. Students will learn about the consultation process and interventions used in medical psychology practice to improve the physical and psychological health of medical patients, including those with chronic conditions (e.g., chronic pain, heart disease) and those with acute illnesses and injuries. Enrollment limited to Junior & Senior Psychology Majors or with instructor approval.  
Prerequisite(s): AS.200.212  
Area: Social and Behavioral Sciences
AS.200.311. Sensory Representations in the Brain: Maps, Modules, & Distributed Coding. 3 Credits.
In this course we will explore the ways in which information from vision, hearing, touch, smell, and taste is encoded in the brain. We will compare and contrast different representation schemes and their computational advantages in order to uncover some overarching organizing principles of sensory processing in the brain. Class meetings will consist of lectures plus group discussions of classic papers in cognitive neuroscience, computational modeling, and neurophysiology. Enrollment limited to Juniors & Seniors.
Prerequisite(s): AS.200.211 OR AS.080.203 OR AS.050.203 OR AS.200.141 OR AS.020.312
Area: Social and Behavioral Sciences

AS.200.313. Models of Mind and Brain. 3 Credits.
This is a seminar surveying computational approaches to understanding mental and neural processes, including sensory and conceptual representation, categorization, learning and memory. The course will also develop familiarity with computational tools such as numerical simulation, linear transformation and data visualization. Recommended Course Background: AS.110.106 / Calculus I OR AS.110.108 Calculus I, AS.050.101 / Cognition OR AS.200.211 / Sensation & Perception OR AS.080.105 / Introduction to Neuroscience OR other introductory coursework in cognitive & neural sciences. Experience with at least one programming language is strongly recommended.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.200.316. Thought and Perception. 3 Credits.
This year's topic: Philosophical, Foundational, and Methodological Issues Connected to Bayesian Approaches in Cognitive Science. Bayesian probability theory and Bayesian decision theory aim to lay out how ideal reasoners update their beliefs in the light of new evidence and make decisions based on those beliefs. But what about such apparently non-ideal agents such as ourselves? The past few decades have witnessed a rising tide of Bayesian work on perception, higher cognition, neural coding, etc. It's been accompanied by vigorous debate concerning the aims and claims of these approaches. Some see the prospect of a grand unified theory of the mind/brain; others demur. We'll examine these debates and what one can learn from them regarding more generally about approaches to modeling the mind and the nature of rationality. Readings will be drawn both from the empirical and the philosophical literature. (This course meets jointly with AS.200.616 & AS.150.476)
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.200.317. Interpersonal Relations. 3 Credits.
This course will investigate interpersonal processes ranging from attraction and courtship to relationship functioning and distress. Enrollment limited to Psychology majors, Psychology minors, and Behavioral Biology majors.
Prerequisite(s): AS.200.133
Area: Social and Behavioral Sciences

AS.200.320. The Interface of Psychology & Semantics: Procedural Matters. 3 Credits.
Often, languages are described as sets of expressions. But in acquiring a language, a child acquires a procedure that generates expressions. If Linguistic expressions pair pronunciations with mental representations, then one task shared by linguists and psychology is to specify the forms of these representations. This seminar explores this relationship in detail.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.321. Child and Adolescent Psychopathology. 3 Credits.
This course focuses on mental disorders in children and adolescents. The course begins with an exploration of the general models and theories for why psychopathology occurs in childhood. The second portion of the course provides a systematic review of the symptoms, course, risk factors, theories, and treatments for specific disorders, including mood disorders, anxiety disorders, autism, ADHD, eating disorders, and behavioral disorders.
Prerequisite(s): AS.200.212
Area: Social and Behavioral Sciences

AS.200.322. Clinical Neuropsychology. 3 Credits.
Clinical Neuropsychology is a clinical psychology specialty focused on assessment and treatment of acquired or developmental disorders of the nervous system, including dementia, neurodegenerative disorders, traumatic brain injury, learning disabilities, and neurodevelopment disorders. This course will focus on research findings and techniques used by psychologists in the assessment, treatment, and rehabilitation processes. Recommended Course Background: AS.200.141 / Foundations of Brain Behavior Cognition.
Prerequisite(s): AS.200.141
Area: Social and Behavioral Sciences

AS.200.323. Psychology and Social Media. 3 Credits.
This course explores modern-day social media use (e.g., Facebook, Match.com) through multiple theoretical lenses within psychology. Through weekly student-led discussions and readings, it will accomplish 3 aims: 1) applying psychology of identity, motivation, and communication to social media (e.g., self-presentation, intergroup dynamics), 2) investigating clinical/health implications of social media use (e.g., addiction, loneliness), and 3) exploring social media as data-gathering environments (e.g., user experience research from already committed guest-speakers who work in social media industries).
Area: Social and Behavioral Sciences

AS.200.326. Law, Psychology and Public Policy. 3 Credits.
An introduction to applications of psychological research in policy analysis. Special emphasis is given to the use and misuse of psychology in Supreme Court advocacy and decision making in the areas of children's rights, adult sexuality, and educational and employment opportunity. Recommended Course Background: Statistics & Regression Analysis Area: Social and Behavioral Sciences Writing Intensive

AS.200.329. Real World Human Data: Analysis & Visualization. 3 Credits.
Experiments in human cognition typically involve careful manipulation and control of variables in order to answer specific questions about the mind or brain. However, digital devices now provide an ocean of incidental human data: information collected continuously about our behavior and physiological states as we go about our lives. These incidental datasets are often large and noisy, and pose different analysis and visualization challenges from more traditional manipulated experiments. In this course students will learn computational tools and qualitative approaches for exploring, visualizing and interpreting large human data. The course emphasizes computer-based analysis of open-source human behavioral and neuroimaging datasets. Analyses will be conducted in MATLAB. Instructor will grant approval as long as you have previous programming experience (roughly equivalent to material covered in an introductory-level programming course). Self-taught or real-world experience can be applicable in lieu of previous formal classroom instruction.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
AS.200.332. Seminar in Theoretical Neuroscience. 3 Credits.
This course develops a theoretical understanding of the large-scale anatomical and functional organization of the mammalian cerebral cortex. We will discuss primary research readings and will implement essential concepts in numerical simulations. The theoretical principles to be explored will include: hierarchy; normalization; pattern completion; prediction; gradient-based learning; and conjunctive representation. We will consider the broader motivation for each of these computational principles, and we will ask how successfully they organize the empirical data about our brains. Specific questions include: What are the functional benefits of a hierarchical anatomical organization of the cerebral cortex? Do neocortical circuits generically implement a normalization operation? How and why is pattern completion implemented in the neocortex and the hippocampus? Can gradient-based representational learning occur in the cerebral cortex without external supervision or reinforcement signals? How is the flow of information between brain regions regulated? How can distinct cortical representations be ‘bound’ into joint representations? Cal 1; Computational Science or some programming experience highly recommended. Instructor approval required.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.200.333. Advanced Social Psychology. 3 Credits.
The class is designed as a seminar including discussion of primary readings of social psychology articles ranging in topics from interpersonal relationship to behavior in large groups. Rising junior & senior Psychology majors only.
Prerequisite(s): AS.200.133
Area: Social and Behavioral Sciences

AS.200.334. Human Memory Psychology. 3 Credits.
This class will survey the behavioral and biological science of human memory. Historical perspectives as well as modern controversies will be discussed. Intersections with other fields such as law, education, medicine, and technology will be highlighted. The course will be a mixture of lectures and group discussions.
Area: Social and Behavioral Sciences

AS.200.335. How Does the Brain Predict the Future?. 3 Credits.
Have you ever wondered how you predict the beat will drop in a song or that a traffic light will change? A combination of evolution and experience have wired your brain to generate predictions about the future. In this course, you will learn about the factors which influence neural predictions. Understanding how the brain forms predictions is critical to understanding perception, movement, music, language, and cognition. Some examples include: hallucinations, how we walk, why and how do we experience mental effort? What limits visual attention and working memory? Where does insight come from? Why do we forget things? What is creativity? What makes some concepts hard to learn? Why do we misunderstand science? How do we evaluate our own knowledge and understanding?
Prerequisite(s): AS.200.110
Area: Social and Behavioral Sciences

AS.200.339. Cognitive Development. 3 Credits.
How do children acquire knowledge about the world? In this course, we will explore how children understand the world, looking at concepts of objects, number, space, and other people. Students will read both empirical and theoretical writing on these topics, participate in class discussions, and complete short critical writing assignments and final literature review paper.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.344. Behavioral Endocrinology. 3 Credits.
An examination of the effects of hormones on behavior in non-human and human animals. Topics will include the effects of hormones on sexual differentiation, reproductive behavior, parental behavior, homeostasis and biological rhythms, regulation of body weight, learning and memory. Cross-listed with Behavioral Biology and Neuroscience.
Prerequisite(s): (AS.200.141 OR AS.080.306) OR (AS.020.151 AND AS.020.152) or instructor’s permission
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.350. Why is thinking hard?. 3 Credits.
In what ways and why is human cognition limited? This seminar will focus on understanding and explaining the limitations and capabilities of human cognition through deep dives into a number of subtopics. Possible topics include: What is ‘intelligence,’ does it have quantifiable units and/or a substance-like underpinning. Why does thinking feel hard, why and how do we experience mental effort? What limits visual attention and working memory? Where does insight come from? Why do we forget things? What is creativity? What makes some concepts hard to learn? Why do we misunderstand science? How do we evaluate our own knowledge and understanding?
Prerequisite(s): AS.200.110
Area: Social and Behavioral Sciences

AS.200.357. Advanced Statistical Methods. 3 Credits.
Topics in applied probability and statistical inference; analysis of variance; experimental design. Recommended Course Background: one statistics course.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.200.361. Tests & Measurements. 3 Credits.
Psychological tests and measures are used in several settings including research, clinical, business, forensic, school and other applied settings. This course will consider the methodological and practical issues involved in test construction, the evaluation of instruments, and the uses of psychological tests across settings and for different purposes. Examples of assessments that may be discussed are aptitude and achievement tests; personality and behavioral inventories; neuropsychological tests, observations and interviews; and tests for employment and forensic use. Enrollment limited to Junior & Senior Cognitive Science & Psychology Majors, or instructor approval.
Prerequisite(s): AS.200.201
Area: Social and Behavioral Sciences
AS.200.368. Sleep, Dreams, and Altered States of Consciousness. 3 Credits.
Sleep, dreaming, resting and arousal to waking represent very different states of consciousness which differ dramatically both psychologically and physiologically. This course focuses on cognitive, psychological, physiological, biological and genetic aspects characterizing each of these states with some reference to other altered states. The course includes a focus on the major pathologies affecting sleep-wake states. Clinical cases will be considered. These inform about both psychological and biological aspects of these states. The relative biological functions of each state will be evaluated with particular attention to the mystery of why we have and apparently need REM and NREM sleep. Actual physiological recordings of sleep states will be reviewed and the student will learn how these are obtained and how to evaluate these. The circadian rhythms, ontogeny and evolution of these sleep-wake states will also be covered. This will include a review of information learned from non-human animal sleep. The change from sleep to full awakening reflects change toward increasing brain organization supporting consciousness. Understanding of the neurobiology of these states will be used to explore some of the more modern and scientific concepts of human self-awareness or consciousness. Recommended Course Background: AS.200.101 OR AS.080.203 OR AS.050.203
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.369. Neuroscience of Motivation & Reward. 3 Credits.
This course will explore the neurobiological bases of motivated behavior, including eating, drinking, and reproduction, tracing the history of our understanding from early neuroscientific studies to the modern day, with a focus on mammalian model systems. We will particularly develop motivated behaviors, and well as how learning can guide the expression of these behaviors. Neural mediation of processes such as reward and aversion will be considered in depth, as will applications of these findings to the understanding of addiction and other behavioral disorders. The course will be a mixed lecture/seminar format; we will read original research articles and scholarly reviews. 
Prerequisite(s): AS.080.306 (students may enroll concurrently); AS.080.305; Students may not have taken AS.200.366.  
Area: Natural Sciences

AS.200.370. Functional Human Neuroanatomy. 3 Credits.
This course examines the general organizing principles of the anatomy of the human central nervous system and how this anatomical organization relates to function, from the level of neural circuits, to systems, to behavior. Students will learn to identify neuroanatomical structures and pathways in dissections and MRI images through computerized exercises. Readings and lectures will emphasize general structure-function relationships and an understanding of the functional roles of particular structures in sensory, motor, and cognitive systems. 
Prerequisite(s): AS.080.305 AND AS.080.306 or Instructor Permission
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.376. Neuropsychopharmacology. 3 Credits.
Designed to provide information about how drugs affect the brain and behavior. The course focuses on biological concepts underlying structures and functions of the brain that relate to mental disorders. An introduction to neurobiology and brain function is presented as it applies to the interaction of various classes of drugs with the individual neurotransmitter systems in the brain. A brief historic review is followed by a discussion of clinical relevance. Cross-listed with Behavioral Biology and Neuroscience. Enrollment limited to juniors and seniors. 
Prerequisite(s): (AS.080.305 AND AS.080.306) OR AS.020.306 AND AS.020.312) OR (AS.200.141 AND AS.020.306)  
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.377. Neuroethology. 3 Credits.
A comparative and evolutionary approach to understanding the neural underpinnings of biologically relevant behaviors in vertebrate and invertebrate animals. Enrollment limited to Sophomores, Juniors, Seniors or by instructor approval. Recommended Course Background: AS.200.141
Area: Natural Sciences

AS.200.379. Research Seminar in Clinical Psychology. 3 Credits.
A small group exploration of current issues in clinical psychology, aimed at developing students’ empirical research skills. Following critical analysis of the empirical literature, students develop research proposals for novel research and/or conduct research and author research reports. Topics vary by semester. In the current offering, the topic will be stress, coping, emotion-regulation, peer relationships, and psychopathology among adolescents and emerging adults. Recommended Course Background: AS.200.212 Abnormal Psychology AND EN.553.111 Statistical Analysis I AND EN.553.112 Statistical Analysis II AND AS.200.207 Research Methods in Experimental Psychology. Enrollment limited to Junior & Senior Psychology majors & minors by instructor approval. 
Prerequisite(s): AS.200.212  
Area: Social and Behavioral Sciences  
Writing Intensive

AS.200.380. Neurobiology of Human Cognition. 3 Credits.
The complexity of human behavior surpasses even our closest primate relatives. Only humans communicate through language, build complex technology, devise legal system and wage war. What neurobiological capacities set humans apart from other animals? This course will explore the neurobiology of cognition, focusing on cognitive domains that are particularly developed in the human species: language, social cognition, number, executive function and concepts. The course format will consist of lectures and in class workshops. 
Prerequisite(s): AS.200.141 OR AS.200.312 OR AS.080.105 OR AS.080.203 OR AS.050.203 OR AS.050.312
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.382. Models of Psychotherapy. 3 Credits.
This course reviews the major models of psychotherapy, including psychodynamic, cognitive, behavioral, interpersonal, and family therapy, with a focus on modern and empirically supported treatments. The application of the models through the analysis of clinical case studies is emphasized. Restricted to Junior & Senior Psychology Majors. 
Prerequisite(s): AS.200.212  
Area: Social and Behavioral Sciences  
Writing Intensive
AS.200.385. Mind, Brain & Experience. 3 Credits.
How do nature and nurture shape the human mind? How does experience contribute to the development of visual perception, language and social reasoning? This course explores insights into these age-old questions from neuroscience and psychology. Studies of infant behavior reveal rich knowledge about objects and people in the first months of life. At the same time, experience has profound effects on behavior and neurobiology. For example, temporary absence of vision (i.e. blindness) during development permanently alters visual perception and the visual cortex. Key evidence also comes from studies of naturally occurring variation in human experience (e.g. blindness, deafness, socioeconomic and cultural differences). We will discuss what such studies of cognitive and neural function tell us about the origins of human cognition. This is a writing intensive course with weekly lectures and seminar style discussion of primary sources. Students will be required to write weekly responses to readings and a term paper.
Prerequisite(s): AS.200.141 OR AS.050.105 OR AS.080.105 OR AS.050.203 OR (AS.080.305 AND AS.080.306) OR AS.080.203
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive

AS.200.386. Animal Cognition. 3 Credits.
Examine relations between brain, mind, and behavior in nonhuman animals, focusing on topics such as learning, memory, attention, decision-making, navigation, communication, and awareness. We will take a variety of approaches, including behavioral, computational, evolutionary, neurobiological, and psychological perspectives.
Prerequisite(s): AS.200.141 OR AS.200.208 OR AS.290.101 or Instructor permission.
Area: Social and Behavioral Sciences

AS.200.388. Occupational Health Psychology. 3 Credits.
Occupational Health Psychology (OHP) concerns the application of psychology to improving the quality of work life, and to protecting and promoting the safety, satisfaction, health, and well-being of workers. This course will consider a broad range of topics in OHP including the role of work on well-being, job stress and burnout, diversity and work, safety climate, work-family balance, conflict, and counterproductive work behaviors. The emphasis will be on drawing connections between OHP theory and OHP practice and at the relationship between individual and organizational health and well-being. This class should be of interest to students interested in industrial/organizational psychology, social psychology, health psychology, clinical psychology, human factors, public health, preventive medicine, and industrial engineering.
Prerequisite(s): AS.200.240 or instructor permission.
Area: Social and Behavioral Sciences

AS.200.401. Careers in Psychology - Freshmen. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Area: Social and Behavioral Sciences

AS.200.402. Careers in Psychology - Sophomore. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Area: Social and Behavioral Sciences

AS.200.403. Careers in Psychology - Juniors & Seniors. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Area: Social and Behavioral Sciences

AS.200.404. Careers in Psychology - Seniors. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Area: Social and Behavioral Sciences

AS.200.501. Psychological Research - Freshmen. 3 Credits.
S/U grading only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.502. Psychology Research - Freshmen. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.503. Psychological Research - Sophomores. 3 Credits.
S/U grading only
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.504. Psychology Research - Sophomores. 0 - 3 Credits.
Grading Satisfactory/ Unsatisfactory only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.505. Psychological Readings. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.509. Internship - Psychology. 1 Credit.
S/U grading only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.510. Psychology Internship. 0 - 3 Credits.
Grading Satisfactory/ Unsatisfactory only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.511. Psychological Research - Juniors. 3 Credits.
S/U grading only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.512. Psychology Research - Juniors. 0 - 4 Credits.
Grading Satisfactory/ Unsatisfactory only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.513. Psychological Research - Seniors. 3 Credits.
The student chooses some research problem with the advice and approval of a faculty member. S/U grading only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.200.514. Psychology Research-Seniors. 0 - 4 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.519. Seniors Honors Research. 3 Credits.
Seniors working on the honors thesis enroll with the approval of the undergraduate coordinator.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.520. Seniors Honors Research. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.540. Independent Study-Seniors. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.541. Independent Study - Juniors. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.542. Independent Study - Sophomores. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.595. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.597. Psychology Research. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.200.599. Independent Study. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

This is a required course for all first year PhD students in the Department of Psychological and Brain Sciences. The course covers foundational concepts and methods in neurobiology and cognitive neuroscience. Area: Natural Sciences, Social and Behavioral Sciences

AS.200.615. Thought and Perception.
This year’s topic: Philosophical, Foundational, and Methodological Issues Connected to Bayesian Approaches in Cognitive Science. Bayesian probability theory and Bayesian decision theory aim to lay out how ideal reasoners update their beliefs in the light of new evidence and make decisions based on those beliefs. But what about such apparently non-ideal agents such as ourselves? The past few decades have witnessed a rising tide of Bayesian work on perception, higher cognition, neural coding, etc. It’s been accompanied by vigorous debate concerning the aims and claims of these approaches. Some see the prospect of a grand unified theory of the mind/brain; others demur. We’ll examine these debates and what one can learn from them regarding more generally about approaches to modeling the mind and the nature of rationality. Readings will be drawn both from the empirical and the philosophical literature. (This course meets jointly with AS.200.316 & AS.150.476)
Writing Intensive

This is a required course for all first year PhD students in the Department of Psychological and Brain Sciences. The course covers foundational concepts and methods in cognition.

This course will provide an overview of clinical, neuropsychological, imaging and neuropathological approaches to the study of cognitive systems altered in aging, AD and other neurodegenerative disorders. It will consider research using animal models as well as human subjects and clinical populations. The course is intended for graduate students and is open to advanced undergraduates only with permission of the professor. Predoctoral and Postdoctoral students from A&S, SPH and SOM students participating in the NIA Training Program on Age-Related, Cognitive and Neuropsychiatric Disorders are required to take this course; meets concurrently with PH.330.802(01).

AS.200.649. Aging, Cognition, and Neurodegenerative Disorders II.
Second part of a two-semester course. Course will provide an overview of clinical, neuropsychological, imaging and neuropathological approaches to the study of cognitive systems altered in aging, AD and other neurodegenerative disorders. It will consider research using animal models as well as human subjects and clinical populations. The course is intended for graduate students and is open to advanced undergraduates only with permission of the professor. Predoctoral and Postdoctoral students from A&S, SPH and SOM students participating in the NIA Training Program on Age-Related, Cognitive and Neuropsychiatric Disorders are required to take this course; meets concurrently with PH.330.802(01).

AS.200.650. Why is thinking hard?.
In what ways and why is human cognition limited? This seminar will focus on understanding and explaining the limitations and capabilities of human cognition through deep dives into a number of subtopics. Possible topics include: What is ‘intelligence,’ does it have quantifiable units and/or a substance-like underpinning. Why does thinking feel hard, why and how do we experience mental effort? What limits visual attention and working memory? Where does insight come from? Why do we forget things? What is creativity? What makes some concepts hard to learn? Why do we misunderstand science? How do we evaluate our own knowledge and understanding?
Area: Social and Behavioral Sciences

AS.200.654. Psychological & Brain Sciences Core Topics A.
This course is designed to introduce students to core topics in psychological and brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field. Graduate students in Psychological and Brain Sciences.
AS.200.655. Psychological & Brain Sciences Core Topics B.
This course is designed to introduce students to core topics in psychological and brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field. Graduate Students in Psychological & Brain Sciences.

Topics in applied probability and statistical inference; analysis of variance; experimental design. Intended for graduate students. Recommended Course Background: one statistics course. 
Prerequisite(s): Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR AS.280.345 OR EN.550.310 OR EN.550.435 OR EN.550.420 OR EN.550.430 OR EN.560.348 
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

Second half of graduate statistics sequence, covering complex research design and analysis. Recommended Course Background: AS.200.657. Enrollment limited to seniors by instructor approval and graduate students. 
Area: Quantitative and Mathematical Sciences

Focus on frequently-used quantitative methods used in the study of brain sciences, including gaining conceptual understanding of techniques, analysis and summarization of data, extracting the process underlying a data set, explaining data as a function of variables, data visualization, etc. Enrollment is limited to undergraduate seniors and graduate students with instructor approval. Recommended Course Background: Probability & Statistics, Linear Algebra, MATLAB programming. 
Area: Quantitative and Mathematical Sciences

AS.200.661. Topics in Psychological & Brain Sciences.
An introduction to postdoctoral activities (e.g., grant applications, journal article submission, meeting presentations, the politics of psychology and American science) for Ph.D. candidates in psychology. 

AS.200.662. Psychological and Brain Sciences: Career Development.

This seminar will cover advanced topics in vision from the perspectives of several disciplines. Topics include human visual psychophysics, perception and cognition, and computational vision. Graduate students only.

AS.200.810. Research In Psychology.
Students plan and execute original research under guidance of advisers. Results are usually prepared in a form suitable for publication. Graduate students only.

Guided independent readings and research in special fields. Graduate Students only.

AS.200.822. research seminar: Naturalistic memory and perception.
Research seminar covering topics on human memory and perception in real-world settings.

Research seminar covering topics related to neural circuits for learning.

Graduate students only.

Graduate Students Only.

Graduate Students only.

Graduate Students Only.

Graduate Students Only.

Research seminar covering topics related to perception & mind.

Research seminar covering topics on the behavioral and brain basis of perception in dynamic scenes.

Research seminar covering topics on cognitive and systems neuroscience.

Research seminar covering topics on the behavioral neurophysiology of the hippocampal formation.

Graduate students only. Permission Required.

AS.200.848. Current Advances in Psychological and Brain Sciences.
Introduces advanced research topics to graduate students (as well as faculty) through a series of speakers and discussions.

AS.200.849. Teaching Practicum.
All candidates are required to obtain special experience in various aspects of undergraduate teaching. Graduate students only.

AS.200.850. Advanced Teaching Practicum.
AS.210 (GERMAN & ROMANCE LANGUAGES & LITERATURES)

AS.210.101. French Elements I. 4 Credits.
Provides a multi-faceted approach to teaching language and culture to the novice French student. The first semester emphasizes listening and speaking, while laying the foundation in grammar structures, reading, and writing. This course is designed for true beginners: Students with any previous background must take the placement test (http://www.advising.jhu.edu/placement_french.php) and receive below 30. Must complete both semesters successfully in order to receive credit. May not be taken on a Satisfactory/Unsatisfactory basis.

AS.210.102. French Elements II. 4 Credits.
The second semester of this intensive course for beginners provides students with the tools to read a play (Antigone by Jean Anouilh), to polish a written autobiography, and to develop their oral skills. A variety of cultural materials help students acquire grammatical structures and expand their vocabulary. May not be taken on a Satisfactory/Unsatisfactory basis. Pre-requisites: AS.210.101 or AS.210.103. New students must take the placement exam (http://www.advising.jhu.edu/placement_french.php) and contact the instructor: cguille1@jhu.edu.

AS.210.103. Learner Managed French Elements I. 3 Credits.
This beginner course is specifically designed for students who have had some exposure to French. They must take the mandatory placement test: http://www.advising.jhu.edu/placement_french.php, and receive between 30 and 49. They will cover the first semester of French elements at a pace suited for ‘false beginners’ with major online components to supplement class instruction. Must complete the year with 210.102 to obtain credit. May not be taken on a Satisfactory/Unsatisfactory basis.

AS.210.111. Spanish Elements I. 4 Credits.
This is an introductory Spanish language course. On completion of this course, the students will have acquired the basic communication and grammatical skills necessary for speaking, writing, listening and reading in Spanish. Students will demonstrate these skills through their performance in class, by completing several online assignments, and by taking part in three group presentations in addition to two comprehensive exams which focus on the following thematic topics: Food, Sports, Shopping, Travel, and Health. Students will also be introduced to the culture, history and geography of various Spanish and Latin American countries. The content covered in Spanish Elements II prepares the students for Intermediate Spanish. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after 4th class session. Prerequisite: AS.210.111 or appropriate placement exam score.

Prerequisite(s): AS.210.111 or Spanish placement exam score.

AS.210.112. Spanish Elements II. 4 Credits.
This introductory Spanish language course is a continuation of the content covered in Spanish Elements I. On completion of this course, the students will have further developed the communication and grammatical skills necessary for speaking, writing, listening and reading in Spanish. Students will demonstrate these skills through their performance in class, by completing several online assignments, and by taking part in three group presentations in addition to two comprehensive exams which focus on the following thematic topics: Food, Sports, Shopping, Travel, and Health. Students will also be introduced to the culture, history and geography of various Spanish and Latin American countries. The content covered in Spanish Elements II prepares the students for Intermediate Spanish. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after 4th class session. Prerequisite: AS.210.111 or appropriate placement exam score.

Prerequisite(s): AS.210.111 or Spanish placement exam score.

AS.210.150. Program Abroad: Preliminary Portuguese. 3 Credits.
Summer Abroad Program. First semester college-level Portuguese. Students will develop basic listening, speaking, reading and writing skills. Some cultural readings are included. This course is intended for program participants with little or no prior Portuguese language instruction. Open to Brazil Program applications only. Course must be taken for a letter grade. Writing Intensive

AS.210.151. Italian Elements I. 4 Credits.
This is a four-credit course, and Italian Elements II (AS.210.152) must be completed in the Spring to receive credit. The aim of the course is to provide students with basic listening, reading, writing, speaking and interactional skills in the language. All classes are conducted in Italian; oral participation is strongly encouraged from the beginning. Students wishing to retain credits for Italian Elements I must complete Italian Elements II with a passing grade. No Satisfactory/Unsatisfactory option.

Prerequisite(s): AS.210.151 or Placement Exam Part I.

AS.210.152. Italian Elements II. 4 Credits.
Course helps students develop basic listening, reading, writing, speaking, and interactional skills in Italian. The content of the course is highly communicative, and students are constantly presented with real-life, task-based activities. Course adopts a continuous assessment system (no mid-term and no final). May not be taken Satisfactory/ Unsatisfactory. No previous knowledge of Italian is required.

Prerequisite(s): AS.210.151 or Placement Exam Part I.

AS.210.161. German Elements I. 4 Credits.
Four skills introduction to German language and culture. Develops proficiency in speaking, writing, reading, and listening skills through the use of basic texts, multi-media, and communicative language activities. Online tools required. May not be taken on a Satisfactory/Unsatisfactory basis. Tuesday section is a mandatory hour; choose your section based on the MWF time. Conflicts with Tuesday hour can be resolved after start of semester. Language Program Director: Deborah Mifflin. Students wishing to retain credits for German Elements I must complete German Elements II with a passing grade.

AS.210.162. German Elements II. 4 Credits.
Continuation to the introduction to the German language and a development of reading, speaking, writing & listening through the use of basic texts and communicative activities. The culture of the German-language countries is also incorporated into the curriculum. May not be taken on a Satisfactory/Unsatisfactory basis. Tuesday hour is mandatory. May not be taken for S/U. 

Prerequisite(s): AS.210.161 or appropriate score on placement exam.
AS.210.163. Elementary Yiddish I. 3 Credits.
Year-long course. Includes the four language skills—reading, writing, listening, and speaking—and introduces students to Yiddish culture through text, song, and film. Emphasis is placed both on the acquisition of Yiddish as a tool for the study of Yiddish literature and Ashkenazic history and culture, and on the active use of the language in oral and written communication. This class will be using In Eynem, the brand new Yiddish language program from the Yiddish Book Center. Both semesters must be taken with a passing grade to receive credit. Cannot be taken Satisfactory/Unsatisfactory.

AS.210.164. Elementary Yiddish II. 3 Credits.
Year-long course that includes the four language skills—reading, writing, listening, and speaking—and introduces students to Yiddish culture through text, song, and film. Emphasis is placed both on the acquisition of Yiddish as a tool for the study of Yiddish literature and Ashkenazic history and culture, and on the active use of the language in oral and written communication. Both semesters must be taken with a passing grade to receive credit. Recommended Course Background: AS.210.163 or instructor permission.

AS.210.171. Accelerated Italian Elements I for Advanced Spanish Speakers. 4 Credits.
Course draws on the many similarities between Spanish and Italian to help students develop basic listening, reading, writing, speaking, and interactional skills in Italian in an accelerated fashion. The content of the course is highly communicative, and students are constantly presented with real-life, task-based activities. Course is taught in Spanish and Italian. Students completing both semesters with a grade of A- or higher will be able to place into Advanced Italian I (AS.210.351)
Area: Humanities

AS.210.172. Accelerated Italian Elements II for Advanced Spanish Speakers. 4 Credits.
Course draws on the many similarities between Spanish and Italian to help students develop basic listening, reading, writing, speaking, and interactional skills in Italian in an accelerated fashion. The content of the course is highly communicative, and students are constantly presented with real-life, task-based activities. Course is taught in Spanish and Italian. Students successfully completing the course with a grade of A- or higher will be allowed to place into Advanced Italian I (AS.210.351)
Prerequisite(s): AS.210.171 with a grade of A- or higher.
Area: Humanities

AS.210.177. Portuguese Elements I. 4 Credits.
This one-year course introduces students to the basic skills in reading, writing, and speaking the language. Emphasis is placed on oral communication with extensive training in written and listening skills. Class participation is encouraged from the very beginning. All classes are conducted in Portuguese. Students must complete both semesters with passing grades to receive credit. May not be taken on a Satisfactory/Unsatisfactory basis. No previous knowledge of Portuguese is required.

AS.210.178. Portuguese Elements II. 4 Credits.
This course expands students knowledge of the basic language skills: reading, writing, listening, speaking. It uses a multifaceted approach to immerse students in the cultures of Brazil, Portugal, and Portuguese-speaking Africa. The focus of the course is on oral communication with, however, extensive training in grammar. The course is conducted entirely in Portuguese. Lab work required. Students must complete both semesters with passing grades to receive credit.
Prerequisite(s): AS.210.177 or equivalent score on placement test or instructor approval.

AS.210.201. Intermediate French I. 3 Credits.
This course develops skills in speaking, listening comprehension, reading, and writing. Systematic review of language structures with strong focus on oral communication and acquisition of vocabulary, extensive practice in writing and speaking; readings and films from French-speaking countries. Recommended Course Background: AS.210.102 or AS.210.104 or score between 65 and 89 on Placement test I.
Prerequisite(s): Students may take AS.210.201 or AS.210.203, but not both.
Area: Humanities

Focus on oral communication; develops skills in oral and written expression, listening comprehension, and reading, with extensive study of films and readings from French-speaking countries. Online component via Blackboard. Continuation of AS.210.201. Recommended course background: AS.210.201 or AS.210.203.
Area: Humanities

AS.210.211. Intermediate Spanish I. 3 Credits.
Intermediate Spanish I is a comprehensive study of Spanish designed for students who have attained an advanced elementary level in the language. The course is organized around a thematic approach to topics relevant to contemporary Hispanic culture. Students will practice the four language skills in the classroom through guided grammatical and creative conversational activities and through the completion of three comprehensive exams. Outside of class, students will complete extensive online assignments and write three major compositions (as part of the three exams). In addition, students will broaden their knowledge of Hispanic culture by viewing a Spanish-language film and by reading several literary selections. Successful completion of Intermediate Spanish I will prepare students for the next level of Spanish (Intermediate Spanish II). There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after the third class session.
Prerequisite(s): AS.210.112 or appropriate Spanish placement exam score.
Area: Humanities

AS.210.212. Intermediate Spanish II. 3 Credits.
Intermediate Spanish II is a comprehensive study of Spanish designed for students who have attained a mid-intermediate level in the language or who have completed Spanish 212. The course is organized around a thematic approach to topics relevant to contemporary Hispanic culture. Students will practice the four language skills in the classroom through guided grammatical and creative conversational activities and through the completion of three comprehensive exams. Outside of class, students will complete extensive online assignments and write three major compositions (as part of the three exams). In addition, students will broaden their knowledge of Hispanic culture by viewing a Spanish-language film and by reading several literary selections. Successful completion of Intermediate Spanish II will prepare students for the next level of Spanish (Advanced Spanish I). There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after September 13th.
Prerequisite(s): AS.210.211 or appropriate Spanish placement exam score.
Area: Humanities
AS.210.250. Program Abroad: Objective Portuguese - Level II. 3 Credits.
Summer Abroad Program. Third semester college-level Portuguese. Students develop basic listening, speaking, reading and writing skills. Cultural readings included. The class is designed to further develop and strengthen the language skills acquired in Portuguese 210.177 & 210.178. Open to Brazil Program applications only. Course must be taken for a letter grade.

Writing Intensive

AS.210.251. Intermediate Italian I. 3 Credits.
Taught in Italian. Course continues building on the four essential skills for communication presented in Intermediate Elements courses (listening, speaking, reading, writing) on topics of increasing complexity. Course adopts a continuous assessment system. May not be taken Satisfactory/Unsatisfactory.
Prerequisite(s): AS.210.152 or placement exam.
Area: Humanities

AS.210.252. Intermediate Italian II. 3 Credits.
Taught in Italian. Course continues building on the four essential skills for communication presented in Intermediate Italian I (listening, speaking, reading, writing) on topics of increasing complexity. Course adopts a continuous assessment system. May not be taken Satisfactory/Unsatisfactory.
Prerequisite(s): AS.210.251 or appropriate placement exam scores (Parts I & II).
Area: Humanities

AS.210.261. Intermediate German I. 3 Credits.
Taught in German. This course continues the same four-skills approach (speaking, writing, reading, and listening) from the first-year sequence, introducing and practicing more advanced topics and structures. Expansion and extension through topical readings and discussion and multi-media materials. Online tools required. Language Program Director: Deborah Mifflin
Prerequisite(s): AS.210.164 or equivalent, or permission of instructor.
Area: Humanities

AS.210.262. Intermediate German II. 3 Credits.
Taught in German. This course is designed to continue the four skills (reading, writing, speaking and listening) approach to learning German. Readings and discussions are topically based and include fairy tales, poems, art and film, as well as readings on contemporary themes such as Germany’s green movement. Students will also review and deepen their understanding of the grammatical concepts of German. May not be taken for S/U.
Prerequisite(s): AS.210.261 or placement by exam.
Area: Humanities

AS.210.263. Intermediate Yiddish I. 3 Credits.
For students who have completed one year of Yiddish language study or equivalent, this course will provide the opportunity to broaden and deepen their knowledge of Yiddish culture while continuing to improve their skills in reading, writing, listening and speaking Yiddish. Alongside textbook-based language work, students will read, listen to and interact with a variety of texts, for example literature, journalism and oral history.
Area: Humanities

AS.210.264. Intermediate Yiddish II. 3 Credits.
Continuation of Intermediate Yiddish I: this course will focus on the Yiddish language as a key to understanding the culture of Yiddish-speaking Jews. Topics in Yiddish literature, cultural history and contemporary culture will be explored through written and aural texts, and these primary sources will be used as a springboard for work on all the language skills: reading, writing, listening, and speaking.
Area: Humanities

AS.210.265. Individual Yiddish Practicum. 3 Credits.
This course will allow students at any stage of Yiddish language acquisition to hone their skills in reading, writing, listening and speaking. The program will be individualized for each student according to his or her needs while at the same time providing joint activities in which all can participate.
Area: Humanities

AS.210.266. German Conversation. 1.5 Credits.
This course is designed for intermediate and above students who wish to improve their conversational and oral presentational language skills. The syllabus aims to provide useful, relevant language and necessary discourse structures to hold conversations and presentations on varied topics of an everyday, as well as academic nature. Students will practice German to build confidence, develop fluency, and improve pronunciation and accuracy. Short texts, audio and films will provide the basis for discussion. Students’ fields of study and interests will be incorporated into the syllabus and tasks will be matched to the ability level of the students enrolled. Recommended Course Background: AS.210.262 or two years of college German or equivalent. May be taken concurrently with other courses in German. May be taken Pass/Fail. Not for major or minor credit.

AS.210.269. Intermediate Yiddish Texts I. 3 Credits.
For students who have completed at least one year of Yiddish language study, this course will provide the opportunity to broaden and deepen their knowledge of Yiddish culture while continuing to improve their skills in reading, writing, listening and speaking Yiddish. Alongside textbook-based language work, students will read, listen to and interact with a variety of texts, for example literature, journalism and oral history.
Prerequisite: AS.210.164 or equivalent, or permission of instructor.
Area: Humanities

AS.210.275. Fast Portuguese for Spanish Speakers and speakers of other Romance Languages I. 4 Credits.
NO PREVIOUS KNOWLEDGE OF PORTUGUESE IS REQUIRED. This fast-paced one-semester course covers all content for Portuguese Elementary I and II. Upon the successful completion of this course with a grade of C or higher, students may enroll in 210.277 Portuguese Intermediate. This course is designed as an accelerated introductory course for speakers with a sound knowledge of Spanish OR other romance languages. The course will cover introductory aspects of Portuguese grammar and present relevant points of the cultures of the Portuguese speaking countries. All classes are conducted in Portuguese. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory / Unsatisfactory basis.
Area: Humanities
AS.210.277. Intermediate Portuguese I. 3 Credits.
More advanced training in the skills of the language with emphasis on vocabulary building, ease and fluency in the language through the use of a multifaceted approach. Materials used immerse students in the cultures of Brazil, Portugal, and Portuguese-speaking Africa, and reflect the mix of cultures at work in the contemporary Lusophone world. All classes are conducted in Portuguese. Lab is required. May not be taken on a Satisfactory/Unsatisfactory basis. Prereq: AS.210.178, or placement test.
Prerequisite(s): AS.210.178 or equivalent score on placement test or instructor approval.
Area: Humanities

AS.210.278. Intermed/Adv Portuguese. 3 Credits.
This course is conducted entirely in Portuguese. Emphasis is placed on vocabulary building, ease and fluency in the language through the use of a multifaceted approach. Materials used immerse students in the cultures of Brazil, Portugal, and Portuguese-speaking Africa, and reflect the mix of cultures at work in the contemporary Lusophone world. Lab work required.
Prerequisite(s): AS.210.177 AND AS.210.178 or equivalent score on placement test or instructor approval.
Area: Humanities

AS.210.288. Portuguese: Conversation through Film & Music. 3 Credits.
Improve your Portuguese conversational and speaking skills through colorful Brazilian media. This course is designed for highly motivated undergraduate and graduate students who want to SPEAK Portuguese. Conversation sessions provide intensive work on communication skills through discussion on issues raised in films, news media & music. Grammar will be reviewed as needed outside of class with tutors or TA, freeing class time for more communicative activities. May not be taken on a Satisfactory / Unsatisfactory basis. Prereq: one semester of Portuguese (AS.210.177), two semesters of Spanish or Placement test. Area: Humanities

AS.210.290. Accelerated Portuguese. 4 Credits.
NO PREVIOUS KNOWLEDGE OF PORTUGUESE IS REQUIRED. This accelerated one-semester course covers all content for Elementary Portuguese. Upon the successful completion of this course with a grade of C or higher, students may enroll in 210.277 Intermediate Portuguese. Encourages rapid acquisition by intensive exposure to the language through immersion activities, videos and culture. The course will cover relevant aspects of the Portuguese language grammar. Students will be encouraged to use the language through communicative activities, listening and writing activities. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory/Unsatisfactory basis.
Area: Humanities

AS.210.301. Advanced French for Writing. 3 Credits.
Students in AS.210.301 will focus primarily on written expression, learning to ‘decipher’ classic and contemporary French texts, in order to expand their vocabulary and communicate their ideas in writing with clarity and accuracy. (A primary focus on oral expression is provided in AS.210.302; the two advanced-level courses may be taken in either order or simultaneously.)
Area: Humanities
Writing Intensive

AS.210.302. Advanced French for Speaking. 3 Credits.
Students in AS.302 will focus primarily on oral expression through individual and group work on contemporary media (music, film, current events) in order to expand their vocabulary and become fluent in conversation across social-cultural contexts. (A primary focus on written expression is provided in 210.301; the two advanced-level courses may be taken in either order or simultaneously.)
Area: Humanities

AS.210.306. Medical French. 3 Credits.
This interactive course is designed to provide students with specific linguistic tools used in medical and public health fields, as well as a comprehensive understanding of health care systems in the French and francophone world. Through a wide range of media (newspaper articles, scenes from TV series, excerpts of historical and literary texts) and group discussions, we will focus on topics such as physical and mental health, consultation and diagnosis, hospitalization, specialized fields (epidemiology, neurology, psychiatry, etc.) and deontology.
Prerequisite(s): AS.210.201 OR AS.210.202 or equivalent or permission.
Area: Humanities

AS.210.278. Intermediate Portuguese I. 3 Credits.
This accelerated one-semester course covers all content for Elementary Portuguese. Upon the successful completion of this course with a grade of C or higher, students may enroll in 210.277 Intermediate Portuguese. Encourages rapid acquisition by intensive exposure to the language through immersion activities, videos and culture. The course will cover relevant aspects of the Portuguese language grammar. Students will be encouraged to use the language through communicative activities, listening and writing activities. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory/Unsatisfactory basis. Prereq: one semester of Portuguese (AS.210.177), two semesters of Spanish or Placement test. Area: Humanities

AS.210.301. Advanced Spanish I. 3 Credits.
This course is a comprehensive study of the Spanish language focused on the continuing development of students’ communicative abilities and their knowledge of Hispanic cultures. Students will expand their use of basic structures of Spanish with a special emphasis on more difficult grammatical and vocabulary aspects, and further improve both their oral and written skills. Students will sharpen their critical thinking skills and listening abilities utilizing movies and written texts. This course combines an extensive use of an online component with class participation and three exams. Upon successful completion of this course, students will have acquired extended complex language tools that facilitate proficiency in Spanish and its use in various professional contexts. There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after the third class session.
Prerequisite(s): AS.210.212 OR AS.210.213 or appropriate Spanish placement exam score.
Area: Humanities
AS.210.312. Advanced Spanish II. 3 Credits.
This course is thorough review of the Spanish language focused on the development of students' communicative abilities and their knowledge of Hispanic cultures. Students will both expand their knowledge of the basic structures of Spanish, with special emphasis on more difficult grammatical and vocabulary aspects, and further improve on oral and written skills. Students will increase their critical thinking skills and listening abilities utilizing movies and written texts. This course combines an extensive use of an online component, class participation and three exams. Upon successful completion of this course, students will have acquired more complex language tools to become proficient in Spanish and its use in various professional contexts. There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after the third class session.
Prerequisite(s): AS.210.311 or appropriate Spanish placement exam score.
Area: Humanities

AS.210.313. Medical Spanish. 3 Credits.
Medical Spanish is a comprehensive examination of vocabulary and grammar for students who either work or intend to work in medicine and health-related fields in Spanish-speaking environments. The student will be able to participate in conversations on topics such as contrasting health systems, body structures, disorders and conditions, consulting your doctor, physical and mental health, first-aid, hospitalization and surgery on completion of this course. In completing the course's final project students will apply, synthesize, and reflect on what has been learned in the class by creating a professional dossier individualized to their professional interests. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session.
Prerequisite(s): AS.210.311 OR AS.210.312 or appropriate Spanish placement exam score.
Area: Humanities

AS.210.314. Spanish for International Commerce. 3 Credits.
Spanish for international business is an overview of business topics in an international Spanish-speaking context with an emphasis on deep review of grammar and vocabulary acquisition. On completion of this course the student will have developed the ability to read and critically discuss business and government relations in Latin America and will have examine entrepreneurship, finance, marketing, business ethics, human resources and commerce in the Spanish speaking world. In completing the course's final project students will apply, synthesize, and reflect on what has been covered in the class by creating a professional dossier individualized to their own professional interests. Concepts learned in this course will be directly applicable to careers linked to international relations and will apply to various careers in business. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session. Language Program Director: Loreto Sanchez-Serrano
Prerequisite(s): AS.210.311 or appropriate Spanish placement exam score.
Area: Humanities

AS.210.315. Spanish for International Relations. 3 Credits.
Spanish for international relations is an advanced examination of grammar and an analysis of international relations' topics in Spanish. By completion of this course the student will have developed the ability to read, critically discuss and demonstrate mastery of political and socio-economic issues in Spanish-speaking environments. Potential topics include a survey of the professions in international relations, NGOs in Latin America, intellectual property, cultural diplomacy, remesas, regional coalitions and treaties, and the environment. Class presentations and final projects will allow students to apply, synthesize, and reflect on what has been learned in the class by participating in a global simulation that will include a written exercise individualized to their professional interests. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the 4th class session.
Prerequisite(s): AS.210.311 or appropriate webcape score
Area: Humanities

AS.210.316. Advanced Spanish Conversation. 3 Credits.
Conversational Spanish surveys high-interest themes, discusses short films by contemporary Hispanic filmmakers and offers a thorough review of grammar. The student will be able to participate in conversations on topics such as personality traits, social media, political power, art and lifestyles on completion of this course. Conversational skills mastered during the course apply to all careers interconnected by Spanish. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session.
Prerequisite(s): AS.210.311 or appropriate Spanish placement exam score.
Area: Humanities

AS.210.317. Adv Spanish Composition. 3 Credits.
This third-year course is a hands-on and process-oriented introduction to discussion and compositional analysis. On completion of this course, students will have improved their Spanish writing skills in various types of compositions they might be expected to write in academic settings and in real-life formats such as film reviews, letters to the editor, cover letters, etc. The course also focuses on refinement of grammar and vocabulary use. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after September 13th.
Prerequisite(s): AS.210.312 or appropriate Spanish placement exam score.
Area: Humanities
Writing Intensive
AS.210.318. Spanish for Engineering. 3 Credits.
Spanish for engineering is a comprehensive examination of vocabulary and grammar for students who either work or intend to work in the engineering field to develop their communicative strategies in the field of engineering. On completion of this course, students will be able to participate in conversations on topics such as applications of biomedical engineering in the diagnosis and treatment of different medical conditions, efficient use of energy and materials, design and construction of public works, development of electrical systems and development of solutions to environmental problems. In completing the course’s final project students will apply, synthesize, and reflect on what has been learned in the class by creating a professional dossier individualized to their professional interests. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third-class session. Prerequisite(s): AS.210.311
Area: Humanities

AS.210.350. Program Abroad: Objective Portuguese - Level III. 3 Credits.
Summer Abroad Program. Fifth semester college-level Portuguese. Students further improve conversation and comprehension proficiency. Develop reading and writing skills through literary analysis and grammar review. The class is designed to further develop and strengthen the language skills acquired in Portuguese 210.277 & 210.278. Open to Brazil Program applications only. Course must be taken for a letter grade. Writing Intensive

AS.210.351. Advanced Italian I. 3 Credits.
Course presents a systematic introduction to a variety of complex cultural and historical topics related to present-day Italy, emphasizing intercultural comparisons and interdisciplinary, and encouraging a personal exploration of such topics. Course adopts a continuous assessment system (no mid-term and no final), and is conducted entirely in Italian. Year course; must complete both semesters for credit. No Satisfactory/Unsatisfactory option. Language Program Director: Alessandro Zannirato Prerequisite(s): AS.210.252 or placement exam
Area: Humanities
Writing Intensive

AS.210.352. Advanced Italian II. 3 Credits.
Course presents a systematic introduction to a variety of complex cultural and historical topics related to present-day Italy, emphasizing intercultural comparisons, interdisciplinary, and encouraging a personal exploration of such topics. Course adopts a continuous assessment system (no mid-term and no final).
Prerequisite(s): AS.210.351 or appropriate placement exam scores (Parts I, II and III).
Area: Humanities
Writing Intensive

AS.210.361. Advanced German I: Cultural Topics of the Modern German-speaking World. 3 Credits.
Taught in German. Required for Major & Minor. Topically, this course focuses on defining moments in cultural history in German speaking countries in the 2nd half of the 20th century. Films, texts and other media provide a basis for discussing events in post-war Germany from 1945 to 1989. A review and expansion of advanced grammatical concepts and vocabulary underlie the course. Focus on improving expression in writing and speaking. Language Program Director: Deborah Mifflin Prerequisite(s): AS.210.262 or placement exam.
Area: Humanities
Writing Intensive

AS.210.362. Advanced German II: Contemporary Issues in the German Speaking World. 3 Credits.
Taught in German. Topically, this course focuses on contemporary issues such as national identity, multiculturalism and the lingering social consequences of major 20th century historical events. Readings include literary and journalistic texts, as well as radio broadcasts, internet sites, music and film. Students read a full-length novel. Emphasis is placed on improving mastery of German grammar, development of self-editing skills and practice in spoken German for academic use. Introduction/Review of advanced grammar. Prerequisite(s): AS.210.361 or equivalent score on placement test. Area: Humanities Writing Intensive

AS.210.363. Business German. 3 Credits.
Taught in German. Course is designed to familiarize students with the vocabulary and standards for doing business in Germany. Taking a cultural approach, students read texts and engage in discussion that elucidate the works of business, commerce & industry in Germany, the world’s third largest economy. Emphasis is placed on vocabulary expansion and writing as it relates to business. Area: Humanities

AS.210.365. German for Science and Engineering. 3 Credits.
Taught in German. Course is designed to provide language training in German tailored to students of science & engineering. Germany has long been a world leader in engineering, most notably in chemical and mechanical engineering. Over the past decades, Germany also has taken a lead in environmental sciences and information technology. In addition, Germany is now becoming an increasingly attractive place to pursue degrees in the technical fields. This course will provide practice and expansion in all language skill areas: analysis of texts, hands-on-activities, preparation of presentations, and discussion of topics. Specific areas of interest to the course members will be taken into consideration for the selection of materials. [Does not replace 210.362 as prerequisite for upper level courses or as major requirement.]
Prerequisite(s): AS.210.262 OR AS.210.361 OR AS.210.362 or equivalent or placement exam.
Area: Humanities

AS.210.371. From the yidishe gas to the Yiddish Farm: Yiddish Identity and Yiddish Community. 3 Credits.
In premodern Ashkenaz, the vernacular Yiddish was an important factor maintaining a distinct Jewish communal identity. With the advent of modernity, and the abandoning of Yiddish by some Jews as their daily language, the choice to speak Yiddish and to use it as a vehicle of modern cultural production became a distinct strand in the web of new Jewish identities. In this course, students will develop a sociolinguistic understanding both of the place of Yiddish in premodern Jewish society, and ways in which the language was – and is – seen as essential to living a Jewish life in the modern world. Since this is an advanced language course, readings, discussion and written work will be in Yiddish. Grammar will be reviewed as necessary, according to the needs of the students. Area: Humanities, Social and Behavioral Sciences
AS.210.375. Avant-garde movements: The MODERNISM in Portuguese speaking countries. 3 Credits.
This course surveys the avant-garde movements in Portuguese speaking countries, giving special attention to Portugal and Brazil. In the first half of the past century, Brazilian and Portuguese writers started a movement that later was considered as a revolution in the literary world. Analysis and discussion of the movement, on both sides of the Atlantic, will offer the opportunity to contemplate authors including, but not limited to Fernando Pessoa, Almada Negreiros, Sá-Carneiro, Branquinho da Fonseca, Gaspar Simões, Casais Monteiro, Josée Régio, and on the Brazilian side Mario de Andrade, Oswald de Andrade, Manuel Bandeira, Menotti del Picchia, and much later, Graciliano Ramos, Rachel de Queiroz, José Lins do Rego and obviously Jorge Amado. It explores the impact the Lusophone Modernism had in other avant-garde movements. Readings in Portuguese; the class is taught in Portuguese. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory / Unsatisfactory basis. Prereq: Advanced Portuguese and Literature I (AS.210.391) or Placement test.

AS.210.391. Advanced Portuguese Language & Literature I. 3 Credits.
This third-year course focuses on reading, writing, and oral expression. Students will read two complete works by major Brazilian, Portuguese, and/or Afro-Portuguese writers each semester, followed by extensive writing and oral discussion on the topics covered. Grammar will be reviewed as necessary. All classes are conducted in Portuguese. Pre req: 210.278, placement test or instructor approval.
Prerequisite(s): AS.210.278 or equivalent score on placement test or instructor approval.
Area: Humanities
Writing Intensive

AS.210.392. Advanced Portuguese: Language and Literature II. 3 Credits.
This course focuses on reading, writing, and oral expression. Under the supervision of the instructor, students will read several works by major Brazilian, Portuguese, and/or Afro-Portuguese writers, followed by intensive writing and oral discussion on the topics covered. Grammar will be reviewed as necessary. The course is conducted entirely in Portuguese. No new enrollments permitted after the third class session. Pre requisites: 210.391 or placement test.
Prerequisite(s): AS.210.391 or equivalent score on placement test or instructor approval.
Area: Humanities
Writing Intensive

AS.210.394. Portuguese for the professions. 3 Credits.
Portuguese for the professions is a comprehensive examination of vocabulary and grammar for students who either work or intend to work in a Portuguese speaking environment. It focuses on the development of advanced communication skills according to students' individualized professional interests through conversations, readings, discussions, writings and media. The course also highlights cultural nuances of the professional Portuguese-speaking world. Grammar will be reviewed as needed in class, but most of it will be done outside of class with tutors or a TA, freeing class time for more communicative activities. There is no final exam. May not be taken on a Satisfactory / Unsatisfactory basis. Prereq: one semester of Portuguese (AS.210.177), Two semesters of Spanish or Placement test.
Area: Humanities

AS.210.409. Le monde francophone. 3 Credits.
This course examines both sociolinguistic and cultural aspects of the French-speaking world and the relationship between la francophonie and France itself. We focus on five regions—Sub-Saharan Africa (Cameroon and Senegal), Northern Africa (Morocco and Algeria), the Caribbean (Martinique and Haiti), North America (Quebec), and Europe (Belgium)—and consider language features unique to those regional varieties, the status of French as opposed to other indigenous languages and creoles, the demographics of their speakers, and the representation of their culture in media (particularly in short stories, poetry, song, and film). A semester-long research project on one of these main areas will allow students to combine their study of the French-speaking world with other disciplines of interest to them.
Area: Humanities

AS.210.411. Translation for the Professions. 3 Credits.
Spanish Translation for the Professions surveys the field of contemporary translation theory and provides practice of translation from English to Spanish. Translation exercises may include comparing and contrasting texts of literature, medicine, health, law, technology, politics, and journalism. Students will identify and differentiate terminology specific to these various fields and will focus on practicing correct uses of the grammatical structures relevant to the translation of both English and Spanish. In the course's final projects, students will apply, synthesize, and reflect on what has been learned in the class by completing a translation exercise individualized to their professional interests. Strategies of communication mastered in this course will help students of Spanish throughout their careers, in that achievement of the course objectives will help students discern, translate, and evaluate the usefulness of translations in different professional settings. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session.
Prerequisite(s): AS.210.313 OR AS.210.314 OR AS.210.315 OR AS.210.318 OR AS.210.319
Area: Humanities
Writing Intensive

AS.210.412. Community Based Learning - Spanish Language Practicum. 3 Credits.
This fourth-year course involves a specially designed project related to the student's minor concentration. On completion of this course, the student will be able to use the Spanish language in real world contexts. The student-designed project may be related to each student's current employment context or developed in agencies or organizations that complement student's research and experimental background while contributing to the improvement of his/her language proficiency. There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after first week of class.
Prerequisite(s): AS.210.411
Area: Humanities
Writing Intensive
AS.210.413. Curso de Perfeccionamiento. 3 Credits.
This fourth-year course is an in-depth examination of the Spanish grammar, including a wider range of idiomatic expressions and usages than students might have previously encountered. On completion of this course, students will be able to achieve the ACTFL Advanced to high level in oral and written expression as well as in reading and listening skills. The course will also help to prepare students for the DELE Intermediate or Superior levels, offered by the Instituto Cervantes. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the 4th class session.
Prerequisite(s): (AS.210.312 OR AS.210.317) AND (AS.210.314 OR AS.210.315)
Area: Humanities
Writing Intensive

AS.210.417. Eloquent French. 3 Credits.
This highly interactive, writing intensive course places emphasis on: 1) providing students with linguistic tools that will help them reach a high level of written proficiency (advanced lexical, stylistic and idiomatic expressions, linking words used to develop and enrich complex sentences, stylistic and grammatical differences between French and English) 2) enhancing students’ analytical skills by introducing them to the French method of Explication de textes 3) teaching students to develop an academic style of writing by studying the different components of the dissertation française (introduction, problématique, argumentation, conclusion, utilisation de sources) 4) teaching students to develop their own style of writing. To that effect, we will study excerpts of French literary texts that deal with themes likely to enhance their own creative writing (lieux imaginaires, mémoire et autobiographie, création d’un personnage de roman, for example).
Area: Humanities
Writing Intensive

AS.210.450. Program Abroad: Objective Portuguese - Level IV. 3 Credits.
Summer Abroad Program. Emphasis on the development of communication skills: the ability to comprehend both written and spoken texts, adrn o speak, read, and write in Portuguese with native-live proficiency. Open to Brazil Program applications only. Course must be taken for a letter grade.
Writing Intensive

AS.210.451. Corso di Perfezionamento. 0 - 3 Credits.
This task-based course is designed to prepare students to acquire Effective Operational Proficiency in Italian (C1 level of the Common European Framework). By the end of the course, successful students will be able to 1) understand a wide range of demanding, longer texts, and recognize implicit meaning, 2) produce clear, well-constructed, detailed texts on complex subjects 3) express themselves fluently and spontaneously without much obvious searching for expressions, and 4) use language flexibly and effectively for social, academic, and professional purposes. Extensive independent work required. Course adopts a continuous assessment system (no mid-term and no final), and is conducted entirely in Italian. No Satisfactory/Unsatisfactory option. Recommended Course Background: AS.210.352 with a grade of B+ or higher, or appropriate placement exam score and interview with Language Program Director.
Prerequisite(s): AS.210.352 with a grade of B+ or higher, or appropriate placement exam score and interview with Language Program Director.
Writing Intensive

AS.210.501. French Independent Study/Language. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.210.502. French Indep Stdy-Lang. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.210.531. Independent study of Spanish. 3 - 4 Credits.
This course is geared towards the student’s independent completion of requirements for courses in Spanish. You may complete 210.111-112 Spanish Elements, 210.211-212 Intermediate Spanish or 210.311 Advanced Spanish through this independent study. Students are responsible for completing all work assigned for his/her individual level. Please see individual course description for more information. Independent study of Spanish is taught online.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
Writing Intensive

AS.210.541. Italian Independent Study-Language. 0 - 3 Credits.
Prerequisite(s): AS.210.252 or higher or placement exam score Parts I and II.

AS.210.551. Portuguese Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.210.561. German Independent Study - Language. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.210.596. German Internship - Summer. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.210.661. Reading and Translating German for Academic Purposes. Taught in English. Graduate students only. This is the first semester of a year-long course designed for graduate students in other fields who wish to gain a reading knowledge of the German language. Seniors who intend to do graduate study in other disciplines are also welcome, with permission from instructor. Instruction includes an introduction to German vocabulary and grammatical structures as well as discussion of relevant translation practices. The goal of the course is for students to gain confidence in reading a variety of texts, including those in their own fields of study. No knowledge of German is assumed. Seniors by permission.
Area: Humanities
AS.210.662. Reading & Translating German for Academic Purposes II. Taught in English. Seniors by permission & Graduate students only. This course is designed for graduate students in other departments who wish to gain reading knowledge of the German language and translation practice from German to English. This course is a continuation of the Fall semester. Focus on advanced grammatical structures and vocabulary. For certification or credit. Prerequisite(s): AS.210.661 or permission of instructor. Area: Humanities

AS.211.102. The Cosmic Imagination: How Literature Changes Our Understanding of the Universe. 3 Credits. Since time immemorial humankind has looked to the skies for clues as to our origins, our destiny, and the nature of existence itself. In some ways, one of the hallmarks of western science has been a story of viewing the cosmos in ever-greater clarity and detail. Yet the very nature of the universe—its massive size, the distance and obscurity of its farthest reaches—requires the active intervention of our imaginations to picture it, no matter how powerful the technologies we use. In this course we will look at how western cultures from the middle ages to the present have deployed the literary and philosophical imagination to try to grasp the ungraspable, and how those attempts in some cases helped prepare intellectuals and scientists to make very real advances in understanding the universe. Prerequisite(s): Students may not take and receive credit for AS.145.102 and AS.211.102. Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.211.117. Freshman Seminar: Writing as Resistance: Jewish Responses to Catastrophe. 3 Credits. Jewish writers during and after the Holocaust, who took up their pen as a means of resistance and memorialization, stand in a long line of Jewish writers who responded to expulsions, persecutions and pogroms throughout Jewish history. This course will examine the themes, tropes and archetypes of Jewish responses to catastrophe from the destruction of the First Temple in Jerusalem to the Holocaust. Area: Humanities

AS.211.137. Freshman Seminar: Borges and Scientific Knowledge. 3 Credits. A survey of the stories and essays of the great Argentine writer Jorge Luis Borges focusing on the theory of knowledge he developed over his long career. Special attention will be paid to the implications his ideas have for the mathematical and physical sciences, in particular cosmology. Area: Humanities

AS.211.202. Freshman Seminar: A Thousand Years of Jewish Culture. 3 Credits. This course will introduce students to the history and culture of Ashkenazi Jews through their vernacular, Yiddish, from the settlement of Jews in German-speaking lands in medieval times to the present day. Particular emphasis will be placed on the responses of Yiddish-speaking Jews to the challenges posed by modernity to a traditional society. In addition to studying a wide range of texts—including fiction, poetry, memoir, song, and film—students will learn how to read the Yiddish alphabet, and will prepare a meal of traditional Ashkenazi dishes. No prior knowledge of Yiddish is necessary for this course. Area: Humanities

AS.211.203. Propaganda: From Blut und Boden to Post-Fact. 3 Credits. This course taught by Writing Seminars professor Wayne Biddle and Media Studies professor Bernadette Wegenstein covers the 20th-century history of propaganda with special focus on its visual techniques, on censorship, and how media serve as sites of both control and resistance to power. We will pay particular attention to the influence of misinformation abetted by the new media revolution, and both the rise of the political rhetoric of “fake news” and the massive dissemination of actual fake news since the 2016 election. Students will write papers pegged to current issues and events using the critical framework developed in class. Cap 30 students. Reader: Jason Stanley: How Propaganda Works, Princeton University Press, 2015. Writing Intensive

AS.211.217. Freshman Seminar: From Rabbis to Revolutionaries: Modern Jewish Identities. 3 Credits. Many Jews in the modern period abandoned the traditional religious way of life, but continued to identify strongly as Jews, and even those who remained committed to tradition had to adapt. Through the prism of the Yiddish language, the vernacular of Eastern European Jewry, this course will explore different ways in which Jews reacted to historical developments and embraced political and cultural movements of their time, from the founding of modern Yiddish theater in Romania, to the creation of a Jewish autonomous region in the far east of the Soviet Union, to the development of avant-garde poetry in New York. In addition to studying a wide range of texts—including fiction, poetry, memoir, song, and film—students will learn how to read the Yiddish alphabet, and will explore food culture by preparing a meal of Eastern European Jewish dishes. No prior knowledge of Yiddish is necessary for this course. Area: Humanities

AS.211.222. Italian Cinema: The classics, the Forgotten and the Emergent. 3 Credits. This course traces the history of Italian cinema from the silent era to the new millennium, highlighting its main trends and genres, and reflecting on the major transformations modern and contemporary Italian society experienced over the twentieth and twentieth-first centuries. We shall examine iconic films such as Vittorio De Sica’s Bicycle Thieves, Federico Fellini’s La Dolce Vita, Michelangelo Antonioni’s L’Avventura, and Pier Paolo Pasolini’s Mamma Roma, that received international recognition and influenced other national, cinematic productions. We shall also look at the work of less famous, or independent filmmakers who received less critical attention. While this class takes an historical approach, it also includes a theoretical component and introduces students to the specificity of the cinematic language, examining films in relation to the mise-en-scène, frame composition, camera movements, editing, and sound. This class is taught in English. Area: Humanities

AS.211.224. Made in Italy: Italian style in context. 3 Credits. Italy and the “Italian style” have become synonym of exquisite taste, class, and elegance thanks to the quality of Italian craftsmanship. This course will explore some of the major factors that contributed to the rise of Italian fashion and Italian industrial design as iconic all around the world. The classes will focus on the main protagonists and art movements that influenced the development of Italian style. We will analyze trends, clothing, and style not only in a historical context, but also through a critical apparatus that will include themes related to gender, culture, power, and politics. The course is taught in English. No knowledge of Italian is required, but those who can read in Italian will have an opportunity to do so. Everyone will learn some Italian words and expressions. Area: Humanities
AS.211.231.  Freshman seminar: Planet Amazonia: Culture, History, and the Environment.  3 Credits.
Without Amazonia, global warming could reach levels that threaten life on the planet. Yet, in an era of deforestation and climate change, Amazonia itself might be on the verge of disappearance, with disastrous consequences for the world. This course proposes interdisciplinary perspectives on Amazonia through a range of works drawn from history, anthropology, archeology, environmental studies, literature, and the arts. We'll look at texts by European travelers and missionaries who contributed to the paradoxical image of Amazonia as a “virgin paradise” or a “green hell”; scientific studies and artists’ depictions of the region’s flora and fauna; the often-overlooked history of human occupation of the region; and projects to colonize, develop, or conserve the world's largest tropical forest. What importance does Amazonia hold for Latin American and global geopolitics? How do art and literature, including indigenous writings, create, reinforce, or deconstruct clichés about the region? What alternative futures for our planet can Amazonia help us to imagine? Minors in Latin American Studies may count the class toward the Portuguese Language and Brazilian Culture concentration.
Area: Humanities

AS.211.240.  Italian Culture and Civilization I.  3 Credits.
This class aims to introduce students to some major traits of Italian culture. This analysis explores topics that span from Art History, Fashion, including Film, to Food Culture, Pop Culture, and Politics. This first module will focus mostly on its aesthetic traditions, and their impact outside national boundaries. The course will be taught mostly in English with the opportunity to be introduced to elements of Italian language. No knowledge of Italian is required. This three-credit course counts toward the major and Minor in Italian, and the International Studies Global Italy concentration.
Area: Humanities

AS.211.247.  Freshman Seminar: Tortured Body, Tortured Soul: Pain in Early Modern Europe.  3 Credits.
This Freshman seminar provides an interdisciplinary exploration of pain and the body in pre-modern Europe. Using classical and early modern sources of philosophy, literature, anthropology and medicine, students will analyze the ways in which cultural perceptions shape our responses to suffering.
Area: Humanities

AS.211.259.  Introduction to Medical and Mental Health Interpreting.  3 Credits.
This course is a broad introduction to the fields of medical and mental health interpreting. Modules will include: (1) Three-way communication: managing role expectations and interpersonal dynamics; (2) Basic interpreting skills and techniques in a healthcare setting; (3) Ethical principles, dilemmas, and confidentiality; (4) Elements of medical interpreting; (5) Elements of mental health interpreting; (6) Trauma-informed interpreting: serving the refugee population. The course is taught in English, and has no foreign language pre-requisites.
Area: Humanities

AS.211.265.  Panorama of German Thought.  3 Credits.
This course introduces students to major figures and trends in German literature and thought from the sixteenth to the twentieth century. We will pay particular attention to the evolution of German political thought from the Protestant Reformation to the foundation of the German Federal Republic after WWII. How did the Protestant Reformation affect the understanding of the state, rights, civic institutions, and temporal authority in Germany? How did German Enlightenment thinkers conceive of ethics and politics or morality and rights? How do German writers define the nation, community, and the people or das Volk? What is the link between romanticism and nationalism? To what degree is political economy, as developed by Marx, a critical response to romanticism? How did German thinkers conceive of power and force in the wake of World Wars I and II? What are the ties that bind and rend a community in this tradition? We will consider these and related questions in this course through careful readings of selected works.
Area: Humanities

Writing Intensive

AS.211.278.  Freshman seminar: Eataly: An Exploration of Italian Food Cultures.  3 Credits.
Italian cuisine is often recognized as one of the finest in the world. This Freshman Seminar will offer an exploration of Italian food cultures past and present. Discussion topics will include the Slow Food Movement, the tension between local and global, food and social justice, and the representation of food in literature, film, and other media. The course is taught in English. No knowledge of Italian is required, and everyone will learn some Italian words and expressions.
Area: Humanities

AS.211.294.  Freshman Seminar: Soccer in Brazil: opium of the masses.  3 Credits.
The course is taught IN ENGLISH. Futebol offers a unique perspective on politics, race and citizenship in Brazil. This course seeks to understand Brazilian culture through the historic national pastime of futebol. In addition to the main textbooks chosen for the class, by reading a variety of texts from newspapers, academic journals, fiction and film, students will be able to find their own approach to understanding the phenomenon of futebol within the social and political traditions of Brazil. No knowledge of Portuguese is required, but those who can read in Portuguese will have an opportunity to do so. Everyone will learn some Portuguese words and expressions. This class may count toward the Minor in Portuguese.
Area: Humanities

AS.211.311.  Introduction to Romance Linguistics.  3 Credits.
If the modern Romance languages all evolved from Latin, why do they differ in so many important ways? What drives language change in the first place? In what areas do the modern Romance languages, and languages in general, differ the most? Why should this be the case? We approach these questions not only from a linguistic perspective (analyzing Romance sound systems, vocabulary, morphosyntax, and semantics), but from a cognitive-psychological and a socio-political perspective as well. As part of a semester-long research project both in and outside the classroom, students will create linguistic questionnaires, use them to conduct native speaker interviews, analyze the data obtained, and present their findings as part of an end-of-semester colloquium.
Prerequisite(s): AS.210.202 OR AS.210.252 OR AS.210.212
Area: Humanities
AS.211.316. Brazilian Cinema and Topics in Contemporary Brazilian Society. 3 Credits.  
Course is taught in ENGLISH - This course is an introduction to the academic study of cinema as a communicative art and to Brazilian film. The films selected focus on films from the late 1950s to the present and highlight import episodes and challenges in the advancement of the Brazilian society as well as its cinematic production with a special view to the film aesthetics through analysis from a number of critical perspectives, including class, race, gender as well as ethnicity, nationalism or national identity, colonialism, social changes, and the politics of representation. In this sense, the films and documentaries that we will be watching and studying encompass the period from the rise of New Cinema (Cinema Novo) up to films exploring the most recent trends, including movies launched up to 2016. Students wishing to do the course work in English, for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory / Unsatisfactory basis. 
Area: Humanities 
Writing Intensive

AS.211.325. Representing O therness in Literature and Film. 3 Credits.  
The term 'Otherness' is known to be rooted in the Self-Other opposition as it emerged in German Idealism, adopted by psychoanalysis and transformed to Post-Colonial and Feminist theories. This theoretical framework will allow us to explore the role of the Other in literature and cinema. Students will become familiar with the historical development of the notion of the "stranger" through reading and analyzing various contemporary works of prose, poetry and cinema from various countries. We will analyze the ways in which these works depict Otherness and will investigate questions regarding their social, political and philosophical framework as well as the literary and cinematographic devices they employ. The course will have a comparative nature with the aim of learning more about the differences between the literary and cinematic representations. 
Area: Humanities 

AS.211.326. We Conduct - Documentary Production Internship. 3 Credits.  
To apply for this practicum, you should send an email of motivation to professor Wegenstein at bernath@jhu.edu. During this internship will accompany Bernadette Wegenstein (director), Shana Hagan (cinematographer), and Judy Karp (sound recordist) on the documentary Vérité set, as they document the history of women orchestral conductors. The film profiles the conductors' incredible dedication, devotion, mentorship, and love for music itself, and highlights the camaraderie and mentorship between generations of female conductors and musicians. Most importantly, it shows their power in pursuing a field not historically welcoming to women, breaking down barriers of gender and race. This documentary feature presents women from different walks of life, including Sylvia Caduff, Marin Alsop, Alexandra Arriech, Lina Gonzalez, 16-year old aspiring conductors Sumaya Elkashif and Maya Johnson, and members of the Baltimore OrchKids afterschool music program for children. The intertwining stories of these women and children, each accompanied by the music they embody, will culminate to reveal their astounding accomplishments as they conduct — the music, and the worlds around them. Filming will take place mainly at the Peabody Conservatory. Some field-trips will be optional (including to foreign destinations). Please note that this class will be held as a practicum, and some of the dates and times will be flexibly adapted to the needs of the artists' residency. If you have a very full calendar in the Spring it is best advised not to take this class. 
Area: Humanities

AS.211.327. Ecocinema: Framing Italy's Environmental Crises. 3 Credits.  
Over the past decade, growing numbers of filmmakers in Italy have addressed ecological crises in their work. This class takes an eco-critical approach to contemporary Italian cinema, examining a body of compelling place-centered stories that deal with local and global issues. Defining the scope of eco-cinema and the ways we can interrogate films as ecological texts, we shall screen earth-centered films that raise consciousness about the consequences of human manipulation of the natural world; the complicity of industry, government, and organized crime in creating environmental crises; and the effects of economic and social malaise. Screenings include iconic films such as Michelangelo Antonioni's Red Desert (1963), more recent, critically acclaimed films such as Matteo Garrone's Gomorrah (2008), Alice Rohrwacher's Happy as Lazzaro (2018), and many others. 
Area: Humanities 

AS.211.328. Berlin Between the Wars: Literature, Art, Music, Film. 3 Credits.  
Explore the diverse culture of Berlin during the heyday of modernism. During the Weimar Republic, Berlin became a center for theater, visual arts, film, music, and literature that would have an outsize impact on culture throughout the world and the twentieth century. The thinkers, artists, and writers drawn to interwar Berlin produced a body of work that encapsulates many of the issues of the period: the effect of the modern city on society; "the New Woman"; socialist revolutionary politics; the rise of the Nazis; and economic turmoil. While learning about interwar Berlin’s cultural diversity, we will take a special look at works by Jewish writers and artists that engage with the question of ethnic, religious, and national identity in the modern world, specifically in the context of Berlin’s rich Jewish history and the rise of anti-Semitism in the interwar period. All readings will be in translation. 
Area: Humanities 

AS.211.329. Museums and Identity. 3 Credits.  
The museum boom of the last half-century has centered largely around museums dedicated to the culture and history of identity groups, including national, ethnic, religious, and minority groups. In this course we will examine such museums and consider their long history through a comparison of the theory and practice of Jewish museums with other identity museums. We will study the various museological traditions that engage identity, including the collection of art and antiquities, ethnographic exhibitions, history museums, heritage museums, art museums, and other museums of culture. Some of the questions we will ask include: what are museums for and who are they for? how do museums shape identity? and how do the various types of museums relate to one another? Our primary work will be to examine a variety of contemporary examples around the world with visits to local museums including the Jewish Museum of Maryland, the National Museum of African American History and Culture and the National Museum of the American Indian. 
Area: Humanities
The course will explore Heidegger’s Being and Time with attention to such central concepts as Dasein’s unique relation to Being, worldliness, care, authentic and inauthentic existence, attunement, understanding, projection, and being unto death. The first eight weeks will be devoted to a thorough reading of Being and Time and selected critical texts. The last five will consider works of art that expand our understanding of Heidegger’s magnum opus.

Area: Humanities

AS.211.330. Curating Media Artists in Residence at JHU. 3 Credits.

The students will be closely involved with JHU’s Center for Advanced Media Studies (CAMS directed by Bernadette Wegenstein), and the Baltimore Museum of Art (curator Kristen Hileman) in preparing the BMA Black Box exhibit of Mary and Patrick Kelley’s new film, We Are Ghosts, set in a submarine: the film tells the story of life as experienced by the sailors in a U.S. submarine at the end of the second world war. Artist Mary Reid Kelley focuses on “minor aspects of life” in the submarine during non-combat — such as boredom, claustrophobia, and the effects of heavy drinking on the sailors. Included is also a restaging of Harry Truman’s announcement of the bombing of Hiroshima — told from the sailors’ point of view. While this new work will be on display in the BMA’s Black Box, Kelley’s 2016 film This is Offal (set in a morgue) will be showing at the museum. This film is centered around a dialogue between the ghost of a deceased woman, the victim of a suicide, and her animated organs. Students will also be traveling to Woodstock, NY on a field trip with professor Wegenstein for a studio visit with the artists at the beginning of the semester. Mary Reid Kelley is an artist who makes arresting, playful, and erudite videos that explore the condition of men and women throughout history. Drawing on literary and historical material, the videos involve intensive research and critical reassessments of standard historical narratives. Mary Reid Kelley is involved in every aspect of the videos’ creation—from writing the scripts (typically in highly structured poetic verse), to designing the sets, props, and costumes, to performing the leading roles—and all of the videos are produced by her and her partner, Patrick Kelley, at their private studio. Kelley is known for her feminist videos that recall the theater of the absurd and German Expressionist cinema. Please note that this class will be held as a practicum, and some of the dates and times will be flexibly adapted to the needs of the artists’ residency. If you have a very full calendar in the Spring it is best advised not to take this class.

Area: Humanities

AS.211.331. Vagabonds and Ramblers: Space & Place in Women’s Cinema. 3 Credits.

In recent times in Italy, a new generation of women filmmakers has found its own space in the traditionally male dominated film industry. This “counter cinema” abounds with female city walkers, migrants, vagabonds and other types of urban nomads, whose movement through space signifies a quest for freedom, gestures of protest and rebellion, and a search for place. We start by looking at the work of a pioneer filmmakers such as Elvira Notari, the first woman director in Italy, and then discuss the issue of gender and space in contemporary films by directors Francesca Comencini, Alice Rohrwacher, and Eleonora Danco. To enrich the analysis, we shall also examine films directed by non-Italians who deal with the theme of women’s mobility and their centrality/marginality from different socio-geographic contexts. Other directors included will be Agnès Varda (France), Chantal Akerman (Belgium), Haifa al-Mansour (Saudi Arabia), and Xiaolu Guo (China). Readings will include essays by Laura Mulvey, Ann E. Kaplan, Linda Williams, and Patricia White.

Area: Humanities

AS.211.332. Heidegger’s Being and Time and the Examined Life. 3 Credits.

This course will explore Heidegger’s Being and Time with attention to such central concepts as Dasein’s unique relation to Being, worldliness, care, authentic and inauthentic existence, attunement, understanding, projection, and being unto death. The first eight weeks will be devoted to a thorough reading of Being and Time and selected critical texts. The last five will consider works of art that expand our understanding of Heidegger’s magnum opus.

Area: Humanities

AS.211.333. Representing the Holocaust. 3 Credits.

How has the Holocaust been represented in literature and film? Are there special challenges posed by genocide to the traditions of visual and literary representation? Where does the Holocaust fit in to the array of concerns that the visual arts and literature express? And where do art and literature fit in to the commemoration of communal tragedy and the working through of individual trauma entailed by thinking about and representing the Holocaust? These questions will guide our consideration of a range of texts — nonfiction, novels, poetry — in Yiddish, German, English, French and other languages (including works by Primo Levi and Isaac Bashevis Singer), as well as films from French documentaries to Hollywood blockbusters (including films by Alain Resnais, Claude Lanzmann, and Steven Spielberg). All readings in English.

Prerequisite(s): Cannot be taken by anyone who previously took AS.213.361

Area: Humanities

AS.211.336. We Conduct Documentary Production Practicum II. 3 Credits.

During this internship will accompany Bernadette Wegenstein (director), Shana Hagan (cinematographer), and Judy Karp (sound recordist) on the documentary Vérité set, as they document the history of women orchestral conductors. The film profiles the conductors’ incredible dedication, devotion, mentorship, and love for music itself, and highlights the camaraderie and mentorship between generations of female conductors and musicians. Most importantly, it shows their power in pursuing a field not historically welcoming to women, breaking down barriers of gender and race. This documentary feature presents women from different walks of life, including Sylvia Caduff, Marin Alsop, Alexandra Arrieche, Lina Gonzalez, 16-year-old aspiring conductors Sumaya Elkashif and Maya Johnson, and members of the Baltimore OrchKids afterschool music program for children. The intertwining stories of these women and children, each accompanied by the music they embody, will culminate to reveal their astounding accomplishments as they conduct — the music, and the worlds around them. Filming will take place mainly at the Peabody Conservatory. Some field-trips will be optional (including to foreign destinations). Please note that this class will be held as a practicum, and some of the dates and times will be flexibly adapted to the needs of the artists’ residency. If you have a very full calendar in the Fall it is best advised not to take this class. To apply for this practicum, you should send an email of motivation to professor Wegenstein at bern@jhu.edu.

Prerequisite(s): AS.211.326 or Permission from the Instructor

Area: Humanities
AS.211.337. Wandering Jews? Jewish Migration in Film and Literature. 3 Credits.
Migration in all its forms has played a major role in shaping Jewish identity throughout history. From the Biblical exodus from Egypt through the beginnings of the diaspora under the Romans to the massive European Jewish immigration to America in the late 19th and early 20th centuries to the founding of the state of Israel, the migrations of Jews have also had a major place in Jewish literature. Going all the way back to the Bible, but focusing on the 20th century, this course will explore the ways in which literature and film represent the experience of migration, whether negative (compelled by expulsion or violence); positive (lured by economic or social opportunity); or somewhere in-between. We will examine poetry, plays, prose and film in Yiddish, German, Hebrew, and English (all in translation) on aspects of Jewish migration including the social and political factors motivating migration from the countryside to the shtetl (town) to the city and from Central and Eastern Europe to the Americas, Palestine, and Israel. Issues under discussion will include: adaptation and assimilation; minority rights; what is the relationship of old and new or major and minor languages and literatures?; what is the place of tradition and heritage in a diasporic context? We will also consider the resonances between contemporary debates on migration and historical examples of these issues as they are reflected in literature and film.
Area: Humanities
Writing Intensive

AS.211.339. Matchmaker, Matchmaker! Jewish Lovers in Literature and Film. 3 Credits.
By examining romantic relationships – some happy, some tragic – in Jewish literature and film, this course will trace the trajectory of modern Jewish history from the Eastern European backwater to the bustling American metropolis. At the same time, there will be ample opportunity to discuss universal questions surrounding love, loss and longing.
Area: Humanities

AS.211.341. Power and Resistance in French Political Thought. 3 Credits.
Even as a strong, divine-right monarchy emerged in France, following the Renaissance wars of religion, rebellious French thinkers never stopped questioning the foundations of power. They focused critically not only on the claims of authority issuing from the top, but also on the submissiveness of the governed and the reach of propaganda. This course examines how power shapes minds and bodies, from absolutism to the Revolution, to democratic laïcité. Readings include works by La Boétie, Montaigne, Loyseau, Bayle, Rousseau, Saint-Just, Maistre, Tocqueville, Foucault, Lefort, Rancière and the Assemblée Nationale. Readings and discussion in English.
Area: Humanities

AS.211.342. Emerging Latin American Cinema. 3 Credits.
This survey of emerging cinema in Latin America focuses on thematic clusters such as gender identity, violence against women, the struggle for indigenous rights and recognition of their history, the politics of ecological crises, and the plight of youth who don't see a viable future. We will focus on films from Brazil, Mexico, Argentina, and Colombia, among other cultures.
Area: Humanities

AS.211.347. Monsters, Ghosts, and Golems. 3 Credits.
Modern Jewish literature and film is full of monsters, ghosts, golems, dybbuks, and other occult creatures. We will study the rich religious and folkloric traditions that these works draw on in order to better understand why Yiddish, German, Hebrew, and English literature from the 19th century to the present and why film from its beginnings are so full of the occult and the supernatural. We will pay special attention to the ways that monsters, spirits, and the like were deployed in modernist literature and film, in order to ask and answer major questions about modernity: what are the social and aesthetic consequences of technology and automation? what aspects of human nature are revealed by new insights into the psyche? All readings in English.
Area: Humanities

AS.211.348. Holocaust Consciousness – An Intercultural and Interdisciplinary Approach Through Media Studies and Psychology. 3 Credits.
This course approaches Holocaust consciousness in the U.S. and Europe within a psychological and media-theoretical frame-work. It is also part of a larger research project between the Center for Advanced Media Studies at JHU and the Sigmund Freud University in Vienna. During the semester students will be tele-conferencing during five to six class sessions with students in the same course held at the Sigmund Freud University and taught by Professors Nora Ruck and Markus Brunner. Together we will examine Holocaust consciousness in the U.S. and Europe, and such phenomena as trauma, inter-generational transmission, and projection of the trauma of the victims’ and/or the perpetrators’ As primary materials we will be using war memoirs and documentary films (from the films of the "Bilderverbot" to today’s family ethnographies). Students will be teamed in small, inter-cultural groups to address both U.S. and a European perspectives on these materials. An excursion to the U.S. Holocaust Memorial Museum in Washington D.C. will also be part of the course.
Area: Humanities
Writing Intensive

AS.211.349. JHU Bologna Program: Food for Thought: Gastronomy, Politics & Identity. 3 Credits.
Italian Culture course offered on the JHU Summer Program in Bologna. Permission required. Must be taken for a letter grade. Open to students admitted to the JHU Summer Program in Bologna only.
Area: Humanities

AS.211.354. The Art, Craft, and Science of Translation. 3 Credits.
This course is an introduction to the growing field of Translation Studies. Broadly speaking, the translation process involves three major phases: (1) 'understanding' what someone else has written; (2) exploring the linguistic/cultural tools available (or not) in another language to convey the original meaning; and (3) taking responsibility for one's translation choices. What does it mean to 'understand' a text? Is it ever possible to find an 'equivalent' in another language? Can the translation process ever be objective, and what role, if any, does the translator's voice play? What practical tools are available to facilitate the translation process? Drawing from interdisciplinary theories and approaches to translation, this course will attempt to reflect on these questions, and provide an opportunity for some hands-on translation practice. Language pre-requisite: Completion of Advanced French I (AS210.301), Advanced Italian I (AS210.351), Advanced Spanish I (AS210.311), or instructor permission.
Prerequisite(s): AS.210.301 OR AS.210.351 OR AS.210.311 OR Instructor Permission
Area: Humanities
AS.211.356. Short Forms in German Literature. 3 Credits.
Taught in English. Before Twitter, there were the diverse short forms that evolved in the accelerating world of modernity to capture fleeting experiences, fragmentary perceptions, and flash-like insights: epigrams, aphorisms, fragments, feuilletons, parables, thought images, and mini-essays. The course offers an alternative history of German modernity by surveying masters of short forms from the 17th century to the present, such as Angelus Silesius, Lichtenberg, Novalis, Fr. Schlegel, Schopenhauer, Nietzsche, Kafka, Roth, Walser, Kracauer, Benjamin, Adorno, Blumenberg, and Kluge. Readings will be made available both in English translation and in the original German.
Area: Humanities

AS.211.360. Franco-American relations. 3 Credits.
Historical allies, yet rivals in trade; partners in intellectual exchange, yet baffled by each other’s culture: in this course we will examine core elements of the relationship between France & the US through the lens of diplomacy, commerce, language, food, cinema, the arts, friendship, feminism, parenting, ethnicity, health, climate change, and social justice. Students will develop and exercise critical thinking habits while working toward the learning outcome of a deeper cross-cultural understanding of France and the US. In the bigger picture, interactions between the two countries will be considered as a significant model of international relations. Course is taught in English.
Area: Humanities

AS.211.361. Narratives of Dissent in Israeli Society and Culture. 3 Credits.
In this course we will study and analyze the notion of dissent in Israeli society and culture on its various literary and artistic forms. We will examine the emergence and the formation of various political and social protest movements, such as the Israeli Black Panthers, Israeli feminism and the 2011 Social Justice protest. We will discuss at length the history and the nature of dissent in the military and in relation to Israeli wars and will track changes in these relation. Significant portion of the course will be dedicated to the literary, cinematic and artistic aspects of Israeli protest and their influence on Israeli discourse. We will explore the nature and role of specific genres and media such as the Israeli satire, Israeli television, newspaper op-ed and the recent emergence of social media. Students wishing to work in English exclusively for 3 credits should enroll in section one. Students who are fluent in Hebrew and are wishing to attend an additional hour-long Hebrew discussion session per week with Professor Cohen (time TBD in consultation with enrolled students) for 4 credits should enroll in section 2.
Area: Humanities

AS.211.362. Critical Knowledges: Black, Feminist, Postcolonial, Queer and Other. 3 Credits.
Is it clear what “knowledge” means? Does it have the same meaning historically, across different academic disciplines and in daily life? Rather than posing questions about the nature of knowledge explored in the branch of philosophy known as epistemology, this course will propose a minoritized critical inquiry into the matter of knowledge/s. Through works by Black, feminist, queer, and postcolonial theorists such as Patricia Hill Collins, Eve Kosofsky Sedgwick and Donna Haraway, we will address alternative epistemologies that operate with “partial” or “unfinished” models. Understanding knowledge as unfinished rather than universal enables consequential dialogue to take place: no longer focused on judgments, thought remains open to the ideas of others.
Area: Humanities
Writing Intensive

AS.211.364. Drama Queens: Opera, Gender, and the Poetics of Excess. 3 Credits.
What is a drama queen? According to the Oxford English Dictionary, a drama queen is “a person who is prone to exaggeratedly dramatic behaviour” and “a person who thrives on being the centre of attention.” While drama queens exist among us, the world of opera is certainly one of their ideal environments. Echoing back to their tragic fates, the powerful voices of Dido, Medea, Violetta, and Tosca never ceased to affect their empathetic public. In fact, excess and overreactions are two main features of the operatic experience both on stage and in the audience. By focusing on the ways in which operatic characters are brought to life, the course explores the social, political, and gender dynamics that inform the melodramatic imagination. Students will have the opportunity to attend live HD broadcasts of Verdi’s La Traviata and Tchaikovsky’s Eugene Onegin from the Metropolitan Opera. No musical skills required.
Area: Humanities
Writing Intensive

AS.211.366. Cuisine and Culture in Latin American Film. 3 Credits.
This course is a comprehensive study of presentations of food in Latin American Film. Cuisines are cultural symbols that bind together people in ritual and into a community. The goal of this class is to interpret how food habits function beyond providing calories and sustenance. Films from Latin America will be used as an entrée to discussing topics of food as medicine, family/community, and gender and as links to the history of Latin America. Students will be able to identify and differentiate between tropes of, as well as approaches to, food in film, and theories of food production, distribution and consumption in Latin America. Assignments will include a weekly film viewing, along with primary theoretical readings (in Spanish) around food and culture. Several presentations and a final project will focus on continuing research into food representations in films selected by individual students in which you will be able to apply what you have learned during this course to analyze additional works, thereby gaining a deeper understanding of Latin American cultures and values.
Area: Humanities

AS.211.368. Program Abroad: Italies: Politics, Culture, and Society. 3 Credits.
Course in Italian culture offered on the JHU summer program in Bologna. Open to students on the JHU Bologna Summer Program only. Permission required.
Area: Humanities

AS.211.369. We Conduct: Editing a Documentary. 3 Credits.
This course will provide a hands-on opportunity to work with film director and professor of media studies Bernadette Wegenstein in the editing process of We Conduct, a documentary about the magic of orchestral conducting and the changing face of those who are called to this vocation. The film follows famed conductor Marin Alsop as she breaks new ground in her already distinguished career. The film was shot predominantly in Baltimore, but also in New York, São Paulo, Vienna, Lucerne, and London, with Shana Hagan (Los Angeles) as Director of Photography, additional cinematography by Judith Benedikt (Vienna), and John Benam (Baltimore). During the semester we will be looking at the various narratives in their rough format, and see the film take shape from treatment to full-fledged documentary narrative. Editor Victor Livingston based in Los Angeles will come to work with the class twice during the semester.
Area: Humanities

Area: Humanities

Area: Humanities
AS.211.374. Gendered Voices. 3 Credits.
The course will explore the notion of ‘voice’ in order to show how poetry, literature, philosophy, and music have been dealing with it throughout the ages. In particular, by focusing on classical figures such as the Sirens, Circe and Echo, as well as by considering the seminal discussions of the ‘voice’ in Plato and Aristotle, the course will address the gendered nature of the voice as a tool to seduce and manipulate the human mind.
More specifically, the course will discuss the ways in which male, female, queer, gendered and un-gendered voices embody different functions. Course materials include classical, medieval and early modern sources as well as later rewritings of myths concerned with the voice by authors such as Jules Verne, Karen Blixen, Giuseppe Tomasi di Lampedusa, and Italo Calvino. A selection of theoretical works (e.g. Cavarero, Silverman, Dollar, Butler) will also be discussed. The course is taught in English and all materials will be available in English translation; Italian majors and minors should enroll in section 2.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.211.380. Modern Latin American Culture. 3 Credits.
Taught in Spanish. This course will explore the fundamental aspects of Latin-America culture from the formation of independent states through the present—in light of the social, political, and economic histories of the region. The course will offer a general survey of history of Latin-America, and will discuss texts, movies, songs, pictures, and paintings, in relation to their social, political, and cultural contexts. May not be taken satisfactory/unsatisfactory. 
Prerequisite(s): AS.210.312
Area: Humanities

AS.211.390. Modern Spanish Culture. 3 Credits.
This course will explore the fundamental aspects of Spanish culture from the nineteenth to the twenty-first centuries. The course will offer a general survey of the history of Spain and will discuss texts, movies, songs, pictures, and paintings in relation to their social, political, and cultural contexts. This course will be of particular interest for students planning on spending a semester abroad in Spain—specially for those students going to the JHU Fall Semester in Madrid, at Carlos III University. Taught in Spanish. Recommended Course Background: AS.210.311 or appropriate Webcape score. NOTE: THIS COURSE IS NOW AS.215.390 as of 9/27/17
Prerequisite(s): AS.210.312
Area: Humanities

AS.211.394. Brazilian Culture & Civilization. 3 Credits.
The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02.
Section 01: 3 credits in ENGLISH
Section 02: 4 credits in Portuguese (instructor’s permission required)
Area: Humanities
Writing Intensive

AS.211.397. Program Abroad: Brazilian Culture & Civilization. 3 Credits.
Summer Abroad Program. Intensive language and culture program offered in Rio de Janeiro, Brazil. The Culture and Civilization course strengthens students’ language skills while deepening their understanding of Brazilian history and culture. Pre-req: 1 semester of Portuguese or 1 year of Spanish. Open to Brazil Program applications only. Course must be taken for a letter grade.
Area: Humanities
Writing Intensive

AS.211.400. Topics in Romance Literatures. 3 Credits.
This course provides an introduction to Romance Literatures from their origins to the present day. Topics and texts discussed vary year-to-year (e.g. the idea of progress in modern Europe; literature and war; poetry and music in medieval and Renaissance Europe). Special attention will be given to how Romance literatures and cultures have evolved in dialogue with each other throughout the centuries. The main language of teaching and discussion will be English, but students will be encouraged to read the materials in the original language compatibly with their skills. The course is a requirement for the Romance Languages and Literatures major
Area: Humanities
Writing Intensive

AS.211.401. La France Contemporaine. 3 Credits.
Students will explore contemporary French society and culture through a wide variety of media: fiction and non-fiction readings (graphic novels, news periodicals, popular magazines), films, music, art, websites, and podcasts. A diverse range of hands-on activities in addition to guided readings will help students develop cultural awareness as we discuss topics such as education, politics, humor, sports, cuisine, immigration, slang, and national identity, as well as the historical factors that have influenced these facets of French and francophone culture.
Recommended Course Background: AS.210.301 or AS.210.302 or permission of instructor.
Area: Humanities

AS.211.415. Thomas Mann’s ‘The Magic Mountain’. 3 Credits.
Taught in English. Stranded for seven years in an Alpine sanatorium, a young engineer is granted a highly unusual education, one that is at turns hilarious and stirring. He gains initiation into the mysteries of life, death, and love, and finds himself caught in the middle of dazzling arguments animated by the ideological conflicts of a continent on the brink of world war. A unique blend of comic portrayal, essayistic reflection, and ironic narration allows Mann to develop an absorbing panorama and an acute diagnosis of cultural crisis, making his novel from 1924 a key work of modernism. We will discuss the novel against the backdrop of the cultural currents and political developments to which it responds.
Area: Humanities

AS.211.421. Almodóvar Measure for Measure. 3 Credits.
A select few films from Spain’s renowned director and top cultural mule. Focus on inter species identities, cyborg antics, mythmaking through the altering of memories and remade of Hollywood studio and post-studio celebrities in the spectrum of perversity.
Area: Humanities
AS.211.445. Rogues, Tricksters, and Saints: Boccaccio's Decameron. 3 Credits.
Boccaccio’s Decameron (1352), a collection of 100 short stories, ranges from the bawdy through the cynical to the romantic and even fantastic. It has inspired numerous writers, artists, musicians and film-makers. We will read Boccaccio’s masterpiece on its own terms and in relation to the development of story-telling, from gossipy “news” (novelle) to artistic short story, theatrical adaptation, literary fairy-tale, and the fantastic. The Decameron will be compared with its forerunners in saints’ lives, bawdy fabliaux, and moral exempla, and with its literary, theatrical, and cinematic imitators in Italy and Europe. Italian graduate students and undergraduate majors will attend an extra weekly meeting conducted in Italian.
Prerequisite(s): Students may not have taken AS.214.445.
Area: Humanities
Writing Intensive

AS.211.477. Witchcraft and Demonology in Literature and the Arts. 3 Credits.
Who were the witches? Why were they persecuted for hundreds of years? Why were women identified as the witches par excellence? How many witches were put to death between 1400 and 1800? What traits did European witch-mythologies share with other societies? After the witch-hunts ended, how did “The Witch” go from being “monstrous” to being “admirable” and even “sexy”? Answers are found in history and anthropology, but also in theology, literature, folklore, music, and the visual arts, including cinema.
Prerequisite(s): Students who have already taken AS.214.171 cannot take AS.211.477.
Area: Humanities
Writing Intensive

AS.211.479. Dante's Journey through the Afterlife. 3 Credits.
Dante's Divine Comedy presents a complete picture of the medieval world-view in all its aspects: physical (the structure of the cosmos), historical (the major actors from Adam to Dante himself) and moral (a complete system of right and wrong). Dante shows how the Christian religion portrayed itself, other religions, the nature of God, humans, angels and devils, and human society. We will explore these topics both from the viewpoint of Dante's own time, and in terms of its relevance to our own societal and cultural concerns.
Prerequisite(s): AS.214.479
Area: Humanities
Writing Intensive

AS.211.480. Religious Themes in Film and Literature. 3 Credits.
This course would be of interest to anyone who would like to learn about the intersection of religion and modern culture. At the center of the course will stand a close study of the representation of religious themes and their role in modern literature and cinema. The works which we will deal with are not considered religious and yet they include religious themes as part of their narrative, images, language or symbolic meaning. We will trace in various works from various countries and genre, themes such as: divine justice, providence, creation, revelation, the apocalypse, prophecy, sacrifice and religious devotion. We will also study the ways in which Biblical and New Testament stories and figures are represented in these works. The course will have a comparative nature with the aim of learning more about the differences between the literary and cinematic representations.
Area: Humanities

AS.211.500. Independent Study-Portuguese Culture. 0 - 3 Credits.
AS.211.501. Independent Study-French Culture. 0 - 3 Credits.

AS.211.566. Independent Study - CAMS/undergraduate. 1 - 3 Credits.
requires permission of instructor
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
Area: Humanities

Forgery is an eternal problem. It is a literary tradition in its own right, with connections to politics, Classics, religion, philosophy, and literary theory. Spurious writings impinge on social and political realities to a degree rarely confronted by criticism. This course offers a reading of the sort traditionally reserved for canonical works of poetry and prose fiction, spotlighting forgery's imaginative vitality and its sinister impact on scholarship. Students will study manuscripts and incunabula drawn from JHU's Bibliotheca Fictiva, the world's premier collection of literary forgeries.
Prerequisite(s): Students cannot have taken AS.214.606.
Area: Humanities
Writing Intensive

AS.211.623. Reading Modern Hebrew Literature.
"And Jesus was a Jew with ear-locks and prayer shawl" claimed Uri Zvi Greenberg, the ultra-nationalist giant of modern Jewish poetry. A flesh-and-blood Jew, a demon, a spoiled student, an idol, a suffering brother, a Messiah, a nationalist rebel, a Greek god in a Jewish garb – these images of Jesus accompanied Jewish thought and literature for almost two thousand years. This course will study these images through a close reading of major Jewish texts from the Talmud to modern times.
Area: Humanities

AS.211.640. The Literature of Existence.
This seminar will explore some key expressions of what could loosely be called existentialist writing from the early twentieth century to the present day, to the end of coming to terms with an emerging “new politics of existence.” While there will be some emphasis on Spanish language materials, including writings by José Ortega Y Gasset, Miguel de Unamuno, María Zambrano, and Jorge Luis Borges, we will also be reading important works by Martin Heidegger, Jean-Paul Sartre, Simone de Beauvoir, Albert Camus, and Martin Hägglund.
Area: Humanities
Writing Intensive

AS.211.661. Women Filmmakers from the Margins.
Film making remains an overwhelmingly male-dominated profession, but women are making significant inroads, and in so doing are leaving their distinctive mark on the medium. In this seminar we will examine the films of a group of women auteurs (those who write and direct their own films) who have endeavored to speak from the margins—be they social, geographical, or sexual—and whose work has challenged mainstream cinematic norms. The filmmakers whose work we will analyze may include Jane Campion, Australia; Aurora Guerrero, Mexico-USA; Claudia Llosa, Peru; Mira Nair, India-USA; Marialy Rivas, Chile; So Yong Kim, Korea.
Area: Humanities
Writing Intensive
This interdisciplinary graduate seminar examines the work of women writers, directors, and photographers in modern and contemporary Italy. We shall explore the question of female authorship and themes such as female subjectivity and mobility, women’s participation in, or exclusion from, history. We shall read foundational texts such as Elsa Morante’s La storia (1974), Anna Maria Ortese’s collection of short stories Il mare non bagna Napoli (1953), and more contemporary novels such as Goliarda Sapienza’s L’arte della gioia, and Elena Ferrante’s L’amore molesto (1995). In the second part of the semester, we will study the work of female directors from different generations, from pioneer Elvira Notari, to mid-century Cecilia Mangini, and contemporary Alice Rohrwacher, as well as the work of photographers such as Carla Cerati and Letizia Battaglia.
Area: Humanities

AS.211.666. Graduate practicum: Mapping the Scholarly Landscape I (Research Skills).
From online resources to core printed reference works, this course acquaints students with the range of scholarly apparatus in the field of literary and cultural studies, with attention to issues of access, retrieval, and research. The course, which is required for all first-year graduate students in GRLL, will be conducted in six (6) two-hour sessions.
Area: Humanities

AS.211.667. Graduate practicum: Mapping the Scholarly Landscape II (Tools for Professional development).
Spring Semester (coordinated by GRLL faculty with the participation of advanced grad students) 1. Preparing a syllabus, marketing your classes (DTF, Summer, Intersession) [with the participation of successful DTF/Intersession instructors] 2. Options for online teaching 3. Writing a conference paper abstract; conference presentations 4. Organizing a conference/symposium [led by advanced grad students] 5. How to get published (what, when, where) 6. Academic review writing 7. Options for fellowships/grants/career development.
Area: Humanities

AS.211.707. Film and Philosophy: The Surrealist Cinema of Alejandro Jodorowsky.
The films of Chilean cult director Alejandro Jodorowsky have confounded, infuriated, and intrigued critics and audiences alike throughout his 50-plus-year career. In this seminar we will examine the expanse of his cinematic production in order to delve into fundamental philosophical questions of representation, violence, and the relation between visual imagery and poetry.
Area: Humanities
Writing Intensive

AS.211.711. Adapting Myths for the Screen.
In this course we will look at examples of adaptations of sacred narratives for the screen from Pasolini’s adaptations of the gospels to Disney’s adaptations of Grimm, and the recent boom of 21st century fairy-tale films; we will be reading Jack Zipes’ The Enchanted Screen, and Fairy-tale Films Beyond Disney, ed. Jack Zipes, and Sacred Narratives. Readings in the Theory of Myth, ed. Alan Dundes, among others.
Area: Humanities
Writing Intensive

AS.211.713. The Culture of Algorithms.
This course proposes a study of the culture of algorithms for students of the literate space. True (deep) literacy is the ability to interpret a text or an object in its cultural, historical, conceptual, material or political contexts. With the evolution of digital cultures, literate practices have changed to incorporate the emerging cultural paradigms born out of the encounter of algorithms and computability with social practices embedded in the earlier literate traditions. Indeed, modern computation environments invite a new algorithmic hermeneutics grounded in both literate and scientific traditions. We will consider, among others, texts such as Bernard Chazelle’s inaugural lesson at the Collège de France, “L’algorithmique et les sciences”; Leibniz on ordered problem solving; Condorcet on “social arithmetic”; Norbert Wiener, God and Golem, Inc.; Herbert Simon, “Bounded Rationality…”; Alan Turing, ‘Computing Machinery and Intelligence’; Steven Wolfram: Computation and the Future of the Human Condition; Leslie Valiant, Probably, Approximately Correct; Ed Finn, What Algorithms Want. Imagination in the Age of Computing; Daniel Cardon, À Quoi rêvent les algorithmes?; and of course Donald Knuth’s classics, Literate Programming and “Computing Science and its Relation to Mathematics”. Various modern novels also attempt to engage with the algorithmic, and these can form a counterpoint to the more technical or philosophical texts. For more information and a provisional syllabus, please go to http://www.wilda.org/Courses/CourseVault/Grad/Algorithms/Syllabus.html. This course will be taught in English. A few (short) texts are in French, so the ability to read French will be useful although not required.
Area: Humanities

AS.211.714. Ariadne’s Threads: Metamorphosing Mythologies.
Abandoned by Theseus, Ariadne lamenting on the shore of Naxos embodies one of the most powerful tropes in literature and the arts. The fate of the heroine who helped Theseus out of the labyrinth became a thread (indeed, an inexhaustible series of threads) running across the ages and populating the imagination of poets, painters, composers. After exploring in detail the classical sources that canonized Ariadne’s myth (Catullus, Carmina, 64; Ovid, Heroïdes, 10) as well as references to the myth found in other classical authors (Homére, Hésiode, Pausanias, Plutarque, Propertius), we will turn to the reception of Ariadne in literature and music (Ariosto, Rinuccini-Monteverdi, Haydn, Nietzsche, Strauss-Von Hofmannsthal). The analysis of the various case studies will focus on the rhetorical and poetical devices used by poets and composers to reenact the vocal features of Ariadne’s lament.
Area: Humanities
AS.211.727. **Humanity in Question.**

Although it is often assumed that any inquiry into the human inevitably leads to pernicious forms of anthropocentrism, current debates about the Anthropocene suggest that we avoid such reflection at our own peril. Drawing on philosophy, biology, and sociology, Helmuth Plessner’s Levels of Organic Life and the Human: An Introduction to Philosophical Anthropology (1928) offers a powerful account of humans’ ‘excentric positionality’, whose key ideas Plessner would further flesh out in his Political Anthropology (1931). Plessner’s 1928 book was overshadowed, however, by the near-simultaneous appearance of Being and Time and Heidegger’s imperious dismissals of philosophical anthropology. Disturbed by Heidegger’s blindspot and its political consequences, during the World War II Hans Jonas, one of Heidegger’s most original students, began to outline a conception of organic life as “an experiment with mounting stakes,” with the highest stakes reached in human freedom. That conception, fully elaborated in The Phenomenon of Life: Toward a Philosophical Biology (1966), would serve as the basis for Jonas’s influential theory of bioethical and ecological responsibility. Now that Plessner’s key works are finally available in English translation, a joint examination of his, Heidegger’s, and Jonas’s conceptions is in order. We will ask what these three thinkers have to tell us about our current situation.

Area: Humanities

AS.211.732. **The Literature of Speculative Genres: Science Fiction, Bandes dessinées, MMOGs, Mangas...**

The francophone and anglophone worlds have longstanding distinct if complementary traditions for staging the primordial literary gesture, the imagining of the “What if”. This course will confront the two cultures in early works like Cyrano de Bergerac’s Histoire comique des états et empires du soleil, C. N. Ledoux’s utopian workers’ paradise, or Jules Verne’s novels. It will then address the modern literate spaces in which the two traditions cross-fertilize each other—for example the French reception of Philip K Dick’s oeuvre, Korogodski’s Pink Noise-A Posthuman Tale, Catherine Dufour’s Le Goût de l’immortalité, cyberpunk, mangas co-authored by francophone artists and writers, the “9e art” of the high graphic novels, especially the Cités obscurc of Schuiten and Peeters, or hybrid French/anglophone MMOG communities like Ubisoft’s Assassin’s Creed. The materials will be in French or English, so the ability to understand French is necessary, with class discussion in English. Undergraduates are welcome with permission of the instructor, and this course may count for the French major or minor.

Area: Humanities

AS.211.748. **Media Theory in the Age of Big Data.**

This seminar will explore some key themes in contemporary media theory in an age when five tech giants have succeeded in infiltrating the daily lives of global citizens to an unprecedented degree in history. We will study the impact of this saturation on socioeconomic inequality as well as the implications of an almost total loss of privacy. Among the strategies of resistance to the capacity for surveillance these companies have developed we will focus in particular on current examples of feminist media art and voices from the global and cultural periphery as well as tendencies in these practices to emphasize a return to interpersonal connections and the embodied here and now. As case studies we may include #metoo, slo-film movements from Southern Bahia in Brazil, and the financing and distribution of art films by mega media companies like Netflix.

Area: Humanities

AS.211.753. **The Renaissance Comic Romance.**

In the fifteenth and sixteenth centuries, Italian and French humanists transformed the medieval adventure stories of Charlemagne’s and Arthur’s knights. The course concentrates on Luigi Pulci’s earthy, bourgeois Morgante, Teófilo Folengo’s Macaronic (Latin/Italian dialect) Baldus, and Rabelais’s encyclopedic Gargantua and Pantagruel, combining close analysis of their linguistic and narrative fabric with examples of their influence on later comic narrative masterpieces.

Area: Humanities

Writing Intensive

AS.211.754. **Modernist Primitivism.**

This course will explore the aesthetics and politics of primitivism in European modernity, focusing on the visual arts and literature in German and Yiddish, but looking at the wider European context, including France and Russia. We will begin with the backgrounds of primitivism in Romanticism, looking especially at its ethnographic and colonial sources. We will then focus on the presence of anthropological and ethnographic discourses within various registers of modernist thought, literature, and visual culture, with special attention to visual and literary primitivism. Our central concerns will include: the attempt to create a modernist aesthetics grounded in ethnography; the primitivist critique of modernity; the place of primitivism in the historical avant-garde; the development of the notion of “culture” in modernity; and the aesthetics of modern ethnic and national identity. &nbsp;Key thinkers, artists, and writers to be considered include Herder; Gauquelin, Picasso; Wilhelm Worringer; Carl Einstein; Hannah Höch; and Emil Nolde.

Area: Humanities

AS.211.777. **The Critical Unconscious.**

Criticism in the 21st century has tended to relegate psychoanalysis to a dustbin of fads that proliferated at the end of the prior century but that today are of interest only to balkanized cliques of devotees. Bucking this trend, this seminar will examine the intellectual history and abiding influence of psychoanalysis’s key critical concept: the unconscious. Basing our discussions on in-depth readings from key thinkers in the analytic tradition such as Freud, Lacan, and Klein, as well as the post-analytic philosophical tradition, including Zizek, Butler, Laclau and Mouffe, Deleuze and Guattari, and Jameson, we will work to distill an understanding of the unconscious as essential to the practice of criticism tout court, and as inhering even in those discourses that have sought most stridently to distance themselves from it. Seminar discussions will take place in English; readings will be available in the original as well as in translation.

AS.212.229. French New Wave. 3 Credits.
An exploration of the major films and directors of the French New Wave that is also designed to help students consolidate their skills in the analysis of film. The course will examine the origins of the French New Wave, looking at the directors as critics and as passionate film fans, along with the institutional and historical context of the films. It will also ask how the French New Wave changed the process of filmmaking, and transformed the way we think about the work of the director—inspiring more vocations in filmmaking than any other movement in cinema history. Conducted in English.
Area: Humanities

AS.212.301. Impossible Freedoms: Speed, Stillness, and Experience. 3 Credits.
An examination of French literary depictions of ways in which speed and human locomotion influence the experience of place and time. What happens when life speeds up so much that the world goes by faster than we are able to process it? Would slowing down allow for a different type of spatio-temporal experience? Authors include Victor Hugo, George Sand, Émile Zola, Ernest Hemingway, and André Gide among others. Students wishing to take the class for French major or minor credit should enroll in section 2.
Area: Humanities
Writing Intensive

AS.212.308. The Battle of the Sacré Coeur in Fin-de-Siècle Paris. 3 Credits.
This interactive course analyzes the stakes underlying the construction of Paris’ controversial Sacré-Cœur Basilica in Montmartre. In the light of heated 19th-century debates on moral authority that opposed religious believers and partisans of a secular state inspired by a scientific ethos, we will consider how the advocates of both sides use specific rhetorical techniques in the public domain (newspaper articles, caricatures, speeches) and artistic devices (paintings, literary writings) to convince their audience of the validity of their claims. In other words, it is all about propaganda. The course will open out onto contemporary debates that show similar ethical conflicts. Recommended Course Background: AS.210.301 or AS.210.302.
Area: Humanities

AS.212.315. Literature, Flight, Action. 3 Credits.
Flight is often conceived as a means of avoiding danger. It can also be seen fundamentally as a refusal of social and sexual categories and as resistance to the present order. By examining modern and contemporary literary works in French by authors on the margins from Rimbaud to Damasio, we will see how ‘la fuite’ allows for the invention of oneself as well as for the construction of worlds by innovative formal means. Course materials in French; taught in French.
Area: Humanities

AS.212.318. Women in French Literature of the 17th and 18th Centuries. 3 Credits.
This course will examine the changes in the relationship of women to literature in France before the French Revolution from several points of view: (1) What were the social and intellectual contexts of gender distinctions? (2) How did men writing about women differ from women writing about women? (3) How were these questions affected by the changing norms of literary productions? Texts by Mme. de Sévigné, Molière, Mme. de Lafayette, Prévost, Diderot, Rousseau, Laclos, and Beaumarchais.
Area: Humanities
Writing Intensive

AS.212.331. Paris 1900. 3 Credits.
Held in Paris, the 1900 World’s Fair introduced to the modern world such striking innovations as subways, moving images on giant screens, escalators, colossal electrical shows, and the first painting by Pablo Picasso to be shown on French soil. Focused on key cultural and socio-political events surrounding this momentous turn-of-the-century display of wealth and power, this course examines the paradoxes of a modernizing French nation which even as it promoted individual rights alongside technology and economic growth was headed towards world conflict. Students will perform original research by exploring the rare book collection at JHU as well as the substantial digital archives now documenting the period.
Area: Humanities

AS.212.333. Introduction à la littérature française. 3 Credits.
Introduction à la Littérature française I (212.333) and II (212.334) propose reading and discussion of texts of various genres from the Middle Ages to the 21st century. This sequence is intended as an introduction to the methods, questions, and techniques of textual analysis through intensive reading, discussion, and production of written texts. Introduction à la littérature française I covers some of the greatest classics of French literature and thought from the Middle Ages to the Revolution. The two semesters may be taken in either order. This sequence is a pre-requisite to all further French and francophone literature courses. Students may co-register with an upper-level course during their second semester. Recommended Course Background: AS.210.301-AS.210.302 or at least one semester of AS.210.301-AS.210.302 with a grade of A and written permission of the instructor. This course is taught in French
Prerequisite(s): AS.210.30 AND AS.210.302
Area: Humanities
Writing Intensive

AS.212.334. Introduction à la littérature française II. 3 Credits.
Readings and discussion of texts of various genres covering the time period from the Revolution to the 20th century. This sequence is a prerequisite to all further literature courses. Students may co-register with an upper-level course during their second semester.
Prerequisite(s): AS.210.301 OR AS.210.302 or at least one semester of AS.210.301 or AS.210.302 with a grade of A and written permission of the instructor.
Area: Humanities
Writing Intensive

AS.212.340. Topics in French Cinema: Immigration, identité, différence culturelle. 3 Credits.
An exploration of immigration, identity, and cultural differences through the lens of recent French and Francophone films. Focus on discussion and analyses of film sequences in class and on oral presentations. Students will have the opportunity to progress in vocabulary, oral expression, and in critical analysis. Films studied include works of Kassowitz, the Dardennes, Kechiche, Sciamma, Hanek, and Audiard. Conducted in French. Recommended course background: completion of AS. 210.301 or equivalent score on Placement test.
Area: Humanities
AS.212.342. Topics in French Cinema: Le crime dans le cinéma. 3 Credits.
Focus on French crime films, thrillers, and films noirs. Films studied will include movies by Jean-Pierre Melville, Dassin, Godard, Chabrol, French responses to US genre movies and to Hitchcock, and contemporary versions of the crime film in France (Jacques Audiard, Michael Haneke). Strong focus on discussion and analyses of film sequences in class and on oral presentations. Additional assignments will involve vocabulary and grammar study. Recommended Background: 210.301 or 210.302 or equivalent score on placement test
Area: Humanities

AS.212.344. Topics in French Cinema: Amour, Sexualité, Mariage. 3 Credits.
What is the nature of desire? Where does it come from, and what determines and conditions it? What do we feel in love with when we fall in love? An exploration of a series of films that ask essential questions about the psychological, political, and social stakes of human love, desire and sexuality, and about the institution of marriage. Focus on discussion and analyses of film sequences in class and on oral presentations. Students will have the opportunity to progress in vocabulary and oral expression. Films studied include works of Truffaut, Godard, Bunuel, Kechiche, Haneke, Breillat and Audiard. Requirements for this course: completion of 210.301, 201.302, or equivalent score on Placement test. Area: Humanities

AS.212.345. French in Switzerland. 3 Credits.
Nearly 30% of the Swiss are native French speakers. But what do we really know about them, what distinguishes them from French speakers in neighboring France? While the language both speak is identical, their social and cultural practices set them worlds apart: the way they interact socially, engage politically, think imaginatively, engage with nature, cook and even love. This highly interactive course explores the social and cultural practices of the French Swiss and how they came to play a key role in national and international critical and political thought; we will analyze how, in a nation composed of four different language groups and an immigrant population of nearly 20%, the French Swiss contribute to maintaining the country's highest standard of democratic practices; likewise, from an international perspective, we will study how French Switzerland developed a historic role in providing and enabling peaceful forums for international dialogue and peace talks (UN, WHO, UIT, etc.)
Prerequisite(s): AS.210.301 OR AS.210.302
Area: Humanities

AS.212.353. La France Contemporaine. 3 Credits.
Students will explore contemporary French society and culture through a wide variety of media: fiction and non-fiction readings (graphic novels, news periodicals, popular magazines), films, music, art, websites, and podcasts. A diverse range of hands-on activities in addition to guided readings will help students develop cultural awareness as we discuss topics such as education, politics, humor, sports, cuisine, immigration, slang, and national identity, as well as the historical factors that have influenced these facets of French and francophone culture. Recommended Course Background: AS.210.301 or AS.210.302 or permission of instructor.
Prerequisite(s): Students may not have taken AS.211.401.
Area: Humanities

AS.212.363. The French Education System: Culture, Class, Race, and Religion in School. 3 Credits.
This course is an overview of the French education system and questions of race, religion, social class, and culture as they relate to public schools. We will study a variety of art forms including film, music, and literature to analyze the relationship between art, public discourse, and education policy. Students wishing to take the class for French major or minor credit should enroll in section 2.
Area: Humanities

AS.212.402. The Count of Monte Cristo and its Avatars. 3 Credits.
Alexandre Dumas’s Le Comte de Monte Cristo (1844-46) is widely regarded as one of the most popular novels of all time and as one of the best adventure novels ever written. Perhaps no other masterpiece of French literature has been subjected around the world to such countless film adaptations, including animation, television series, and serials. This course aims to study and contextualize the reasons behind this sustained transnational and transcultural interest. Close reading and analysis of Dumas’ novel will provide a good point of departure to explore problems that cut across nineteenth-century French society: politics, social class, revolution, family, love and desire, revenge, justice, science, and religion. Course conducted in French; most films in English or with English subtitles.
Area: Humanities

AS.212.413. For the Record: Jazz Cultures of Modern France. 3 Credits.
Across the 20th century, mainstream and avant-garde French culture was deeply impacted by the presence of African American musicians and performing artists hailing from the jazz tradition. From the Josephine Baker craze of the 1920s to the second post-war which welcomed the innovations of bebop and sixties-era free improvisation, metropolitan France proved a space where expatriate and exiled African Americans could both perpetuate the tradition and innovate by turns. At the same time, French taste-makers, critics, and musicians eager to adopt new forms and styles debated the extent to which American jazz music in its various strains could be made French. This course in transcultural French studies will feature readings in music criticism, history, and literature, as well as frequent close listening. It will culminate in an international symposium (to be held Nov. 15 and 16; attendance mandatory) uniting noted scholars and legendary jazz musicians. Although some background in French language and basic musical notation is desirable (students are encouraged to engage in original-source research), all core course readings will be provided in English.
Area: Humanities

AS.212.422. Esthétique et politique: autour des révoltes de Mai 68. 3 Credits.
What prompts a society to turn its back on tradition and to topple its most sacred institutions? This exploration of the French ‘Sixties’ highlights the cultural ferment behind the historic student/worker revolts of May/June 1968, which brought the nation to a standstill. Through novels, essays, songs, and films, we will examine linkages between authority and desire; thought and action; revolutionary aspiration and the consequences of failed revolt.
Prerequisite(s): AS.211.401 OR AS.212.353
Area: Humanities
AS.212.429. Honors Thesis Prep. 1 Credit.
This course will meet three times during the Fall semester to enable
all French majors to prepare their thesis subject, thesis bibliography,
and abstract prior to the writing of the Senior Thesis (AS.212.430)
in the Spring semester of their senior year. This course is required
of all French majors and must be taken during the Fall semester of
their senior year. Schedule TBA upon consultation with the class list,
as there are only three group meetings. The rest of the meetings are
in individual appointments with the DUS or another chosen French
professor. Prerequisites: AS.212.333-334 and either prior enrollment or
concurrent enrollment in AS.210.417 Eloquent French.
Prerequisite(s): AS.210.417; AS.212.333 AND AS.212.334
Area: Humanities

AS.212.430. French Honors Thesis. 3 Credits.
An in-depth and closely supervised initiation to research and thinking,
oral and written expression, which leads to the composition of a senior
thesis in French. Recommended Course Background: AS.212.429
Area: Humanities
Writing Intensive

AS.212.431. Style, Gender and Politics from Marie-Antoinette to the
Burgini. 3 Credits.
From effeminate kings, to slutty queens, to post-revolutionary dandies,
to the manifest invisibility adopted by some French citizens today,
debates on the gendering and styling of political bodies have always been
central to power struggles in France. Students will read from sociology,
history and literature in order to understand the complex interplay among
fashion, gender and political identity. Taught in English, but French
minor/major credit possible by completing written work in French and
by attending a weekly discussion section conducted in French. Students
interested in the 4-credit French option should enroll in section 2. All
others should enroll in section 1. Special Notes: This course is meant to
be a small class experience. Enrollment limits will be strictly enforced.
Area: Humanities

AS.212.432. The Dreyfus Affair: Lying for Truth. 3 Credits.
In 1894 French military captain Alfred Dreyfus was found guilty of a crime
of treason he did not commit. The true reasons for his arrest are still
under debate today: was this a sheer act of antisemitism? Why did the
army create false proof against a man they knew was innocent? What
was the role of the press in propagating the Affair? This course proposes
to approach the Dreyfus Affair in all its complex forms, while encouraging
students to carry out original and innovative research based on ta wide
range of resources (caricatures and articles in the press, pamphlets,
paintings, films, music, photographs, court transcripts, government
archives, private letters, and hopefully more).
Area: Humanities

AS.212.433. Reason and Revolution. 3 Credits.
The French Revolution in relation to the literature and political thought of
the Enlightenment: Montesquieu, Rousseau, Beaumarchais, Condorcet,
Robespierre, Mme de Stael and the revolutionary theater. Recommended
Course Background: AS.212.333 or AS.212.334. http://www.wilda.org/
Courses/CourseVault/Undergrad/ReasonRev/syllabus.html
Area: Humanities
Writing Intensive

AS.212.436. Cultures of Love. 3 Credits.
From the time of its invention, as a kind of counterfeit religion, in
the Hispano-Arabic world, love has been an unsettling, paradoxical,
transgressive phenomenon: mystical, adulterous, con game, parlor
game, poison, illness. Taking a literary, sociological and anthropological
approach, this course will try to grasp some of the challenges posed by
love’s protean discourse: from the fin’amor born in women-ruled Medieval
courts, to the language of 17th-century women mystics, to libertinage, to
the cold intimacies of today’s emotional capitalism. Taught in French.
Prerequisite(s): AS.210.301
Area: Humanities
Writing Intensive

AS.212.437. Diderot and the French Enlightenment. 3 Credits.
Denis Diderot’s early work was dominated by his work on the natural
sciences and the Encyclopédie. In later years, his literature addressed
the social applications of knowledge: economic, anthropological,
political, and moral issues structured his aesthetic concerns. As an
author in continual conversation with his contemporaries and who was
instrumental in the creation of an engaged intellectual community, his
fiction, philosophical texts and critical works serve as the ideal lens to
bring into focus the peculiarities of the French Enlightenment. Among
the texts to be considered will be articles from the Encyclopédie, the
Supplément au voyage de Bougainville, Le Rêve de d’Alembert, the Salon
de 1767, Le Neveu de Rameau, extracts from his Essai sur les règles de
Claude et de Néron... This class will be taught in French. Recommended
Course Background - AS.212.333
Area: Humanities
Writing Intensive

AS.212.442. Souvenirs de la France occupée 1940-1944 [Memories of
Occupied France, 1940-1944]. 3 Credits.
How have writers and filmmakers active in France since World War
II shaped the collective memory of German occupation, deportation,
and liberation, both forging and contesting myths of the French nation
through the wartime experience of resistance and collaboration? In what
ways do distinct modes of written and audiovisual expression (fiction,
testimony, documentary) conjoin with individual or group perspectives
to color our understanding of France’s “dark years”? See full description
here: http://grll.jhu.edu/french/undergraduate/courses/
Area: Humanities
AS.212.445. French romanticism across the arts. 3 Credits.
This course is designed to introduce you to a glamorous moment in French culture and the arts, namely the first half of the nineteenth-century. This was a time when talent and ingenuity, and a desire to mend the wounds left by war and terror created an aesthetic movement that brought its own form of revolution. What was it like then to be in Paris in the theater, at the ballet, in literary salons, at concerts, at the opera? How did such “cultural productions” shape the imagination and nourish the creative endeavors of many artists and writers? As there was no camera to document this moment, we’ll need to rely on writers to describe or, even better, evoke a universe of new aesthetic experiences that richly shaped the nineteenth-century literary world. What were these new visions and personal dreams? Why the exoticism? What was it like to live in a time that made it possible to carry your heart on your sleeve without ridicule? Literary writings will be our archive, as we explore such cultural offerings as romantic ballet, the stage (both as opera and theater), collaborations between musicians and writers, and translations of major romantic themes across the arts. With the help of texts and visual as well as musical examples, we will try to imagine what it means to declare yourself “un romantique.” Modern film excerpts and productions of romantic art will help us see the lasting effects of this period of cultural effervescence. Among the authors and creators whose work we will study are Victor Hugo, Nerval, Gautier, Baudelaire, Chopin and George Sand, Berlioz., Taglioni, as well as Shakespeare in French. Recommended Course Background: AS.212.302 and either AS.212.333 or AS.212.334
Area: Humanities

AS.212.449. France, terre des migrations [French Histories of Migration]. 3 Credits.
Comme le Canada ou les Etats-Unis, la France est une grande terre d’immigration qui depuis le 19e siècle a accueilli sur son sol des populations du monde entier. En examinant témoignages, textes de fiction et films documentaires, nous suivrons les expériences contrastées de diverses vagues de migrants chassés par la faim, le chômage ou les persécutions. Quels mécanismes ont favorisé ou freiné l’intégration économique, sociale et civique de ces migrants qui ont rejoint la République française? Que veut dire “être immigré” aujourd’hui?
Prerequisite(s): AS.211.401
Area: Humanities

AS.212.452. The Character Function. 3 Credits.
What do we really mean when we talk about a ‘character’ in a discursive work? What are the structuring, esthetic and heuristic functions of such forms of agency? How has the concept of the character evolved from the early modern period to the present day? A sampling of the cases to be considered: Descartes, Racine, Marivaux, Diderot, Rousseau, Napoleon, Michelet, Zola, avatars and ‘digital angels’. This course will be taught in French. Recommended Course Background - AS.212.333
Area: Humanities

AS.212.454. French Theater: Reading and Practice. 3 Credits.
Reading modern theater in French can be exciting: a battle waged with words instead of swords, a battle of wit and of style. The literature of the nineteenth century was marked by major literary battles opposing young Romantic writers against an old school of Academicians. This battle was fought largely in and through the theatre. In this course the classroom space itself becomes a stage in which to reenact or rehearse some of these battles, through careful readings of texts and by exploring all possible literary contexts. Participants will read together a number of plays as well as take part in collaborative learning and creative activities. Readings to include texts by Césaire, Dumas, Hugo, Marivaux, Musset, Scribe, Sartre, and Vigny. Readings and discussion in French.
Area: Humanities

AS.212.470. Censorship in Language and Practice. From the Ancien Régime to Democracy. 3 Credits.
An exploration of the boundaries of acceptability when speaking about religion, government, sexuality and gender. Students will learn about the political, theological and legal basis of blasphemy and punishable behavior, and how they have changed from the time of divine-right monarchy to contemporary laïcité. Selected readings ranging from the clandestine culture of free-thinkers and rakes in the 17th century, to the trials and causes célèbres of the Enlightenment, to modern-day democratic polemics.
Prerequisite(s): AS.210.302
Area: Humanities

AS.212.471. Jules Verne. 3 Credits.
An overview of the corpus of the author of the ‘Voyages extraordinaires’. The patron saint of steampunk authors explored through his novels the transformation of the modern world resulting from the explosion of technological advances in the industrial age, yet he was also an astute and erudite historical thinker, an amateur anthropologist whose work reflected many of the prejudices and challenges of his colonizing contemporaries. A dabbler in the new human sciences and their role in the development of cultural models, he provides a unique entryway into the fin-de-siècle French mind set. This class will be taught in French.
For more information, see http://www.wilda.org/Courses/CourseVault/Undergrad/Verne/Syllabus.html
Recommended Prerequisites AS.212.333 or AS.212.334
Area: Humanities

AS.212.501. French Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
Area: Humanities

AS.212.502. French Indep Study-Lit. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
Area: Humanities

AS.212.598. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
AS.212.651. Romantisme et Indigénisme.
Le romantisme littéraire, en tout temps et en tout lieu, est contagieux. Ce qui a fait la force pérenne du romantisme français au XIXe siècle, c'est sa capacité de susciter de nouveaux modèles en France et de miroiter son élan esthétique au-delà des frontières nationales. Ce séminaire abordera principalement la question du romantisme français et la manière dont ses préludéromanesques ont été appropriées par une ancienne culture coloniale.
Area: Humanities
Writing Intensive

Literary critics from René Girard to Jacques Rancière assert that French literature of the 19th century—its central rhythms of the century—is fundamentally romantic. What does that mean? Is the French novel intrinsically romantic? Our discussion could well start with Girard’s Vérité romanesque et mensonge romantique, which presents a new conception of the novel in correlation with human philosophy, and concludes that the “roman romanesque” is not “romantique,” because romanesque adhered to the truthfulness of its subject while the romantic scenario is linked to its deceit. However, the real theoretical focal point is not the position of contemporary critics on romantic and non-romantic narrative scenarios, but the following characterization from 1903 of the “roman romanesque” by Académician Émile Faguet (1847-1916): “Ce n’est point du tout le roman à aventures extraordinaires et tumultueuses. Celui-là, je l’appellerais plutôt le roman méloDRAMATIQUE. J’entends par roman romanesque celui qui, très délibérément, s’attache à nous présenter des caractères exceptionnels qui ne cessent pas d’être vrais.” The course will introduce the socio-cultural complexity of novelistic forms and techniques of the literary movement familiarly known among the critics as “le roman romanesque français” from the Restoration to the early Third Republic. Readings by Balzac, Constant, Dumas, Flaubert, Hugo, Sand, Staël, and Stendhal. Taught in French.

AS.212.684. Fabrique de la banlieue parisienne [The Making of the Paris Suburbs].
Parler de "la banlieue parisienne", qu’est-ce à dire? Et si ce singulier induisait en erreur? Selon les époques, la banlieue fut tour à tour verte, grise, rouge ou nénouf. Appréhendée à la croisée des discours sur l’urbain et des productions culturelles, elle est le lieu de conflits idéologiques entre le capital et le salariat, entre "le Français" et "tétanger", entre progressisme et nostalgia, entre droit et non-droit. La dialectique qui se tisse entre représentations artistiques (romans, photographies, films), pratiques sociales (arts de faire, modes d’habitation et de déplacement) et représentations idéales (urbanisme, architecture) formera l’objet de ce parcours critique emmariant un siècle de banlieue parisienne. Textes de Céline, Simonen, Queneau, Fallet, Rochefort, Daeninckx, Charef, Djaidani, films de Duvivier, Dhéry, Godard, Rohmer, Cabrera, Ly. *Open to undergraduate French majors with permission of instructor.
Area: Humanities

AS.212.692. Research Methods.
Texts have lives. From handwritten manuscript to digital format, the various incarnations of the literary text have implications for literary scholarship. This course examines the many lives of a literary text and the issues of access, retrieval, and research. From online resources to the core printed reference works, this course acquaints graduate students with the range of scholarly apparatus in the field of literary studies.

AS.212.696. Literature Confronts Science: Zola.
Zola worked with the theories of heredity of his time in the Rougon-Macquart novels. But he also attempted to use his understanding of biology and thermodynamics to reform the theory of the novel in general. This course will examine these two different effects of science on literature and try to see what leads an author to undertake such a project. For a more extended description, please see http://www.wilda.org/Courses/CourseVault/Grad/Zola/Syllabus.html. Advanced undergraduates with sufficient background may register for this course with permission of the instructor.
Area: Humanities

AS.212.699. Cultures of Criticism from the Classics to Foucault.
From fault-finding to the crossover of aesthetic and political judgment, criticism never loses sight of its medical cognates critical and crisis. This course examines the emergence and the transformations of critical judgment in the arts, culture and politics, from the early days of its collusion with French monarchical propaganda, to the critical genealogies of the Enlightenment, to the postrevolutionary critique of history, to Foucault’s critique of practices of veridiction. Works by Perrault, Bayle, Diderot, Rousseau, Tocqueville, Cassirer, Koselleck, Derrida, Barthes, Bourdieu, Foucault. Taught in English; most texts available in translation, but knowledge of French recommended.
Area: Humanities

AS.212.705. Fictions d’espace: geopoetique du roman de langue francaise.
En quoi consiste et par quels moyens se construit l’espace dans les fictions littéraires? Quelles fonctions y jouent les toponymes, les descriptions de lieux ou les trajectoires des personnages? Quels contrats l’écrivain peut-il passer avec son lectorat à l’égard du statut des espaces traversés et décrits, qu’ils se fondent sur le « réel » ou qu’ils soient fabriqués de toutes pièces ? Seront abordées dans cette introduction à la géopoétique narrative des œuvres de Balzac, Maupassant, Giono, Gracq, Duras, Chamoiseau, Sony et Echenoz entre autres.
Area: Humanities

AS.212.707. French Documentary Filmmaking.
Overview of the history of French documentary filmmaking featuring works by Cavalier, Depardon, Epstein, Malle, Marker, Painlevé, Philibert, Resnais, Rouch, Simon, Varda, and Vautier. Emphasis will be placed on the rhetorical functions of editing and on the relation forged among filmmakers, their subjects, and the public. Extensive weekly viewing is required.
Area: Humanities

AS.212.720. Le Livre Antillais: Culture/Écriture.
On s’arrête trop souvent pour souligner l’inexistence d’une véritable sphère du livre lorsqu’on aborde la littérature haitienne, mais assez rarement pour s’interroger sur la place de cet objet dans la fiction. Il semble que la représentation du Livre et ses avatars sont partout dans les œuvres des écrivains antillais depuis le 19esiècle. Car lire et écrire jouent un rôle non négligeable dans la représentation culturelle, esthétique et politique qu’ils se font de leur société qui subit une quelconque tyrannie. Ce séminaire sera consacré essentiellement à la question du livre dans un contexte antillais. Aussi s’interrogera-t-on sur la personne de l’auteur antillais, sa présence dans l’œuvre fictionnelle, sa conception fétilisée du livre et de l’écriture au travers de l’esthétique, du social et du politique, en prenant pour exemples quelques romans de Marie Chauvet, René Depestre, Frankétiennne, Fernand Hibbert, Dany Laferrière, Émile Ollivier, René Philoctète.
Area: Humanities
Writing Intensive
AS.212.725. Poe's French Legacies.
Edgar Allan Poe was considered a vulgar hack by many of his fellow Americans, but in 19th-century France, he was touted as a misunderstood poetic genius, the original _poète maudit_. Through the translations of Charles Baudelaire, who found in Poe a kindred spirit in the “goût de l’infini,” French intellectuals came to know the American writer as a fount of aesthetic sensibility, diabolical sensibility, and mystic mastery. In this course, we will study Baudelaire's poetry as well as the many literary and artistic movements in France that were directly inspired by Poe’s uncanny mix of the macabre and the methodical: Symbolist poetry (Valéry, Mallarmé), the Scientific Fantastic (Maupassant, Villiers de l’Isle-Adam), fin-de-siècle Decadence (Huysmans, Odilon Redon), science fiction (Jules Verne), the detective novel (Emile Gaboriau), and 20th-century Surrealism (Breton, Max Ernst).

Area: Humanities

AS.212.726. Approches géopoétiques: théâtre, poésie, roman.
Chaque genre littéraire développe un rapport particulier à l’espace, tout autant qu’au temps. Au théâtre, l’espace est à la fois abstrait, dans la mesure où le texte théâtral fait subir au monde une réduction à l’extrême, et concret, en ce que la mise-en-scène actualise un ensemble de possibles devant le public. Dans le domaine de la poésie, l'espace fait l'objet d'invocations diverses et changeantes ; il peut être intensément présent ou être renvoyé à l’arrière-plan au profit de la seule voix, siège de la 'conscience' poétique. Le récit de fiction, lui, fort de sa visée mimétique, semble engendrer un imaginaire spatial plus marqué, que celui-ci se crée à partir de topoi communément admis ou qu'il intègre des précisions géographiques ou architecturales, comme le veut l’esthétique réaliste. Le but de ce séminaire sera de confronter ces trois imaginaires de l’espace en littérature, afin d’en arriver à une meilleure compréhension des ressources propres aux textes littéraires et de leur possible théorisation. Ouvrages et articles critiques d’Ubersfeld, Collot, Westphal, Moretti, Bouvet et Camus; œuvres d’expression française, à lire en extenso ou sous forme d’extraits, de Corneille à Koltès, de Lamartine à Glissant, de Voltaire à Volodine...

Area: Humanities
Writing Intensive

What is personal memory? This course offers both an in-depth journey through Proust’s Recherche and a way of tracing major scientific questions about the formation of memory in connection with autobiography and medical history. The process of human remembering – with its counterpart, forgetting – has emerged over the last thirty years as an extraordinarily rich field of investigation as well as of creative endeavors in the arts. Poised between literature and science, this course offers both an in-depth introduction to Proust’s ground breaking modern work on human time, A la recherche du temps perdu, and an investigation into a modern history of memory (a history that unfolds in the nineteenth and early twentieth century, and has made a surprising return in our contemporary understanding of remembrance). That Proust’s petite madeleine should have turned, in recent years, into the magical token of autobiographical recollection and provided, at the same time, an immensely productive clinical and neuro-scientific model of how memory works serves as our point of departure. That human memory is an experience and not merely a biological function – its existence depending on language – will be our running thread. Proust’s book, filled with immensely learned and complex descriptions of mnemonic processes, serves as our case-study. Proust’s investigations into remembering reveal fascinating aspects of the 19th century advances into the psychology and nosography of memory. These will in turn prompt us to read his work in light of present controversies in scientific research, as for example on the construction of memory, on “body-memory,” the interface between cognition and emotion, and the mind/brain debate. As it prompts many questions on the relation between fiction and experience, this journey through major themes of Proust’s quest for memory will invite a broader reflection on the relation between literary and philosophical investigations. Requirements: Short oral presentation and final research paper. Taught in English; reading knowledge of French desirable but not required. Most readings are available in English. Required for this course are vol. I, V, VI of In Search of Lost Time in the 2003 Modern Library edition (ISBN 978-0-375-75154 – 1 and 4 and 7). For a copy of the syllabus, with a list of main recommended readings, available in mid-June, please write to e.ender@jhu.edu

Area: Humanities

Throughout his life Rousseau presented himself by turns as the citizen of a Republic, a stateless outcast, the resident of a vanishing homeland of the heart, and the focal point of an international conspiracy. He invented new foundations for political communities that could never be implemented or were severely misunderstood during the revolutionary Terror. The families he portrayed were both patriarchal and defiantly anti-normative. He affirmed his desire to belong and insisted on his irreducible difference; he extolled friendship and engineered breakups. Through readings of Rousseau’s major political, autobiographical and fictional works we shall examine how and why communities, personal identity and citizenship are alternately built and destroyed. Course open to undergraduates.
AS.213.251. Freshman Seminar: Friedrich Nietzsche. 3 Credits.
Nietzsche’s writings continue to inform contemporary thinking about morality, psychology, art, culture, and politics. He started out as a daring scholar of Greek antiquity, went on first to advocate and then to repudiate a grand project of cultural renewal, and eventually transformed his authorial persona into the site of an unprecedented theoretical experiment in which the most cherished ideals of Western culture were turned against themselves. In discussing his works we will focus on such themes as the struggle to affirm life in the face of the challenge of nihilism, modernity, cultural decadence, selfhood and individualism, the status of nature, and the effort to overcome metaphysical thinking. Close attention will be paid to the strategies of writing through which Nietzsche negotiates the conflict between intellectual integrity and aesthetic appeal, truth and illusion.
Area: Humanities

AS.213.270. Die Erfindung der Moderne. 3 Credits.
Taught in German. An introduction to key conceptions of modernity elaborated in the German-language cultural context. We consider the rise of historical awareness and the question of whether history has a purpose, modernity’s difference from ancient and medieval times, secularization and the crisis of meaning, the role of intellectual reflection and subjectivity, the relation between cultural production, political power, and economic processes. Excerpts in the original German from works by Kant, Schiller, Novalis, Hegel, Heine, Marx, Nietzsche, Weber, Benjamin, Heidegger
Prerequisite(s): AS.210.362 or placement exam.
Area: Humanities

AS.213.271. Trust: Literature and Philosophy. 3 Credits.
Fake news, policing crises, political polarization, and the like challenge us to reevaluate the notion of trust. The course takes up this challenge with the help of both literary and philosophical texts that shall assist us in posing, and trying to answer, questions such as the following: What or whom should we trust (ourselves, others, neither)? Is it possible and sometimes even preferable not to trust? Or should we cultivate trust in society? If so, how? Authors may include ETA Hoffmann, Hegel, Nietzsche, and others.
Area: Humanities
Writing Intensive

AS.213.303. Mini-Term: Feminist and Queer Theory: Past and Present. 2 Credits.
This course familiarizes participants with central texts in contemporary feminist and queer theory. We will read, discuss and engage with selections by Judith Butler, Gayatri Spivak, Jack Halberstam, Maria Lugones and Claudia Rankine. Many of these theorists, directly or indirectly, refer to philosophic concepts such as those addressed by the German Jewish thinker Walter Benjamin. We will therefore also examine a few philosophic echoes of these contemporary feminist and queer voices in 20th century German philosophy.
Area: Humanities

From exoticist features of the 1920s and 1930s and political works of the 1960s, to family sagas and personal essays looking back on a conflicted past from the standpoint of the new century, Algeria has featured prominently in the French cinematic imaginary. The independent North African nation has likewise produced compelling narratives that address the colonial legacy, the armed struggle for independence and its aftermath. Addressing from both sides of the Mediterranean an entangled political and cultural history, this course places in critical context conflicting screen representations as well as the institutions, individuals, and publics associated with them. The course will be taught in English, however most course materials will be in French. Undergraduates may take with permission of the instructor and completion of AS.212.333 and AS.212.334. Graduate students need not have completed the prerequisite courses.
Area: Humanities

AS.212.768. Norms and Forms of Academic Communication.
How to write a book review, an article, a conference paper; how to choose the appropriate journal for publication.
Area: Humanities
Writing Intensive

AS.212.778. Les écrivures contemporaines aux confins des genres [Contemporary French Writing Beyond the Genres.
Area: Humanities

AS.212.785. The Enlightenment and its Critics.
Are imperialism, universalism, soulless rationalism, reckless exploitation of nature, and social engineering the legacy of a so-called “Enlightenment project,” as many have argued in the wake of World War II? This course explores some core aspects of that critique, from Rousseau to Foucault, while testing them against examples of the plurality of discursive practices that we call Enlightenment. Readings and discussion in French. Course open to undergraduates with the instructor’s permission.
Area: Humanities
Writing Intensive

AS.212.801. French Independent Study.

AS.212.802. French Dissertation Research.

AS.213.205. Outsiders, outlaws, outcasts. 3 Credits.
Introduction to the close reading of German-language literature in the original. We read and discuss literary works in which experiences of crisis give rise to novel forms of selfhood. Authors may include Tieck, Kleist, Büchner, Drost-Hülshoff, Heine, Keller, Storm, Kafka, and others. We will ask how narrative form can represent breakdowns in established ways of sense-making. Attention will be paid to writers’ divergent responses to the challenges of modernity. Readings, discussion, and writing assignments in German.
Area: Humanities
AS.213.304. German Aesthetic Thought. 3 Credits.
Central to modernity is the idea that certain perceptual experiences are worth having for their own sake, even if they do not directly serve any moral, political or cognitive aims. Aesthetics emerged in the eighteenth century as a theory of such experiences, and among them especially of the beautiful and the sublime. It soon became increasingly concerned with questions regarding the significance of art as a privileged realm of human production and experience. In the German-language intellectual lineage that begins with Kant, aesthetics moved from the margins of theoretical attention to its very center, where it could engage with some of the most pressing dilemmas of modernity. We read excerpts from relevant theoretical texts (Kant, Schiller, the early Romantics, Hegel) as well as texts that perform model cases of aesthetic reflection in relation to concrete works of art (Lessing, Kierkegaard, Nietzsche, Benjamin, Adorno).
Area: Humanities

AS.213.308. Schweigen in der Familie. 3 Credits.
We will study the psychic afterlives of involvements in WW1, National Socialism and the state security service of the GDR. In particular, we will focus on (auto-)biographical and documentary films examinations of perpetrators in the family. Within the family, these stories are often shrouded in silence but nevertheless handed down across generations in powerful, less-than-explicit, and often distorted ways. Drawing on philosophy and psychoanalysis, we will discuss how the need for silence meets the need to hear and to talk. Recommended Course Background: AS.210.362.
Area: Humanities

This course provides students with an introduction to thought foundational to Critical Theory. We will explore major concepts such as reason, genealogy, and freedom. Students can expect to gain familiarity with works that have proven immensely influential in modern Europe and beyond, but will also be expected to consider ways in which such thinking has relevance for today’s world. The readings, though provided in English, are primarily from the German-language tradition. Participation in discussions and a short paper dealing directly with ideas from at least one unit will be required.
Area: Humanities

AS.213.321. Bodies and Pleasures. 3 Credits.
Taught in English. This course traces a literary history of sexuality from the Middle Ages to contemporary women’s writing. We will analyze how sexual pleasure changed over time. In particular, we will discuss what role literature plays in the reproduction and transformation of bodily pleasures. The course explores how the pleasures of bodies are imagined in and through literature, but also whether words are bodies that give pleasure and perhaps even have their own pleasures. Authors discussed will include Boccaccio, Cleland, Rousseau, Schlegel, Kleist, Hoffmann, Novalis, Arnim, Büchner, Freud, Rilke, Kafka, Rich, Foucault, Kristeva, Cixous, Giddens, and Winterson.
Area: Humanities

AS.213.324. What is Jewish Culture?. 3 Credits.
We talk about Jewish literature, music, and art— but can a book, or a song, or a painting be Jewish? We will examine the premises of this question and the many answers that have been formulated in response to it focusing on modern European (and some American) culture. Jewishness as it relates to human identity has been conceived of as related to religion, ethnicity, race, nation, language, geography, and politics. But these keywords have also been used to engage with the question of the Jewish identity not of a person, but of a cultural product. To understand the implications of calling, say, a book Jewish, we will examine the history of the concept of culture and its emergence in the context of the formation of modern Jewish identity. We will examine theoretical and literary texts originally written in German, Yiddish, Hebrew, and English, as well as painting, photography, film, and architecture from Europe, Israel and the Americas. We will aim to arrive at an understanding of the ways that the idea of culture intersects with the formation of Jewish identity in modernity. All readings will be in English.
Area: Humanities

AS.213.328. German Literary Modernism. 3 Credits.
Taught in English. German Literary Modernism focuses on modernist works of literature between 1900-1930, considering central modernist authors against the backdrop of dramatic changes and events in European culture and society, including urbanization, technological change, the First World War, and social and artistic movements. Students will engage literary works—by such authors as Kafka, Rilke, Hofmannsthal and Thomas Mann— that express a sense of crisis about modern life, or provoke questions about the nature of reality, the human self, the reliability of perception, and the possibilities of language and art. Students have the option of an additional hour of German discussion and doing all the assignments in German for German-language credit (3+1) towards the major or minor. Students interested in that option should register for section 2.
Area: Humanities

AS.213.334. Kafka. 3 Credits.
Franz Kafka is one of the most important — and one of the most challenging — writers of the twentieth century. This course will investigate why both are true. We will analyze a wide range of his works and learn “how” to read Kafka. We will become familiar with his characteristic subjects: law; family; power; institutions; modernity. We will also attempt to become familiar with his characteristic forms and style and attempt, in the process, to find out what makes Kafka “kafkaesque.” We will also consider his impact on art, literature, film, and thought from his time to the present. All readings in English. German majors/minors should enroll in section 02.
Area: Humanities

AS.213.340. Flucht und Migration: Literarische Erkundungen. 3 Credits.
We will study how contemporary German literature reflects the experiences of migrants and refugees. Jenny Erpenbeck’s novel Gehem, ging, gegangen (2017) and Sasha Marianna Salzmann’s novel Außer sich (2018) will serve as our main examples, complemented with shorter texts and other material on the historical and political contexts.
AS.213.346. Uncanny Realism. 3 Credits.
Dominant in the second half of the 19th century, realism was a literary movement whose representatives devoted close attention to the quotidian particulars of a social world caught up in the transformations of modernity. Its German-language variants were often intensely local, portraying regional forms of life (in Westphalia, the Austrian and Swiss countryside, Frisia, Berlin and Brandenburg) with a richness of detail approaching that of ethnographic descriptions. Far from confining themselves to giving literal-minded inventories of observable facts, these authors portrayed social worlds haunted by intangible powers: ghosts, historical memories, and vestiges of religious experience in an increasingly secular world. We will explore this duality of local and spectral features in the works of Droste-Hülshoff, Stifter, Keller, Storm, and Fontane.
Prerequisite(s): AS.210.362 or equivalent
Area: Humanities

AS.213.350. Wie wir begehren. 3 Credits.
Taught in German. Human desire and sexuality proves of vital concern in German-speaking countries: from the invention by German sexologists of much of the terminology still in use today to the so-called sexual revolution in the late sixties to new perspectives on the topic today. We will study film, fiction and non-fiction. Recommended Background: AS.210.362
Area: Humanities

AS.213.354. Introduction to German Poetry. 3 Credits.
This class will introduce students to German poetry from the eighteenth to the twentieth century. We will read selected poems by Goethe, Eichendorff, Mörike, George, Hofmannsthal, Rilke, Trakl, Celan, and Bachmann. In addition we will read several theoretical reflections on poetry by literary critics and philosophers which examine the lyric form and the curious world that poetry constructs. Readings and discussion in German.
Area: Humanities

AS.213.359. Kleist. 3 Credits.
Heinrich von Kleist was one of the most intriguing literary figures of the early nineteenth century in Germany. Neither Classicist nor Romanticist, he developed a unique style that combines such different elements as complex rhythmical, drastic imagery, and philosophical precision. His novellas, plays, and nonfiction prose explore questions of gender, colonialism, the tragic, and of innocence and double dealing. Among the texts we will read together are 'The Betrothal in St. Domingo' (Kleist's literary response to the Haitian revolution), 'Penthesilea' (the play about lovers who can find each other only in war ends in a splatter scene), and 'Marquise of O' (the story of a woman whose father rejects her because she finds herself pregnant, and yet she has no memory of the sexual intercourse that must have led to her current situation). Language of Instruction: German
Area: Humanities

AS.213.374. Existentialism in Literature and Philosophy. 3 Credits.
This course explores the themes of existentialism, including the meaning of existence, the nature of the self, authenticity and inauthenticity, the inescapability of death, the experience of time, anxiety, freedom and responsibility to others, in literary and philosophical works. It will be examined why these philosophical ideas often seem to demand literary expression, or bear a close relation to literary works. Readings may include writings by Kierkegaard, Nietzsche, Dostoevsky, Heidegger, Rilke, Kafka, Simmel, Jaspers, Buber, Sartre, de Beauvoir, and Camus.
Area: Humanities
Writing Intensive

AS.213.378. Seeing the World by Foot. 3 Credits.
TAUGHT IN GERMAN. Few traditions have placed more emphasis than German literature on the importance of walking for finding one's way on earth and in the cosmos. From Schiller and Novalis to Thomas Bernhard and Werner Herzog, walking has been conceived not only as a journey outwards but also inwards into uncharted terrain of memory, the unconscious, and the imagination. In this course we will read short texts on wandering by Schiller, Chamisso, Goethe, Novalis, Tieck, Stifter, Walser, Bernhard, Herzog and Sebald with an eye toward the relationships that walking establishes between past and present, reality and imagination, time and space and inner and outer experience. Prerequisite(s): AS.210.361 AND AS.210.362
Area: Humanities

AS.213.380. Ghost Stories, Haunted House and Other Occult Phenomena. 3 Credits.
From the eighteenth century to the modern period, German authors have been obsessed with uncanny phenomena that blur the line between the natural world and the supernatural world of ghosts, spirits, and magic. We will explore the encounter with otherworldly phenomena in this course with a special emphasis on the status of literature as a play of semblance or collection of shadows. Why have ghost stories been so persistent in the modern era when science and reason are said to dominate our understanding of the world? Is the occult the dark side of science? What kind of knowledge does literature yield? What can literature tell us about what is random, obscure, or inexplicable? Area: Humanities

AS.213.383. Jewish Travel Literature. 3 Credits.
Exile; Diaspora; Wandering; Refugee; Immigrant—these are all keywords that have been closely associated with Jews and the Jewish experience. What binds them all is movement, whether individual or communal, voluntary or involuntary. This course will examine the connection between movement and Jewish culture and history through the various forms of Jewish travel writing. In looking at depictions of travel both fictional and historical from the Middle Ages to the 20th century we will revisit and interrogate many of these keywords to understand the ways they have been deployed to understand Jewish identity in literature and beyond. A central point of consideration will be the role of travel in shaping conceptions of Jewish identity as well as Jewish literature in the modern period. We will examine novels, short stories, reportage, and travelogues describing real and imagined journeys from and to Asia, the Middle East, Europe, and America. All readings will be in English translation, primarily from sources in Yiddish, Hebrew, and German.
Area: Humanities
AS.213.407. Museums and Identity. 3 Credits.
This course will explore the phenomenon of the “identity” museum through case studies involving Jewish and Holocaust museums around the world. The museum boom of the last half-century has centered in large part around museums dedicated to the culture and history of particular minority groups; recent notable (and relatively local) examples include the brand new National Museum of African American History and Culture in Washington and the National Museum of American Jewish History in Philadelphia. Our understanding of the contemporary theory and practice of such museums will be based on an examination of the history of the various museological traditions that engage Jewish identity from the 19th century to the present, including the collection and display of art and antiquities, ethnographic exhibitions, history museums, and Holocaust museums. We will deal with two primary museological phenomena: first, the introduction of the “primitive other” into European modernity via ethnographic museums; second, the museological commemoration and representation of trauma, specifically of the Holocaust. We will explore these topics through historical documents, theoretical readings, and case studies including visits to nearby museums. All readings in English.
Area: Humanities

AS.213.423. Reflections on Modernity. 3 Credits.
Taught in English. Reflections on Modernity takes up the problems conflicts, and possibilities of modernity in aesthetic, literary, and philosophical texts. Questions about the modern self, our relationship to nature, to urban experience, to history and language, and the role of the artist and writer in reflecting on modern life. Texts include works by such authors as Kant, Nietzsche, Baudelaire, Weber, Rilke, Hofmannsthal, Simmel, Heidegger, Habermas, Foucault.
Area: Humanities

AS.213.433. Fictional Autobiographies and Autobiographical Fiction. 3 Credits.
This course will examine fictional works that pose as memoirs or autobiographies, which is not a genre unique to the twentieth century but which rose to prominence in the modern period as a result of historical developments. We will consider the aesthetic presuppositions that gave rise to the novel and culminated in the great realist narratives of the nineteenth century that claimed to do nothing less than represent real life situations. Novels such as Robert Walser’s Jakob von Gunten, Thomas Mann’s Felix Krull, Bernhard’s Auslöschung, Beckett’s Malone Dies, and Coetzee’s Waiting for the Barbarians call these assumptions into question by focusing on the inner life of a hero who lives only in writing and writes to live. Fictional autobiographies provide a fertile ground for reconsidering such issues as what it means to tell a story and whether life takes the form of a story, which have gone unaddressed in narrative theory.
Area: Humanities

AS.213.446. Nature and Ecology in German Literature and Thought. 3 Credits.
Nature and Ecology in German Literature and Thought considers the understanding and representation of the natural world in literary works and aesthetic theory from the 18th to the 20th centuries. We will consider such topics as poetic reverence for nature, anthropocentric representations of nature in literature, the thematization of landscape, the representation of animal life, the distinction between the human and animal as explored by literary writers, and ecologically-oriented critique of human consciousness. Readings may include works by such writers and thinkers as Goethe, Kant, Hölderlin, Nietzsche, Heidegger, Rilke, and Kafka, and more recent works of literary ecocriticism.
Area: Humanities

AS.213.501. Independent Study - Literature. 0 - 3 Credits.

AS.213.510. German Honors Program. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.213.616. The Aesthetic Discourse of Modernity.
When, in 1985, Jürgen Habermas published his lectures on The Aesthetic Discourse of Modernity, he pursued a double aim. He offered a critique of French Theory while at the same time providing a foundation for a normative category of modernity in the tradition of Hegel. Curiously there is one subject he does not touch on, though it seems necessary for a sufficient understanding of modernity: the realm of art and literature. This course will develop a critique of Habermas’ normative notion of modernity through re-readings of texts by Nietzsche, Benjamin, Horkheimer/Adorno, Derrida, Bataille and Foucault to elaborate an alternative category of aesthetic modernity. Taught in English. Reading knowledge of German and French is not required, but recommended.
Area: Humanities

AS.213.618. Nietzsche.
The first premise of this seminar is that Nietzsche’s works are not simply expositions of ideas. Rather, they testify to an effort to overcome nihilism, that is, to make a life of writing worth living by turning it into an enthralling experiment in which basic tenets of Western culture are pitted against themselves. Our second premise is that this project cannot be adequately understood without attention paid to the peculiar German form of cultural crisis that confronted the young Nietzsche, the characteristically German turn to Greek antiquity that defined his beginnings, and the grand project of national renewal to which he dedicated his energies during his early alliance with Wagner—the encounter with whom Nietzsche continued to view as the most important event of his life even after he repudiated Wagner. The selection of works we discuss will therefore be bookended on one end by The Birth of Tragedy and a few other early writings, and on the other end by Nietzsche’s final settling of scores with Wagner. A recurrent theme will be the shifting relation between aesthetic delight and the will to truth in Nietzsche’s writings.
Area: Humanities
AS.213.636. Hölderlin and His Readers.
Hölderlin’s works develop vast intellectual constructions in a poetic language of striking rhetorical power, while remaining anxiously concerned with the conditions of lyric utterance. Although his work responded to the literary and philosophically currents as well as the revolutionary politics and Philhellenism of his time, it proved untimely. Yet the same severe features that alienated contemporaries would lead such 20th-century poets as George, Rilke, and Celan to celebrate and emulate Hölderlin. We will examine how Hölderlin’s early contributions to post-Kantian idealism paved the way for his poetic project, as well as his odes and elegies, and some of the poetological writings. The late hymns will be discussed in detail against the backdrop of Hölderlin’s engagement with ancient tragedy and his Empedoclean studies. Since Hölderlin’s works have elicited literary criticism of the highest order as well as influential reflections on the aims and challenges of literary interpretation, our readings of Hölderlin will proceed in dialogue with such critical responses.
Area: Humanities
Writing Intensive

AS.213.639. On the Difficulty of Saying I.
This course takes as its point of departure the position that language carries within it the traces of something that exceeds the cognitive grasp of the subject and to this extent undoes any claim to knowledge the subject might make. This position has been central to twentieth and twenty-first century thought from psychoanalysis and poststructuralism to media theory and new materialism. This course will not take issue with this position. It will examine instead how this position evolved from the Idealism of Fichte to the eerily inhuman, if not mechanical, talking figures in texts by Novalis ("Monolog"), Poe ("Maelzel’s Chess Player"), Hoffmann ("Die Automate"), Büchner (Leonce und Lena), and Kafka ("Ein Bericht für eine Akademie"). We will explore the literature of the personal and impersonal in romantic and modernist texts in order to ask what moves and motivates works in which the first-person narrator would seem to be nothing more than a fiction—a staged phenomenon or a mechanical device.
Area: Humanities

AS.213.643. Franz Kafka in Philosophical and Literary Perspective.
This course is devoted to close study of the writings of Franz Kafka from both philosophical and literary perspectives. The course will include Kafka's short prose works and novels along with philosophical and literary critical interpretations thereof. Readings may include commentaries by Walter Benjamin, Theodor Adorno, Hannah Arendt, Albert Camus, Giles Deleuze, and Giorgio Agamben. Primary texts for students from the German section will be in original; any other students may read Kafka in translation.
Area: Humanities

AS.213.656. Thinking of the Environment.
Few concepts are more anthropocentric than the environment. Although the term is usually invoked to describe what is other than the human being, it places the human at the center of the universe by defining nature as the world surrounding him. This course will examine various literary and philosophical texts from Novalis to Celan that approach nature as a sphere alien to thought, which can never be known except through the rhetorical device of prosopopoeia, which gives face to what is inhuman. Readings to include works by Novalis, Schlegel, Tieck, Stifter, Rilke, and Celan.
Area: Humanities

AS.213.664. Dirt.
Near the outset of Büchner’s “Lenz,” the protagonist seeks to impress himself into the earth, “[E]r dehnte sich aus und lag über der Erde, er wühlte sich in das All hinein, es war eine Lust, die ihm wehe tat.” This course will examine the desire to merge with the surface of the earth and to become a planetary body, at once utterly material and utterly ethereal. The earth’s crust will emerge as the interface between cosmic forces and human existence, the atmosphere and the pedosphere. We will consider how history, biography, and geological time intersect in dirt, or what William Bryant Logan has recently called the “ecstatic skin of the earth,” in texts by Goethe, Alexander von Humboldt, Novalis, Nietzsche, Büchner, Walser, Rilke, Kafka, and Sebald.
Area: Humanities

AS.213.670. Theories of the Human in German Modernity.
Fifty years ago Michel Foucault advanced the influential argument that modern thought foundered on the circular undertaking to ground the possibility of human knowledge in actual knowledge of the human being. We survey various conceptions of the human developed in German modernity with a view to Foucault’s diagnosis. Against the background of pre-modern and early modern conceptions of the human, we focus on the tradition of anthropological thinking inaugurated by Herder, including spin-offs of German idealism in the writings of the later Schelling, Schopenhauer, and Marx. We consider the rivalry between twentieth-century philosophical anthropology (Plessner) and Heideggerian fundamental ontology, Hans Jonas’ phenomenology of the human, as well as recent disputes regarding the significance of the human standpoint.
Area: Humanities

AS.213.677. Impossible Intimacy.
Reading Ingeborg Bachmann and Elfriede Jelinek, we will analyze the condition of heterosexuality after fascism. “Fascism lies at the root of the relationship between a man and a woman,” Bachmann argues. And Jelinek continues to uncover structures of sexism, sadism and submission in the German language.
Area: Humanities
Writing Intensive

AS.213.679. Haitian Revolution: German Responses.
We will explore how contemporary German writers and thinkers reacted to the Haitian Revolution, what their interests were, and how later generations of readers responded to earlier reactions, perhaps tried to do better and used the historical material for their own purposes. Possible authors: Hegel, Humboldt, Kleist, Zschokke, Seghers, Müller, Fichte, Buch, Öziri and others.
Area: Humanities

AS.213.687. Imagination in Philosophy and Literary Theory.
Imagination in Philosophy and Literary Theory is devoted to studying theories of imagination in the history of philosophy and literary theory, from the ancient Greeks to the present day. We will study philosophical conceptions of the role of imagination in memory, cognition, perception, and creativity, and assess traditional philosophical oppositions between imagination and reason, the imaginary and the real. Readings may include selections from Aristotle, Kant, Coleridge, Nietzsche, Husserl, Heidegger, Merleau-Ponty, Sartre, Dufrenne, Stevens, Iser, Ricoeur, Ryle, Wittgenstein, and Nussbaum.
Area: Humanities
AS.213.701. The Frankfurt School.
Founded in the interwar years, the Frankfurt School gave rise to an array of reflections on modernity, emancipation, and ideology that have continued to inform critical theory and are now eliciting renewed interest. In this seminar we focus on various models developed by Frankfurt School theorists for approaching cultural phenomena. Following a brief review of Hegelian and Marxian legacies at work in the Frankfurt School, we consider relevant works by Walter Benjamin, Siegfried Kracauer, Max Horkheimer, and Theodor W. Adorno.

AS.213.705. Hegel’s Phenomenology of Spirit.
We will study key passages of The Phenomenology of Spirit from a queer-feminist perspective and engage with some of the feminist scholarship on Hegel.

Area: Humanities

This course takes as its point of departure Klopstock’s efforts to model German poetry after music—“the harmony of the spheres”—which served as the impetus for Goethe’s and Schiller’s poetry and Hölderlin’s late hymns. We will examine his experiments with verse form and his notion of interiority as the backdrop for Herder’s theory of the Volksspiel as a popular genre that joins word and music and expresses the soul of a nation. Music and poetry will emerge on the one hand as the glue that binds a community and on the other as a disruptive force that isolates its members. Its significance as a figure if not vehicle for transcendence will return again and again in works as varied as Achim von Arnim and Brentano’s Des Knaben Wunderhorn, Kleist’s “Heilige Cäcilie,” Hölderlin’s poetological writings, Schopenhauer’s Die Welt als Wille und Vorstellung, and Nietzsche’s Geburt der Tragödie among other texts.

Area: Humanities

The course will focus on the aesthetics and discourse of “New Objectivity” in Weimar German literature. The ideals of sobriety and coldness called for a direct and unadorned view of the routines of modern work and love and found proponents not only among writers of the avant-garde but also, and with less fanfare, among authors who worked in popular genres like adventure novels. In this course, we will investigate how the desire for objectivity responded to a cultural crisis in the aftermath of World War I and how it guided the choice of genres (biography, reportage, non-fiction, modernist novel) as well as encouraged factographic styles of writing. Authors to be discussed include Egon Erwin Kisch, Joseph Roth, Siegfried Kracauer, Ilja Ehrenburg, B. Traven, Irmgard Keun, Gabriele Tergit, and Marieluise Fleißer. Class discussion will be in English or German depending students’ preferences. Reading will be in German.

Area: Humanities

AS.213.757. Rilke.
The concept of the “Weltinnenraum” has long dominated Rilke scholarship as a result of its two-fold sense as both the Innenraum der Welt and the Weltraum des Inneren. In this it captures the seeming autonomy of the world of things, characteristic of the New Poems, as well as the exploration of the cosmic dimensions the self, characteristic of the late work. This course will concentrate on the Duino Elegies and Sonnets to Orpheus with emphasis on the transformation of both world (or nature) and consciousness into song. In addition to Rilke’s poetry, we will also read texts by Husserl, Heidegger, and Merleau-Ponty. Taught in English.

Area: Humanities

AS.213.761. Literary Aesthetics.
This course explores literature in the context of the aesthetic tradition in philosophy. Themes include literature as mimesis, or the representation of reality, its relation to truth, untruth, and possibility, literature as the revealing of being, literary imagination, the distinctiveness of literary language and expression, the role of the literary author. Readings may include background selections from Plato and Aristotle, but the course will focus on philosophical interest in literature since the late 18th century, and may include Kant, Hölderlin, Nietzsche, Heidegger, Sartre, Blanchot, Bachelard, among other readings. Course will be taught by the Kurrelmeyer Chair in German. Taught in English.

Area: Humanities

AS.213.763. Contemporary Theater: Gender/Violence.
The course explores 21st-century German theater in its diverse aesthetic and textual forms. Due to comparatively generous funding, German non-commercial theater has over the last decades been able to develop, adapt, and maintain a great variety of at one point “experimental” artistic styles, including frequently stark depiction of gender and violence. We will focus on the ways in which the productions take up, amplify, displace, disrupt, and/or reinforce cultural codes and images of gender and violence both in their symbolic and physical dimension. Topics include the “directors’ theater,” political theater, “pop-theater,” “discourse-theater,” “new documentary theater,” “post-migratory theater,” postcolonial theater and live art. The readings may include Nobel laureate Elfriede Jelinek, Dea Loher, René Pollesch, Milo Rau, Falk Richter, Sasha Mariana Salzmann and various works of shared authorship such as Shé She Pop, Rimini Protokoll, Gintersdorfer/Klaßen, and Yael Ronen. The Tuesday sessions will be used for the joint viewing of production recordings. Taught in English. Course material in German. No sessions after March 27th.

Area: Humanities

AS.213.800. Independent Study-German.

AS.213.811. Advanced Reading in German Literature.
Students will read works in German from a variety of authors. Sessions with faculty will be arranged on an individual basis, as needed.

Area: Humanities

AS.213.813. German Qualifying Paper Preparation.

AS.214.176. Freshman Seminar: Warrior Women from Ancient Times to Game of Thrones. 3 Credits.
Dean’s Teaching Fellowship This course will trace the origins of the warrior woman from ancient times through today’s pop culture and reflect on the multiplicity of its social, cultural, and political ramifications.

Area: Humanities
AS.214.321. The Prince and the Demagogue: Machiavelli to House of Cards. 3 Credits.
Niccolo Machiavelli's The Prince is undoubtedly one of the most influential political works in the history of western culture. Read and discussed in many ways, the early-sixteenth-century booklet has been the object of controversial interpretations, which have fueled its myth. Who is Machiavelli's prince? Is he a tyrant, a good ruler, or a demagogue? How does Machiavelli's prince move between ethics, politics, and rhetoric? Often evoked in contemporary political discourse and popular culture, Machiavelli's prince embodies a flexible idea of power that is most difficult to pin down. Moving from a close reading of the text within its original context, this course will consider not only the classical sources that inform The Prince, but also the presence of Machiavelli in today's political culture and fiction. Special attention will be given to the contribution of Italian philosopher Antonio Gramsci, whose interpretation of Machiavelli's thought is one of gateways to the reception of The Prince in the 20th and 21st centuries. The course is taught in English. Italian Majors and Minors should register for section 02.
Area: Humanities
Writing Intensive

AS.214.362. Italian Journeys: Medieval and Early Modern. 3 Credits.
A journey through early modern Italy, from the cultural centers (Florence, Venice, Rome, etc.) to the peripheries, this course will trace the development of the Italian literary identity from a civic and cultural perspective. How do we live our best lives? How do we create a good and just society? These enduring quandaries were fundamental points of consideration for the humanist scholars of early modern Italy. Drawing from the wisdom of their ancient Roman legacy — along with their own striking innovations — they forged a new and glorious cultural tradition. Using literary, philosophical and historiographical sources from antiquity through the early modern period (Cicero, Aristotle, Dante, Petrarch, Boccaccio, Machiavelli, Ariosto, Tasso) we will explore the cultural and civic history of Italy, paying particular attention to themes of community, identity and the ethics of citizenship. The course is taught in English with section 02 available in Italian for Italian Majors and Minors to fulfill their requirements.
Area: Humanities
Writing Intensive

AS.214.363. Italian Journeys: Modern and Contemporary Literature. 3 Credits.
Marvels, Monsters, Misfits, Brutes: Peripheries of the Human in Italian Literature. Where does the human end and the non-human—or in-human —begin? Who—or what—inhabits the peripheries of the human? And what conditions beget those peripheries in the first place? This course will examine how Italian thinkers and creatives have grappled with these questions over the past 150 years, a period during which Italy and its citizens have witnessed both great growth and great turbulence. The first half of the course, "Marvels & Monsters," will focus on works that challenge the division between humans and the (super)natural world through fantastic creatures and landscapes. The second half, "Misfits & Brutes," will turn to the question of social peripheries: that is, how literature has given voice to the marginalized and dehumanized in Italy. We will explore topics like Fascism, the Holocaust, the Southern Question, the mafia, Italian environmentalism, Italian feminism, and Mediterranean immigration. Primary texts include poems, novels, plays, films, songs, and music videos; authors include Leopardi, Verga, Pirandello, Morante, Fellini, Calvino, Levi, Sorrentino, and Scego. Students wishing to do coursework in Italian for major/minor credit should register for AS.214.363.02.
Area: Humanities
Writing Intensive

AS.214.477. Magic, Marvel, and Monstrosity in the Renaissance. 3 Credits.
Magic, Monstrosity, and Marvels or Wonders call into question what we see and experience: what is reality, what is illusion; what's natural and what's supernatural? What's human and what's more, or less, than human? During the Renaissance, ideas about the nature of reality were bound up with questions and issues very different from those of our time. With the exact sciences still being invented, the nature of the world was much less hard and fast for Renaissance people than it is for the modern educated person. The literary masterpieces of the Italian Renaissance provide vivid illustrations of the early modern sense of wonder. Foremost among these are the theatrical comedies which Italian authors revived in imitation of the ancients, and the romances, especially Ariosto's Orlando furioso (1532) and Tasso's Gerusalemme liberata (1581). These and other works influenced ideas about magical and marvelous phenomena across Europe for centuries to come. Works will be read and discussed in English. Italian majors and graduate students (who should enroll in section 2) will attend a weekly supplemental discussion in Italian and compose their written work in Italian.
Area: Humanities
Writing Intensive

AS.214.479. Dante Visits the Afterlife: The Divine Comedy. 3 Credits.
Dante's Divina commedia is the greatest long poem of the Middle Ages; some say the greatest poem of all time. We will study the Commedia critically to find: (1) What it reveals about the worldview of late-medieval Europe; (2) how it works as poetry; (3) its relation to the intellectual cultures of pagan antiquity and Latin (Catholic) Christianity; (4) its presentation of political and social issues; (5) its influence on intellectual history, in Italy and elsewhere; (6) the challenges it presents to modern readers and translators; (7) what it reveals about Dante's understanding of cosmology, world history and culture. We will read and discuss the Commedia in English, but students will be expected to familiarize themselves with key Italian terms and concepts. Students taking section 02 (for 4 credits) will spend an additional hour working in Italian at a time to be mutually decided upon by students and professor.
Area: Humanities
Writing Intensive

AS.214.561. Italian Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.214.562. Italian Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.214.640. Film Theory.
The seminar deals with film theory in its history and its current trends. We will examine structuralist, post-structuralist, feminist, Marxist, psycho-analytic and other theoretical approaches to understanding and interpreting the cinematic medium. We will look at several different genres of contemporary films from Italy, France, Spain, and Latin American Film, from auteur-films to independent documentary collectives, animation films to blockbusters. We will invite at least one film theorist and one filmmaker to class during the semester.
Area: Humanities
In the last decade in Italy, filmmakers and writers have been expressing, with increasing urgency, strong concerns about the environment while also attempting to raise awareness about the consequences of human manipulation of the natural world, the complicity of industry, government, and organized crime in illegal disposal of toxic waste, and the effects of economic and social malaise. This graduate seminar examines from an eco-critical perspective, a variety of literary texts and films, produced in Italy from the sixties to the present day. While reading foundational texts from environmental literary studies and the growing field of eco-cinema studies, we shall examine short stories and novels by Italo Calvino (Smog, A Plunge into Real Estate and Marcovaldo) and Carlo Cassola’s The Nuclear Trilogy (1978-1982), as well as films by Pier Paolo Pasolini, Michelangelo Antonioni and Francesco Rosi. In the second part of the seminar we shall focus on contemporary novels, documentary and feature films that more explicitly deal with environmental degradation. Critical and theoretical readings will include Marco Armiero and Marcus Hall’s Nature and History in Modern Italy, Rob Nixon’s Slow Violence and Environmentalism of Poor, Serenella Iovino’s Ecocriticism and Italy, and Scott MacDonald’s “Toward and Eco-cinema,” among others.
Area: Humanities

AS.214.666. Primo Levi Today: Seventy Years After the First Publication of If This Is a Man (Survivor in Auschwitz).
How have genocides been represented by people with different backgrounds and sexual identifications? How do written testimonies challenge or reinforce the hegemonic accounts of wars and genocides? How is the relationship between the “personal” and the “public/national” theorized in literary texts dealing with wars and other forms of political violence? What concepts or frameworks (Queer, Postcolonial, Community Studies) offer new approaches to the analysis of testimonial statements on collective traumatic events? This course aims at exploring these questions, using Primo Levi’s work as an anchoring point. Readings and discussions will be in Italian. COURSE IS OPEN TO UPPER LEVEL UNDERGRADUATES
Area: Humanities
Writing Intensive

AS.214.689. Flânerie and Female Authorship in Contemporary Italian Cinema.
This course examines the prolific production of Italian women filmmakers inscribing their work into a national cinematic tradition. The most prominent visual leitmotif in films by directors such as Marina Spada, Francesca Comencini, Alice Rohrwacher and others, is that of the wandering woman contemplating the cityscape. What does the act of walking signify in these works? How do these filmmakers embrace and transform Italy’s cinematic tradition? After highlighting the figure of the city-walker in post-war classics by Roberto Rossellini and Vittorio De Sica, we shall discuss from a gender perspective films such as Fellini’s Nights of Cabiria, Pasolini’s Mamma Roma, and Antonioni’s La Notte, which feature female city-walkers who stroll throughout urban peripheries created during the country’s rush toward modernity. Then, we shall analyze the work of women directors who recurrently employ the narrative strategy of flânerie to construct female narratives of displacement and liminality. We shall question how and to what extent this contemporary cinematic production is indebted to the masters of neorealism and the auteurs from the sixties. Critical and theoretical readings will include essays by Michel de Certeau, Siegfried Kracauer, Janet Wolff, Elizabeth Wilson, Anne Friedberg, Giuliana Bruno, and others.
Area: Humanities
Writing Intensive

AS.214.685. Donne e scrittura tra ’500 e ’600.
While women’s contributions to Italian Renaissance literature have long been acknowledged, their creative output continued well into the 17th century. This course focuses on some of the protagonists of this extraordinary season, from Lucrezia Marinella and Arcangela Tarabotti to Elena Lucrezia Comaro Piscopia, who in 1678 became the first woman in the world to receive a university degree. Taught in Italian
Area: Humanities

This course explores the history and evolution of documentary filmmaking in Italy through the study of non-fictional works dealing with different social, political, and personal matters from the post-war period to the last decade. We shall screen the works of Vittorio De Seta, Ernesto De Martino, Alberto Grifi, Cecilia Mangini, Annabella Mischuglio, as well as the works of iconic directors such as Michelangelo Antonioni, Luchino Visconti, Pier Paolo Pasolini, and Ermanno Olmi, considering their fiction and non-fiction films in dialectical relationship to one another. Moreover, this course devotes particular attention to late, contemporary female production (e.g. Alina Marazzi, Costanza Quattriglio, and Eleonora Danco) that, through the use of found footage and hybrid modes, blurs the boundaries between fiction and non-fiction, the real and the surreal. Critical and theoretical readings include Marco Bertozzi’s Storia del documentario italiano, Bill Nichols’ Representing Reality, and others.
Area: Humanities
AS.214.711. Dissolving Margins: Space and Female Subjectivity in the Work of Elena Ferrante.
Elena Ferrante is Italy's most acclaimed contemporary novelist, although her true identity remains unknown. Having been translated into multiple languages and published in 39 countries, with over a million of copies sold in the United States alone, her 'Neapolitan Quartet' triggered what has been called "Ferrante Fever." This course investigates the reasons behind this global, literary phenomenon while exploring themes such as female subjectivity and the interplay with space and society, the question of female authorship, women's participation in, or exclusion from, history, and the internal violence of a rapidly changing society. We shall read Ferrante's entire oeuvre: Troubling Love (1999) The Days of the Abandonment (2002), and The Lost Daughter (2006), the Neapolitan Quartet (2012-2014), as well the collection of letters and essays Frantumaglia. (2016). Theoretical readings will include essays by Julia Kristeva, Luce Irigaray, Steve Pile, and others.
Area: Humanities

AS.214.748. Giambattista Vico and the Old Science.
Giambattista Vico's Principi di scienza nuova (1725, 1730, 1744) was intended to found an "ideal" and "eternal" model of human development. Vico emphasizes the importance of both philology and philosophy to his project, and attempts to break the mold of thinking about the history of humanity by exposing the preconceptions and misconceptions that arose from attempts to square "sacred history" with "profane" or non-Judaic-Christian history, creating a philosophy (or even a science) of mythology.
Area: Humanities
Writing Intensive

AS.214.753. Tasso the Madman.
In late sixteenth-century Europe, Tasso's name was a synonym for madness. The Elizabethan stage hosted a play on 'Tasso's Melancholy'; Montaigne belatedly recalled observing the 'mad poet' in prison. Biographers and dramatists spread the myth into the nineteenth century, but Tasso's dialogues and letters tell a more complex and nuanced story of suffering and struggle, life and work.
Area: Humanities
Writing Intensive

AS.214.757. Tasso, Poet of Doubt.
A reading of Tasso's Gerusalemme liberata along with relevant poetic, literary-theoretical, philosophical, and theological texts.
Area: Humanities
Writing Intensive

AS.214.861. Italian Independent Study.

AS.214.862. Italian Dissertation Research.

AS.214.863. Italian Proposal Preparation.

AS.215.231. Introduction to Literature in Spanish. 3 Credits.
The main objective of this course is to examine and discuss specific authors and topics in literature in Spanish from the Middle Ages to the 20th century. The course is designed to cover a selection of Hispanic texts from Spain and Latin America. Literary genres to be studied will include narratives, poetry, and drama. The bulk of each class session will be dedicated to the discussion of the assigned readings. This course is taught in Spanish. This course is required for the major in Spanish.
Area: Humanities
Writing Intensive

AS.215.290. Latin American Critical Perspectives on Colonialism: From the 'World Upside Down' to the 'Coloniality of Power'. 3 Credits.
This course, taught in English, examines how indigenous and local (postcolonial) intellectuals in Latin America responded to the ideology and practices of Spanish Colonialism in the earliest post-conquest years (1532), continued to battle colonialism during the period of the wars of independence, and finally arrived at an analysis of an production that shows how modernity is but the other face of colonialism. Among key works to be discussed are Guaman Poma's illustrated sixteenth-century chronicles, D.F. Sarrazin's _Civilization and Barbarism_, (1845), and Anibal Quijano's 'Coloniality of Power' (2000).
Writing Intensive

AS.215.307. Cervantes: Don Quixote and The Exemplary Novels. 3 Credits.
In this course we will read the most important narrative works of Miguel de Cervantes, Don Quixote and the Exemplary Novels, works that are widely understood to have changed western literature. We will read both works in the English translation by renowned translator Edith Grossman, who will also visit Hopkins during the semester. Those who wish to receive credit toward the Spanish major will read the books in the original and attend a separate section conducted in Spanish. Those students shall enroll in section 2 of the course.
Area: Humanities
Writing Intensive

AS.215.309. An Interdisciplinary Introduction to the Study of Latin America. 3 Credits.
The course is an interdisciplinary introduction to the study of Latin America. It brings together archeology, ethno-history, art history, literature and environmental studies.
Area: Humanities
Writing Intensive

AS.215.312. The Great Latin American novel according to Carlos Fuentes. 3 Credits.
An investigation into the historical development of the great Latin American novel according to Carlos Fuentes new book on the subject. Course includes reading novels by machado de Assis, Garcia Marquez, Carlos Fuentes, Vargas Llosa, Cortazar and Piglia
Area: Humanities

AS.215.336. Don Quijote. 3 Credits.
A close reading and discussion primarily in Spanish of Cervantes' masterpiece, with concentration on its major themes and contributions to the formation of the modern novel. We will use A. Murillo's edition of the novel, Editorial Castalia.
Prerequisite(s): AS.210.311 AND AS.210.312
Area: Humanities

AS.215.350. Mexico: A cultural history from the Olmecs to the Mexican revolution of 1910. 3 Credits.
The offers a survey of Mexican culture from the formative years of the Olmecs (2000 b.c.) to the Mexican revolution of 1910. History of ideas, matrix social formations, art and literature are the focus of this historical overview.
Area: Humanities
Writing Intensive
AS.215.361. A multidisciplinary Introduction to the Study of Latin America. 3 Credits.
The course brings together knowledges drawn from the fields of geography, history, anthropology, literature and art in order to provide access to the complexity of 'Latin America'. Students may opt do the reading in the original Spanish or Portuguese and also write in either language.
Area: Humanities
Writing Intensive

AS.215.380. Modern Latin American Culture. 3 Credits.
Taught in Spanish. This course will explore the fundamental aspects of Latin America culture from the formation of independent states through the present—in light of the social, political, and economic histories of the region. The course will offer a general survey of history of Latin America, and will discuss texts, movies, songs, pictures, and paintings, in relation to their social, political, and cultural contexts. May not be taken satisfactory/unsatisfactory.
Prerequisite(s): AS.210.312; Students may earn credit for AS.211.380 or AS.215.380, but not both.
Area: Humanities

AS.215.390. Modern Spanish Culture. 3 Credits.
This course will explore the fundamental aspects of Spanish culture from the nineteenth to the twenty-first centuries. The course will offer a general survey of the history of Spain and will discuss texts, movies, songs, pictures, and paintings in relation to their social, political, and cultural contexts. This course will be of particular interest for students planning on spending a semester abroad in Spain—specially for those students going to the JHU Fall Semester in Madrid, at Carlos III University. Taught in Spanish. Recommended Course Background: AS.210.311 or appropriate Webcape score. AS.215.390 was formerly numbered AS.211.390
Prerequisite(s): Students may not have previously completed AS.211.390.
Area: Humanities

AS.215.402. Senior Seminar: Literaturas y culturas del Cono Sur: Argentina, Uruguay y Chile. 3 Credits.
Focus on twentieth and twenty-first century literary authors, filmmakers, and various other media.
Prerequisite(s): AS.210.311
Area: Humanities

AS.215.403. Cine en Comin. 3 Credits.
Eleven commercial films in Spanish closely examined through screenings, class discussion, and short papers. Besides basic film appreciation, the course intends to develop a common critical vocabulary between Spanish and English to discuss movies in plain language and in terms relevant to social issues.
Prerequisite(s): AS.210.312
Area: Humanities

AS.215.404. Cuba Between Heresy and Revolution. 3 Credits.
We will examine the Stalinist and Leninist refashioned doctrines of Fidel Castro and Ernesto Che Guevara, Cuba's Devil's Pact with Obama; the decline to near breakdown of Cuba-Venezuela Alba dual nation Chavismo; and the startling implications that all of it poses to the rise of sham populism in America. We will press hard into the fabric of Cuba's battered daily lives, mostly in greater Havana, but also in Miami. Among others, the work of filmmaker Fernando Pérez, the fiction of Leonardo Padura, and Mariel exodus artists will inform our discussions. Our shared hypothesis: that post-revolutionary national sovereignty, coupled with Cuban exile irredentism, may have engendered the island's dual nation status, tied to Miami's so-called Cuban enclave. As a result, a theologico-political confessional crisis continues into infinity in terms of plural and bipolar heresies supported by US electoral mapping and lobbying, and in some minds having Cuba become the Fifty-First US state.
Area: Humanities

AS.215.406. Novelist Intellectuals. 3 Credits.
What does a novelist's op-ed about economics have to do with her literary writing? In what ways does a fiction writer's essays on the environment inform how we read her novels? What happens when we find the political opinions of a writer objectionable? This undergraduate seminar will consider what the Spanish writer Francisco Ayala termed "novelist intellectuals," that is, literary writers who actively participate in society's public sphere. Considering writers from Madrid to New York, from London to Buenos Aires, we will ask how one should hold a novelist's fictional and non-fictional writings in the balance and explore ways of reading that allow us to consider the public intellectual side and the aesthetic side of a novelist together.
Area: Humanities

AS.215.409. Catalonia and Independence. 3 Credits.
What is the Catalan independence movement? Where did it come from? What, exactly, does it advocate? This seminar will examine the history, politics, and culture of Catalonia in an attempt to understand why the push for independence has grown over the past decade. We will focus especially on the impact of nationalism, ideology, social history, economics, law, and language on the construction of Catalan identity. But we will also compare Catalonia to other regions in the Iberian Peninsula (the Basque Country, Galicia) as well as across Europe (Scotland, Northern Italy) and North America (Québec) in order to better understand how movements for regional autonomy and independence emerge today.
Taught in English.
Area: Humanities

AS.215.412. Populism. 3 Credits.
What do Hugo Chávez, Marine Le Pen, and Donald Trump have in common? According to many from across the political spectrum, they are all populists. But what is populism, exactly, and how can it describe such disparate phenomena as left-wing social movements, xenophobic anti-immigrant policies, and economic redistribution? This advanced seminar will examine the history, culture, and political theory of populism. We will pay special attention to the resurgence of populism after the Great Recession and examine a number of cases from Latin America, Europe, and the United States.
AS.215.413. Cuba y España. 3 Credits.
La frase "más se perdió en Cuba" alude al singular rango de la antigua Provincia de Ultramar en el mapa geopolítico del colonialismo hispánico. Hemos de estudiar la prolongada relación entre España y Cuba, desde 1492 al presente, a través de materiales literarios, crónicas, artes plásticas, música y medios sociales al corriente. Enseñado íntegramente en español.
Prerequisite(s): AS.210.311
Area: Humanities

AS.215.417. Literature of the Great Recession. 3 Credits.
The Great Recession—sometimes called the financial crisis or the economic crisis of 2008—brought financial markets to a halt and created significant political turmoil across the North Atlantic. But its impact on culture, and literature especially, has often been ignored. This seminar will travel across Europe, from Dublin to Madrid, from London to Reykjavik in order to examine how literature has registered this most recent economic crisis. We will focus on how crisis is narrated and the ways in which literary works have managed to provide a voice for marginalized social, economic, and political demands.
Area: Humanities

AS.215.460. Modern Mexico and the Culture of Death. 3 Credits.
Drawing from sources in popular culture, literature, folk religion, and the media, we will explore the myths and daily practices of death-related representations of Mexico's survival against enemies, from within the state apparatus, and the insertion into it of drug traffickers, on both sides of the so-called Crystal Frontier with the US.
Area: Humanities

AS.215.463. Borges: His Fiction and Critical Essays. 3 Credits.
This course will deal with close readings of Borges ficciones and critical essays in order to determine how his thinking on the problem of writing and thinking is fictionalized in his stories.
Area: Humanities

Writing Intensive

AS.215.464. Senior Seminar: El Caribe como problema. 3 Credits.
Recommended for Spanish majors and anyone fluent in the language. The course explores through diverse media the Hispanic and Afro-Descendant Caribbean/Anthillean societies, from the early Spanish conquest to the current crises in Caribbean Venezuela, Colombia, Mexico, and Florida. Taught in Spanish
Prerequisite(s): AS.210.311 OR AS.210.312 or equivalent test score.
Area: Humanities

AS.215.465. Wild Surrealism: Lorca, Dali, Buñuel. 3 Credits.
Spanish surrealism emerged unevenly. Some writers and artists sought out the surrealist label while others rejected or ignored it altogether. Some attempted to adhere to André Breton's “Surrealist Manifesto” while others went decidedly against its principles. Yet surrealism, in one way or another, took over the Spanish artistic scene during the 1920s and '30s. Today, it is associated with Federico García Lorca, Salvador Dali, and Luis Buñuel. Friends, roommates, and even lovers, Lorca, Dali, and Buñuel came to define surrealism's acceptance, rejection, and indifference in Spain. This seminar will examine the moment of Spanish surrealism through these three figures. The course will include the study of film, art, drama, poetry, and nonfiction. Taught in Spanish. Recommended Course Background: AS.215.390 or AS.215.231
Area: Humanities

AS.215.477. La Habana Miami: One World and Two Cities. 3 Credits.
Havana and Miami make up the oldest US enclave city linked to a foreign one under US Embargo access. We will study a unique counterpoint Hispanic Exiled culture which considers itself protected by American Exceptionalism
Area: Humanities

AS.215.489. Poetry in Latin America: A multilingual survey from 1200 to the present. 3 Credits.
The course focuses on a presentation of the multiple traditions of poetry writing that make up the Latin American tradition from the Mexico poets at about 1200 to current writers in Latin America. Original poetry in Nahuatl, Maya-Quiche, Spanish and Portuguese will be read along side translations into English. Attention will be paid to translation theory.
Area: Humanities

Writing Intensive

AS.215.490. Reading Ancient Mexico Today: Amoxtli, Tlacuilos and the Florentine Codex. 3 Credits.
This course offers an in depth study of 'Mexican' writing systems before and after the Spanish Conquest in 1521. Special emphasis is placed on the role of the tlacuilos—nahuatl intellectuals— in the writing of the Florentine Codex (1584), the largest surviving compendium on pre-conquest Mexico.
Area: Humanities

Writing Intensive

AS.215.525. Spanish Independent Study. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.215.526. Spanish Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.215.527. Spanish Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.215.603. Napoleon's Haitian Cosmos from Boukman to Bolívar.
Area: Humanities
AS.215.604. To Die in Mexico.
The seminar adopts and translates recent ideological revisions of Mexico's alternate modernities; impacted by postcolonial, subaltern, and decolonial theories of Latin American exceptionality. The plural character of these combined exceptions and exemptions and refusals to reincorporate Mexicananness into modernizing Occidentalism will be foregrounded in two historical moments: modernismo-to-modernism, in convulsed Mexico (1900-1927) and criollista Nueva España “Baroque” hybridized and myth-invested ethics of nationhood (1604/1690): Bernardo de Balbuena’s Grandeza Mexicana (1604)/Carlos Sigüenza y Gongora’s Infortunios de Alonso Ramirez (1690). These materials will be framed in Europe’s modernist, re-mythologized “Waste Land” (T.S. Eliot), as ‘brought home’ to America in Hart Crane’s The Bridge (a poem largely conceived and reborn in Cuba’s Isla de Pinos.) (Fluent reading knowledge of Spanish)
Area: Humanities

A voice in Piglia’s Artificial Respiration claims that Argentina did not have an eighteenth century or the Eighteenth Century. Besides Piglia’s palmiest novel, we’ll study a handful of texts by Borges. Passages from Leopoldo Marechal’s Adan Buenosayres, and Derrida’s The Beast and the Sovereign Volume Two, in reference to Heidegger’s The Fundamental Concepts of Metaphysics and Defoe’s Robinson Crusoe. Taught in English.
Area: Humanities
Writing Intensive

In this seminar we will examine the ways in which Jorge Luis Borges’s narratives intersect with lines of inquiry pursued by Martin Heidegger and Jacques Derrida around perception, knowledge, language, time, and space.
Area: Humanities
Writing Intensive

As of today, due to the work of Walter Mignolo, Ossio, Lamana and other scholars in Colonial Studies, the 1000 page letter of Guaman Poma to the King of Spain has become the pre-eminent text written on the question of coloniality of power as theorized by Anibal Quijano. Given that the concept is now central to colonial and modern studies, familiarity with the work of Guaman Poma is essential in the formation of all Latin Americanists and scholars interested in coloniality and imperial studies.
Area: Humanities
Writing Intensive

AS.215.642. Readings in Contemporary Literary Criticism and Theory.
This course is a graduate level survey of contemporary trends in literary theory and criticism. Readings will span all aspects of literary and cultural scholarship and may include such topics as: new materialism, new formalism, affect theory, Marxism, literary history, and comparative literature.
Area: Humanities

AS.215.651. The idea of Latin America: current debates on the fundamentals of the field.
The course will explore the history of the idea of Latin America as a discursive and political entity. Students will read the work of Walter Mignolo, Mauricio Tenorio Trillo and Fernando Digiovanni among other theorists and cultural historians.
Area: Humanities
Writing Intensive

AS.215.657. Cities in Motion, Worlds Adrift.
We will explore the comparative phenomenology of the city in historical reference to literary, cinematic, and TV serial values. Modalities of segregation and divisiveness will dominate our inquiry. Undergrads by request and with approval of instructor.
Area: Humanities

How should one study contemporary literature and culture? Is “the contemporary” a period in and of itself? Does it require a distinct conceptual approach? This graduate seminar will examine various approaches that have emerged since Michel Foucault called his genealogies a “history of the present.” We will pay special attention to contemporary literature and culture’s most distinguishing feature today: crisis. Considering theories of crisis and “the contemporary” together, the course will explore how living in a time of overlapping crises—economic, political, social, cultural, environmental, and others—affects the way we interpret the world.
Area: Humanities

AS.215.735. The Boom Revisited. Visions by Carlos Fuentes, Garcia Marquez, Diane Goodrich and the MLA.
Now that Carlos Fuentes has written his history of the Latin American novel, that a biography of Garcia Marquez is out and several retrospective studies on the making and impact of the ‘boom’ are circulating, it is time to reconsider the boom as a force in the making of the cannon and a paradigm for narrative interpretation. Besides three long critical studies and the MLA’s ‘how to teach the boom’, the seminar will consider in detail three key novels: La muerte de Artemio Cruz, Cien anos de soledad, and La casa verde.
Area: Humanities
Writing Intensive

The course engages close readings of Borges critical essays and some of his fiction in order to establish the points of interpellation that Post-modern theory takes from or shares with Borges’s meditation on the problem of writing.

AS.215.748. Public Humanities Writing Workshop.
Humanists possess a reservoir of scholarly abilities that prime them for contributing to debates well beyond the academy. This semester-long workshop will introduce graduate students to the basics of writing for such broad audiences. Each session will be organized around particular topics in public humanities writing, including the pitching, writing, editing, and publishing processes of newspapers, magazines, and online outlets. We will also consider the forms of writing that most allow scholars to draw from their academic training and research: reviews, personal essays, op-eds, interviews, and profiles. Throughout the course we will see how the interdisciplinarity, comparativism, and multilingualism of fields from across the humanities can be helpful for reaching wide audiences. Beyond the nuts and bolts of getting started in so-called “public” writing, this course aspires to teach graduate students how to combine quality writing with academic knowledge, scholarly analysis with a general intellectual readership—and, ultimately, make academic knowledge a public good. Taught in English.
Area: Humanities
AS.216.300. Contemporary Israeli Poetry. 3 Credits.
This course examines the works of major Israeli poets such as Yehuda Amichai, Nathan Zach, Dalia Rabikovitch, Erez Biton, Roni Sonek, Dan Pagis, Yona Wollach, Yair Horwitz, Maya Bejerano, and Yitzhak Laor. Against the background of the poetry of these famous poets we will study recent developments and trends in Israeli poetry, including less known figures such as Mois Benarroch, Shva Salhoov and Almog Behar. Through close reading of the poems, the course will trace the unique style and aesthetic of each poet, and will aim at presenting a wide picture of contemporary Hebrew poetry.
Area: Humanities
Writing Intensive

AS.216.342. The Holocaust in Israeli Society and Culture. 3 Credits.
This course examines the role of the Holocaust in Israeli society and culture. We will study the emergence of the discourse of the Holocaust in Israel and its development throughout the years. Through focusing on literary, artistic and cinematic responses to the Holocaust, we will analyze the impact of its memory on the nation, its politics and its self-perception.
Area: Humanities

AS.216.373. War in Israeli Arts and Culture. 3 Credits.
In this course we will study the various representations of what functions as one of Israel's most unifying and yet dividing forces: war. By analyzing literary and cinematic works as well as visual art and popular culture we will attempt to understand the role of war in shaping Israeli society, culture and politics. Topics such as commemoration and mourning, heroism, dissent and protest, trauma and memory and the changing image of the soldier will stand at the center of the course.
Area: Humanities

AS.216.398. Zionism: Literature, Film, Thought. 3 Credits.
This course studies the relations between modern Hebrew and Israeli culture and Zionism. Based on a close reading of both literary and non-literary Zionist texts, we will explore the thematic, social and political aspects of the Zionist movement. The course focuses on primary sources and its main goal is to familiarize students with the various ways in which Zionism was formed and understood. In the last part of the semester we will investigate the different meanings of Post-Zionism through contemporary literary and non-literary texts as well as recent Israeli films.
Area: Humanities

AS.216.444. The Apocalypse in Literature and Film. 3 Credits.
"Everything which we loved is lost! We are in a desert" – this emotional assertion was the reaction to Kazimir Malevich's 1915 painting The Black Square, as the artist himself recalled it. This sentiment of fearing, warning and even witnessing the end of the world as we know it, will stand at the center of the course. We will study the literary and cinematic representations of this apocalyptic notion and investigate its theoretical, theological, physiological and aesthetic aspects. We will seek to trace the narrative dynamics as well as literary and cinematic means of apocalyptic representations in works from various periods, languages, cultures and religions. Among the issues to be discussed: what is the apocalypse, biblical apocalypse, dystopia and nostalgia, trauma and post trauma, war and the apocalypse, the Holocaust as the end of civilization, the atomic bomb, realism and anti-realism, political changes and the apocalypse in popular culture.
Area: Humanities

AS.216.500. Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.216.643. Realism and Anti-Realism in Modern Hebrew Literature. 3 Credits.
This seminar seeks to trace the narrative dynamics and literary means of modern Hebrew Literature through a close examination of the tension between its realistic and anti-realistic trends. It begins with theoretical questions regarding the definition of realism as a literary genre. After this introductory section, the seminar is divided to three different periods in modern Hebrew literature, each is analyzed within the framework of its relation to realism. The first period is the turn of the 20th century and its first decades, reading works by writers such as Yosef Haim Brenner, Shmuel Yosef Agnon and Devora Baron. In the second period we study the post Israeli statehood period through reading works by A.B. Yehoshua, Amos Oz, Amalia Khanana Carmon and Yehoshua Knaz. The third part of the course deals with prose-fiction that is considered post-modernistic and includes writers such as David Grossman, Orly Castel-Bloom Yoel Hofmann, and Ronit Matalon.
Area: Humanities
Writing Intensive

AS.216.707. Modern Hebrew Women's Prose-Fiction. 3 Credits.
In this graduate seminar we will read and discuss modern Hebrew women's prose-fiction and novels in the Hebrew original. We will study the historical background in which they emerged and their various literary means of expressing a feminine voice. We will read works by writers such as Amalia Kahanna- Carmon, Savoyon Liebrecht, Ronit Matalon, Orly Castel-Bloom, Michal Govrin, Yehudit Hendel, Nirit Zarchi, Ester Peled and Maya Arad. Required Course Background: Knowledge of Hebrew
Area: Natural Sciences
Writing Intensive

AS.216.800. Independent Study.
AS.217.301. Literary Readings Across the Lusophone World. 3 Credits.
This discussion-based course for continuing students of Portuguese focuses on a wide range of Lusophone literary sources from the modern and contemporary periods. We'll read seminal texts from Europe, the Americas, and Africa, paying close attention to language and context. How do forms, ideas, and genres travel across the Atlantic? What shape do they take according to different geographies, cultures, and histories? Topics include the legacies of empire and slavery, theoretical debates about the formation of Brazilian literature, national identity, (post)colonialism, representations of nature, and indigeneity. Students will read in the original Portuguese innovative prose works by Machado de Assis and Clarice Lispector; the poetry of Fernando Pessoa; satiric poetry; Haroldo de Campos's "transcriptions"; modernist manifestos and the theater of the oppressed, among others. Conducted in Portuguese. May not be taken on a Satisfactory/Unsatisfactory basis. Prereq: AS.210.392, placement test or instructor approval.
Area: Humanities
AS.220 (WRITING SEMINARS)

AS.220.105. Fiction/Poetry Writing I. 3 Credits.
An introduction to basic strategies in the writing of poetry and fiction, with readings by Joyce, Woolf, Baldwin, Munro, Garcia Marquez, Donne, Bishop, Yeats, Komunyakaa, Tetheway, and others. Students will learn the elements of the short story and try their hand at a variety of forms: realist, fantastical, experimental. They'll also study the basic poetic forms and meters, from the ballad to the sonnet, iambic pentameter to free verse. Students will compose short stories and poems and workshop them in class. This course is a prerequisite for most upper level courses. This course is part one of the year-long Introduction to Fiction and Poetry, and must be taken before AS.220.106.
Area: Humanities
Writing Intensive

AS.220.106. Fiction/Poetry Writing II. 3 Credits.
The second half of IFP; this course delves deeper into the finer points of fiction writing, including tone, description, and point of view; students will also enrich their knowledge of poetic forms and devices, such as figurative language, verse rhythm, and the poetic line. Readings include work by Paley, Mahfouz, Calvino, Lessing, Richard Wright, Plath, Rich, Auden, Li-Young Lee, and others. Students will write and workshop their own stories and poems, and complete a final portfolio. This course is a prerequisite for most upper level courses.
Prerequisite(s): AS.220.105
Area: Humanities
Writing Intensive

AS.220.108. Introduction to Fiction & Nonfiction. 3 Credits.
A course in realist fiction and nonfiction, with readings by Eudora Welty, Vladimir Nabokov, Henry James; George Orwell, Beryl Markham and Truman Capote. Students compose short stories and essays with attention to literary models. AS.220.105 can be substituted for AS.220.108.
Area: Humanities
Writing Intensive

AS.220.142. Seriously Funny: Writing Humor Poetry. 3 Credits.
This course will examine both light verse and how humor can enrich serious subjects in poetry. We will explore many subjects, from bad love to aesthetic experiences. Principal readings will range from classic exemplars such as Shakespeare, Dryden, and Eliot to selections from American poets since 1950, as represented in the anthology 'Seriously Funny: Poems about Love, Death, Religion, Art, Politics, Sex, and Everything Else.' Students will be required to write several seriously funny poems of their own. Fun is mandatory.
Area: Humanities

AS.220.152. Words of Light: Poetry and Photography. 3 Credits.
This course examines the role of lyric poetry in a media culture that has become obsessed with photographs. In a world where everyone with a cell phone is a photographer – and every literate person a writer – how do we create valuable work? We will pair genres of photography and lyric poetry in discussion – landscape photos and poems of place, for example – and view each through the other. Students will read a body of poetry and criticism (prose by Walter Benjamin, Susan Sontag, Penelope Pelizzon, Roland Barthes, et al.). In addition to bringing worthwhile comments on the readings to each class, students will submit one original poem and one original photo each week for credit.
Prerequisite(s): Each student is required to have a device capable of taking digital photos. Cell phones are fine.
Area: Humanities

AS.220.162. Writing for Children: The Tales We Can't Seem to Forget. 1 Credit.
In this summer mini-course, students will use canonical works of children's literature to inspire their own stories and verses, which they will read aloud and discuss in a workshop setting. We will focus on the uses and reuses of fairy and folk tales – from early works compiled by the Brothers Grimm and Charles Perrault to fantasies from the Victorian era by Mary de Morgan and Oscar Wilde. We will end with contemporary reimaginings by Roald Dahl, Neil Gaiman, Angela Carter and Lauren Child. Class will include discussion of illustration, recent trends in children's literature, and the publishing process. Course instructor Sarah Smith is the former Children's Book editor at the New York Times Book Review.
Area: Humanities

AS.220.165. Writing Unreality: Fantastical Fiction. 3 Credits.
While fiction is by definition not “real,” some modes of fiction present deliberate departures from the world as we know it. This class will examine fantastical and non-realist writing, including surreal and magic realist stories, as well as works with fairy-tale and folklore influences, and stories with elements of the uncanny or supernatural. Students will read and discuss representative fiction, complete weekly creative assignments, and participate in workshop of a final, full-length piece.
Area: Humanities

AS.220.200. The Craft of Fiction. 3 Credits.
"In literature, only trouble is interesting," Janet Burroways says in Writing Fiction. Conflict is often referred to as the heart or the engine of a story: in this workshop-centered course, we'll investigate conflict within short fiction, giving attention to all its related components, such as narrative structure, pacing, character development, and dialogue. Both in workshop and in our weekly discussions of assigned readings, we'll always return to the question of how a story provokes readers' sense of anticipation and keeps readers engaged. This course builds upon the material covered in the Introduction to Fiction and Poetry course sequence and will prepare students for further study at the Intermediate and Advanced levels. Course readings include diverse and contemporary authors such as Han Kang, Z.Z. Packer, Carmen Maria Machado, Haruki Murakami, George Saunders, and Curtis Sittenfeld.
Prerequisite(s): AS.220.105 AND AS.220.106
Area: Humanities
Writing Intensive

AS.220.201. The Craft of Poetry. 3 Credits.
A study of the fundamentals and strategies of poetry writing. This course combines analysis and discussion of traditional models of poetry with workshop critiques of student poems and student conferences with the instructor.
Prerequisite(s): AS.220.105 AND AS.220.106
Area: Humanities
Writing Intensive
AS.220.204. Introduction to Dramatic Writing: Film. 3 Credits.
Screenwriting workshop. This course will look at the screenplay as both a literary text and blue-print for production. Several classic screenplays will be analyzed. Students will then embark on their own scripts. We will intensively focus on character development, creating 'believable' cinematic dialogue, plot development, conflict, pacing, dramatic foreshadowing, the element of surprise, text and subtext, and visual storytelling. Several classic films will be analyzed and discussed (PSYCHO, CHINATOWN, BLADE RUNNER). Students will learn professional screenplay format and write an 8-12 page screenplay that will be read in class and critiqued.
Area: Humanities Writing Intensive

AS.220.206. Writing about Science I: Daily News Journalism. 3 Credits.
This course is designed to teach students the skills of daily news reporting, with a focus on covering science news. Students will learn how to turn scientific discoveries into lively and engaging prose for the general public, interview sources, and pitch stories to news organizations. The skills taught are applicable to all areas of journalism, not just science journalism.
Area: Humanities Writing Intensive

AS.220.211. Journalism for Writers. 3 Credits.
Learn reporting through analysis of famous and infamous work by contemporary journalists such as Janet Malcolm, Michael Finkel, Sarah Corbett and Seymour Hersch. Students will use readings to understand concepts central to news and feature writing, including libel, fair use, balanced reporting, and appropriate sourcing. They will then head out to find and write their own stories about local issues using best practices learned in class. Sarah Harrison Smith is a former managing editor of the New York Times Magazine and the author of 'The Fact Checker’s Bible.'
Area: Humanities Writing Intensive

AS.220.212. Line and Lineage: A Survey of Poetry Writing. 3 Credits.
In this lecture-based course, students will build their knowledge of the history of poetry writing in English through a chronological exploration of the poetic line. This course will serve as a foundation for future studies in the writing and reading of poetry.
Prerequisite(s): AS.220.105 AND AS.220.106
Area: Humanities Writing Intensive

AS.220.213. Fiction Survey: Once Upon a Time. 3 Credits.
A review of the origins and development of the realist short story from fable, fairy tale, saint's life, Bible story, through versions created in the Renaissance and classic (19th and 20th century) periods, to modern narratives. Writing Seminars majors only.
Prerequisite(s): AS.220.105 AND AS.220.106
Area: Humanities Writing Intensive

AS.220.218. Writers on Film. 3 Credits.
An interdisciplinary course focusing on the film writings of poets, novelists, critics, and essayists such as Virginia Woolf, H.D., James Agee, James Baldwin, and Pauline Kael; and films showing the intertitle and screenplay work of writers such as Anita Loos, F. Scott Fitzgerald, William Faulkner, and Jean Cocteau. Participants will write weekly assignments on film from a critical perspective.
Area: Humanities Writing Intensive

AS.220.219. Readings in Fiction and Literary Nonfiction. 3 Credits.
This course offers an in-depth exploration of content, style, and crossover literary techniques among authors who write both fiction and nonfiction, including Jamaica Kincaid's memoir My Brother and 'Girl.' Students will evaluate why each genre was chosen to narrate, for example, such quandaries as ethics in surgery: Abraham Verghese's novel Cutting for Stone and Richard Selzer's essay, 'The Knife,' as well as the reportage and novels of Ernest Hemingway and others. Also explored: topics of social import and questions of identity in James Baldwin's essays ('Notes of a Native Son') and stories ('Sonny's Blues'), and other works; The course builds on literary writing and reading techniques established in Intro to Fiction & Nonfiction (IFN) and Intro to Fiction & Poetry (IFP). Either course is a prerequisite, with IFN preferred.
Prerequisite(s): AS.220.105 OR AS.220.108
Area: Humanities Writing Intensive

AS.220.220. Reading Korean Literature in Translation: A Survey. 3 Credits.
An introduction for students unfamiliar with the Korean language but interested in Korean culture / literature. Students will read a variety of translated texts, especially of works written in the 20th and early 21st centuries by authors including Kim Tong-in, Hwang Sun-won, Pak Wanso, Hwang Sok-yong and Han Kang; there will also be classes on traditional sijo poetry. Students will become familiar with Korean literary genres and formal features, and develop a broad understanding of the historical and sociocultural context of Korean literature.
Area: Humanities Writing Intensive

AS.220.221. Modernist Literature and Film. 3 Credits.
This course explores the exchange of ideas and techniques between modernist literature and cinema in response to the social and technological changes of the twentieth century. Prominent figures include Charlie Chaplin, Ezra Pound, T. S. Eliot, Virginia Woolf, Franz Kafka, Sergei Eisenstein, Jean Epstein, John Dos Passos, Zora Neale Hurston, Paul Strand, and Gertrude Stein. Participants will write weekly assignments on films and readings from a critical perspective.
Area: Humanities Writing Intensive

AS.220.230. Reading Contemporary Korean Fiction in Translation. 3 Credits.
This course examines a range of contemporary Korean fiction produced since political liberalization of Korea in the 1990s. Students will see the many different ways in which individual selves relate to the world, question the value systems of a globalized society, and celebrate the instinct to survive and thrive. While exploring these things, students will develop their analytical skills and identify the central components of new Korean narratives.
Area: Humanities

AS.220.311. Intermediate Fiction: Point of View. 3 Credits.
In this course, we will workshop student short stories, complete short writing exercises, and discuss published writing with an emphasis on the possibilities of point of view. We will explore the opportunities and challenges of writing in first, second, and third person, think about how narrative distance and tense complicate these choices, and connect narrative voice to story shape and structure.
Area: Humanities Writing Intensive
AS.220.312. Intermediate Fiction: Detail and Description. 3 Credits.
An intermediate workshop focusing on the question of how to make fictional worlds feel real. We'll read 19th, 20th, and 21st century short fiction by authors such as Anton Chekhov, Jhumpa Lahiri, Junot Diaz, and Alice Munro, focusing particularly on how authors make the lives on the page feel three-dimensional. Students will write stories and exercises, including exercises that involve exploring Baltimore in order to observe and write about the city in which we live. Recommend Course Background: Students need to have completed a 200-level Writing Seminars course.
Prerequisite(s): AS.220.105 AND AS.220.106
Area: Humanities

AS.220.313. Writing about the Arts. 3 Credits.
Learn the practice of arts journalism, from reviewing to conducting interviews and writing profiles. In class, students will study the work of some of the best writers in this field, pitch story ideas, report and write, and then discuss their pieces in a workshop setting. Instruction will include journalistic ethics, plagiarism, libel law, and use of social media. Students can expect class visits from established journalists. Writing Seminars Majors only
Area: Humanities

AS.220.317. Writing about Science II: Feature Writing Journalism. 3 Credits.
This course is designed to teach students the skills of long-form narrative journalism, with a focus on covering science news. Skills taught will include how to compose scenes, create three-dimensional characters, create narrative tension, and conduct on-site reporting. Class speakers will include award-winning science journalists from New York to DC, who will share the secrets of their craft. The primary writing assignment will be a 3,000-word feature piece that is pitched, reported, and workedshopped throughout the course of the class. 'Writing About Science I' is recommended as a prerequisite for this course. If you have not taken this, please contact instructor (dgrimm5@jhu.edu) to enroll.
Area: Humanities
Writing Intensive

AS.220.318. Intermediate Fiction: Voice. 3 Credits.
This workshop will focus intensely on student writing, and on reading stories with a strong narrative voice, the kinds of stories in which the reader can hear the narrator speaking, where the voice gets stuck in the reader’s mind, where the story feels like an invasion of the narrator’s private thoughts, or is a retelling of the tale for some invisible public, or is the quiet, clear prose of a diarist, journaling into the void.
Area: Humanities

AS.220.327. Intermediate Fiction: Characters. 3 Credits.
Area: Humanities

AS.220.331. Intermediate Fiction: Forms of Fiction. 3 Credits.
A workshop in the formative genres of fiction: romance, confession, anatomy, and novel. Readings include Flaubert, Stevenson, Camus, and Stephen Dixon. Frequent sketches and two stories.
Prerequisite(s): AS.220.200(C)
Area: Humanities

AS.220.332. Intermediate Fiction and Poetry. Poet-Novelists. 3 Credits.
We will look at writers in English who excelled at both fiction and poetry. We will ask: How does a talent in one genre show itself in another? Novels will include: Thomas Hardy’s Return of the Native, Sylvia Townsend Warner’s Lolly Willowes, Vladimir Nabokov’s Lolita, John Updike’s, Rabbit, Run. Other writers who may be included: Rudyard Kipling, D. H. Lawrence, Malcolm Lowry, Richard Wright, Muriel Spark.
Prerequisite(s): AS.220.200 AND AS.220.201
Area: Humanities

AS.220.333. Intermediate Fiction: Plot and Narrative Structure. 3 Credits.
This class is primarily a workshop. Students will write two 10-20 page short stories to present for discussion and critique. The craft focus of the class is plot and narrative structure. Through the assigned reading and a few short writing exercises, we will think about storytelling and the elements (character, conflict, desire, causality, consequence) that make a question a plot or narrative question, and how stories are shaped and structured by these questions. The course reading will begin with a variety of short stories. Later in the semester, we will discuss braided narratives and read novels by Virginia Woolf, Rebecca Makkai and Valeria Luiselli.
Prerequisite(s): AS.220.200
Area: Humanities
Writing Intensive

AS.220.356. Intermediate Fiction: A Story’s Beginnings. 3 Credits.
Where does a story best begin? How does it successfully launch itself? We will look closely at a great many opening paragraphs and pages, analyzing the various strategies by which writers grab and hold a reader’s interest. Most of the reading will be short fiction, drawn from various countries and languages.
Prerequisite(s): AS.220.200
Area: Humanities
Writing Intensive

AS.220.363. Intermediate Fiction: Writing about Adolescence. 3 Credits.
Only fairly recently has adolescence been recognized as a developmental period distinct from childhood or adulthood. In this course, we’ll read a range of classic and contemporary literature that takes on the challenge of writing about this complicated and fraught stage of life. Readings may include work by Shakespeare, Louisa May Alcott, Colson Whitehead, Louise Erdrich, and others. Students will write and workshop their own stories or novel chapters.
Prerequisite(s): AS.220.200
Area: Humanities

AS.220.370. Intermediate Fiction: Dialogue and Exposition. 3 Credits.
We will look at a variety of ways in which dialogue furthers artistic ends. We will ask questions like: When is dialogue best expressed directly? When is it best summarized? How does dialogue-heavy short fiction differ from a play? When can dialogue stand on its own, and when does it require an author’s explanation or interpretation? Students will write both creative and expository papers. Recommend Course Background: Students need to have completed a 200-level Writing Seminars class.
Prerequisite(s): AS.220.105 AND AS.220.106
Area: Humanities
Writing Intensive
AS.220.372. Intermediate Fiction: Style and Voice. 3 Credits.
In this course, we’ll focus on the writing and workshopping of student fiction, with special attention to style and voice. What distinguishes a good sentence from a bad one? How does one develop a style that feels both natural and distinctive at the same time? What do we even mean by “voice,” and how on earth is a writer supposed to find one? In addition to each other’s work, we’ll read stories by authors with particularly unique voices, focusing on what makes their sentences sing.
Area: Humanities

AS.220.377. Intermediate Poetry: Poetic Forms. 3 Credits.
Poetic Forms fulfills one of the intermediate requirements for The Writing Seminars Major. It deals with rhyme, meter, traditional forms, and ad hoc forms of students’ own making. Whether you are a poet, novelist, song writer, science writer, or dramatist, this course will help you master lines and sentences even better.
Prerequisite(s): AS.220.201
Area: Humanities

AS.220.378. Contemporary Poetic Forms. 3 Credits.
In Contemporary Poetic Forms, we will look at exciting, mostly younger poets writing in a wide array of metrical forms. From Anthony Hecht to Erica Dawson, you will read a book a week and write eleven poems, and the assignments will be keyed but not beholden to those challenging authors.
Prerequisite(s): AS.220.201[C]
Area: Humanities
Writing Intensive

AS.220.391. Performing Poetry & Fiction: An Acting Workshop for Writers. 3 Credits.
This hands-on performance workshop, combining literary and theatrical practice, will look closely at what makes a performance or reading compelling, clear, and resonant. Through textual analysis, vocal technique, and group discussion, students will create a pliant and compelling, clear, and resonant. Through textual analysis, vocal technique, and group discussion, students will create a pliant and engaging performance style to best serve their work. The course includes regular writing assignments in poetry and fiction and weekly performance and group discussion.
Area: Humanities
Writing Intensive

AS.220.398. Intermediate Fiction: Fictional Frames. 3 Credits.
In this course, we’ll focus on writing and workshopping student fiction while reading contemporary parallel texts representing a variety of styles, subgenres, and forms. We’ll look at exceptionally short works, stories of intermediate lengths, and longer, novella-length works in an effort to understand what kinds of stories lend themselves to particular lengths and styles. How do you know whether your story should be a work of flash fiction or a novel? What kinds of stories can you tell in each form? We’ll read work by Lydia Davis, Kirstin Valdez Quade, Jenny Zhang, Bret Anthony Johnston, Paul Yoon, Lauren Groff, Bryan Washington, and more.
Prerequisite(s): AS.220.200
Area: Humanities

AS.220.400. Advanced Poetry Workshop. 3 Credits.
In this course we’ll explore poetic responses to myth and legend, looking at how poets from different cultures and eras have responded imaginatively to established stories about gods, heroes, and the supernatural, whether for the sake of aligning themselves with tradition, or for the sake of challenging it. Our discussions will take place in the context of a rigorous poetry workshop, where students will experiment with figurative language, management of the line, narrative organization, and the control of rhythm in both form and free verse. At the end of the semester students will turn in a final portfolio of revised poems, accompanied by a reflective letter that demonstrates a mature understanding of verse technique.
Prerequisite(s): AS.220.201
Area: Humanities
Writing Intensive

AS.220.401. Advanced Fiction Workshop. 3 Credits.
Topics in Advanced Fiction
Prerequisite(s): AS.220.200
Area: Humanities
Writing Intensive

AS.220.403. Readings In Poetry: Dramatic Verse. 3 Credits.
Why and how do playwrights make their characters speak in verse? What can we learn about writing—and speaking—“naturally” but with artifice? Blank verse is the most important model we have in English dramatic poetry, but not the only one. Readings in this course will range from Shakespeare’s King Lear to modern verse plays by Caryll Churchill, Derek Walcott, and David Hirson. Students will write their own one-act verse play.
Prerequisite(s): AS.220.201
Area: Humanities
Writing Intensive

AS.220.406. Readings in Fiction: Italian war-time and post-war fiction: Italo Calvino, Primo Levi, and Natalia Ginzburg. 3 Credits.
We’ll read these three masterly fiction writers who found new ways to write about hard times.
Prerequisite(s): AS.220.200
Area: Humanities
Writing Intensive

AS.220.407. The Illustrated Short Story. 4 Credits.
A collaboration of The Writing Seminars and The Center for Visual Arts Students will study JHU’s Homewood House, residence of the Carrol family, choosing a room as the site of a story or a series of prose poems. To illustrate their work and produce an artist book, students will learn camera handling and Photoshop.
Area: Humanities
AS.220.408. Readings in Poetry: War Poetry From Troy to Afghanistan. 3 Credits.
The course will follow a chronological line from Homer through to American and British poets of the current war in Afghanistan. This means we will be looking at (among other things) Beowulf, poems of the English Civil War, poems of the American Civil War, poems of the First and Second World Wars, and poems about the conflicts in Iraq and Syria as well as Afghanistan. Each class will be divided into two sections of equal length. In the first half we will study poems written by our predecessors - poems by women as well as men, poems written in the front line as well as behind the lines in hospitals and ‘at home’, and poems written in a variety of forms - ranging from pure lyric to prose-poetry; in the second half we will discuss poems written by members of the class in response to conflict, and/or in response to the poems we are discussing in any given week.
Prerequisite(s): AS.220.201
Area: Humanities

AS.220.411. Community-Based Learning: Nonfiction and Social Engagement. 3 Credits.
In this Community-Based Learning course, students will read and write memoir and discuss issues of social concern with high-school age writers from Baltimore public schools in partnership with the organization Writers in Baltimore Schools Please note that this class is not a traditional workshop focusing on critique, but will instead explore how writing can build connection and foster conversation. Participation in some events outside of class time may be required.
Area: Humanities

AS.220.413. Fiction Survey: Pairings Across Time. 3 Credits.
We will trace the ancestry of some modern genres, pairing a modern book with a nineteenth-century counterpart. We will look at suspense fiction (Patricia Highsmith's The Talented Mr. Ripley and Dickens's Tale of Two Cities), romantic comedy (Anne Tyler's Accidental Tourist and a Jane Austen novel), science fiction (Philip K. Dick's Do Androids Dream of Electric Sheep?—the basis for Blade Runner—and Wells's The Time Machine) and tales of the fantastic (stories by John Cheever and Steven Milhauser paired with Poe and ?Hawthorne). A few films may be shown, but not during class.
Area: Humanities

AS.220.414. Readings in Fiction: The Lyric Mode. 3 Credits.
This course will focus on musicality in prose, with close attention to the effects that fiction writers can achieve through assonance, refrain, and the careful management of rhythm. Readings will include work by Toni Morrison, Vladimir Nabokov, Michael Ondaatje, Rainer Maria Rilke, Marilyne Robinson, and Virginia Woolf.
Prerequisite(s): AS.220.201
Area: Humanities

AS.220.415. Community-Based Learning: Teaching Creative Writing in Baltimore Schools. 3 Credits.
In this course, students will work alongside writing teachers from the non-profit organization Writers in Baltimore Schools (WBS) to lead creative writing workshops in local public middle schools. Students and WBS teachers will also meet as a group once a week to plan classes, discuss pedagogy, and share ideas. Students will write weekly responses to reading assignments, write reflections on the volunteer experience, and help to assemble a final project at their worksite. Upon completion of the class, students will have the opportunity to apply to become instructors with Writers in Baltimore Schools.
Area: Humanities

AS.220.418. Readings in Fiction: The Novella. 3 Credits.
Registration Restrictions: Permission required. Twentieth-century novellas, with a new author and book each week. The course asks: What can and has been accomplished by American fiction writers in fewer than 150 pages?
Area: Humanities
Writing Intensive

AS.220.422. Readings in Fiction: Race, Passing, and Performance. 3 Credits.
This course will explore the context and craft of racial passing texts in the U.S, asking students to think critically about literal passing narratives and their persistence over time, and more broadly about how we write about cultural passing, codeswitching, and identity as conscious performance. We’ll start with texts that ground us in the genre—Chopin, Larsen, Fauset, Ellison, and Morrison—and read our way into contemporary texts, potentially including work by Danzy Senna, Mat Johnson, Brit Bennett, Min Jin Lee, and Marcelo Hernandez Castillo. Students will write a critical paper, a craft paper, and a short story or novella.
Prerequisite(s): AS.220.200
Area: Humanities

AS.220.424. Science as Narrative. 3 Credits.
Class reads the writings of scientists to explore what their words would have meant to them and their readers. Discussion will focus on the shifting scientific/cultural context throughout history. Authors include Aristotle, Copernicus, Galileo, Descartes, Newton, Darwin, Freud, Einstein, Heisenberg, Bohr, Crick and Watson.
Area: Humanities

AS.220.425. Readings in Fiction: The Story Cycle. 3 Credits.
A study of the short story cycle as a literary form. Authors may include Joyce, Schulz, Anderson, Welty, Calvino, Munro, Erdrich, Diaz and others.
Area: Humanities

AS.220.427. Readings in Fiction: The Novella. 3 Credits.
A study of the novella as a literary form. Authors may include Melville, Turgenev, Tolstoy, Chekhov, Kafka, James, Wharton, Baldwin, Porter, Rulfo, Smiley, and others.
Prerequisite(s): AS.220.200
Area: Humanities
Writing Intensive

AS.220.437. Creating the Poetry Chapbook. 3 Credits.
Students will build on previous work in the major by completing a project of sustained length, depth, and cohesion (15 - 25 pages) in their final semester. Application only, Advanced Poetry prerequisite.
Prerequisite(s): AS.220.400
Area: Humanities
Writing Intensive

AS.220.438. Readings in Poetry: Of Late: Poetry & Social Justice. 3 Credits.
In this Community-Based Learning course, students will explore poetry of social and political engagement in partnership with high-school age writers from Writers in Baltimore Schools. Participants will put learning into practice by organizing community conversation, reflection, and collaboration. Participation in some events outside of class time will be required.
Area: Humanities
AS.220.441. Readings in Poetry: Shakespeare and Company. 3 Credits.
A study of three of Shakespeare's plays, and of some of the most important creative responses to these plays by modern writers, such as Auden and Stoppard. Students will familiarize themselves with Shakespeare's continuing presence in contemporary culture, and write short critical responses; they will also write a longer creative work that in some way transforms one of Shakespeare's plays.  
Prerequisite(s): AS.220.201[C]  
Area: Humanities

AS.220.442. Readings in Fiction: Narrative Strategies of Jane Austen. 3 Credits.  
We will read the major novels with the aim of detecting the chief patterns and devices the author uses to make the familiar and ubiquitous marriage plot suspenseful and gripping. Writing Seminars Majors only  
Prerequisite(s): AS.220.105 AND AS.220.106 AND AS.220.201  
Area: Humanities

AS.220.443. Readings in Poetry: International Voices. 3 Credits.  
International voices will combine the workshopping of poems by students with a study of contemporary poems written by black British writers and British writers in dialect, African-American writers, Caribbean writers, and Indian and South African poets who are writing in English. The study of broad themes and subjects will be combined with a particular appreciation of linguistic and acoustic matters - which means among other things that time will be spent listening to and evaluating recordings of the poets concerned. Writing Seminars Majors Only  
Prerequisite(s): AS.220.105 AND AS.220.106 AND AS.220.201  
Area: Humanities

AS.220.444. Readings in Fiction: The Art of Fiction: the Novels of Henry James and Robert Louis Stevenson. 3 Credits.  
Given the significant differences between their aims and styles as novelists - James the great investigator of the interior life, and Stevenson the equally great exponent of the adventure story - it's somewhat surprising to find the two men were good friends who admired one another's work. This course will use their friendship as a starting point to explore their novels in general, while paying particular attention to their narrative techniques; the novels under discussion will include Daisy Miller, Turn of the Screw, Portrait of a Lady, Treasure Island, Dr Jekyll and Mr Hyde, and Kidnapped. Students will also be asked to create original work that both responds to and takes off from their reading of these books.  
Area: Humanities

AS.220.447. Theater and Social Concern. 3 Credits.  
In this Community-Based Learning course, students will explore theatre and areas of social concern in partnership with high-school age writers from Baltimore Schools. Participants will put learning into practice by organizing community conversation, reflection, and collaboration. Participation in some events outside of class time will be required.  
Area: Humanities

AS.220.449. Readings in Poetry: Exploring Baltimore Through Poetry. 3 Credits.  
Students in this course will write poems based on an exploration of Baltimore itself: weekly assignments will require the students to get off campus, visit specific sites around town, and craft their observations into original poems. Course readings will include work by Baltimore authors past and present; other readings, drawn from further afield, will take up the question of what it means to explore a city. Writing Seminars majors only.  
Prerequisite(s): AS.220.105 AND AS.220.106  
Area: Humanities

AS.220.452. Reading Proust. 3 Credits.  
An excursion through the 3,000 page, seven-volume masterpiece, *In Search of Lost Time.* We will closely read *Swann's Way* and *Within a Budding Grove*; we will cover, in a less intensive way, *Guermantes Way*, and *Time Regained*.  
Prerequisite(s): AS.220.200  
Area: Humanities

AS.220.453. Border Crossings: Contemporary Writing from Canada. 3 Credits.  
In this Community-Based Learning course, students will explore poetry of social and political concern in partnership with high-school age writers from Baltimore public schools. Students will put learning into practice by engaging in community conversation and collaboration. Participation in some events outside of class time will be required.  
Prerequisite(s): AS.220.201  
Area: Humanities

AS.220.454. Poetry and Social Engagement. 3 Credits.  
A survey of contemporary Canadian poetry and fiction. Course readings will include work by Margaret Atwood, Christian Bök, Anne Carson, Anne Michaels, Alice Munro, Michael Ondaatje, Madeleine Thien, and others. Students will have the opportunity to respond artistically as well as analytically to the course readings.  
Prerequisite(s): AS.220.105 AND AS.220.106 AND AS.220.201  
Area: Humanities

AS.220.455. Readings in Fiction: Low, High, and Back Again: Experiments in Genre. 3 Credits.  
In this course, we'll take a look at the increasingly obsolete notion of "genre fiction" and the way that many contemporary writers are borrowing the conventions of once-frowned-upon genres, from sci-fi to horror to crime, and imbuing them with the concerns of the "literary novel" (character, language, social critique, etc.). The course will pair classics of genre fiction with more contemporary works that take the genre in surprising directions. We'll also do a fair bit of writing ourselves, experimenting with various genres. Authors might include Mary Shelley, Colson Whitehead, Philip K. Dick, Kazuo Ishiguro, Edgar Allen Poe, Carmen Machado, Raymond Chandler, Joan Didion, Zane Grey, and Charles Portis.  
Prerequisite(s): AS.220.200  
Area: Humanities

AS.220.456. The Long Work. 3 Credits.  
A course in the composition of a novella or short-story collection. Students will write and revise a thesis of 50 to 60 pages of fiction. Open to seniors by invitation.  
Area: Humanities  
Writing Intensive

AS.220.501. Independent Study. 3 Credits.  
Ordinarily no more than one independent study course may be counted among the eight Writing Seminars courses presented for graduation.  
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.220.502. Independent Study. 1 - 3 Credits.  
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.220.505. Writing Seminars Internship. 1 Credit.  
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.220.506. Writing Seminars Internship. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.220.507. Honors Thesis. 3 Credits.
Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.220.508. Honors Thesis. 0 - 3 Credits.
Department Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.220.509. Professional Internship. 1 Credit.
The Professional Internship is a one-credit independent course created to document internships in journalism, publishing, the arts, or other writing-related fields. Internships require a minimum of 120 work hours and a short final paper. Permission required. Satisfactory/ Unsatisfactory only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.220.510. Professional Internships. 1 Credit.
The Professional Internship is a one-credit independent course created to document internships in journalism, publishing, the arts, or other writing-related fields. Internships require a minimum of 120 work hours and a short final paper. Permission required. Satisfactory/ Unsatisfactory only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.220.513. Teaching Writing. 3 Credits.
Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.220.592. Internship - Summer. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.220.594. Professional Internships. 1 Credit.
The Professional Internship is a one-credit independent course created to document internships in journalism, publishing, the arts, or other writing-related fields. Internships require a minimum of 120 work hours and a short final paper. Permission required. Satisfactory/ Unsatisfactory only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.220.596. Teach Writing-Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.220.598. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

A study of Modernism focusing on long poems and poem sequences by Stein, Pound, Eliot, Rukeyser, Tolson, and others. Coursework will include completion of a long poem or poem sequence.

This course will look at the ways in which poetry finds words to express moments of vision and self-forgetting. Ranging from the Elizabethans to the present day, it will begin by looking at poetic manifestos by Sidney and Shelley (among others), and explore the ways in which they require poetry to engage with what cannot easily be put into words, then go on to consider: poems about religious transcendence; poems about rapturous communication with nature; visionary poems; dream poems; poems about ghosts and haunting; and poems which explore the possibility of saying the unsayable. Donne and other Metaphysical poets, Wordsworth, Dickinson, Christina Rossetti, Whitman, Hardy, Edward Thomas, T. S. Eliot, and Seamus Heaney will be among those poets discussed.
Workshop time will be divided equally between critical discussion, and the presentation of original work by students. Area: Humanities

Study of classic/modernist novels written by the "I": Christopher Isherwood, Gertrude Stein, Albert Camus, Ford Madox Ford, and other practitioners. Mostly close study of texts, but some writing practice, too. Area: Humanities

AS.220.608. Readings in Poetry: Sonnet and Sequence.
This course will use the sonnet form as a through line to consider both aesthetic shifts and the enduring lyric impulse across centuries of poetry in English, with a particular focus on how contemporary poets are working with the form through individual poems, sequences, and book-length works. Coursework will include reading, critical writing and presentation, discussion, and completion of an original lyric sequence. Area: Humanities

An examination of some half-dozen English-language novelists who were also significant poets. Readings will include both novels and poems. The course seeks to bridge the gap between the two genres. Area: Humanities

AS.220.619. Graduate Poetic Forms I.
We will read and write a variety of traditional and less traditional poetic forms with a keen ear toward meter, rhyme, and other prosodic curiosities.

AS.220.623. Fiction Workshop.
Discussion and critique of fiction manuscripts by students enrolled in the M.F.A. program. Some assignments possible.

AS.220.624. Fiction Workshop.
Discussion and critique of fiction manuscripts by students enrolled in the M.F.A program. Some assignments possible.

AS.220.625. Poetry Workshop.
Discussion and critique of poetry manuscripts by students enrolled in the M.F.A. program. Some assignments possible.

AS.220.626. Poetry Workshop.
Discussion and critique of poetry manuscripts by students enrolled in the MFA program. Some assignments possible.
A study of three major poets—Caribbean, Irish, and Russian—who self-identified with at least two cultures. We’ll examine these poets’ literary friendship and their shared engagement with subjects such as tyranny, empire, home, exile, and the English language. Exploration of these poets’ shared debt to a predecessor, Robert Frost, and the debt owed to them by younger poets, will lead to students’ own original projects in poetry and prose.
Area: Humanities

We will read all—or most—of Chekhov’s short stories, his ‘notebook,’ as well as the letters that have been translated into English.

AS.220.646. Readings in Pedagogy: Teaching Fiction and Poetry.
A graduate course designed to develop both close reading and genre study, and to support the teaching of Introduction to Fiction and Poetry (IFP) I and II. Readings in selected works of American, English, and European poetry and short fiction. Course required by all graduate students in fiction and poetry.
Area: Humanities

This course focuses on three poets whose individual relationships with form, inspiration, and innovation continue to shed light on the poetic process.
Area: Humanities

AS.220.651. Readings in Fiction: Five from the Fifties.
We will examine five American writers who were emerging or thriving in the middle of the 20th century. John Cheever, Bernard Malamud, Vladimir Nabokov, Jean Stafford, John Updike. We will read short stories by all five, as well as the following novels: Malamud’s The Assistant, Nabokov’s Lolita and Pale Fire. Restricted to graduate students in the MFA program.
Area: Humanities

This course will look at the way poets have responded to the environment, from the early Romantic period to the present day. In the process, it will study and show how the role of the natural world in poetry has changed from being a cause for celebration and a mirror for self-scrutiny, into a way of continuing these things while also expressing anxiety about the effects of global warming any other dangers to the health of the planet. Poets included in the discussion will include Wordsworth, Clare, Hopkins, Frost, Auden, Hughes and Heaney.
Area: Humanities

Which books do writers often foist on other writers, telling them ‘You have to read this?’ In this course, we’ll look at books that have yet to find much popular appeal, but which writers often speak about in reverential tones. Authors may include James Salter, Paula Fox, Dezso Kosztolanyi, J.L. Carr, Juan Rulfo, Tom Drury, Christina Stead, Evan S. Connell, Leonard Gardner, Joy Williams, and Penelope Fitzgerald.
Area: Humanities

AS.220.654. Readings in Fiction: Rediscovered Masters.
Readings from modern novels and collections of short fiction which, however well received at time of publication, fell into subsequent eclipse before undergoing something of a revival. Many of the titles will be drawn from the series of New York Review of Books Classics.
Area: Humanities

A study of the interplay of the line and the sentence in poetry, with an emphasis on syntax. Some prose works will also be used for context. Poets employing syntax with great verve and precision, whether they obey or disrupt the rules, will be read in order to inform students’ own stylistic choices.
Area: Humanities

A study of major figures, including Dickinson, Moore, Bishop, Clampitt, Brooks, and others. The theme of place and displacement will be a focus.
Area: Humanities

Class will read nine short novels and begin to write one.
Area: Humanities

This hands-on performance workshop, combining literary and theatrical practice, looks closely at what makes poetry performance compelling, clear, and resonant. Through textual analysis, vocal technique, and group discussion and critique, students will create a pliant and powerful reading style, as an integral part of their work.
Area: Humanities

The course will begin by looking at theories of translation, and thereafter spend half of each class looking at examples of poems in translation before moving on in the second half to look at poems by members of the group - translated poems where people have been able to write them, otherwise at original pieces. I’ll be providing texts for study each week.
Area: Humanities

AS.220.800. Independent Study.
**AS.225 (THEATRE ARTS & STUDIES)**

**AS.225.100. Introduction to Theatre. 3 Credits.**
An introduction to the drama: how and why the theatre came into being; its role in human history; and how changing social structures in different regions and epochs have shaped different kinds of theatre, plays and performance. Also: how theatre "works" for us and on us, and the major plays of world drama.
Area: Humanities

**AS.225.101. Acting I. 3 Credits.**
An introduction to the fundamentals of acting through exercises, improvisation, and work on scenes from established plays and Shakespearean sonnets, based on the teachings of Stanislavsky, Greet, Boleslavsky, Michael Chekhov, Clurman, and Meisner. This course also includes a brief survey of major playwrights. Plays will be read, analyzed, and employed in scene work.
Area: Humanities

**AS.225.201. Acting II. 3 Credits.**
As in Workshop I, the principal classroom activities will consist of scene work, exercises, lectures, and discussion. Some rehearsal will also take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises. Recommended Course Background: AS.225.301
Area: Humanities

**AS.225.212. Voice and Speech for the Actor. 3 Credits.**
It has been said that 90% of what an actor does onstage is dependent on being effortlessly heard and understood by their audiences. This course is designed to establish the tools for the actor to begin to create this foundation. Using a combination of both the benchmark texts by Edith Skinner and Kristin Linklater, along with in-class exercises and monologues, we will begin the process of exploring both vocal power through breathing and breath control, and the fundamental tools of clarity in the speaking of a dramatic text onstage.
Area: Humanities

**AS.225.215. Performing Musical Theatre. 3 Credits.**
Effective performance in musical theatre demands a committed analysis of the musical and dramatic values of the song and the libretto from which it springs, in order to develop a fresh, organic interpretation. This course will provide you with the training to both analyze and interpret musical theatre scenes and songs and to make the most of them in performance. Instructor Permission Only.
Area: Humanities

**AS.225.218. ANGELS IN AMERICA (The Play) The Millennium Shift in American Culture and Politics. 3 Credits.**
Tony Kushner's epoch-making play weaves together astonishingly diverse sides of America in a broad tapestry; a modern work that emerged at the end of the 20th Century, now being revived world wide: it provides keys to understanding the American zeitgeist and the coming transformations of the culture. In one pivotal work we find the emergence of LGBT rights, the Mormon Church, the AIDS epidemic, the new "spirituality," the Reagan-era transformation of both government and business, and the looming figure of Roy Cohn whose influence in American politics "behind the scenes" ranged from the Rosenberg trial to his work as counsel for the McCarthy Committee in the 1950s: and even his legacy in the 2016 as primary political and business mentor of the current President of the United States.
Area: Humanities, Social and Behavioral Sciences

**AS.225.300. Contemporary Theatre & Film. 3 Credits.**
An introduction to the performing arts, including an overview of theatre history, acting styles and the interaction of art and society. A personal view from inside.
Area: Humanities

**AS.225.303. Acting III. 3 Credits.**
Special attention is given to the development of spontaneity and emotional freedom using the principles of Workshops I and II. Hands on work with John Astin's "The Process" and the second Silverberg workbook are employed, along with the Uta Hagen text. Boleslavsky and Michael Chekhov are introduced. The Clurman, Meisner, Stanislavsky and Strasberg approaches are included. Substantial out of class time is required. Recommended Course Background: Two acting courses.
Area: Humanities

**AS.225.307. Directing Seminar. 3 Credits.**
Fundamentals of mounting, casting and staging the play; various theories of directing; students must commit to a practical lab. It is understood that students have a working familiarity with acting fundamentals.
Area: Humanities

**AS.225.308. Shakespeare in Performance. 3 Credits.**
Students will work with a selection of Shakespeare's plays — AS YOU LIKE IT, RICHARD III, CYMBELINE — in exploring specific ways in which the power of the lines can be translated dynamically and immediately into vocal and physical performance. This course can be repeated for credit, because it covers different topics. (Some background in the acting sequence is encouraged).
Area: Humanities

**AS.225.310. Stagecraft. 3 Credits.**
A hands-on approach to the technical and theoretical elements of production. Meets in the Merrick Barn Scene Shop. Permission Required.
Area: Humanities

**AS.225.311. Scene Study. 3 Credits.**
Classes and scenes tailored to the needs of the actors. Some rehearsal will take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises.
Area: Humanities

**AS.225.314. Theatre: Tech Direction. 3 Credits.**
An introduction to Technical Direction including pre-production and production with an overview of materials, tools, rigging and safety, together with design and its implementation.
Area: Humanities

**AS.225.315. Scene Study 2. 3 Credits.**
Classes and scenes tailored to the needs of the actors. Some rehearsal will take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises.
Area: Humanities

**AS.225.318. 21st Century Female Playwrights. 3 Credits.**
This is a writing intensive class exploring the current wealth of women playwrights, including Pulitzer Prize winners: Wendy Wasserstein, Paula Vogel, Lynn Nottage, and Jackie Sibblies Drury (2019 Prize for FAIRVIEW). We will discuss Script Analysis and read (and see) plays by numerous writers including Claire Barron, Kia Corthron, Theresa Rebeck, Sarah Ruhl, Danai Gurira, Caleen Sinnette Jennings, and Hansol Jung. This class will include a mid-term and a Final Paper.
Area: Humanities
Writing Intensive
AS.225.320. Performance. 3 Credits.
The student is given specific acting assignments, and develops them as special projects for public performance under the direct supervision of the instructor. A professional level performance is the goal. Audition Required. Out of class rehearsal time required. Permission only, signature required.
Area: Humanities

AS.225.321. The Lab - The Actor/Director/Playwright Lab. 3 Credits.
Student actors, directors, and playwrights will explore their respective crafts with emphasis on process and individual artistic growth. Participants in the class will also collaborate on the creation of new material for the stage. Recommended Course Background: one course in Acting, Directing, or Playwriting.
Area: Humanities

AS.225.322. Design for the Stage. 3 Credits.
The fundamentals of stage design, with an emphasis on process, including script analysis, research, conceptualization, and implementation, from the first reading of the play to opening night, along with an overview of theatre architecture from the Greeks to the current day and into our imagined future.
Area: Humanities

AS.225.323. Adaptation for the Stage. 3 Credits.
For aspiring playwrights, dramaturgs, and literary translators, this course is a workshop opportunity in learning to adapt both dramatic and non-dramatic works into fresh versions for the stage. Students with ability in foreign languages and literatures are encouraged to explore translation of drama as well as adaptation of foreign theatre. Fiction, classical dramas, folk and fairy tales, independent interviews, or versions of plays from foreign languages are covered.
Area: Humanities
Writing Intensive

AS.225.324. The Existential Drama: Philosophy and Theatre of the Absurd. 3 Credits.
Existentialism, a powerful movement in modern drama and theatre, has had a profound influence on contemporary political thought, ethics, and psychology, and has transformed our very notion of how to stage a play. Selected readings and lectures on the philosophy of Kierkegaard, Nietzsche, Camus and Sartre – and discussion of works for the stage by Sartre, Ionesco, Genet, Beckett, Albee, Pinter, Athol Fugard (with Nkani & Nshone), Heiner Müller and the late plays of Caryl Churchill. Opportunities for projects on Dürrenmatt, Frisch, Havel, Witkiewicz, and Mrozek.
Area: Humanities
Writing Intensive

AS.225.328. Acting and Directing Musical Theatre. 3 Credits.
Musical Theatre is a unique form of theatrical expression that requires special skills of its actors and directors. In this course, students will study the form and structure of musicals as they apply to acting and directing. Students will direct and perform musical numbers as well as book scenes from classic and contemporary American musicals.
Area: Humanities

AS.225.330. Playwriting Strategies. 3 Credits.
A seminar and workshop in playwriting with Dr. Joe Martin, playwright and dramaturge. Student writers, developing their plays, will learn how to open up to the creative process, “brainstorm,” refine their work, and shape it toward an act of artistic communication. Writer’s techniques, such as attending to plot or “story,” delineation of character, creating effective “dialog,” even overcoming “writer’s block,” will be addressed. This course is designed to be complementary to – not a replacement for – playwriting classes in the Writing Seminars.
Writing Intensive

AS.225.333. Scene Study 3. 3 Credits.
Classes and scenes tailored to the needs of the actors. Some rehearsal will take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises.
Area: Humanities

AS.225.339. Exploring The Major Plays of Anton Chekhov. 3 Credits.
This is an advanced class for actors who are interested in delving into the ‘world of the play.’ Students will work on scenes from the four major plays of Anton Chekhov. We will also explore some modern adaptations including VANYA, SONIA, MASHA, and SPIKE.
Area: Humanities

AS.225.345. History of Modern Theatre & Drama. 3 Credits.
Designed to impart a deepened appreciation and understanding of today’s theatre by surveying the major playwrights, historical movements, and theatre practices of the 20th century. The course also seeks to help students understand theatre’s relationship to the societal and political power structure of each era and to introduce students to great dynamic literature in its intended form, which is performance.
Area: Humanities
Writing Intensive

AS.225.346. Creative Improvisation: For Theatre and for Life. 3 Credits.
An exploration of the imagination and the senses using basic techniques of improvisation: exercises, conflict resolution, ensemble building, and theatre games. Texts: Spolin, Johnstone, LaBan and Feldenkreis. Open to all students.
Area: Humanities

AS.225.374. Acting IV. 3 Credits.
Work is tailored to individual students, using the principles of Workshops I and II and other previous experience. Students work with John Astin’s "The Process", along with the texts of Uta Hagen, Boleslavsky and Michael Chekhov. The Clurman, Meisner, Stanislavsky and Strasberg approaches are further explored. Substantial out of class time is required. Recommended Course Background: Two acting courses. Permission Required.
Area: Humanities

AS.225.501. Independent Study. 1 - 3 Credits.
Permission only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.225.502. Independent Study. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
AS.225.520. Projects in Theatre. 3 Credits.
Special projects created for and tailored to the individual theatre student. Enrollment limited. Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.230 (SOCILOGY)

AS.230.101. Introduction to Sociology. 3 Credits.
Introduces students to basic sociological concepts and perspectives, and applies them to a variety of topics including family, work, and the dynamics of class, gender, and racial/ethnic inequalities in the United States and globally.
Area: Social and Behavioral Sciences

AS.230.109. Freshman Seminar: Hot Topics in Education. 3 Credits.
This course examines current school reform initiatives and the controversies surrounding them through a sociological lens. Freshmen Only
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.143. Global Migration: Refugees, Economic Migrants, and Borders. 3 Credits.
This course introduces students to the different forms, catalysts, and consequences of global migration. Even as the plight of migrants and refugees has elicited the sympathy of millions worldwide, the majority of them still encounter closed borders and draconian immigration regimes on the fringes of more "desirable" destinations in Europe, Australia, and the United States, and many others remain in limbo in their countries of origin or in transit states. Are these border restrictions new? Or are they consistent with states' long-standing ways of regulating who is and is not worthy of being admitted through their borders? Throughout the course, we will trace the divergent factors that prompt refugees and economic migrants to migrate, juxtaposing these with the responses of states, international treaties, and humanitarian organizations to their movement and arrival in host countries. Using a variety of written and verbal assignments, we will question the fundamental categories of migration: What is an economic migrant? What is a refugee? How are they different or similar? Whose interests do such categories serve, and how have they been used to justify governmental practices of inclusion and exclusion over time?
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.147. Introduction to Islam Since 1800. 3 Credits.
This course is an introduction to contemporary Islam and Muslim societies from approximately 1800 to the present. Key themes will include the colonial encounter, state formation and reform, revolution, Islamic revival, and globalization. Reflecting Islam's status as a world religion, the course will touch on developments around the Muslim-majority world and in the West.
Area: Social and Behavioral Sciences

AS.230.150. Issues in International Development. 3 Credits.
Why do billions of people continue to live in poverty? What obstacles stand in the way of secure and dignified lives for all? Who is most likely to bring about change, what strategies should they follow, and what kinds of institutions should they put in place? This course will introduce the main theoretical perspectives, debates, and themes in the field of international development since the mid-20th century. It has three sections. The first section focuses on debates over the optimal conditions and strategies for generating economic growth and on the relationship between growth, human welfare, and inequality. The second section presents critical assessments of development interventions from various perspectives. The third section considers the role of social movements in shaping development and social change in the 21st century.
Area: Social and Behavioral Sciences

AS.230.154. Freshman Seminar: Gender, Health and Aging. 3 Credits.
In this course students will develop an understanding of the ways in which gender structures health and well being through adulthood and later life. The experience of sexual minorities and the intersection of gender with class and ethnicity will also be discussed. Students will be expected to participate actively and lead discussions on specific topics.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.175. Chinese Revolutions. 3 Credits.
This course introduces the origins, operation and impacts of five major revolutions in modern China between 1850 and 1950. These include the Taiping Rebellion, the republican revolutions, federalist and southern automatic movements, labor strikes as well as peasant rebellions. It draws on the existing historiography that examines China's transition from an empire to a republic, impacts of western and Japanese influences to China, as well as the continuity and change of Chinese social organizations. Cross list with International Studies and East Asian Studies. Fulfills IS History requirement.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.195. Exploring Baltimore: An Introduction to Urban Studies. 3 Credits.
This course will introduce students to the field of urban studies and Baltimore itself. Students will learn data collection and analysis methods used in the social sciences. Students will discuss relevant research published in urban studies by Johns Hopkins faculty and other experts in the field. Students will also gain an introduction to their adopted home, Baltimore, by collecting data and conducting field observations in different neighborhoods.
Area: Social and Behavioral Sciences
Writing Intensive

The purpose of this course is to provide a sound introduction to the overall process of research and the specific research methods most frequently used by sociologists and other social scientists. Required for Sociology majors and IS GSCD track students.
Area: Social and Behavioral Sciences

AS.230.205. Introduction to Social Statistics. 4 Credits.
This course will introduce students to the application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, confidence intervals, chi-square, anova, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research. Special Note: Required for IS GSCD track students.
Prerequisite(s): Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR EN.550.310 OR EN.550.311 OR EN.550.413 OR EN.550.420 OR EN.550.420 OR EN.550.420 OR EN.550.435 OR AS.280.345 OR AS.200.314 OR AS.200.315 OR EN.560.348; Statistics Sequence Restriction: Students who have completed EN.550.111 OR EN.550.113 may not enroll.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
AS.230.213. Social Theory. 3 Credits.
This course will focus on four classical theorists whose ideas have greatly influenced the ways we study society: Karl Marx, Max Weber, Emile Durkheim, and W. E. B. Du Bois. The course is devoted to understanding how each theorist understood the origin, structure, and historical dynamics of modern societies. In addition to comparing their theories, we will use them to analyze current social issues, including those involving social inequality, conflict, cohesion, and change.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.216. Disability and Society. 3 Credits.
Objectives of this course are to achieve an understanding of the social context of disability from the population level to the individual disability experience. Topics will include social versus medical models of disability; the spectrum of ability; the history of disability; civil rights perspectives; life course and aging aspects of disability; and the role of the environment. Attention will be paid both to theoretical understandings of disability and the role of policies.
Area: Social and Behavioral Sciences

AS.230.219. Land, Labor and Environmental Movements in Contemporary Africa. 3 Credits.
The course examines the new wave of social protest and popular uprisings in contemporary Africa through the interconnected themes of land, labor, and environmental movements. Attention will be placed on the early 21st century.
Area: Social and Behavioral Sciences

AS.230.221. Global Social Change. 3 Credits.
This course introduces students to issues of global social change, with a particular focus on the challenges of international development and the contemporary globalization process. Specific themes include world income inequality and global poverty, the rise of supranational organizations (e.g. WTO and EU) and their relations with sovereign states, anti-globalization activism, the rise of China and India in the global economy, and the origins as well as consequences of the current global economic crisis, among others. Lectures will be aided by documentary films and other multi-media materials. Special Note: Fulfills Economics requirement for IS GSCD track students only.Formerly offered as AS 230.353. Students who took AS.230.353 cannot take AS.230.221.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.222. Land, Labor, Environmental Rights and Struggles in Contemporary Africa. 3 Credits.
The course examines the new wave of social protest and popular uprisings in contemporary Africa through the interconnected themes of land, labor and environmental struggles. Attention will be placed on the early 21st century.
Area: Social and Behavioral Sciences

AS.230.223. Housing and Homelessness in the United States. 3 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Area: Social and Behavioral Sciences

AS.230.224. Freshman Seminar: Public Opinion and Democracy. 3 Credits.
How does public opinion shape electoral behavior and democratic governance, and how have these relationships evolved as techniques for measuring public opinion have developed since the 1950s? After a consideration of models of effective democratic governance, the course will consider how public opinion is measured and interpreted in the United States by private pollsters, university-based survey researchers, and data journalists. The course will consider competing perspectives on the sources of variation within mass public opinion, such as social class membership, racial and gender identity, religious affiliation, and party identification. Throughout the course, emphasis is placed upon the alternative modes of inquiry and writing that opposing analysts adopt. Students will learn to interpret and write about public opinion patterns from these perspectives.
Area: Social and Behavioral Sciences

AS.230.228. Colonialism in Asia and Its Contested Legacies. 3 Credits.
This course surveys the impacts of colonialism in East and Southeast Asia. Special attention will be paid to the social and economic development in British Singapore and Hong Kong as well as Japanese Korea and Taiwan. Topics include free-trade imperialism, colonial modernity, anticolonial movements, pan-Asianism, and post-war U.S. hegemony.
Area: Social and Behavioral Sciences

AS.230.233. Inequality and Social Change in Contemporary China. 3 Credits.
This course examines the trajectory of economic development in China since the beginning of market reforms in the late 1970s, with a special focus on social inequality and forms of resistance that have emerged in response to the expansion of the market economy. The first part of the course focuses on understanding the academic debates around China’s economic miracle and introduces students to theories about the relationship between market expansion and social resistance. The second part focuses on key thematic topics including the rural/urban divide, rural protest, urban inequality and labor unrest, gender and sexuality in social movements, environmental protests, and the politics of ethnic relations.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.238. Beyond the Wall: The Political Economy of the US and Mexico. 3 Credits.
Examining the exchange of culture, people, and commodities between the United States and Mexico since the 19th century, this course asks not just how US practices and policies have shaped Mexican society, but how, in turn, Mexico has shaped the United States. We will examine the social, political, and economic forces that have long pulled these two societies together -- and pushed them apart.
Area: Social and Behavioral Sciences

AS.230.244. Race and Ethnicity in American Society. 3 Credits.
Race and ethnicity have played a prominent role in American society and continue to do so, as demonstrated by interracial and interethnic gaps in economic and educational achievement, residence, political power, family structure, crime, and health. Using a sociological framework, we will explore the historical significance of race and its development as a social construction, assess the causes and consequences of intergroup inequalities and explore potential solutions.
Area: Social and Behavioral Sciences
AS.230.255. The Sociology of Gender and Sexuality. 3 Credits.

This course will examine the processes by which gender is socially constructed and how society and its social institutions structure life chances based on gender. It employs Barbara J. Risman's (2004) conceptualization of "gender as a social structure": "Gender is deeply embedded as a basis for stratification not just in our personalities, our cultural rules, or institutions but in all these, and in complicated ways." Course lectures and assignments for this course center on the distinction between biological sex and sociological gender, causes and consequences of gender inequality, and the intersectionality of gender, sexuality, race-ethnicity, class, religions, and other social structures in contemporary society and in everyday life. Students will examine theories of gender through scholarly literature, and popular films are used to help offer insight into gender theory, research, and social and academic commentary. Though the course will primarily cover gender as enacted in the United States, other countries and their gender dynamics will also be addressed.

Area: Social and Behavioral Sciences

AS.230.265. Research Tools for Global Sociology and Development. 3 Credits.

This course will introduce students to a range of software programs that are critical for conducting social scientific research in the 21st century. Students will develop competency in the use of computer programs for statistical analysis, database management, the creation of maps and timelines, and the presentation of research reports. The course uses examples from ongoing social science faculty research projects at Johns Hopkins on global inequality and international development. Required for GSCD track students. Course previously titled 'Research Tools and Technologies for the Social Sciences'.

Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.230.275. Revolution, Reform and Social Inequality in China. 3 Credits.

This course explores various aspects of social inequality in China during the Mao Zedong and the post-Mao reform eras. We will examine inequality within villages, the rural/urban divide, urban inequality, education and health policies, and gender and ethnic inequality. Each of these issue areas will be tackled analytically, but the aim is also to understand what it was/is like to live in China during and after the Mao era. Formerly offered as AS.230.321.

Area: Social and Behavioral Sciences

Writing Intensive

AS.230.256. Technologies for the Social Sciences'.

This course provides an introduction to the use of computer programs for social scientific research. Students will develop competency in the use of software programs for statistical analysis, database management, the creation of maps and timelines, and the presentation of research reports. The course uses examples from ongoing social science faculty research projects at Johns Hopkins on global inequality and international development. Required for GSCD track students. Course previously titled 'Research Tools and Technologies for the Social Sciences'.

Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

How do we think about the power relations at work in the scholarship we read and in the important texts we consider essential to our educational experience? This course will critically investigate the role that concepts of race and racism have played in formulating dominant perceptions of who can be the producers of knowledge and what constitutes authoritative knowledge itself. We will consider how and why thinkers and scholarship produced outside of Europe and North America are too often ignored for their scholarly contributions and the dynamics that lead to this situation. We will also explore how and why new and important perspectives emerge from engaging and centering voices from beyond traditional canonical works. With a particular focus on the forms of knowledge arising from European Enlightenment approaches to concepts of thought reason and objective knowledge, this course will critically engage students with a wide range of thinkers such as W.E.B. Du Bois, Angela Davis, Ralph Trouillot, Sadiya Hartman, Walter Rodney, Derek Walcott, Sylvia Wynter and Frantz Fanon. This course will focus largely on thinkers engaging within the Black Atlantic and black diaspora traditions to question how we might consider voices and thought from beyond Eurocentric positions in our own scholarly practice.

Area: Social and Behavioral Sciences

AS.230.304. (Making Space For) Black Thought. 3 Credits.

This course analyzes educational systems as social institutions and organizations. It gives particular attention to the often taken-for-granted ways that we structure learning in schools and their consequences for social inequality. To these ends, the course will examine classical institutional and organizational theory in sociology and evaluate these theories in their application to historical process of educational formation and the contemporary organization of K-12 schooling in the US.

Area: Social and Behavioral Sciences

Writing Intensive

AS.230.312. Education & Society. 3 Credits.

This course analyzes educational systems as social institutions and organizations. It gives particular attention to the often taken-for-granted ways that we structure learning in schools and their consequences for social inequality. To these ends, the course will examine classical institutional and organizational theory in sociology and evaluate these theories in their application to historical process of educational formation and the contemporary organization of K-12 schooling in the US.

Area: Social and Behavioral Sciences

Writing Intensive
AS.230.313. Space, Place, Poverty & Race: Sociological Perspectives on Neighborhoods & Public Housing. 3 Credits.
Is a neighborhood just a grouping of individuals living in the same place, or do neighborhoods have collective meanings and impacts on children and families? We will capitalize on research methodologies used to define and describe neighborhoods and their effects on economic and educational outcomes. These include case studies, census data, surveys, quasi/experimental data. Focus is on how research measures neighborhood effects and incorporates community level processes into models of social causation (e.g., social capital/control, community efficacy, civic engagement). Also examined: patterns in residential mobility, segregation, and preferences within black and white populations; development of housing policy in the U.S.; programs to determine how neighborhoods affect issues of social importance. Statistics and public policy background is helpful but not required.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.316. African American Family. 3 Credits.
This course is an examination of sociological theories and studies of African-American families and an overview of the major issues confronting African-American family life. The contemporary conditions of black families are explored, as well as the historical events that have influenced the family patterns we currently observe. Special attention will be given to social policies that have evolved as a result of the prominence of any one perspective at a given point in time.
Area: Social and Behavioral Sciences

AS.230.317. Sociology of Immigration. 3 Credits.
This course surveys sociological theories and research on immigration to the U.S. Theoretical approaches include theories of international migration, economic sociology, immigration, and assimilation. Research topics include the impact of national immigration laws and policies on immigrant inflows and stocks, self-selection of immigrants, the impact of immigration on the native-born population and the U.S. labor market and economy, and the adaptation of the first and second generations.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.318. State and Society in Modern India. 3 Credits.
This course examines the complex, at times conflicting, relationship that has emerged between Indian seats of power from above and Indian expressions of society from below. Attention will be placed on the period between 1947 to the present.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.320. Education & Inequality: Individual, Contextual, and Policy Perspectives. 3 Credits.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.322. Quantitative Research Practicum. 3 Credits.
This course provides "hands on" research experience applying sociological research tools and a sociological perspective to problems of substance. Quantitative methods will be emphasized, as applied to census data, survey data and/or archival data. Students will design and carry out a research project and write a research report. Juniors and seniors only. Sophomores require instructor's permission. Recommended Course Background: AS.230.205, AS.230.202
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
Writing Intensive

AS.230.323. Qualitative Research Practicum. 3 Credits.
This course provides 'hands on' research experience applying sociological research tools and a sociological perspective to problems of substance. Qualitative observational and/or interviewing methods will be emphasized. Students will design and carry out a research project and write a research report. This course fulfills the 'research practicum' requirement for the Sociology major.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.324. Gender and International Development. 3 Credits.
This course employs a comparative perspective to examine the gendered impact of international development experiences and policies. Students will discuss the historical evolution of how the concept of gender has been constructed, conceptualized, and integrated into international development theory and practice. The course will also examine how greater international development. In particular, we will examine structural theories of poverty reduction, individual theories of power and processes of stratification at the household and family level. Specific issue areas will include the globalization, class and work political participation and social movements. Cross-listed with International Studies (CP; IR). Fulfills Economics requirement for IS GSCD track students only.
Area: Social and Behavioral Sciences

AS.230.325. Global Social Change and Development Practicum. 3 Credits.
This course provides 'hands on' research experience in the field of global social change and development. The course fulfills the 'research practicum' requirement for Sociology majors and is required for the GSCD track.
Prerequisite(s): AS.230.265 or permission of instructor.
Area: Social and Behavioral Sciences

AS.230.332. Race, Racism & Racial Privilege. 3 Credits.
This course will examine the concepts of race, racism, racial privilege in contemporary America, and the West in general. Examples from other countries will be integrated as well. Historical contexts such as the colonialism, the Civil War and Reconstruction, the Civil Rights movement, and the post Civil Rights era will help to provide an understanding of the social, political, economic, and cultural forces processes that have constructed and shaped the concepts of race and the racialized subject over time.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.333. Medical Humanitarianism. 3 Credits.
Humanitarian organizations play life-preserving roles in global conflicts, and have front-row views of disasters ranging from the 2010 Haiti earthquake to the 2011 Fukushima tsunami in Japan. Yet even while they provide vital assistance to millions of people in crisis, such organizations are beset by important paradoxes that hinder their capacity to create sustainable interventions. They work to fill long-lasting needs, but are prone to moving quickly from one site to the next in search of the latest emergency. They strive to be apolitical, yet are invariably influenced by the geopolitical agendas of global powers. How do such contradictions arise, and what is their impact upon millions of aid recipients around the world? Drawing on case studies from South Sudan to Haiti, this course addresses these contradictions by exploring how and why medical aid organizations attempt, and sometimes fail, to reconcile short-term goals, such as immediate life-saving, with long-term missions, such as public health programs and conflict resolution initiatives.
Area: Social and Behavioral Sciences
Writing Intensive
AS.230.337. Global Crises: Past and Present. 3 Credits.
This course will compare the current global crisis with previous major crises of historical capitalism through a combination of theoretical and historical readings. Throughout, we will ask: What can a study of past crises tell us about the nature and future trajectory of the current global crisis? Special emphasis will be placed on (1) “the late-nineteenth century great depression”, (2) the Great Depression of the 1930s, and (3) the period of crisis and stagflation in the 1970s. We will be particularly concerned to understand the differential social and geopolitical impact of the crises. Which social classes bore the brunt of the disruptions in economic activity in each crisis? Which geographical areas or geopolitical groupings lost out (or benefited) from the crises? How have environmental and ecological challenges re surfaced in each crisis including today?
Area: Social and Behavioral Sciences

AS.230.341. Sociology of Health and Illness. 3 Credits.
This course introduces students to core concepts that define the sociological approach to health, illness and health care. Topics include: health disparities, social context of health and illness, and the Sociology of Medicine.
Area: Social and Behavioral Sciences

AS.230.348. Society in the Anthropocene. 3 Credits.
If the progressive domination of nature has been the overriding ideology of modern societies, extreme weather events and now the Covid-19 pandemic have underscored the tenuousness of that domination. The pandemic has quickly put extreme stress on a variety of social institutions, realizing dystopian scenarios previously imagined by science fiction writers and apocalyptic climate change thinkers. While addressing the unfolding Covid-19 crisis, this course will place it within a broader set of concerns around climate change and what some call the Anthropocene—the era in which human activity has become the dominant influence on the Earth’s climate and environment. We will survey a range of social scientific literature—combined with journalistic and popular sources—on the social origins of ‘natural’ disasters; the ways in which social phenomenon—insti tutions, ideologies, poverty, inequality, racism, nationalism, anomie and politics—affect and are affected by such disasters; and the different ways in which various social factors—states, investors, social movements and sub-cultures—prepare for the coming crises of the 21st century.
Area: Social and Behavioral Sciences

AS.230.350. Capitalism, Dependency, and Development in Latin America. 3 Credits.
This course examines Latin American insertion into the global capitalist economy from the colonial period to the present. Examining various historical, sociological, and political-economic theories, this course will ask not only how Latin American economies and societies have developed their particular characteristics, but also how theorists within and outside the region have understood Latin American development over time.development over time.
Area: Social and Behavioral Sciences

AS.230.351. Capitalism, Development and Resistance in South Korea. 3 Credits.
This course examines the trajectory of capitalist development in South Korea (hereafter, Korea) in the twentieth and the early twenty-first centuries. We will examine debates around the political economy of development in Korea as well as class formation and social and labor protest. This course is designed to help students explore the dynamics of capitalist development and workers’ movements in Korea as a case of late development in the global South. The course also draws on theoretical perspectives and methodological tools from comparative and world-historical sociology to better understand the Korean case.
Area: Social and Behavioral Sciences

Writing Intensive

AS.230.352. Chinese Diaspora: Networks and Identity. 3 Credits.
This course combines lecture and class discussion. It examines the history and historiography of Chinese overseas migration. Major issues include overseas Chinese as “merchants without empire,” Chinese exclusion acts in the age of mass migration, the “Chinese question” in postcolonial Southeast Asia, as well as the making and unmaking of Chinese identity in the current wave of globalization.
Prerequisite(s): Students may not have completed AS.230.217 previously.
Area: Social and Behavioral Sciences

AS.230.357. Baltimore and Beyond. 3 Credits.
This course uses the city of Baltimore as a lens through which to explore issues of urban inequality. We will focus on Baltimore’s history of racial segregation and concentrated poverty, and its effect on the social and economic well-being of the city and its residents, with attention to education, employment, health and crime. Students will learn how to employ Census data, GIS approaches, and sociological research to inform questions about population change, inequality and the distribution of resources across the city and metropolitan region. Students will also work on one or more policy relevant studies based in Baltimore, including: a project on abandoned and vacant housing, a desegregation intervention, and a longitudinal study of inner city youth. Finally, students will become familiar with Baltimore City’s programs and policy approaches to addressing the city’s most pressing problems, and will design innovative and effective and innovative solutions as part of their course assignments. Enrollment restricted to Social Policy minors only.
Prerequisite(s): Students that took AS.360.357 may not take AS.230.357
Area: Social and Behavioral Sciences

Writing Intensive

AS.230.358. The Politics of Mental Health. 3 Credits.
This course examines how the psy disciplines – psychology, psychiatry, psychotherapy and related fields – create knowledge about the mind, and how these fields have in turn shaped political and social life since early 20th century. We will explore how the psy disciplines have proven useful to projects of state building by reconstructing the human mind as a calculable, quantifiable entity, one that can be measured and governed across diverse educational, military, and healthcare settings. We will then ask how psychiatric categories such as bipolar disorder and PTSD (post-traumatic stress disorder) were created, and consider their impact on both the legal/medical management of illness and on lay and expert notions of sanity and normality. Finally, we will examine the rising influence of humanitarian mental health interventions, and immerse ourselves in the debates they have engendered concerning the use of psychotherapy to alleviate suffering in war and disaster zones.
Area: Social and Behavioral Sciences

Writing Intensive
AS.230.362. Migration & Development. 3 Credits.
This course focuses on the relationship between international migration and development. The course first introduces theories of international migration, immigrant integration, and international development. Building on this foundation, we then examine how immigrants interact with their homeland and how sending country governments tap their diaspora to improve development outcomes. Cross-listed with International Studies (CP, IR). Fulfills Economics requirement for IS GSCD track students only.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.363. Sociology of Dispossession. 3 Credits.
The “grabbing” of land and natural resources has, in recent years, generated widespread political conflict across the world and put dispossession on the agenda of academics and policy-makers. Nevertheless, compared to other social relations of power, land dispossession has not been central to scholarly or public understandings of capitalism, the state, development, or politics. In this class, we will collectively explore the nascent field that we might call the sociology of dispossession. We will examine existing theories of dispossession, and proceed to challenge, reconstruct or supplant those theories as we consider a wide range of historical examples of dispossession from the English Enclosures and colonial plunder to contemporary urban redevelopment and rural land grabs. This is a reading- and writing-intensive seminar.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.366. Black Social Thought and Social Movements. 3 Credits.
This course will examine the reciprocal relationship between Black social thought and social movements. How have social movements informed thinkers who grapple with questions of freedom and liberation in racially and economically stratified societies, and how have their ideas affected movement tactics? This course will look at 20th century movements and investigate connections between theory and practice through concepts like civil disobedience, internal colonialism, Black feminism, Black internationalism, and others.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.367. Islamic Finance. 3 Credits.
Today, Islamic finance is a global industry comprising nearly $2 trillion in assets, with hubs from Kuala Lumpur to Dubai to London. But half a century ago, nothing called “Islamic finance” existed. So where did Islamic finance come from? Why is it growing so fast? And what does it mean for finance to be Islamic? We discuss the ban on riba in the Quran and hadith, finance in early and medieval Islamic societies, petrodollars and the birth of Islamic banking in the 1970s, the rise of Islamic capital markets since 2000, contemporary shariah-compliant financial structures, and the constitution of piety through financial practice.
Area: Social and Behavioral Sciences

AS.230.369. Sociology in Economic Life. 3 Credits.
This course discusses how geopolitics, technology as well as social differentiation (such as race, class and gender) shape the structure of economic actions. Special attention will be paid to patterns of state-business relationship, labor processes, migrant economy, globalization and international division of labor.
Area: Social and Behavioral Sciences

AS.230.370. Housing and Homelessness in the United States. 3 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Prerequisite(s): Students may not have previously taken AS.230.223.
Area: Social and Behavioral Sciences

AS.230.375. Nations, States, and Boundaries. 3 Credits.
This course explores the historical origins and development of the modern global political order based on sovereign nation-states, the crisis of this order through the twentieth century, as well as the unraveling of this order at the turn of the twenty-first century. We will focus on how dominant political organizations in the changing world order (such as states, political parties, and transnational governing bodies) have been shaped by different social forces (such as classes and ethnic groups) and vice versa. Topics covered include rise and fall of modern nationalism, formation of regional and global governing structures, “civilizational” turn of global politics, waves of separatism and redrawing of nation’s boundaries after the Cold War, politics of immigration and citizenship, among others.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.377. Colonialism and Anti-Colonialism. 3 Credits.
This seminar examines the theories and historiography of colonialism and anti-colonial movements. It focuses on the establishment of the colonial division of labor, comparative colonialism, identity formation, and nationalism as well as anti-colonial movement.
Area: Social and Behavioral Sciences

AS.230.378. Refugees, Human Rights, and Sovereignty. 3 Credits.
What is a refugee? Since World War II, states that have pledged to offer protection to refugees have frequently been drawn instead to the dictates of nationalism and communitarianism, which prioritize concern for their own citizens, rather than to the needs of forced migrants. As a result, even those migrants that have been formally recognized as refugees according to the 1951 UN Refugee Convention have not been assured of protection, and other migrants have been even less assured. In this course, we will locate the reasons for this reality in the legal, political, and historical underpinnings of political asylum. What is the difference between an asylum seeker and a refugee? How has the refugee category been redefined and contested by international bodies since 1951? How are the ambiguities of real-life violence and persecution simplified in asylum adjudication interviews that require clear, factual narratives? What kinds of protections are offered to asylum seekers, whether by UN bodies, NGOs, or host governments, and how have such protections varied geographically and historically? Finally, what protections, if any, are afforded to those migrants who are fleeing not persecution but rather “merely” endemic poverty or climate-induced displacement? The course draws on literature from sociology, history, anthropology, and international refugee law in order to understand the capacity (or lack thereof) of human rights discourses and declarations to contravene state sovereignty in the name of protecting the rightless.
Area: Social and Behavioral Sciences
Writing Intensive
AS.230.379. Undergraduate Research Seminar. 3 Credits.
Seminar for Sociology students writing senior honor theses and conducting pre-approved independent research projects. Juniors and Seniors Sociology majors only. Permission of instructor.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.385. Schooling, Racial Inequality and Public Policy in America. 3 Credits.
After examining alternative explanations for why individuals obtain different amounts and types of educational training, the course focuses on how an individual's family background and race affect his or her trajectory through the educational system. The course covers the specific challenges that have confronted urban schooling in America since the 1960s, including the classic literature on the effects of school and community resources on student achievement as well as the development and later evaluation of school desegregation policies. The course also considers case studies of current policy debates in the US, such as housing segregation and school resegregation, voucher programs for school choice, and the motivation for and consequences of the establishment of state-mandated testing requirements. Throughout the course, emphasis is placed upon the alternative modes of inquiry and writing which opposing scholars, policymakers, and journalists use to address these contentious topics.
Area: Social and Behavioral Sciences

AS.230.388. Sociology of the Family. 3 Credits.
Sociological perspectives on contemporary family life, including marriage and divorce, cohabitation, single parenthood, same sex partnerships, children's wellbeing, balancing work and family responsibilities, domestic violence, and government policy toward families.
Area: Social and Behavioral Sciences

AS.230.393. Global Health and Human Rights. 3 Credits.
Is access to healthcare a fundamental human right? If so, then which global actors are obligated to provide healthcare to whom, and for how long? How do meanings of health and illness vary across time and place? And finally, how are human rights principles translated into frontline practice in order to promote well-being? This course takes a critical interdisciplinary approach to these questions through a series of global case studies ranging from humanitarian aid in post-tsunami Sri Lanka to anti-FGM (female genital mutilation) campaigns in Ghana. How do international NGOs, UN bodies, and governments collaborate (or compete) to distribute healthcare in places beset by dire resource shortages? Do human rights principles carry legal weight across borders, and if so, could access to healthcare services and essential medicines be litigated in order to compel governments to provide it? And finally, what cultural assumptions do human rights discourses carry with them, and what happens if rights-based approaches are poorly received by recipient populations? Moving beyond the basic principle of healthcare as a human right, this course aims to bring this idea's history and politics into focus by offering an in-depth exploration of its ethics and implementation.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.394. Social Statistics. 4 Credits.
The application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, confidence intervals, chi-square, anova, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.230.395. Contemporary Social Theory. 3 Credits.
This course will examine how major social theorists of the 20th century advanced upon the "classical" social theories of Marx, Weber, and Durkheim. As they grappled with the historical events and social concerns of the 20th century—the Russian revolution and its degeneration into Stalinism, the failure of communist movements in the West, the rise and fall of fascism and Nazism, the consolidation of capitalist democracies and welfare states, the emergence of anti-colonial movements in the "Third World," and the persistence of race, gender and sexuality as forms of domination—social theorists provided novel answers to classical questions of social theory: 1) what is the structure of modern society, how does it change, and how is it reproduced?; 2) what is the relation between social structures and ideas, knowledge, and subjectivity?; and 3) what are the conditions of possibility for human freedom? Theorists to be covered include Antonio Gramsci, Franz Fanon, W.E.B. DuBois, Georg Lukacs, Talcott Parsons, Herbert Marcuse, Jurgen Habermas, Louis Althusser, Pierre Bourdieu, Michel Foucault, Nancy Fraser, Patricia Hill Collins, Judith Butler, and Henri Lefebvre. In addition to understanding and comparing the theories, we will try to use them to understand contemporary societies. 
Prerequisite(s): AS.230.213
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.396. Politics and Society. 3 Credits.
This seminar surveys key problems of political sociology including the rise of the modern state, the origins and nature of liberal democracy, sources of authority, the relationship between political and economic power, the nation-state and nationalism, states and war, ideology and political contention, collective identity, social movements, and social revolutions. Fulfills Comparative Politics for International Studies.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.397. The Political Economy of Drugs and Drug Wars. 3 Credits.
In the United States, we spend more than $100 billion annually on illegal drugs—and the government spends more than $50 billion a year to combat their sale and use. These statistics raise important and complicated social questions. This course will examine the production, sale, use, and control of illegal drugs from a historical and sociological perspective. We will have three objectives: to understand the social construction of drug use and illegality in the United States and other rich countries; to uncover the political and economic consequences of drug trafficking in those countries that produce drugs, particularly in Latin America; and to examine the political economy of drug control through the so-called War on Drugs, both domestically and internationally.
Area: Social and Behavioral Sciences
AS.230.398. In Our Backyard: Housing and Community Change in Baltimore. 3 Credits.
This course will focus on how and why urban neighborhoods change. Why does vacant housing grow in some communities, while others seem on the brink of gentrification? Who benefits from neighborhood investment in Baltimore? Can urban revitalization benefit all residents? How can we study these challenging issues? These concerns are as relevant as they have ever been, as Baltimore contends with life after the death of Freddie Gray, contentious investment plans with major developers, and stubborn levels of poverty and crime. In this course, we will read scholarship in urban sociology, economics and housing policy data. A significant portion of the course will be dedicated to the analysis of longitudinal data on neighborhood change in the areas around both of Hopkins’ campuses, as well as other communities in the city. The data includes the perspectives of residents, landlords, developers, and community leaders, as well as ground-level observations of street and housing conditions. The course provides students an opportunity to become involved in timely and relevant research in the city, and possibly produce papers that would be suitable for conference submission, senior theses, and writing samples for graduate school. We will also compare efforts in Baltimore to those elsewhere, such as Detroit, Chicago, Brooklyn, Washington, D.C. Previous coursework in statistics and research methods is helpful but not required.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.405. Neoliberalism. 3 Credits.
Neoliberalism, a political project that seeks to subject all aspects of social life to free market force, has ascended to orthodoxy in developed and developing countries alike over the last four decades. This course is a reading seminar focused on some of the key classic and cutting-edge original texts that critically examine and debate the origins, socio-political impacts, and crisis of the neoliberal project. It will cover such topics as the genealogy of the neoliberal idea, neoliberal state, informalization of works, neoliberal cities, rise of the one percent, and global governance. Class will be a mix of lecture and seminar-style discussions. Requirements include reading memo, class presentation, and a term paper.
Area: Social and Behavioral Sciences

AS.230.415. Social Problems in Contemporary China. 3 Credits.
In this course we will examine contemporary Chinese society, looking at economic development, rural transformation, urbanization and migration, labor relations, changes in class structure and family organization, health care, environmental problems, governance, and popular protest. The course is designed for both graduate and undergraduate students. Undergraduates must have already completed a course about China at Hopkins. Cross-listed with East Asian Studies.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.420. Class, Capitalism, Colonialism: Evaluating the work of Walter Rodney. 1 Credit.
This course will focus on key writings of Guyanese scholar and intellectual, Walter Rodney (1942-1980) with an emphasis on evaluating his legacy and the relevance of his work for the 21st century, globally and locally. The main course readings are Rodney’s three major books—(1) How Europe Underdeveloped Africa; (2) History of the Guyanese Working People; and (3) Groundings with my Brothers. The course will provide students with the background necessary to participate in the January 31, 2020 workshop on the legacy of Walter Rodney organized by the JHU Arrighi Center for Global Studies.
Area: Social and Behavioral Sciences

AS.230.435. The China Boom. 3 Credits.
This course addresses the origins, global impacts, and demise of China’s economic ascendance as a world economic and political powerhouse at the turn of the twenty-first century. The course will cover the historical origins of the China boom and impacts of the boom on global political economic order. It will also address the social-political imbalances within China that contribute to the global financial crisis and recent slowdown of the Chinese economy. Particular topics include late imperial and Maoist legacies’ relation to contemporary economic growth, stages of China’s capitalist development, China’s outward investment in the developing world, formation and limits of US-China economic symbiosis, and China’s participation in global governance, among others.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.440. Port Cities and Historical Capitalism in Maritime Asia. 3 Credits.
The goal of the seminar is to examine the prospects and limits of understanding the incorporation of Asia in the capitalist world-system from the prism of oceanic connections. The theoretical thrust of this course is to develop but also to adapt Janet Abu-Lughod emphasis on the connections across port cities and littoral in the Afro-Eurasian continents before the long sixteenth century in her Before European Hegemony. But instead of looking at a port city as its adjacent hinterland polity’s gateway to global trade in the premodern era, the course examines the multifarious coast-hinterland relationships. The readings are organized by a chronological order, which begins with the historical maritime silk road between the third and thirteenth centuries, and will be followed by Asian port cities in the European age of empire and postwar American-led Cold War Structure, as well as the present-day Chinese New Silk Road Diplomacy. Students are expected to select an issue of regional tensions and to analyze its historical root.
Area: Social and Behavioral Sciences

AS.230.445. Sociology of Religion. 3 Credits.
This seminar tackles major issues in the classical and contemporary sociology of religion. We begin with Ibn Khaldun, Friedrich Nietzsche, Karl Marx, Max Weber, Émile Durkheim, and Mary Douglas, asking basic questions: What are religion and the sacred? Why do they exist? What is the relationship between religion and social structure? And what role does religion play in morality, solidarity, boundaries, exploitation, patriarchy, and macrohistorical transformations such as the rise of capitalism? Keeping this theoretical grounding (and its flaws and biases) in mind, we continue to probe the problem of religion in modernity through more-recent writings. Topics include the secularization debate (Are modernity and religion antithetical?); “religious markets” and rational-choice theories of religion; religious revivalism, evangelicalism, fundamentalism, and proselytizing movements; feminist and queer sociologies of religion; civil religion (Is standing for the national anthem a religious act?); embodiment and prayer; Orientalism and postcolonial interrogations of the secular; religious violence and nationalism; the intersectionality of religion with race, class, and caste; and religion and neoliberalism. Although dominant sociologies of religion have focused on Christianity in Western Europe and North America, this course applies a global lens, training significant focus on non-Western and non-Christian contexts.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.500. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.230.501. Research Assistantship. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.230.502. Senior Thesis Program. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.230.506. Independent Research. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.230.507. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.230.508. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.230.597. Independent Research. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.230.598. Summer Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.230.599. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.230.600. Introduction to Social Statistics.
This course will introduce students to the application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, confidence intervals, chi-square, anova, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.230.602. Theories of Society.
This course will focus on three classical theorists whose ideas have fundamentally influenced the ways we study and understand society: Karl Marx, Max Weber, and Emile Durkheim. In the section on Marx, we will also read contributions by his close collaborator, Frederick Engels.

AS.230.603. Contemporary Social Theory.
This course will examine how important schools of social theory challenged and reconstructed the "classical" theories of Marx, Weber, and Durkheim as they grappled with the historical developments and social concerns of the 20th and early 21st centuries.

A seminar in multiple regression (least squares and alternative estimation procedures) with a focus on sociological problems and software applications. Extensions to hierarchical linear models will be included. Graduate students should have completed AS.230.600 or the equivalent. Undergraduates only admitted with instructor's permission, and AS.230.205 or equivalent. Recommended Course Background: AS.230.205, AS.230.600 or equivalent.

AS.230.605. Categorical Data Analysis.
This course provides the students with a set of statistical tools to understand and interpret social science research dealing with categorical dependent variables and to prepare students to apply these models in their own research. The models covered in the course include logit, probit, Poisson, and log-linear models, as well as multi-level models of categorical dependent variables.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

This is an intensive reading seminar on working class formation from a comparative, historical and global perspective, including theoretical and empirical (case study) readings on changes over time in labor process, labor markets, and labor movements. We will build on a range of local case studies to establish spatial and temporal patterns, and discuss the connections between these global patterns and the dynamics of historical capitalism.

AS.230.608. Proseminar In Sociology.
Individual one-hour presentations by faculty members will introduce students to the faculty's substantive interests and research styles.

Advanced seminar for PhD students who are preparing their dissertation proposals or writing their dissertations. Sociology graduate students only.

AS.230.611. Seminar on Comparative & World-Historical Sociology.
In this seminar we will read key texts in comparative sociology. The topics covered are cross-national sociology, comparative national development, comparing world-systems, the modern world-system, globalization, and social movements.

AS.230.612. Seminar on Social Inequality.
This seminar attempts a broad survey of sociological theorizing and research on social stratification in the United States and the role of social institutions in generating and mitigating inequality.

A discussion-oriented seminar focused on major recent writings on the family, in both the developed and developing nations.

In-depth reading and discussion of theories and research on immigration to the U.S. Theoretical issues include international migration, immigration, and assimilation. Research topics include: the impact of U.S. immigration laws on immigrant inflows and stocks, self-selection of immigrants, the impact of immigration on the native-born population, and the adaptation of the first and second generations. The course focuses on immigration since 1965 and its related controversies and debates.

AS.230.618. Introduction to Computational Social Science.
Computational social science is an interdisciplinary field combining social science and data science. Today's digital age presents both opportunities and risks to social scientists with the availability of increasingly big and complex data that depart from traditional data in remarkable ways. This course offers a foundational basis for social science students to embark upon the field. The weekly 2-hour seminar introduces the topics of big data ethics; research designs for the collection and use of digital trace data, automated texts, government administrative data, and large-scale social network data; new forms of surveys and experiments; and mass data collaborations. Research publications are used to illustrate each topic. The weekly 1-hour labs are for group activities on the weekly topic. There are no social science or data science prerequisites.
Area: Social and Behavioral Sciences

This course introduces strategies for estimating causal effects from a counterfactual perspective, uniting the potential outcome model with causal graph methodology. After an examination of the primary features of the counterfactual perspective and criteria for causal effect identification, the course focuses on developing a deep understanding of data analysis techniques that can work in favorable circumstances, such as matching, regression from a potential outcome perspective, and inverse probability of treatment weighting. The course concludes with the vexing challenges posed by unobserved determinants of both the cause and outcome of interest, and it provides a review of specialized designs that can salvage a research project in these situations.
Area: Social and Behavioral Sciences

AS.230.635. PGSC Research Seminar.
Working seminar focusing on new research in the field of comparative and world-historical sociology. Sociology graduate students or permission of instructor.

An intensive analysis of a wide range of sociological studies, designed to acquaint the student with how sociologists deal with important theoretical issues, using a variety of methods and sources of data. Particular attention will be paid to the logical coherence of the studies and to the fit between data and interpretation.
Area: Social and Behavioral Sciences

AS.230.644. Reading Capital @150.
Area: Social and Behavioral Sciences

AS.230.646. Race and Ethnicity in American Society.
Race and ethnicity have played a prominent role in American society and continue to do so, as demonstrated by interracial and interethnic gaps in economic and educational achievement, residence, political power, family structure, crime, and health. Using a sociological framework, we will explore the historical significance of race and its development as a social construction, assess the causes and consequences of intergroup inequalities and explore potential solutions.
Area: Social and Behavioral Sciences

AS.230.647. Agrarian Change.
This course will explore questions related to historical and contemporary trajectories of agrarian change. It begins with classical theoretical debates on the distinctiveness of peasantries and their prospects under capitalism. It will then turn to major themes of agrarian change in the twentieth century: modes of production, class polarization and differentiation, peasant wars, moral economies, everyday resistance, collectivization and decollectivization, food regimes, and depeasantization. It will conclude with new themes in agrarian change, with a particular emphasis on contemporary forms of land dispossession and repossession. The course will be structured as a reading-intensive research seminar.
Area: Social and Behavioral Sciences

AS.230.649. Qualitative Research Methods: Domestic and International Fieldwork.
This course discusses the conceptualization of qualitative research involving fieldwork, and the collecting, analyzing, and reporting of sociological field data in both domestic and international settings. Data collection techniques such as intensive interviewing, participant-observation, document analysis, and ethnography are included. The course also covers the logic of qualitative inquiry, choosing research sites and cases, engaging archival sources, judging the validity and reliability of data, and software-based data analysis.
Area: Social and Behavioral Sciences

AS.230.650. Macro-Comparative Research.
The course examines methods of studying long-term, large-scale social change. Both qualitative and quantitative methods are covered.
Area: Social and Behavioral Sciences

AS.230.651. Political Sociology.
This seminar surveys key problems of political sociology including the rise of the modern state, the origins and nature of liberal democracy, sources of authority, the relationship between political and economic power, the nation-state and nationalism, states and war, ideology and political contention, collective identity, social movements, and social revolutions.
Area: Social and Behavioral Sciences

This course will focus on how and why urban neighborhoods change. Why does vacant housing grow in some communities, while others seem on the brink of gentrification? Who benefits from neighborhood investment in Baltimore? Can urban revitalization benefit all residents? How can we study these challenging issues? These concerns are as relevant as they have ever been, as Baltimore contends with life after the death of Freddie Gray, contentious investment plans with major developers, and stubborn levels of poverty and crime. In this course, we will read scholarship in urban sociology, economics and housing policy data. A significant portion of the course will be dedicated to the analysis of longitudinal data on neighborhood change in the areas around both of Hopkins' campuses, as well as other communities in the city. The data includes the perspectives of residents, landlords, developers, and community leaders, as well as ground-level observations of street and housing conditions. The course provides students an opportunity to become involved in timely and relevant research in the city, and possibly produce papers that would be suitable for conference submissions or journal articles. We will also compare efforts in Baltimore to those elsewhere, such as Detroit, Chicago, Brooklyn, Washington, D.C. Previous coursework in statistics, policy, research design and research methods is helpful but not required.
This course will introduce students to a range of software programs that are critical for conducting social scientific research in the 21st century. Students will develop competency in the use of computer programs for statistical analysis, database management, the creation of maps and timelines, and the presentation of research reports. The course uses examples from ongoing social science faculty research projects at Johns Hopkins on global inequality and international development.

AS.230.674. Political Economy of India.
This course is designed to critically engage political economy questions in contemporary India. The course will focus on the post-colonial era. A basic understanding of India's contemporary political economy is required.
Area: Social and Behavioral Sciences

AS.230.685. TRP PROPOSAL SEMINAR.
This seminar includes all members of the second year cohort of sociology graduate students. Class meetings will provide feedback and guidance as students develop proposals for their Trial Research Papers. The course will also include a series of professional developments seminars. For Sociology PhD students only.

AS.230.690. TRP PRESENTATION SEMINAR.
This seminar includes all members of the third year cohort of sociology graduate students. Class meetings will provide feedback and guidance as students revise the final drafts of their Trial Research Papers. For Sociology PhD students only.

AS.230.800. Independent Study.

AS.230.811. Teaching Assistantship.

AS.230.815. Trial Research Paper I.

AS.230.816. Trial Research Paper II.

AS.230.817. Trial Research Paper III.
AS.250 (BIOPHYSICS)

AS.250.105. Science and Film. 2 Credits.
From the origins of cinema to the present, science and technology have remained the most reliably popular subjects for filmmakers and audiences alike. This course will address that enduring fascination, exploring the meanings and uses of science and technology in film through guest lectures and discussion of cinematic examples both recent and historic. Lectures and discussion will focus on a range of questions: How does film both reflect and shape our understanding of scientific concepts and technologies, from artificial intelligence to genetic engineering? How does science fiction reveal contemporary cultural anxieties and address ethical questions? How “fictional” is the science in science fiction film? What can we learn about “real” science from the movies? In addition to exploring science through film, students will learn the tools of film analysis through lecture, close viewing and completion of a series of short written responses. Possible films to be discussed: 2001: A Space Odyssey, Her, Ex Machina, GATTACA, Minority Report, Eternal Sunshine of the Spotless Mind, Forbidden Planet, The Matrix, and more. Attendance at weekly screenings required.

AS.250.106. Introduction to Biomedical Research and Careers I. 1 Credit.
Lecture Series designed for those curious about a career in life sciences, medicine and public health. A novel format combining presentation with didactic interviews gives a broad view of a range of research topics, experimental approaches and logistics, and practical applications as well as career paths. Emphasis is on the excitement of scientific explorations not an abundance of the technical facts and figures. Freshmen and non-science majors. Co-listed with AS.250.300 and AS.250.306. Area: Natural Sciences

AS.250.131. Freshman Seminar in Biophysics. 1 Credit.
Introduction of contemporary biophysics research topics through presentations, discussion and hands-on exercise. Freshmen only. S/U grading only. Area: Natural Sciences

AS.250.205. Introduction to Computing. 3 Credits.
This course will introduce students to basic computing concepts and tools useful in many applications and disciplines, not only the life sciences. Students learn to work in the Unix environment, to write shells scripts, and to make use of powerful Unix commands (e.g grep, awk, and sed). They will learn to program using the Python programming language, graphing software, and a package for numerical and statistical computing, such as Mathematica or MATLAB. At the end of the semester students will complete a project coupling all components of the semester together. Brief lectures followed by extensive hands-on computer laboratories with examples from many disciplines. No prerequisites. Course offered every semester. Prerequisite(s): You cannot take AS.250.205 if you have already taken AS.250.206. Area: Natural Sciences

AS.250.206. Practical Programming: UNIX and PYTHON. 4 Credits.
This course is useful for many disciplines not only the life sciences. It will introduce students to basic computing concepts and tools useful in many applications. Students learn to work in the Unix environment, to write shells scripts, and to make use of powerful Unix commands (e.g grep, awk, and sed). They will learn to program using the Python programming language, graphing software, and a package for numerical and statistical computing, such as Mathematica or MATLAB. At the end of the semester students will complete a project coupling all components of the semester together. Brief lectures followed by extensive hands-on computer laboratories with examples from many disciplines. No prerequisites. Course offered every semester. Prerequisite(s): You cannot take AS.250.206 if you have already taken AS.250.205. Area: Natural Sciences

AS.250.253. Protein Engineering and Biochemistry Lab. 3 Credits.
The RNA world: from discovery to application. 3 Credits.
What is the first molecule of life? RNA embodies both informational and catalytic function, making it an ideal candidate for the first genetic biomolecule. In this course, we will explore the RNA world hypothesis by introducing different RNA molecules and discussing their functions. Students will learn the history of RNA biology discoveries through current topics in the field, such as RNA interference and CRISPR. Also, we will discuss the roles of essential cellular RNA-protein complexes, such as the ribosome and spliceosome. By the end of the class, students will have a general understanding of RNA biology and be familiar with RNA biotechnology techniques. Students will also gain experience reading scientific literature to learn advances in the field, discuss current applications, ethics and social impact of RNA biotechnology. Students’ performance will be evaluated by short written essays and student-led seminars on promising new directions for the field. Recommended Course Background: (AS.250.135 or AS.020.305) or equivalent knowledge of molecular biology.

AS.250.254. Protein Biochemistry and Engineering Laboratory. 4 Credits.
A project laboratory where students will use the techniques of protein engineering to attempt to modify existing proteins to endow them with new structural or physical properties. This course will provide an introduction to standard biochemistry laboratory practice and to protein science, including experiments in site-directed mutagenesis, protein purification and characterization of proteins in regard to structure, function and stability. Prerequisite(s): You cannot take AS.250.254 if you have already taken AS.250.253. Area: Natural Sciences

AS.250.257. RNA Biochemistry and Biotechnology. 3 Credits.
This laboratory examines the relationship between genes and proteins in the context of disease and evolution. It is a research project lab in which the structural and functional consequences of mutations are determined for a model protein. Students will learn basic protein science and standard biochemical techniques and methods in protein engineering. They will perform experiments in site-directed mutagenesis, protein purification, and structural, functional and physical characterization of proteins. No prerequisites. Courses offered in Fall and Spring semesters. Prerequisite(s): You cannot take AS.250.254 if you have already taken AS.250.257. Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module. Area: Natural Sciences Writing Intensive
AS.250.300. Introduction to Biomedical Research and Careers II. 1 Credit.
Lecture Series designed for those curious about a career in life sciences, medicine and public health. A novel format combining presentation with didactic interviews gives a broad view of a range of research topics, experimental approaches and logistics, and practical applications as well as career paths. Emphasis is on the excitement of scientific explorations not an abundance of the technical facts and figures. Freshmen and non-science majors. Co-listed with AS.250.106 and AS.250.306
Area: Natural Sciences

AS.250.302. Modeling the Living Cell. 4 Credits.
Previously titled ‘Models and Algorithms in Biophysics.’ Introduction to physical and mathematical models used to represent biophysical systems and phenomena. Students will learn algorithms for implementing models computationally and perform basic implementations. We will discuss the types of approximations made to develop useful models of complex biological systems, and the comparison of model predictions with experiment.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences

AS.250.306. Introduction to Biomedical Research and Careers III. 1 Credit.
Lecture Series designed for those curious about a career in life sciences, medicine and public health. A novel format combining presentation with didactic interviews gives a broad view of a range of research topics, experimental approaches and logistics, and practical applications as well as career paths. Emphasis is on the excitement of scientific explorations not an abundance of the technical facts and figures. Freshmen and non-science majors. Co-listed with AS.250.106 and AS.250.300
Area: Natural Sciences

AS.250.310. Exploring Protein Biophysics using Nuclear Magnetic Resonance (NMR) Spectroscopy. 3 Credits.
NMR is a spectroscopic technique which provides unique, atomic level insights into the inner workings of biomolecules in aqueous solution and solid state. A wide variety of biophysical properties can be studied by solution state NMR, such as the three dimensional structures of biological macromolecules, their dynamical properties in solution, interactions with other molecules and their physical and chemical properties which modulate structure-function relationships (such electrostatics and redox chemistry). NMR exploits the exquisite sensitivity of magnetic properties of atomic nuclei to their local electronic (and therefore, chemical) environment. As a result, biophysical properties can be studied at atomic resolution, and the global properties of a molecule can be deconstructed in terms of detailed, atomic level information. In addition, interactions between nuclei can be exploited to enhance the information content of NMR spectra via multidimensional (2D and 3D) spectroscopy. Since these properties can be studied in solution, NMR methods serve as an effective complement to X-Ray crystallography and electron microscopy. In this course, we will learn about the basics of NMR spectroscopy, acquire 1D and 2D NMR spectra and use various NMR experiments to characterize and probe biophysical properties of proteins at an atomic level.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.250.311. Biophysics. 4 Credits.
This course covers the principles of biophysical systems, with an emphasis on computational analysis. Networks ranging from simple biochemical pathways to genome-scale metabolic, regulatory, and signaling networks will be studied. Topics include dynamic modeling of biochemical pathways, steady-state analysis of cellular metabolic networks, inference of gene regulatory networks using –omics data, and systems biology approaches to studying signal transduction. Recommended course background: Calculus (AS.110.106 and AS.110.107), Biochemistry (AS.250.315 or AS.020.305 or equivalent). Prior exposure to programming is recommended.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.250.313. Molecular and Cellular System Biology. 4 Credits.
This course covers the principles of biological networks, with an emphasis on computational analysis. Networks ranging from simple biochemical pathways to genome-scale metabolic, regulatory, and signaling networks will be studied. Topics include dynamic modeling of biochemical pathways, steady-state analysis of cellular metabolic networks, inference of gene regulatory networks using –omics data, and systems biology approaches to studying signal transduction. Recommended course background: Calculus (AS.110.106 and AS.110.107), Biochemistry (AS.250.315 or AS.020.305 or equivalent). Prior exposure to programming is recommended.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.250.314. Research in Protein Design and Evolution. 3 Credits.
Writing Intensive

AS.250.315. Biochemistry I. 3 Credits.
Foundation for advanced classes in Biophysics and other quantitative biological disciplines. Lecture and computer laboratory. This class is the first semester of a two semester course in biochemistry. Topics in Biochemistry I include chemical and physical properties of biomolecules and energetic principles of catabolic pathways. Computer labs include extensive use of molecular graphics and modelling of reaction kinetics and pathway flux. Co-listed with AS.030.315
Prerequisite(s): If you have completed AS.250.307 you may not register for AS.250.315.;AS.030.206 OR AS.030.212
Area: Natural Sciences

AS.250.316. Biochemistry II. 3 Credits.
Biochemical anabolism, nucleic acid structure, molecular basis of transcription, translation and regulation, signal transduction with an emphasis on physical concepts and chemical mechanisms. Format will include lectures and class discussion of readings from the literature.
Prerequisite(s): (AS.250.315 OR AS.030.315 OR AS.020.305 ) AND (AS.030.206 OR AS.030.212 ) or permission of the instructor.

AS.250.320. Macromolecular Binding. 3 Credits.
All biological processes require the interactions of macromolecules with each other or with ligands that activate or inhibit their activities in a controlled manner. This course will discuss theoretical principles, logic, approaches and practical considerations used to study these binding processes from a quantitative perspective. Topics will include thermodynamics, single and multiple binding equilibria, linkage relationships, cooperativity, allosterism, and macromolecular assembly. Some biophysical methods used in the study of binding reactions will be discussed. Computer simulation and analysis of binding curves will be used to analyze binding data, and binding schemes and examples from the scientific literature will be reviewed and discussed. Recommended Course Background: AS.250.372 Biophysical Chemistry
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

Writing Intensive
AS.250.335. Single Molecule & Cell Biophysics. 3 Credits.
This (elective) course offers an introduction to the field of single molecule and single cell biophysics to second and third year undergraduate students in biophysics. We will examine technologies such as single molecule fluorescence, force measurements and single cell fluorescence detections that enable high precision molecular visualizations in vitro and in cells. In addition, we will cover topics of genome engineering, cell mechanics and optogenetics toward the end of the semester. Each student is expected to read two articles assigned for each week and submit a written summary. All students will take turns presenting the assigned articles to class.

AS.250.351. Reproductive Physiology. 2 Credits.
Focuses on reproductive physiology and biochemical and molecular regulation of the female and male reproductive tracts. Topics include the hypothalamus and pituitary, peptide and steroid hormone action, epididymis and male accessory sex organs, female reproductive tract, menstrual cycle, ovulation and gamete transport, fertilization and fertility enhancement, sexually transmitted diseases, and male and female contraceptive methods. Introductory lectures on each topic followed by research-oriented lectures and readings from current literature.
Area: Natural Sciences

AS.250.372. Biophysical Chemistry. 4 Credits.
Course covers classical and statistical thermodynamics, spanning from simple to complex systems. Major topics include the first and second law, gases, liquids, chemical mixtures and reactions, partition functions, conformational transitions in peptides and proteins, ligand binding, and allosterism. Methods for thermodynamic analysis will be discussed, including calorimetry and spectroscopy. Students will develop and apply different thermodynamic potentials, learn about different types of ensembles and partition functions. Students will learn to use Mathematica and will use it for data fitting and for statistical and mathematical analysis. Background: Calculus, Introductory Organic Chemistry, and Introductory Physics.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences

AS.250.381. Spectroscopy and Its Application in Biophysical Reactions. 3 Credits.
Continues Biophysical Chemistry (AS.250.372). Fundamentals of quantum mechanics underlying various spectroscopies (absorbance, circular dichroism, fluorescence, NMR); application to characterization of enzymes and nucleic acids.
Area: Natural Sciences

AS.250.383. Molecular Biophysics Laboratory. 3 Credits.
An advanced inquiry based laboratory course covering experimental biophysical techniques to introduce fundamental physical principles governing the structure/function relationship of biological macromolecules. Students will investigate a "model protein", staphylococcal nuclease, the "hydrogen atom" of biophysics. Using a vast library of variants, the effect of small changes in protein sequence will be explored. A variety of techniques will be used to probe the equilibrium thermodynamics and kinetic properties of this system; chromatography, spectroscopy (UV-Vis, fluorescence, circular dichroism, nuclear magnetic resonance), calorimetry, analytical centrifugation, X-ray crystallography, mass spectroscopy, and computational methods as needed for analysis. These methods coupled with perturbations to the molecular environment (ligands, co-solvents, and temperature) will help to elucidate protein function. Prerequisite: Introduction to Scientific Computing (250.205) or equivalent. Biophysical Chemistry (250.372 or 020.370) or equivalent. Course taught in Fall and Spring.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.; (AS.250.372 OR AS.030.370) AND AS.250.205
Writing Intensive

AS.250.403. Bioenergetics: Origins, Evolution and Logic of Living Systems. 3 Credits.
The trait shared by all living systems is the capacity to perform energy transduction. This biophysics/biochemistry course examines the physico-chemical and structural basis of biological energy transduction. Emphasis is on understanding the molecular and cellular logic of the flow of energy in living systems. The course explores the connection between fundamental physical requirements for energy transduction and the organization, evolution and possibly even the origins of biological molecules, cells, and organisms. Implications for planet earth's energy balance and for the design of synthetic organisms and of artificial energy transducing machines will be discussed, time permitting. Recommended Course Background: One semester of Biochemistry. Recommended Course Background: One semester of Biochemistry
Writing Intensive

AS.250.411. Advanced Seminar in Structural Biology of Chromatin. 3 Credits.
Focus is on structural and physical aspects of DNA processes in cells, such as nucleosomal packaging, DNA helicases, RNA polymerase, and RNA inhibition machinery. Topics are meant to illustrate how the structural and chemical aspects of how proteins and nucleic acids are studied to understand current biological questions. Recommended Course Background: Biochemistry I (AS.250.315) and Biochemistry II (AS.250.316) or Biochemistry (AS.020.305) and Intro to Biophys Chem (AS.250.372)
Area: Natural Sciences
Writing Intensive

AS.250.421. Advanced Seminar in Membrane Protein Structure, Function & Pharmacology. 3 Credits.
Topics are meant to illustrate the physical basis of membranes and membrane proteins towards understanding their functions and pharmacological importance including aspects of drug design as it relates to membranes. Contemporary issues in the field will be covered using primary literature articles, structural manipulations in pymol, and computational binding simulations.Recommended Course Background: AS.030.205, AS.250.307, and AS.250.372
Writing Intensive
AS.250.514. Research in Protein Design and Evolution. 3 Credits. 
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms. 
Writing Intensive

AS.250.520. Introduction to Biophysics Research. 3 Credits. 
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.250.521. Research in Biophysics. 3 Credits. 
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

Graduate students only. Students and invited speakers present current topics in the field.

Graduate students only. Students and invited speakers present current topics in the field.

Living systems require a constant flux of energy to perform their various functions. As such, they provide a unique opportunity to study the physics of systems out of equilibrium. This course covers topics in nonequilibrium biological physics including modeling fluctuations using Langevin, Fokker-Planck, and master equation formalisms, dissipation in driven systems, liquid-liquid phase separation, chromatin dynamics, epigenetic landscapes, and information flow in complex networks. Emphasis is placed on biological examples from cell and molecular biology and several lectures by domain experts will be interspersed with the course material. Recommended course background: Knowledge of equilibrium statistical mechanics.

AS.250.610. Savvy Science Seminars. 
Oral presentations are one of the main forms by which scientists communicate their results. Whether in the context of the classroom, the relatively informal lab meeting or as an invited speaker at an international colloquium, the ability to effectively present scientific results is an important skill to master. This course will cover the planning and execution steps necessary to produce an engaging oral presentation. Students will learn to articulate the big biological questions, tell a story that stimulates interest in their chosen subject, and effectively convey their experimental findings. Key methodological steps in planning will guide students on how to create slides with compelling visuals, and how to use technology to their advantage. Students will each prepare, present, and receive feedback on a 15-minute talk on their thesis project in the style of the Biophysical Society short talks. In addition, each student will receive and evaluate a video of their presentation so they can see themselves through the eyes of others.

AS.250.621. X-ray diffraction. 
Basics of X-ray diffraction methods

AS.250.622. Statistics and Data Analysis. 
Basics of statistics and data analysis

Basics of molecular dynamics

AS.250.624. NMR Spectroscopy. 
Basics of NMR spectroscopy

Basic Principles of Single Molecule Measurements
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

Cells are actively-driven soft materials but also efficient sensors and information processors. This course will cover the physics of those cellular functions, from the mechanics of DNA to the sensing of chemical signals. Questions answered include: How does polymer physics limit how quickly chromosomes move? Why do cells use long, thin flagella to swim? What limits the accuracy of a cell’s chemotaxis? Some experience with partial differential equations required. No biology knowledge beyond the high school level necessary. Some problem sets will require minimal programming.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

Area: Natural Sciences

AS.250.649. Introduction to Computing in Biology. 
In this four week, intensive introductory course, students will gain a practical working knowledge of programming languages and packages for analyzing data from biochemical and biophysical experiments. The course covers fundamentals of UNIX, Python, Mathematica and MATLAB. Brief daily lectures are followed by extensive hands-on experience in the computer laboratory.

The structure of proteins, DNA and RNA, and their functions in living systems. Students are required to participate in class discussions based on readings from the primary scientific literature. Co-requisite: AS 250.649 Introduction to Computing in Biology. Instructor permission for undergraduates.
Prerequisite(s): Prerequisite: AS.250.649, may be taken concurrently.

AS.250.689. Physical Chemistry of Biological Macromolecules. 
Introduction to the principles of thermodynamics and kinetics as applied to the study of the relationship between structure, energy dynamics, and biological function of proteins and nucleic acids. Topics include of classical, chemical, and statistical thermodynamics, kinetics, theory of ligand binding, and conformational equilibria.

AS.250.690. Methods in Molecular Biophysics. 
Introduction to methods employed in study of energetics, structure and function of biological macromolecules. Topics include optical spectroscopy, transport methods, NMR, X-ray crystallography. Theoretical understanding and knowledge through problem solving and literature discussion emphasized.
Prerequisite(s): AS.250.685 AND AS.250.689

AS.250.801. Dissertation Research.

ME.100.300. Research Practicum in Biophysics. 
Provides an opportunity for students to actively conduct research in Biophysics.

ME.100.699. Biophysics Elective. 
For Medical Students only. Specialized Topics in Biophysics. Refer to Medical Student Electives Book located at https://www.hopkinsmedicine.org/som/students/academics/electives.html.

ME.100.705. Computer Modeling Of Biological Macromolecules. 
Lecture will offer an introduction to the mathematical aspects of computer representation and manipulation of macromolecules
ME.100.706. Fundamentals Of Protein Crystallography.
An introductory course designed to present the core knowledge and theoretical underpinnings of protein crystallography necessary to function in the laboratory. Assigned readings and problem sets will be given.

ME.100.707. Advanced Topics in Protein Crystallography.
An introductory course designed to present the core knowledge and theoretical underpinnings of protein crystallography necessary to function in the laboratory. Assigned readings and problem sets will be given.

ME.100.709. Macromolecular Structure and Analysis.
The course will cover the structure and properties of biological macromolecules and the key methods used to study them, including X-ray crystallography, nuclear magnetic resonance, spectroscopy, microscopy, and mass spectrometry.

ME.100.710. Biochemical and Biophysical Principles.
The physical and chemical principles underlying biological processes are presented and discussed. Topics include thermodynamics, chemical equilibrium, chemical and enzymatic kinetics, electrochemistry, physical chemistry of solutions, and structure and properties of water. Elementary concepts of statistical thermodynamics will be introduced as a way of correlating macroscopic and microscopic properties.

The laboratory course will familiarize students with practical aspects of molecular modeling. It teaches the necessary tools to create and manipulate computer generated models of biological-interest molecules. Techniques such as comparative modeling will be introduced.

ME.100.713. Using Structure to Understand Biology.
The goal of this course is to teach students how to make use of structural information in the PDB using commonly available tools that are accessible to the non-expert. Students will learn how to read a structure paper, understand structure quality and limits of interpretation, and use coordinates from the Protein Data Bank to explore a structure and make figures. Topics covered will include non-covalent interactions, modeling point mutants, identifying binding pockets, making homology models, and calculating electrostatic surface potentials. Classes will combine lectures, hand-on computer demonstrations and critical reading of papers. A final project will require a short write-up and presentation that implements the programs and principles learned in the class.

This elective course offers an introduction to the field of single molecule and single cell biophysics to graduate students in Johns Hopkins University and will be delivered in the School of Medicine. We will examine technologies such as single molecule fluorescence and force measurements, super-resolution imaging and single cell fluorescence detections that enable high precision molecular visualizations in vitro and in cells.

ME.100.715. Proteins and Nucleic Acids II.
Critical reading and analysis of primary source literature is vital to scientific discourse and discovery. Students will be responsible for analyzing and critiquing papers in diverse topics and systems ranging from replication, transcription, and translation to enzyme mechanism, drug resistance, innate immunity, and signaling. Methods covered will include structural, biochemical, single-molecule, single-cell, and genomic approaches. Students will deliver analytic presentations on at least two ground-breaking papers relevant to these areas, and will be expected to actively participate in class discussion of experimental methodology and logic of other papers assigned in the course.

ME.100.716. Analysis of Macromolecules.
The course will cover (1) macromolecules, (2) physical chemical principles dictating their biological behavior, and (3) methods to study them. Lectures will focus on practical application of the methods, experimental design, data collection, and elementary aspects of data analysis.

ME.100.801. Research.
Thesis research

ME.100.804. Topics in Macromolecular Structure and Function I.
This is the first part of a seminar course covering a variety of topics involving the structure and function of proteins and nucleic acids. Recent topics have included: protein folding, evolutionary significance of introns, protein-DNA interactions, solution structure of peptides, prospects for designing novel proteins, and two-dimensional NMR.

ME.100.807. Research.
Thesis Research

ME.100.808. Topics in Macromolecular Structure and Function II.
This is the second part of a seminar course covering a variety of topics involving the structure and function of proteins and nucleic acids. Recent topics have included: protein folding, evolutionary significance of introns, protein-DNA interactions, solution structure of peptides, prospects for designing novel proteins, and two-dimensional NMR.
AS.270 (EARTH & PLANETARY SCIENCES)

AS.270.103. Introduction to Global Environmental Change. 3 Credits.
A broad survey of the Earth as a planet, with emphasis on the processes that control global changes. Topics include: the structure, formation, and evolution of the Earth, the atmosphere, oceans, continents, and biosphere. Special attention is given to present-day issues, such as global climate change, natural hazards, air pollution, resource depletion, human population growth, habitat destruction, and loss of biodiversity. Open to all undergraduates.
Area: Natural Sciences

AS.270.110. Freshman Seminar: Sustainable + Non-Sustainable Resources. 1 Credit.
An introduction to the important resources involved in the origin and production of oil, natural gas, coal, cement, metals and geothermal fluids.
Area: Natural Sciences

AS.270.111. Freshman Seminar: The Story of Earth. 1 Credit.
The four and a half billion year story of Earth's global changes focusing on the co-evolution of Earth and Life.
Area: Natural Sciences

AS.270.112. The Changing Arctic Environment: Problem or Opportunity?. 3 Credits.
The Arctic is warming three times faster than the global-mean rate. In this course we will be studying this phenomenon and its consequences by looking at the interconnected parts of the Arctic climate system (ocean, atmosphere, and ice), how they are changing, and which socio-economic opportunities and environmental challenges arise from these changes.
Area: Natural Sciences

AS.270.113. Freshman Seminar: Environmental Poisons. 1 Credit.
An exploration of the occurrence and potential effects of poisons in the environment, from naturally occurring ones such as arsenic to those that may be introduced by mankind such as nuclear waste.
Area: Natural Sciences

AS.270.114. Guided Tour: The Planets. 3 Credits.
An introduction to planetary science and planetary exploration primarily for non-science majors. A survey of concepts from astronomy, chemistry, geology, and physics applied to the study of the solar system.
Area: Natural Sciences

AS.270.125. People and the Earth: The Science Behind Our Interactions. 3 Credits.
This course is designed to introduce non-science students to the ways in which humans and the Earth interact. These interactions go in both directions, with Earth processes and materials affecting human society, and human activities altering the Earth. Topics include natural disasters, natural resources, and environmental issues rooted in geology; and they are examined from both a historical perspective and in the context of current events. Class time involves active learning and hands-on experiences. Course open to freshmen, sophomores, and juniors. Seniors by instructor permission only.
Area: Natural Sciences

AS.270.127. Our Moon From Imagination to Exploration. 3 Credits.
People imagined going to the Moon long before Neil Armstrong took those famous steps. Works such as Jules Verne's 1865 book De la terre à la lune (From the Earth to the Moon) and Georges Méliès's 1902 movie Le Voyage dans la Lune (A Trip to the Moon) served to inspire later exploration of the Moon in the second half of the 20th century. In 1959, Luna 2 became the first spacecraft to visit the Moon and since then a number of robotic and human missions have successfully explored the Moon. Analyzing data from those missions has led to a detailed scientific understanding of the Moon, yet certain fundamental questions remain unresolved. This calls for future exploration of the Moon. To be active participants of future exploration of the Moon, students in this course will understand the culture, history, engineering, and science of the Moon.
Area: Natural Sciences

AS.270.202. Introduction to Ecology. 3 Credits.
Ecology is the study of organisms and their environment. This course focuses on the patterns of distribution and abundance of organisms. Topics include population dynamics and regulation, competition, predation, host-parasite interactions, patterns of species diversity, community succession, the flow of energy and matter through ecosystems. We will also discuss the role of natural and human disturbances in shaping communities.
Prerequisite(s): AS.270.103 OR AS.020.151

AS.270.205. Introduction to Geographic Information Systems and Geospatial Analysis. 3 Credits.
The course provides a broad introduction to the principles and practice of Geographic Information Systems (GIS) and related tools of Geospatial Analysis. Topics will include history of GIS, GIS data structures, data acquisition and merging, database management, spatial analysis, and GIS applications. In addition, students will get hands-on experience working with GIS software.
Area: Engineering, Natural Sciences

AS.270.219. Natural Hazards. 3 Credits.
This course investigates earth processes that lead to natural hazards and their social and economic consequences. Topics include earthquakes, tsunamis, volcanoes, hurricanes, coastal flooding, drought, fire, and climate change. We will use case studies to explore the scientific principles behind the occurrence of natural disasters, assess their risks, and evaluate how societies have responded to these events.
Area: Natural Sciences

AS.270.220. The Dynamic Earth: An Introduction to Geology. 3 Credits.
Basic concepts in geology, including plate tectonics; Earth's internal structure; geologic time; minerals; formation of igneous, sedimentary, and metamorphic rocks; development of faults, folds and earthquakes; geomagnetism. Corequisite (for EPS Majors): AS.270.221; optional for others. The course is introductory and open to undergraduates at all levels; freshmen are encouraged to enroll.
Area: Natural Sciences

AS.270.221. The Dynamic Earth Laboratory. 2 Credits.
This course is a hands-on learning experience for introductory geological concepts and techniques using geological tools, such as mineral/rock samples, microscopes, and maps. Field trips are its essential part. The course is open to undergraduates at all levels; freshmen who wish to get their hands (and boots) dirty are encouraged to enroll.
Corequisite(s): AS.270.220
Area: Natural Sciences
AS.270.222. Mineralogy. 4 Credits.
An introduction to the properties, occurrence, and origin of the basic constituents of the Earth, including minerals and rocks. Introductory training in the recognition of minerals and rocks in the laboratory and the field.
**Prerequisite(s):** Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences

AS.270.224. Oceans & Atmospheres. 3 Credits.
A broad survey of the Earth's oceans and atmospheres, and their role in the environment and climate. Topics covered include waves, tides, ocean and atmosphere circulation, weather systems, tornadoes and hurricanes, El Niño, and climate change. For science and engineering majors
Area: Natural Sciences

AS.270.302. Aqueous Geochemistry. 3 Credits.
Modeling the chemistry of water-rock interactions from weathering and riverine development at Earth's surface to hot springs at depth, fluids in subduction zones in Earth's interior, and the ancient fluids preserved in fluid inclusions. Thermodynamic basis for the calculation of equilibria and irreversible chemical mass transfer involving minerals and aqueous species at low and high temperatures and pressures. The course culminates with practical examples of research interest to individual participants.
**Prerequisite(s):** (AS.030.101 AND AS.030.102) AND (AS.270.220 AND AS.270.221) or equivalents.
Area: Natural Sciences

AS.270.303. Earth History. 3 Credits.
This course will explore the evolution of life in the context of environmental, ecological, and geological changes to the Earth surface system. The goal of the class is to provide students with an understanding of how geological and paleontological records provide insight into the origin(s) of life, oxygenation of the atmosphere, the evolution of multicellularity, evolutionary radiations and extinctions, and modern global change.
**Prerequisite(s):** AS.270.103 OR AS.270.220 OR AS.270.224; or permission of the instructor.
Area: Natural Sciences

AS.270.304. Igneous Geology and Volcanology. 3 Credits.
This course provides an introduction to igneous and volcanic processes on Earth and other planetary bodies. Focus is placed on linking observations made on rocks in hand sample and outcrop to Earth/planetary processes. The course will review crystal chemistry of major rock-forming minerals and progress through how igneous rocks form. Volcanism, including eruption processes, landforms and tectonic settings, will be reviewed. Labs will include rock identification, study of thin sections under microscope and field trips. Teaching is geared toward the graduate and advanced undergraduate level. Recommended course background: AS.270.220 and AS.270.221, or instructor permission.
Area: Natural Sciences

AS.270.305. Energy Resources in the Modern World. 3 Credits.
This in-depth survey will inform students on the non-renewable and renewable energy resources of the world and the future prospects. Topics include petroleum, natural gas, coal, nuclear, hydroelectric, geothermal, solar, wind, biomass, and ocean energy. Global production, distribution, usage, and impacts of these resources will be discussed.
Area: Natural Sciences

AS.270.306. Urban Ecology. 3 Credits.
Urban ecology has been called the ecology in, of, and for cities. In this course, we will explore how ecological concepts are applied to urban ecosystems and the different approaches to urban ecological research. Topics will include: Biodiversity, water dynamics, energy and heat island effects, and nutrient cycling, urban metabolism, design of greenspace, and sustainability of cities. We will use Baltimore as a case study for studying cities.
**Prerequisite(s):** AS.270.308 OR EN.570.205 OR EN.570.403
Area: Natural Sciences

AS.270.307. Geoscience Modeling. 4 Credits.
An introduction to modern ways to interpret observations in the context of a conceptual model. Topics include model building, hypothesis testing, and inverse methods. Practical examples from geophysics, engineering, and medical physics will be featured.
Area: Natural Sciences

AS.270.308. Population/Community Ecology. 3 Credits.
This course explores the distribution and abundance of organisms and their interactions. Topics include dynamics and regulation of populations, population interactions (competition, predation, mutualism, parasitism, herbivory), biodiversity, organization of equilibrium and non-equilibrium communities, energy flow, and nutrient cycles in ecosystems. Field trip included. Students who have not taken one of the prerequisites may register with the permission of the instructor.
**Prerequisite(s):** AS.270.103 OR AS.020.151
Area: Natural Sciences

AS.270.310. Evolution and Development of the Vertebrates. 3 Credits.
Modern vertebrates (animals with backbones) are the products of a more than 500-million-year evolutionary history. This course surveys that history and uses it to explore such core evolutionary concepts as adaptive radiation, convergence, extinction, homology, phylogenetic taxonomy, and tree thinking. Emphasis will be placed on the origins of the modern vertebrate fauna and how fossils are being integrated with developmental biology to better understand major transitions in the vertebrate body plan.
Area: Natural Sciences

AS.270.312. Mammalian Evolution. 3 Credits.
An introduction to the evolutionary history and diversity of mammals, with emphasis on the first half of the Cenozoic - the beginning of the Age of Mammals. The course will focus primarily on the adaptive radiation of mammals (including our own order primates) that followed the extinction of the dinosaurs, exploring the origins and relationships of the major groups of mammals as well as the anatomical and ecological reasons for their success. Lectures will be supplemented with relevant fossils and recent specimens.
Area: Natural Sciences

AS.270.315. Natural Catastrophes. 3 Credits.
A survey of naturally occurring catastrophic phenomena, with emphasis on the underlying physical processes. Topics include hurricanes, tornadoes, lightning, earthquakes, tsunamis, landslides, and volcanic eruptions and climate change. Intended for students in science and engineering.
Area: Natural Sciences
AS.270.317. Conservation Biology. 3 Credits.
In this course, students examine the meaning and implications of biodiversity with a focus on disciplines associated with conservation biology, wildlife conservation and wildlife management, including taxonomy, genetics, small population biology, chemical and restoration ecology, and marine biology. This includes exploring how conservation biology differs from other natural sciences in theory and in application. Students learn the major threats to biodiversity and what natural and social science methods and alternatives are used to mitigate, stop, or reverse these threats. The course also includes the economic and cultural tradeoffs associated with each conservation measure at the global, national, regional, and local levels. One required field trip.
Area: Natural Sciences

AS.270.318. Remote Sensing of the Environment. 3 Credits.
This course is an introduction to the use of remote sensing technology to study Earth's physical and biochemical processes. Topics covered include remote sensing of the atmosphere, land and oceans, as well as remote sensing as a tool for policy makers. Also offered as 270.618
Area: Natural Sciences

AS.270.319. Geochronology and High-Temperature Isotope Geochemistry. 3 Credits.
Introduction to radioisotope geo/thermochronology and mantle stable and radioisotope geochemistry. Course covers: (1) methods for dating of rocks and geologic processes using long-half-life radioisotope systems, including the various isotope systems available and their applicability; (2) radioisotope techniques for investigation of the geochemical evolution of the crust and mantle; (3) isotope fractionation and utility of traditional and novel stable isotope geochemistry for interrogating high-temperature processes, and (4) thermochronology and methods for interrogating upper-crustal processes. Recommended course background: AS.270.220 and AS.270.221, or instructor permission.

AS.270.320. Seminar in Planetary Science. 1 Credit.
Major problems of current interest in planetary science are critically discussed in depth.
Area: Natural Sciences

AS.270.322. Ocean Biogeochemical Cycles. 3 Credits.
This course will examine the cycling of trace chemicals in the ocean, consider what we can learn from the distributions of these chemicals about the ocean circulation, and ocean ecosystems. Topics covered will include oceanic biological productivity, open water cycling of nutrients and oxygen, ocean acidification and sediment cycling.
Area: Natural Sciences

AS.270.325. Introductory Oceanography. 3 Credits.
This class is an introduction to a wide range of physical, chemical, and biological phenomena in the world's oceans. Underlying basic principles are exposed wherever possible. Topics covered include: seawater, waves, tides, ocean circulation, chemical oceanography, biogeochemical ocean processes, and remote sensing of the oceans. Recommended Course Background: freshman Physics, Chemistry, Calculus through ordinary differential equations.
Area: Natural Sciences

AS.270.326. Cosmochemistry. 4 Credits.
Students in this course will gain an understanding of the origin of various forms of matter in our Solar System and beyond, along with its evolution through geologic processes. Beginning with the concepts of nucleosynthesis and stellar evolution, this course will then cover the condensation of matter, meteoritics, and petrogenetic evolution of differentiated, rocky bodies (i.e. asteroids, the Moon, Mars). Evolution of matter in extra-Solar planetary systems (i.e. exoplanets) will also be broached. In lab we will examine thin sections of meteorites, lunar material, and terrestrial analogs - a field trip to the Smithsonian Meteorite Collection is planned. Graduate and advanced undergraduate-level students are encouraged, as are interdisciplinary students with an interest in planetary science.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences, Social and Behavioral Sciences

AS.270.328. Planetary Exploration: Techniques and Data Analysis. 3 Credits.
Have you ever wondered what it would be like if you could visit other planets and travel through the space? Students in this course will use state-of-the-art observational techniques in planetary exploration and actual spacecraft data from the Cassini mission to Saturn and the Mars Rover mission to solve problems in planetary science and design a space exploration mission. Important planetary properties, such as atmospheric composition and interior composition of a planet, will be studied using remote sensing and in situ data. Recent discoveries about exoplanets will be integrated into course activities. Recommended Course Background: One semester of Introductory Chemistry (AS.030.101).
Prerequisite(s): ((AS.110.105 AND AS.110.106) OR (AS.110.108 AND AS.110.109) OR (AS.110.202 AND AS.110.211)) AND ((AS.171.101 AND AS.171.102) OR (AS.171.103 AND AS.171.104) OR (AS.171.105 AND AS.171.106) OR (AS.171.107 AND AS.171.108))
Area: Natural Sciences, Social and Behavioral Sciences

AS.270.331. Isotope Geochemistry. 4 Credits.
Introduction to stable isotope and radioisotope geochemistry. Isotope measurements are used to probe fundamental questions in the Earth and environmental sciences because they can be used to extract information about the timing of and/or chemical, physical, and biological processes associated with the formation of geopolymers. The first half of the course focuses on light isotope systems (O, C, S, etc.) and low-temperature applications, including: (1) tracing sources and sinks of fluids, sediments, biological materials, and contaminants, (2) studying rates and mechanisms of biochemical reactions, and (3) paleoenvironmental reconstructions. The second half of the course focuses on heavier isotope systems and high-temperature applications, including: (1) methods for dating of rocks and geologic processes using long-half-life radioisotopes, including the various isotope systems available and their applicability, and (2) isotope fractionation at high temperatures and the utility of radioisotope and novel stable isotope geochemistry for interrogating processes influencing the crust and mantle. Biweekly lab classes (scheduled in first week) will allow students to become familiar with principles of isotope measurements and interpretations. Mid-term and final exams. Recommended course background: AS.270.220 and AS.270.221, or instructor permission.
Prerequisite(s): AS.270.220 AND AS.270.221
AS.270.332. Soil Ecology. 3 Credits.
The course introduces basic aspects of cycles and flows in the soil ecosystem, and provides students with an overview of the higher groups of soil organisms. Laboratory and field surveying methods are also covered.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences

AS.270.333. Mineral Physics Recitation. 2 Credits.
This course is designed for undergraduate students interested in pursuing geophysics research in the topics of solid state physics or inorganic chemistry. It will consist of a weekly seminar paired with a separate paper reading+discussion group, covering a range of topics on the frontiers of mineral physics. Themes rotate each semester, and Fall 2018 will be paired with the Mineralogy Lecture Series on Modeling and Experimental challenges in Cosmochemistry. Recommended Course Background: Relevant coursework such as Mineralogy or equivalent in other department, and instructor permission.

AS.270.334. Astrobiology: Chemical Evolution of Life on Earth and Beyond. 3 Credits.
Have you wondered how life began on Earth or if we are alone in the Universe? This course will explore the prebiotic chemistry and origin of life on Earth, then move on to Mars, icy bodies (Europa, Titan, Enceladus) and newly-found “habitabile” exoplanets. Students in this course will learn state-of-the-art methods and techniques used to characterize habitable conditions and to detect life. This course will deepen understanding of the current developments and ongoing discoveries in field of astrobiology.
Prerequisite(s): AS.030.102 or equivalent.
Area: Natural Sciences

AS.270.336. Freshwater Systems. 3 Credits.
A study of streams, lakes, and groundwater with a focus on aspects of water quality, hydrology, geomorphology, and aquatic ecology that are relevant to human impacts on freshwater systems. US environmental policies and water resource management agencies will also be examined in the context of issues such as dams, cattle grazing, climate change, and water allocation.
Prerequisite(s): AS.270.103 OR AS.271.107 or permission of the instructor.
Area: Natural Sciences

AS.270.337. Freshwater Systems Lab. 1 Credit.
A hands-on investigation of the water quality, hydrology, geomorphology, and aquatic ecology of streams and other freshwater bodies. Includes field trips to water-related facilities such as drinking water and wastewater treatment plants.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences

AS.270.338. Field Methods in Ecology. 3 Credits.
This course will introduce student to methods used in field-based ecological research addressing population, community and ecosystem-level questions. Outdoor fieldwork is an essential part of the course. Field activities will center around the riparian ecosystem adjacent to the Homewood campus and on the urban ecology of the greater Baltimore region. Students will build skills in data collection, analysis, synthesis, and presentation. Basic statistical instruction in R will be taught to aid data analysis.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.;AS.270.308 OR EN.570.205

AS.270.339. Topics in Mineralogy. 3 Credits.
This semester, join HEMI’s Designer in residence, and MICA professor Jenna Frye, in a modified version of her popular experimental fabrication course, EPIC FAIL. Discover how thinking with your hands, embracing risk and failure and playful exploration with educational toys, can invigorate your research in mineralogy and deepen your understanding of crystallography visualization. This course is designed as a hands-on, deeply collaborative workshop, where we will investigate the role of creative fabrication technology and invention as it relates to communicating scientific research to outside audiences. Together we will make, tinker and fail our way to improved visualization and presentation strategies so that others may more fully access the complexities in our work.Topics in Mineralogy is a special topics course that rotates in subject and may be taken multiple times for credit. This course is designed for those interested in mineralogy, and we recommend concurrent enrollment in Planetary Interiors, Space Weathering, and/or Advanced Mineralogy seminar.

AS.270.346. Structural Geology Seminar. 1 Credit.
Seminar class on fundamentals of structural geology, as applied in field-based studies. Involves weekly readings/practical exercises on: (1) field techniques for measuring structures; (2) interpretation of structural data on maps and cross-sections; (3) approaches for inferring large-scale structure from limited data; (4) techniques for visualizing structure; (5) deformation style and associated fabrics/textures/structure; (6) metamorphism and deformation, and (7) methods for visualizing and analyzing structure. Topics covered are geared towards developing skills required for a 10-day, field-based Independent Study in Structural Geology course in Scotland in the summer (May–June).
Prerequisite(s): AS.270.220

AS.270.347. Foundations of Ecology. 3 Credits.
In this seminar students will read seminal pieces in ecology. Assigned readings will span early 1900s to present. Students will pair a foundational paper with a more current paper on a similar topic to explore the evolution of ecological concepts and approaches over time. This course is aimed at upper level undergraduates and graduate students.
Prerequisite(s): AS.270.202

AS.270.348. Communicating Climate Science. 3 Credits.
This course is a study of techniques used to effectively communicate scientific knowledge with a focus on climate science. This will be done with three overarching topics: reading and comprehending scientific papers, critically interpreting science news from the media, and communicating complex climate science to a general audience. The course is intended for science and engineering majors and not open to freshman. Recommended pre-requisites: General Physics I and/or Oceans and Atmospheres.
AS.270.350. Sedimentary Geology. 4 Credits.
Sedimentary rocks are the historical records of the Earth, documenting climate change, mass extinctions, and the evolution of life. This course will provide an introduction to sedimentary processes and sedimentary rocks. Focus is placed on linking physical observations to the ancient environments in which sedimentary rocks once formed. Fundamental tools for interpreting the sedimentary rock record, such as depositional models, geochronology, and chronostratigraphy will be reviewed. Two 1-day weekend field trips will occur over the course of the semester. There will also be weekly 1-hour labs. Lab and field trip times will be determined in the first week of class. Graduate and advanced undergraduate level. Recommended Course Background: AS.270.220 or instructor permission. Area: Natural Sciences

AS.270.361. Geodynamics Seminar. 1 Credit.
Seminar class on the dynamics of subduction and accretionary orogenesis. Weekly readings discussed in class. Focus will be broad and process-based. Topics in subduction may include: (1) modes of global subduction through Earth history; (2) models of forced/triggered v. spontaneous subduction initiation; (3) arc development and implications for growth of continents; (4) subduction zone rollback and arc migration, and (5) subducted slab breakoff and tearing. Topics in accretionary orogenesis may include: (1) stress state of the overriding plate; (2) tectonic mode switches (shortening to extension and vice versa), and (3) length and time scales of the thermal manifestations of accretionary orogenesis.
Prerequisite(s): AS.270.220 AND AS.270.221 or instructor permission.

AS.270.366. Spacecraft Instrumentation Project. 3 Credits.
Co-Listed with EN.530.366!nvestigation into the content relevant to an ongoing spacecraft instrumentation project. An interdisciplinary team will enhance the skills and knowledge of science and engineering students. Topics include mission background, planetary science, sensor design, spacecraft systems, and mission planning, and sensor fabrication, calibration, integration, and testing, data analysis and interpretation, scientific/technical writing and publication.
Area: Engineering, Natural Sciences

AS.270.369. Geochem Earth/Environment. 3 Credits.
An introduction to all aspects of Geochemistry: theoretical, experimental, and observational, including the application of geochemistry to issues such as the migration of toxic metals and nuclear waste.
Prerequisite(s): AS.270.220
Area: Natural Sciences

AS.270.378. Present and Future Climate. 3 Credits.
Intended for majors who are interested in the science that underlies the current debate on global warming, the focus is on recent observations one can glean from model simulations. Meets with AS.270.641. Recommended Course Background: AS.110.108-AS.110.109 and AS.171.101-AS.171.102
Prerequisite(s): Student may not receive credit for both AS.270.378 and AS.270.641.
Area: Natural Sciences

AS.270.379. Atmospheric Science. 3 Credits.
A survey of core topics in atmospheric science, including dynamics, thermodynamics, radiative transfer, and chemistry. The course addresses both basic principles and applications to weather and climate. Recommended pre-requisites: General Calculus and Physics I and/or Oceans and Atmospheres.
Area: Natural Sciences

AS.270.380. Seminar in Regional Field Geology. 3 Credits.
Introduction to the regional geology and geological history of the Appalachian system (from Alabama to Newfoundland). Key papers on regional bedrock geology and Mesoproterozoic through Phanerozoic tectonics are reviewed in weekly seminar classes. Two three-day field trips are made on weekends negotiated at the beginning of the semester. Fieldwork will be designed with student input to test ideas and models from the literature. Techniques in sedimentary, metamorphic, igneous and structural field geology are introduced and developed in the field. Recommended course background: AS.270.220 and AS.270.221, or instructor permission.
Area: Natural Sciences, Social and Behavioral Sciences

AS.270.381. Seminar in Field Geology. 3 Credits.
Field experience is an integral part of a geology student’s education. During this course, students will spend over a week outdoors, learning to make observations that can be used to interpret the geologic history and structure of natural environments. This course is a spring break field course that will focus on different topics each year. For Spring 2019, the focus of the trip will be on applying concepts and techniques covered in Dynamic Earth (AS.270.220/1), Sedimentary Geology (AS.270.350), and Earth History (AS.270.303). Students will also learn about the different tectonic events that have shaped the landscape that we see today in the western United States. The class is designed for upper level E&PS majors and first or second year E&PS graduate students. For logistical reasons, this class is capped at 10 students. Preference will be given to E&PS majors. Students will be camping during the field course and should be prepared to be hiking outside all day. In the case that obtaining personal field supplies (e.g., hiking boots, sleeping bags) is not possible through Homewood student affairs gear rentals and/or is a financial hardship, please contact the instructor. Any communication about this will be kept confidential. Mandatory class field trip: 9-day field trip to Esmeralda County, NV over spring break (3/16/18-3/24/18).
Prerequisite(s): (AS.270.220 AND AS.270.221) OR AS.270.350 OR AS.270.303

AS.270.385. Seminar in Virtual Field Experiences: Accessibility, Exploration, and Development. 2 Credits.
The Earth Sciences traditionally rely heavily on outdoor field education – the purposeful use of an outdoor environment to achieve educational objectives – in higher education. Observations made at the surface of the Earth are fundamental to understanding the processes that have shaped it, and outdoor field education is often considered an essential way to connect classroom theory with actual data and observations. However, despite the demonstrated benefits of outdoor field education, there are persistent, deep-rooted problems with it in higher education, two of which include accessibility issues and financial barriers. There is overwhelming and demonstrated need to make outdoor field education and research more accepting of all who want to participate. This course aims to explore some of these accessibility issues by: 1) reading and discussing peer-reviewed literature on this topic, 2) participating in and learning about already established virtual field trips and tools, and 3) developing our own virtual educational tools and experiences.
AS.270.396. Special Topics in Planetary Exploration. 3 Credits.
Geology in the Outer Solar System: This course will focus on the solid bodies of the outer solar system, addressing their formation, surfaces, interiors, evolution, and how we study them via remote sensing and spacecraft investigation. We will use data from the various missions that have investigated the outer system and cover aspects of instrumentation and remote sensing of outer system bodies from the Voyager missions, Galileo, Cassini, and New Horizons. The course includes lecture, discussion, and hands-on lab work. Recommended pre-requisites: Dynamic Earth and/or Introductory planetary science and/or remote sensing, or instructor approval.
Area: Natural Sciences

AS.270.406. Space Weathering. 1 Credit.
This course will introduce and explore multiple topics of Space Weathering - the interaction of solar system bodies with the space environment. Through a combination of lecture, reading, research, and discussion the course will explore physical and chemical processes of solar and cosmic radiation and particles, micrometeorites, etc., on the surfaces of planets. We will also explore interaction of the space environment with planetary magnetic fields and atmospheres, and with non-planetary materials (such as spacecraft, and astronauts).
Prerequisite(s): AS.270.222

AS.270.408. Petrology Seminar. 1 Credit.
Seminar class on recent developments in igneous and metamorphic petrology. Involves weekly readings on modern methods/understanding in petrogenesis and processes leading to mineral (re)crystallization; rock deformation; fluid transport in rocks; pressure and temperature estimates of rock formation, and rates/durations of thermotectonic processes in the lithosphere. Topics covered will cater to interests and learning goals of those who register in the class.
Prerequisite(s): AS.270.220

AS.270.410. Planetary Surface Processes. 3 Credits.
This course explores processes that influence the evolution of planetary surfaces, including impact cratering, tectonics, volcanism, weathering, and sediment transport. These processes manifest themselves as structural deformation of planetary crusts due to loading by volcanoes, formation of craters by asteroid impacts, modification of surfaces by flowing landslides, rivers and glaciers, and the accumulation and transport of sand in dune fields on various planets. Emphasis is on the relationship to similar Earth processes, and the integrated geologic histories of the terrestrial planets, satellites, and asteroids. The focus will be on developing a physical understanding of these processes to interpret the surface characteristics and evolution of planets, satellites, asteroids, and comets from both qualitative assessments and quantitative measurements obtained from spacecraft data. A key component of the class will be the interpretation of these observations from recent and current planetary missions to the Moon, Mars, and other terrestrial bodies. Recommended Course Background: A sound knowledge of Calculus and Introductory Physics, and some prior knowledge of Earth and/or Planetary Science.
Area: Natural Sciences

AS.270.412. Spring seminar: Geological Field Studies in California. 2 Credits.
Field experience is an integral part of a geology student’s education. During this course, students will learn to digitize, synthesize, and interpret the observations they made during the January field-based class to interpret the geologic history and structure of southern California. Study USA: Geological Field Studies in California is a co-requisite for this course. For Spring 2020, the focus of the field work and course will be on applying concepts and techniques covered in Dynamic Earth (AS.270.220/1), Sedimentary Geology (AS.270.350), Earth History (AS.270.303), Planets, Life and the Universe (AS.020.334), and Isotope Geochemistry (AS.270.331). Sedimentary rocks are spectacularly exposed in this region and record over a billion years of key events in Earth history. Students will learn how these rocks have shaped our understanding of major evolutionary and environmental shifts in Earth’s past, while also learning how to map these units’ regional geographic distribution. Finally, students will also learn about the different tectonic events that have shaped the landscape that we see today in the western United States. The class is designed for upper level E&PS majors and E&PS graduate students.
AS.270.413. Readings in Mineral Physics. 1 Credit.
Mineral Physics is the study of mineralogical problems through the application of condensed matter physics and solid-state chemistry. In this course, students will participate in the journal discussion about the foundational and developing research capabilities in Mineral Physics, with an emphasis this semester on Spectroscopy. Topics will include electron spectroscopy and X-ray scattering (both elastic and inelastic) techniques. Readings in Mineral Physics is a special topics course that rotates in subject and may be taken multiple times for credit. Prerequisites: Structure of Materials (EN.510.311/601), Mineralogy (AS.270.222) or permission of the instructor. 
Prerequisite(s): (EN.510.311 OR EN.510.601) AND AS.270.222 OR Permission of the Instructor.

AS.270.423. Planetary Atmospheres. 3 Credits.

AS.270.425. Earth and Planetary Fluids. 3 Credits.
An introductory course on the properties, flow, and transport characteristics of fluids throughout the Earth and planets. Topics covered include: constitutive relationships, fluid rheology, hydrostatics, dimensional analysis, low Reynolds number flow, porous media, waves, stratified and rotating fluids, plus heat, mass, and tracer transport. Illustrative examples and problems are drawn from the atmosphere, ocean, crust, mantle, and core of the Earth and other Planets. Open to graduate and advanced undergraduate students. Recommended Course Background: Basic Physics, Calculus, and familiarity with ordinary differential equations. Area: Natural Sciences

AS.270.431. Tectonics Seminar. 3 Credits.
Introduction to plate tectonics and its 'framework' role in understanding the Earth. Kay papers will be discussed in a weekly seminar class. Focus will be on early works that helped establish the theory, in addition to recent breakthrough contributions that have led to modifications and improvements to the theory of plate tectonics.

AS.270.501. Independent Study. 1 - 3 Credits.
Exploration of topic(s) in earth, planetary, and/or environmental science under the direction of an instructor. 
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.270.504. Independent Research. 0 - 3 Credits.
Research in earth, planetary, and/or environmental science conducted under the direction of a faculty advisor. 
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.270.510. Senior Thesis. 1 - 3 Credits.
Senior thesis research project in earth, planetary, and/or environmental science conducted under the direction of a faculty advisor. 
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms. Writing Intensive

AS.270.595. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.270.603. Geochemistry Seminar.
A variety of topics of current interest involving mineral-fluid interactions will be reviewed.

AS.270.605. EPS Colloquium.
A weekly seminar series in which graduate students present their latest research results and attend Departmental seminars. This course is required for all graduate students in the Department of Earth and Planetary Sciences.

AS.270.606. EPS Colloquium.
A weekly seminar series in which graduate students present their latest research results and attend Departmental seminars. This course is required for all graduate students in the Department of Earth and Planetary Sciences.

AS.270.611. Global Atmospheric Dynamics.
This course will examine the fluid dynamics that determine large-scale atmospheric circulation and variability using Ian James’ “Introduction to Circulating Atmospheres.” Topics covered will include the dynamics of Hadley cells, mid-latitude jets, baroclinic instability, monsoon circulations, and low-frequency variability of the circulation.

AS.270.615. Inversion Modeling & Data Assimilation.
This graduate class will introduce modern inverse modeling and data assimilation techniques. These powerful methods are used in atmospheric science, oceanography, and geophysics and are growing more widespread. Topics will include: singular value decomposition, Green's function inversions, Kalman filtering, and variational data assimilation. The class will include lectures on concepts and theory, and practical experience in the computer laboratory. Permission of Instructor Required

Also offered as 270.318 Area: Natural Sciences

Discussion of the physical principles that underlie earth remote sensing. Topics to include radiative transfer in Earth's atmosphere, operating principles of active and passive remote sensing systems, and advanced methods for image analysis.

AS.270.625. Ocean General Circulation.
The aim of this course is to achieve conceptual understanding of the large scale low frequency ocean general circulation. The role of the ocean circulation in earth's climate is emphasized throughout.

AS.270.628. Seminar in regional field geology.
Weekend field trip to explore regional geology. Students are required to prepare short presentations on field trip topics in advance of weekend trip. Attendance at two organizational meetings (to be scheduled) is required. Open to E&PS graduate students and upper level E&PS undergraduate majors and minors. Trip date is 11/9/2019. Consult instructors for details.

AS.270.629. Tracer Transport in Geophysical Flows.
This course examines the transport of substances in geophysical flows. Topics covered include fundamental transport processes, transport in simple flows, and use of chemical tracers to infer transport properties. These concepts will be illustrated by case studies in a variety of geophysical flows, including the flow in atmospheres, oceans, lakes, and groundwater.
AS.270.630. Physics and Chemistry of Aerosols.
This course will cover fundamentals of aerosol physics and chemistry. Topics covered will include aerodynamics and diffusion of aerosol particles, condensation and evaporation, particle size distributions, optics of small particles, characterization of particle composition, and the diversity of aerosols found in planetary atmospheres. Recommended Course Background: Basic Physics and Chemistry. Calculus.

AS.270.631. Tectonics Seminar.
Introduction to plate tectonics and its 'framework' role in understanding the Earth. Kay papers will be discussed in a weekly seminar class. Focus will be on early works that helped establish the theory, in addition to recent breakthrough contributions that have led to modifications and improvements to the theory of plate tectonics.
Area: Natural Sciences

AS.270.641. Present and Future Climate.
Meets with AS.270.378.
Prerequisite(s): Student may not receive credit for both AS.270.378 and AS.270.641.
Area: Natural Sciences

AS.270.653. Earth and Planetary Fluids II.
A sequel to AS.270.425 concentrating on planetary-scale atmospheric and oceanic circulation. Physical understanding of the underlying fluid dynamics will be emphasized.

AS.270.654. Environmental Data Analysis.
Environmental data is often messy-contaminated with noise, fundamentally nonlinear, potentially stationary. This course will build on Menke and menke's Environmental Data Analysis with Matlab to examine methods of analyzing environmental data that don't lead us to confuse noise with signal. Topics covered will include significance testing, spectral estimation, nonparametric methods, multivariate data analysis. Applications will be tailored to the student interest.

AS.270.656. Geochemical modeling of water-rock interactions in the deep Earth.
Thermodynamic basis for the modeling of irreversible chemical mass transfer involving minerals and aqueous species at elevated temperatures and pressures. Reading will start with classic papers by Helgeson and co-workers and proceed to applications in the literature involving hydrothermal ore deposits, subduction zones, and diamond formation in the upper mantle. The course focusses on developing specific projects of research interest to individual participants. Recommended Course Background: AS.030.101 and AS.030.102 or equivalent, AND AS.270.220 AND AS.270.221 or equivalent, AND AS.270.302 or equivalent.

Area: Natural Sciences

AS.270.668. Geobiology Seminar.
Geobiology is the study of interactions between life and rocks. In this class we will explore how organisms impact sedimentary records both directly, by leaving behind biosignatures, or indirectly, by affecting their surroundings in a way that promotes formation of certain types of minerals. This will serve as a guide for interpreting geological records during the early evolution of life on Earth, the rise of animals, and major mass extinctions.
Area: Natural Sciences

AS.270.675. Communication for Scientists.
Communication for Scientists" and the description is "This course will cover the various ways in which scientists are expected to communicate throughout the life of a project. Topics will include writing proposals, preparing impactful figures, writing press releases, interacting with the press (press conferences, radio/TV, interviews, etc.), writing for and speaking to the public, social media, and interacting with policy makers."

AS.270.679. Atmospheric Science.
A survey of core topics in atmospheric science, including dynamics, thermodynamics, radiative transfer, and chemistry. The course addresses both basic principles and applications to weather and climate. Recommended pre-requisites: General Calculus and Physics I and/or Oceans and Atmospheres.
Area: Natural Sciences

AS.270.680. Seminar in Regional Field Geology.
Introduction to the regional geology and geological history of the Appalachian system (from Alabama to Newfoundland). Key papers on regional bedrock geology and Mesoproterozoic through Phanerozoic tectonics are reviewed in weekly seminar classes. Two three-day field trips are made on weekends negotiated at the beginning of the semester. Fieldwork will be designed with student input to test ideas and models from the literature. Techniques in sedimentary, metamorphic, igneous and structural field geology are introduced and developed in the field. Recommended course background: AS.270.220 and AS.270.221, or instructor permission.
Area: Natural Sciences

AS.270.681. Seminar in Field Geology.
Field experience is an integral part of a geology student's education. During this course, students will spend over a week outdoors, learning to make observations that can be used to interpret the geologic history and structure of natural environments. This course is a spring break field course that will focus on different topics each year. For Spring 2019, the focus of the trip will be on applying concepts and techniques covered in Dynamic Earth (AS.270.220/1), Sedimentary Geology (AS.270.350), and Earth History (AS.270.303). Students will also learn about the different tectonic events that have shaped the landscape that we see today in the western United States. The class is designed for upper level E&PS majors and first or second year E&PS graduate students. For logistical reasons, this class is capped at 10 students. Preference will be given to E&PS majors. Students will be camping during the field course and should be prepared to be hiking outside all day. In the case that obtaining personal field supplies (e.g., hiking boots, sleeping bags) is not possible through Homewood student affairs gear rentals and/or is a financial hardship, please contact the instructor. Any communication about this will be kept confidential. Mandatory class field trip: 9-day field trip to Esmeralda County, NV over spring break (3/16/18-3/24/18).
Area: Natural Sciences

AS.270.683. Topics in Mineral Physics.
Mineral Physics is the study of mineralogical problems through the application of condensed matter physics and solid-state chemistry. In this course, students will learn about the foundational and developing research capabilities in Mineral Physics, with an emphasis this year on shock compression and experiments at High Energy Density. Topics will include experimental investigation of equation of states, phase transitions, changes in optical and transport properties and other strain-rate dependent phenomena. Topics in Mineral Physics is a special topics course that rotates in subject and may be taken multiple times for credit.
Prerequisite(s): (EN.510.311 OR EN.510.601) OR AS.270.222 or instructor permission.
AS.270.684. Mathematical Methods in Earth and Planetary Sciences. A range of standard mathematical methods used in earth and planetary science applications will be studied. A core set of topics will include back-of-the-envelope estimates, differential equations, linear algebra, special functions, and transforms. In addition, students will tailor the course to their needs by choosing from a range of extended topics to explore further. Potential topics include perturbation theory, tensors, probability theory and complex analysis. Open to graduate students and senior undergraduate EPS majors with permission of instructor. Recommended preparation includes knowledge of single and multivariable calculus and linear algebra.

AS.270.685. Seminar in Virtual Field Experiences: Accessibility, Exploration, and Development. The Earth Sciences traditionally rely heavily on outdoor field education – the purposeful use of an outdoor environment to achieve educational objectives – in higher education. Observations made at the surface of the Earth are fundamental to understanding the processes that have shaped it, and outdoor field education is often considered an essential way to connect classroom theory with actual data and observations. However, despite the demonstrated benefits of outdoor field education, there are persistent, deep-rooted problems with it in higher education, two of which include accessibility issues and financial barriers. There is overwhelming and demonstrated need to make outdoor field education and research more accepting of all who want to participate. This course aims to explore some of these accessibility issues by: 1) reading and discussing peer-reviewed literature on this topic, 2) participating in and learning about already established virtual field trips and tools, and 3) developing our own virtual educational tools and experiences.

AS.270.693. Special Topics in Dynamo Theory. Current research literature in planetary magnetic fields and dynamo theory will be studied. Topics will vary year-to-year. Students will be responsible for leading discussions on relevant papers from the literature. Open to graduate students and senior undergraduate EPS majors with permission of instructor. Recommended preparation includes knowledge of fluid dynamics, electromagnetism and planetary science.

AS.270.696. Special Topics in Planetary Exploration. A selection of planetary research topics investigated by Prof. Strobel spanning the past 45 years covering the progress that has been made and remaining problems that still need to be addressed. The majority of topics will involve the outer solar system and the science discoveries made by the Voyager, Cassini-Huygens, and New Horizons Missions as well as observations by Earth orbiting satellites – IUE, HUT, HST, FUSE. Area: Natural Sciences

AS.270.807. Research.

AS.270.808. Research.

AS.271.302. Exploring Nature. 3 Credits. This course integrates the analysis and production of environmental media with weekly outdoor excursions. Students will survey a range of authors, adventurers, journalists, scientists, photographers, acoustic ecologists and filmmakers that have explored the natural world and chronicled the history of human-environmental relations and environmental problems. Field trips to regional parks and green spaces will encourage students to discover their own sense of place, foster a deeper level of ecological awareness and construct personal environmental narratives through careful exploration, observation, documentation and reflection. Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.271.304. Sustainable Food Systems. 3 Credits. Where does your food come from? What impact does food production have on the environment and human societies? How can food systems become more sustainable as the human population increases? This seminar-style course examines the past, present, and future of agriculture, including topics such as the foodways of indigenous people, modern 'factory farming' versus organic agriculture, genetically modified foods, and the interplay among science, economics, policy, and agriculture. Involves hands-on experiences. Area: Social and Behavioral Sciences

AS.271.305. Special Topics in Environmental Studies. 3 Credits. Environmental Policy in the Age of Trump. This course will analyze the effects of the current administration's actions on environmental issues by assessing the policies in question and estimating the potential impacts on climate change, human health, and ecology. Policies that have been overturned or are under review represent a number of environmental issues, including climate change and greenhouse gas emissions, offshore drilling, national monuments, mining pollution, toxic discharge into public waterways, the development of oil pipelines, public land use planning, coal leases, a harmful insecticide, hunting in wildlife refuges, airborne mercury emissions, protection of tributaries and wetlands under the Clean Water Act, energy and fuel-efficiency standards, and resource extraction from federal lands. Students will examine the historical roles environmental organizations and government agencies have played in advocating for, creating and enforcing U.S. environmental policy and will discuss the future roles of these actors and other stakeholders in implementing effective environmental policy. Area: Social and Behavioral Sciences

AS.271.306. Environmental Photojournalism. 3 Credits. Environmental cognition, consciousness and communication are produced, reproduced, interpreted and remembered with the support of visual representations and, in particular, photography. Images increasingly structure our experience of nature, environmental problems, human-environmental relations, and ecological awareness. Students will review critical literature focusing on visual representation theory, the relationship between images and social change, the practice of journalism and the history and typology of environmental photography. An understanding of environmental issues is required. Students will engage with the local community, identify and investigate environmental issues facing Baltimore, participate in photographic critiques, and develop a documentary project. This studio/seminar course is designed with an emphasis on independent research and practice. Area: Humanities, Social and Behavioral Sciences Writing Intensive
AS.271.345. Society and Nature Conflicts: Interdisciplinary Approaches to Studying Environmental Problems Over Time. 3 Credits.
In this seminar students will read seminal pieces in the field of socio-environmental research. Socio-environmental research recognizes that society and nature inherently interact in such a way that they affect and change one-another - it is not only that society affects the nature or that nature only affects society. Solving environmental problems necessitates understanding this duality and thus an interdisciplinary background. Assigned readings will span early from thinkers on environmental problems (Before 1900) to current approaches to studying and solving environmental problems. It is aimed at upper level undergraduates and graduate students.

AS.271.360. Climate Change: Science & Policy. 3 Credits.
Prereq: 270.103 or permission of instructor. This course will investigate the policy and scientific debate over global warming. It will review the current state of scientific knowledge about climate change, examine the potential impacts and implications of climate change, explore our options for responding to climate change, and discuss the present political debate over global warming.
Area: Natural Sciences

AS.271.399. Research Design. 1 Credit.
This course supports students in the design of their senior capstone project, including crafting a suitable research question, identifying appropriate methodologies, and writing a formal project proposal.

AS.271.401. Environmental Ethics. 3 Credits.
Environmental Ethics is a philosophical discipline that examines the moral relationship between humans and the natural environment. For individuals and societies, it can help structure our experience of nature, environmental problems, human-environmental relations, and ecological awareness. Beginning with a comprehensive analysis of their own values, students will explore complex ethical questions, philosophical paradigms and real-life case studies through readings, films and seminar discussions. Traditional ethical theories, including consequentialism, deontology, and virtue ethics will be examined and applied. Environmental moral worldviews, ranging from anthropocentric to ecocentric perspectives, will be critically evaluated. Organized debates will help students strengthen their ability to deconstruct and assess ethical arguments and to communicate viewpoints rooted in ethical principles. Students will apply ethical reasoning skills to an examination of contemporary environmental issues including, among others, biodiversity conservation, environmental justice, climate change, and overpopulation. Students will also develop, defend and apply their own personal environmental ethical framework. A basic understanding of modern environmental history and contemporary environmental issues is required. Prior experience with philosophy and ethics is not required.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.271.402. Water, Energy, and Food. 3 Credits.
The water, energy and food (WEF) nexus is a topic of growing interest in the research and policy communities. This course will survey WEF concepts and principles, introduce tools of analysis, and engage students in case studies of critical WEF issues in the United States and internationally.

AS.271.403. Environmental Policymaking and Policy Analysis. 3 Credits.
This course provides students with a broad introduction to US environmental policymaking and policy analysis. Included are a historical perspective as well as an analysis of future policymaking strategies. Students examine the political and legal framework, become familiar with precedent-setting statutes such as NEPA, RCRA, and the Clean Air and Clean Water Acts, and study models for environmental policy analysis. Cost benefit studies, the limits of science in policymaking, and the impact of environmental policies on society are important aspects of this course. A comparison of national and international policymaking is designed to provide students with the proper perspective. This course is taught in conjunction with an identical graduate course. All students will be expected to perform at a graduate level.
Area: Social and Behavioral Sciences

AS.271.404. GIS Workshop. 1 Credit.
An accompaniment to the GECS Senior Capstone Seminar for students whose research project involves a GIS component. Designed to enable beginner to advanced GIS users to acquire the data and skills needed to accomplish their research goals.
Area: Natural Sciences

AS.271.405. Energy and Politics. 3 Credits.
In the 21st century, energy supply and consumption are critical subjects for international politics, social development, and the future of the environment. Policies that determine energy supply and consumption come to being in complex institutional, national, and international contexts. This course will equip students with the necessary background to analyze energy policy issues and contribute to them in a meaningful manner. It also involves examination of wide-ranging debates over the switch to renewables, the use of unconventional energy sources, and the environmental consequences of energy choices.
Area: Social and Behavioral Sciences

AS.271.496. Senior Capstone Experience. 3 Credits.
This seminar will provide the academic space, time, and mentoring for students to integrate, synthesize and apply the knowledge and skills obtained through the ENVS curriculum into a tangible environmental project.

AS.271.499. Senior Seminar. 1 Credit.
This seminar explores topics related to career development and current events to support senior environmental majors as they transition to post-graduate life and work.

AS.271.502. Independent Study. 1 - 3 Credits.
Exploration of topic(s) in environmental studies under the direction of an instructor.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.271.506. Independent Research. 1 - 3 Credits.
Research in environmental studies conducted under the direction of a faculty advisor.

AS.271.507. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
AS.271.509. Applied Experience. 1 Credit.
This course is designed to accompany a supervised, hands-on experience working on an environmental or sustainability-related research project or internship. While completing 80 hours of applied work, students will prepare a reflective journal, paper, and poster presentation about their experience. Graded S/U only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.271.511. Senior Thesis. 1 - 3 Credits.
Senior thesis research project in environmental studies conducted under the direction of a faculty advisor.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Writing Intensive
AS.280 (PUBLIC HEALTH STUDIES)

AS.280.101. Introduction to Public Health. 3 Credits.
This course provides an overview of the field of public health. Topics include the major causes of morbidity and mortality; the socioeconomic, behavioral, and environmental factors that affect health; the analytical methods used in the field; the role of government in protecting the public’s health; key features of the U.S. health care system; and current challenges in the field. The course also introduces students to the basic conceptual models and approaches that are central to public health practice. This course is restricted to freshmen and sophomores. Other students may enroll with the instructor permission. Your enrollment may be withdrawn at the discretion of the instructor if you don’t meet one of those criteria.
Area: Social and Behavioral Sciences

AS.280.120. Lectures on Public Health and Wellbeing in Baltimore. 1 Credit.
An introduction to Urban Health with Baltimore as a case study: wellbeing, nutrition, education, violence and city-wide geographic variation. Lectures by JH Faculty, local government/service providers and advocates.
Area: Social and Behavioral Sciences

AS.280.161. Applications of Biological Concepts in Public Health. 3 Credits.
This course explores the basic biology concepts relevant to public health. Case studies will be used to examine key scientific principles and their application. This course is designed for public health students who are not intending to pursue a career in natural sciences or medicine. This course satisfies the Public Health Studies Biology requirement, but does not satisfy Pre-Med requirement. All freshman must have taken or be currently enrolled in AS.280.101 to register. Department Approval Required.
Prerequisite(s): AS.020.151
Area: Natural Sciences

AS.280.225. Population, Health and Development. 3 Credits.
This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS. This course is restricted to Public Health Studies majors. Students minoring in Study of Women, Gender, and Sexuality can register with instructor approval.
Area: Social and Behavioral Sciences

AS.280.232. Applications of Precision Medicine in Public Health. 1 Credit.
This course will (1) introduce students to principles of precision medicine (PM) across the care continuum and (2) engage students to think critically about how PM will change the medical and public health landscape. Students will learn about the PM initiative and current examples of PM in disease prevention, diagnosis, treatment and surveillance. Students will identify challenges associated with incorporating PM into our health care system and discuss strategies to mitigate such challenges.

AS.280.235. Public Health Cardiology. 1 Credit.
This course will provide a hands on overview of the modern science behind cardiovascular disease. Topics will include the epidemiology of cardiovascular disease, prevention, interventions and risk factors that impact outcomes. Students will learn hands on skills to recognize and treat heart attacks including basic ECG recognition, cardiopulmonary resuscitation (CPR) and current treatment algorithms.
Area: Natural Sciences, Social and Behavioral Sciences

AS.280.240. Research Methods in Public Health. 4 Credits.
This course examines the research process, with an emphasis on formulating research questions, critically evaluating published research, and drawing objective conclusions from a body of scientific literature. Students conduct a systematic review of the scientific literature related to a public health issue. Labs focus on developing and documenting a sound review methodology and communicating the review findings effectively in writing.
Prerequisite(s): AS.280.101 AND (AS.280.345 OR AS.200.314 OR EN.553.230 OR EN.553.310 OR EN.553.311 OR EN.553.420 OR EN.553.430 OR EN.560.348 OR EN.553.211)
Area: Social and Behavioral Sciences Writing Intensive

AS.280.312. Media, Politics, and Evidence in the History of Public Health. 3 Credits.
This writing intensive course will encourage students to consider what counts as evidence among public health professionals as well as popular audiences. Using case studies from the field of epidemiology, now emblematic of the field, students will learn about historical changes in theories of population health and disease. Through a series of writing assignments, students will interrogate the formal structure of scientific arguments and gain practice in synthesizing and communicating complex ideas to a lay audience. Juniors/Seniors Only
Prerequisite(s): AS.280.350
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.280.320. Seminar on Public Health and Well-being in Baltimore. 3 Credits.
Seminar combines lectures from AS.280.120 with additional readings and discussion to more deeply address urban health issues. The course will revolve around student projects that can impact health and wellbeing in Baltimore. If you are accepted for this course do NOT register for AS.280.120. Course registration is by instructor permission only. You will be asked to provide a brief description of a project in order to determine your potential linkage with this course. This course is utilizing the online active approval process. Permission requests should be submitted via SIS Self-Service upon the opening of your registration period. The instructor will review requests and approve registrations using SIS Self-Service for Faculty. Please note, a request does not guarantee registration into the course. Status inquiries should be address to the instructor or departmental administrator.
Area: Social and Behavioral Sciences

AS.280.325. Public Health in South Africa. 3 Credits.
This course provides an in-depth overview of Public Health in South Africa, including material on the political climate, health care services, and the impact of the HIV/AIDS epidemic. Course is taught in Cape Town, South Africa.
Area: Social and Behavioral Sciences
AS.280.326. Community-Based Learning in South Africa. 3 Credits.
3 Credit course taught in Cape Town, South Africa. This course may be used to satisfy the Public Health Applied Experience requirement. Students will participate in a community-based service learning program with a local NGO in Cape Town.
Area: Social and Behavioral Sciences

AS.280.329. The Good, the Bad, and the Ugly: Scientific Writing in Public Health. 3 Credits.
This course covers how to conduct a literature review, and interpret and evaluate scientific literature that focuses on public health. In addition, this course will provide students with fundamental skills of writing a scientific manuscript. Skills obtained in this course will prepare students for advanced-level senior year classes at Bloomberg and other graduate institutions.
Prerequisite(s): AS.280.350;AS.280.345
Area: Social and Behavioral Sciences
Writing Intensive

AS.280.335. The Environment and Your Health. 3 Credits.
This course surveys the basic concepts underlying environmental health sciences (toxicology, exposure assessment, risk assessment), current public health issues (air, water- and food-borne diseases) and global health threats (climate change, designing healthy communities, and sustainability). Public Health Studies, Environmental Sciences and Studies, Environmental Engineering, and Earth and Planetary Science majors have 1st priority for enrollment. Your enrollment may be withdrawn at the discretion of the instructor if you are not a PHS,ENVS, EHE or EPS major.
Area: Natural Sciences

AS.280.340. Fundamentals of Health Policy & Management. 3 Credits.
Through lectures and small group discussions, students will develop a framework for analyzing health care policy problems and gain familiarity with current issues including managed care, Medicare and the uninsured.Public Health Studies majors have 1st priority for enrollment. Your enrollment may be withdrawn at the discretion of the PHS program if you are not a PHS major.
Prerequisite(s): AS.280.101
Area: Social and Behavioral Sciences

AS.280.345. Public Health Biostatistics. 4 Credits.
Using problem-based learning focusing on public health topics, students learn to describe & summarize data, make inferences regarding population parameters, & test hypotheses. Recommended Course Background: Four years of high school math.
Prerequisite(s): Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.213 OR AS.200.314 OR AS.200.315 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430 OR EN.560.348
Area: Quantitative and Mathematical Sciences

AS.280.346. Introduction to R Programming for Public Health. 1 Credit.
Formerly known as Advanced Biostatistics Laboratory, a complementary course to 280.345, Public Health Biostatistics, this course teaches R programming skills necessary for conducting independent data analyses, beyond those presented in the main course. No programming experience is necessary, but a willingness to learn independently and work with other students is indispensable.
Prerequisite(s): AS.280.345
Area: Quantitative and Mathematical Sciences

AS.280.347. Health Data Analysis Practicum. 2 Credits.
Students will learn to formulate precise scientific and policy questions, design exploratory and confirmatory statistical analyses to address the questions, conduct appropriate analyses using the statistical package R, and communicate their findings through graphical and tabular displays that are presented in writing and in person. The course will be run seminar style in which students conduct data analysis to present to one another in one meeting per week. Evaluation will be through class participation and a final project in which students will analyze their own data set to address a question of their choice. Students need to have taken an introductory statistics course at the level of AS.280.345 (Public Health Biostatistics) and must have some experience using the statistical software R to perform basic analyses.
Area: Quantitative and Mathematical Sciences

AS.280.349. Making Work Safer. 3 Credits.
This course explores major health and safety issues that affect workers in the United States, with an emphasis on developing and selecting interventions to prevent occupational injuries. In this course, students will examine the morbidity, mortality, and economic costs associated with work-related injuries; interact with key surveillance systems and other data sources used for tracking such injuries; and apply principles of injury prevention and decision-making through a basic policy analysis process.
Prerequisite(s): AS.280.340
Area: Social and Behavioral Sciences

AS.280.350. Fundamentals of Epidemiology. 4 Credits.
A practical introduction to epidemiology focusing on the principles and methods of examining the distribution and determinants of disease morbidity and mortality in human populations. This course is restricted to Public Health Studies only. Any remaining open seats at the start of the semester will open up to all other majors.
Area: Quantitative and Mathematical Sciences

AS.280.360. Clinical & Public Health Behavior Change. 3 Credits.
This course explores the theory and practice of changing the health behaviors of individuals, and the public health and medical impact of doing so. Theoretical concepts are integrated with practical clinical applications, especially in the areas of diet and fitness. Skill building in persuasive, health-related communication will be included in smaller group discussions.
Area: Social and Behavioral Sciences

AS.280.380. Global Health Principles and Practices. 3 Credits.
Global health addresses the staggering global disparities in health status, drawing on epidemiology, demography, anthropology, economics, international relations and other disciplines. We review patterns of mortality, morbidity and disability in low and middle income countries, starting with malnutrition, infectious diseases and reproductive health, and continuing to an emerging agenda including mental health, injury prevention, surgical care, chronic diseases, and health impacts of climate change. Gender, health systems and health workforce challenges, and career trajectories in global health are also discussed. Recommended course background: Minimum of one prior course in Public Health.
Area: Social and Behavioral Sciences
AS.280.399. Community Based Learning - Practicum Community Health Care. 3 Credits.
This course is designed to expose students to urban health with focus on Baltimore City through lectures, class discussions, and experiential learning. Students will select a community-based organization (CBO) according to their expressed interests and schedule in order to complete 45 hours of service based learning. Grades are based on participation, completion of service learning project, presentation, and papers. Open to Junior Public Health Studies majors only. Others by permission of instructor.
Area: Social and Behavioral Sciences

AS.280.427. Communicating Science: Skills to Analyze and Communicate Science News. 3 Credits.
Science communication is challenging. Experts are seldom trained to translate jargon in everyday language. In this course students will expand their knowledge of the biology basics of several public health issues, develop the critical thinking needed to assess health science reporting, and practice science communication skills.
Prerequisite(s): AS.020.151 OR AS.020.152 OR AS.020.243 OR AS.020.123 OR AP Biology.
Area: Humanities, Natural Sciences

AS.280.428. Environmental Health and Disasters. 3 Credits.
Environmental Health and Disasters examines the core principles and applications of environmental health science in disaster and humanitarian emergency response. Lecture topics range from emerging infectious diseases to toxicology to climate change. Students will have the opportunity to apply lessons learned through completion of weekly in-class case studies based on recent global events. Juniors/Seniors only
Area: Natural Sciences, Social and Behavioral Sciences

AS.280.429. An Introduction to Public Health Evaluation Using Population-Based Survey. 3 Credits.
Students will be introduced to key concepts for public health program evaluation, including how to develop evaluation research questions, common evaluation study designs, and aspects of study implementation including sample size calculation and questionnaire development. Students will become familiar with how to analyze datasets to answer global health evaluation research questions, and effectively interpret and summarize evaluation study results for key audiences. Students will get hands-on experience working with a Demographic and Health Survey (DHS) dataset to apply skills learned in each module. The DHS program provides indicators in areas of population, health, and nutrition from more than 300 surveys in 90 countries (see www.dhsprogram.com). Juniors/ Seniors only
Area: Natural Sciences, Social and Behavioral Sciences

AS.280.430. Communicating Public Health Findings Through Research-Based Theatre. 3 Credits.
Results of public health research have the potential to catalyze positive social change, yet often need to be creatively communicated to target audiences in order to produce meaningful effects. Research-based theatre is gaining traction in the health and social sciences as a compelling and effective means of disseminating research findings to audiences beyond those that typically read scientific journal articles. Equipped with the results of a recent mixed-methods study of sexual violence on JHU campuses, students will collaboratively prepare a messaging strategy, a research-based script, print/digital materials, and an audience evaluation plan for a live campus dissemination event at the end of the semester.
Area: Humanities, Social and Behavioral Sciences

AS.280.431. Beyond Borders: Migration, Ethics, and Public Health. 3 Credits.
This course explores the public health, ethical, and policy implications of international human migration both globally and within the United States. It is intended for upper-level undergraduate students interested in bioethics, migration, public health, and political philosophy. The first part of the course acquaints students with the various types of migrants and relevant political theory, including citizenship, freedom of movement, open/closed borders, and human rights. In the second part of the course, students discuss different ethical/philosophical concepts related to migration and apply them in analysis of a wide variety of public health and health policy cases. The course culminates with a final paper that students workshop collaboratively. This course challenges students to draw connections between ethical theory and real-world events and policies involving human migration. This is a Gordis Teaching Fellowship course.
Area: Social and Behavioral Sciences

AS.280.432. Statistical Thinking for Informed Decision Making. 3 Credits.
Much of the science that we are exposed to on a daily basis is not through original research articles but through sources such as news reports, articles from content aggregators, and social media postings. While these convenient sources of information can be useful in some respects, it is important to read the original scientific articles on which these reports are based. Only in this way can we better understand the state of science on the issues we care about. In this course, students will primarily learn about statistical concepts within the domains of association studies, causal inference, survey analysis, and survival analysis that provide the background necessary to read a wide variety of primary research in public health. Required readings from a custom course textbook will be supplemented by in-class lecture, discussion, and guided simulation exercises. Simulation exercises will use the Shiny environment in the R programming language which allows for point-and-click style exploration and does not require any coding. All code used to create these simulation activities will be made available so that students familiar with R or who want to learn more have the chance to explore on their own time. Secondary goals of the course include (1) examining the differences between information contained in original research articles and secondary sources and (2) improving written and oral communication about statistical ideas.
Prerequisite(s): AS.280.345
Area: Quantitative and Mathematical Sciences

AS.280.433. How to Feed the World: Perspectives in Global Food and Nutrition Security. 3 Credits.
How do we produce not only enough food, but enough of the right kinds of food, to nourish a growing population? In this course we define global food security and position it within the landscape of nutritional problems. We then discuss key challenges associated with food production and food distribution including climate change, weak supply chains, and changing dietary patterns. Finally, we learn about current efforts to improve global food security through policies, programs, and new technologies. This course is suitable for students with an interest in food, nutrition, global health, environmental sustainability, and complex systems.
Area: Social and Behavioral Sciences
AS.280.434. Public Health Nutrition in Latin America. 3 Credits.
This course examines drivers and determinants of health in Latin American population from a public health nutrition perspective. Students will be able to discuss the Global Nutrition Transition framework, drawing from historical public health nutrition issues in Latin America to understand current diet-related concerns and patterns. This is a discussion-based course in which students will be constantly reflecting on past and current issues and lessons learned from these countries. By the end of this course, students be able to propose future public health policies and strategies to improve the nutritional profile of the Latin American population both in Latin American Countries and in Latino immigrant communities here in the United States. Gordis Teaching Fellowship course open to junior and seniors only.
Area: Social and Behavioral Sciences

AS.280.435. Alcohol Use and Social Disparities: A Public Health Perspective. 3 Credits.
This upper-level course examines alcohol use from an ethical, epidemiological, and social justice perspective. The course is structured in three parts: 1.) Ethical issues in alcohol-related harms, 2.) Alcohol and marginalized populations, and 3.) Alcohol and injustice. This course models how to frame a complex problem from a public health perspective and teaches students to critically engage with social justice concepts. This seminar-format course incorporates guest lectures, small group exercises, case studies, and role plays. Gordis Teaching Fellowship course open to juniors and seniors.
Area: Social and Behavioral Sciences

AS.280.436. Using Secondary Data to Conduct Public Health Research. 3 Credits.
Students will learn how to use administrative claims, electronic health records, and other secondary data sources to conduct public health research. The course will address privacy issues, data cleaning, creation of new variables, missing data, and documentation of data analysis decisions. Students will have the opportunity to apply course concepts to real data sets. This course is intended for undergraduates in their junior or senior year who are interested in conducting public health research with large, secondary data sets. AS.280.345 (Public Health Biostatistics) or other introductory statistics class required. Some familiarity with R is recommended, but not required. This is a Gordis Teaching Fellowship course.
Prerequisite(s): AS.200.314 OR AS.230.205 OR AS.280.345] OR AS.280.350 can be taken concurrently; AS.280.335; AS.280.350
Area: Quantitative and Mathematical Sciences

AS.280.437. Saving Newborn Lives in Low Resource Settings. 3 Credits.
Child mortality has declined precipitously over the past 25 years, but neonatal mortality has remained largely unchanged. Today, around the world, 45 percent of all child mortality occurs in newborns, and these deaths are overwhelmingly in low-income countries. Prematurity, events during childbirth, and infections like pneumonia and sepsis are the largest killers of newborns, and most of these deaths could be prevented with quality care during childbirth. Students will spend the first half of the course learning the direct and indirect causes of perinatal and newborn mortality and interventions that have been proven to prevent perinatal and newborn deaths in low resource settings, such as skilled birth attendance, essential newborn care, helping babies breathe, kangaroo mother care, and treatment of the sick newborn. Students will spend the second half of the course working in teams to critically evaluate newborn health in a chosen country and propose a solution that will reduce perinatal and newborn deaths. Students will have the opportunity to present their final project design to a panel of professionals working in international public health. This class is designed to be highly engaging, so students should come prepared to work in groups, debate ideas, and discuss their points of view. Students will also have the opportunity to learn how to treat a newborn who is not breathing at birth, and simulate kangaroo mother care for thermoregulation. This is a Gordis Teaching Fellowship course.
Prerequisite(s): (AS.280.225 OR AS.280.380) AND AS.280.350
Area: Social and Behavioral Sciences

AS.280.438. Reproductive Health in Crisis: Issues in Meeting the Needs of Vulnerable Populations. 3 Credits.
Introduces students to the reproductive health needs of over 65 million people affected by humanitarian, economic, and environmental crises globally. Presents an overview of health care delivery systems in a variety of contexts, and examines the reproductive health consequences of disruptions in service provision during times of crisis. Examines the impact of policies and programs targeting affected groups. Discusses international standards in humanitarian response. Includes discussion of maternal and newborn health, family planning, abortion, and gender based violence. Students develop competency to conduct reproductive health service needs assessments and design an emergency preparedness plan that ensures provision of essential care. For the final project, students apply their skills to plan a response program to meet the reproductive health needs of a specific crisis-affected population. This is a Gordis Teaching Fellowship course.
Area: Social and Behavioral Sciences
Writing Intensive

AS.280.439. Ecological Change and Infectious Disease. 3 Credits.
This course will introduce students to key concepts in infectious disease ecology and epidemiology. Students will also learn how key ecological changes are influencing infectious disease dynamics. Ecological changes explored in the course include climate change, water management, deforestation, agriculture, and urbanization. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Prerequisite(s): AS.280.350 can be taken concurrently; AS.280.335
Area: Natural Sciences
AS.280.440. Introduction to Harm Reduction: Principles and Examples in Public Health. 3 Credits.

Harm reduction is an increasingly popular paradigm in public health research and practice. This course introduces students to the principles of and current research in harm reduction. The class will focus on a) history and principles of harm reduction, and appropriate research methods; b) harm reduction & substance abuse and policy; c) harm reduction & sexual health and sex work; d) ethical considerations in harm reduction. This seminar-format course uses journal clubs, small group discussions, and interactive debates. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Prerequisite(s): AS.280.345 OR EN.553.112 OR EN.550.112 OR EN.553.211 OR EN.550.211

Area: Quantitative and Mathematical Sciences

AS.280.441. Social Media and Public Health. 3 Credits.

This upper-level undergraduate research methods design course explores the growing role of social media in public health research. The course first introduces the current social media landscape, tying in different public health and health communication theories of importance to social media research. This is followed by a discussion of qualitative and quantitative research methods that have been used to conduct social media research, as well as the unique ethical considerations presented by this novel field. The course will then delve into each type of social media platform in depth, discussing how public health research has been conducted and how this ever-changing field continues to move forward. By the end of the course, students will have given explicit consideration to the strengths and challenges posed by conducting social media research in public health, and will be able to apply social media research methods to a public health issue of their interest. Some background in research methods is preferred but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Area: Social and Behavioral Sciences

AS.280.442. Genetics and Public Health. 3 Credits.

DNA is the code of life and variability in this code can be critical in determining human health outcomes. In a post-genomic era with increasingly advanced genetic tools and data it is critical for future public health professionals to understand the role that genetics plays in disease on the individual and population level. More and more, genetics is instructing public health interventions by informing individuals of their risk of acquiring certain diseases, explaining disease etiology, guiding treatment options in the wake of personalized medicine, and may dictate the future of genetic-based disease treatment in the form of gene therapy. The goal of this semester long course is to expand upon basic genetic concepts and apply them to understanding how variation in the human genome can impact health outcomes and inform treatment. We will look at how genetic diseases are inherited, the various ways in which they can manifest as pathology, and how they are discovered and diagnosed. We will also learn how to interpret genome wide association studies and genetic test results and explore the field of genetic counseling. We will finish by looking at the future of genetic medicine by looking at personalized medicine, gene therapy, and gene drive technologies and the potential ethical implications of these interventions. Prior genetics coursework is useful, but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Prerequisite(s): AS.020.151 AND AS.020.152

Area: Social and Behavioral Sciences

AS.280.443. Health-Related Stigma: Concepts, Considerations, and Interventions. 3 Credits.

Health-related stigma plays an important role in health and social outcomes, however its impact on individuals and populations varies according to context. Through readings, discussions, and assignments, students acquire the framework and skills to conceptualize and assess stigma across a range of health domains. To develop their understanding and analytical approach, students examine examples of HIV/AIDS, smoking, obesity, addiction, and mental health stigma. In each case, students consider key questions including: What are the forms and consequences of stigma? What theories apply? What ethical issues exist? How might interventions minimize or leverage stigma for health promotion? Throughout the semester, students also consider broader questions including: When should interventions target stigma? What are the ethical considerations in health-related stigma research? Is stigma always a threat to health? As the course places a strong emphasis on reading, critiquing, and applying health and social scientific literature, knowledge of or experience with psychology, sociology, ethics, and/or statistics is recommended but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted registration as space allows.

Area: Social and Behavioral Sciences

AS.280.445. Mental Health and the Gut. 3 Credits.

Explores the strong, bidirectional communication between the gastrointestinal tract and the brain. Reviews the role of the microbiome in shaping brain health, the link between gastrointestinal symptoms and mental health, and new and seminal research on the brain-gut connection in specific psychiatric disorders, including neurodevelopmental disorders, sleep disorders, depression and anxiety, bipolar disorder, schizophrenia and other psychotic disorders, dementia, and Parkinson’s/other movement disorders. Develops students’ skills in reading and critiquing literature as well as designing and analyzing studies on the microbiome and mental health. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Area: Social and Behavioral Sciences

AS.280.440. Introduction to Harm Reduction: Principles and Examples in Public Health. 3 Credits.

Harm reduction is an increasingly popular paradigm in public health research and practice. This course introduces students to the principles of and current research in harm reduction. The class will focus on a) history and principles of harm reduction, and appropriate research methods; b) harm reduction & substance abuse and policy; c) harm reduction & sexual health and sex work; d) ethical considerations in harm reduction. This seminar-format course uses journal clubs, small group discussions, and interactive debates. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Prerequisite(s): AS.280.345 OR EN.553.112 OR EN.550.112 OR EN.553.211 OR EN.550.211

Area: Quantitative and Mathematical Sciences

AS.280.441. Social Media and Public Health. 3 Credits.

This upper-level undergraduate research methods design course explores the growing role of social media in public health research. The course first introduces the current social media landscape, tying in different public health and health communication theories of importance to social media research. This is followed by a discussion of qualitative and quantitative research methods that have been used to conduct social media research, as well as the unique ethical considerations presented by this novel field. The course will then delve into each type of social media platform in depth, discussing how public health research has been conducted and how this ever-changing field continues to move forward. By the end of the course, students will have given explicit consideration to the strengths and challenges posed by conducting social media research in public health, and will be able to apply social media research methods to a public health issue of their interest. Some background in research methods is preferred but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Area: Social and Behavioral Sciences

AS.280.442. Genetics and Public Health. 3 Credits.

DNA is the code of life and variability in this code can be critical in determining human health outcomes. In a post-genomic era with increasingly advanced genetic tools and data it is critical for future public health professionals to understand the role that genetics plays in disease on the individual and population level. More and more, genetics is instructing public health interventions by informing individuals of their risk of acquiring certain diseases, explaining disease etiology, guiding treatment options in the wake of personalized medicine, and may dictate the future of genetic-based disease treatment in the form of gene therapy. The goal of this semester long course is to expand upon basic genetic concepts and apply them to understanding how variation in the human genome can impact health outcomes and inform treatment. We will look at how genetic diseases are inherited, the various ways in which they can manifest as pathology, and how they are discovered and diagnosed. We will also learn how to interpret genome wide association studies and genetic test results and explore the field of genetic counseling. We will finish by looking at the future of genetic medicine by looking at personalized medicine, gene therapy, and gene drive technologies and the potential ethical implications of these interventions. Prior genetics coursework is useful, but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Prerequisite(s): AS.020.151 AND AS.020.152

Area: Social and Behavioral Sciences

AS.280.443. Health-Related Stigma: Concepts, Considerations, and Interventions. 3 Credits.

Health-related stigma plays an important role in health and social outcomes, however its impact on individuals and populations varies according to context. Through readings, discussions, and assignments, students acquire the framework and skills to conceptualize and assess stigma across a range of health domains. To develop their understanding and analytical approach, students examine examples of HIV/AIDS, smoking, obesity, addiction, and mental health stigma. In each case, students consider key questions including: What are the forms and consequences of stigma? What theories apply? What ethical issues exist? How might interventions minimize or leverage stigma for health promotion? Throughout the semester, students also consider broader questions including: When should interventions target stigma? What are the ethical considerations in health-related stigma research? Is stigma always a threat to health? As the course places a strong emphasis on reading, critiquing, and applying health and social scientific literature, knowledge of or experience with psychology, sociology, ethics, and/or statistics is recommended but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted registration as space allows.

Area: Social and Behavioral Sciences

AS.280.445. Mental Health and the Gut. 3 Credits.

Explores the strong, bidirectional communication between the gastrointestinal tract and the brain. Reviews the role of the microbiome in shaping brain health, the link between gastrointestinal symptoms and mental health, and new and seminal research on the brain-gut connection in specific psychiatric disorders, including neurodevelopmental disorders, sleep disorders, depression and anxiety, bipolar disorder, schizophrenia and other psychotic disorders, dementia, and Parkinson’s/other movement disorders. Develops students’ skills in reading and critiquing literature as well as designing and analyzing studies on the microbiome and mental health. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Area: Social and Behavioral Sciences
AS.280.446. Quality of Life: Concepts and Challenges in Assessing Wellbeing. 3 Credits.
Quality of life means something different to nearly everyone. While public health and regulatory professionals agree that quality of life matters, developing tools that appropriately conceptualize and evaluate quality of life across varying populations remains a challenge. This course will explore the role of quality of life and other health status and functional outcomes in public health. The course is structured in three segments: 1) Conceptualizing quality of life, 2) Measuring quality of life, 3) Valuing quality of life. The class challenges students to assess the existing landscape of life research and critically evaluate how diverse literature bases (including psychology, medicine, economics, & regulatory science) have influenced public health research, policy, and practice. Students will also gain experience in analyzing and drawing meaningful research and regulatory conclusions from experience data such as patient reported outcomes and patient preference information. This course will be structured as a seminar featuring lectures, in-class journal clubs, guest speakers, and small-group lab activities. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Prerequisite(s): AS.280.345 OR (EN.553.211 (EN.550.211) OR EN.553.112)
Area: Social and Behavioral Sciences

AS.280.447. Ethical Considerations When Working With Marginalized Populations- A Public Health Perspective. 3 Credits.
Interested in developing best practices to work with marginalized people in public health? This course is for you! We will use a combination of lectures and discussions to critically analyze public health research methodologies at the intersection of ethics, justice, and human rights when working with marginalized populations. The first part of the course is an introduction to theory to equip students with a shared language to understand how marginalization, justice, and ethics are conceptualized in public health. In the second part of the course, students will delve deeper into various public health research methodologies and apply ethical guidelines to a variety of public health cases in the U.S. and internationally. The course will culminate with students designing case studies to present and provide feedback on based on ethical considerations. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Area: Social and Behavioral Sciences

AS.280.448. Vaccine Development, Epidemiology, and Hesitancy in the Modern World. 3 Credits.
Immunization is one of the most cost-effective and successful public health measures available, but loss of public confidence in vaccines has resulted in the resurgence of vaccine-preventable diseases. This course will review the process of vaccine development and students will understand the use and utility of immunizations for disease prevention. Students will gain an in-depth understanding of the vaccines that have been successfully introduced into routine immunization schedules. This course will discuss post-licensure vaccine surveillance as well as current domestic and international policy issues in vaccine development, supply, delivery, and utilization. We will also examine the origins of vaccine hesitancy and discuss the impact of “anti-vaxxers” on immunization coverage and the subsequent return of vaccine-preventable diseases. Students will have the opportunity to work in teams to critically evaluate multi-level interventions to target vaccine hesitancy and improve immunization coverage, and propose a recommendation that will reduce the morbidity and mortality of a specified vaccine-preventable disease. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Prerequisite(s): AS.280.350
Area: Social and Behavioral Sciences

AS.280.449. Corporate Influence on Public Health. 3 Credits.
Corporate practices are an often under-recognized social determinant of health. Corporate-induced disease contributes to morbidity and mortality worldwide, and a better understanding of the mechanisms underlying corporate-induced diseases illuminates pathways by which social and environmental factors influence health. This course will investigate the influence of industry using tobacco, alcohol, sugar-sweetened beverage, food, and pharmaceutical industries as examples, emphasizing ecological models. Students will evaluate the historical and current role of each industry as they effect health outcomes, research, public health policy, and public perceptions and behaviors. Students will use case studies from around the globe that exemplify instances of influence and interference and critically consider the power and activity of multibillion-dollar multinational companies. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Area: Social and Behavioral Sciences
AS.280.450. The Dreaded R-Word: The Ethics of Rationing and Resource Allocation in Health Care. 3 Credits.
Uwe Reinhardt, the renowned Princeton health economist, once labeled rationing as “the dreaded ‘R-word.”’ Sarah Palin infamously criticized the Affordable Care Act for, in her view, setting up rationing “death panels.” Many others recoil from the idea of rationing, considering it a “heartless, mechanistic withholding of desirable goods or services by faceless bureaucrats.” In contrast, “resource allocation” does not typically inspire the same response. Why does the idea of rationing in health care generate such a negative emotional response? Is this response justified? Does rationing differ from resource allocation as a means of setting priorities for health care? Who has the authority to set priorities for health care? On what basis should priorities be set? Why must priorities be set at all? This class addresses questions like these and offers a broad introduction to the ethics of priority-setting in health care. The class will devote significant time to understanding both the conceptual and normative foundations of priority-setting as well as specific proposals for how to set priorities. We will explore priority-setting in health care at both the individual and population level through various case studies including organ transplants and flu pandemic preparation. We will discuss priority-setting in the context of public health and universal health coverage and explore the role of global organizations like the World Health Organization and World Bank in setting priorities for health care. We will also consider whether priority-setting is compatible with the pursuit of social justice. Gordis Teaching Fellowship course. Area: Social and Behavioral Sciences

AS.280.451. Born a Girl: Issues in Women’s Health From a Life Course Perspective. 3 Credits.
The discussion surrounding women’s health has often remained limited to understanding women’s reproductive health needs. This course seeks to move beyond this topic to explore the key issues affecting women’s health, utilizing a life course perspective. This undergraduate course will focus on a select number of themes including: a) understanding the history of women’s health; b) sexual and reproductive health; c) maternal health; d) violence against women and girls; e) the needs of younger girls and aging women; and f) how mental health and stigma affect women. The course brings both U.S. and global perspectives to enhance the understanding of how the field of women’s health has evolved over time. It will also address some of the challenges public health professionals continue to face in addressing the health and wellbeing of women today. This seminar-style course combines class presentations with journal clubs and small group discussions. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Prerequisite(s): AS.280.350
Area: Social and Behavioral Sciences

AS.280.452. Policy, Politics, and Power in Health Equity. 3 Credits.
Health disparities are avoidable, unjust differences in health opportunities and outcomes related to factors such as race and ethnicity, education, class, citizenship, disability, sex and gender identity, and sexual orientation. These disparities reflect the systems that distribute resources, privileges, and power across society and mediate exposure to physical and mental health hazards such as economic deprivation, discrimination, violence, unhealthy environments, uninsurance, and inadequate medical care. Health equity, which is often referred to as social justice in health, is an ethical value that drives efforts to eliminate these disparities. As the National Academy of Medicine asserts in each of its reports, “Knowing is not enough; we must apply. Willing is not enough; we must do.” The purpose of this course is to introduce students to essential concepts, literature, and policy issues related to health disparities and to prepare them to use their knowledge to build effective policy strategies in support of health equity. Gordis Teaching Fellowship course. Completion of AS.280.340/ Fundamental of Health Policy Management is recommended, but not required. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Area: Social and Behavioral Sciences

AS.280.453. Contemporary Social Movements in Public Health. 3 Credits.
Health social movements attempt to alter power structures in order to achieve greater health equity, promote access to resources, and change perceptions of disease. But what distinguishes a moment from a movement? Under what conditions can health social movements lead to lasting policy and social change? Together we will explore a wide range of contemporary health social movements such as Black Lives Matter, MeToo, gun reform, US healthcare reform, environmental movements, and others. We will analyze the types of goals, resources, and tactics used in these movements and consider their contributions to the shaping of health-related policies and practices. Students will compose a brief and highly polished analysis of a health social movement of their choosing that may be suitable for publication. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Area: Social and Behavioral Sciences
AS.280.454. What is the Link Between Oppression and Mental Health? Combining Theory, Concepts, and Empirical Science to Explain Minority Mental Health. 3 Credits.
In this three-module course, students will first gain knowledge on the theoretical orientations and how they inform the social determinants of health, in combination with conceptual approaches in the field of trauma and violence research, in order to formulate a theoretical, conceptual, and empirical understanding of minority mental health. In the final module, students will study select mental health concerns (e.g., trauma, depression, anxiety, suicide) that affect specific minority populations, including discussions around the lived experiences of minority mental health. This culminates in a final group presentation on empirical research from an approved minority mental health topic of their choice that will be delivered as a TED-style talk. The course will run with graduate-level expectations. Students should anticipate weekly reading assignments to inform group lab presentations and discussions. There will be three brief individual writing assignments of 5 pages or less that critically analyze current minority mental health research. Upon completion of the course, students will be able to discuss minority mental health research with the necessary contexts of theory, research, and life stories that inform current public mental health approaches. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Prerequisite(s): Students cannot take this course if they are taking AS.194.301.
Area: Social and Behavioral Sciences

AS.280.455. Understanding and Engaging Adolescents in Public Health Context. 3 Credits.
Adolescent health is an increasingly important component of the public health agenda. As adolescence is a unique and pivotal stage of life, a rich understanding of this population is important for successful public health engagement. This seminar-style course seeks to provide a foundation for those interested in adolescent health and support effective engagement with adolescent populations. The first half of the course offers theoretical and contextual insights on adolescents—ranging from discussing public health significance, to developmental and life course perspectives, to influences across socioecological levels. The course then delves into practical and methodological considerations for working with this population including ethical matters, insights on reaching adolescents, and approaches to collecting information. This course culminates with deliberations of successful examples of engaging adolescents in public health as well as the future of the adolescent health field. This is a Gordis Teaching Fellowship course open to juniors and seniors. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Area: Social and Behavioral Sciences

AS.280.499. Honors in Public Health. Seminar. 3 Credits.
A research methods seminar to prepare students doing honors in Public Health Studies. Permission Required.
Area: Social and Behavioral Sciences
Writing Intensive

Perm. Req’d, Public Health Majors Only. This is a supervised, hands-on experience working with public health professionals. Students will complete 80 hours of applied work and submit a synthesizing assignment at the end of the term. Students completing their AE in the current semester will be enrolled in Section 2. Students whose time will roll over to an additional grading period will be enrolled in Section 1. Please contact your PHS Advisor for complete details.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.501. Internship-Public Health. 1 Credit.
Permission Required. Public Health majors only
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.502. Internship-Public Health. 1 Credit.
Permission Required. S/U only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.505. Research in Public Health. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.506. Research in Public Health. 0 - 3 Credits.
Permission Required.

AS.280.598. Research for Juniors/Seniors in Public Health. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.290 (BEHAVIORAL BIOLOGY)

AS.290.101. Human Origins. 3 Credits.
This course examines the origins of human structure, function and behavior from an evolutionary perspective. It includes study of the evolution, behavior and behavioral ecology of nonhuman primates, hominid evolution (including the paleontological and archaeological records), and the origins of human cognition, social behavior and culture.
Area: Natural Sciences, Social and Behavioral Sciences

AS.290.303. Animal Communication. 3 Credits.
This course examines animal communication in all modalities (especially sound, sight, and scent) across taxa. Production, perception and evolution of signals will be discussed. Students will learn how to conduct research and write scientific papers in publication form.
Prerequisite(s): AS.200.208 OR AS.200.344
Area: Natural Sciences, Social and Behavioral Sciences

AS.290.304. Comparative Neuroanatomy. 3 Credits.
This course examines the phylogenetic and developmental history of the central nervous system across the vertebrate tree of life, with emphasis on the deep history of those features that characterize the human brain. We will study how our understanding of non-human vertebrates (both model and non-model organisms) can provide important insights into the structure and function of the modern human brain.
Prerequisite(s): (AS.080.305 AND AS.080.306) OR AS.200.141
Area: Natural Sciences

AS.290.420. Human Sexual Orientation. 3 Credits.
This course will examine the historical and current theories of sexual orientation and sexual variation development by examining the biological, psychological and social contributing factors that influence the development of sexual orientations and variations along with treatment and modification of problematic sexual behaviors. Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester. Priority given to Behavioral Biology majors. Note: For credit towards a Psychology major, students should register for AS.200.204 Human Sexuality, rather than this course.
Corequisite(s): Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester.
Area: Social and Behavioral Sciences

AS.290.490. Senior Seminar: Behavioral Biology. 1 Credit.
Great ideas in Behavioral Biology. Discussion of classic and cutting edge articles in the original literature. Student presentations and reaction papers. Capstone course for senior Behavioral Biology majors.
Prerequisite(s): AS.290.101 AND AS.200.208 AND AS.200.208 AND AS.200.208, or Instructor permission. (AS.290.101 AND AS.200.208 AND AS.200.141) or Instructor permission.
Area: Social and Behavioral Sciences

AS.290.500. Connections in Behavioral Biology. 0.5 Credits.
A small group of students will meet two times in the semester to share experiences and information on research, internship and volunteer activities in Behavioral Biology. This course is designed to 1) help Behavioral Biology majors obtain real world experiences that can lead to opportunities after graduation, 2) provide an informal setting to develop oral and written communication skills, and 3) build community among students in the major. Students will make oral presentations to the group about activities they wish to pursue or have already completed. Students will also write a short paper/news piece or prepare a webpage on an internship, research or volunteer experience.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.290.501. Behavioral Biology Research - Freshmen. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.290.502. Research-Freshmen. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.290.503. Behavioral Biology Research-Behavioral Biology Majors. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.290.504. Research-Sophomores. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.290.505. Behavioral Biology DUS Approved Research. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.290.506. Research-Juniors. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.290.507. Research-Seniors. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.290.508. Research-Seniors. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.290.510. Comparative Neural Systems and Behavior Research Discussions. 0.5 Credits.
This course is required concurrently with research in the Comparative Neural Systems Research and Behavior lab. During the scheduled meetings we will discuss scientific papers, policies and procedures, research ethics and other information related to activities in the lab. At the end of the semester, students will present their research in groups.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
AS.290.519. Independent Study. 1 - 3 Credits.
**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.290.520. Independent Study. 1 - 3 Credits.
**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.290.590. Behavioral Biology Internship. 1 - 3 Credits.
**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.290.594. Behavioral Biology Internship. 1 Credit.
**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.290.596. Behavioral Biology Internship. 1 - 3 Credits.
**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.290.597. Research - Summer. 3 Credits.
**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.300 (COMPARATIVE THOUGHT AND LITERATURE)

AS.300.102.  Great Minds.  3 Credits.
Introductory survey of foundational texts of modern Western literature and thought. This semester will include works by René Descartes, Max Weber, W. E. B. Du Bois, Virginia Woolf, Ludwig Wittgenstein, Martin Heidegger, Hannah Arendt, Theodor Adorno, Michel Foucault, Cora Diamond, and Stanley Cavell. The course is taught in lectures and seminar discussions led by the course faculty.
Area: Humanities

AS.300.110.  Philosophies of Existence.  3 Credits.
The question about the meaning of existence is as old as philosophy itself. In the nineteenth and twentieth centuries, however, this question received renewed attention due to various modern processes, chief among which was the process of secularization, giving rise to a philosophical movement that has come to be known as existentialism. This course will offer an examination of key themes, concepts, and doctrines that are associated with existentialist thought including: the rejection of the Aristotelian-scholastic distinction between essence and existence; the rejection of the Cartesian notions that “nothingness possesses no attributes or qualities” and that the infinite is prior to the finite; the problem of repetition and the thought experiment of the eternal return; the problems of death and suicide; and the philosophical significance of feelings such as anxiety, boredom, and nausea, and of experiences such as loneliness and despair. Reading will include a selection of texts by Pascal, Kierkegaard, Nietzsche, Shestov, Jaspers, Heidegger, Sartre, Camus, and others.
Area: Humanities

AS.300.114.  Emotions: An Interdisciplinary Perspective.  3 Credits.
What are emotions? Do they have a history? Can they be studied scientifically? The study of emotions is a newly emerging field that does not belong to a single discipline. Exploring this field form an interdisciplinary perspective, we will read texts by psychologists, biologists, philosophers, anthropologists, sociologists, and historians from the nineteenth century to the present, including, among others, Charles Darwin, William James, Lucien Febvre, Martha Nussbaum, and Ruth Leys.
Area: Humanities

AS.300.129.  Capitalism and Tragedy: From the Eighteenth Century to Climate Change (Freshman Seminar).  3 Credits.
In contemporary discussions of climate change, it is an increasingly prevalent view that capitalism will lead to the destruction of civilization as we know it. The notion that capitalism is hostile to what makes human life worth living, however, is one that stretches back at least to the early eighteenth century. In this class, we will examine key moments in the history of this idea in works of literature, philosophy, and politics, from the birth of bourgeois tragedy in the 1720s, through topics such as imperialism and economic exploitation, to the prospects of our ecological future today. Authors to be studied: George Lillo, Balzac, Dickens, Marx and Engels, Ibsen, Weber, Brecht, Arthur Miller, Steinbeck, Pope Francis, and contemporary fiction, politics and philosophy on climate change.
Area: Humanities

AS.300.139.  Introduction to Intellectual History.  3 Credits.
This course offers a conceptual and historical introduction to Intellectual History. What makes the “history of ideas” different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call “ideas”? In what sense do they have a history? These are examples of the kind of questions addressed in the course.
Area: Humanities

AS.300.145.  Humanities Collaboratory.  3 Credits.
The Humanities Collaboratory is designed for new researchers from across the humanities as they gain the applied skills and experience to conduct their own independent research projects in the humanities. The Humanities Collaboratory model uses a high-tech classroom to allow students and instructors to work, learn, and research together. Three sections of this course will share a core list of materials focused on humanities research techniques, but your primary course materials will be individually selected. Students will have the unique opportunity to participate in a humanities lab section where all three course sections merge for discussion. You will choose your own topic to research with no limits of time period, subject, or genre, and through constant collaborative and independent research, each student will develop the expertise in that topic to both write a research paper and create a final oral presentation.
Area: Humanities
Writing Intensive

AS.300.203.  Freshman Seminar: How Literature Works: Narrative Imagination from Ancient to Modern Times.  3 Credits.
Is storytelling part of human nature? Do myths and legends have a universal structure? As a bridge between experience and language, narratives inform the way we understand history, gender, politics, emotion, cognition and much more. This course will explore how narratives are composed, how they are experienced, and eventually, how they evolve throughout history. We will be reading a diverse selection of ancient and modern texts, including selections from Plato and Aristotle, the Odyssey, the Hebrew Bible, as well as 19th- and 20th-century authors such as the Brothers Grimm, Gustave Flaubert, James Joyce and Virginia Woolf. The second part of the course focuses on philosophical and critical approaches to narrative in arts and media, concluding with the evolving concept of narrative in the digital age. Theoretical readings include selections from Karl Marx, Roland Barthes, Jacques Derrida and Judith Butler. All readings will be in English.
Area: Humanities
Writing Intensive
AS.300.219. Freshman Seminar: Babblers, Mumbleurs & Howlers: Languages of Modernist Fiction: Freshman Seminar. 3 Credits.
Does literature represent reality or create it? Is language just a tool we use to communicate, or is it shaped by our culture, or indeed, is our culture—and even our own experiences—shaped by our language? Modernist writers at the turn of the 20th century grappled with these questions, concerned that literature and in fact language itself was ill-equipped to face the changes occurring at the beginning of a new era of modernity. From symbolist and sound poetry to innovations in stream of consciousness narration and non-syntactic fragmentation, the literature of the time reflected a receding faith in the ability for ordinary spoken language to communicate feeling, meaning, and the authentic self. The task of modernism in turn became the reinvention of a new literary language that could either capture this condition of crisis or seek to overcome it. This course will investigate the various responses and solutions to the crisis of language in Anglo-American and European modernist fiction. Authors to be studied: Virginia Woolf, Andrei Bely, Franz Kafka, Jean Toomer, Filippo Marinetti, Andrei Platonov, Mikhail Bakhtin, Yuri Olesha, et al. All readings will be in English.
Area: Humanities Writing Intensive

AS.300.223. Philosophy and Infinity. 3 Credits.
What is the infinite? Can we comprehend it? Can we experience it? In this course we will explore various ways in which philosophers in the western tradition have answered questions such as these. In the first half of the semester, we will examine theoretical treatments of the infinite that inform how we understand the fabric of our world, from the ordinary objects around us to more sublime concepts of God, space, time, and mathematics. In the second half, we will turn to arguments in aesthetics and ethics that reveal an interplay between infinity and finitude occurring before our very eyes. Philosophers we will cover include Descartes, Spinoza, Locke, Kant, Hegel, Russell, Levinas, and Arendt. Throughout, we will ask such fundamental questions as, what is the starting point of philosophy? what is its methodology? what can it achieve in terms of knowledge? and in terms of practice?
Area: Humanities Writing Intensive

AS.300.232. Existentialism. 3 Credits.
What is existence and why do we care about it? What happens when we think about the nothing? What is the philosophical significance of issues such as commitment, marriage, death, and suicide, or of feelings such as anxiety, boredom, and nausea? We will consider these themes and read a selection of texts dealing with them by some of the most famous thinkers associated with the existentialist tradition, including Pascal, Kierkegaard, Nietzsche, Heidegger, Sartre, and Camus.
Area: Humanities

AS.300.237. Freshman Seminar: Tolstoy’s War and Peace. 3 Credits.
Leo Tolstoy’s monumental novel War and Peace, which the author Henry James called “a loose baggy monster,” is a sui generis work of modern literature that offered a response and challenge to the European Realist novel and founded a Russian national myth. We will read the novel in translation, alongside its adaptations into opera, film, and Broadway musical.
Area: Humanities Writing Intensive

AS.300.302. Making Modern Poetry. 3 Credits.
Making Modern Poetry” will explore the intersection and conversation between literature, art history, and graphic design by examining the rapid global development of poetry, art, and print from 1890 to 1930. We will read canonical modernist poets such as T.S. Eliot and Ezra Pound as well as those less familiar, like Mina Loy and César Moro, considering texts comparatively across national borders and through their relations to other arts. All readings will be in English.
Area: Humanities Writing Intensive

AS.300.304. Hopkins/Memes/Lost Hopes and Dreams. 3 Credits.
Find your lost hopes and dreams, through memes. This class is about why we can come to feel lost or disillusioned in the course of our educational journeys and about how we might begin to find our way again. We'll use memes as a window into our everyday experiences at Hopkins and think about how digital platforms like Facebook, Snapchat, and Tinder might be sources of and/or responses to our modern sense of alienation. The course will be discussion-based and shaped by the interests of those in the class.
Area: Humanities Writing Intensive

AS.300.307. Dostoevsky and Critical Theory. 3 Credits.
The tormented, obsessive and sadistic characters of Dostoevsky’s novels posed a challenge to positivism and reason too scandalous and compelling to be ignored. The novels inspired some of the most brilliant and influential thinkers of the nineteenth and twentieth centuries in the fields of religion, philosophy, psychology and literary theory. We will read three of Dostoevsky’s philosophically challenging novels alongside works by these critics and philosophers. While exploring their ideas about faith and unbelief, madness and reason, violence and torture, society and history, we will also inquire into the relationships among literature, philosophy and biography and examine the processes of influence and adaptation.
Area: Humanities

AS.300.309. The Contemporary Philosophical Novel. 3 Credits.
What can literature offer to philosophical reflection? Can literature address experiences that evade theoretical philosophy? Or, does fictional writing conflict with rigorous philosophical inquiry? The long-standing separation of philosophy and literature begins when Plato bans poetry and tragedy from the ideal city in the Republic. This seminar focuses on nineteenth and twentieth century thinkers that challenge the predisposition against literature through different attempts to write the “philosophical novel.” In this seminar, we will take seriously the philosophical stakes of literary texts, and investigate how and why literature offers a unique perspective for philosophical reflection. We will read texts by Plato, Fyodor Dostoevsky, Friedrich Nietzsche, Jean-Paul Sartre, Simone de Beauvoir, Albert Camus, Iris Murdoch, and David Foster-Wallace.
Area: Humanities Writing Intensive
AS.300.310. Imagining Social Change in TV Series. 3 Credits.
How can the imagined worlds of television help us critically reflect on the social and political realities of modern life? This class will look at TV series that offer different ways for their viewers to consider the question: What are the possibilities and limits for social change in the twenty-first century? Each week, selections from a TV series will be paired with a reading from philosophy, literary theory, media studies, political science, theology, or another related field that responds to similar themes and concerns. Our seminar will be discussion-based, and the TV series we watch will be determined by the interests of those in the class, but may include: Atlanta, Euphoria, The Handmaid’s Tale, Black Mirror, House of Flowers, Dear White People, The Good Place, and BoJack Horseman.

Area: Humanities

AS.300.311. Introduction to Intellectual History. 3 Credits.
This course offers a conceptual and historical introduction to Intellectual History. What makes the “history of ideas” different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call “ideas”? In what sense do they have a history? These are examples of the kind of questions addressed in the course.

Area: Humanities

AS.300.312. Imagining Revolution and Utopia. 3 Credits.
What form should revolution take, and what should society look like after the revolution? What would happen to the state, family, home, status of women, human interrelations, and everyday life? These questions consumed radicals in 19th century Russia and Europe, and their answers helped to shape the political culture of the 20th century. This course examines theories of revolution and utopia and responses to them in literature, art and film. Primary case study is Russia and the Soviet Union, with a comparative look at influential European works.

Area: Humanities

Writing Intensive

AS.300.313. Maintaining Social Order: Elements of Conservative Political Philosophy and its Critics. 3 Credits.
The seminar will discuss (primarily German) political philosophy of a broadly ‘conservative’ orientation in relation to three key periods of social and political upheaval: the Reformation, the French Revolution, and the crisis of parliamentary democracy in the Weimar Republic. Readings from these periods of European history will be approached under the common heading of ‘conservatism’ for their shared preoccupation with how traditional sources of social unity are to be replaced following times of dramatic change and conflict. We will explore why different political crises have always led philosophers to reiterate the fundamental question of what binds political communities together. This preoccupation distinguishes the philosophical currents of conservative thought surveyed in this course from other, more familiar conservatisms with purely reactionary agendas that reassert the superiority of a particular religion, culture, or ethnic group, the rule of elites, or the dismantling of the state in favor of free market forces. Each section on conservative thought will conclude with the most relevant critiques from Leftist political opponents. Readings include Hobbes, Burke, de Maistre, Herder, Hegel, Nietzsche, Schmitt, Kant, Marx, Marcuse.

Area: Humanities

Writing Intensive

AS.300.314. Dreams - From Genesis to Freud. 3 Credits.
Die Traumdeutung is one of the groundbreaking books of the 20th century. Translated into English as The Interpretation of Dreams, this book argues that dreams are both interpretable and meaningful. Unlike the psychiatrists of his days, Freud held that dreams are expressions of the subject and thus positioned himself closer to the ancient conception of dreams than to the views of the positivistic science of his days. He emphasized that dreams represent not so much an objective reality but rather the symbolic manifestation of the truth of the subject’s unconscious, a “symptom” of a history.

Area: Humanities

AS.300.315. Philosophical Conceptions of the Infinite. 3 Credits.
What is the infinite? Can we comprehend it? Can we experience it? In this course we will explore various ways in which philosophers in the western tradition have answered questions such as these. In the first half of the semester, we will examine theoretical treatments of the infinite that inform how we understand the fabric of our world, from the ordinary objects around us to more sublime concepts of God, space, time, and mathematics. In the second half, we will turn to arguments in aesthetics and ethics that reveal an interplay between infinity and finitude occurring before our very eyes. Philosophers we will cover include Descartes, Spinoza, Locke, Kant, Hegel, Russell, Levinas, and Arendt. Throughout, we will ask such fundamental questions as, what is the starting point of philosophy? what is its methodology? what can it achieve in terms of knowledge? and in terms of practice?

Area: Humanities

AS.300.316. Philosophy and Revolution: Four Case Studies. 3 Credits.
This course offers a historical and systematic inquiry into the modern idea, most clearly expressed by the young Karl Marx, that revolution should be the realization of philosophy. We will take up four revolutionary moments or four crucial years in four places and study them together with their philosophical influences and / or consequences: the French Revolution of 1789/1792 with Hegel, the Russian/October Revolution of 1917 with Lenin and Georg Lukács, the Iranian Revolution of 1979 with Michel Foucault, the Egyptian Revolution of 2011 with Alain Badiou. Some of the concept with which we will be engaging include freedom, alienation, historical necessity, reification, political spirituality, infinity.

Area: Humanities

Writing Intensive

AS.300.317. The Russian Novel. 3 Credits.
This course introduces students to the nineteenth century Russian novel and considers its lasting impact on world culture. We will read classic masterpieces of the psychological and philosophical novel, and their experimental forerunners. Short lectures on historical and cultural context and on methods of literary analysis will be combined with intensive group discussion. Novels include Anna Karenina, Crime and Punishment, Eugene Onegin, Dead Souls, and Hero of our Time.

Area: Humanities

Writing Intensive

AS.300.318. The Modernist Novel: Mann, Woolf, and Joyce. 3 Credits.
In this course, we will survey the major works of three of the greatest, most relentless innovators of the twentieth century – Thomas Mann, Virginia Woolf, and James Joyce – who explored and exploded narrative techniques for depicting what Woolf called the “luminous halo” of life.

Area: Humanities

Writing Intensive
AS.300.320. Lover's Discourse. 3 Credits.
Much of what we know about love and desire we owe to fiction's ability to evoke these experiences. Consider for example that the publication, in Germany, of The Sorrows of Young Werther inspired young men across Europe to dress and behave just like him. We will study in this course a selection of love stories chosen because they break the mold and question their conventions. Taking a critical distance from these tales of seduction, we will examine not only the manifestations and meanings of love, but also the configurations of gender they inspire and reflect. Indeed, just as nowadays film and television represent, as well as mold, our identities as desiring subject, fictions from the eighteenth-century onwards have shaped our current understanding of gendered subjectivities. The readings for this seminar (all available in English) include: Austen, 'Persuasion'; Balzac, 'The Girl with the Golden Eyes' and 'Sarrasine'; Barthes, 'Lover's Discourse'; Goethe, 'The Sorrows of Young Werther'; Mann, 'Death in Venice'; Rousseau, excerpts from 'Julie or The New Heloise'; Sulzer, 'A Perfect Waiter', Winterson, 'Written on the Body'.
Area: Humanities

AS.300.321. Rise of the Modern Short Story. 3 Credits.
A comparative tour of examples of short stories from three continents that emerged from earlier narrative forms in the 19th and 20th centuries. Attention will be given to new structural, rhetorical, and thematic concerns including the development of new sub-genres, e.g. fictions of detection, case histories, portraits of the artist, and the adaptation of several stories to newer media [at least 2 of the longer narratives translated to film will be screened]. A detailed syllabus of our readings will be available later in the summer; because there is no anthology that quite fits our needs, all the texts or translations, as well as critical and contextual notes will be supplied in digital forms. Note: there will also be an optional hour for questions & discussion TBA.
Area: Humanities Writing Intensive

AS.300.322. Shakespeare and Ibsen. 3 Credits.
William Shakespeare and Henrik Ibsen are the two most frequently performed playwrights in history, and both have been credited with reinventing drama: Shakespeare for the Elizabethan stage and Ibsen for the modern. In this course we will pair together plays by each author – those that stand in an explicit relation of influence as well as those that share a significant set of concerns – in order to investigate how each takes up and transform key problems in the literary, political, and philosophical tradition for their own historical moment. Plays to be studied: by Shakespeare, A Midsummer Night’s Dream, Hamlet, Othello, King Lear, The Tempest, A Winter’s Tale, by Ibsen, St. John’s Night, Hedda Gabler, Rosmersholm, The Wild Duck, The Master Builder, When We Dead Awaken.
Area: Humanities

AS.300.323. Cinema of the 1930s: Communist and Capitalist Fantasies. 3 Credits.
Comedy and musical comedy film flourished in the USA during the Great Depression as well as in the USSR during the Stalinist Great Terror. This course will compare films of the era in a variety of genres (musical, epic, Western, drama), examining the intersections between politics and aesthetics as well as the lasting implications of the films themselves in light of theoretical works on film as a medium, ethics and gender.
Area: Humanities

AS.300.324. American Madness – History of the Treatment of the Mentally Ill. 3 Credits.
As mental illnesses became a social issue during the 18th century, community institutions were created in order to handle the needs of individuals with such illnesses collectively. This course will investigate the history of these institutions in the USA from the seemingly quiet, secluded, and peaceful private asylums in country settings, at the beginning of the 19th century, through the notorious crowded public, so-called “psychopathic hospitals” in mid-20th century, to the crisis-services, short-term acute psychiatric units, and out-patient services that followed the “death of the asylum” at the end of the 20th century. The history of the institutional care of the mentally ill in America is also the story of American psychiatry changing attitudes towards these individuals.Reading will include selections from 200 years of writings of asylum superintendents, psychiatrists, patients, and historians of psychiatry such as Foucault, Goffman, Grob, Scull, Lunbeck, Micale, and Mora.
Area: Humanities

AS.300.325. Introduction to Comparative American Cultures: Obama and Philosophy. 3 Credits.
This course will investigate the philosophical as well as theological, juridical and political, and rhetorical and literary backgrounds that have informed and shaped Barack Obama’s writings, speeches, and policy strategies leading up to and during his presidency. While paying minute attention to a few selected controversial debates in domestic and international governance and relations, and while discussing the question of Obama’s legacy in and after the upcoming elections, our primary focus will be on understanding the curious blend of Christian realism, influenced by the theologian Reinhold Niebuhr, the tradition of American civic republicanism and pragmatism, and Obama’s specific brand of post-Civil Rights, if not necessarily post-racial, politics. All these tenets coalesce in a vision and politics that may well be described as one of ‘deep’ pragmatism. Attention will be paid to Obama’s early appeal to ‘simple ideas’ and ‘small miracles,’ each of them yielding the Biblical and sobered injunction of a ‘hope against hope.’ But extensive consideration of his thought and impact in the assessment of biographers and intellectual historians, legal scholars and political theorists, cultural critics and pundits will add to our attempt to understand and take stock of the Obama phenomenon as well.
Area: Humanities

AS.300.326. Literature of the Everyday. 3 Credits.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read closely a set of novels by Flaubert, Mann, Dickens, Zola, Tolstoy, and Woolf from the period between 1850 and 1950 in which the development of realism reaches it climax. These novels explore the nature of work, family, the body, consciousness, and the changing relation between individual and tradition in modernity. We will situate these novels in their social, historical, and literary contexts, and establish a set of terms for the formal study of the novel as a genre (plot, character, setting, narrative, etc).
Area: Humanities Writing Intensive
AS.300.331. The Authoritarian Image: Russian Cinema from Stalin to Putin. 3 Credits.
Vladimir Putin's charismatic authority has a deep history in Russian culture. We'll investigate that history through cinema, which Lenin called "the most important of the arts." While Soviet cinema often served as immersive propaganda, directors also found ways to question authority and power. Films to be screened range from Sergei Eisenstein's Ivan the Terrible (1944) to the 2013 documentary Pussy Riot: A Punk Prayer. This course will combine study of Russian and Soviet culture from the end of World War II to the present with study of film history, style, and technique.
Area: Humanities
Writing Intensive

AS.300.334. Love and its maladies. 3 Credits.
Much of what we know about love and desire we owe to fiction's ability to evoke these experiences. Consider for example that the publication, in Germany, of The Sorrows of Young Werther inspired young men across Europe to dress and behave just like this lover. Just as nowadays film and television represent, as well as mold our conceptions of love, love-stories from the eighteenth-century onwards have given shape to gendered subjectivities in ways that still matter now. As, intriguingly, illness is a recurrent theme in many modern love stories, we will be prompted to decipher signs and symptoms in the bodies of mind of our protagonists. Why is it that in Western cultures, passion is tightly interwoven with a landscape of pain, suffering, and disease? In studying texts that represent major aspects of a romantic sensibility, we are indeed invited to trace the steps of a history of the body increasingly defined by gender and by medical knowledge. The readings for this class (all available in English) include: Austen, Persuasion; Balzac, The Unknown Masterpiece; Barthes, Lover's Discourse; Goethe; The Sorrows of Young Werther; Mann, Death in Venice; Winterson, Written on the Body.
Area: Humanities

AS.300.336. Forms of Moral Community: The Contemporary World Novel. 3 Credits.
Literary and philosophical imaginations of moral community in the post-WWII period (1950-2001). Texts include: Coetzee, Disgrace; McEwan, Atonement; Achebe, Things Fall Apart; Ishiguro, An Artist of the Floating World; Roy, The God of Small Things; Lessing, The Grass is Singing; Mistry, A Fine Balance; Morrison, Beloved; and essays by Levi, Strawson, Adorno, Murdoch, and Beauvoir on the deep uncertainty over moral community after the crisis of World War II. Close attention to novelistic style and narrative will inform our study of the philosophical questions that animate these works. What does it mean to acknowledge another person's humanity? Who are the members of a moral community? Why do we hold one another responsible for our actions? How do fundamental moral emotions such as contempt, humiliation, compassion, gratitude, forgiveness, and regret reveal the limits of a moral community?
Area: Humanities

AS.300.337. The Tragic Tradition. 3 Credits.
This course offers a broad survey of tragic drama in the Western tradition, from its origins in ancient Greece to the twentieth century. In weekly lectures and discussion sections, we will study the specific literary features and historical contexts of a range of different works, and trace the continuities and transformations that shape them into a unified tradition. Key questions and themes throughout the semester will include what counts as tragic, the tragedy of social and political conflict, the bearing of tragedy on the meaning and value of life, the antagonistic relation between world and humans, the promises and dangers of tragedy for contemporary culture. Authors to be studied: Sophocles, Euripides, Seneca, Shakespeare, Racine, Goethe, Ibsen, Strindberg, Chekov, Brecht, Pirandello, and Beckett.
Area: Humanities

AS.300.339. Introduction to Comparative Literature. 3 Credits.
This course offers an introduction to the history, theory, and praxis of comparative literature. We will read texts from some of the founding figures of the discipline and look at the most recent debates in the field, including translation studies, literary theory, and world literature, among others. Particular attention will be given to the methodologies and problems of studying literatures in different linguistic traditions and the relation between literature and other areas of thought and culture, such as philosophy, art history, and psychoanalysis. Case studies in comparative approaches to literature will provide concrete examples to our discussions.
Area: Humanities

AS.300.341. Transwar Japanese and Japanophone Literatures. 3 Credits.
A survey of Japanese and Japanese-language literatures produced in Japan and its (former) colonies during the "transwar" period, or the several years before and after the end of WWII. This periodization enables us to take into account the shifting boundaries, sovereignties, and identities amid the intensification of Japanese imperialism and in the aftermath of its eventual demise. We aim to pay particular attention to voices marginalized in this political watershed, such as those of Japanese-language writers from colonial Korea and Taiwan, intra-imperial migrants, and radical critics of Japan's "postwar" regime. Underlying our investigation is the question of whether literature can be an agent of justice when politics fails to deliver it. We will introduce secondary readings by Adorno, Arendt, Levinas, Derrida, and Scarry, among others, to help us interrogate this question. All readings are in English.
Area: Humanities

AS.300.342. Imagining Climate Change. 3 Credits.
Climate change poses an existential threat to human civilization. Yet the attention and concern it receives in ordinary life and culture is nowhere near what science tells us is required. What are the causes of this mismatch between crisis and response? What accounts for our collective inability to imagine and grasp this new reality, and how can it be overcome? In pursuit of these questions, we will look at texts from politics, philosophy, literary theory, and religion that frame climate change as a fundamental challenge not only to humanity but to the humanities: the disciplines and modes of thought that we rely on to make sense of the human condition. The second part of the course will examine works of literature and film for examples of how contemporary artists attempt to make the climate crisis visible and intelligible to us.
Area: Humanities
AS.300.343. The Cinema of Revolution. 3 Credits.
This course examines global political revolutions through cinema and the ways in which cinema helped to make political revolutions. Early cinema was intimately intertwined with the Russian revolution, and Russian revolutionary cinema had a profound impact on the ways in which media was used for revolutionary purposes through the 20th century and around the world. Students will be introduced to films from a number of different countries, and the history and context of their production and reception. They will also learn methods of film analysis and produce their own video essay.
Area: Humanities

AS.300.344. Literature and the World. 3 Credits.
This course interrogates how modern literature not simply reflects the world but functions as world-making power. What is a world? How do we conceive of, live in, and change it? What if there are multiple worlds? How are literature and other aesthetic forms crucial to tackling these questions? We will survey literary and philosophical texts in a comparative setting, engaging examples from both Europe and East Asia. All readings are in English. Open to graduate students.
Area: Humanities
Writing Intensive

AS.300.349. Capitalism and Tragedy: from the 18th Century to Climate Change. 3 Credits.
In contemporary discussions of climate change, it is an increasingly prevalent view that capitalism will lead to the destruction of civilization as we know it. The notion that capitalism is hostile to what makes human life worth living, however, is one that stretches back at least to the early eighteenth century. In this class, we will examine key moments in the history of this idea in works of literature, philosophy, and politics, from the birth of bourgeois tragedy in the 1720s, through topics such as imperialism and economic exploitation, to the prospects of our ecological future today. Authors to be studied: George Lillo, Balzac, Dickens, Marx and Engels, Ibsen, Weber, Brecht, Arthur Miller, Steinbeck, Pope Francis, and contemporary fiction, politics and philosophy on climate change.
Area: Humanities

AS.300.353. Present Mirth: Stages of Comedy. 3 Credits.
A comparative survey of presentational comedies from Aristophanes to Beckett on stage and screen, with some attention to to to the vexed question of theories of comedy [no laughing matter].
Area: Humanities
Writing Intensive

AS.300.357. Forms of Modern Fiction. 3 Credits.
A comparative tour of modern narrative forms from 3 continents. The emphasis is on the development of shorter fictional models, though some of the founders and innovators are better known for their novels. The emphasis will be on the emergence new structural, rhetorical, and thematic concerns, including adaptation to other media. There will be an optional hour for queries and discussion TBA.
Area: Humanities
Writing Intensive

AS.300.366. Russian Avant-Garde Cinema. 3 Credits.
Russian cinema was born out of the intense artistic experimentation of the fin-de-siècle avant-garde and developed in a climate of dramatic political and cultural change in the twenties and thirties. While subject to draconian censorship in the Soviet period, it nonetheless engaged in active dialogue with the film industries of Western Europe and America and had a lasting impact on world cinema. This course examines the extraordinary flourishing of avant-garde cinema in the Soviet Union in the 1920s and 30s including films by Eisenstein, Vertov, Pudovkin, and Dovzhenko, their theoretical writings, and their far-reaching influence on film and film theory. All readings in English, films subtitled in English.
Area: Humanities
Writing Intensive

AS.300.367. Seeing Like a Woman. 3 Credits.
What does it mean to "see," think, desire, feel, speak, act, or write "like a woman"? Gendered notions of seeing have had an impact on politics and society long before the #metoo movement and far beyond debates about women's rights in isolation. This seminar examines the issues of female desire, subjectivity, spectatorship and performance in fiction, poetry, memoir and film from a variety of cultures and theoretical perspectives.
This is not a course on “the image of the woman” in literature, film or politics, but a course in which we examine the ways in which both male and female theorists, novelists, poets, and filmmakers have imagined how women “see,” feel, think and behave.
Area: Humanities
Writing Intensive

AS.300.372. Dance and the Russian Avant-Garde. 3 Credits.
This course will explore the relationship between art and dance during the explosion of artistic creativity at the time of the Russian Revolution (1900s-1920s) as well as the influence of the Russian Avant-Garde on modern dance and theories of movement through the 20th century. We will examine how dance both gave physical form to aesthetic, philosophical and political ideas and catalyzed new forms of thinking about the human body and modern spaces. Lecture and discussion of readings and screenings will be paired with a weekly movement workshop in the dance studio that will introduce students to different forms and theories of avant-garde and modernist dance and movement theory. No prior dance experience or knowledge of Russian is required.
Area: Social and Behavioral Sciences

AS.300.374. Marxist Theory of Consciousness: Class, Color, Creed, Gender. 3 Credits.
This course takes up the tripartite problematic of class as social context, ideology as false consciousness, and gender as the perception of sexual difference in modern society through philosophical engagements in Marxist tradition with consciousness. It will primarily treat the formation and validity of the individual’s insight into her society as a whole. Our systematic and historical path runs through Marx, Georg Lukács, Adorno, Rosa Luxemburg, Althusser, Judith Butler.
Area: Humanities, Natural Sciences
AS.300.389. Freud's Cases - Source of Psychoanalytic Knowledge. 3 Credits.
Even though major scientific discoveries have been made from the intensive study of singular cases, modern science is mostly quantitative in its approach. In this course we will follow psychoanalysis’ use of clinical practice as the primary context for the generation of knowledge. We will use two notions from the philosophy of science: “exemplars” (Kuhn) and “personal knowledge” (Polanyi), as we read Freud’s cases in which he combines theoretical consideration and detailed investment in the singularity of the person. In his accounts of the “hysteric” of Dora, the “phobia” of Little Hans, the “obsession” of the Rat Man, the “infantile neurosis” of the Wolf Man and Schreber’s “paranoia,” Freud not only generated theoretical and technical knowledge but also constituted the “single case study” genre of investigation, as the primary source of psychoanalytic knowledge. Readings will include: Freud, Foucault, Polanyi, Kuhn, Hacking, and Forrester. Cross-listed with Film and Media Studies
Area: Humanities

AS.300.399. Cinema and Philosophy. 3 Credits.
Do movies have anything to say about philosophical problems? Why is contemporary philosophy so interested in cinema? What are the most productive ways of bringing films and philosophy into conversation?
Area: Humanities

AS.300.402. What is a Person? Humans, Corporations, Robots, Trees. 3 Credits.
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course investigates recent debates about being a person in literature and law. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Although our explorations will be focused on these questions, the genre of materials examined will be wide-ranging (including legal essays, philosophy, contemporary novels, and film). Texts will include novels by William Gibson and Lydia Millet, essays by John Dewey and Daniel Dennett, and films such as Ex Machina and Her.
Area: Humanities

AS.300.410. China in Imagination. 3 Credits.
What is China? This question has gained new relevance amid the nation’s recent rise as a global power. We survey how China was imagined, represented, and conceptualized in literature, film, and philosophical writings from mainland China, overseas Chinese communities, East Asia, and the West from the late nineteenth century to the present. Through exploring this complex history, we aim to understand China and the contemporary world in a diversified, historically self-reflective way. Topics of discussion include, but are not limited to, representation, identity, form, allegory, exile, diaspora, modernism, translation, world history, and universality. All readings are in English; all films subtitled in English.
Area: Humanities

AS.300.414. Starobinski: The Art of Interpretation. 3 Credits.
How can we become better readers of the signs and symptoms that texts, as well as minds and bodies, address to us? An eminent figure of European intellectual life, deeply versed in the world of the arts and of medicine, Jean Starobinski will guide us through this inquiry. With his seminal work Jean-Jacques Rousseau: Transparency and Obstruction as our focus, we will learn why the ideas of this modern humanist have had such a wide-ranging influence on twentieth-century conceptions of subjectivity, interiority, imagination, and illness (e.g. nostalgia, melancholia, paranoia). We will also learn through his work on Rousseau, why Starobinski’s groundbreaking ideas about writing (l’écriture) shaped some of the major debates of French theory. This course is taught in English. For graduate students, reading knowledge of French is desirable. Next to Transparency and Obstruction, readings involve selections from Starobinski’s essays and from Rousseau. No exams, but a short oral presentation and a final essay.
Area: Humanities

AS.300.422. Luther, Philosophy, Politics: 500 Years After the Reformation. 3 Credits.
As historical legend has it, in 1517 the German monk and then professor of theology Martin Luther inaugurated a revolution in thinking, belief and moral practice, known as the Protestant Reformation by nailing his Ninety-Five Theses, under the title Disputation on the Power of Indulgences, to the door of the Castle Church of Wittenberg. Known for his brutal characterization of reason as ‘the devil’s whore,’ his theology of the hidden god, his catechisms, the doctrine of the two realms, and his condemnation of peasants’ revolts of his days, Luther’s influence has been profound and lasting. We will study some of his most influential theses, treatises, and sermons and will seek to gauge the effect they had on the Western narrative of secularization and modernity, together with their deep influence on post-Reformation and, indeed, recent philosophy and political thought. Readings include: Luther, G.W.F. Hegel, Max Weber, Martin Heidegger, Karl Barth, Erik Peterson, Dietrich Bonhoeffer, Kaj Munk, Ernst Bloch, Philippe Lacoue-Labarthe, Marcel Gauchet, Giorgio Agamben, and others.
Area: Humanities

AS.300.424. Psychoanalysis as a Theory of Thinking. 3 Credits.
This course will introduce students to the writings of Wilfred Bion, the British psychoanalyst who expanded Sigmund Freud’s and Melanie Klein’s metapsychology. Bion developed an epistemological theory of thinking, surmising that the mind grows when it is exposed to the truth of one’s emotional experience. In his many writings and lectures, Bion developed a sophisticated theoretical model that conceptualizes the transformation of emotional experience into the capacity for thought. While in his early writings he is inspired by life sciences and mathematics, in his later writings Bion shifts away from the scientific view to an aesthetic/mystical vertex, drawing on poets mystics and philosophers, such as Keats, Milton, Shakespeare, Sophocles, Meister Eckhart, St John of the Cross, Plato, Hume and Kant.
Area: Humanities
AS.300.425. Modernities and Comparison. 3 Credits.
Comparative survey of literary modernities in Europe and East Asia (China, Japan, and Korea). We will study works of modern literature as well as critical and philosophical texts from these civilizations in each other’s light. We will, as a working hypothesis, begin our examination by bracketing off the conventional center-periphery (Europe-Asia) scheme and considering literary modernities to be singular and contested, yet mutually resonating at moments of reconstruction, restoration, and revolution vis-à-vis the deconstructive forces of capitalist modernity. Ultimately, we will interrogate how we should understand literary modernities in the plural, as they emerged in distant civilizations. Topics of discussion include decadence, repetition, the trope of the human, ideology, the sublime, ritual, and translation. Readings in Hegel, Nietzsche, Mann, Benjamin, Baudelaire, Proust, Breton, Soseki, Kobayashi, Wang Guowei, Lu Xun, and Yi Kwangsu. All readings are in English. Area: Humanities

AS.300.429. Literature of the Everyday. 3 Credits.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read closely a set of novels by Flaubert, Mann, Dickens, Zola, Tolstoy, and Woolf from the period in which the development of realism reaches it climax. These novels transform the conventions for the representation of lives of lower and middle class subjects, revealing such lives as capable of prompting reflection upon deep and serious questions of human existence. Area: Humanities Writing Intensive

AS.300.437. Literature and Philosophy of the Everyday. 3 Credits.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read closely a set of novels by Flaubert, Mann, Dickens, Eliot, Zola, Tolstoy, and Woolf from the period between 1850 and 1950 in which the development of realism reaches it climax. These novels transform the conventions for the representation of lives of lower and middle class subjects, revealing such lives as capable of prompting reflection upon deep and serious questions of human existence. Theoretical and philosophical texts on the everyday by Auerbach, Kierkegaard, Heidegger, Sartre, Beauvoir, Lefebvre, Certeau, and Wittgenstein will accompany our discussions. Area: Humanities

AS.300.439. Stories of hysteria. 3 Credits.
Many are the stories that recount episodes of hysteria, and we owe them not only to medicine. To the modern observer, they are a puzzle, involving strange beliefs about wandering wombs, demonic possession, and female virtue (or lack thereof). Closer to our time, contemporary media, as well as accounts in the social and clinical sciences have evoked cases of “mass hysteria” in America and across the globe. Marriage, it was thought for a long time, might be the best cure, which might be the reason case-studies of this illness can be as intriguing and troubling as novels. Against a backdrop of medical and historical materials, we will examine a selection of stories, from the 17th century onward, that evoke aspects of hysteria. They serve as our case-studies and as prompts to study an illness born at the convergence of histories and myths, of medical science, and of cultural and gender assumptions. Among the notions we will explore: The birth of psychoanalysis, trauma and PTSD, the concept of suppression, the visual aspects of an illness and its spread in the arts, including cinema. Area: Humanities

AS.300.501. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.300.508. Honors Seminar. 3 Credits.
The Honors Seminar is a mandatory component of the Honors Program in Humanities, which offers qualified undergraduates the possibility of pursuing an independent research project in their Junior and Senior years in any humanistic discipline or combination of disciplines: intellectual history, comparative literature, philosophy, critical theory, psychoanalysis, religion, film, etc., as well as points of intersection between the arts and the sciences. After one year qualified students may apply for admission to the concurrent BA/MA degree program. Sophomores who plan to study abroad in their Junior year should also consider applying to the Program. In the 2017-2018 academic year, the Seminar will focus on a close reading of Coetzee’s Elizabeth Costello and associated texts, which will serve as a point of departure for discussion on the relation between different intellectual disciplines and the idea of the humanities. Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms. Writing Intensive

AS.300.601. How to Read Proust?.
Given the difficulty of his prose, closely and patiently would seem the best way to read Proust, but who has time – time to read a book that, ironically, begins with “Longtemps” and ends with “le temps”? This course will offer for critical examination surgically selected passages of A la Recherche du Temps Perdu as a training ground for the (lost?) art of close reading and as entry points into wide-ranging aspects of literary criticism and theory. Open to advanced undergraduates with permission of the instructor. Taught in English. Knowledge of French is desirable, but not required. Area: Humanities

AS.300.608. The Physics and Metaphysics of Handwriting.
When word processing machines that can be held in the palm of a hand, why use pen and paper? Handwriting – and its juxtaposition against digital forms of communication – offers a unique approach to studying human interactions and the ways in which meaning, truth, intimacy, and agency are shaped by our changing technologies. At a time of exponential growth in machine writing, a study of this older form of communication enables a comparative approach that, perhaps surprisingly, opens up what are contemporary political questions. Centered on a few case-studies involving works by Sand, Chopin, Manet, Giacometti, Mallarmé, and Proust, this course takes a backward glance at a culture of written expression at a great remove from our word processing world and yet explicitly vested in an aesthetics of free expression. This modern graphological culture saw in the tracings of the hand, the uniquely personal marks of an intertwining of mind, body, and of subjectivity. Merleau-Ponty and recent work on embodiment will provide us with critical tools for our investigations into the “physics” of this activity, as will the methods of textual criticism and the new domain of creativity studies. The “metaphysics” of handwriting call, meanwhile, for a return to Heidegger, to Derrida and other major contemporary theorists of writing. They will help us see how hand and digital writing emerge as fundamentally different modes of human expression – philosophically and politically. Knowledge of French is not required for this course. Undergraduates accepted with the permission of the professor. Area: Humanities
AS.300.609. Bildungsroman, Vollendungsroman: Novels of Youth and Old Age.
This seminar explores the Vollendungsroman, or novel of age, as a twentieth- and twenty-first-century counterpart to the late eighteenth- and nineteenth-century Bildungsroman that Moretti and others view as the symbolic form of modernity. We will examine how Vollendungsromanen broach the relation between subjectivity and ‘age’ (not only in the sense of individual maturity, but also in the sense of historical epoch); how they bring into question traditional conceptions of growth, authority, interiority, body-soul, authenticity, and reconciliation; how they represent alternatives to the modes of moral response and being valorized in the Bildungsroman; and how, in and through their very form, they meditate upon the philosophical significance of the classic phase of the novel. Selected novels by Goethe, Austen, Brontë, Joyce, Woolf, Coetzee, Ishiguro, and McEwan. Open to qualified undergraduates.
Area: Humanities

AS.300.614. The End of Art.
In this course we will examine Hegel’s seminal claim that art has come to an end in the modern world. In addition to Hegel’s original argument, readings will include important elaborations of the idea by Kierkegaard, Heidegger, and Adorno. In a final section of the course, we will relate these texts to reflections on the function and prospects of art under the unprecedented condition of the Anthropocene.
Area: Humanities

AS.300.618. What is a Person? Humans, Corporations, Robots, Trees.
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course investigates recent debates about being a person in literature and law. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Although our explorations will be focused on these questions, the genre of materials examined will be wide-ranging (including legal essays, philosophy, contemporary novels, and film). Texts will include novels by William Gibson and Lydia Millet, essays by John Dewey and Daniel Dennett, and films such as Ex Machina and Her.
Area: Humanities
    Writing Intensive

AS.300.620. Cosmopolitanism: Conflicted Legacies, Potential Futures.
In its modern version cosmopolitanism is a defining aspect of Enlightenment that bespeaks its emancipatory aspirations as well as the shortcomings of its Eurocentric and gendered presuppositions. In our time of resurgence of violent nationalisms and mass refugees crises, this seminar aims at reassessing the conflicted legacies of cosmopolitanism and its critical value for the present. Authors studied include: Montaigne, Kant, Marx, Derrida, Lévinas, Kwame A. Appiah, Seyla Benhabib, and others.
Area: Humanities

AS.300.621. Immersive Poetics and Permeable Screens.
Victor Shklovsky claimed that the art exists “to return sensation to life, to make us feel objects, to make a stone feel stony.” This seminar examines various ways of understanding Shklovsky’s concept of ostranenie (“estrangement”) across media (literature, art, cinema, and beyond) and in comparative perspective, considering the problematic of politics, philosophy, and aesthetic form. Students will be encouraged to present on texts in their own area of expertise over the course of the term.
Area: Humanities

AS.300.625. Russian Literary and Critical Theory.
Close reading of major authors from the Russian literary theoretical and critical tradition including Bakhtin, Elkhenbaum, Jakobson, Lotman, Shklovsky and Tynianov. Student will present primary sources or case studies from their own fields and research.

Area: Humanities

AS.300.629. Theory, Now and Then: Autonomy, Form, Critique.
This course explores recent developments and disputes in critical theory in relation to their longer philosophical genealogies. The three topics—form, autonomy, and critique—have been the subject of much recent debate, contention, and new analysis, yet each was also a source of critical and philosophical interest in years past. Our aim will be to make sense of today’s interventions in conversation with earlier theory. “Historical” theory writing will include Adorno, Lukács, Cavell, and Jameson; contemporary theory will include Nicholas Brown, Rita Felski, Caroline Levine, Mark McGurl, and Toril Moi.
Area: Humanities

AS.300.638. Happy and Unhappy Words: Austin, Wittgenstein, and Cavell.
This seminar studies how words help shaping the world we inhabit and how the power and limits of language affect the possibility of living in a shared world in the works of Austin, Wittgenstein, Cavell and others.
Area: Humanities
    Writing Intensive

AS.300.639. Literature and Philosophy of the Everyday.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read closely a set of novels by Flaubert, Mann, Dickens, Eliot, Zola, Tolstoy, and Woolf from the period between 1850 and 1950 in which the development of realism reaches its climax. These novels transform the conventions for the representation of lives of lower and middle class subjects, revealing such lives as capable of prompting reflection upon deep and serious questions of human existence. Theoretical and philosophical texts on the everyday by Auerbach, Kierkegaard, Heidegger, Sartre, Beauvoir, Lefebvre, Certeau, and Wittgenstein will accompany our discussions.

AS.300.642. Philosophy and Literature in Kierkegaard’s Either/Or.
Celebrated and reviled alike, Kierkegaard’s 1843 Either/Or has been viewed as both the culmination of the Enlightenment project and the birth of existentialism, a playful work of romantic literature and a piece of late-Hegelian philosophy, a vindication of the secular everyday and the articulation of a modern faith in a transcendent God. In this course we read the work closely and in its entirety and pay particular attention to the relation between its philosophical arguments and literary forms of presentation.
Area: Humanities
AS.300.647. Comparative Methods and Theory: Formalism and Materialism.
This pro-seminar provides a brief overview and map of the theoretical and philosophical positions in the major debate, still ongoing, between formalism and materialism. Its aim is both theoretical and historical: to help graduate students understand the range and depth of these positions as well as their development over time, continuing to this day. We will study fundamental philosophical works (Kant, Hegel, Marx, de Beauvoir), classic theoretical texts (Propp, Lévi-Strauss, Foucault, Derrida), and contemporary variations on these debates (Fish, McGurl, Moi, Allen), to name a few. The course fulfills the pro-seminar requirements in comparative methods and theory for CTL but is open to all graduate students.
Area: Humanities

This seminar analyzes Deleuze's philosophy in the light of his attempt to renew Kant's critical and transcendental method and in dialogue with other contemporary conceptions of critiques.
Area: Humanities

AS.300.657. Martin Heidegger, Being and Time: Integral Reading and Current Perspectives, II.
Starting with a brief overview and recapitulation of themes discussed in its Introduction and Division One, this jointly will focus on Division Two of Being and Time and bring phenomenological, hermeneutic, and deconstructive as well as analytic, epistemological, and pragmatist methods and viewpoints to bear upon this modern classic.

AS.300.660. Humanities Thesis Seminar.
Required thesis seminar for Humanities Center MA students.
Area: Humanities

AS.300.666. Russian Avant-Garde Cinema.
Russian cinema was born out of the intense artistic experimentation of the fin-de-siècle avant-garde and developed in a climate of dramatic political and cultural change in the twenties and thirties. While subject to draconian censorship in the Soviet period, it nonetheless engaged in active dialogue with the film industries of Western Europe and America and had a lasting impact on world cinema. This course examines the extraordinary flourishing of avant-garde cinema in the Soviet Union in the 1920s and 30s including films by Eisenstein, Vertov, Pudovkin, and Dovzhenko, their theoretical writings, and their far-reaching influence on film and film theory. All readings in English, films subtitled in English.

AS.310.106. Introduction to Korean History and Culture. 3 Credits.
This course offers a comprehensive overview of Korean history and culture from ancient times to the modern era. Through primary, secondary, and audio-visual sources, students will become familiar not only with the overall contours of the entirety of Korean history, but also with its cultural and religious legacy. The course combines lectures and class discussions.
Area: Humanities

This course aims to inspire students to explore the impacts, meanings, and explanations of social transformation in contemporary China, via the lens of documentary photography. The photographic images of selective topics will include the products of photojournalism and documentary photography, and several documentary films, by both Chinese and non-Chinese photographers. While one picture is worth a thousand words, one picture may also provoke countless interpretations. Students are strongly encouraged to read broadly about different aspects of social transformations in contemporary China, and to select and curate their own subjects of photo images. The spirit of comparative study of documentary photography of China and other parts of world will be strongly encouraged. Active class participation is imperative. A small exhibition on the campus will be organized by the Spring semester. The course is designed for upper division undergraduates. Cross-listed with Sociology and International Studies (CP).
Area: Social and Behavioral Sciences

AS.310.222. The Religions of Korea. 3 Credits.
This course offers an overview of the religions of Korea, both indigenous and foreign, old and new. Attention will be paid to the history of these religions, their impact on society, as well as their teachings and objectives. Students will engage with various forms of secondary as well as primary sources including scriptures, sermons, and religious tracts.
Area: Humanities

AS.310.230. Chinese Politics and Society. 3 Credits.
This introductory course will familiarize students with the major dynamics of political and social change in contemporary China since 1949. The course will be divided chronologically into four main topics: 1. The contested processes of nation-state making in modern China before 1949; 2. The making of the socialist system during the Mao Years and its dismantling since 1978; 3. The Reform Era transformation to a market economy with Chinese characteristics; 4. The dynamic relationships among the state, market and society since the new millennium. Students will explore how scholars have explained major political and social changes with reference to individual and collective rationalities, specific organizational and institutional arrangements, and specific strategic and cultural mechanisms of Chinese political and social habits.
Area: Humanities, Social and Behavioral Sciences

AS.310.302. China, Human Rights, and U.S. Policy Responses. 3 Credits.
This seminar explores select human rights issues in China (e.g., human rights impacts of the management of COVID-19, the Hong Kong protests, mass detentions/forced labor in Xinjiang province) and the extraterritorial reach of China's human rights challenges. As a practice and policy-oriented course, we will also investigate different responses and actions taken by the U.S. government and Congress, including hearings, legislation, reports, statements, etc. Class assignments include advocacy for Chinese prisoners of conscience (each student will "adopt" one currently detained PoC), and written work that mirrors real-world writing. We'll also have several human rights advocates and experts visit the class to share their experiences and insights. This seminar explores select human rights issues in China (e.g., human rights impacts of the management of COVID-19, the Hong Kong protests, mass detentions/forced labor in Xinjiang province) and the extraterritorial reach of China's human rights challenges. Area: Social and Behavioral Sciences

AS.310.305. Southeast Asia and US Security Strategy. 3 Credits.
This survey course is designed to introduce students to Southeast Asia -- the ten member countries of the Association of Southeast Asian Nations (ASEAN) plus Australia and New Zealand. Southeast Asia is an integral part of the broader region of East Asia and a geographic bridge to the Indian subcontinent (South Asia). Southeast Asia has been one of the great success stories in the saga of modernization and development of post-colonial Afro-Asia over the last six decades. Its resulting economic importance is matched by its strategic significance given the presence of imbedded jihadist networks and the emergence of China as a regional great power and aspirant superpower. Nevertheless, the region has been largely overlooked by senior foreign policy and defense officials in Washington. This course will equip students to fill that void by examining the region from the perspective of national security strategy -- broadly understood in its multiple dimensions. Students will be challenged to formulate some element of a viable U.S. national security strategy for the region.
Area: Social and Behavioral Sciences

AS.310.312. Masterpieces of Chinese Literature: Song through 20th Century, a Literature-in-Translation class. 3 Credits.
In the millennium from the Song Dynasty (960-1280) to the modern era court poets and master storytellers, eccentric misfits and satiric novelists, as well as courtesans and film makers all considered a complex and changing China. We will look at the masterpieces of this millennium, examining both text and cultural context. In examining the texts we will rely on close reading in order to develop sound critical interpretations. We will also place the text in cultural context, considering the multiple forces--political, economic, artistic and religious-- that shaped the lives of these writers and the cultures they observed.

Writing Intensive
**AS.310.316. First Year Classical Chinese: Philosophers, Poets and Fantasists: An Introduction to Chinese Literature in the Original Classical Texts. 3 Credits.**

We will read arguments, anecdotes and stories, beginning with the philosophers of the ancient period, including the imaginative paradigms of the Daoist writer Zhuangzi, and continue with the strange writings allied with shamanism and goddess-worship. We will continue with the fantastical writers of the medieval world and finish with anecdotes of the strange from the Ming and Qing. Because this is a language as well as a literature class, in addition to literary content and social history as background, we will emphasize grammar and vocabulary. Class preparation will require language exercises, translations, readings in English and there will be a final translation/research paper.

**Prerequisite(s):** (AS.373.115 AND AS.373.116) OR (AS.378.115 OR AS.378.116) or Instructor permission.

Area: Humanities

**AS.310.320. Sociology of Urban China. 3 Credits.**

Urban China has gone through two major social transformations since 1949: the embrace of a central planning socialist system between early 1950s and late 70s, and the embrace of neo-liberal market economy in the so-call "socialism with Chinese characteristics" since 1980. While the political regime remains the same over time, many profound changes have occurred in economic life, social life, cultural life, spiritual life and civil life. What really happened in the social transformation of urban China? What would explain those changes? How did people in different walk of life deal with those huge and deep social transformation? To address these concerns, we will exam a list of issues. Topics includes changes in population and demographic characteristics, employment structure and job market, workplace and residential communities, income and wealth distributions, segregation impacts of urban household registration systems, urban consumption patterns, courting cultures and dressing codes, spiritual practices, and social mobility and social stratifications. In the realm of public policies, we will pay special attentions to the issues of transportation, housing, medical service, public education, social insurance, and environmental protection. We will also study the characteristics of contentious politics and how social conflicts of power, interest, justice, cultural and belief were processed in urban China.

Area: Social and Behavioral Sciences

**AS.310.322. Korean History Through Film and Literature. 3 Credits.**

In this course, students will engage with select topics in Korean history from premodern and modern times and examine how the past has been represented through various forms of film and literature. This will be combined with readings of academic articles to allow students to gauge the distance between scholarship and cultural expressions of history. Through this, students will be introduced to the highly contested and often polarizing nature of Korean history and the competition surrounding historical memory. Prior coursework in East Asian Studies strongly recommended.

Area: Humanities

Writing Intensive

**AS.310.323. The History and Culture of North Korea. 3 Credits.**

This is a seminar that investigates the history and culture of North Korea. Course materials include scholarly articles, political tracts, biographies, movies, as well as works of fiction. For the final project, students will write an extended research paper on a topic of their choice.

Area: Humanities, Social and Behavioral Sciences

**AS.310.340. Development and Social Change in Rural China. 3 Credits.**

This course will survey the major issues of development and social change in rural China since 1950s. These issues will be addressed in chronological order. They include land ownership and land grabbing, organization of rural economic, political, and social life, rural elections and village governance, development strategies, urban-rural relationship in resource allocation, rural modernization strategies in regard to irrigation, clean drinking water, electricity supply, hard paved road, education and rural medical service, women's rights and family life, rural consumption, and etc. This course will prepare students, both empirically and analytically, to understand what happened in rural China from 1949 to the present, and how we can engage in policy and theoretical discussions based on what we learn.

Area: Humanities, Social and Behavioral Sciences

**AS.310.402. Labor Politics in China. 3 Credits.**

This course explores the transformation of labor relations in China over the past century. It will cover the origins of the labor movement, the changes brought about by the 1949 Revolution, the industrial battles of the Cultural Revolution, the traumatic restructuring of state-owned enterprises over the past two decades, the rise of private enterprise and export-oriented industry, the conditions faced by migrant workers today, and recent developments in industrial relations and labor conflict. The course is designed for upper division undergraduates and graduate students. Cross-listed with Sociology and International Studies (CP).

Area: Social and Behavioral Sciences

Writing Intensive

**AS.310.404. Korea in the World. 3 Credits.**

This seminar examines Korea's interactions with the outside world including Japan, China, and the Americas, as well as Europe and Southeast Asia. We will touch upon a wide range of topics, including political, economic, and military interactions, as well as cultural, intellectual, and religious engagements. The purpose is to identify larger transnational trends and parallels in understanding Korea's position in the world.

Area: Humanities, Social and Behavioral Sciences

**AS.310.431. Senior Thesis Seminar: East Asian Studies. 3 Credits.**

Students may earn honors in the East Asian Studies major by maintaining a 3.7 average in the major and completing a senior thesis by taking the year-long AS.310.431 & AS.310.432 Senior Thesis Seminar: East Asian Studies. Students are required to secure the mentorship of an adviser among the EAS faculty before asking for permission to enroll in the course. Students who decide, after the fall semester, that they are unable to complete the senior thesis and who do not enroll for the spring will be graded S/U for the fall semester. Only students who complete the fall semester course will be permitted to enroll for the spring.

Area: Humanities, Social and Behavioral Sciences

Writing Intensive

**AS.310.432. Senior Thesis Seminar: East Asian Studies. 3 Credits.**

This course is the continuation of Senior Thesis Course AS.360.431 for students completing their thesis in the East Asian Studies program.

**Prerequisite(s):** AS.310.431

Area: Social and Behavioral Sciences

Writing Intensive

**AS.310.501. Independent Study - East Asia. 1 - 3 Credits.**

Students carry out an independent research project involving East Asia.

**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.310.592. Summer Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.360 (INTERDEPARTMENTAL)

AS.360.000. Pre-College E.S.L.  1 Credit.
Sharpen and refine your speaking, reading, listening, and writing skills, or improve your test scores. A separate application is required. Please contact 410-516-4548 for information or write summer@jhu.edu.

AS.360.100. Neuroscience Applied: Designing and Communicating Theory and Research.  1 Credit.
Science is about theory, research, data and storytelling. This course focuses on Neuroscience and its related topics —Cognitive Science, Psychology, Biology, Computer Science, Philosophy of Mind and Anthropology—as they can be applied outside of the traditional laboratory. Through research projects on a topic of their choice, students will experience hands-on creative problem solving through the scientific process and create and write their own research papers and scientific visualizations. It is strongly recommended to take this course in conjunction with the course ‘Mind, Brain, and Beauty’ or any other course in the brain, psychological and behavioral sciences.

AS.360.105. Intro to Hopkins: Arrive & Thrive.  1 Credit.
Explore the University. Engage with people. Empower yourself. Chart your expedition at Hopkins. In this freshman-only course, students will explore Hopkins’ academic resources and opportunities to integrate their academic, career, and personal goals for college and beyond. Students will be exposed to topics including learning strategies, academic planning, and campus culture. Students will develop a personalized plan for success and make some new friends.

AS.360.107. Library Research and Research/Grant Proposal Writing.  1 Credit.
This course offers training to undergraduate and graduate students in humanities and social sciences on the fundamentals of library research and research/grant proposal writing. The course will introduce the students to the major research resources in humanities and social sciences, strategies and techniques to conduct effective research, and how to use library research to enhance research and grant proposal writing. This course aims to help students learn the basics of research and grant proposal writing and develop useful research skills that will benefit them in the long run.

AS.360.111. Special Opportunities in Undergraduate Learning Tutorials.  1 Credit.

AS.360.116. Neuroscience Applied - The Brain & Creativity.  1 Credit.
What underlies our perception of visual art and music? Do specific properties of objects, scenes, and musical events evoke consistent emotional responses? Does the perception of beauty lie in the eye of the beholder? What can the creative, artistic process tell us about the mind/brain? Examining such questions from cognitive and computer sciences, neuroscience, psychology, and philosophy, we will explore relevant research, theory and data in the visual and auditory domains as they pertain to art perception and cognition, creativity, and artificial intelligence.

AS.360.118. Health Studies.  1 Credit.
Most Americans were born in one and will die in one. Lots of you likely aspire to spend your careers in one. Hospitals stand at the center of modern health care as symbols of healing; below the surface, they perform all the technological and social functions of a miniature city. This class explores the past, present, and future of hospitals with a focus on Johns Hopkins, a global model for medical education and patient care. Area: Humanities, Social and Behavioral Sciences

AS.360.125. Scholars.
Permission and separate application required. Please contact 410-516-4548 for information or write summer@jhu.edu. No credit is earned for this course.

AS.360.133. Freshman Seminar: Great Books at Hopkins.  3 Credits.
Students attend lectures by an interdepartmental group of Hopkins faculty and meet for discussion in smaller seminar groups; each of these seminars is led by one of the course faculty. In lectures, panels, multimedia presentations, and curatorial sessions among the University’s rare book holdings, we will explore some of the greatest works of the literary and philosophical traditions in Europe and the Americas. Close reading and intensive writing instruction are hallmarks of this course; authors for Fall 2020 include Homer, Plato, Dante, John Donne, George Herbert, Christina Rossetti, Mary Shelley, Friederick Nietzsche, Isaac Bashevis Singer, Frederick Douglass.
Area: Humanities
Writing Intensive

AS.360.137. Mini-Term: Disease as Creativity in the Arts.  1 Credit.
In this course, we will analyze the ways in which physiological and mental diseases have contributed to the creation of renowned works of art and literature through the ages as means of coping with illness.
Area: Humanities

AS.360.139. Medicine: An Integrative Approach.  1 Credit.
Integrative medicine considers the human body not as a machine to be repaired when broken, but as a potent mind-body with extraordinary potential for high-level wellness, resilience under duress, and resistance to disease. Changing our disease-care model into a wellness model will be facilitated when we consider the vitality of soul and spirit to be as important as cellular function. We will explore a vision of medicine broader than that of the conventional model as it integrates the biological with the psychological aspects of human experience and focuses on the flourishing of human possibility. David Mercier, M.S., L.Ac., author of A Beautiful Medicine, winner of a Grand and Gold Prize in the 2013 Nautilus Book Awards, will be co-teaching this class with Medical Herbalist Geo Giordano, MSc, RH(AHG).

AS.360.140. Introduction to Orthopedics.  1 Credit.
This two-week course is an immersion experience for high school students in the fascinating medical specialty of orthopaedic surgery. By the end of this course, students will be able to (i) describe important anatomic and physiological aspects of the musculoskeletal system, (ii) explain the pathogenesis and presentation of common musculoskeletal disorders, and (iii) indicate how to evaluate and manage a patient with a musculoskeletal disorder at a level appropriate for the high school student.
**AS.360.142. Drug Discovery and Development. 1 Credit.**
This interactive course will give students an introduction to the guiding principles of drug discovery and development. Topics will range from pre-clinical pharmacokinetic and pharmacodynamic considerations through clinical trial design, implementation, and analysis. Upon completion of this course, students will be able to define the path of drug discovery, while being able to identify and critically assess important factors to consider at each stage when moving a drug forward through the process.

**AS.360.143. Ethics and Public Health Research. 1 Credit.**
In this course, students will be introduced to principles of bioethics and ethical theory and their application to public health research and practice both in the U.S. and abroad. We will discuss how ethical considerations have evolved in research, practice, and academia and the systems in place to support ethical research and practice in the U.S. and abroad. The course will use a combination of lecture, discussion and student debates to encourage broad participation.

**AS.360.145. JHU EducationUSA Academy. 1 Credit.**
Course description: This course provides students who are new to the study of higher education in the United States with an overview of the field and its opportunities. We will explore various topics such as the history and diversity of colleges and universities, the admissions process, introduction to library research, and campus diversity. The course is comprised of guest lecturers, campus tours, readings, and writing workshops.

**AS.360.146. Epidemics, Pandemics, & Outbreaks. 1 Credit.**
We are in the midst of a global pandemic that has shifted the ways in which we move world and interact with others around the world. It is more important than ever to have a deeper understanding of how outbreaks, epidemics, and pandemics have evolved through reviewing select communicable (COVID-19, Ebola, Zika, and HIV) and non-communicable (diabetes, cancer, cardiovascular disease, injury, and mental health) diseases in public health around the world. We will review the global burden of these diseases and the various forms of prevention efforts undertaken by global and national organizations.

**AS.360.147. Freshmen Seminar: Adam Smith and Karl Marx. 3 Credits.**
This course will compare the ideas of Adam Smith, the most famous proponent of free trade and free enterprise, with those of Karl Marx, the greatest critic of capitalism. For freshmen only.
Area: Humanities, Social and Behavioral Sciences

**AS.360.149. An Introduction to the Counseling Profession. 1 Credit.**
This course is designed to provide students with an overview of the field of counseling as a profession. It will introduce students to and define the subject matter of counseling psychology, the target population the counseling professional seeks to serve, and the theories and technical tools that inform practice. Moreover, the course will provide students with an introduction to basic counseling skills.

**AS.360.160. Neurobiology: Cellular & Behavioral. 1 Credit.**
Neurobiology studies the biological basis of nervous system structure and function. This course is a college seminar that will cover topics ranging from cellular neurophysiology to development to gross nervous system anatomy and clinical correlates. While not a formal lab course, we will use models and demonstrations to introduce students to the wonders of the brain. There are no prerequisites, but a background in biology is helpful. Students should be generally enthusiastic and uninhibited.

**AS.360.167. Physics of Sports. 1 Credit.**
Starting with an introduction to basic concepts in physics learn why a curve ball curves, why a ping pong ball dunks, how the speed and temperature of bobsleds critically define its trajectory and dynamics, etc. The course will try to build general understanding of physics needed to explain various sports in a greater depth and to appreciate the amount of science and engineering that goes into designing sporting equipment.
Area: Engineering, Natural Sciences

**AS.360.168. Depression: Philosophical and Neurological Perspectives. 1 Credit.**
Depression has established environmental and neurological causes. Efforts to join the two typically ends at lifestyle or social factors, but what can be said beyond that? Sociopolitical power structures, zeitgeist, and culture all exert significant effects on our lives. This course seeks to join modern theories of depression from philosophical, polito-theoretical, and neuropsychiatric perspectives to form a holistic model of how depression exists in modernity.

**AS.360.172. Maximizing Student Entrepreneurship. 1 Credit.**
Maximizing Student Entrepreneurship is designed to teach students about the six core tenets of successful entrepreneurship - time management, team building, networking, purpose, operations, and financial management - via exposure to the ideas of successful entrepreneurs and venture capitalists, who will conduct Q&A sessions with the students on these topics.

**AS.360.174. Miracles of Modern Medicine. 1 Credit.**
The course is an introduction to the milestone discoveries and inventions in the history of modern medicine as well as the frontier of current medical research. The two-week course is composed of 10 teaching modules, each is designed and delivered by the scientists at Johns Hopkins Medical Institutions and Johns Hopkins University. Students will take interactive lectures, participate in group projects, perform hands-on activities, visit cutting-edge laboratories, and interact with scientists and physicians.

**AS.360.190. College Writing Workshop. 1 Credit.**
In College Writing, we will ask well-informed questions and attempt to answer those questions with the support of evidence. In the process, we will treat good writing not only as a product of good thinking, but also as a tool for effective communication. To that end, we will plan, draft, and revise original essays in several genres in order to create finished pieces of writing.
Area: Humanities

**AS.360.199. The Art and Science of Happiness. 1 Credit.**
This dynamic course provides students with life-changing insights and skills that have the potential to affect the quality and substance of their academic, personal, and professional lives. In addition to learning basic concepts from neuroscience, nutritional biochemistry, and positive psychology, students will learn practical skills in social intelligence, resilience, meditation. They will also learn how to think critically about commonly held views of success and happiness. With both lecture and experiential exercises, the course will provide students the opportunity to experience significant changes in mood, cognitive skills, self-awareness, and physical wellbeing.

**AS.360.220. An Introduction to the Counseling Profession. 1 Credit.**
This course is designed to provide students with an overview of the field of counseling as a profession. It will introduce students to and define the subject matter of counseling psychology, the target population the counseling professional seeks to serve, and the theories and technical tools that inform practice. Moreover, the course will provide students with an introduction to basic counseling skills.
**AS.360.223. Mini Term: Medicine, Sports, and Culture. 1 Credit.**

This course examines how medicine is practiced in different cultures around the world. In particular, we draw on theories and concepts from medical anthropology to study how these differences reveal alternative perspectives on the body, its health and its capabilities. To sharpen our inquiries into cultural differences surrounding bodily health, we look comparatively at the anthropology of sports and bodily performance. In looking at how concepts including illness, wellness, and injury differ across cultures, we consider, for example, how the bodily experience of pain not only varies according to societal beliefs and behaviors, but also changes as one pursues the limits of athletic performance. In addition to introducing how cultural anthropologies engage with medicine and sports performance, this course enriches scientific interest in medicine by teaching students techniques of critical reasoning that powerfully investigate both how medicine is practiced and the cultural phenomenon of bodily health. Prior study in anthropology is not required.

**AS.360.247. Introduction to Social Policy: Baltimore and Beyond. 3 Credits.**

This course will introduce students to basic concepts in economics, political science and sociology relevant to the study of social problems and the programs designed to remedy them. It will address the many inequalities in access to education and health care, unequal treatment in the criminal justice system, disparities in income and wealth, and differential access to political power. The focus will be on designing effective policies at the national and local level to address these pressing issues. This course is open to all students, but will be required for the new Social Policy Minor. The course is also recommended for students who are interested in law school, medical school, programs in public health, and graduate school in related social science fields. This course does not count as one of the required courses for the Economics major or minor, but it is required for the Social Policy Minor. Cross list with Sociology, Economics and Political Science. Freshman, Sophomore and Juniors only.

Area: Social and Behavioral Sciences

Writing Intensive

**AS.360.249. Basics of Medicinal Plant Pharmacology. 1 Credit.**

We will explore some of the commonly used herbal medicines which support our anatomy and physiology. One class will be devoted to pain management & the emerging use of Cannabinoids. JHU is currently performing a clinical trial on Mistletoe which we will be study, as it’s use is widespread for cancer patients in Europe. We will review current scientific discoveries explaining the cellular pathways and mechanisms that these plants affect in healing. Therapeutic doses, appropriate uses, plus known drug-herb interactions will be highlighted. Students will gain some useful insights into staying well, thinking clearly and optimizing their personal performance during their academic years ahead.

**AS.360.300. Mini-Term: So you want to be a .... Dentist. 1 Credit.**

Participation in all aspects of dentistry designed to immerse students in the experience of being a clinical dentist. The experience will focus on 5 elements for immersion: Chair-side monitoring throughout multiple dental specialties, dental anatomy/radiology review, dental laboratory work, sterilization and OSHA protocols, and business dental management discussion in the changing insurance landscape.

**AS.360.308. Policy and Practice in Human Services. 3 Credits.**

This course will focus on the policies that frame human service programs and the methods that are used to deliver them. Students will be given the opportunity to review the challenges of implementing programs and reforms in government and to consider the impact human services have on the population served.

Area: Social and Behavioral Sciences

**AS.360.311. Methods for Policy Research. 3 Credits.**

This course will introduce students to quantitative methods for studying social policy problems. Topics to be covered include descriptive statistics and sampling, correlation and causation, simple and multiple regression, experimental methods, and an introduction to cost-benefit analysis. The emphasis will be on the selection, interpretation and practical application of these methodologies in specific policy settings, rather than with formal proofs. Skills will be reinforced by hands-on exercises using statistical software. Over the course of the semester, students will critically analyze policy reports and empirical research in a range of policy areas and learn how to present this research to a non-specialist audience. Finally, we will discuss the pros and cons of quantitative vs. qualitative methodologies. The course will conclude with group presentations that draw on all these skills. Enrollment restricted to Social Policy minors only.

Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

**AS.360.339. Planets, Life and the Universe. 3 Credits.**

This multidisciplinary course explores the origins of life, planet formation, Earth's evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions, and planetary protection. Recommended Course Background: Three upper level (300+) courses in sciences (Biophysics, Biology, Chemistry, Physics, Astronomy, Math, or Computer Science)

**Prerequisite(s):** Students may not register for this class if they have already received credit for AS.020.334 OR AS.020.616 OR AS.171.333 OR AS.171.699 OR AS 270.335 OR AS.360.671

Area: Natural Sciences

**AS.360.366. Public Policy Writing Workshop. 3 Credits.**

This workshop is designed to hone the analytical and communications skills necessary for effective formulation and advocacy of public policy. Topics include how to develop op-ed pieces and other forms of advocacy journalism, memoranda, position papers, and grant proposals. The workshop puts special stress on how to make a clear and persuasive exposition of complex or counter-intuitive policy arguments in the market place of ideas, including the challenges of writing for popular journals and communicating to specific audiences both in and out of government. Students receive intensive individual instruction, including close editing of their work and advice on how to publish or promote it in the public sphere. Enrollment restricted to Social Policy minors only.

Area: Social and Behavioral Sciences

Writing Intensive

**AS.360.387. Cities, Crime, and the Constitution. 3 Credits.**

This course is meant to introduce students to the profound challenge of crime in American cities and to the opportunities and obstacles to address it. From gangs, gun violence, and the narcotics trade to crimes targeting vulnerable populations like children and the elderly, the course will survey the breadth and character of criminal enterprises in cities like Baltimore. Students will confront vexing questions raised by contemporary criminal justice practices relating to race, poverty, privacy, and policing. Students will also examine whether institutional reform in the areas of juvenile justice, conviction integrity, fairness in sentencing, and reentry reflect the Constitution's promise of equal justice for all.

Area: Social and Behavioral Sciences

**AS.360.401. Social Policy Seminar. 3 Credits.**

This course is designed for students who have completed either the Baltimore intensive semester of the Social Policy Minor. The students will make presentations and pursue joint projects based on what they have learned during the intensive semesters concerning key social policy issues.

Area: Social and Behavioral Sciences
AS.360.528. Problems in Applied Economics. 2 Credits.
This course focuses on a monetary approach to national income determination and the balance of payments. Money and banking, as well as commodity and financial markets, are dealt with under both central banking, as well as alternative monetary regimes. Particular emphasis is placed on currency board systems. Students learn how to properly conduct substantive economic research, utilizing primary data sources, statistical techniques and lessons from economic history. Findings are presented in the form of either memoranda or working papers of publishable quality. Exceptional work may be suitable for publication through the Johns Hopkins Institute for Applied Economics, Global Health, and the Study of Business Enterprise. Advanced excel programming skills are required and students are expected to be pre-screened for research at the Library of Congress in Washington, D.C. Bloomberg certification is a requisite.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Writing Intensive

AS.360.551. Arts and Sciences Research Practicum.

AS.360.624. Responsible Conduct of Research (Online).
Online

AS.360.625. Responsible Conduct of Research.
Through a discussion-based curriculum, the Responsible Conduct of Research course introduces students to key research issues: academic ethics, animal subjects, conflict of interest, data management and authorship, and human subjects. Attendance to all meetings is required to receive credit for the course.

AS.360.671. Planets, Life and the Universe.
This multidisciplinary course explores the origins of life, planet formation, Earth’s evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions, and planetary protection. Recommended Course Background: Three upper level courses in sciences and buy textbooks
Prerequisite(s): Students may not register for this class if they have already received credit for AS.020.616 OR AS.020.334 OR AS.171.333 OR AS.171.699 OR AS.270.335 OR AS.360.339.
Area: Natural Sciences

AS.360.781. Preparation for University Teaching.
Full-time A&S Graduate Students only. This course will prepare graduate students to teach at the university level. Topics covered include large and small class teaching, characteristics of student learning, syllabus construction, grading students, and developing a teaching portfolio. Co-listed with EN.500.781

AS.360.851. Arts and Sciences Research Practicum.

EN.990.974. Outgoing Engineering Exchange Program. 15 Credits.
This is a study abroad place holder for students enrolled in engineering exchange programs.

Principles of Developmental Biology

Required course in the first year medical student curriculum.

ME.800.616. Longitudinal Ambulatory Clerkship - 1st year.
Longitudinal Ambulatory Clerkship - 1st year

ME.800.617. Longitudinal Ambulatory Clerkship - 2nd year.
Required course in the second year medical student curriculum.

ME.800.618. Transition to Residency and Internship and Preparation for Life.
This two-week capstone course is offered twice in April of Year Four. The goal of TRIPLE is to prepare students to work effectively as interns, residents and practicing physicians. Additionally, it will help students to develop the knowledge, attitudes and skills necessary to be successful in their professional lives. In addition to Advanced Cardiac Life Support Certification, activities include exercises in Rapid Response scenarios; central venous catheter and interosseous line insertion; airway management; multitasking, organization and prioritization; advanced communications; reflective writing; teaching skills and facilitated small group discussions.

ME.800.621. Clinical Foundations of Medicine.
Clinical Foundations of Medicine

ME.800.623. Scholarly Concentrations.
Required course in the first year medical student curriculum.

ME.800.630. Genes to Society III (inc. Cardiovascular, Pulmonary, and Renal).
Required course in the first year medical student curriculum.

ME.800.631. Genes to Society IV (inc. GI, Reproductive, Endocrine, and Musculoskeletal).
Required course in the second year medical student curriculum.

ME.800.633. Scholarly Concentrations - 2nd year.
Required course in the second year medical student curriculum.

ME.800.634. Transition to the Wards.
Required course in the second year medical student curriculum.

ME.800.637. Foundations of Public Health: Epidemiology, Ethics & the Health Care System.
Required course in the first year medical student curriculum.

The purpose of this course is to present the language and principles of biomedical science that students will be using throughout their study of human health and disease. Course methods include lecture, readings, journal clubs, virtual microscopy, small-group problem-solving sessions and clinical correlations.

ME.800.639. Genes to Society I (inc. Immunology, Microbiology/Infectious Disease, Hematology, and Dermatology).
Required course in the first year medical student curriculum.

ME.800.640. Topics in Interdisciplinary Medicine – Health and HealthCare Disparities and Inequities.
Required course in the first year medical student curriculum.

ME.800.641. Topics in Interdisciplinary Medicine - Obesity, Nutrition, & Behavior Change.
Required course in the first year medical student curriculum.

ME.800.642. Topics in Interdisciplinary Medicine – Global Health.
Required course in the first year medical student curriculum.

ME.800.643. Topics in Interdisciplinary Medicine – Pain Care Medicine.
Required course in the first year medical student curriculum.

ME.800.644. Topics in Interdisciplinary Medicine – Disaster Medicine.
Required course in the first year medical student curriculum.

ME.800.645. Topics in Interdisciplinary Medicine - Substance Use Disorders.
Required course in the second year medical student curriculum.
ME.800.646. Topics in Interdisciplinary Medicine – Patient Safety and Quality Improvement.
Required course in the second year medical student curriculum.

ME.800.647. Topics in Interdisciplinary Medicine – End of Life/Palliative Care.
Required course in the second year medical student curriculum.

ME.800.648. Topics in Interdisciplinary Medicine – Metabolism.
Topics in Interdisciplinary Medicine – Metabolism

ME.800.649. Topics in Interdisciplinary Medicine – Immunology.
Topics in Interdisciplinary Medicine – Immunology

ME.800.650. Topics in Interdisciplinary Medicine – Infectious Disease.
Topics in Interdisciplinary Medicine – Infectious Disease

ME.800.651. Topics in Interdisciplinary Medicine – Cancer.
Topics in Interdisciplinary Medicine – Cancer

ME.800.652. Topics in Interdisciplinary Medicine - Introduction to Regenerative Medicine.
Topics in Interdisciplinary Medicine - Introduction to Regenerative Medicine

ME.800.653. Integrative Medicine.
Required course in the first year medical student curriculum.

ME.800.655. Topics in Interdisciplinary Medicine - High Value Healthcare.
This three-day course is offered in February of Year One after the Microbiology and Infectious Disease section. The goals of the course are to empower students to understand high value care and advocate for its practice. Lectures serve as the background on why providers order unnecessary labs, imaging, and medications and the changes that are occurring. Interactive small group sessions then allow students to participate in hands-on approaches to improving their role as stewards of healthcare for the healthcare system and most importantly their patients.

ME.800.661. Topics in Interdisciplinary Medicine - Genomic Medicine.
Fulfills TIME requirement in the third and fourth year medical student curriculum.

ME.800.669. Interdepartmental Elective.
For Medical Students only. Specialized Topics in Interdepartmental. Refer to Medical Student Electives Book located at https://www.hopkinsmedicine.org/som/students/academics/electives.html.

ME.800.702. Introduction to the Human Body: Anatomy, Histology, Physiology.
The focus of the course is an overview exposure to the organ systems of the human body. Class has histology oral presentations.

ME.800.703. CMM Core Discussion.
In section One: Students present a journal article and lead the class discussion. In section Two: 3R online modules with class discussions. In section Three: Compliments Intro to Clinical Research course content.

ME.800.705. Method, Logic and Experimental Design.
Students meet in small groups with faculty members to read and discuss current research articles. The goal is to learn to critically evaluate experiments, results and to design controlled experiments.

ME.800.708. BCMB Core Discussion.
Core discussion is a small-group discussion which corresponds to the BCMB core module lectures.

ME.800.709. Cellular and Molecular Basis of Disease.
The emphasis of this course is the cellular and molecular aspects of the pathogenesis and treatment of human diseases.

ME.800.713. BCMB Responsible Conduct of Research.
This discussion course focuses on responsible conduct of research in science. Topics include Issues of Diversity, Mentoring, Misconduct/Fraud, Authorship, Conflict of Interest, Scientific Record Keeping, Animal and Human Experimentation.

ME.800.717. CMM Grant Writing: Nuts and Bolts.
Will give a general overview of the grant writing process to include the significant components of a hypothesis driven scientific grant application and its peer review process. Proposals for this course will be based on each student’s current thesis work and will be developed as the thesis proposal.

ME.800.718. Topics in Cellular and Molecular Medicine.
This course introduces students to CMM faculty and their areas of expertise.

ME.800.724. Introduction to Clinical Research.
Understand the steps involved in conceiving, conducting and translating clinical research. Prepare and review a clinical research project in groups.

Required course in the first year medical student curriculum.

ME.800.783. Scientific Foundations of Medicine: Histopathology.
Course is offered in two sections. Students must enroll and attend both sections. The course is designed to provide the foundations to understand organ histology and histopathology. The course begins with basic concepts of tissue organization and ends with globally relevant histopathologic changes seen in disease. The course is primarily designed around the virtual microscopy (VM system within small gorups, occasional lectures, and e-lectures.

Scientific Foundations of Medicine: Pharmacology

ME.800.789. 3B’s: Bench to Bedside and Back.
To further expose and educate students about the clinical opportunities and translational implications associated with their thesis research, and how this information may help guide the student to think about the translational potential of their research in the design of pre-clinical models, clinical trials or collaborations with the pharmaceutical industry. It will also demonstrate, that data obtained from patient tissues and clinical correlates can help bring the clinical research from the bedside back to the bench for continued improvement and refinement.

ME.800.801. Research in Cellular and Molecular Medicine.
First year students perform 3 lab rotations. Upper-class students in conjunction with thesis advisor perform focused research on his/her thesis project.

ME.800.803. Biomedical Science Practicum.
Provides an opportunity for students to actively conduct research in BME, HGEN, BCMB-2, Biophysics, or PHYS.

ME.800.805. BCMB Quantitative Biology Lab.
Weekly session provide hands-on work to reinforce and further develop computational concepts and problems students learn didactically in the BCMB core courses during the same period. Experimental design, and concepts of rigor and reproducibility will also be emphasized.

ME.800.806. BCMB Computational Biology Bootcamp.
This intensive one week course is meant to immerse student in computation, and to provide them with the foundational tools to be able to apply modern computational techniques and appropriate statistics to their data.
AS.361 (PROGRAM IN LATIN AMERICAN STUDIES)

AS.361.130. Introduction to Latin American Studies. 3 Credits.
The goal of this course is to provide an overview of Latin America, analyzing political and cultural aspects, chronologically organized. We will begin studying the origins of the multi-ethnic societies, starting with the ancient civilizations and their transformation under colonization. It is important to understand the survival of cultural traits among indigenous peasants today in the countries that were the cradle of ancient civilizations: Mexico, Guatemala, and the Andean countries. In the republican era the course will focus on the classical Caribbean dictators in the first half of the 20th century and their reflection in the literature, comparing the historical reality with the magic representation in the work of García Márquez. The course will scrutinize the most important revolutions in the continent: the Mexican, Cuban and Bolivian revolutions and the geopolitics of USA in the Americas. Weekly lectures related to the assigned reading will focus on specific periods, topics and regions. After each lecture, we will review the material, connecting specific details from the readings with the more theoretical aspects provided in my lecture. The course has a website where the PowerPoint presentations will be posted. Students are encouraged to post their questions, comments and suggestions on the web after their readings. Students will be given a study guide for each lecture, which will be the basis for the exams. Our perspective on Latin America will be enhanced by a selection of few films related to the topics.
Area: Humanities, Social and Behavioral Sciences

AS.361.170. NI DE AQUI NI DE ALLA: Introduction to Latino Studies. 3 Credits.
Through readings and discussion of texts, viewing of films and performance art, this course studies varied histories of Mexican, Puerto Rican, Cuban and other Latin American peoples in the U.S. Students will develop a general understanding of major issues facing Latinos/as in the 21st century as well as gain an understanding of the impact Latino culture has on US society and politics.
Area: Humanities, Social and Behavioral Sciences

AS.361.207. Afro-Latin American Biography. 3 Credits.
In this course, we will examine biographical accounts of men and women of African descent in Latin America and in the broader Black Atlantic. These individuals include conquistadors and slaves, saints and sinners, revolutionaries, and ordinary people. In their life stories, we will not only examine questions of race, gender, and religiosity that were central to the construction of identity in the early modern Atlantic world, but also the nature of the sources that allow us to tell their stories.
Area: Humanities, Social and Behavioral Sciences

AS.361.331. Drug wars, violence and illicit lifeworlds in Latin America. 3 Credits.
Drawing on ethnographic and historical sources, this course will introduce anthropology as an invitation for students to re-conceptualize and deepen their understanding of the so-called “War on Drugs” as a cultural, social and political formation in Latin America.
Area: Humanities, Social and Behavioral Sciences

AS.361.335. Colombia at War. 3 Credits.
The history of Colombia comes down to a tale of armed conflicts, protracted and renewed civil wars, coups, ethnic cleansing, riots, narco wars, besides the struggles for independence from Spanish colonial rule and extractive capitalist exploitation. We will study the literary, journalistic, and historical record about warring and uncivil Colombia from narration from Gabriel García Márquez (The General in his Labyrinth and News of a Kidnapping), Fernando Vallejo (The Virgin of the Assassins), and Juan Gabriel Vázquez (The Sound of Things Falling and The Secret History of Costaguana). We will also delve into the current peace process and disarming of the FARCS and the perils and promises that the absorption of the former combatants and recalitrant holdovers pose to the skeptical and hopeful citizens and various political factions.
Area: Humanities

AS.361.336. Hugo Chávez, Fidel Castro, and Bolivar's Venezuela. 3 Credits.
Are the current extreme hard times in Venezuela’s Bolivarian Republic irreversible? Is there a ballpark somewhere for Thomas Jefferson and Simón Bolívar to hold a debate match about democracy, achieved emancipations, republican values and the lure of dictatorship? The course welcomes serious and sharply political dialogue about ideals of democratic republicanism in clash from the rise and apparent fall of Fidelismo and Chavismo in the Caribbean region to the agitations and alliances dictated by Trump’s seizure of American politics.
Area: Humanities, Social and Behavioral Sciences

AS.361.380. Brazil: Cinema, Popular Music, Counterculture and Politics from 1960-1990. 3 Credits.
We believe that understanding the second half of the 20th century is crucial to understand the challenges that Brazil faces in the 21st Century. This course investigates the cultural, intellectual, social and political history of Brazil from mid-1950s to the 1990s. We begin with an overview of the legacy of Getúlio Vargas (1930-45) and the construction of Brasília (1961), examining the formation of ideas about Brazilian identity, development and modernization of the country. We then examine the dictatorship (1964-1985), its economic and social project, the place of human rights and its impact on Brazilian society, paying attention to how the people responded to an authoritarian regime through a counter revolutionary movement and through culture (Cinema Novo, MPB/ Brazilian popular music, Tropicália) in a fight for democracy. And, finally, we discuss the current issues that the country has dealt with such as democracy development, corruption, social mobility, and sporting mega events, for example. The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. The sections will be taught simultaneously. Section 01: 3 credits Section 02: 4 credits (instructor’s permission required)
Area: Humanities, Social and Behavioral Sciences

AS.361.501. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.361.502. Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
AS.361.510. Senior Thesis I. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service:
Registration &gt; Online Forms.
AS.362 (CENTER FOR AFRICANA STUDIES)

AS.362.109. Introduction to African American Literature- Part II. 3 Credits.
This course will offer students an introduction to the central novels, plays, short stories, essays and poetry that have constituted African American Literature from 1930-1980. By focusing on representative works that span each of the major periods from the Harlem Renaissance to the Black Arts Movement, we will continue to consider the question of race and representation. How does one represent the race? And, for whom should black authors write – a white audience in order to change their minds about black people, or to black people for their pleasure and edification? Over the course of the semester, we will trace the various ways early- to late-20th century black writers sometimes borrowed from earlier literary traditions and, at other times, developed new ones. In addition, we will hone in on the major debates and central texts that have come to define African American Literature and explore how it has long served as a creative, political, and intellectual enterprise.
Area: Humanities, Social and Behavioral Sciences

AS.362.110. Colonial Encounters: Artistic Responses. 3 Credits.
This course disrupts conventional ways of seeing, reading, and examining artistic texts. When we read a novel or study a work of art, especially that produced by white people, we tend to treat it as representative of the nation, talk about its aesthetic genius, or discuss it as reflecting its social/historical moment. Black artistic production, on the other hand, is most often treated as “protest,” as that which simply responds to a national narrative. But what would happen if we treated the experience of black people and other people of color as universal? What would happen if we treated colonialism as the dominant social and intellectual problem of our age?
Area: Humanities, Social and Behavioral Sciences

AS.362.111. Introduction to African American Studies. 3 Credits.
This course introduces students to the interdisciplinary field of African American Studies, with attention to the literature, film, culture, history, and politics of black life in the United States. Our reading list will likely include texts by David Walker, Frederick Douglass, Frances E.W. Harper, W.E.B. Du Bois, James Baldwin, Amiri Baraka, Toni Morrison, and others.
Area: Humanities, Social and Behavioral Sciences

AS.362.112. Introduction to Africana Studies. 3 Credits.
This course introduces students to the field of Africana Studies. It focuses on the historical experience, intellectual ideas, theories, and cultural production of African-descended people. We will consider how people of the black diaspora remember and encounter Africa. We will explore, too, how such people have lived, spoken, written, and produced art about colonialism and enslavement, gender and mobility, violence and pleasure. This course will be thematically organized and invite you to center your own stories about black people within your understanding of the modern world and its making.
Area: Humanities, Social and Behavioral Sciences

AS.362.115. Introduction to Police and Prisons. 3 Credits.
This introductory course will examine policing and prisons in the United States and beyond, with a focus on racial inequality. It will consist of three parts. First, we will define key concepts in police and prison studies. Then, we will explore the contemporary state of prisons and policing in the United States and look at debates around the rise of “mass incarceration” and aggressive forms of policing in the final third of the 20th century. Third, we will explore policing and prison in other parts of the globe in the contemporary moment, highlighting similarities and differences from the U.S. case. What can studying the instruments of social control in other societies reveal about our own? Students will develop an understanding of major trends, keywords, and debates in the literature on policing and prisons, with particular reference to race and racism.
Area: Humanities

AS.362.123. Introduction to African American Literature (Part 1). 3 Credits.
This course will survey African American Literature from the 19th century to the late 20th century. We will turn to prose, poetry, and drama to explore the various ways black writers have engaged U.S. culture, history, and politics.
Area: Humanities, Social and Behavioral Sciences

AS.362.160. Land, Labour and Environmental Rights and Struggles in Contemporary Africa. 3 Credits.
‘Africa rising’ has become an influential, albeit contested, narrative used by institutions like the International Monetary Fund and World Economic Forum to describe the rapid economic growth in 21st century Africa. This rapid ‘economic growth has been accompanied by another type of ‘Africa Rising’ – a mushrooming of social protest and popular uprisings across the continent. The course will introduce important theoretical perspectives, debates, and examples to equip students to critically examine contemporary social dynamics through the interconnected themes of land, labor and environmental rights and struggles that have gripped the African continent. What has given rise to these awakenings? Who are the actors involved in these actions? What are their demands and strategies? What lessons does it hold for social movement theory and development more broadly? The first section focuses on land reclamation movements, the new wave of ‘land grabs’ and responses from below. The second section presents the role of labour movements and its intersection with popular uprisings. The third section considers responses from communities and movements to the ecological destruction and climate change.
Area: Humanities

AS.362.200. Race and Power in American Cinema. 3 Credits.
This course will examine changing norms of racial representation in American cinema and consider those images in relation to the operations of the film industry and to specific moments in U.S. history that informed cinematic representations of race. In particular, we will be analyzing film as a social practice that creates meanings that inform both everyday practices and deliberations over many of the most important issues and debates in American society. Ultimately, the goal is to gain a better appreciation for how the stories films tell us shape our personal and collective identities and inform our understanding of political life.
Area: Humanities, Social and Behavioral Sciences
AS.362.201. African American Poetry and Poetics. 3 Credits.
In this course, we will follow the development of black poetry primarily as it has evolved in the United States. Beginning with the first published African American writers of the eighteen century and ending with several important poets writing and performing today, we will consider the shape of the African American poetic tradition as commonly anthologized and as defined by our own theoretically-informed readings of the assigned literature. Attention will be given to both canonical and neglected literary movements and groups. Readings will include poetry and essays by Frances E.W. Harper, James Weldon Johnson, Langston Hughes, Gwendolyn Brooks, Amiri Baraka, Harryette Mullen, Tracie Morris, and others.

AS.362.202. Colonial Encounters and Literary Responses. 3 Credits.
This course considers how black writers of the diaspora engaged the history and realities of colonialism and imperialism. While some novelists wrote specifically about the colonial encounter and its consequences, others chose to critique the enterprise by rewriting — from the perspective of the colonized — the literary tradition of the colonizing nation. Focusing on works by African, Caribbean, and American writers alongside the British tradition to which they respond, we will look at how diasporic writers thought about and constructed ideas about the world, the self, and the racial Other.

Area: Humanities, Social and Behavioral Sciences

AS.362.203. Passing in American Culture. 3 Credits.
This course will examine film and literary narratives of “passing” in 20th century America. We will study texts that feature people who cross social boundaries of race, class, sexuality, and gender, and consider what “passing” reveals about American social mobility.

Area: Humanities
Writing Intensive

AS.362.207. Race and public policy in comparative perspective. 3 Credits.
This course will explore the relationship between racial inequality, racial politics, and policy-making in the western world, particularly as it concerns the fight for equality by people of African descent in the US, Canada, Britain, and France. It will cover historical and contemporary struggles over policy, beginning with the African-American civil rights movement, the ensuing War on Poverty and War on Drugs, and followed by contemporary debates over immigration, racial segregation, poverty and racial economic inequality across the four countries. We will take insights from theory and empirical research to study the role that racial constructs and politics play in policy designs, contests over power and resources, electoral representation, public opinion, social movements, and political change. Through case studies of policies aimed at racial inequality (e.g., affirmative action, police reform, urban revitalization), we will examine why and under what circumstances they arise, what form they take, and in what ways they alleviate or reproduce racial inequality. These questions will be considered in light of the broader impact of neoliberalism on normative ideas about policy, race, and inequality.

Area: Humanities

AS.362.216. The politics of contemporary black film. 3 Credits.
Over the past few years films such as Black Panther, Get Out, and Black KKKlansman have been both critical and economic successes, significantly changing how we think of “black films” as a genre. What do these films tell us about what it means to be black at this specific moment in time? How is what these films tell us shaped by how they are produced? How do the circulation of concepts like “Wakanda Forever!” shape political imaginations? When we watch these films how are our own ideas change? As a particularly powerful form of popular culture, film not only entertains, but it educates, and in some instances propagandizes. This is no less true of black films than it is of non-black ones. In this class we will examine a range of recent popular black films with an eye to examining the politics of their production, circulation, and consumption.

Area: Humanities, Social and Behavioral Sciences

AS.362.219. Freshman Seminar: Black Narratives and the Archive. 3 Credits.
This course will explore the various ways black people have narrated stories. From the slave narrative to fiction, biography to oral history, we will consider the relationship between historical events and the stories that people tell about those events. Where does history and imagination meet in the telling? How does one weave together story material to give it shape? While we will spend the first half of the semester engaging published and more popular narratives about black life, the second half of the course will focus on interviewing and archiving the stories of black workers and staff at JHU. What kinds of stories do they tell? How do they tell them? What do their stories help us understand about the past? Ultimately, this course will concern itself with what it means to be black and the various ways everyday people and artists alike have attempted to narrate their experiences in both writing and oral forms.

Area: Humanities

AS.362.219. Seeing the Unspeakable: Baltimore, #BLM, and Kara Walker. 3 Credits.
The advents of smartphone technology, social media platforms, and the 24-hour cable news cycle have made violent images of Black death and dying ubiquitous. The public consumes these images unremittingly and social movements have used these images to highlight the vulnerable character of Black life globally. However, questions remain as to whether these images work as tools of populist politicization or as sources of entertainment for viewers unsympathetic to the various politics expressed by the Black Lives Matter movement. This course seeks to explore this uncomfortable reality through the artistic renderings of Kara Walker, an acclaimed mixed media artist whose provocative explorations of race, sexuality, and violence offer one lens by which explore this political phenomenon. Additionally, students will spend the semester creating multimedia archival projects that explore these images and their political impact on Baltimore. In doing so, students will explore the politics bound within, pressed upon, and interpreted from the Black body.

Area: Humanities, Social and Behavioral Sciences
AS.362.271. Hip Hop Culture: From the Boogie Down to Black Lives Matter. 3 Credits.
Hip hop has become one of the most influential youth cultural movements of the past 40 years. It has moved from being a geographically-isolated African American and Puerto Rican musical scene to influencing every aspect of American and international youth culture, including music, visual culture, language, and politics. How did hip hop develop? Where did it come from, who made it, and why? What do the images and messages of hip hop culture mean, how has it changed our world, and who cares? We will approach these questions by delving into the historical, aesthetic, socioeconomic, and political dimensions of hip hop culture. Classes will historically explore specific themes, either examining issues that hip hop has dealt with (e.g., police brutality) or employing theoretical frameworks that we can use to help us think more critically about hip hop (e.g., subcultural theory).
Area: Humanities, Social and Behavioral Sciences

AS.362.301. Black Women Writers. 3 Credits.
This course will introduce students to a variety of works written by black women of the Diaspora with a focus on the U.S. We will consider how women have theorized power, engaged history, and creatively imagined both the past and the present.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.362.305. Black Periodical Studies. 3 Credits.
This course explores the ways in which nineteenth- and twentieth-century black periodical culture fostered (and, at times, hampered) the literary and cultural production of the African diaspora. Authors will likely include Frederick Douglass, "Ethiop (William J. Wilson)," Frances E.W. Harper, Pauline Hopkins, W.E.B. Du Bois, Marcus Garvey, Jean Toomer, Langston Hughes, Richard Bruce Nugent, and others.
Area: Humanities Writing Intensive

AS.362.311. Black Utopias. 3 Credits.
In this course, we will read literary and historical texts that present visions of black utopia. Authors include “Ethiop” (William J. Wilson), Marcus Garvey, Octavia Butler, Toni Morrison, and others.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.362.315. Black Against Empire. 3 Credits.
This course will examine the confrontation of Black social movements with imperialism in the twentieth century. How, we will ask, have key Black internationalist thinkers conceptualized and defined diaspora, capitalism, imperialism, war, and the global? What have been the effects of war and repression, as well as economic growth and globalization, on Black internationalism? Readings may include texts by W.E.B. Du Bois, Angela Y. Davis, Frantz Fanon, Ashley Farmer, Claudia Jones, Robin D.G. Kelley, Claude McKay, Huey P. Newton, Walter Rodney, Malcolm X, etc.
Students will complete a research paper on a topic of their own choosing related to Black internationalism in the twentieth century.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.362.371. Public Health Crisis in Africa. 3 Credits.
This course examines the historical and current public heath crises in Africa. Topics covered include infectious diseases and viral outbreaks, water and food access, sanitation, education, behavioral health, gender equality, health care and health care access, as well as the link between culture, economics and health. Introduction to Epidemiology is recommended but not required.
Area: Humanities, Social and Behavioral Sciences

AS.362.413. African American Representations in the Western. 3 Credits.
This course examines how modern black political thought emerged through a series of critical engagements with Enlightenment ideas about universalism, progress, the authority of reason, and the foundations of citizenship. Course readings include texts by W. E. B. Du Bois, Angela Davis, James Boggs, Frantz Fanon, bell hooks, and others.
Writing Intensive

AS.362.510. Senior Honors in Africana Studies I. 3 Credits.
The first semester of Senior Honors in Africana Studies, conducted as an Independent Study. Interested students should submit an application to the CAS Director of Undergraduate Studies.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Writing Intensive

AS.362.590. Independent Study for Africana Studies. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Writing Intensive

AS.362.595. Summer Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.363.201. Introduction to the Study of Women, Gender, and Sexuality. 3 Credits.
This course offers an introduction into the fields of Women's Studies, Gender Studies, and Sexuality Studies. It explores why we need these fields of inquiry, how they have emerged historically, what some of the major and most interesting contributions are and where we might go from here. The course is meant as a preparation for the other WGS core courses.
Area: Humanities, Social and Behavioral Sciences

AS.363.303. Feminism and Queer Theory: 'The Master's Tools Will Never Dismantle the Master's House'. 3 Credits.
As a Black lesbian woman, Lorde denounced white feminism for being complicit with patriarchy by not acknowledging marginal women's experiences as a source of strength and creativity. Inspired by the title and impetus of Lorde's essay, this course seeks to ask what happens when we start seeing the world through unfamiliar, alternative, tools or sensibilities? What different pictures of critique—ones that don't merely focus on replacing the master's house with other strong edifices—are allowed to emerge? With these questions in mind, the main objective of this course is to expose us to alternative sensibilities and ways of thinking offered by voices that experience gender and sexuality beyond conventional Western norms and counter-norms.
Area: Humanities
Writing Intensive

AS.363.305. Feminist & Queer Theory: Feminist Queer Theories: Past & Present. 3 Credits.
This course offers a range of transnational and US feminist and queer theories, starting from the present with which we are familiar and moving backwards into history. It is designed to facilitate deep engagement with feminist and queer theoretical language/s and concepts, as well as critical approaches applicable to further discourses beyond the class in other disciplines and outside them. The course is divided into 5 units, which roughly organize the reading thematically around the topics of: 1. language and cultural translation, 2. feminist critique, and thinking through the lenses of 3. queerness, 4. race and 5. class. The organization reflects the focus of each unit, yet the topics are intertwined. Students are encouraged to be patient with themselves and the readings and, especially if encountering theoretical discourses for the first time, not to expect to understand everything immediately but rather to acclimate to the radically different thinking of others throughout the course of the semester.
Area: Humanities
Writing Intensive

AS.363.306. Feminist and Queer Theory: Race, Class, Gender, Sexuality-Intersectional Feminist Theory. 3 Credits.
In this course, we will get to know intersectional feminist philosophy through the lens of a Black feminist epistemology. What does this mean? That means that we will focus on how the contributions of Black feminist authors can bring out the specific political and philosophical nature of an intersectional theoretical framework.
Area: Humanities

AS.363.307. Feminist and Queer Theory: Family Matters: Queer and Feminist Responses to Family Life. 3 Credits.
This course examines the historical development of feminist and queer critique, focusing on how the concept of family life has been understood by generations of writers, activists, and theorists. We will read important early works on western forms of kinship and family structure, and investigate how contemporary developments in reproductive technology, queer marriage, and workplace integration have produced new imaginations of familial belonging and its alternatives.
Area: Humanities

AS.363.316. Health, Medicine, Gender, and Sexuality: Gender, Sexuality, and AIDS in Africa. 3 Credits.
This course uses historical sources to connect constructions of gender and sexuality in Africa from the pre-colonial, colonial, and post-colonial periods to the epidemiology, politics, and culture of the AIDS epidemic.
Area: Humanities, Natural Sciences
Writing Intensive

AS.363.327. Gender and Sexuality beyond the Global West: Feminism and Homosexuality in the Islamic World. 3 Credits.
This course explores the emerging discourses on gender and sexuality in Islam. As minorities, women and homosexuals developed a shared interest in exegetic tools challenging the dominant narratives that shaped a so-called Muslim tradition. We will investigate disruptive narratives that take place within theological debates but we will also grapple with discourses that have been produced on women and homosexuals in the Islamic world. We will deal with the question of imposing on Muslims a specific conception - that a good amount of scholars have identified as being Western - of homosexuality and feminism. A set of questions will guide us through our readings: does sexuality constitute an identity or refer to a practice? Should equality be reduced to identity or can it be understood differently? Are agency and freedom best manifested through subversion and opposition?
Area: Humanities

AS.363.328. Beyond the Global West: Gender/Sexuality, Post-colonialism & Global Capitalism: Feminist Inquiries from Asian Perspectives. 3 Credits.
This course examines gender and sexuality issues in both East and South Asian Societies and situates subject matters in the broader contexts of post-colonialism, state formation, revolution and global capitalism.
Area: Humanities
Writing Intensive

AS.363.329. Gender and Sexuality Beyond the Global West: Gender and Sexuality in Contemporary Art in North Africa and the Middle East. 3 Credits.
This course aims to explore how gender and sexuality is situated in contemporary artistic practices in the geographical Middle East, through concepts of religion, war, revolution, resistance, nation-state, post-colonialism, and neoliberalism, especially as written and observed first-hand by artists, curators and scholars from the Middle East and North Africa region and their diasporas. Every week, under an overarching topic, notions of gender and sexuality will be questioned through works of selected artists across the region, as well as texts that provide the historical, theoretical, sociological and political background.
Area: Humanities
Writing Intensive

AS.363.330. Gender and Sexuality Beyond the Global West. 3 Credits.
The course is an exploration of issues of gender and sexuality beyond the Global West.
Area: Humanities
AS.363.331. Gender and Sexuality beyond the Global West: Stitching Women—Sewing and Gender, Labor, and Art. 3 Credits.
What's radical about stitching? And how did sewing coming to be viewed—across centuries, cultures, regions, and political epochs—as (in embroidery artist Hannah Hill's words) "women's work"? This course will analyze and discuss how work with needle and thread has been associated with women, their bodies, and the domestic space where the repetitive labor of mending, the mixed opportunity for making, and the devalued practice of the "applied arts" took place. Looking at histories of work, fictions, and visual objects, we will explore stitching's gendered past and its potential for oppressive normativity and radical, creative expression alike. Over the semester, our course follows the "red thread" of stitching via four short response papers (or one Unessay), one in-class presentation, and one final oral history/research project on an interdisciplinary discussion related to the (often radical) politics and poetics of women's lives and works. Authors and artists may include Elizabeth Barrett Browning, Emily Dickinson, Elizabeth Gaskell, Virginia Woolf, Alice Walker, Carol Ann Duffy, Alice Dunbar-Nelson, Tracey Emin, Louise Bourgeois, Elaine Reichek, Silvia Federici, Mariarosa della Costa, Kyung-Ah Ham, and Project Runway.
Area: Humanities

AS.363.333. Poetics and Politics: Eros & Literature. 3 Credits.
What does it mean to love? From Antiquity to now, from Plato to Jeanette Winterson, writers have staged conversations on love and sex. In this way, they provide us with a "science of sex" (to use Foucault's notion) that, though fully attuned to the power differentials that inhabit our most intimate physical experiences, gives free range to the imagination of desires. With Plato, the legend of Tristan and Isolde, and the study a few Renaissance love lyrics as a backdrop, we will delve into stories of desire that chart new configurations and break away from "normative heterosexuality." Readings involve novellas by Balzac, George Sand, Colette; stories by Woolf, by Proust, and selected from Gender Outlaws as well as two films M. Butterfly and Call Me by Your Name. Meshing such stories with fundamental concepts in gender theory will enable us to chart ever changing configurations of desire from the double perspective of queerness and of sexual politics.
Area: Humanities
Writing Intensive

AS.363.340. The Poetics and Politics of Sex: Gender and Sexuality in Twentieth Century European Empires. 3 Credits.
This course explores themes around sexuality and empire in nineteenth and twentieth century European empires, including (but not limited to) the gendered policies of colonial regimes, how colonialism encouraged ideal forms of femininity and masculinity, and nationalist feminisms in the era of independence.
Area: Humanities
Writing Intensive

AS.363.336. The Poetics & Politics of Sex: Feminist Separatism & Its Afterlives. 3 Credits.
In 1977, feminist theorist Marilyn Frye asked, "What is it about separation, in any or all of its many forms and degrees, that makes it so basic and so sinister, so exciting and so repellent?" Her essay, "Some Reflections on Separatism and Power" was a response to the emergence and persistence in the 1960s of a feminist separatist politics, as well as its many detractors, both from outside the feminist movement and within (many black feminists, for example, critiqued the movement's essentialism and its positioning of gender and sexuality above considerations of race). Today, Frye's question still remains a live one; think, for example, of the now commonplace exclamation that one will "move to Canada" (or "leave Earth" as Tina Fey has it) in the face of an ominous political possibility. In a less facetious form, one might consider the separatism latent in the emergence of queer futurity politics, safe space discourse, and a more general pessimism about reform and assimilation as satisfying answers to a continually oppressive status quo. In this course, we will consider the ongoing salience of the idea of separatism, particularly as it is engaged within politics of gender and sexuality.
Area: Humanities

AS.363.337. The Poetics & Politics of Sex: Struck From the Record: Reclaiming Women's Contribution to the Global March Towards Modernity. 3 Credits.
The course examines claims that present women's historic role as limited to confinement in the home, and bearing children. Students will gain an understanding of the complexity the world's path to modernity and the important, and until recently, silent roles that women have played.
Area: Humanities
Writing Intensive

AS.363.338. The Poetics and Politics of Sex: Feminist Utopia in Theory and Fiction. 3 Credits.
This course examines the historical development of feminist utopia in theory and fiction. Readings will center Indigenous, Black, postcolonial, diasporic, and transnational perspectives that engage the topic of feminist utopia.
Area: Humanities
Writing Intensive

AS.363.340. Costumes and Masquerades of the Self. 3 Credits.
Area: Humanities
AS.363.341. **The Making of Modern Gender. 3 Credits.**

Gender as we know it is not timeless. Today, gender roles and the assumption that there are only two genders are contested and debated. With the binary gender system thus perhaps nearing its end, we might wonder if it had a beginning. In fact, the idea that there are two sexes and that they not only assume different roles in society but also exhibit different character traits, has emerged historically around 1800. Early German Romanticism played a seminal role in the making of modern gender and sexuality. For the first time, woman was considered not a lesser version of man, but a different being with a value of her own. The idea of gender complementation emerged, and this idea, in turn, put more pressure than ever on heterosexuality. In this course, we will trace the history of anatomy and explore the role of literature and the other arts in the making and unmaking of gender.

Area: Humanities

AS.363.400. **Feminist Modernisms. 3 Credits.**

Prize Teaching Fellowship seminar. Triangulating feminist psychoanalysis and theories of embodiment and subjectivity with art criticism and case studies of artistic practice (primarily painting), this course comparatively investigates the routes modernism takes after the Second World War and decolonization (1945/1947). We will be interested in specific postcolonial and postwar contexts where modernism in the domain of the visual arts was mounted as a feminist project. Each week will pair readings that establish conceptual frameworks with close analyses of works by specific artists, including those represented by the Library’s Special Collections and the Baltimore Museum of Art. Texts include Freud, Spivak, Butler, Irigaray, Kristeva, and Mahmood.

Area: Humanities

Writing Intensive

AS.363.415. **WGS Internship Practicum: The Carceral State, Gender, and the Family. 3 Credits.**

This class will examine the U.S. government’s use of incarceration, parole, and house-arrest as default forms of social management, in lieu of social welfare policy. We will explore the origins of the “carceral state” and its impact on targeted communities. The class will focus on often neglected aspects of the ongoing crisis of mass-incarceration in the U.S., in particular its debilitating effects on single-mother households, children who grow up with incarcerated family members, and the extreme violence and deprivation of basic medical needs faced by incarcerated women and LGBTQI individuals. Topics will include black-feminism and “black matriarchy,” the relationship between domestic violence and mass-incarceration in communities of color, women and non-gender conforming prisoners, the “school-to-prison pipeline,” the psychological effects of policing on targeted communities, and the fiscal interests served by mass-incarceration. We will engage sociological, historical, and philosophical materials, as well as literature, film, and past and present social movements.

Area: Humanities

Writing Intensive

AS.363.416. **WGS Internship/Practicum: Feminist Animals: Sex, Nature, and Nonhumans. 3 Credits.**

Introducing feminist approaches to ecology and nonhumans, this course considers the interconnections between heteropatriarchal domination and the domination of nonhuman animals and ecologies. What different sensibilities and ways of seeing sex and gender open up when attention shifts to nonhumans? What tensions within and between feminism, animal liberation, and ecological concern come to the fore when each approach is alongside the others? How does the study of nonhumans extend the promise of feminism, and vice versa? In responding to these questions, we will see the real breadth of issues that the theory and practice of feminism can address.

Area: Humanities

Writing Intensive

AS.363.418. **Internship Practicum: Feminist Ethnographic Methods and Social Justice Organizations. 3 Credits.**

This course is for students who are working with social justice organizations. It will introduce students to ethnographic research that is informed by feminist methodologies of listening, care, ethics, and structural analysis. Methods will be oriented to the “inside” and “outside” of organizations.”Inside” the organization might refer to listening to marginalized voices, examining the place of bureaucracy and paperwork, and engaging with activist research and records. Reaching beyond the organization proper, we will learn to analyze localities, and less tangible zones such as social media, political networks, and the state.

Area: Humanities

Writing Intensive

AS.363.419. **Internship/Practicum: Dividing the Divisions. 3 Credits.**

This course examines the essentially political ways in which class, race, and gender relate to one another in the context of social division of labor, resources, and representation. It intends to show how reflection and transformative practice can best change the instances of social injustice through introducing new divisions within the existing imposed divisions in a manner that will make ineffective and inoperative the latter. With the help of the analytic of the central modern notion of class and class relations, we will revisit the relations of gender and race in concrete situations. The course is twofold, practical and theoretical within the framework of Women, Gender, and Sexuality. In one fold, students will have the chance to engage in some kind of practical-social activity out in an actual community with people who are committed to all sorts of social work. This can span from LGBTQ or immigrant workers to addiction among women. In the other fold, we will undertake theoretical reflections on various aspects of these activities. We will read texts mainly in feminist and Marxist traditions. How these two folds relate to one another will be one key question of the whole course.

Area: Humanities

AS.363.445. **Reading Judith Shakespeare: Women and Gender in Elizabethan England. 3 Credits.**

If Shakespeare had a sister who went to London to be a writer, what would she write? Virginia Woolf's account of the thwarted career of Shakespeare’s hypothetical sister, Judith, in A Room of One’s Own frames our reading of plays and poetry by Shakespeare and contemporary women writers, including Isabella Whitney, Elizabeth Cary, Mary Sidney, Aemelia Lanyer, and Mary Wroth. Working within a selected historical context, students will create fictional biographies of “Judith Shakespeare,” including her perspective on our identified authors and a sample or description of Judith's own literary accomplishments.

Secondary course readings will reflect contemporary economic, political, and religious contexts.

Area: Humanities

Writing Intensive
AS.363.502. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.363.601. WGS Graduate Colloquium.
Presenting new scholarship and art, the WGS Graduate Colloquium will catalyze intellectual discussions in which gender and sexuality concerns play important roles. The seminar includes lectures by invited speakers and a film series. Graduate students are encouraged to develop critical and comparative approaches to the study of gender and sexuality—often in interaction with related issues such as race, class, violence, law, medicine, art, and emotionality. This seminar can be taken for credit or audit.

AS.370.091. Advanced Pronunciation and Intonation.
This course is designed to help non-native American English speakers tackle American English language skills and improve their pronunciation and manner of speaking dramatically. The course incorporates the learning of language skills such as the sounds, stress patterns, rhythm, and intonation patterns of American English. This is a separate process from learning the grammar and vocabulary of American English. The goal of this course upon completion is to successfully attain accent modification, accent improvement and easily understandable conversational speech and will help the learner to function more effectively at work and outside of work.

In this course students at the high advanced level perfect their language skills to lead and manage discussions, argue effectively, and make formal presentations in demanding professional and university environments. Students practice leading discussions, answering questions, making formal and informal presentations on a variety of topics within and outside their professions, as well as interpersonal and intercultural communication.

AS.370.093. Advanced Writing in Sciences and Humanities.
Students learn to write more effectively and persuasively by practicing the elements of good writing mechanics in a variety of assignments that include formulating and supporting a thesis and expressing and defending an opinion. Students strengthen their reading and writing skills through a variety of adapted and authentic texts. Academic writing tasks, including research papers, are featured, with special attention given to each student’s specific areas of need as they relate to structure, vocabulary, and language usage.

AS.370.602. Pronunciation and Discourse.
This course focuses on improving students’ perception and pronunciation of American English through learning articulation, phonetics, and phonology. Students learn the basics of anatomy of speech production in order to understand how difficult sounds and sound contrasts are made. Students also learn the International Phonetic Alphabet (IPA) to help them distinguish sound contrasts that are difficult depending on the individual students’ native languages. Moving beyond individual sounds, students learn how sounds change depending on what word or phrase they appear in and when they appear in fast or colloquial speech. Finally, students learn and practice intonation appropriate for various types of statements and questions.

AS.370.603. Public Speaking in Academia.
This course is intended for international students with advanced English skills and satisfactory pronunciation who wish to further improve their communication and public speaking skills, as well as better understand the cultural norms of American academia. Students will refine their speaking skills, practice designing and giving presentations, and learn the basics of speaking publicly in American Academia, at conferences, and inside the classroom. This course is appropriate as a follow-up to Pronunciation and Discourse (AS 370.602) or as a stand-alone course for students with satisfactory pronunciation. This course can also be repeated for additional practice or taken concurrently with Pronunciation and Discourse

AS.370.604. Advanced Grammar and Academic Writing.
In this course, students will read and analyze the content, structure, and style of a wide range of academic and professional writing in order to improve their own essays, articles, reports, theses, critiques, and proposals using those features. They will learn to explain, support, compare and argue their ideas effectively through attention to organization, vocabulary, and style. Grammar will be infused into the course as it applies to revision and editing of written work and consistency within various types of writing. Students will use a variety of strategies to improve skills in idea development, organization, word choice, sentence fluency, voice, grammar and mechanics. Writing tasks will be integrated with content, vocabulary, and grammar from various texts.

AS.373.111. First Year Heritage Chinese. 3.5 Credits.
This course is designed for students who were raised in an environment in which Chinese is spoken by parents or guardians at home and for those who are familiar with the language and possess native-like abilities in comprehension and speaking. The course therefore focuses on reading and writing (including the correct use of grammar). Cross-listed with East Asian Studies

AS.373.112. First Year Heritage Chinese II. 3 Credits.
For students who have significant previously-acquired ability to understand and speak Modern Standard Chinese. Course focuses on reading and writing. Teaching materials are the same as used in AS.373.115-116; however, both traditional and simplified versions of written Chinese characters are used. Lab required. Continuation of AS.373.111. Recommended Course Background: AS.373.111 or permission required.

Prerequisite(s): AS.373.111 or instructor permission
AS.373.115. First Year Chinese. 5 Credits.
This course is designed primarily for students who have no prior exposure to Chinese. The objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. Note: Students with existing demonstrable skills in spoken Chinese should take AS.373.111-112. No Satisfactory/Unsatisfactory. Students may choose to attend either lecture at 12pm or 3pm on TTh. Cross-listed with East Asian Studies

AS.373.116. First Year Chinese II. 5 Credits.
Introductory course in Modern Standard Chinese. Goals: mastery of elements of pronunciation and control of basic vocabulary of 800-900 words and most basic grammatical patterns. Students work first with Pin-Yin system, then with simplified version of written Chinese characters. Continuation of AS.373.115. Note: Student with existing demonstrable skills in spoken Chinese should take AS.373.111-112. Recommended Course Background: AS.373.115 or permission required. 
Prerequisite(s): AS.373.115 or instructor permission

AS.373.211. Second Year Heritage Chinese. 3.5 Credits.
This course is designed for students who finished AS.373.112 with C+ and above (or equivalent). Students in this course possess native-like abilities in comprehension and speaking. The course focuses on reading and writing. Cross-listed with East Asian Studies
Prerequisite(s): AS.373.112 or equivalent.
Area: Humanities

AS.373.212. Second Year Heritage Chinese II. 3 Credits.
For students who have significant previously-acquired ability to understand and speak Modern Standard Chinese. Course focuses on reading and writing. Teaching materials are the same as used in AS.373.115-116; however, both traditional and simplified versions of written Chinese characters are used. Continuation of AS.373.211. Recommended Course Background: AS.373.211 or permission required.
Prerequisite(s): AS.373.211 or instructor permission
Area: Humanities

AS.373.215. Second Year Chinese. 5 Credits.
Consolidation of the foundation that students have laid in their first year of study and continued drill and practice in the spoken language, with continued expansion of reading and writing vocabulary and sentence patterns. Students will work with both simplified and traditional characters. Note: Students who have native-like abilities in comprehension and speaking should take AS.373.211-212. Cross-listed with East Asian Studies
Prerequisite(s): AS.373.116 or equivalent
Area: Humanities

AS.373.216. Second Year Chinese II. 5 Credits.
Consolidation of the foundation that students have laid in their first year of study and continued drill and practice in the spoken language, with continued expansion of reading and writing vocabulary and sentence patterns. Students will work with both simplified and traditional characters. Note: Students who have native-like abilities in comprehension and speaking should take AS.373.211-212. Recommended Course Background: AS.373.215 or Permission Required.Cross-listed with East Asian Studies
Prerequisite(s): AS.373.215 or instructor permission.
Area: Humanities

AS.373.313. Third Year Heritage Chinese. 3 Credits.
This course is designed for those who have already taken AS.373.212 or equivalent. Students need to have native-level fluency in speaking and understanding Chinese. The course focuses on reading and writing. In addition to the textbooks, downloaded articles on current affairs may also be introduced on a regular basis. Cross-listed with East Asian Studies
Prerequisite(s): AS.373.211 AND AS.373.212 or instructor’s permission
Area: Humanities

AS.373.314. Third Year Heritage Chinese II. 3 Credits.
This course is a continuation of AS.373.313. Students need to have native-level fluency in speaking and understanding Chinese. The course focuses on reading and writing. In addition to the textbooks, downloaded articles on current affairs may also be included on a regular basis. Recommended Course Background: AS.373.313 or Permission Required. Lab required.
Prerequisite(s): AS.373.313 or equivalent
Area: Humanities

AS.373.315. Third Year Chinese. 3 Credits.
This two-semester course consolidates and further expands students’ knowledge of grammar and vocabulary and further develops reading ability through work with textbook material and selected modern essays and short stories. Class discussions will be in Chinese insofar as feasible and written assignments will be given. Cross-listed with East Asian Studies
Prerequisite(s): AS.373.216 or instructor permission
Area: Humanities

AS.373.316. Third Year Chinese II. 3 Credits.
This two-semester course consolidates and further expands students’ knowledge of grammar and vocabulary and further develops reading ability through work with textbook material and selected modern essays and short stories. Class discussions will be in Chinese insofar as feasible, and written assignments will be given. Continuation of AS.373.315. Recommended Course Background: AS.373.315 or permission required.
Prerequisite(s): AS.373.315 or instructor permission
Area: Humanities

AS.373.415. Fourth Year Chinese. 3 Credits.
This course is designed for students who finished AS.373.316 with a C+ or above (or equivalent). Readings in modern Chinese prose, including outstanding examples of literature, newspaper articles, etc. Students are supposed to be able to understand most of the readings with the aid of a dictionary, so that class discussion is not focused primarily on detailed explanation of grammar. Discussion, to be conducted in Chinese, will concentrate on the cultural significance of the readings’ content.Cross-listed with East Asian Studies
Prerequisite(s): AS.373.316 or instructor permission
Area: Humanities

AS.373.416. Fourth Year Chinese II. 3 Credits.
Continuation of AS.373.415. Readings in modern Chinese prose, including outstanding examples of literature, newspaper articles, etc. Students should understand most of the readings with the aid of a dictionary, so that class discussion need not focus primarily on detailed explanations of grammar. Discussion, to be conducted in Chinese, will concentrate on the cultural significance of the readings’ content. Recommended Course Background: AS.373.415 or Permission Required. Cross-listed with East Asian Studies
Prerequisite(s): AS.373.415 or instructor permission
Area: Humanities
AS.373.491. Fifth Year Chinese. 3 Credits.
Fifth Year Chinese is designed for students who finished fourth year regular or third year heritage Chinese course at JHU or its equivalent and wish to achieve a higher advanced proficiency level in Chinese. The goal of the course is to help students further develop their listening, speaking, reading and writing skills cohesively and to enhance students' understanding of Chinese culture and society through language learning. 
Prerequisite(s): AS.375.116 OR AS.373.314 or equivalent
Area: Humanities

AS.373.492. Fifth Year Chinese II. 3 Credits.
Fifth Year Chinese is designed for students who finished fourth year regular or third year heritage Chinese course at JHU or its equivalent and wish to achieve a higher advanced proficiency level in Chinese. The goal of the course is to help students further develop their listening, speaking, reading and writing skills cohesively and to enhance students' understanding of Chinese culture and society through language learning. 
Prerequisite(s): AS.373.491 or equivalent
Area: Humanities

AS.373.493. Fundamentals of Chinese Grammar. 2 Credits.
This course is designed for students who have already studied 1st Year Chinese grammar and wish to develop a thorough knowledge of Chinese grammar in order to advance all aspects of language skills to a higher level. It is also appropriate for graduate students who need to be able to read materials written in Chinese. The goal of the course is to provide students with a thorough knowledge of Chinese grammar; therefore, knowledge of vocabulary in depth is not requisite. In addition, since this is not a language course that places equal focus on all four skills (speaking, listening, writing, and reading), there will be no conversation practice – this is a lecture course on grammar. Pass-fail grade option only
Prerequisite(s): AS.373.115

AS.373.501. Independent Study - Chinese. 0 - 4 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.373.502. Independent Study - Chinese. 2 Credits.
Independent Study - Chinese

AS.375.115. First Year Arabic. 5 Credits.
Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study. May not be taken Satisfactory/ Unsatisfactory
Prerequisite(s): AS.375.115 or instructor permission

AS.375.116. First Year Arabic II. 5 Credits.
Continuation of AS.375.115. Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study. May not be taken Satisfactory/ Unsatisfactory
Prerequisite(s): AS.375.115 or instructor permission

AS.375.215. Second Year Arabic. 5 Credits.
Designed to bring students up to competency level required for third/fourth year Arabic. Students will consolidate and expand their mastery of the four basic skills acquired in AS.375.115-116. More authentic material–written, audio, and visual–will be used, and culture will be further expanded on as a fifth skill. Recommended Course Background: AS.375.115-116 or equivalent.
Prerequisite(s): AS.375.116 or equivalent
Area: Humanities

AS.375.216. Second Year Arabic II. 5 Credits.
Continuation of AS.375.215. Designed to bring students up to competency level required for third/fourth year Arabic. Students will consolidate and expand their mastery of the four basic skills acquired in AS.375.115-116. More authentic material–written, audio, and visual–will be used, and culture will be further expanded on as a fifth skill. Accelerated students should register for Section 01.Recommended Course Background: AS.375.215 or permission required.
Prerequisite(s): AS.375.215 or instructor permission

AS.375.301. Third Year Arabic. 3 Credits.
Designed to enhance students' ability to read, discuss, and write about various topics covered in traditional and contemporary Arabic texts. Recommended Course Background: AS.375.216 or equivalent.
Prerequisite(s): AS.375.116 or instructor permission
Area: Humanities

AS.375.302. Third Year Arabic II. 3 Credits.
Designed to enhance students' ability to read, discuss, and write about various topics covered in traditional and contemporary Arabic texts. Continuation of AS.375.301. Recommended Course Background: AS.375.301 or permission required.
Prerequisite(s): AS.375.301 or instructor permission
Area: Humanities

AS.375.401. Fourth Year Arabic. 3 Credits.
This is an introductory course to different periods of the Arabic literature. Selections of famous Arabic poetry and short prose works are the substance of the course.
Prerequisite(s): AS.375.302 or equivalent
Area: Humanities

AS.375.402. Fourth Year Arabic II. 3 Credits.
This is an introductory course to different periods of the Arabic literature. Selections of famous Arabic poetry and short prose works are the substance of the course. Continuation of AS.375.401. Recommended Course Background: AS.375.302 or equivalent.

AS.378.802. Independent Study -- Arabic.
Area: Humanities
AS.377.115. First Year Russian. 5 Credits.
This course is designed for students who have no background in the language and wish to learn the language at an academic level, obtaining knowledge of the linguistic aspects of the language as well as skills needed to communicate in Russian. The goal of the course is the simultaneous progression of four skills (speaking, listening, writing, and reading) as well as familiarity with aspects of Russian linguistics and culture that are necessary for language competency in survival level. It is expected that, by the end of the spring term, students will have basic speaking and listening comprehension skills, a solid grasp of basic grammar, reading and writing skills. No Satisfactory/Unsatisfactory. Prerequisite(s): Students may not have completed AS.377.131 AND AS.377.132 under the previous JHU/Goucher program.

AS.377.116. First Year Russian II. 4 Credits.
A continuation of AS.377.115. This course is designed for students who have no background in the language and wish to learn the language at an academic level, obtaining knowledge of the linguistic aspects of the language as well as skills needed to communicate in Russian. The goal of the course is the simultaneous progression of four skills (speaking, listening, writing, and reading) as well as familiarity with aspects of Russian linguistics and culture that are necessary for language competency in survival level. It is expected that, by the end of the spring term, students will have basic speaking and listening comprehension skills, a solid grasp of basic grammar, reading and writing skills. No Satisfactory/Unsatisfactory. Prerequisite(s): AS.377.115

AS.377.215. Second Year Russian. 5 Credits.
This course is designed for students who have finished AS.377.116 with C+ or above, or by a placement exam. The goal of the course is the simultaneous progression of four skills (speaking, listening, writing, and reading) as well as familiarity with aspects of Russian linguistics and culture that are necessary for language competency higher than that learned in First Year Russian. Area: Humanities

AS.377.216. Second Year Russian II. 3 Credits.
Continuation of AS.377.215. The goal of the course is the simultaneous progression of four skills (speaking, listening, writing, and reading) as well as familiarity with aspects of Russian linguistics and culture that are necessary for language competency higher than that learned in First Year Russian. Prerequisite(s): AS.377.215

AS.377.315. Third Year Russian. 3 Credits.
This course offers advanced training in spoken as well as written Russian. It is designed for students who have basic Russian language proficiency acquired through AS.377.216 or equivalent. Advanced level of grammatical structures will be learned and practiced through communicative tasks. Area: Humanities

AS.377.316. Third Year Russian II. 3 Credits.
Continuation of AS.377.315. This course offers advanced training in spoken as well as written Russian. Advanced level of grammatical structures will be learned and practiced through communicative tasks. Prerequisite(s): AS.377.315 Area: Humanities

AS.377.395. Readings in Russian Studies. 2 Credits.
The course examines aspects of Russian culture through Russian literature. Readings include a wide range of texts. In this particular course, we will read a play by a Soviet writer and watch a video recording of a contemporary stage show by the Moscow Art Theater. Participation in the course would require reading authentic Russian texts, extensive classroom discussions, and frequent writing assignments. (All texts and videos are in Russian.) Pre-req: 377.315-316 or by permission Area: Humanities

AS.377.397. Readings in Russian Studies II. 2 Credits.
The course examines aspects of Russian culture through Russian literature. Readings include a wide range of texts. Participation in the course would require reading authentic Russian texts, extensive classroom discussions, and frequent writing assignments. (All texts and videos are in Russian.) Pre-req: 377.315-316 or by permission Prerequisite(s): AS.377.315 OR AS.377.316 OR AS.377.395 or permission of instructor Area: Humanities

ASS.377.506. Independent Study - Russian. 0 - 3 Credits.

AS.378.115. First Year Japanese. 5 Credits.
This course is designed for students who have no background or previous knowledge in Japanese. The course consists of lectures on Tuesday/Thursday and conversation classes on Monday/Wednesday/Friday. The goal of the course is the simultaneous progression of four skills (speaking, listening, writing, and reading) as well as familiarity with aspects of Japanese culture. By the end of the year, students will have basic speaking and listening comprehension skills, a solid grasp of basic grammar items, reading and writing skills, and a recognition and production of approximately 150 kanji in context. Knowledge of grammar will be expanded significantly in AS.373.215. No Satisfactory/Unsatisfactory. Student may choose to attend either lecture at 10:30 am or 12 pm on TTh. Cross-listed with East Asian Studies

AS.378.116. First Year Japanese II. 5 Credits.
This course is designed for students who have no background or previous knowledge in Japanese. The course consists of lectures on Tuesday/Thursday and conversation classes on Monday/Wednesday/Friday. The goal of the course is the simultaneous progression of four skills (speaking, listening, writing, and reading) as well as familiarity with aspects of Japanese culture. By the end of the fall term, students will have basic speaking and listening comprehension skills, a solid grasp of basic grammar items, reading and writing skills, and a recognition and production of approximately 60 kanji in context. Knowledge of grammar will be expanded significantly in 2nd year Japanese. May not be taken Satisfactory/Unsatisfactory. Recommended Course Background: AS.378.115 Prerequisite(s): Prereq: AS.378.115 or instructor permission
AS.378.215. Second Year Japanese. 5 Credits.
Training in spoken and written language, increasing their knowledge of more complex patterns. At completion, students will have a working knowledge of about 250 Kanji. Recommended Course Background: AS.378.115 and AS.378.116 or equivalent.
Prerequisite(s): AS.378.116 or equivalent
Area: Humanities

AS.378.216. Second Year Japanese II. 5 Credits.
Continuation of Beginning Japanese and Intermediate Japanese I. Training in spoken and written language, increasing students' knowledge of more complex patterns. At completion, students will have a working knowledge of about 250 Kanji. Lab required. Recommended Course Background: AS.378.215 or equivalent.
Prerequisite(s): AS.378.215 or instructor permission
Area: Humanities

AS.378.315. Third Year Japanese. 3 Credits.
Emphasis shifts toward reading, while development of oral-aural skills also continues apace. The course presents graded readings in expository prose and requires students to expand their knowledge of Kanji, grammar, and both spoken and written vocabulary. Cross-listed with East Asian Studies
Prerequisite(s): AS.378.215 AND AS.378.216 or instructor permission
Area: Humanities

AS.378.316. Third Year Japanese II. 3 Credits.
Emphasis shifts toward reading, while development of oral-aural skills also continues apace. Area: Humanities

AS.378.396. Fundamentals of Japanese Grammar. 2 Credits.
This course is designed for students who have already studied 1st Year Japanese grammar and wish to develop a thorough knowledge of Japanese grammar in order to advance all aspects of language skills to a higher level. It is also appropriate for graduate students who need to be able to read materials written in Japanese. The goal of the course is to provide students with a thorough knowledge of Japanese grammar; therefore, knowledge of vocabulary (including kanji) in depth is not requisite. In addition, since this is not a language course that places equal focus on all four skills (speaking, listening, writing, and reading), there will be no conversation practice — this is a lecture course on grammar. 2 credits. Pass-fail grade option only
Prerequisite(s): AS.378.115
Area: Humanities

AS.378.415. Fourth Year Japanese. 3 Credits.
By using four skills in participatory activities (reading, writing, presentation, and discussion), students will develop reading skills in modern Japanese and deepen and enhance their knowledge on Kanji and Japanese culture. Recommended Course Background: AS.378.315 and AS.378.316 or equivalent.
Prerequisite(s): AS.378.316 or equivalent
Area: Humanities

AS.378.416. Fourth Year Japanese II. 3 Credits.
By using four skills in participatory activities (reading, writing, presentation, and discussion), students will develop reading skills in modern Japanese and deepen and enhance their knowledge on Kanji and Japanese culture. Lab required. Recommended Course Background: AS.378.415
Prerequisite(s): AS.378.415 or equivalent.
Area: Humanities

AS.378.493. Grammar and Readings in Japanese Studies. 2 Credits.
This course is designed for graduate students (in East Asian Studies, Public Health, History of Medicine, History, etc.) and undergraduate students with a strong interest in developing a thorough knowledge of Japanese grammar from both linguistic and cultural perspectives in depth well beyond regular language courses in order to advance knowledge and comprehension of materials written in Japanese without use of a dictionary. We first review the primary components of Japanese grammar, such as tense, aspect, particles, conditionals, passive and causative, etc., followed by readings of articles demonstrating particular grammatical items. Specific strategies and techniques are also introduced, followed by practice. Class materials include a broad spectrum of native materials, including novels, newspapers, scholarly articles, essays, and historical papers. A diverse range of articles and essays are selected by students to introduce and enforce various ways of reading Japanese effectively. 2 credits. Pass-fail grade option only.
Area: Humanities

AS.378.501. Independent Study - Japanese. 2 Credits.
Independent Study in advanced Japanese language.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

This course is designed for graduate students (in East Asian Studies, Public Health, History of Medicine, History, etc.) and undergraduate students with a strong interest in improving Japanese reading skills. The main goal of the course is to learn strategies for reading and comprehending materials written in Japanese without using a dictionary. Specific strategies and techniques are introduced, followed by practice. Class materials include a broad spectrum of native materials, including novels, newspapers, scholarly articles, essays, historical papers, and so forth. A diverse range of articles and essays are selected to introduce and enforce various ways of reading Japanese effectively. 2 credits for undergraduate students.
Area: Humanities

AS.379.115. First Year Haitian-Creole. 3 Credits.
This course is designed for students who have no background in the language and wish to learn the language at an academic level, obtaining knowledge of the linguistic aspects of the language as well as skills needed to communicate in Haitian-Creole. The goal of the course is the simultaneous progression of four skills (speaking, listening, writing, and reading) as well as familiarity with aspects of linguistics and culture that are necessary for language competency in survival level. It is expected that, by the end of the spring term, students will have basic speaking and listening comprehension skills, a solid grasp of basic grammar, reading and writing skills. No Satisfactory/Unsatisfactory.
AS.379.116. First Year Haitian Creole II. 3 Credits.
A continuation of AS.379.115. This course is designed for students who have no background in the language and wish to learn the language at an academic level, obtaining knowledge of the linguistic aspects of the language as well as skills needed to communicate in Haitian-Creole. The goal of the course is the simultaneous progression of four skills (speaking, listening, writing, and reading) as well as familiarity with aspects of linguistics and culture that are necessary for language competency in survival level. It is expected that, by the end of the spring term, students will have basic speaking and listening comprehension skills, a solid grasp of basic grammar, reading and writing skills.
Prerequisite(s): AS.379.115

AS.380.101. First Year Korean. 5 Credits.
Introduces the Korean alphabet, hangeul. Covers basic elements of the Korean language, high-frequency words and phrases, including cultural aspects. Focuses on oral fluency reaching Limited Proficiency where one can handle simple daily conversations. No Satisfactory/ Unsatisfactory. Cross-listed with East Asian Studies

AS.380.102. First Year Korean II. 3 Credits.
Focuses on improving speaking fluency to Limited Proficiency so that one can handle simple daily conversations with confidence. It provides basic high-frequency structures and covers Korean holidays. Continuation of AS.380.101. Recommended Course Background: AS.380.101 or permission required.
Prerequisite(s): AS.380.101 or instructor permission

AS.380.201. Second Year Korean. 4 Credits.
Aims for improving oral proficiency and confident control of grammar with vocabulary building and correct spelling intended. Reading materials of Korean people, places, and societies will enhance cultural understanding and awareness. Project due on Korean cities. Existing demonstrable skills in spoken Korean preferred.
Prerequisite(s): AS.380.101 AND AS.380.102 or instructor permission
Area: Humanities

AS.380.202. Second Year Korean II. 3 Credits.
Aims for improving writing skills with correct spelling. Reading materials of Korean people, places, and societies will enhance cultural understanding and awareness, including discussion on family tree. Continuation of AS.380.201. Recommended Course Background: AS.380.201 or equivalent.
Prerequisite(s): AS.380.201 or equivalent
Area: Humanities

AS.380.301. Third Year Korean. 3 Credits.
Emphasizes reading literacy in classic and modern Korean prose, from easy essays to difficult short stories. Vocabulary refinement and native-like grasp of grammar explored. Project due on Korean culture. Cross-listed with East Asian Studies
Prerequisite(s): AS.380.202 or equivalent
Area: Humanities

AS.380.302. Third Year Korean II. 3 Credits.
Emphasizes reading literacy in classic and modern Korean prose. By reading Korean newspapers and professional articles in one’s major, it enables one to be well-versed and truly literate. Continuation of AS.380.301. Cross-listed with East Asian StudiesPrerequisite: AS.380.301 or equivalent.
Prerequisite(s): AS.380.301 or instructor permission
Area: Humanities

AS.380.401. Fourth Year Korean. 2 Credits.
This course is designed for those who have finished AS 380.302 or beyond advanced mid level of competency in Korean in four skills. By dealing with various topics on authentic materials including news, articles on websites, short stories, this course aims to help students enhance not only linguistics knowledge and skills, but also current issues in Korea. It is expected that, by the end of the term, students will be able to discuss a variety of topics and express opinions fluently in both spoken and written language.
Prerequisite(s): AS.380.302 or instructor permission
Area: Humanities

Prerequisite(s): AS.380.401 or equivalent
Area: Humanities

AS.381.101. First Year Hindi I. 3 Credits.
Course focuses on acquisition of additional vocabulary and grammatical structures in culturally authentic contexts, listening, speaking, reading, and writing comprehension. No Satisfactory/ Unsatisfactory

AS.381.102. First Year Hindi II. 3 Credits.
This course prepares students to function in everyday situations in the Hindi speaking world. Focuses on the acquisition of basic vocabulary and grammatical structures in culturally authentic contexts through listening, speaking, reading, and writing comprehension. Hindi reading and writing is taught in its original Dayva-nagari script. Oral-aural drills in class and work in the Language Lab is required.
Prerequisite(s): AS.381.101 or instructor permission

AS.381.201. Second Year Hindi I. 3 Credits.
Course provides refinement of basic language skills in cultural context. Emphasis will be on expansion of vocabulary and grammatical structures and further development of communicative skills. Recommended Course Background: AS.381.101, AS.382.102
Prerequisite(s): AS.381.102 or equivalent
Area: Humanities

AS.381.202. Second Year Hindi II. 3 Credits.
Course provides refinement of basic language skills in cultural context. Emphasis will be on expansion of vocabulary and grammatical structures and further development of communicative skills. Continuation of AS.381.201. Recommended Course Background: AS.381.201 or permission required.
Prerequisite(s): AS.381.201 or instructor permission
Area: Humanities

Writing Intensive

AS.381.301. Third Year Hindi I. 3 Credits.
Learn to converse in Hindi through Hindi songs, films, and media. Promotes the active use of Hindi in culturally authentic contexts. Development of fluency in oral and written communication is emphasized. Not offered every semester.
Prerequisite(s): AS.381.201 AND AS.381.202 or instructor permission
Area: Humanities

Writing Intensive
AS.381.302. Third Year Hindi II. 3 Credits.
This course is geared towards listening comprehension, enrichment of vocabulary and exposure to various social situations. Students will get an opportunity to learn to narrate and support their views in informal and formal styles. The course will promote a meaningful interaction to understand the cultural nuances. Not offered every semester.
Prerequisite(s): AS.381.301 or instructor permission
Area: Humanities
Writing Intensive

Independent study in Hindi above 3rd year level.

AS.381.802. Independent Study - Hindi.
Independent study in Hindi above 3rd year level.

AS.384.115. First Year Hebrew. 4 Credits.
Designed to provide reading and writing mastery, to provide a foundation in Hebrew grammar and to provide basic conversational skills. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students’ schedules.

AS.384.116. First Year Hebrew II. 3 Credits.
Designed to provide reading and writing mastery, to provide a foundation in Hebrew grammar and to provide basic conversational skills. Cross-listed with Jewish Studies.
Prerequisite(s): AS.384.115

AS.384.215. Second Year Hebrew. 3.5 Credits.
Designed to enrich vocabulary and provide intensive grammatical review, and enhance fluency in reading, writing and comprehension. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students’ schedules.
Prerequisite(s): AS.384.116 or equivalent
Area: Humanities

AS.384.216. Second Year Hebrew II. 3 Credits.
Designed to enrich vocabulary and provide intensive grammatical review, and enhance fluency in reading, writing and comprehension. Recommended Course Background: AS.384.215 or permission required.
Prerequisite(s): AS.384.215
Area: Humanities

AS.384.315. Third Year Hebrew. 4 Credits.
Designed to maximize comprehension and the spoken language through literary and newspaper excerpts providing the student with the language of an educated Israeli. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students’ schedules.
Prerequisite(s): AS.384.216 or equivalent
Area: Humanities

AS.384.316. Third Year Hebrew II. 3 Credits.
Designed to: maximize comprehension and the spoken language through literary and newspaper excerpts providing the student with the language of an educated Israeli. Recommended Course Background: AS.384.315 or permission required. Cross-listed with Jewish Studies.
Prerequisite(s): AS.384.315 or instructor permission
Area: Humanities
AS.371.126. Fiber Art and the String Revolution. 2 Credits.
This course presents students with technical, historical and cultural understanding of the fiber medium. Students learn the basics of textile processes, including dyeing, felting, knitting, weaving, sewing, and lacemaking. Technical demonstrations and samples will be covered in class while students are encouraged to expand upon covered material through long-term personal projects. Technical demonstrations will be supported with slide lectures demonstrating the historical context of fiber processes and their contemporary applications. Attendance in 1st class is mandatory.
Area: Humanities

AS.371.131. Studio Drawing I. 2 Credits.
This course is designed as an introduction to the tools, techniques and concepts of basic drawing for students with little or no previous experience. Studio assignments focus on developing strong observation and rendering skills while experimenting with traditional and contemporary practices in drawing. Wet and dry media will be used. Attendance at 1st class is mandatory.

AS.371.133. Oil Painting I. 2 Credits.
This course is designed as an introduction to the tools, techniques and concepts of basic painting for the serious student with little or no previous experience. Studio assignments focus on developing strong observation and rendering skills focusing on issues of light, color and composition while experimenting with traditional and contemporary practices in painting. Lectures and a museum trip give students an art historical context in which to place their own discoveries as beginning painters. Oil paint will be used. Attendance at 1st class is mandatory.
Approval for this course will be considered after enrollment in SIS.

AS.371.134. Oil Painting II. 2 Credits.
Students who have mastered basic painting skills undertake sustained projects, including portrait and plein air landscape work. Slide lectures and handouts deepen students' appreciation of representational traditions. Advanced techniques, materials, and compositional issues are also investigated. Recommended Course Background: AS.371.133 or equivalent. Approval for this course will be considered after enrollment in SIS; no need to email.

Prerequisite(s): AS.371.133 or instructor's permission.

AS.371.136. Drawing: The Portrait. 2 Credits.
An intensive look at the traditions and techniques of portrait drawing. Students work from live models in a variety of media and study master portraits by Holbein, Rembrandt, Ingres, Degas, etc. Trips to the Baltimore Museum of Art Print & Drawing Room and JHU Archaeological Museum will enhance knowledge and appreciation of the history and traditions of portraiture. Recommended Course Background: AS.371.131 or permission required.

AS.371.139. Still Life/Interior/Landscape. 2 Credits.
This intermediate drawing class will examine three grand traditions in representational art. We will explore problems in still life that have occupied artists from Chardin to Morandi; in interiors from Vermeer to Giacometti; in landscape from Corot to Diebenkorn. We will also look at where the boundaries between these genres blur and how they overlap.

AS.371.140. Cartooning. 3 Credits.
Not open to Freshmen. A history-and-practice overview for students of the liberal arts. The conceptual basis and historical development of cartooning is examined in both artistic and social contexts. Class sessions consist of lecture (slides/handouts), exercises, and ongoing assignments. Topics include visual/narrative analysis, symbol & satire, editorial/political cartoons, character development, animation. Basic drawing skills are preferred but not required.
Area: Humanities

AS.371.147. Art of Architecture: Homewood, Baltimore and Beyond. 3 Credits.
In this course, students will learn to design, draw, and see like an architect. A series of progressive design exercises will teach the practical capacities and habits of mind that lead not merely to competence but success and advancement in the field. We will look at what architecture has been, discuss what it is becoming, and explore both formal and narrative methodologies for design. The class will use the built environment of the city - and the Homewood campus - as a classroom and a site for interpretive drawing and creative design work. Essential in the architect's education is the sketchbook, which functions not merely as a place to 'store' what has been witnessed, but a place to interpret and explore implications of design in the world, whether close to home or traveling in exotic locales.
Area: Humanities

AS.371.151. Photoshop/Digital Darkroom. 3 Credits.
Photoshop is not only the digital darkroom for processing images created with digital cameras; it is also a creative application for making original artwork. In this course, students use Photoshop software as a tool to produce images from a fine art perspective, working on projectsthat demand creative thinking while gaining technical expertise. Students will make archival prints, have regular critiques, and attend lectures on the history of the manipulated image and its place in culture. We will look at art movements which inspire digital artists, including 19th-century collage, dada, surrealism, and the zeitgeist of Hollywood films. Students must have a digital SLR camera. Prior knowledge of Photoshop is not required. Attendance at first class is mandatory. Approval for this course will be considered after enrollment in SIS; no need to email.
Area: Humanities

AS.371.152. Introduction to Digital Photography. 3 Credits.
Students learn to use their digital cameras through a variety of documentary, landscape and portrait projects, which will help them develop technical and creative skills. Critiques and slide lectures of historic photographs, which range from postmortem daguerreotypes to postmodern digital imagery, help students develop a personal vision. Students are provided digital SLR cameras and gain proficiency with one-on-one instruction in the field. Basics for print adjustment and output will be covered. Attendance at first class is mandatory. Approval for this course will be considered after enrollment on SIS.
Area: Humanities

AS.371.154. Introduction to Watercolor. 2 Credits.
Watercolor is simultaneously the most accessible of all painting media and the most misunderstood. This course provides experience and instruction in observational and expressive watercolor techniques, materials, concepts, and vocabulary. Topics to be reviewed include line, perspective, value, texture, composition, color, and pictorial space. There will be an introduction to contemporary practices in watercolor, as well as experimental and abstract exercises, collage, and conceptual work.
AS.371.155. Introduction to Sculpture. 2 Credits.
A studio course introducing students to sculptural concepts and methods. Emphasis is on the process of creating. Even the simplest materials can effectively activate space, convey meaning, and elicit emotion when used thoughtfully and imaginatively. Students will learn different methods including additive and reductive techniques, construction, modeling, and mold-making. No prerequisites except a willingness to experiment, make mistakes... and clean up when you are done. Approval in this course will be considered after enrollment in SIS. Attendance in 1st class is mandatory.

AS.371.162. Black and White: Digital Darkroom. 3 Credits.
In this digital course, students explore the black-and-white aesthetic. They develop camera skills on numerous field trips and local walks. Students meet frequently for critiques and discussions based on historic and contemporary imagery. Techniques such as high dynamic range, and infrared are covered. Emphasis is on composition and developing a photographic style with shooting and post processing. Students are encouraged to make work that is meaningful to them and which communicates its intent to their audience. Camera experience is a plus, but not a prerequisite. Digital SLRs are available on loan for the semester. Attendance in first class is mandatory. Approval in this course will be considered after enrollment in SIS.
Area: Humanities

AS.371.164. Introduction to Printmaking. 2 Credits.
Working with non-toxic/water based inks and both an engraving press and hand tools, students will explore several types of printmaking. Methods will include intaglio, collograph and both simple and multi-plate relief. As they develop their prints, students can then observe and exploit the strengths that each method has to offer. Drawing and Photoshop skills are helpful but not required.

AS.371.165. Location Photography. 3 Credits.
Working in the studio and in various locations, students will learn the fundamentals of lighting interiors and strategies for working in almost any environment. Field trips will include the National Aquarium, Evergreen Museum & Library, a Howard County horse farm, a Tiffany-designed church and a photo studio. Students will also concentrate on the fine art of printing in our digital lab. They will develop a final portfolio of 10 photographs which express a personal vision about a location of their choice. A basic knowledge of digital photography is helpful, but not required. Approval for this course will be considered after enrollment in SIS. First class is mandatory.
Area: Humanities

AS.371.166. Landscape Photography. 3 Credits.
Class begins: Wednesday, July 6th. In this course students will experience the drama and beauty of the urban and rural landscape. On numerous field trips they will hone their camera technique as well as learn elements of composition and develop a personal style. Students will learn the fundamentals of Photoshop and they will also be introduced to the beauty of black and white in Silver Efex software. Digital SLR cameras will be provided.
Area: Humanities

AS.371.177. Design Studies: Detail, Product, Prototype. 3 Credits.
When we undertake the design of an artifact—something material, perhaps interactive—we do more than create a pretty little sculpture, or simply enclose the inner workings of a product. We think about aesthetics; about ergonomics; about material heft and surface texture. In a successful product, toy, or building detail it is often something ineffable—the way the object interfaces with the human hand, or the way it takes on a personality in the mind—that results in its success as an object of design. The course is structured as a series of design exercises, each intended to develop the graphical and manual skill-set of the designer. Our subject, broadly speaking, is the design of small things: from building details to useful products and tools, the act of drawing iterative design sketches, and creating prototypes, will guide us in the development of practical design intelligence.
Area: Humanities

AS.371.178. Making of Masks: Inspired by World Tradition. 2 Credits.
Since before written history, humankind has conceived masks for a range of purposes using forms and materials to help develop, protect and preserve physical and spiritual existence. Great care and specificity went into these visages to obtain these various goals. These historical cultural roots will be examined, honored and transformed as students consider these elements and create their own versions of masks to produce these goals in a personal way. This investigation will provide the historical examples of masks from Native Americans to PTSD American soldiers, from Africa to Anime, Kabuki to Carnivale. Materials and sculptural methods used will arise from the needs of the artist. Such methods will likely include, paper mache, collage, wood construction and various painting and surface techniques. No pre-reqs. Attendance in first class is mandatory.

AS.371.180. Exploring Line. 2 Credits.
This challenging yet creatively playful course presents abstract, perceptual and conceptual concepts in art to understand line, one of the elements of art, from multiple perspectives, materials and practices. Be prepared to collaborate and experiment! Through an intense exploration of line, students will create artworks exploring line as marks on a flat surface (drawing), lines that communicate data (design), lines that build form (sculpture) and lines that embody movement (performance and video). Possible assignments will include projects with drawing, printmaking, fiber, cell phone video, installation, unconventional or recycled materials and collaboration. • This is not a drawing class but a multimedia course on one of the elements of art. Instructor approval and attendance at first class is mandatory.
Area: Humanities

AS.371.185. Printmaking: Multiples and Variations. 2 Credits.
In this course students learn to create marks, textures and imagery using a variety of printmaking techniques. Students create relief and intaglio printing matrices and practice printing by hand and with a press to reproduce their images. The class culminates with explorations of layered printing, monoprinting, and mixed media approaches to create unique 2-dimensional and 3-dimensional works. Attendance in first class is mandatory. No prior experience is needed.
Area: Humanities
This is an intermediate drawing class that builds on the concepts and skills in Studio Drawing 1. Students will explore contemporary and conceptual approaches to drawing while further developing their skills in various graphic mediums. Risk taking and experimentation will be encouraged while learning about contemporary practices in the medium. The course will conclude with students creating an individual series of drawings of their choice.
Prerequisite(s): AS.371.131 OR AS.371.250
Area: Humanities

AS.371.250. Life Drawing. 3 Credits.
An intermediate drawing course focusing on all aspects of the human form. Beginning with infrastructure (skeletal and muscular systems), we will work directly from the model using a variety of wet and dry media to address problems in figurative art from Renaissance to the present. Approval in this course will be considered after enrollment in SIS. No need to email. Attendance in first class is mandatory.
Prerequisite(s): AS.371.131 or permission of Instructor.

AS.371.302. Photographic Portfolio. 3 Credits.
In this upper level course, students will work on a semester-long project. They will develop their ideas within a seminar style format that allows for conversation and debate and provides a forum for the evolution of their work. Students will learn advanced techniques in Photoshop, Nik software and Lightroom to enhance content and develop a personal style. Through a combination of critique, lecture, and lab, students will complete a portfolio of ten printed images that work together in a series. Approval for this course will be considered after enrollment on SIS. Attendance in 1st class is mandatory.
Area: Humanities

AS.371.303. Documentary Photography. 3 Credits.
In this course, we will explore different genres of documentary photography including: the fine art document, photojournalism, social documentary photography, the photo essay and photography of propaganda. Field trips offer opportunities to explore Baltimore neighborhoods such as Waverly, Greenmount Avenue, and Baltimore's old Chinatown. Students will work on a semester-long photo-documentary project on a subject of their choice. Camera experience is a plus, but not a prerequisite. Digital SLRs are available on loan for the semester. Attendance at first class is mandatory. Approval in this course will be considered after enrollment in SIS.
Area: Humanities

AS.371.307. The Photographer's Book. 3 Credits.
Students create a handmade book of photographs that illustrate a favorite piece of text. They may work with poetry, song lyrics, a play, a narrative, a blog, a diary, any writing (including their own). Students may look at historical texts such as medieval manuscripts or even scientific treatises. The possibilities are endless. We will take fieldtrips to book collections at the George Peabody Library, Evergreen Museum and Library and the Betty and Edgar Sweren Collection. This course will be taught by a photographer and an artist book designer. A previous photography class is a plus, but not a requirement. Students who would like to combine their painting and drawing skills with their photographs are welcome to do so. Attendance in first class is mandatory. Students will have an exhibition of their artist books in the Special Collections Rare Books room of the MSE library. Approval for this course will be considered after enrollment in SIS.

AS.371.501. Independent Study. 2 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.371.502. Independent Study. 0 - 2 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.371.590. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.374 (MILITARY SCIENCE)

AS.374.101. Introduction to the Army. 2 Credits.
The MSL I course produces a Cadet who accepts the Army as a values-based organization and embraces the scholar-athlete-warrior ethos; who is familiar with individual roles and responsibilities in support of team efforts and problem solving processes in military and non-military situations; who demonstrates oral and written communication skills, understands resilience, and demonstrates a commitment to learning. MSL101 introduces Cadets to the Army and the Profession of Arms. Students will examine the Army Profession and what it means to be a professional in the U.S. Army. The overall focus is on developing basic knowledge and comprehension of the Army Leadership Requirements Model while gaining a big picture understanding of the Reserve Officers’ Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Cadets also learn how resiliency and fitness supports their development as an Army leader. As you become further acquainted with MSL101, you will learn the structure of the ROTC Basic Course program consisting of MSL101, 102, 201, 202, Fall and Spring Leadership Labs, and Basic Camp. The focus is on developing basic knowledge and comprehension of Army leadership dimensions, attributes and core leader competencies while gaining an understanding of the ROTC program, its purpose in the Army, and its advantages for the student. Military Science courses require department permission and are restricted to active or inquiring ROTC members.

AS.374.102. Foundations of Agile and Adaptive Leadership. 2 Credits.
The MSL I course produces a Cadet who accepts the Army as a values-based organization and embraces the scholar-athlete-warrior ethos; who is familiar with individual roles and responsibilities in support of team efforts and problem solving processes in military and non-military situations; who demonstrates oral and written communication skills, understands resilience, and demonstrates a commitment to learning. MSL102 introduces Cadets to the Army and the Profession of Arms. Students will examine the Army Profession and what it means to be a professional in the U.S. Army. The overall focus is on developing basic knowledge and comprehension of the Army Leadership Requirements Model while gaining a big picture understanding of the Reserve Officers’ Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Cadets also learn how resiliency and fitness supports their development as an Army leader. As you become further acquainted with MSL102, you will learn the structure of the ROTC Basic Course program consisting of MSL101, 102, 201, 202, Fall and Spring Leadership Labs, and Basic Camp. The focus is on developing basic knowledge and comprehension of Army leadership dimensions, attributes and core leader competencies while gaining an understanding of the ROTC program, its purpose in the Army, and its advantages for the student.

AS.374.110. Basic Leadership Laboratory, ROTC 101. 1 Credit.
These introductory courses in a laboratory environment are designed to expose students to practical experiences, challenges and individual learning opportunities in a small group. Students learn the fundamentals of an organization and apply principles of leadership and management at the foundation level. Students develop military courtesy, organizational discipline, communication and basic leadership and management skills. Ultimately, students understand how to facilitate and lead a small group of four to five people as an integral part of a larger organization of 75-100 people through situational training opportunities in a variety of conditions. As a leadership practicum, students have the opportunity to serve in leadership positions and receive tactical and technical training. In addition to learning to lead groups of five to 100 people, students will also be exposed to training on first aid, operating Army equipment, Army activities such as rappelling and drill and ceremony. These laboratories are required for enrolled ROTC participants who desire to be considered for a commission in the Army. Corequisite: AS.374.101-AS.374.102. Military Science courses require department permission and are restricted to active or inquiring ROTC members. Corequisite(s): AS.374.101 OR AS.374.102

AS.374.120. Basic Leadership Laboratory II. 1 Credit.
Students learn and apply team echelon leadership at an entry level. They continue development of military courtesy, discipline, communication and basic Soldier skills. Ultimately, students understand how to operate in and lead 4-5 persons through a program of training opportunities in a variety of conditions. Freshmen only.

AS.374.201. Leadership and Decision Making. 2 Credits.
The MSL II course produces a cadet grounded in foundational leadership doctrine and skills by following and leading small units to achieve assigned missions; who applies critical thinking and problem solving using Troop Leading Procedures (TLP); who comprehends the value of diversity and understands the officer's role in leading change; understands the fundamentals of the Army as a profession. MSL201 adds depth to the Cadets understanding of the Adaptability Army Learning Area. The outcomes are demonstrated through Critical and Creative Thinking and the ability to apply Troop Leading Procedures (TLP) to apply Innovative Solutions to Problems. The Army Profession is also stressed through leadership forums and a leadership self-assessment. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during Leadership LABs team building exercises, and Field Training Exercises. Military Science courses require department permission and are restricted to active or inquiring ROTC members.

AS.374.202. Army Doctrine and Team Development. 2 Credits.
MSL 202 focuses on Army doctrine and team development. The course begins the journey to understand and demonstrate competencies as they relate to Army doctrine. Army Values, Teamwork, and Warrior Ethos and their relationship to the Law of Land Warfare and philosophy of military service are also stressed. The ability to lead and follow is also covered through Team Building exercises in small units up to squad level. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during Leadership LABs (team building exercises, LTXs, VBS exercises). Includes a 1-Hour lab per week taught by MS III Cadets. The Army Reserve Officer Training Course (ROTC) Basic Course is an academically rigorous 2-year college program comprised of four semester courses of instruction, Leadership Labs (two sets, Fall/Spring), and the Cadet Basic Camp conducted at Fort Knox, KY.
AS.374.210. Basic Team Leadership. 1 Credit.
Students lead and assist in leading 4-5 person teams through a variety of training opportunities. They learn the troop-leading procedures, basic problem solving, and tactical skills aimed at military leadership. Students will mentor and assist members of their team with improving their own skills and leadership as well. Corequisite: AS.374.201. Military Science courses require department permission and are restricted to active or inquiring ROTC members.
Corequisite(s): AS.374.201

AS.374.220. Advanced Team Leadership. 1 Credit.
Students perform duties of and develop their leadership, as team leaders during a variety of induced training opportunities. Continued emphasis is placed on troop-leading procedures and simple problem solving. Students lead physical fitness training and mentor subordinates in military, academic, and extra-curricular activities. Successful completion of advanced team leadership allows students to progress into ROTC Advanced Courses. Sophomores only.

AS.374.301. Training Management and the Warfighting Functions. 2 Credits.
MSL301 Training Management and the Warfighting Functions, is an academically challenging course where you will study, practice, and apply the fundamentals of Army Leadership, Officership, Army Values and Ethics, Personal Development, and small unit tactics at the platoon level. At the conclusion of this course, you will be capable of planning, coordinating, navigating, motivating and leading a squad and platoon in the execution of a mission during a classroom PE, a Leadership Lab, or during a Field Training Exercise (FTX). You will be required to write peer evaluations and receive feedback on your abilities as a leader and how to improve those leader skills that can further develop you in to a successful officer. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, and practical exercises, a mid-term exam, and a final exam. You will receive systematic and specific feedback on your leader attributes, values, and core leader competencies from your instructor, other ROTC cadre, and MSL IV Cadets who will evaluate you using the Cadet Officer Evaluation System (COER). Successful completion of this course will help prepare you for the SROTC Advanced Camp, which you will attend in the summer at Fort Knox, KY. Corequisite: AS.374.301. Military Science courses require department permission and are restricted to active or inquiring ROTC members.
Corequisite(s): AS.374.301

AS.374.320. Advanced Tactical Leadership. 1 Credit.
Students further develop their leadership skills by directing and coordinating the efforts of 9-60 personnel on offensive, defensive and civil-support tactical-tasks. Develop written plans for garrison and field environments while supervising its execution. Ultimately, prepares students to excel at the four-week National Leadership Development and Assessment Course at Fort Knox, KY. Permission required. Juniors only.

AS.374.401. The Army Officer. 2 Credits.
MSL 401 Focuses on development of the Army Officer. It is an academically challenging course where you will develop knowledge, skills, and abilities to plan, resource, and assess training at the small unit level. You will also learn about Army programs that support counseling subordinates and evaluating performance, values and ethics, career planning, and legal responsibilities. At the conclusion of this course, you will be familiar with how to plan, prepare, execute, and continuously assess the conduct of training at the company or field grade officer level. Includes a lab per week overseeing MSL III lesson facilitation and supervised by ROTC Cadre. Military Science courses require department permission and are restricted to active or inquiring ROTC members.
AS.374.402. Company Grade Leadership. 2 Credits.
This is an academically challenging course where you will study, practice, develop, and apply critical thinking skills pertaining to Army leadership, officer skills, Army Values and ethics, personal development, and small unit tactics at platoon level. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, practical exercises, mid-term exam, and a Capstone Exercise in place of the final exam. For the Capstone Exercise, you will be required to complete an Oral Practicum that you will be evaluated on your knowledge of the 20 Army Warfighting Challenges (AWFC) covered throughout MSL401 and 402 coursework. In addition, you could be assessed on leadership abilities during classroom PE, Leadership Labs, or during a Field Training Exercise (FTX). You will receive systematic and specific feedback on your leader attributes, values, and core leader competencies from your cadre, PMS and other MSL IV Cadets who will evaluate you using the Cadet Officer Evaluation Report (COER). You will be required to write peer evaluations and receive feedback on your abilities as a leader and how to improve those leader skills. At the conclusion of this course, you will be able to plan, coordinate, navigate, motivate and lead a platoon in future operational environments. Successful completion of this course will assist in preparing you for your BOLC B course and is a mandatory requirement for commissioning.

AS.374.410. Advanced Planning & Decision Making I. 1 Credit.
Students develop a semester-long progression of programmed training activates that support completion of the unit’s Mission Essential Task List. The laboratory builds from fall to spring semester as students master advanced problem solving, resource synchronization and executive decision making. Students evaluate, mentor and develop subordinate leaders as part of the Leadership Development Program and FM 6-22, Army Leadership. The course serves as the final evaluation and determination on a student's ability to lead Soldier's as a Second Lieutenant in the US Army. Co-requisite: AS.374.401-AS.374.402.
Recommended Course Background: AS.374.301-AS.374.302, AS.374.310-AS.374.320 and Basic Course. Military Science courses require department permission and are restricted to active or inquiring ROTC members.
Corequisite(s): AS.374.401 OR AS.374.402

AS.374.420. Advanced Organizational Planning. 1 Credit.
Students develop a semester-long progression of training activates that support completion of the unit’s Mission Essential Task List. The laboratory builds on the first semester’s achievements through advanced problem solving, resource synchronization and executive decision making. Students evaluate and develop subordinate leaders as part of the Leadership Development Program and FM 6-22, Army Leadership. The course serves as the final evaluation and determination on a student’s ability to lead Soldier’s as a Second Lieutenant in the US Army. Permission required. Seniors only.

AS.374.501. Independent Study. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms. Writing Intensive

AS.374.512. Internship - Military Science. 0 - 3 Credits.
Students will select a topic relevant to the study of military leadership and will complete a project based on current military doctrine and the contemporary operating environment of current military operations. Permission required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms. Writing Intensive
AS.376 (MUSIC)

AS.376.111. Rudiments of Music Theory and Musicianship. 3 Credits.
This course introduces written and aural music fundamentals including notation, scales, intervals, chords, rhythm, meter and sight-singing. Students will compose melodies and short pieces and complete listening projects. Course does not count towards the completion of the minor.

AS.376.123. Freshman Seminar: Composer Biographies in Film. 3 Credits.
This freshman seminar focuses on the lives of Mozart, Beethoven, Schumann, and Chopin and the depictions of their lives in film during the 20th century. The course provides both an introduction to film analysis and music history biography.

Area: Humanities

AS.376.166. Star Trek Music: The Franchise Frontier. 3 Credits.
Music defines the Star Trek experience. Through their continued reuse and repetition, Star Trek’s many musical themes go beyond their original audiovisual frameworks to operate as learned musical-cultural texts. As Star Trek has expanded its content into a myriad of installations and media platforms, this musical symbolism has proved vital in articulating both these differences and “sameness.” This online, asynchronous course uses Star Trek’s music as a tool to investigate musical branding and the creation of meaning in the media we consume every day. Through close viewings—and listenings—of film, television episodes, video games, computer games, commercials, and other media, we will explore the meaning(s) these media construct and acquire as they are re-used and re-purposed in audiovisual contexts. Your work will include studying media clips, television episodes, and some feature-length films; short readings in which we interact with both current and classic scholarly literature; regular discussion posts and responses to our content; a weekly reflection journal of short posts; and a final paper/project on a Star Trek music topic of your choice (1500 words). In so doing, we will hone your analytical skills by learning to critically evaluate filmic media and craft arguments about the roles of music/sound in film.

Area: Humanities

AS.376.190. Learn Music by Writing It. 3 Credits.
This course uses composition and song-writing projects to introduce music fundamentals to students with little or no musical background. Topics will include rhythm and meter, pitch and intervals, scales, chords, and harmony, and how to read and write music in both traditional and popular presentations. We will cover standard classical music notation (score, Roman numerals, traditional theory terminology) as well as popular (lead-sheet notation and performance conventions). This course has no prerequisite.

Area: Humanities

AS.376.211. Music Theory I. 3 Credits.
Introduction to basic principles of tonal music through listening, analysis and music making. Students study melody, harmony, voice leading, figured bass and dissonance treatment, and will also undertake short composition projects. Must have taken the qualifying examination or AS.376.111. Recommended to be taken concurrently with AS.376.221.

Area: Humanities

AS.376.212. Music Theory II. 3 Credits.
This course continues the aural and written work of the previous course, but focuses on chromatic harmony while continuing the study of melody, counterpoint, and figured bass. Prerequisite: Music Theory I.

Prerequisite(s): AS.376.211
Area: Humanities

AS.376.214. Music Theory III - Formal Analysis. 3 Credits.
An examination of the musical forms of the Common Practice Period and the logic of their structures. Forms studied will include variation, binary, rounded binary, ternary, rondo, sonata-allegro, and sonata-rondo.

Recommended Course Background: AS.376.212

AS.376.215. Theory III - 20th Century. 3 Credits.
This course teaches compositional approaches to and analytical techniques for twentieth-century music, including modes, synthetic and exotic scales, set theory, serial theory, and geometric proportionality.

Prerequisite(s): AS.376.212

AS.376.216. Theory III - Counterpoint. 3 Credits.
A study of contrapuntal music, emphasizing composition in both the sixteenth- and eighteenth-century styles as epitomized by Palestrina and Bach.

AS.376.217. Music Theory III - Song. 3 Credits.
An examination of text-setting and song-writing in a variety of eras and styles. Topics will include art song, lieder, jazz standards, and pop tunes.

AS.376.221. Musicianship I. 2 Credits.
An introduction to basic musicianship skills. The course is divided into performance skills (sight singing, rhythm reading, basic piano, and improvisation) and aural skills (recognition of pitch, chords, rhythms, melodies, and other musical structures). Topics include major and minor keys and simple time signatures. Emphasis is placed on developing effective practice techniques. Pre-requisite: AS.376.111 (Rudiments of Music Theory and Musicianship) or placement exam.

AS.376.222. Musicianship II. 2 Credits.
A continuation of the skills developed Musicianship I. The course is divided into performance skills (sight singing, rhythm reading, basic piano, and improvisation) and aural skills (recognition of pitch, chords, rhythms, melodies, and other musical structures). Topics include minor keys, chromatic melody and harmony, compound time signatures, and syncopation. As in Musicianship I, emphasis is placed on developing effective practice techniques. Pre-requisite: AS.376.221 (Musicianship I) or placement exam.

AS.376.231. Western Classical Music. 3 Credits.
This course is an introduction to the rich tradition of Western ‘Classical’ music. We will examine this music from a variety of perspectives, including: 1) its historical, intellectual, and cultural background; 2) the biographical background of its composers; 3) its stylistic context; and 4) analysis of the music itself. We will approach these perspectives through a variety of activities, such as lectures, readings, writing, exams and in-class discussion.

Area: Humanities

AS.376.242. Introduction to Popular Music. 3 Credits.
A survey of the stylistic features and social contexts of American popular music since the 1950s.

Area: Humanities

AS.376.244. Electronic Music Production. 3 Credits.
Students will be introduced to electronic music production techniques and software, and how both can be used to produce a wide range of genre specific results. Skills such as beat matching, intricate use of quantization, virtual instrument editing, automation, sampling, mixing, mastering, effect usage and use of plugins will be explored.
AS.376.245. Introduction to Sound, Audio, and Recording Arts. 3 Credits.
In this course we will undertake a comprehensive survey of sound, audio and the related technology. While covering sound recording from an historical perspective, we'll touch on related material in physics, music, psychology and acoustics. In lab exercises and assignments, students will have the opportunity to learn in a hands-on environment as practical applications of the lecture material are explored. Assignments will include critical listening, in addition to basic recording, editing and mixing of audio. The course will culminate in a comprehensive final project.
Area: Humanities

AS.376.250. Introduction to Computer Music. 3 Credits.
Introduction to Computer Music is an opportunity for people with no specialized training in music to explore electronic art music as a long-standing, if obscure, body of art, then to participate in creative work in the style. Participants will gain a heuristic understanding of forms of musical composition that operate outside the conventions of regular rhythm and harmony as they record and manipulate sound to sculpt it into original musical works. The lecture portion combines an historical overview of electronic music, rudiments of acoustics and musical perception, and instruction in compositional techniques and in using computers as creative musical tools. The laboratory portion, given at the Digital Media Center, serves as a workshop for creative exploration and for the completion of assigned creative projects including original works of digital sound art.
Area: Humanities

AS.376.252. Jazz History. 3 Credits.
Survey, investigation, and study of Jazz music and how it shaped American history from its origins to current times.
Area: Humanities

AS.376.258. Jazz Improvisation and Theory. 3 Credits.
The primary focus of this performance/theory course is designed to help students acquire and develop basic language for improvisation in a collaborative environment. Throughout the semester, the course will develop these skills through songs drawn from standard jazz repertoire, examining improvised solos by master musicians, and understanding the application of fundamental theory concepts in performance situations. Enrolled students should be comfortable with theory rudiments such as note reading, scales, and intervals. No textbook is required, but students should have access to an instrument (singers are welcome).
Area: Humanities

AS.376.259. Theory of 20th Century Popular Song. 3 Credits.
This class will explore the way harmonic concepts codified in the western classical tradition over the last few centuries are represented and expanded upon in 20th and 21st century popular music. We will examine a number of harmonic techniques using a wide array of genres, ranging from jazz to Broadway to rock to pop to R&B/soul to hip-hop. This course will focus on listening, analysis, and composition techniques.
Area: Humanities

AS.376.303. Musical Theater from Aristophanes to Leonard Bernstein. 3 Credits.
This course examines the birth of musical theatre from Greek tragedy through the liturgical and secular plays of the middle ages and Renaissance, to the classical and romantic singspiels, operettas, and zarzuelas of the modern era, by such figures as Aristophanes, Adam de la Halle, Hildegard of Bingen, Angelo Poliziano, Juan del Encina, Wolfgang Amadeus Mozart, Gilbert and Sullivan, Ernesto Lecuona, Igor Strawinsky, and Kurt Weill. These will serve as a backdrop for a closer examination of the musicals of Jerome Kern, Cole Porter, George Gershwin, Irving Berlin, Richard Rodgers, Harold Arlen, Frank Loesser, Leonard Bernstein and others. In addition to studying and placing the works of these Broadway giants into a social, political, and economic context, we will study and perform from representative musicals and attend a performance at the Lyric Theatre. Student will be expected to write a capstone project.
Area: Humanities
Writing Intensive

AS.376.304. Voice and Contest: Historical Approaches to Singing Competitions. 3 Credits.
This course examines voice contests across time. While contests such as American Idol have received widespread attention, these competitions must be understood in terms of a much broader trend towards the proliferation of music prizes, both within and outside the so-called classical music tradition. Our course examines the deep history of the current obsession with voice contests, with examples drawn from the medieval period to the current day.
Area: Humanities, Social and Behavioral Sciences

AS.376.305. Operatic Technologies. 3 Credits.
Operatic Technologies offers an introduction to opera via a series of case studies about the materials used to produce it. With a particular focus on the Italian case, we will trace issues such as how auditoriums have historically been illuminated; orchestras directed; machines used to create and sustain illusion and operas simulcast. Students will leave this course with a clear sense of how the look and feel of the operatic experience has changed over time; how technological practices established in the past continue to determine productions now, and how the cinema can be considered an extension of opera. Our course includes a visit to the cinema to see a Metropolitan Opera simulcast. Ability to read music is not required.
Area: Humanities
Writing Intensive

AS.376.330. History of Opera. 3 Credits.
A basic course in the origin and development of opera and its dissemination throughout the Western world.
Area: Humanities

AS.376.332. Arranging for vocal ensembles. 3 Credits.
Students will learn how to arrange pre-existing melodies or songs for various vocal ensembles. Music theory I as a prerequisite recommended but not required.
Area: Humanities

AS.376.334. World Music & Cultures. 3 Credits.
A study of world musics and cultural contexts.
Area: Humanities
AS.376.336. Beethoven and the Transformation of Musical Style. 3 Credits.
A survey course focusing on the life and music of Ludwig van Beethoven, whose compositions transformed and revolutionized music of the 19th century. Students will become acquainted with Beethoven's major works, including piano sonatas, string quartets, and symphonies. No previous musical background is necessary. NOTE: The year 2020 marks the 250th anniversary of Beethoven's birth.
Area: Humanities

AS.376.342. Caribbean Music. 3 Credits.
This course will explore several genres of traditional and popular music from the Caribbean, including Trinidad and Tobago, Jamaica, Haiti, Cuba, the Dominican Republic, and Puerto Rico. We will examine the social, political, and economic issues that have shaped these musics, with migration, colonization, race, and tourism especially informing our studies. Students will read about a variety of musical experiences and listen to representative examples of each music genre in order to think critically about music, culture, and performance in Caribbean contexts.
Area: Humanities

AS.376.344. Powerful Women in Opera. 3 Credits.
Many opera scholars have noted that opera abuses its female characters. Many operatic heroines die, whether from violent acts or chronic diseases. However, women in opera also wield great power through their voices as ambitious queens, cunning servants, magical beings, and femmes fatales. In this class we will examine how these female characters operate through explorations of the operas' historical context, their texts and scores, and modern performance practice. Spanning from the 17th to 21st centuries, the repertoire studied in this class will provide an introduction to opera history. At the same time, we will delve deeply into different ways to do close analyses of opera through the lens of gender, reading the work of such thinkers as Carolyn Abbate, Naomi Andre, Adriana Caverero, Catherine Clément, and Wayne Koestenbaum.
Area: Humanities

AS.376.348. The Symphonic Century. 3 Credits.
The symphony occupies a prominent place within the history of Western classical music in the "long" nineteenth century. At once a canvas for daring innovations in style and form and a genre strongly allied with notions of "tradition," the nineteenth-century symphony brings together a complex set of issues that illuminate the broader history of music and musical culture of the past 200 years. This course introduces the iconic works of the symphonic tradition, with a focus on music of Haydn, Mozart, Beethoven, Schubert, Berlioz, Schumann, Mendelssohn, Brahms, Bruckner, and Mahler. As we aim to discover what made this music so remarkable in its time and why so many people still care about it today, we will consider each symphony both as a timeless work of art and as a particular moment in cultural history. Close attention will be given to the techniques of musical listening, and our work will be deeply rooted within the historical, philosophical, and political contexts of the time. There are no pre-requisites for the course apart from a willingness to open one's ears and to engage creatively and critically with some of the most extraordinary music ever written.
Area: Humanities

AS.376.371. Introduction to Music Cognition. 3 Credits.
What underlies our aesthetic response to music? How and why are we able to identify certain sounds as music? To what extent are music and natural language similar? What is it about music that evokes such powerful emotions such as happiness and sadness? What is unique to musical creativity? Examining such questions from cognitive science, neuroscience, psychology, and philosophical perspectives, this course explores relevant research and theory in the emerging domain of music perception and cognition. Students will complete a final research paper on the topic of their choice that integrates the course material.
Area: Natural Sciences, Social and Behavioral Sciences

AS.376.372. Topics in Music Cognition. 3 Credits.
This course explores the similarities and differences between music and language, the effects of musical training on cognitive development, and the expressive power of music, with an introduction to music and its role in film. We will read relevant research and theory on these topics from cognitive science, neuroscience, psychology, musicology, and philosophical perspectives.
Area: Natural Sciences, Social and Behavioral Sciences

AS.376.404. History of Musical Instruments. 3 Credits.
The history, technology, and performance of Western European musical instruments, their precursors, and their non-western counterparts, addressed by experts and explored on visits to historic collections. Recommended prerequisite: AS.376.231 'Western Classical Music'.
Area: Humanities
Writing Intensive

AS.376.407. Music and Evolution. 3 Credits.
This course will examine the bi-cultural evolution of music in light of recent interdisciplinary research on the social bases of human cognitive evolution, and explore its implications for current debates in musicology, ethno-musicology, psychology of music, and human cognitive evolution.
Area: Humanities
Writing Intensive

AS.376.428. Mozart Operas. 3 Credits.
Wolfgang Amadeus Mozart wrote his first opera in 1767 at the age of 11. By the time of his death at age 35, he had written 22 full-length operas. Many of these operas are still performed today in opera houses around the world. In this course, we will discuss the enduring popularity of these works. We will discover how these operas were created, delving into the many important collaborations Mozart had with singers, librettists, impresarios, and patrons. We will analyze the words and music of the operas and how they combine to create three-dimensional characters for which his operas are known, such as the melancholy but determined Countess in The Marriage of Figaro, or the cowardly but loyal Papageno in The Magic Flute. Cultural norms have shifted dramatically between Mozart's time and ours, and we will examine how Mozart's operas have been received from their premieres through to today. We will think about how the operas have been translated, adapted, and circulated to different audiences in different eras and locations. Finally, we will reflect on our position as modern audience members, watching recent productions of the operas which reinterpret the works in alternative settings or times and studying the ways in which opera companies promote Mozart's works.
Area: Humanities
Writing Intensive
AS.389 (PROGRAM IN MUSEUMS AND SOCIETY)

AS.389.155. The History of Fake News from The Flood to The Apocalypse. 3 Credits.
"Fake News" is everywhere in both past and present. Explore that history first-hand through JHU's rare book collection of literary and historical forgeries spanning millennia of human history. Students learn how to examine and investigate rare books.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Crosslisted with Archaeology, History, History of Art, International Studies and Medicine, Science & Humanities.
Area: Humanities, Social and Behavioral Sciences

AS.389.202. Introduction to the Museum: Issues and Ideas. 3 Credits.
Museums face practical, political and ethical challenges, including economic difficulties, debates over interpretation of culture and pressure to demonstrate social value. This course considers how museums are answering these challenges. Extra time is to allow for field trip travel - most days class runs 1:30-3:50
Area: Humanities, Social and Behavioral Sciences

AS.389.205. Examining Archaeological Objects. 3 Credits.
We examine the Johns Hopkins Archaeological Museum collection to learn the materials and techniques utilized in the ancient world to produce objects in ceramics, stone, metal, glass, faience, bone and ivory.
Area: Humanities

AS.389.230. Queer & Trans Public History. 3 Credits.
This course introduces students to a blend of public history, queer studies and transgender studies. Students learn oral history and archival research methods as they draw on and contribute to the university's archival, museum, and library collections.
Area: Humanities, Social and Behavioral Sciences

AS.389.240. Archaeological Museum Practicum: Collections Management. 3 Credits.
Students will learn current procedures for surveying, cataloguing, documenting and rehousing collections using objects from the Archaeological Museum. This is a hands-on practicum course working closely with museum staff.
Area: Humanities, Social and Behavioral Sciences

AS.389.242. Museum Education: From Contested Knowledge to Reflective Narrative. 3 Credits.
This practicum course critically considers current art and history museum education practices and explores social justice discourses through museum visits, visitor studies, and museum learning strategies.
Area: Humanities, Social and Behavioral Sciences

AS.389.250. Conservation of Material Culture: Art, Artifacts and Heritage Sites. 3 Credits.
This course will introduce students to the field of art conservation through the study of paintings, paper, books, objects, contemporary sculpture and historic preservation. Topics covered will include: methods of manufacture, agents of deterioration, preservation initiatives, conservation treatment and ethics, and conservation science. Cross-listed with History of Art. Class usually meets at 1:30 - 3:50 PM, except for days with field trips.
Area: Humanities

AS.389.275. Interpreting Hopkins as Historic Site. 3 Credits.
This hands-on course explores interpretive strategies for historic sites and culminates in the production of original, research-based, outdoor interpretive exhibits on the Homewood Campus.
Area: Humanities, Social and Behavioral Sciences

AS.389.303. World of Things. 3 Credits.
The course introduces and applies new concepts about materials, and materiality to museum objects. It treats the museum as a site for investigating the relationship between people and things.

AS.389.311. From Treasure House to Production House: Exploring New Roles for the Museum in the 21st Century. 3 Credits.
Students work with the Director of, the Peale Center for Baltimore History and Architecture as it reinvents itself as a museum for the twenty-first century. Involves working with community story-tellers in residence. Extra time is to allow for field trip travel - most days class runs 1:30-3:50.
Area: Humanities, Social and Behavioral Sciences

AS.389.315. Ancient Color: The Technologies and Meanings of Color in Antiquity. 3 Credits.
What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum.
Area: Humanities, Social and Behavioral Sciences

AS.389.322. Tigers to Teapots: Collecting, Cataloging, and Hoarding in America. 3 Credits.
Course will examine the collecting behavior of Americans. Students will explore how collectors have defined the holdings of the nation's museums, galleries, and libraries and used objects to shape taste and status in the U.S.
Area: Humanities, Social and Behavioral Sciences

AS.389.325. Women of the Book: Female Mystics, Miracles, and Material Culture in Early Modern Europe. 3 Credits.
Students will study and assess JHU's new, unparalleled rare book and manuscript collection about the spiritual lives of women at the crossroads of religious mysticism, miracles, and material culture, 1450-1800.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.389.329. Author/Canon/Archive. 3 Credits.
Why are some literary works from the past reprinted, anthologized, and considered worthy of study, but not others? Why are some works "lost" and some "rediscovered," while others simply fall out of favor? Focusing on nineteenth- and early twentieth-century American literary culture, we will use rare books and archival materials from JHU collections to examine Edgar Allan Poe, Walt Whitman, Emily Dickinson, Stephen Crane, Charles Chesnutt, and Zora Neale Hurston, along with a few authors you've never heard of, in terms of the relationship between authorship, stewardship, and status.
Area: Humanities, Social and Behavioral Sciences

AS.389.336. Heritage at Work. 3 Credits.
Working with the Catoctin Furnace historic site, students will gain hands-on experience connecting archaeology with interpretive exhibitions, public outreach, and community engagement. Several field trips to Catoctin required. M&S practicum course.
Area: Humanities, Social and Behavioral Sciences

AS.389.340. Critical Issues in Art Conservation. 3 Credits.
The course examines recent controversies in the conservation of major global art works and sites, raising questions concerning the basic theoretical assumptions, practical methods and ethical implications of art conservation. Cross-listed with History of Art and Anthropology
Area: Humanities

AS.389.343. Edgar Allan Poe and His Afterlives. 3 Credits.
We will investigate the creative development and iconic afterlife of a canonical American author, Edgar Allan Poe, as a case-study in literary legacy and cultural heritage. What is the lifespan of a literary work, and how do works "stay alive" for later generations? Students will examine rare Poe materials and create a digital exhibition of Poe archives.
Area: Humanities, Social and Behavioral Sciences

AS.389.346. Scribbling Women in the Literary Archive. 3 Credits.
Students examine select texts and archival materials related to Emily Dickinson, Frances Ellen Watkins Harper, Edith Wharton, Ida B. Wells, Charlotte Perkins Gilman, Sui Sin Far, Alice Duer Miller, and Zora Neale Hurston. Students interrogate how these writers navigated the constraints of gender, as informed by race and class, in the decades before and after the 19th Amendment and consider literary collecting in relation to gendered cultural politics.
Area: Humanities, Social and Behavioral Sciences

AS.389.349. Art, Museums and the Law. 3 Credits.
This course will introduce and examine the legal systems that structure and guide museums' management of collections and relationships with artists, employees, the public, the state, and the international community.
Area: Humanities

In 1857 Baltimore's historic George Peabody Library was born, one of America's first public libraries. This course studies its history, rare book collections, and foundational role in Baltimore's cultural history.
Area: Humanities, Social and Behavioral Sciences

AS.389.356. Halls of Wonder: Art, Science, and Literature in the Age of the Marvelous, 1500-1800. 3 Credits.
Area: Humanities

AS.389.357. Heaven on Earth: Art, Power, and Wonder in the Vatican from Antiquity to the Enlightenment. 3 Credits.
A material cultural exploration of the Vatican from the founding of St. Peter's basilica in antiquity to the establishment of the Vatican Library and Museums in the Renaissance and Enlightenment.
Area: Humanities

AS.389.358. Collecting the Contemporary. 3 Credits.
What does it mean to be a collector? Students will visit private collections of contemporary art in Baltimore, learning from collectors and their objects. This course alternates seminar meetings, focused on theories and practices of collecting, with field trips. Cross-listed with History of Art.
Area: Humanities, Social and Behavioral Sciences

AS.389.359. Modernist Networks in the Archive. 3 Credits.
This class examines three American writers who built important and enduring networks, Ezra Pound, Gertrude Stein, and Langston Hughes. We will investigate the artefactual traces of their networks through recently acquired special collections materials and digital representations, in order to address questions about aesthetics and style, politics and power, race and gender, and what is and is not present in the literary archive.
Area: Humanities

AS.389.372. Zoos as Community Institutions. 3 Credits.
This course examines zoos and living collections from historical and contemporary perspectives, taking into account the potentially conflicting role of zoos as conservation organizations, educational institutions, and entertainment venues. The class culminates in the creation of conservation education content for Baltimore City elementary school children. M&S practicum course.
Area: Humanities

AS.389.373. Encountering American Art. 4 Credits.
Students investigate the Baltimore Museum of Art's American art collection and its presentation to the public alongside current scholarship on American art to develop strategies for a new permanent collection display that aligns with the museum's commitment to artistic excellence and social equity. M&S Practicum. Co-taught with BMA curator Virginia Anderson.
Area: Humanities, Social and Behavioral Sciences

AS.389.374. Museum Lab: Creating Participatory Spaces at the Baltimore Museum of Industry. 3 Credits.
Where are visitor voices and perspectives in museums? Using contemporary scholarship, philosophical frameworks, and practical approaches, we tackle this question for an interactive exhibition at the Baltimore Museum of Industry. Approximately half of the class meetings will take place off campus at the museum. Transportation provided. Class usually meets 1:30-3:50. M&S practicum course; CBL course.
Area: Humanities, Social and Behavioral Sciences
AS.389.375. Museums and Social Responsibility. 3 Credits.
Do museums have a social responsibility? What roles should they play in their communities? Should they be agents of social change or social justice? This course explores the ways in which museums engage with local communities. Students work in partnership with a specific museum to develop an original and fundable proposal that attends to its social responsibility. Field trips and guest speakers will be a key feature of this course. M&S practicum course. CBL course. Cross-listed with Sociology. Responsibility. Field trips and guest speakers will be a key feature of this course. M&Spracticum course. CBL course. Cross-listed with Sociology.
Area: Humanities

AS.389.376. Enslaved at Homewood: Slavery in 19th Century Maryland. 3 Credits.
Students consider the representation of slavery in historic house museums of the late 20th century through the present, and use the university’s Homewood Museum as a laboratory for the development, production and mounting of an exhibit about the men, women and children who labored at Homewood in the nineteenth century. Museums and Society Practicum course.
Area: Humanities, Social and Behavioral Sciences

AS.389.377. Black Artists in American Art Museums: Correcting the Canon. 3 Credits.
Students are invited to examine critically the history of Black artists exhibiting within American museums. With the help of BMA staff, class will develop interpretation for an installation to accompany a major retrospective of artist Jack Whitten that considers the “canon” of art history as a site of ongoing negotiation between taste-makers, artists, dealers, and critics, as well as art institutions that include the market and the museum. Students will take advantage of archives at the BMA, the Library of Congress and Howard University. Students will help select the artworks and themes for the show; research individual participants in the social networks that facilitated the success of some artists over others; and research the biographies of individual artworks – some that have entered the canon and some that should. M&S Practicum. CBL Course. Cross-listed with Africana Studies.
Area: Humanities, Social and Behavioral Sciences

AS.389.378. Collections Remix. 3 Credits.
The course invites students to mine the archival, literary and cultural collections of the university for materials that reflect African-American experiences and stage campus interventions based on their findings. Participates in the Housing Our Story: Archival Justice for Black Baltimore project. M&S Practicum.
Area: Humanities, Social and Behavioral Sciences

AS.389.379. Interpreting Historic Sites for the 21st Century. 3 Credits.
Students go behind the scenes at JHU’s own Evergreen Museum and Library to investigate how historic sites design spaces for learning, community engagement, leisure, as well as for exhibitions and special events. Students consider the history of Evergreen and its inhabitants and create concepts for how to engage communities in that history and story. Multiple class meetings take place at the Evergreen Museum.
Area: Humanities, Social and Behavioral Sciences

AS.389.384. Object Encounters at the Baltimore Museum of Art. 3 Credits.
Using the Baltimore Museum of Art as a laboratory, students examine canonical narratives in art museums and iterate new approaches to objects in museums that build equity, interrogate privilege, decolonise, revitalise and offer alternative stories. Class meets at the museum every other week.
Area: Humanities, Social and Behavioral Sciences

AS.389.385. Islamic Art in the 21st Century Museum. 3 Credits.
What narratives about Islam and Islamic art does the visitor encounter at the museum? Recent re-installations of Islamic art will be studied in the context of current issues, including Islamophobia, attacks on cultural heritage, and hesitation in addressing matters of faith in public institutions. Cross-listed with History of Art and Islamic Studies.
Area: Humanities, Social and Behavioral Sciences

AS.389.410. Sharing Knowledge: Participatory Archives, Collaborative Storytelling, and Social Justice. 3 Credits.
This course introduces students to collaborative humanities projects that encourage democratic participation among publics more broadly conceived than the academy. We investigate Indigenous research methods; collaborative oral history and ethnography; interactive theater; and community archives. Final projects draw on the university’s archival, museum, and library collections.
Area: Humanities, Social and Behavioral Sciences

AS.389.420. Curatorial Seminar. 4 Credits.
In collaboration with a local museum, conceptualize and develop an exhibition, potentially including but not limited to: checklists, exhibition texts, interpretive strategies, and programming. Exhibition theme varies year to year. Concepts, ethics and practicalities of curation are key concerns. Research visits to regional museums and private collections as relevant.
Area: Humanities, Social and Behavioral Sciences

AS.389.440. Who Owns Culture?. 3 Credits.
This seminar explores the complicated, often explosive concept of cultural property, including questions surrounding the ownership, preservation, and interpretation of artifacts, monuments, heritage sites, and living traditions. Cross-listed with Anthropology and History of Art.
Area: Humanities, Social and Behavioral Sciences

AS.389.501. Independent Study - Museums & Society. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.389.502. Independent Study - Museums and Society. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.389.521. Capstone in Museums and Society. 1 - 3 Credits.
The Capstone allows students to develop and carry out their own, hands-on research project in a museum, collection, archive, or other living resource. Final projects must involve some form of public presentation (exhibition, lecture, poster, web-based, etc.) and a work of self-reflection (journal, brief paper, blog, or other). Projects must be approved and overseen by a supervising faculty member and approved by the Program’s Director, in keeping with the University’s Independent Work Policy. Instructor permission required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
AS.389.522. **Capstone in Museum and Society. 1 - 3 Credits.**
The Capstone allows students to develop and carry out their own, hands-on research project in a museum, collection, archive, or other living resource. Final projects must involve some form of public presentation (exhibition, poster, web-based, etc.) and a work of self-reflection (journal, brief paper, blog, or other). Projects must be approved and overseen by a supervising faculty member and approved by the Program's Director, in keeping with the University's Independent Work Policy.

**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.; AS.389.201; AS.389.202

AS.389.599. **Museum & Society Internship. 1 Credit.**

**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.410 (BIOTECHNOLOGY)

AS.410.011. Managing the Medical School Portfolio. 4 Credits.
This year-long course leads students through a series of topics and exercises designed to identify strengths and weaknesses, develop a plan to cultivate skills and ultimately prepare a successful medical school portfolio. To be eligible for this course, students must be officially accepted and enrolled in the MS Biotechnology concentration in Health Science Intensive Program. You must sign up for this course each semester it is required.

AS.410.302. Bio-Organic Chemistry. 4 Credits.
This course provides a foundation in structural organic chemistry, acid-base chemistry, chemical thermodynamics, and reaction mechanisms. Subjects include Lewis structures, atomic and hybridized orbitals, stereochemistry, inter- and intramolecular forces of attraction, nucleophilic reaction mechanisms, functional groups, and the organic chemistry of biological molecules. Please note that this course does not count toward requirements for the master’s degree in biotechnology. Prerequisite: two semesters of college chemistry.

AS.410.303. Foundations in Bioscience. 4 Credits.
This course examines the fundamental underlying scientific concepts utilized in the creation and development of biomedical products. Topics to be covered include the structure and function of biomolecules, such as proteins, enzymes, carbohydrates, lipids, and DNA, as well as the structure and function of cellular components, such as membranes, vesicles, organelles, and the cytoskeleton. In addition, students will examine the complexities of metabolism, DNA replication, transcription, translation, signal transduction mechanisms, apoptosis, the cell cycle, and cancer. Please note that this course does not count toward requirements for the master’s degree in either biotechnology or regulatory science and is required as a prerequisite course for some students entering the Master of Science in Regulatory Science. Pre-requisites: one year of college chemistry and one year of college biology or permission of program director.

AS.410.601. Biochemistry. 4 Credits.
This course explores the roles of essential biological molecules, focusing on protein chemistry while also covering lipids and carbohydrates. It provides a systematic and methodical application of general and organic chemistry principles. Students examine the structure of proteins, their function, their binding to other molecules, and the methodologies for the purification and characterization of proteins. Enzymes and their kinetics and mechanisms are covered in detail. Metabolic pathways are examined from thermodynamic and regulatory perspectives. This course provides the linkage between the inanimate world of chemistry and the living world of biology.

AS.410.602. Molecular Biology. 4 Credits.
This course provides a comprehensive overview of the key concepts in molecular biology. Topics to be covered include nucleic acid structure and function, DNA replication, transcription, translation, chromosome structure, and the remodeling and regulation of gene expression in prokaryotes and eukaryotes. Extended topics to be covered include methods in recombinant DNA technology, microarrays, and microRNA.

AS.410.603. Advanced Cell Biology I. 4 Credits.
This course covers cell organization and subcellular structure. Students examine the evolution of the cell, chromosome, and plasma membrane structures and behaviors, as well as the mechanics of cell division, sites of macromolecular synthesis and processing, transport across cell membranes, cell dynamics, organelle biogenesis, and cell specialization. Students are also introduced to the experimental techniques used in cell biology to study cell growth, manipulation, and evaluation.

AS.410.604. Advanced Cell Biology II. 4 Credits.
This course is a continuation of 410.603 Advanced Cell Biology and further explores cell organization and subcellular structure. Students examine cell-to-cell signaling that involves hormones and receptors, signal transduction pathways, second messenger molecules, cell adhesion, extracellular matrix, cell cycle, programmed cell death, methylation of DNA, modification of chromatin structure, and mechanisms of the cell. The roles that defects in signal transduction pathways play in the development of cancer and other disease states will be stressed. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I.

AS.410.605. Life Science Entrepreneurial Ventures. 4 Credits.
This course focuses on the knowledge, skills, and attitudes that enable entrepreneurs to pursue opportunities in life sciences. Students form teams to experience each step of the entrepreneurial process. The end result is an opportunity assessment of a business idea and the opportunity to pitch the opportunity to an active Venture Capital firm. Emphasis is placed on a hands-on approach with learning supplemented by cases appropriate to each phase of the course. Entrepreneurs and subject experts provide students with an experiential and in-depth examination of the challenges involved in identifying and assessing an opportunity for an entrepreneurial venture, whether in business-to-business or business-to-consumer settings. By entrepreneurial, we refer to those ventures that are high risk/high reward, capital intensive, scalable, and attractive targets for at-risk capital investment. The course's focus is specific to Life Sciences, including biotherapeutics, medical devices, diagnostics, health care information technology (HCIT) and digital health.

AS.410.607. Proseminar in Biotechnology. 4 Credits.
The Biotechnology Proseminar introduces students to issues and challenges facing leaders of public and private-sector organizations as well as 10 communities seeking to achieve shared goals within the biotechnology industry. The course brings together diverse academic, science, and business disciplines (science, regulatory affairs, marketing, finance, legal, ethics, communications, etc.). It explores how these disciplines can be used as powerful tools to create effective leadership and productive collaborations within the industry while improving managerial decision-making.
AS.410.608. Neurological Disease. 4 Credits.
Knowledge about neuronal structure, function, and circuitry will be applied in order to understand the genetic and molecular bases of a wide variety of diseases that affect the central and/or peripheral nervous systems. This course will incorporate explorations of the recent primary literature, as it relates to specific disease pathologies and treatments, and innovative research tools used in their study. The particular pathologies covered will vary by semester, but will include some of the following: brain/spinal cord injury, epilepsy, stroke, multiple sclerosis, Parkinson's disease, Alzheimer's disease, schizophrenia, depression/bipolar disorder, amyotrophic lateral sclerosis, Huntington's disease, infectious disease, prion-based disease, addiction, autism spectrum disorder, and disorders of neural development. This course is a natural continuation of, and builds upon the foundations provided in, the Neurobiology course. Prerequisites: All four core courses; 410.628 Neurobiology.

AS.410.610. Epigenetics, Gene Organization & Expression. 4 Credits.
Students use genetic analysis and molecular biology techniques to investigate chromosome organization, chromatin function, epigenomics, and mechanisms of differential gene expression. Other topics include DNA methylation, silencers, enhancers, genomic imprinting, and microarray analysis. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology. S
Area: A, A, P

AS.410.611. Vaccinology. 4 Credits.
This course will cover the biological development of vaccines as well as the immunologic concepts and methods for vaccine delivery. Specific topics include new technologies for vaccine development, such as DNA vaccines, recombinant mucosal vaccines, dendritic cells for antigen delivery, novel adjuvants, and methods to increase vaccine stability. Both time-tested and new vaccine delivery systems, such as lipid-based systems, needle-free injection systems, and the use of genetically modified foods, will be discussed. The underlying biological role of the innate and adaptive immune systems will be explored in light of new types of vaccines and delivery systems. Finally, the process of bringing vaccines to market will be covered, including government oversight and licensure. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I. 410.613 Principles of Immunology, or undergraduate immunology course.

AS.410.612. Human Molecular Genetics. 4 Credits.
In this course, students learn to use the tools of modern genomics to elucidate phenotypic variation within populations. The course uses human disease (from simple Mendelian disorders to common, complex disorders) to exemplify the types of studies and tools that can be used to characterize cellular pathophysiology as well as to provide genetic diagnostics and therapies. Students become facile with linkage analysis, cancer genetics, microarray analysis (oligo and DNA arrays), gene therapy, SNP studies, imprinting, dissequilibrium mapping, and ethical dilemmas associated with the Human Genome Project. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology. S

AS.410.613. Principles of Immunology. 4 Credits.
This course covers molecular and cellular immunology. Topics include innate immunity, adaptive immunity, the development and function of B cell and T cell antigen receptors, the major histocompatibility complexes, innate effector mechanisms, humoral and cellular immune responses, and regulation of immune responses. Special topics include immunomodulation, immunodeficiency diseases, autoimmune evasion and subversion of the immune system by pathogens, immunotherapies, and vaccines. Students are also introduced to the applied aspects of immunology, which include protein and cellular-based immunoassays. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I.

AS.410.614. Pathogenic Bacteriology. 4 Credits.
Lecture and discussion are augmented by guided readings on pathogenic bacteria, with special attention being given to the microorganisms that cause human disease. The course is designed to impart to the student an appreciation and knowledge of the history, epidemiology, cultivation, morphology, serology, biochemistry, and clinical description of the major disease-producing bacteria. Discussion of therapeutic considerations and vaccination will also be included in this course. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, undergraduate microbiology course, or permission of program committee.

AS.410.615. Microbiology. 4 Credits.
This course is an overview of microorganisms important to clinical diseases and biotechnology. Students are introduced to the general concepts concerning the morphology, genetics, and reproduction of these microbial agents. Lectures focus on individual organisms, with emphasis on infectious diseases, biotechnology applications, and biochemical characteristics, and molecular and serological identification methods. Students will also discuss the impact that biotechnology, particularly genomics, will have on the development of antibiotics and vaccines as treatments and preventive measures. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I.

AS.410.616. Virology. 4 Credits.
This course covers the advanced study of viruses with regard to the basic, biochemical, molecular, epidemiological, clinical, and biotechnological aspects of animal viruses primarily, and bacteriophage, plant viruses, viroid’s, prions, and unconventional agents secondarily. Specific areas of virology, including viral structure and assembly, viral replication, viral recombination and evolution, virus-host interactions, viral transformation, gene therapy, antiviral drugs, and vaccines, are presented. The major animal virus families are discussed individually with respect to classification, genomic structure, viroid structure, virus cycle, pathogenesis, clinical features, epidemiology, immunity, and control. The viral vectors and their application in biotechnology are discussed. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I.

AS.410.618. Parasitology. 4 Credits.
The field of parasitology is immense. It covers a plethora of organisms and a multitude of disciplines. This course focuses on the parasites of medical importance that cause human morbidity and mortality throughout the world. It also introduces the student to the general aspects of parasitology. The developmental biology, natural history, and cell and molecular biology of the major eukaryotic parasites will be discussed. Also, the fundamental mechanisms of host-parasite relationships, diagnosis, pathogenesis, epidemiology, and control strategies will be emphasized. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I.
AS.410.620. Advanced Topics in Immunology. 4 Credits.
This course integrates and expands concepts learned in an introductory immunology course. Students will be presented with advanced topics in immunology through literature reviews, clinical case studies, and basic science and clinical research papers. Students will also receive support from leading-edge webinars. Topic areas may include, but are not limited to: a cellular and cellular innate immunity, adaptive immunity, immune regulation, autoimmunity, immunosuppression, inflammation, neuroimmunology, immunobiology of pregnancy, immunogenomics, tumor immunology, standard and developing therapies for immunopathologies, and immunotherapies. Students will also be introduced to immunological tests used for disease screening and diagnoses. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cellular Biology I, and 410.613 Principles of Immunology or an undergraduate immunology course.

AS.410.621. Agricultural Biotechnology. 4 Credits.
This course is designed to provide an introduction to the application of recombinant DNA technology in agriculture. We will study methods for the introduction of foreign DNA into plant and animal cells and the generation of stably transformed plants and animals. We will discuss specific examples of the use of transgenic plants and animals in biotechnology, which can provide protection against insects, diseases, and tolerance to specific herbicides. We will also investigate how recombinant growth hormones can result in leaner meat, greater milk yield, and better feed utilization, as well as how transgenic plants and animals can serve as bioreactors for the production of medicinals or protein pharmaceuticals. Because recombinant agricultural products are released into the environment or consumed as foods, we will also discuss environmental safety issues. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I.

AS.410.622. Molecular Basis of Pharmacology. 4 Credits.
This course begins by reviewing receptor binding and enzyme kinetics. Various cellular receptors and their physiology are discussed, as are the pharmacological agents used to define and affect the receptor's function. Students study the pharmacology of cell surface receptors and intracellular receptors. Also considered are the drugs that affect enzymes. Prerequisites: All four core courses.

AS.410.627. Translational Biotechnology: From Intellectual Property to Licensing. 4 Credits.
This course provides an extensive overview of a process for the development of a pharmaceutical by a biotechnology company or pharmaceutical company. The course emphasizes the importance of intellectual property, the basic sciences underpinning the development of a product, and the importance of the interaction between a company and the Food and Drug Administration. Students learn to appreciate the importance of quality control and assurance, good manufacturing practices, preclinical and clinical testing, and the lengthy regulatory processes that govern the development, manufacturing, and eventual sale of biotechnological products. Hands-on solving of practical problems and guest lecturers who are experts in the field familiarize students with the intricacies of the process. Prerequisites: 410.303 Bioscience for Regulatory Affairs, OR 410.601 Biochemistry and 410.603 Advanced Cell Biology I or admission to the MS in Regulatory Science OR Master of Biotechnology Enterprise and Entrepreneurship programs.

AS.410.628. Neurobiology. 4 Credits.
This course provides a framework for understanding the molecular physiology of neuronal structure, signaling, and circuitry, and how this cellular design is ultimately integrated to achieve higher cognitive functions, such as perception, control of movement, learning, and memory. The course introduces the students to various current neuroscience topics, including but not limited to membrane physiology and electrical excitability of neurons, neurotransmitters and synaptic transmission, and the neuromuscular junction. Students will also be introduced to higher-order aspects of perception and motor control, molecular mechanisms of neural development, and the molecular basis of learning and memory. This course places particular emphasis on the genetic and molecular bases of a wide variety of neurological and neurodegenerative diseases, such as multiple sclerosis, amyotrophic lateral sclerosis, Parkinson's, and Alzheimer's. Prerequisites: All four core courses.

AS.410.629. Genes & Disease. 4 Credits.
Because of recent advances, powerful diagnostic tests now detect genetic diseases, and there is promise of gene replacement therapy. In this course, students cover general genetic principles, DNA tools for genetic analysis, cytogenetics, gene mapping, the molecular basis of genetic diseases, animal models, immunogenetics, genetics of development, genetics of cancer, and treatment of genetic diseases. Molecular methods of analysis are emphasized. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I.

AS.410.630. Gene Therapy. 4 Credits.
In this course, students learn about how gene therapy can be used to treat or prevent genetic disease in the human population. This course is centered around how disease-causing variations in the human genome, including inherited diseases, mutations, epigenetic modifications, and viral infections, can be targeted using molecular technologies. Students will learn about the benefits and limitations of gene therapy as well as about the bioethical concerns involved with this field of research and medicine. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Cell Biology I.

AS.410.631. Infectious Diseases. 4 Credits.
This course focuses on infectious diseases of mankind and is presented in a system-by-system format. Basic principles of host defense and microbial virulence will be discussed. Practical, up-to-date information on the clinical presentation, symptoms, physical findings, laboratory diagnosis, treatment, and prevention of the general array of diseases caused by bacteria and viruses will be presented. The use of antibiotics, prophylactic agents, and vaccines, along with selected aspects pathogenesis and epidemiology, will be covered. More cursory coverage will be given to the fungal and parasitic agents of human disease. The student will develop a broad understanding of the many different kinds of infectious processes to which our bodies are subjected to on an ongoing basis. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I.
AS.410.632. Emerging Infectious Diseases. 4 Credits.
This course focuses on emerging infectious diseases from many different perspectives. The maladies addressed range from diseases that have reappeared in altered genetic forms, such as the influenza virus and West Nile virus, to the lethal hemorrhagic fever caused by the Ebola virus. Also discussed is the threat of recombinant and ancient infectious agents, such as Bacillus anthracis, the causative agent of anthrax, which can be used in biological warfare weapons. Opinions from noted scientists and leaders concerning emerging diseases and the prospects for battling them successfully provide scientific and social perspectives. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I.

AS.410.633. Introduction to Bioinformatics. 4 Credits.
This course explores the theory and practice of biological database searching and analysis. In particular, students are introduced to integrated systems where a variety of data sources are connected through internet access. Information retrieval and interpretation are discussed, and many practical examples in a computer laboratory setting enable students to improve their data mining skills. Methods included in the course are searching the biomedical literature, sequence homology searching and multiple alignment, phylogeny, gene prediction, protein sequence motif analysis and secondary structure prediction, and several genome browsing methods. Introductory analysis using the R programming language is introduced. Computer access is required. Prerequisites: 410.601 Biochemistry. Corequisite: 410.602 Molecular Biology. S

AS.410.634. Practical Computer Concepts for Bioinformatics. 4 Credits.
This course introduces students with a background in the life sciences to the basic computing concepts of the UNIX operating system, relational databases, structured programming, object-oriented programming, and the Internet. Included is an introduction to SQL and the Python scripting language. The course emphasizes relevance to molecular biology and bioinformatics. It is intended for students with no computer programming background but with a solid knowledge of molecular biology. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology.

AS.410.635. Bioinformatics: Tools for Genome Analysis. 4 Credits.
Large-scale DNA sequencing efforts have resulted in increasingly large numbers of DNA sequences being deposited in public databases. Assigning annotations, such as exon boundaries, repeat regions, and other biologically relevant information accurately in the feature tables of these sequences requires a significant amount of human intervention. This course instructs students on computer analytical methods for gene identification, promoter analysis, and introductory gene expression analysis using software methods. Additionally, students are introduced to comparative genomics and proteomic analysis methods. Students will become proficient in annotating large genomic DNA sequences. This course covers customizing genome browsers with novel data. Next-generation sequence analysis is covered through sequence quality control and assembly and analysis of ChIP-seq and RNA-seq data. Students complete two large sequence analysis projects during the course. Prerequisites: 410.601 Biochemistry; 410.602 Molecular Biology; 410.633 Introduction to Bioinformatics or equivalent.

AS.410.637. Bioethics. 4 Credits.
Students in this course analyze and discuss traditional philosophical theories regarding the nature of the moral good. They then apply these theories to critical issues and selected cases involving experiments with human subjects, organ transplantation, in vitro fertilization, the use of animals in research, the collection and publication of research data, peer review, conflicts of interest, and other topics of current concern.

AS.410.638. Cancer Biology. 4 Credits.
This course provides students with knowledge of the fundamental principles of the molecular and cellular biology of cancer cells. The course explores the role of growth factors and signal transduction mechanisms, oncogenes, tumor suppressor genes, tumor viruses, and angiogenesis in tumorigenesis and metastasis. Special topics include cancer prevention and the array of cancer therapies, which include surgery, chemotherapy, radiation therapy, hormonal therapy, stem cell transplant, and immunotherapies. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cellular Biology I, 410.604 Advanced Cell Biology II. S

AS.410.639. Protein Bioinformatics. 4 Credits.
Because the gap between the number of protein sequences and the number of protein crystal structures continues to expand, protein structural predictions are increasingly important. This course provides a working knowledge of various computer-based tools available for predicting the structure and function of proteins. Topics include protein database searching, protein physicochemical properties, secondary structure prediction, and statistical verification. Also covered are graphic visualization of the different types of three-dimensional folds and predicting 3-D structures by homology. Computer laboratories complement material presented in lectures. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.633 Introduction to Bioinformatics.

AS.410.640. Molecular Phylogenetic Techniques. 4 Credits.
This course will provide a practical, hands-on introduction to the study of phylogenetics and comparative genomics. Theoretical background on molecular evolution will be provided only as needed to inform the comparative analysis of genomic data. The emphasis of the course will be placed squarely on the understanding and use of a variety of computational tools designed to extract meaningful biological information from molecular sequences. Lectures will provide information on the conceptual essence of the algorithms that underlie various sequence analysis tools and the rationale behind their use. Only programs that are freely available as either downloadable executables or as Web servers will be used in this course. Students will be encouraged to use the programs and approaches introduced in the course to address questions relevant to their own work. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.633 Introduction to Bioinformatics.

AS.410.641. Clinical & Molecular Diagnostics. 4 Credits.
This course covers basic concepts and practical applications of modern laboratory diagnostic techniques. Topics include the principles of testing methodology, quality assurance, and the application of molecular methods to the clinical and research laboratory. The test methods to be covered include nucleic acid-based methods, such as hybridization, amplification, and sequencing, non-nucleic acid methods, such as HPLC, GLC, and protein analysis, and technologies such as PFGE, ribotyping, RFLP and serological testing methodologies. In addition to the test procedures, students are exposed to aspects of statistics, quality control, and regulatory issues, as well as applications of these methods to the diagnosis and prognosis of human disease. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology.
AS.410.642. Economic Dynamics of Change in Biotechnology. 4 Credits.
Governments around the world are beginning a long-term process that reviews and redesigns their health care systems, addressing concerns of innovation, cost, equitable access, and sustained quality of health care. As a result, health care is undergoing significant changes globally in R&D, marketing, pricing, sales, and distribution. This course helps students to understand these processes and the new business opportunities and new business models they will create. It provides some of the basics of macro and microeconomics to clarify how economic and social forces drive changes in the pharmaceutical, biotech, and genetic industry. Emphasis will be placed on the application of economics.

AS.410.643. Managing and Leading Biotechnology Professionals. 4 Credits.
The roles of managers and leaders within biotechnology companies undergo constant change. Biotechnology managers and leaders must engage in new and innovative problem-solving strategies, lead a diverse and global workforce, develop partnerships with other businesses, customers, and competitors, manage horizontally and across teams, and utilize technology to a competitive advantage. The student is able to address and cure challenges in his/her own organization and learn methods of implementing change, such as negotiation techniques and motivation. The course includes in-depth discussions of leadership skills, communication, conflict resolution, and goal integration. Students research a biotechnology organization, analyze what is working and not working within its management systems, and suggest alternatives.

AS.410.644. Marketing Aspects of Biotechnology. 4 Credits.
This course introduces students to the strategic and tactical approaches used in the marketing of biotechnological produce and services. Students gain a thorough understanding of the research and planning necessary to develop a marketing plan, the relationship between the marketing and sales functions, the difference between marketing a scientific product and a scientific service, pricing strategies, distribution alternatives, communications, promotion, and the importance of perception. Knowledge of marketing terminology and techniques proves helpful to anyone in the industry.

AS.410.645. Biostatistics. 4 Credits.
This course introduces statistical concepts and analytical methods as applied to data encountered in biotechnology and biomedical sciences. It emphasizes the basic concepts of experimental design, quantitative analysis of data, and statistical inferences. Topics include probability theory and distributions; population parameters and their sample estimates; descriptive statistics for central tendency and dispersion; hypothesis testing and confidence intervals for means, variances, and proportions; categorical data analysis; linear correlation and regression model; logistic regression; analysis of variance; and nonparametric methods. The course provides students with a foundation to which to evaluate information critically to support research objectives and product claims and a better understanding of statistical design of experimental trials for biological products/devices. Prerequisites: Basic mathematics (algebra).

AS.410.646. Creating a Biotechnology Enterprise. 4 Credits.
This course provides a foundation to start or help guide a young biotechnology company from inception through early growth. Topics include market assessment of innovative technology, patents and licensing, corporate law, preparing a business plan, raising money from angels and venture capitalists, government grants, strategic alliances, sales and marketing, real estate, human resources, and regulatory affairs. The course provides a survey and overview of the key tasks and challenges typically faced by biotech entrepreneurs, their management team, and directors. Students will prepare a business plan for a biotech startup and present the plan to a panel of industry experts and financiers. Leaders from our local bioscience community will be guest lecturers for many of the classes.

AS.410.647. Research Ethics. 4 Credits.
This course covers the basic ethical issues associated with the responsible conduct of biomedical research using animals and human subjects. Students explore ethical dilemmas and decisions central to these issues, such as the appropriate use of animals in research, misconduct in science, informed consent for human subjects, the role of institutional review boards (IRBs), authorship, data integrity, peer review, intellectual property, and biosecurity.

AS.410.648. Clinical Trial Design and Conduct. 4 Credits.
Through a case study approach, this course will cover the basic design issues of clinical trials, specifically targeting protocol, case report forms, analysis plans, and informed consent. The design of a specific trial will be studied to illustrate the major issues in the design of a study, such as endpoint definition, control group selection, and eligibility criteria. The course will also cover the analysis plan for a study, including approaches that are central to clinical trials, such as stratified analysis, adjustment factors, and “intention-to-treat” analysis. The planned analytical techniques will include the analysis of correlated data (i.e., clustered data and longitudinal data), survival analysis using the proportional hazards (Cox) Regression model, and linear models. A semester-long project will include the creation of a protocol, case report forms, and informed consent. Prerequisites: 410.645 Biostatistics or equivalent (recommended), 410.651 Clinical Development of Drugs and Biologics (recommended).

AS.410.649. Introduction to Regulatory Affairs. 4 Credits.
Regulatory affairs are comprised of the rules and regulations that govern product development and post-approval marketing. In the U.S., the FDA establishes and oversees the applicable regulations under several statutes, many regulations, and partnerships with legislators, patients, and customers. Biotechnology products may be classified as drugs, biologics, or medical devices. Each type is regulated by a different center within the FDA. This course provides an overview of RA and its effect on product development. Topics include RA history, regulatory agencies, how to access regulatory information, drug submissions, biologics submissions, medical device submissions, GLP, GCP, GMP, and FDA inspections.

AS.410.650. Legal Aspects of Biotechnology. 4 Credits.
This course is a survey of legal topics relevant to a biotech enterprise as it is established, conducts research, and brings innovative products to market. These include property, contracts, regulatory compliance, and patents. Students will be able to analyze common business situations and understand how associated legal risks are managed. Students who have taken 410.687 Ethical, Legal and Regulatory Aspects of the Biotechnology Enterprise will also benefit from this course, as they will analyze contracts, patents, and various statutes and court decisions that impact the biotechnology sector.
AS.410.651. Clinical Development of Drugs and Biologics. 4 Credits.
This course introduces students to the planning and work required to develop potential new drugs and biologics efficiently. Students gain a thorough appreciation of FDA and International Council for Harmonisation regulations and guidelines. Because the course emphasizes the importance of planning before the execution of any of the necessary steps, lectures use a “backward” approach, discussing the final analysis and report before developing protocols. Topics also include an overview of preclinical investigations, NDA/BLA format and content, clinical development plans, product and assay development, the IND, and trial design, implementation, and management. Prerequisites: 410.303 Foundations of Bioscience OR 410.601 Biochemistry and 410.603 Advanced Cell Biology OR admission to the MS in Regulatory Science Program OR Master of Biotechnology Enterprise and Entrepreneurship programs.

AS.410.652. Cell Culture Techniques. 4 Credits.
This laboratory course illustrates the use of basic cell culture techniques for bioscience research and commercial applications. Students are introduced to cell cultivation methods, including proper use of a biological safety cabinet, sterile technique, cell enumeration and media preparation, cultivation of cell lines, detection of contamination, cryopreservation, transfection, cell culture scale-up, and bioassays. This course is designed for students with no prior knowledge or with limited knowledge of cell culture methods. Prerequisites: 410.601 Biochemistry, 410.603 Advanced Cell Biology I.

AS.410.653. Regenerative Medicine: from Bench to Bedside. 4 Credits.
Regenerative Medicine is a multidisciplinary field developing next-generation therapies that aim to augment, repair, replace or regenerate tissues and organs. This field can be broadly defined by three overlapping technology domains: cell therapy, gene therapy, and tissue engineering. In this course, we will explore these regenerative medicines from bench to bedside. We will discuss relevant biological, engineering, clinical, legal, regulatory, and ethical principles and perspectives to understand the emerging field of regenerative medicine. Specific topics will include induced pluripotent stem cells, bioartificial organs, cell-based immunotherapy, and gene editing techniques such as a CRISPR/Cas-9. In addition to gaining a scientific foundation, students will become familiar with the current state of the industry and the process of bringing these regenerative medicine products to market, including market trends and opportunities, process development and manufacturing, and commercialization challenges and successes. Readings will be drawn primarily from scientific journals. Prerequisites: 410.601 Biochemistry; 410.602 Molecular Biology; 410.603 Advanced Cell Biology I.

AS.410.655. Radiation Biology. 4 Credits.
This course will review types of ionizing radiation and their differences, physical and chemical interactions of radiation with key biological molecules, and effects on living matter beginning with molecular and cellular interactions and proceeding to tissue, organ, and organism levels, emphasizing the human system. Radiation's beneficial effects in cancer therapy and medicine, as well as its detrimental and carcinogenic effects, will be discussed. Specific units will consider food irradiation, nuclear power plant accidents, radiation terrorism, everyday sources exposure to the U.S. population, and other practical situations involving radiation. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I.

AS.410.656. Recombinant DNA Laboratory. 4 Credits.
This laboratory course introduces students to methods for manipulating and analyzing nucleic acids. Students gain extensive hands-on experience with plasmid purification, restriction mapping, ligations, bacterial transformations, gel electrophoresis, and applications of the polymerase chain reaction. This course is not recommended for students with substantial experience in these methodologies. Prerequisites: 410.602 Molecular Biology. S

AS.410.658. Biodefense & Infectious Disease Laboratory Methods. 4 Credits.
This laboratory course introduces students to the methods and techniques used for bioterrorism detection, surveillance, and identification. Using bio simulants and demonstrations, various bio detection platforms will be discussed and presented, such as point-of-detection devices and methods, laboratory-based screening and identification technologies (culture, quantitative PCR, immunoassays, biosensors), and high-throughput environmental surveillance methods. Statistical methods for determining diagnostic sensitivity and specificity and assay validity will be discussed. Laboratory practices and procedures for working in simulated Biosafety Level 2 and 3 environments will be practiced. Students will be introduced to the current bioinformatics genomic and proteomic databases used for select agent (category A, B, and C) identification and characterization. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I, undergraduate microbiology or 410.615 Microbiology, or approval of program committee.

AS.410.659. Advanced Recombinant DNA Lab. 4 Credits.
This course is a continuation of Recombinant DNA Laboratory (410.656), intended for those who have completed the introductory course or who have extensive molecular biology laboratory experience. This second course consists of a series of integrated laboratory exercises designed to give students hands-on experience with a variety of molecular techniques. Exercises include molecular cloning, PCR optimization, quantitative real-time PCR, control of gene expression by RNA interference (RNAi), CRISPR, and DNA sequencing. Students will be introduced to microarray analysis and utilization of bioinformatics pipelines. Prerequisites: 410.601 Biochemistry; 410.602 Molecular Biology; 410.656 Recombinant DNA Laboratory; or consent of program committee.

AS.410.660. Immunological Techniques in Biotechnology. 4 Credits.
This laboratory course introduces students to methods for analyzing the immune system. Participants gain experience with various immunologic techniques used in research and biotechnology laboratories, such as immunoassays, immunofluorescence, western blot analysis, SDS-PAGE, antibody purification (protein A), and cytokine assays. Additional topics for discussion include hybridism technology phage antibody libraries, therapeutic monoclonal antibodies, and flow cytometry. Prerequisites: 410.601 Biochemistry, 410.6 Molecular Biology, 410.603 Advanced Cell Biology I, 410.613 Principles of Immunology or undergraduate immunology course highly recommended, or consent of program committee. S
AS.410.662. Epidemiology: Diseases in Populations. 4 Credits.
Epidemiology is the study of the patterns and determinants of disease in populations. It constitutes a basic science for public health and biomedical sciences, and its influence can be felt daily through the presentation of data by government, academic, and industry sources. The goal of this course is to present an introduction to epidemiological methods and inferences to biotechnology professionals with little prior experience in public health. Issues in epidemiological inference and the assessment of causal relationships from epidemiological studies will be discussed, introducing the issues of bias and confounding. Throughout the course, emphasis will be placed on the practical use of epidemiology, and lectures will be complemented by case studies and published literature. Examples will be drawn from contemporaneous issues in chronic and infectious diseases. At the conclusion of the course, students should have a greater appreciation for the role of the epidemiologic method and be able to evaluate a basic epidemiologic study, including how the study goals and research questions relate to the design, measures, and inferences. Recommended prerequisites: undergraduate statistics course or 410.645 Biostatistics.

AS.410.663. Current Topics in Molecular & Cellular Biology. 4 Credits.
This course is a literature-driven exploration of current topics and methodologies employed in cell biology research. By closely examining both fundamental and innovative experimental approaches as well as cutting-edge technologies, we will explore a broad range of cell biology topics, many of which most students have previously encountered, at least at some level, in the core courses. The particular subjects and technologies discussed may vary widely from semester to semester; topics may include but are not limited to expression profiling (microarray analysis), “knock-down” with RNAi, the use of transgenic and knockout mice, proteomics and mass spectrometry, microscopy applications (epifluorescence, confocal, and/or EM), characterizing protein/protein interactions, and detection methods for the movement of small molecules and ions. Students enrolling in this course are expected to already have some experience in critical reading and evaluation of the primary scientific literature. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I, 410.604 Advanced Cell Biology II.

AS.410.665. Bioscience Communication. 4 Credits.
Researchers must communicate effectively so their discoveries can be shared with others. In this course, students learn how to communicate their ideas to other researchers, their scientific peers, and investment communities. Students master both written and verbal communication skills, hone their expertise at making both formal and informal oral presentations, prepare poster presentations, and develop their own public speaking strategies. The course also presents personal strategies for improving daily communications, cross-cultural communications, and nonverbal skills. Students improve their written communication, editing, and informal writing skills. Participants also learn effective email strategies for getting their message across and learn how effective writing can improve their chances of getting grant applications approved. Class assignments include preparation of scientific papers, general science writing, oral presentations, PowerPoint presentations, and scientific posters.

AS.410.666. Next Generation DNA Sequencing and Analysis. 4 Credits.
The recent revolution in DNA sequencing technologies has transformed biology within a few short years, decreasing the cost and difficulty of sequencing dramatically to the point where the “$1,000 human genome” is in sight. Armed with complete genome sequences, biologists need to identify the genes encoded within and the variation in these genes between individuals, assign functions to the genes, and put these into functional and metabolic pathways. This course will provide an overview of next-generation sequencing technologies in the historical context of DNA sequencing, the pros and cons of each technology, and the bioinformatics techniques used with this sequence information, beginning with quality control assessment, genome assembly, and annotation. Prerequisites: 410.602 Molecular Biology, 410.633 Introduction to Bioinformatics, 410.634 Practical Computer Concepts for Bioinformatics.

AS.410.671. Gene Expression Data Analysis and Visualization. 4 Credits.
This course will introduce students to various methods for analyzing and interpreting transcriptomics data generated from technologies such as oligonucleotides or two-channel microarrays, qRT-PCR, and RNA sequencing. Topics will include scaling/normalization, outlier analysis, and missing value imputation. Students will learn how to identify differentially expressed genes and correlate their expression with clinical outcomes such as disease activity or survival with relevant statistical tests; methods to control for multiple testing will also be presented. An introduction to linear and nonlinear dimensionality reduction methods and both supervised and unsupervised clustering and classification approaches will be provided. Open source tools and databases for biological interpretation of results will be included. Assignments and concepts will make use of publicly available datasets, and students will compute and visualize results using the statistical software R. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.645 Biostatistics, 410.634 Practical Computer Concepts for Bioinformatics, or an undergraduate computer programming course.

AS.410.673. Biological Processes in Regulatory Affairs. 4 Credits.
This course provides an overview of the biological processes and laboratory techniques utilized for the discovery, development, and evaluation of therapeutic drugs. Students investigate drug development processes, such as gene cloning, culture scale-up, downstream processing, and product purification. Emphasis is placed on the theory and application of laboratory methods used in drug development, such as recombinant DNA techniques, antibody technology, protein purification, immunoassays, high-throughput drug screening, chromatography, electrophoresis, cell receptor characterization, pharmacokinetics, drug toxicity testing and evaluation of therapeutic drugs, diagnostics, and vaccines. Prerequisites: 410.303 Bioscience for Regulatory Affairs, OR 410.601 Biochemistry and 410.603 Advanced Cell Biology OR admissions to the MS in Regulatory Science OR Master of Biotechnology Enterprise and Entrepreneurship programs.

AS.410.674. Food Microbiology. 4 Credits.
Food microbiology encompasses the study of microorganisms that have both beneficial and deleterious effects on the quality and safety of raw and processed meat, poultry, and egg products. Food microbiology focuses on the general biology of the microorganisms that are found in foods, including their growth characteristics, identification, and pathogenesis. Specifically, areas of interest that concern food microbiology are food poisoning, food spoilage, food preservation, and food legislation. Pathogens in products, or harmful microorganisms, result in major public health problems in the United States and worldwide, and are the leading causes of illnesses and death.
AS.410.675. International Regulatory Affairs. 4 Credits.
Pharmaceutical/biotechnology product approval and marketing requires a good understanding of international regulatory affairs in order to successfully compete in today’s global marketplace. It is important for tomorrow’s leaders to understand and follow the regulatory differences to ensure optimum product development strategies, regulatory approvals, and designs for exports conforming to the foreign regulatory bodies. There are various product development strategies that industry is using to shorten the product development time by conducting preclinical programs outside the U.S., but the strategies require careful planning and interaction with the U.S. and foreign regulatory agencies. With the increased globalization of economy and exports, international regulations will have a bigger impact on the biotechnology business in the future.
The course provides a review and analysis of the pharmaceutical/biotechnology product approval processes within the world’s major markets. The key strategies required in phases from preclinical product development to marketing approval of the products in Europe, Japan, and the U.S. will be compared and discussed. Students will explore the European Union regulations and their overall importance to international markets. The course will cover the salient features of common technical and regulatory documents required for submission and approval to the leading regulatory bodies in the world, general guidance documents, international harmonization, and the General Agreement on Tariffs and Trade.

AS.410.676. Food And Drug Law. 4 Credits.
The Food, Drug, and Cosmetic Act governs the regulatory approval process for bringing a drug, biologic, medical device, food, or cosmetic to market. The class will discuss administrative procedures followed by the FDA. The course includes an overview of the drug, biologic, and medical device approval processes and the regulation of food and dietary supplements. Students then will be exposed to the enforcement activities of the FDA, including searches, seizure actions, injunctions, criminal prosecutions, and civil penalties authorized under the FD&C Act as well as other statutes, like the Public Health Service Act, which regulates the development and approval of biologics.

AS.410.679. Practicum in Regulatory Science. 4 Credits.
This integrative, case-based course will focus on applying knowledge gained from previous courses in the Master of Science in Regulatory Science program to actual cases from the FDA. For each case, students will assume the role of a regulatory specialist, an FDA reviewer or senior-level policy-maker, or other involved stakeholders, such as a consumer group or an advocacy group. Students will be expected to research, evaluate, and present scientifically and legally justifiable positions on case studies from the perspective of their assigned roles. Students will present their perspectives to the class and be asked to debate the issues with the other students from the perspective of their assigned roles. The major responsibility of the students in this course will be to make scientifically and legally defensible recommendations and to justify them through oral and written communication.

AS.410.680. Finance for Biotechnology. 4 Credits.
Students will build an understanding of the basics of contemporary global monetary systems and the essentials of financial management. This course will include the means to develop a working knowledge of the critical financial factors for decision-makers from the perspectives of key stakeholders. The syllabus is designed to provide students with limited or no background in finance an opportunity to establish an understanding of financial basics and communicate clearly in financial terms when conducting business. This course is uniquely designed to meet the current needs of those leading the global life science industry.

AS.410.682. Validation in Biotechnology. 4 Credits.
Understanding validation and applying a comprehensive validation philosophy are essential in today’s biotechnology industry. First and foremost, validation allows a company to operate in compliance with the regulations and guidance set forth by the FDA. Perhaps more importantly, validation allows a company to operate in compliance with the regulations and guidance set forth by the FDA. Perhaps more importantly, it results in equipment assays and processes that are well-understood and robust, less prone to failure, and more cost-effective. This course will introduce the fundamentals of validation, validation master planning, resource management, types of validation and the associated documentation, departmental roles and interactions, and the differences between commissioning and validation. Students will have the opportunity to solve real-world problems, generate actual validation documents, and develop validation program elements that balance regulatory requirements, operational needs, and business expectations.

AS.410.683. Introduction to cGMP Compliance. 4 Credits.
Current Good Manufacturing Practice regulations are the minimum standards for the design, production, and distribution of drugs, biologics, and medical devices in the U.S. and internationally. In the U.S., they are codified at the federal level in the FD&C Act and the Code of Federal Regulations and are actively enforced by the FDA. These regulations, however, only begin to describe the practices used in the pharmaceutical and biotech industries. Additional sources of insight and guidance include the FDA’s guidance documents and training manuals, industry trade publications, international compendia, and standards-setting organizations. Students will learn the scope and history of the regulations, industry-standard implementation strategies and “best-practices” approaches, and the FDA’s current expectations. Students will also learn to apply practical solutions to the regulatory issues faced in the pharmaceutical and biotech industries today.

AS.410.684. Technology Transfer & Commercialization. 4 Credits.
This course is an introduction to the multidisciplinary aspect involved in the process of translating innovations in technology into commercial use, particularly research discoveries emanating from universities and other nonprofit organizations.

AS.410.685. Emerging Issues in Biotechnology. 4 Credits.
Biotechnology impacts the world and our social, political, and physical environment in ways that many both inside and outside the industry may not fully understand or appreciate. It is critical to ensure that advances in biotechnology be accompanied by important public, political, and social considerations and discussions. This course will cover issues including domestic and global public perception of biotechnology, its benefits and risks, advances in bio-agriculture and genetically modified food, the impact of recombinant therapeutics on the pharmaceutical and health care industry, ways in which advances in biotechnology have and will continue to change our views of what life is, and how the political climate impacts advances in biotechnology discoveries. This highly interactive course will include thought-provoking debate and discussion with industry leaders, both proponents and opponents of biotechnology.

AS.410.686. Regulation of Good Food Production Practices. 4 Credits.
Good Food Production Practices are production and farm level approaches to ensure the safety of food for human consumption. Good food production and post-harvest guidelines are designed to reduce the risk of foodborne disease contamination. These good food production procedures can be tailored to any production system and are directed toward the primary sources of contamination: soil, water, hands, and surfaces. Good food production protocols were developed in response to the increase in the number of outbreaks of foodborne diseases resulting from contaminated food. Students will learn to develop good food production regulatory protocols using case studies.
AS.410.687. Ethical, Legal & Regulatory Aspects of the Biotechnology Enterprise. 4 Credits.
This course provides an overview of the important ethical, legal, and regulatory issues that are critical to the biotechnology industry. The course shares current trends and essential elements of ethics, legal issues, and regulations in a way that allows for an appreciation of how each influences the others. Students will examine core ethical values that guide the practice of science in the biotechnology industry. The course will provide an overview of legal issues, such as protecting inventions, intellectual property, licensing, and the range of regulatory oversight mechanisms with which the biotech industry must comply. This course will review the implications of strategic ethical, legal, and regulatory choices that add value to the biotechnology firm, customers, and society.

AS.410.688. Project Management in Biotechnology. 4 Credits.
Today, many organizations use the approach called project management to handle activities that have a limited life span as opposed to routine, ongoing operations. This course will answer the question, “What do I do to be successful?” The units will provide guidance for project management success by considering each phase in the life of a typical project, from concept to closeout. We will discuss the nature of project management, the structure of projects, working with teams of technical experts, and all the other activities that make project management different from any other discipline. The course will rely heavily on group discussions. Topics will include deciding making decisions, developing a project plan, risk management, team leadership, monitoring and controlling during the project, scope change control, and traditional and modern approaches to project closeout. Concepts presented will be consistent with the Project Management Institute’s “Guide to the Project Management Body of Knowledge,” the U.S. standard for project management.

AS.410.689. Leading Change in Biotechnology. 4 Credits.
As bioscience companies grow and mature, leadership needs to evolve. Students will learn how to identify their company’s position in the “Leadership Life Cycle” and learn how to select the right leadership capabilities based on their current organizational needs. Research shows that the right leaders at the right time dramatically improve organizational success. Discussions will address the leadership needs of organizations from early-stage, research-based companies through fully integrated biopharmaceuticals. General leadership practices and strategies, moving ideas from the research bench to the consumer, and strategies to prevent failure will all be discussed.

AS.410.690. International Food Regulations. 4 Credits.
As the U.S. food industry expands into international markets, the same companies hoping to sell their products abroad find themselves forced to source ingredients and finished products from foreign suppliers to reduce costs and remain competitive, and to do so, they must comply with a myriad of rules and regulations in both the United States and elsewhere. The most visible enforcement agency at any U.S. border is Customs and Border Protection. However, food importers must also comply with regulations enacted by a host of other government agencies, most notably the FDA, USDA Food Safety and Inspection Service, USDA Animal and Plant Health Inspection Service, and U.S. Fish & Wildlife Service. Food exporters have an even tougher burden, as they need to comply with Customs and food safety, quality, and labeling regulations and certification requirements in both the U.S. and the country that is receiving the goods; this is to mention nothing of the international regulatory infrastructure to which manufacturers must adhere when shipping food internationally. This course will cover each step of the importing and exporting process in detail and explain where to go for key information and guidance.

AS.410.692. Biological & Chemical Threat Response & Forensics. 4 Credits.
This course introduces the methods and techniques used for biological and chemical threat agent characterization; methods of detection, identification, medical intervention, and forensic attribution are also discussed. Lectures cover a broad variety of topics pertaining to the use of biological and chemical agents, including the historical background of biological and chemical agents in classic and discretionary warfare, the introduction of scientific evidence in criminal proceedings and chain of custody for evidentiary materials in crimes and terrorism, quality assurance in laboratory operations, threat containment, decontamination and remediation, health and safety of responders and analysts, and risk assessments. Laboratory methods employed in the characterization and forensic analysis of biological (bacterial, viral, biological toxins, agricultural threats) and chemical agents (classic military chemical agents, toxic industrial chemicals, and materials) will also be discussed. The course will also provide general overviews of techniques and sample collection for classic biological and chemical agents (PCR, DNA sequencing methods, immunological analyses) and for chemical agents (gas chromatography and mass spectrometry). Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I, undergraduate microbiology, or 410.615 Microbiology.

AS.410.693. Science, Medicine & Policy in Biodefense. 4 Credits.
This course provides a comprehensive introduction to the Concentration in Biodefense. Biological warfare is introduced in its historical context, followed by the properties of the most important biological threat agents, their medical consequences and treatment, diagnostics, and forensics. Relevant international and domestic policy issues are explored, along with defense strategies and the nature of existing dangers to national security. Students should leave the class with a deep understanding of biological warfare and terror agents, the consequences of their potential use, and the available means of protection. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I, undergraduate microbiology, or 410.615 Microbiology.

AS.410.694. FDA Premarket Applications. 4 Credits.
This course provides a comprehensive overview of the U.S. Food and Drug Administration’s (FDA’s) regulation of the research and development, and marketing of new drugs, biologics, and medical devices. The regulatory requirements for investigational (Investigational New Drug (IND) and Investigational Device Exemption (IDE)) and premarket approval (New Drug Application (NDA), Abbreviated New Drug Application (ANDA), Biologics License Application (BLA), premarket notification (510(k)), Premarket Approval (PMA)) applications will be addressed. The content and format requirements for the preparation, submission, and maintenance of these applications will be covered.

AS.410.696. Bioassay Development. 4 Credits.
This course will cover methodological approaches to bioassay development for high-throughput screening. Both cell-based (cytotoxicity, cytostaticity, high content imaging, and reporter systems) and cell-free assay systems (enzyme, FRET, time-resolved fluorescence, quenching assays, and immunological assays) will be included with discussion of the potential promise and pitfalls associated with each assay system. Various assay formats, visualization techniques, and current developments in assay technology will be discussed. Project management techniques will be utilized to aid in the process of assay development. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I.
AS.410.698. Bioperl. 4 Credits.
This course builds on the Perl concepts taught in 410.634 Practical
Computer Concepts for Bioinformatics. Perl has emerged as the language
of choice for the manipulation of bioinformatics data. Bioperl, a set of
object-oriented modules that implements common bioinformatics tasks,
has been developed to aid biologists in sequence analysis. The course
will include an overview of the principal features of Bioperl and give
students extensive opportunity to use Perl and the tools of Bioperl to
solve problems in molecular biology sequence analysis. Prerequisites:
410.601 Biochemistry, 410.60 Molecular Biology, 410.634 Practical
Computer Concepts for Bioinformatics.

AS.410.699. Nanobiotechnology. 4 Credits.
The emerging field of nanobiotechnology utilizes developments in
nanotechnology and molecular biology for applications to biomedical
science and clinical practice as well as fundamental cell biology research
and industrial biotechnology. Nanobiotechnology is an interdisciplinary
field that exploits the unique functional properties of natural and
synthetic biomolecular-sized (nanometer-scale) constructs, such as
quantum dots, carbon nanotubes, nanostructured surfaces, liposomes,
artificial membranes, and molecular machines for biotechnology and
medicine. This course is designed for biotechnology majors and will
survey the research, development, and applications of nanotechnology
to medical diagnostics, imaging, and therapeutics (including drug
delivery and anti-cancer treatments), cell biology and single-cell analysis,
nanofluidics, bioassays, biosensors, and bio-inspired engineering.
Prerequisites: 410.601 Biochemistry; 410.602 Molecular Biology; 410.603
Advanced Cell Biology I.

AS.410.700. Food Labeling and Packaging Regulations. 4 Credits.
The Nutrition Labeling and Education Act of 1990, which amended the
FD&C Act, requires most foods to bear nutrition labeling and requires food
labels that bear nutrient content claims and certain health messages to
comply with specific requirements. The NLEA and the final regulations
to implement the NLEA provide for a number of fundamental changes
in how food is labeled, including requiring that nutrition labeling be
placed on most foods, requiring that terms that characterize the level of
nutrients in a food be used in accordance with definitions established
by the FDA, and providing for the use of claims about the relationship
between nutrients and diseases or health-related conditions. These
changes apply to virtually all foods in the food supply, including, in large
measure, to foods sold in restaurants. Food labeling is required for
most prepared foods, such as breads, cereals, canned and frozen foods,
snacks, desserts, drinks, etc. Nutrition labeling for raw produce (fruits and
vegetables) and fish is voluntary.

AS.410.701. Introduction to Food Safety. 4 Credits.
This course is designed to help students understand the legal and
regulatory complexities of the regulation of food products in the United
States. The prone issues, including regulatory compliance in food
safety and Hazard Analysis and Critical Control points (HACCP), are
among major issues to control the food-supply. The FDA and the U.S.
Department of Agriculture (USDA) have primary responsibility for the
safety of meat and food products. Based on the principles of HACCP,
FDA-issued seafood regulations went into effect in December of 1997.
However, the regulation of food additives, labeling, dietary supplements,
genetic modifications, and the protection of the food supply account
for the majority of the in-depth food regulation in the United States. The
FDA and USDA regulate the safe practice of primary and secondary food
products to the American public. Depending upon the source and nature
of food product, the method of shipment, advertisement of nutritional
values, etc., are being governed by FDA and USDA jurisdictions. The
Food Safety Modernization Act overhauls the FDA in food surveillance,
ensuring regulations on specific targets, inspection records examination,
and exemptions. In this course, students will learn the existing food
regulations and safety net by examining the product tracing, performance
standards, and preventive control plans toward food safety, security,
genetic modifications, dietary supplements, and food labeling. Students
will have the option to design projects to propose an effective food safety
net that can assist in the supply chain of the nation’s food safety and
security.

AS.410.702. Biomedical Software Regulation. 4 Credits.
Software continually grows more complex and is becoming relied upon
by health care professionals in the treatment of patients. This course
describes how the U.S. government regulates software used in delivering
health care, including the regulations utilized by the FDA and the Centers
for Medicare and Medicaid Services. This course covers a wide range
of topics, including FDA regulation of software as a medical device and
software validation, medical imaging software regulation, electronic
record keeping and software used in clinical trials, laboratory information
management systems, and HIPAA privacy rules and security standards.

AS.410.703. Strategic Planning for the Biotechnology Enterprise. 4
Credits.
This course is an overview of the strategic planning process of a
biotechnology enterprise. It focuses on creating value through strategy
formulation and implementation. Topics covered include leadership
and technology competencies, performance indicators, intellectual
property, corporate governance, regulatory strategy, and appropriating
value. The thesis of the course is that effective strategic planning and
implementation is critical to success and provides a valuable, structured
process for creating enterprise value and managing business risks. Best
practices in strategic planning and managing the planning process are
also discussed.

AS.410.704. Social Entrepreneurship in BioScience. 4 Credits.
This course will explore how biotechnology innovators are solving
social issues, including developing medical diagnostics, discovering
effective and safer medicine, producing cleaner energy, remediating
environmental contamination, and improving crop yields. Students
will think broadly in terms of the roles required to tackle these social,
economic, health, and environmental issues and how these roles can
add value to society. <o:p></o:p></span></p><p>This course will cover
social entrepreneurship principles and practices in a range of sectors,
including corporate social responsibility and public value missions in
emerging markets. Students will have the opportunity to define their role
in advancing biotechnology as it relates to the top global challenges.
</o:p></o:p></span></p>
AS.410.705. Problem-solving for Innovation in Health Care. 4 Credits.
Whether tackling small business challenges in a clinic or creating global initiatives, being a health care provider means being a problem-solver. This course focuses on helping students develop the problem-solving strategies and innovation development models necessary for every health care provider to more effectively tackle challenges. Students will develop a working knowledge of design thinking principles and techniques as well as an understanding of how they can be utilized to create positive change in any context. While evaluating real-world problems, students will consider how these techniques can be utilized to turn an innovative idea into an effective solution. Students will work collaboratively on real-world projects, turn their ideas into practical action, and demonstrate their ability to leverage health care and social innovation to bring change through community-based and global initiatives.

AS.410.706. Building and Leading Teams in Health Care. 4 Credits.
In order to provide the best care possible, health care professionals are working together more now than ever before. As a result, strong leadership and teamwork skills are becoming necessities in joining the health care field. This course will provide hands-on activities to help students develop problem-solving skills, learn basic negotiation and mediation strategies, and understand their own tendencies as leaders and team members. Using real-world examples, students will explore how strong leadership and teamwork can drive innovative solutions to public health issues.

AS.410.707. The Psychosocial Determinants of Health, Implications on Diagnostics. 4 Credits.
In this capstone course, students will learn basic diagnostic techniques and use case studies to explore the relationship between physiological illnesses and diagnostic output. Through discussions and guided interviews, students will explore the role of psychology and sociology in patient care choices as well as physician recommendations to patients. Students will practice cultural sensitivity through group activities and discussion of pressing public health issues. Students will undertake final group projects that identify needs in the local community and attempt to create solutions that could feasibly be completed with limited resources.

AS.410.708. Medical Product Reimbursement. 4 Credits.
Medical products brought to market need to have a sound payment, coding, and coverage strategy. Medicare covers over 100 million Americans and leads the way in all United States insurance policies. This course will provide insight into how medical product reimbursement works and allow students to understand how the Centers for Medicare & Medicaid Services (CMS) considers medical products for coverage, coding, and payment. We’ll review the history of Medicare coverage and the regulations. We’ll focus primarily on strategies used to get reimbursement for medical products—both at the national and local levels.

AS.410.709. Cancer Genomics. 4 Credits.
Alterations to the genome are the basis of cancer development, but not all mutations cause cancer. Cancer genomics is the study of cancer cell genomes to elucidate how changes from the normal host genome drive cancer development and how these changes can be targeted for better prevention, diagnosis, and treatment of cancer. In this course, students learn about the multi-step process of tumorigenesis and the confounding development of passenger mutations that challenge the use of genomics to inform therapies. Students will use bioinformatics tools to analyze human cancer genomic data sets to understand the genetic basis of cancer and how to identify genetic signatures in tumors to guide treatment. Topics also include the development of drug resistance, biological sample acquisition, the technologies used to identify and distinguish pathogenic alleles, and how data is stored, referenced, and shared. Discussions about clinical trials and standards of care based on cancer genomics, and about the ethical challenges raised by the use of genomic information to make personal care decisions, are included in the course. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cellular Biology. 410.638 Cancer Biology is recommended.

AS.410.712. Advanced Practical Computer Concepts for Bioinformatics. 4 Credits.
This intermediate-to-advanced-level course, intended as a follow-on to 410.634 Practical Computer Concepts for Bioinformatics (a prerequisite for this new class), will integrate and expand on the concepts from that introductory class to allow students to create working, Web-based bioinformatics applications in a project-based course format. After a review of the concepts covered in 410.634, students will learn how to create functional Web applications on a UNIX system, using Python and CGI to create forms that can be acted upon, and using the Perl DBI module to interface with MySQL relational databases that they will create and populate to retrieve and present information. This will be demonstrated by building an in-class, instructor-led project. More advanced SQL concepts and database modeling will also be covered, as well as introductions to HTML5, CSS3, and Javascript/JQuery. Class time in the latter weeks of the class will be devoted to individual assistance on student projects and to short lectures on advanced topics. Once again, whenever possible, this course will emphasize relevance to solving problems in molecular biology and bioinformatics. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.634 Practical Computer Concepts.

AS.410.713. Advanced Genomics and Genetics Analyses. 4 Credits.
The next generation of array and sequencing technologies provides the ability to investigate large quantities of genomics information with higher sensitivity, greater throughput, and lower costs. This also introduces new challenges in data management, novel algorithmic approaches, and general interpretation. This course builds on the topics in 410.671 Gene Expression Data Analysis and Visualization to address analysis of both genetic variation and genomics content, including splice variants, single nucleotide polymorphisms (SNPs) with family-based and case/control genome-wide association, copy number variation, somatic and germline single nucleotide variants, tumor clonality and ploidy estimates, and transcription factor binding sites. Data types will include array, RNA sequencing, and DNA sequencing (targeted and whole exome) with sequence assembly methods?presented, such as de novo and reference-based. Prerequisites: 410.602 Molecular Biology, 410.633 Introduction to Bioinformatics, 410.671 Gene Expression Data Analysis and Visualization.
**AS.410.715. Medical Device Regulation. 4 Credits.**

This course provides a comprehensive introduction to medical devices and how they are regulated by the FDA. Topics that will be covered include an overview of the laws and regulations that govern medical devices, the FDA’s organizational structure and responsibilities for medical device regulation, and administrative and legal requirements for medical devices throughout the full product life cycle. Particular focus will be placed on the premarket review, post-market programs enforcement (e.g., Quality Systems Regulation, and FDA inspectional programs). Included will be discussions on the responsible offices and major program requirements and resources. Students will be given various case studies to examine the application of regulations and participate in a 510(k)/PMA workshop, mock inspectional audit, and mock enforcement action. Upon completion of this course, the student will have a working knowledge of the requirements and policies of FDA regulation of medical devices.

**AS.410.716. Food Toxicology. 4 Credits.**

Food toxicology is the study of the nature, properties, effects, and detection of toxic substances in food, and their disease manifestation in humans. This course will provide a general understanding of toxicology related to food and the human food chain. Fundamental concepts will be covered, including dose-response relationships, absorption of toxicants, distribution and storage of toxicants, biotransformation and elimination of toxicants, target organ toxicity, teratogenesis, mutagenesis carcinogenesis, food allergy, and risk assessment. The course will examine chemicals of food interest, such as food additive mycotoxins and pesticides, and how they are tested and regulated.

**AS.410.717. Risk Assessment and Management. 4 Credits.**

Risk analysis is composed of three separate but integrated elements, namely, risk assessment, risk management, and risk communication. Risk communication is an interactive process of exchange of information and opinion on risk among risk assessors, risk managers, and other interested parties. Risk management is the process of weighing policy alternatives in light of the results of risk assessment and, if required, selecting and implementing appropriate control options, including regulatory measures. Students will learn how to integrate risk assessment, risk management, and risk communication using case studies.

**AS.410.718. Food Safety Audits and Surveillance. 4 Credits.**

Food safety audits provide a credible verification system to the entire food processing industry, including retail environments, meat, fish, and poultry, vegetable, and produce suppliers. Having a HACCP plan in place is often the first step to a successful food safety program, but is not entirely enough to ensure that food safety standards are being adhered to on a consistent basis. In this course, students will learn how to adequately plan for a food crisis situation.

**AS.410.719. Postmarket Surveillance. 4 Credits.**

While review of devices prior to marketing plays a significant role in ensuring that patients and providers have access to safe and effective medical devices, continued post market surveillance of devices after they reach the market is crucial to protecting public health. The Office of Surveillance and Biometrics (OSB) within the FDA’s Center for Devices and Radiologic Health (CDRH) is responsible for overseeing the continued post market surveillance of medical devices. This course covers regulatory requirements for industry once a device reaches the market as well as the post market surveillance requirements and activities performed by the FDA. Students will discover the multifaceted approach to medical device post market surveillance through topics including Post market Surveillance Studies, 522 Studies, Registries, Medical Device Reporting (MDR) & Complaint Handling, the MedSun Program, Medical Device Tracking, Unique Device Identification (UDI), MDEpiNet, and Real-world Data/Evidence & the National Evaluation System for health Technology (NEST).

**AS.410.720. USDA Regulation of Food Safety, Wholesomeness, and Labeling. 4 Credits.**

This course addresses the USDA, FSIS regulatory processes that ensure a safe, wholesome, properly labeled food supply. Students will (1) review the history of applicable food law and the rise of the Food Safety Inspection Service as a regulatory agency, (2) evaluate the statutory definitions of adulterated and misbranded as the basis for regulatory requirements, and (3) apply those regulatory requirements to the preparation, packaging, and holding of meat and poultry products. Coursework is built around a project in which students prepare a series of documents required to meet food safety, wholesomeness, and labeling requirements. Course work concludes with a review of FSIS enforcement authority and state inspection programs.

**AS.410.721. In Vitro Diagnostic Regulation. 4 Credits.**

This course provides a comprehensive overview of in vitro diagnostic (IVD) devices and how they are regulated by the U.S. Food and Drug Administration (FDA) and by international organizations such as the European Union (E.U.). Topics that will be covered include: (1) a summary of the U.S. and international laws, regulations, and policies that govern IVD devices, (2) administrative and legal requirements and resources for IVD devices throughout the full product life-cycle, (3) types of IVD devices, (4) coverage and reimbursement of laboratory tests, and (5) current issues and developments. Upon completion of this course, the student will have a working knowledge of the requirements and policies of the regulation of IVD devices.

**AS.410.727. Regulatory Strategies in Biopharmaceuticals. 4 Credits.**

Given the costly drug development process and the limited resources of emerging biopharmaceutical companies, developing an early regulatory strategy - starting well before clinical trials are initiated - is extremely important for the success of a company. This course will discuss different regulatory strategies that several players of the U.S. biopharmaceutical industry have employed. Students will learn about interacting with regulatory agencies, the orphan drug development, accelerated approval, fast track, priority review, and other regulatory mechanisms, pharmacogenomics and biomarkers, adaptive clinical trials, animal rule, generic drug development, and biosimilars. Using case studies, the impact of these regulatory strategies on drug development, and how these strategies have helped many biopharmaceutical companies will be discussed. At the end of this course, students will better understand federal regulations and the aspects involved in developing efficient regulatory strategies.
**AS.410.728. Managing Innovation in the Life Sciences. 4 Credits.**  
Innovation is the creation of value from new ideas, concepts, methods, materials, and organizational structures. Life sciences organizations that seek to create value for their stakeholders must do so using available capital resources, including financial capital, human capital, intellectual capital, and physical capital. They should manage those resources to gain leverage and maximize value realized. They then seek to defend and control the value created. Why, then, do most organizations treat innovation (and innovators) in ways similar to the body’s immune system (i.e., by identifying the innovators, isolating them, “killing” them, and ejecting them from the organization?) This course will explore innovation, invention, and value creation as a driving force in the biotechnology or life sciences enterprise as well as the ways in which managers should plan to take full advantage of innovation as the only true competitive weapon for long-term success. A special emphasis will be placed on innovation as applied to life science applications (biotechnology, medical devices, health care delivery, drug discovery, development and packaging, bioinformatics, etc.). Topics include invention, ROI, disruption, creative destruction, types of innovation, technology brokerage, organizational structures that foster innovation, planning, and managing for innovation. Students are required to read extensively, participate actively in discussions, do case studies, and develop a convincing pitch for an innovation project.

**AS.410.731. Bioprocessing and Scale-up Laboratory. 4 Credits.**  
This course will provide students with hands-on experience in the process development of biological products from a cell bank through purification. Students will develop two products: one produced in bacteria and the other in a mammalian cell culture system. Students will optimize growth conditions on a small scale and then produce the biologic in a bioreactor. Students then purify the product after optimizing purification conditions. Topics to be covered include microbial fermentation, cell culture production, bioassays, product purification, and the regulatory, engineering, and business principles associated with the scale-up of a biologic product. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I.

**AS.410.732. Funding a New Venture. 4 Credits.**  
In this course, we study the nuts and bolts of putting together a new company and explore financial markets and the economics of life science companies. The course includes weekly discussions based upon textbook and outside reading materials; the latter are often topical and speak to the issues of the day and how they may affect investor’s confidence and funding. Video presentations on the part of all students are required. We will examine the roles of corporate officers and the venture community. The students will learn what makes the startup process both attractive and difficult, and will work through that process in a realistic manner.

**AS.410.733. Comparative Animal Physiology. 4 Credits.**  
This class examines animal physiology from an evolutionary and comparative viewpoint. The goal is to examine the commonalities and unique differences in how various animal organisms address the necessary life functions. Topics will include homeostatic mechanisms as an overarching theme, integrating the following systems: nervous, endocrine, muscle, circulatory, defense, respiratory, excretory, fluid and acid-base balance, digestive, energy balance and thermal, and reproductive.

**AS.410.734. Practical Introduction to Metagenomics. 4 Credits.**  
The emerging field of metagenomics allows for the study of entire communities of microorganisms at once, with far-reaching applications in a wide array of fields, such as medicine, agriculture, and bioremediation. Students will learn the principles of metagenomics through the exploration of published project data and guided readings of recent literature. Using data from the Human Microbiome Project, students will explore practical analysis tasks, including sequence assembly, gene prediction and annotation, metabolic reconstruction, taxonomic community profiling, and more. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.633 Introduction to Bioinformatics, 410.634 Practical Computer Concepts for Bioinformatics.

**AS.410.736. Genomic and Personalized Medicine. 4 Credits.**  
With the advent of rapid, low-cost whole-genome sequencing, the field of personalized medicine is growing from a niche field to becoming the new standard of practice in medicine. Already, oncology makes use of genomic sequencing to inform treatment decisions based on tumor types, and patients are seeking knowledge about their genetic and environmental risk factors to make informed health decisions. This class explores the evolving field of personalized medicine, examining genomics as well as proteomics, metabolomics, epigenetics, and the microbiome. Students will read and discuss new developments in pharmacogenomics, rare and complex diseases, genomics for the healthy person, and the ethical, economic, and social implications of these new technologies. These topics will be approached with a view toward application in clinical practice. Prerequisites: 410.602 Molecular Biology, 410.633 Introduction to Bioinformatics.

**AS.410.737. Promotion of Biomedical Products: Regulatory Considerations. 4 Credits.**  
This course will provide students with knowledge of the basic laws and regulations affecting the advertising and promotion of drugs, biologics, and medical devices. This course is specifically designed to illustrate how the law and regulations are applied on an everyday basis using case study examples as well as to provide historical context on regulations and strategies used in the past.

**AS.410.750. Molecular Targets & Cancer. 4 Credits.**  
This course will investigate current and potential molecular targets in cancer, including kinases, DNA repair pathways, epigenetic modifications, immunotherapy approaches, and hormonal, metastasis, and angiogenesis targets. Discussion will also include topics on what defines a molecular target and the methods by which they are evaluated. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I. Recommended: 410.604. Advanced Cell Biology II.

**AS.410.751. Chemical Libraries & Diversity. 4 Credits.**  
Chemical diversity and “pharmacological space” will be studied, with emphasis being placed on disciplines related to drug discovery. Medicinal chemistry, natural product chemistry, focused synthetic libraries, and combinatorial chemistry will be covered. Lipinski’s rules for drug-like molecules will be discussed in detail, as well as methods for chemical analysis, in silico drug design, molecular modeling, and compound storage and handling. In addition, techniques used for assessing and harnessing chemical diversity for drug discovery will be discussed. Prerequisites: All four core courses or approval of program committee.
AS.410.752. High Throughput Screening & Automation Lab. 4 Credits. This course will use hands-on instruction in automated bioassay systems for high-throughput screening as an entry point to covering pertinent aspects of HTS, such as data manipulation, storage, and analysis; liquid handling robotics, microwell plate washing, manipulation, and barcoding; HTS assay detectors; and automated devices for assay setup, validation, and visualization. Cost considerations, HTS amenable assay systems, and miniaturization and scale-up will also be discussed. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology, and 410.696 Bioassay Development.

AS.410.753. Stem Cell Biology. 4 Credits. This course will involve discussion and debate on current topics concerning stem cell biology and the use of stem cells in biotechnology and therapeutics. Topics will include review and discussion of developmental and cell biology, stem cell characteristics, stem cell preparation and therapeutic uses, tissue engineering, global regulatory and ethical issues, and commercialization of stem cell therapy. Current peer-reviewed literature and guest experts in the field will provide up-to-date information for discussion. Prerequisites: 410.601 Biochemistry, 410.602 Molec Biology, 410.603 Advanced Cell Biology I, 410.604 Advanced Cell Biology II. S

AS.410.756. Grants and Federal Funding for Biotechnology Enterprises. 4 Credits. This course is designed to help students working for life sciences companies understand the fundamentals of obtaining government funding for product/technology research and development. While emphasis will be on grant funding from the National Institutes of Health, other Federal and state funding mechanisms will also be covered. Students will learn how to search for funding opportunities and receive an overview of the NIH funding mechanisms as well as explore the background and history of the Small Business Innovation Research (SBIR) program. The course will provide insights on preparing an SBIR proposal and submission procedure. Fundamentals of government contracting law will also be covered.

AS.410.777. Next Generation Alternative Energies. 4 Credits. In this course, students are introduced to the current technologies used in the production of alternative energies. These technologies include first and second-generation biomass biofuels, carbon-neutral synthetic fuels, microbial fuel cells, algae fuel, and biological hydrogen production. The study of biomass biofuels will include technologies using agriculture, cellulosic, and waste feedstocks. Carbon-neutral synthetic fuels will include biobutanol, acetone-butanol-ethanol, methane, and biogas. Students will study the methods used to produce these types of fuels, the by-products produced, and the sustainability of energy production. In addition to studying the techniques used to produce alternative energy, students will also discuss the economic and environmental impacts of producing and using alternative energy sources. Prerequisites: 410.601 Biochemistry, 410.602 Molecular Biology, 410.603 Advanced Cell Biology I.

AS.410.780. Stem Cell Culture Laboratory Methods. 4 Credits. This laboratory course introduces students to the cultivation and differentiation of stem cells. Students are introduced to cell cultivation methods for three types of stem cells and the basics of tissue engineering. Students will scale-up cells into mini-bioreactors for large scale use. The class will include industry-wide practices in CGMP. Prerequisites: 410.601 Biochemistry; 410.602 Molecular Biology; 410.603 Advanced Cell Biology I; 410.652 Cell Culture Techniques or permission of program committee.

AS.410.799. Current Topics in Regulatory Policy. 4 Credits. The ability to successfully navigate the intersections of law, regulation, guidance, and policy has never been more critical to the success of entities engaged in medical product development and commercial marketing. The entities that make up this industry are very sophisticated in their abilities to innovate at a blazing speed. In contrast, regulators must use a regulatory model that evolves and adapts much slower than their industry counterparts. As a result, regulators are relying more heavily on policy to drive their strategy, actions, and outcomes. Therefore, a clear understanding of regulatory policy is an essential consideration for individuals engaged in the medical product development industry. This course provides an introduction to several key areas of government regulatory policy (both old and new) and regulatory science. The topics covered in this course will serve as a road map for students who want to successfully navigate within this complex and changing regulatory model.

AS.410.800. Independent Research in Biotechnology. 4 Credits. Students in the biotechnology program have the opportunity to enroll in an independent research course. This elective course is an option after a student has completed at least eight graduate-level courses and has compiled a strong academic record. Prior to proposing a project, interested students must have identified a research topic and a mentor who is familiar with their prospective inquiry and is willing to provide guidance and oversee the project. The research project must be independent of current work-related responsibilities as determined by the project mentor. The mentor may be a faculty member teaching in the biotechnology program, a supervisor from the student’s place of work, or any expert with appropriate credentials. Students are required to submit a formal proposal for review and approval by the biotechnology program committee. The proposal must be received by the Advanced Academic Programs office no later than one month prior to the beginning of the term in which the student wants to enroll in the course. Students must meet with a member of the program committee periodically for discussion of the project’s progress, and a written document must be completed and approved by the program committee and project mentor for the student to receive graduate credit. Additional guidelines can be obtained from the AAP administrative office. Prerequisite: All core courses and four additional courses.

AS.410.801. Biotechnology Thesis. 4 Credits. Students wishing to complete a thesis may do so by embarking on a two-semester thesis project, which includes the 410.800 Independent Research Project and 410.801 Biotechnology Thesis courses. This project must be a hypothesis-based, original research study. The student must complete 410.800 Independent Research Project and fulfill the requirements of that course, including submission of a project proposal, final paper, and poster presentation, before enrolling in the subsequent thesis course. For the thesis course, students are required to submit a revised proposal (an update of the 410.800 proposal) for review and approval by the faculty adviser and biotechnology program committee one month prior to the beginning of the term. Students must meet with the faculty adviser periodically for discussion of the project’s progress. Graduation with a thesis is subject to approval by the thesis committee and program committee and requires the student to present his/her project to a faculty committee both orally and in writing. Prerequisites: Successful completion of 410.800 Independent Research Project and 410.645 Biostatistics.
AS.410.802. Independent Studies in Regulatory Science. 4 Credits.
This course is open only to students in the MS in Regulatory Science program or the MS in Biotechnology with a concentration in Regulatory Affairs and may be taken only after the student has completed 5 courses and has compiled a strong academic record. Prior to proposing a project, interested students must have identified a study topic and a mentor who is familiar with their prospective inquiry and who is willing to provide guidance and oversee the project. The study project must be independent of current work-related responsibilities as determined by the project mentor. The mentor may be a faculty member, a supervisor from the student’s place of work, or any expert with appropriate credentials. The goal of the study project should be a 'publishable' article. Students are required to submit a formal proposal for review and approval by the regulatory science program committee. The proposal must be received by the Advanced Academic Programs office no later than one month prior to the beginning of the term in which the student wants to enroll in the course. Students must interact with a member of the program committee periodically for discussion of the project’s progress, and a written document must be completed and approved by the program committee and project mentor for the student to receive graduate credit. Additional guidelines can be obtained from the AAP administrative office.

AS.410.803. Regulatory Science Thesis. 4 Credits.
Students wishing to complete a thesis may do so by embarking on a two-semester thesis project, which includes the 410.802 Independent Studies in Regulatory Science Project and 410.8 Biotechnology Thesis courses. This project must be either a hypothesis-based or research question-based original research study. The student must complete 410.802 Independent Research Project and fulfill the requirements of that course, including submission of a project proposal, final paper, and poster presentation, before enrolling in the subsequent thesis course. For the thesis course, students are required to submit a revised proposal (an update of the 410.802 proposal) for review and approval by the faculty adviser and biotechnology program committee one month prior to the beginning of the term. Students must meet with the faculty adviser periodically for discussion of the project’s progress. Graduation with a thesis is subject to approval by the thesis committee and program committee and requires the student to present his/her project to a faculty committee both orally and in writing. Prerequisites: All required regulatory science courses and three elective courses, which must include 410.802 Independent Studies in Regulatory Science and, if hypothesis-driven, 410.645 Biostatistics.

AS.410.804. Practicum in Biotechnology Enterprise & Entrepreneurship. 4 Credits.
This course synthesizes the knowledge and skills acquired in the Masters of Biotechnology Enterprise and Entrepreneurship program while offering a real-world examination of a bioscience organization and the issues it faces. Students will form interdisciplinary teams and work with faculty and industry professionals on an authentic and current project from a local bioscience public or private company, an entrepreneurial startup, or a nonprofit organization. This course is only open to students completing the Master of Biotechnology Enterprise and Entrepreneurship program.

AS.410.806. Independent Studies in Biotechnology Enterprise and Entrepreneurship. 4 Credits.
This course is open only to students in the MBEE or the MS in Biotechnology with a concentration in Enterprise and may be taken only after the student has completed five courses and has compiled a strong academic record. Prior to proposing a project, interested students must have identified a study topic and a mentor who is familiar with their prospective inquiry and who is willing to provide guidance and oversee the project. The study project must be independent of current work-related responsibilities as determined by the project mentor. The mentor may be a faculty member, a supervisor from the student’s place of work, or any expert with appropriate credentials. The goal of the study project should be a 'publishable' article. Students are required to submit a formal proposal for review and approval by the enterprise/regulatory program committee. The proposal must be received by the Advanced Academic Programs office no later than one month prior to the beginning of the term in which the student wants to enroll in the course. Students must interact with a member of the program committee periodically for discussion of the project’s progress, and a written document must be completed and approved by the program committee and project mentor for the student to receive graduate credit. Additional guidelines can be obtained from the AAP administrative office.
AS.420 (ENVIRONMENTAL SCIENCES)

AS.420.301. Quantitative Methods. 3 Credits.
This prerequisite course provides the necessary background in mathematics for students who do not have sufficient undergraduate course work in calculus and statistics. Students who receive a provisional admission because of math deficiency can opt to take the mathematics assessment test. If the student earns a score of 80% or better, then s/he is not required to take the course. In this course, students acquire quantitative skills and an understanding of mathematical principles fundamental to environmental sciences, and necessary for evaluating the implications of policy measures. Topics include probability and statistics, systems of equations, analytical geometry, and basic concepts of calculus. Problem sets, interpretation of data, and applications to everyday problems help students appreciate the usefulness of quantitative methods. Offered online twice a year.

AS.420.302. Chemistry of Natural Processes. 3 Credits.
This course provides students with a basic understanding of the fundamentals of chemistry, of Earth's interrelated chemical systems, and of how to manipulate and interpret chemical data. Topics include molecules and chemical bonding, states of matter, thermodynamics, and kinetics. Through a series of exercises, students apply chemistry principles to solve real-world environmental problems. Prerequisite: Students are urged to take 420.301 Quantitative Methods for Environmental Sciences before enrolling in this course. Offered online only, one to two times annually.

AS.420.601. Geological Foundations of Environmental Science. 3 Credits.
This course provides an overview of Earth's materials, processes, and resources for environmental scientists and policymakers. Topics include minerals, rocks, sediments, stratigraphy, structure, geomorphology, and geologic environments. Emphasis is placed on understanding geologic principles and methods as applied to environmental science, Earth resources, and public policy. Offered online or onsite, twice per year. Onsite version includes a required field trip.

AS.420.603. Environmental Applications of GIS. 3 Credits.
Geographic information systems technology (GIS) is a powerful data visualization and analysis tool. This course is designed to introduce students to advanced concepts of geographic information science related to the fields of reserve planning, environmental science, natural resources, and ecology for the purpose of spatial analysis and geovisualization of environmental issues. Topics may include conservation needs using remote sensing, digital image processing, data structures, database design, landscape ecology and metrics, wildlife home range and habitat analysis, suitability modelling, terrain and watershed analysis, and spatial data analysis. This course will only be offered online.

AS.420.604. Hydrology & Water Resources. 3 Credits.
This course provides an introduction to the hydrological cycle and examines the influence of climate, geology, and human activity on this cycle. The components comprising this cycle will be examined and include: precipitation; evapotranspiration; surface and groundwater flow; storage in natural reservoirs; water quality; and water resource management and regulation. Discussion of these topics in threaded discussions using the primary literature as well as problem sets will highlight applications and areas of current hydrological research. Offered online and onsite three times per year. Onsite version includes a required field trip.

AS.420.605. Maritime Law and the Environment. 3 Credits.
The course is designed to introduce students to the process by which environmental policy can be implemented as law in the international sphere. “Law of the Sea” formed the foundation of modern public international law. It also represents the world’s first efforts to define and regulate a “global commons” and to grapple with the management of resources as the “common heritage of mankind”. Topics explored include freedom of navigation on the high seas, the limits on port-state jurisdiction over foreign vessels, and the scope of coastal nations’ power to regulate activities in their respective territorial waters, “contiguous zones”, and “exclusive economic zones”. The course also examines how the UNCLOS regime functions in tandem with other treaties, customary international law, the role of voluntary standards (such as American Society for Testing and Materials (ASTM) International and International Organization for Standardization (ISO)) and domestic law in addressing specific current issues - including management of living and nonliving resources on the Continental Shelf, deep seabed mining, reduction of pollution, protection of highly migratory fish stocks, aquaculture, “marine dead zones”, and the future of ocean policy.

AS.420.606. Climate Justice. 3 Credits.
Climate change impacts and policies effect different groups of people in varying ways. More vulnerable populations will disproportionately experience impacts more severely (drought, flooding, food security, storms, heat islands, changes to resources and livelihoods). Also, policies to mitigate and adapt to climate change will have differential impacts. In this course, we will review both climate impacts and proposed policies through the lens of equity and justice. Topics to cover will include: analysis of differential impacts, equity critique of mitigation policies, and the impact of adaptation policies on the poor and people of color. The course will cover both the US and international topics.

AS.420.608. Oceanic & Atmospheric Processes. 3 Credits.
In this course, students study the oceans and the atmosphere as interrelated systems. The basic concepts of air masses, water masses, winds, currents, fronts, eddies, and storms are linked to permit a fundamental understanding of the similar nature of oceanic and atmospheric processes. Among the course's topics are weather forecasting, global climate change, marine pollution, and an introduction to applied oceanography. A field trip is included for in-person sections. Offered on-site or online two to three times each year.

AS.420.609. Agroecology. 3 Credits.
In this course, Agroecology will be taught as a transdisciplinary study of how agricultural production of plants and animals affects and is affected by the local environment. Students will gain a more in-depth understanding of inputs and outputs in agricultural systems and their relation to primary productivity, nutrient cycling, energy flows, and species interactions on farms. The components of farm management will be studied within the context of a complex ecosystem. Time in this course will be spent in lecture, field studies and field trips that will attempt to integrate concepts in agroecology with actual practices in sustainable agriculture.
AS.420.610. Sustainable Business. 3 Credits.
This course provides an introduction to sustainable business strategies practiced by US companies. Students will examine the evolution of CSR and triple bottom line management in the context of competing stakeholder interests. Given that sustainability practices differ by sector, company and country, specific illustrations will be discussed in relation to deforestation, water and waste. Attention will be placed on evolving regulatory regimes including compliance mechanisms such as certification and auditing as well as voluntary partnering with NGO's and government agencies. The discussion of sustainable business strategies will be approached as a policy debate that continues to be shaped at both the national and global levels.

AS.420.611. Principles & Methods of Ecology. 3 Credits.
This course examines the relationship between organisms and their biotic and abiotic environment at three levels of biological hierarchy: individual organism, population, and community. Population characteristics, models of population dynamics, and the effect of ecological interactions on population regulation are discussed in detail. The structure and function of natural and man-made communities and the impact disturbances have on community structure are also examined. Students are led to appreciate the importance of ecology in solving environmental problems. Offered online or onsite, at least twice per year. Onsite version includes required field trips.

AS.420.612. Sustainability Science: Concepts and Challenges. 3 Credits.
Sustainability Science is an interdisciplinary field engaged with understanding the dynamics between natural and social systems and how those interactions challenge the notion of sustainability. This course will start by reviewing the history of the concept of sustainability and will then consider how it has been applied in the environmental sciences. Specifically the goal of the course is to provide a comprehensive, multidisciplinary perspective on this emerging field, understanding its theory, research horizons, and practical applications. Concepts to be reviewed include socio-environmental systems, complex adaptive systems, cross-scale impacts, tipping points and regime shifts, vulnerability, resilience and adaptive capacity, equity, sustainable development, political ecology, governance, capital assets and livelihoods. In a seminar context this course will consider these and other concepts from a theoretical perspective but will focus on their application in solving real-world problems.

AS.420.613. Forest Ecosystems. 3 Credits.
Forests are critical global ecosystems that provide not only timber and wood products, but an array of services including habitat for wildlife, water filtration, carbon storage, and recreational opportunities. Forests are also dynamic landscapes produced by complex and interacting social and ecological processes. Yet increasingly they are being impacted by deforestation, climate change, biotic homogenization, the spread of invasive species and a range of other natural and anthropogenic stressors. This graduate discussion based seminar class will explore the distribution, ecology and sustainability of forest ecosystems with an eye on development of forests of North America over time. It will cover aspects of biogeography, climate forcing of vegetation dynamics, effects of invasive species, land use change and creation of urban forests. Prerequisites: Principles and Methods of Ecology or equivalent experience.

AS.420.614. Environmental Policymaking and Policy Analysis. 3 Credits.
This course provides students with a broad introduction to U.S. environmental policymaking and policy analysis. Included are a historical perspective as well as an analysis of future policymaking strategies. Students examine the political and legal framework, become familiar with precedent-setting statutes such as NEPA, RCRA, and the Clean Air and Clean Water Acts, and study models for environmental policy analysis. Cost benefit studies, the limits of science in policymaking, and the impact of environmental policies on society are important aspects of the course. A comparison of national and international policymaking is designed to provide students with the global perspective on environmental policy. Offered online or onsite, at least twice per year.

AS.420.615. Environmental Restoration. 3 Credits.
This field-centered course focuses on river, freshwater tidal wetland, serpentine and deforested grassland environments that have been restored or designed in the southern Pennsylvania, Maryland and DC region. Knowledge of prehistoric and paleoecological conditions and post-settlement impact along with modern ecological studies provide important long-term guidelines for restoration, mitigation and conservation measures. Field trips are an integral component of this course with possible locations to include Gettysburg Battlefield, PA; Soldiers Delight Environmental Area, Little Falls and First Mine Run in northern Baltimore County; Big Spring Run Restoration in Lancaster, PA; Severn River Coastal Plain forest, sweet bay magnolia bog and cedar bog in Anne Arundel County; and the restored Kenilworth Marsh in DC. Weekly classroom sessions include plant identification of grasses, sedges and trees, and background data on vegetation, land use history and paleoecological data. The pros and cons of different restoration and conservation approaches regarding effectiveness and sustainability are reviewed. Prerequisite: 420.611 Principles and Methods of Ecology, equivalent course, or experience.

AS.420.616. Environmental Consequences of Conventional Energy Generation. 3 Credits.
Environmental consequences of conventional energy generation will explore the energy resources that have driven and are projected to be the primary energy sources worldwide for the next several decades. Specifically, this course will focus on the historical and future role of conventional energy sources such as those derived from fossil fuels, focusing on their geologic genesis and the consequences of resource extraction which will invite comparisons to more recent trends in energy generation. Students will be exposed to the nexus of social, technical, engineering and environmental challenges of providing energy supplies to an increasingly urban and technologically connected global population. Topics include petroleum, traditional natural gas, coal, nuclear, hydroelectric, and geothermal supplies as well as recent trends in shale hydrologic fracturing methods of obtaining petroleum resources. Environmental impacts will focus on mining, resource extraction, soil and groundwater contamination as well as particulates, smog, acid rain, and global warming. Global production, distribution, usage and impacts of these resources will be considered. Offered online, annually. Prerequisites: none.
AS.420.617. Managing Responsible Organizations for the Ecosystem. 3 Credits.
Corporations are currently in the forefront of the sustainability debate with business viewed as a primary player in determining the future of the ecosystem. Leading businesses focused on sustainable strategies, implies changes across the conventional management processes of planning, organizing, leading and innovating. This course will examine the existing and emerging managerial approaches and individual competencies for sustainable management.

AS.420.618. Terrestrial and Marine Conservation Biology. 3 Credits.
Both the Maine coast and mountainous, interior Maine provide a stunning and ideal venue for learning about the myriad conservation biology issues, challenges and solutions in dealing with both marine and terrestrial conservation. These habitats provide an ideal “living laboratory” for studying, understanding and implementing conservation biology. Acadia National Park, established in 1919, will provide us opportunities to investigate the only fjord in the Atlantic Northeast, Somes Sound; carefully assess the ocean-land interface, e.g., Otter Cliffs, Thunder Hole, Sand Beach, and the Ocean Path Trail; hike Cadillac Mountain — the first place to see the sunrise from October to early March in the continental U.S.; time permitting visit Long Pond and hike the Ship Harbor Nature Trail; and spend a day “at sea” investigating cutting edge marine conservation issues up close. Additionally, day trips will be scheduled for the Schoodic Peninsula (via ferry from COA’s dock to Winter Harbor) and to the new Katahdin Woods and Waters National Monument, just east of Mt. Katahdin, Maine’s highest mountain — designated by President Obama as our newest National Monument in August 2016. Since this is a brand new Monument, we’ll investigate how to help implement its mission including through a day hike assessing Katahdin Lake off the Loop Road. Prerequisite: 420.611 Principles and Methods of Ecology, equivalent course, or experience.

AS.420.619. Climate Dynamics. 3 Credits.
There is a huge interest in understanding the climate at multiple scales. This course will provide an overview of the chemical and physical climate system, feedbacks, and the basic physical balances governing atmospheric circulations and climate with an eye on understanding the basics of climate models. The course will cover energy transfer in the ocean-atmosphere system, mathematical modelling of the ocean and atmosphere, modeling of these systems and the basics on how to construct a climate model and explore the current state of climate models.

AS.420.620. Soils in Natural & Anthropogenic Ecosystems. 3 Credits.
This course introduces students to basic concepts of soil science and the soil's contribution to the functions of natural and anthropogenic ecosystems. It provides an overview of soil morphological, physical, chemical, and biological properties, and how these interact to form a soil with unique characteristics and ecosystem function. Students discuss soils of the world from the perspective of soil taxonomy, the processes that form these soils, and land use properties specific to each soil order. Students learn to read soil maps, to interpret and predict the quality and land use potential of soils, and to use available soil data. A strong focus will be given to environmental and ecological issues relating to soil science in the context of the ecological relationships between soil organisms and their biotic and abiotic environments, with emphasis on the role of soil organisms in biogeochemical cycling, ecosystem structure and function, long-term ecosystem sustainability, and global environmental change. Current issues regarding the proper use and management of soils are investigated. All sections (online and in person) will involve some field related work. Online sections will be offered every annually. Prerequisites: 420.601 Geological Foundations for Environmental Sciences; (recommended) 420.611 - Principles & Methods of Ecology, or permission from the instructor. Prerequisite(s): Must satisfy prerequisite course (AS.420.611) prior to enrolling in AS.420.620

AS.420.622. Ecotoxicology. 3 Credits.
This course covers fundamental of ecotoxicology, including chemical action on plants, wildlife, and ecosystems. Coursework explores toxic effects of pollutants and other stressors at multiple levels of function ranging from cellular and organ systems to populations, communities, and ecosystem functions. Students will learn essential concepts governing fate, exposure, and toxic mechanisms of chemicals as well as basic mathematical models used to investigate biological uptake, bioaccumulation, and dose-response effects. Course includes lessons on application of ecotoxicology, including standard procedures for toxicity testing, risk assessment, and measuring exposures and impacts in the field. Topics are covered in a framework of basic biology and ecology, including cellular/organismal functions, trophic structure, food-web dynamics, population biology and community ecology. Offered online every two years. Prerequisite: 420.611 Principles and Methods of Ecology, equivalent course, or experience.

AS.420.623. Freshwater Ecology & Restoration of Aquatic Ecosystems. 3 Credits.
This course focuses on the ecology, protection, and restoration of non-tidal waters. Students study the biological, chemical, and physical characteristics of the waters and riparian zones. There is also a focus on ecological responses to anthropogenic activity and approaches to protection and damage mitigation in freshwater ecosystems. Ongoing and planned protection and restoration activities in Maryland and elsewhere are presented. Students develop holistic restoration plans based on existing ecological data. Two weekend field trips are required parts of the course. Offered every two years. Prerequisite: 420.611 Principles and Methods of Ecology. Prerequisite(s): Must satisfy prerequisite course prior to enrolling in 420.623
AS.420.624. Ocean Stewardship and Sustainability. 3 Credits.
Covering over 70% of our planet, the ocean produces half the planet's oxygen, absorbs a quarter of all carbon dioxide emissions, feeds 3 billion people, and contributes $3 trillion per year to the global economy. Yet, we know more about the moon's surface than we do about the bottom of the ocean. What we do know, however, is that overfishing, pollution, land-use change, and ocean warming and acidification, to name a few, are causing marine biodeterioration and threatening the ability of the ocean to sustain global systems critical for life. This course will provide students with a robust scientific approach to the study of oceans with a focus on environmental issues, governance and social-ecological systems.

Prerequisite(s): Must satisfy the prerequisite course (420.608) prior to enrolling in AS.420.624

AS.420.625. Ecology and Ecosystem Management in Coastal and Estuarine Systems. 3 Credits.
This course examines the physical, chemical, and biological processes affecting coastal and estuarine ecosystems with special emphasis on the Chesapeake Bay as a model system. Human influences on such large and critical ecosystems and the policy decisions made to manage and minimize human impact are explored in lecture and seminar formats.

Topics include the hydrodynamics of shallow tidal waters; energy and material flows and transformations; diversity and adaptation of plant, animal, and microbial communities; population and pollution ecology; and ecosystem management. Case histories illustrate problems in fisheries management and the eutrophication of the coastal and estuarine systems. Offered annually, on-site. Required weekend field trips are included. Prerequisite: 420.611 Principles and Methods of Ecology, equivalent course, or experience.

AS.420.626. Field Methods in Ecology. 3 Credits.
This course centers on practical field exercises to develop both technical proficieny and broader understanding of varied ecological systems. Field methods include quadrate, transect, and SAV sampling as well as multiple techniques for surveying animal communities and monitoring water quality. While analyzing their own data, students develop deeper understanding of fundamental concepts such as species-area curves, importance values, species diversity, and community similarity indices. Students also are introduced to paleoecological tools such as sediment coring. Several ecological processes including succession and the effect of disturbances on community structure are demonstrated. The significance, advantages, and disadvantages of various surveying methods are explored in classroom meetings, but for much of the course students conduct their studies in the forests, fields, and wetlands of the area. This course is offered onsite only with fieldwork scheduled for a succession of Saturdays; some sections may conduct field trips on one or two Fridays and/or Sundays. Offered most summers. Prerequisite: 420.611 Principles and Methods of Ecology, equivalent course, or experience.

AS.420.627. Great Lakes Ecology and Management. 3 Credits.
This intensive course examines the physical, chemical, and biological aspects of the Great Lakes aquatic ecosystem as well as its governance, policy-making and management. State-of-the-science, socio-economic relationships, human impacts and restoration activities are also explored, often by presentations from regional experts. Daily lecture topics are reinforced with numerous field experiences to an array of sites throughout Michigan. Students will also be exposed to hands-on sampling, learn about long-term monitoring programs and participate in developing alternative management strategies.

AS.420.628. Ecology and Management of Wetlands. 3 Credits.
This course explores the biological, physical, chemical, and ecological aspects of tidal and non-tidal wetland ecosystems. Topics include wetland classification, valuation, function and dynamics. Wetland modification and manipulation are analyzed through case studies of restoration, construction, and mitigation. The effects of federal and state laws, of various regulations, and of human perturbations are explored. In-person sections include field trips that provide hands-on experience and demonstrate the significance of wetland mitigation, restoration and construction projects. Offered onsite every two years. Prerequisite: 420.611 Principles and Methods of Ecology, equivalent course, or experience.

AS.420.629. Drinking Water, Sanitation & Health. 3 Credits.
In this course students examine scientific and public policy dilemmas related to the provision of safe drinking water and related protection of global human health. Course work emphasizes basic understanding of the fundamentals of water supply, treatment, regulation, and sanitation as well as providing a focus on unresolved issues confronting scientists, resource managers, and policymakers. Students work to develop recommendations for solutions to critical issues as controlling pathogens from urban and agricultural runoff, managing harmful by-products of the disinfection process, regulating arsenic in ground water, evaluating the risk posed by exposure to mixtures of contaminants, and confronting the threat of terrorist attacks on water supplies. Offered online, annually. Prerequisite: 420.604 Hydrology and Water Resources, equivalent course, or experience.

Prerequisite(s): Must satisfy prerequisite course (AS.420.604) prior to enrolling in AS.420.629
AS.420.630. Tropical Ecology and Conservation of African Wildlife. 4 Credits.
This is an immersive study abroad field course in Cameroon, Africa with a strong focus in tropical ecology field methods for the purpose of conserving African wildlife. The Congo Basin is the second largest tropical rainforest in the world, storing an estimated 25-30 million tons of carbon stocks, and home to nearly 20% of Earth’s species. There is a critical need to better understand the Congo Basin’s rainforests because we cannot conserve what we do not understand. The field component of this course takes place at the Dja Nature Reserve in southeast Cameroon at a remote research station operated by the Congo Basin Institute. The Dja rainforest is a diverse and understudied ecosystem. This course will cover basic field methods including but not limited to biodiversity assessments, species population estimates, setting up and checking large mammal camera traps, auditory surveys of primate vocalizations, mist netting for tropical birds, and other field techniques. Course content will focus on problems such as ecological impacts of biodiversity loss, drivers of wildlife poaching, conservation strategies and best practices. Students will be introduced to local leaders in conservation, members of the community from the ecosystems we'll be working in, as well as indigenous residents from the Baka tribal group. This course will also explore the broader social, political, economic, and climate change impacts to wildlife conservation efforts in Africa. Prerequisite: AS.420.611 – Principles and Methods of Ecology.

AS.420.631. Field Methods in Stream & Water Quality Assessment. 3 Credits.
This course provides an overview of field methods used to sample and assess various biological, physical, and chemical components in streams, rivers, and lakes. It allows students to determine the impact human activity has on aquatic environments. Students gain hands-on experience with standard sampling techniques, and with the detection, identification, and quantification of biological specimens and chemical pollutants in the aquatic environment. Students discuss water quality standards and federal regulations such as the Clean Water Act and Safe Drinking Water Act. Also included are study design, gear selection, sample preservation, and safety. Basic approaches to analyze and report findings are covered, with emphasis on methods currently practiced by government resource agencies. Offered onsite every two years. Prerequisite: 420.611 Principles and Methods of Ecology, equivalent course, or experience.

AS.420.632. Air Quality Management and Policy. 3 Credits.
Understanding and mitigating air pollution, both indoor and outdoor, is of extreme importance to global health. In fact, the World Health Organization released a statement in 2014 that in 2012, approximately 7 million people died - one in eight of total global deaths around the world - as a result of air pollution exposure. Air pollution also has an impact on climate change, in terms of its abilities to both exacerbate and reduce global warming. This course provides an overview of the principles, effects, and policies regarding outdoor air pollution with an emphasis on emerging international air pollution issues, public health and environmental impacts of outdoor air pollution, and evolving ways to monitor air pollution, from low-cost sensors to satellite techniques. Course topics include: history of air pollution events and management; major air pollutants and sources; atmospheric chemistry, transport and dispersion; measurement and monitoring; control technology; effects on human health and climate; and regulatory requirements. The effectiveness of the Clean Air Act, approaches toward air quality management in other countries, international treaties, future air quality projections, and regulatory case studies will also be discussed. Offered online, infrequently. Prerequisite: 420.608 Oceanic and Atmospheric Processes, an equivalent course or experience, or approval of the instructor. Prerequisite(s): Must satisfy prerequisite course (AS.420.608) prior to enrolling in AS.420.632

AS.420.634. Bioremediation & Emerging Environmental Technologies. 3 Credits.
This course presents details of environmental technologies for assessment and remediation of contaminated sites. The course includes a brief review of environmental policy related to impacts of hazardous chemicals and endocrine blockers, but focuses on remediation technologies available for reclaiming contaminated resources and reducing health risks. It covers the application of multiple physical and chemical technologies, but emphasizes use of biological systems for the cleanup of hazardous chemicals. In the course, students are introduced to the nature of hazardous waste, behavior of chemicals in the subsurface, biochemistry of microbial degradation and technology applications. Bioremediation technologies covered include bioventing, air sparging, monitored natural attenuation or intrinsic remediation, and chemical oxidation. Students learn to select appropriate technologies, design a monitoring program for assessing the applicability of bioremediation techniques, develop biological conceptual models for natural attenuation, and understand the key principles for design. Case studies and problem sets acquaint students with field applications and introduce modeling techniques for predicting performance. Offered onsite, infrequently. Prerequisites: 420.601 Geological Foundations of Environmental Science and 420.604 Hydrology and Water Resources, equivalent courses, or experience.

AS.420.635. Integrated Water Resources Management. 3 Credits.
Integrated water resources management provides coordinated, goal-oriented control for development of river, lake, ocean, wetland and other water assets. This course provides students with a broad introduction to U.S., EU and international perspectives. The evolution of basic concepts behind IWRM will be explored as well the limits of current practices and strategies. Students will examine several different conceptual frameworks, and become familiar with how various US water management agencies and international institutions such as the World Bank, USAID, UNDP and the EU apply the principles of IWRM in various settings. Associated concepts of river basin management, climate adaptation and sustainable development will be addressed within the context of IWRM. Case studies will be presented and evaluated by the students.
AS.420.637. Conservation Biology and Wildlife Management. 3 Credits.
In this course students examine the meaning and implications of biodiversity with a focus on disciplines associated with conservation biology, wildlife conservation and wildlife management, including taxonomy, genetics, small population biology, chemical and restoration ecology, and marine biology. This includes exploring how conservation biology differs from other natural sciences in theory and in application. Students learn the major threats to biodiversity and what natural and social science methods and alternatives are used to mitigate, stop, or reverse these threats. The course also includes the economic and cultural tradeoffs associated with each conservation measure at the global, national, regional, and local levels. The course is taught in the seminar-style with field trips. Offered in person in Baltimore, Washington DC or off-site annually. Prerequisite: 420.611 Principles and Methods of Ecology, equivalent course, or experience.

AS.420.638. Coastal Zone Processes and Policy. 3 Credits.
The course is designed to provide the student with knowledge to address modern coastal, environmental, geologic, and policy issues. The course will focus on the coasts, barrier-islands, major estuaries, and inner continental shelf areas of the United States. Fundamental coastal engineering principles will be described in order to address methods used for public works projects including hurricane protection, beach nourishment, and tidal inlet maintenance. The policies pertinent to management and use of coastal environments will be studied. Offered online every other year. Prerequisite: 420.601 Geological Foundations for Environmental Sciences, equivalent course, or experience.

AS.420.639. Landscape Ecology. 3 Credits.
Landscape ecology is a rapidly developing area of study that explicitly examines the effects of spatial pattern and scale on ecological processes that unfold over areas of several square kilometers or larger. Thus, landscape ecology provides many concepts, tools, and approaches that will enhance the effectiveness of endeavors such as watershed management, ecosystem management, design of conservation reserves and green infrastructure, and smart growth. The goal of this course is to give students a firm grasp of the concepts of landscape ecology and of how they can be applied to enhance the effectiveness of environmental policy, management, regulation, and assessment. Offered online at least every other year. Prerequisite: 420.611 Principles and Methods of Ecology, equivalent course, or experience.
Prerequisite(s): Must satisfy prerequisite course (AS.420.611) prior to enrolling in AS.420.639

AS.420.641. Natural Resources Law and Policy. 3 Credits.
This course introduces students to federal and state legislation and policies of critical importance in natural resource management. Students explore such issues as regulation of ocean fishing, coastal zone management, mineral exploitation and associated environmental impact, water allocation and quality, hazardous waste cleanup programs under the Superfund law, urban industrial infrastructure such as water and sewage systems, land use management, and water and air pollution control. Offered onsite of online every two years. Completing 420.614 Environmental Policymaking and Policy Analysis is recommended. An equivalent course or experience may also suffice.

AS.420.642. Public Lands-Private Interests: The Struggle for Common Ground. 3 Credits.
This course prepares students to participate in the great debate over the use and protection of America’s federally owned forests, rangeland, parks, and sanctuaries. Students consider such questions as how much should be paid for grazing on federal lands; how to balance the demand for timber harvest with the need for watershed and wildlife management; who controls mineral and oil extraction on federal lands; and who has the rights to waters flowing through federal lands and stored behind federally funded dams. These and similar issues of today and tomorrow are studied in the context of history, statute and case law, and administrative regulations. Offered infrequently. Prerequisite: 420.614 Environmental Policymaking and Policy Analysis, equivalent course, or experience.

AS.420.643. U.S. Environmental History. 3 Credits.
Environmentalism is a multifaceted phenomenon infused with many different schools of thought about the nature of environmental problems as well as the most appropriate solutions for those problems. This course will examine the major historical influences on the varied approaches to environmentalism and environmental practice. Students will explore the influence of environmental ideas and actions in the US from the 19th century to the present. The goal is to deepen our understanding of contemporary environmental practice — by others and ourselves — by tracing the influence of these historical trends in current debates and actions. Topics include conservationism, preservationism, transcendentalism and green romanticism, toxic construct, the wilderness construct, and sustainability.

AS.420.644. Sustainable Cities. 3 Credits.
This course examines urbanization and its impacts on the environment. The goal of the course is to better understand how urbanization contributes to ecological damage as well as how cities can be constructed in ecologically healthy ways. Topics include land use planning, transportation, waste, management, water quality, open space/greening, green building technology, urban design, and urban ecology. The course takes an international perspective by using case studies of cities in North America, Europe, Asia, Latin America, and Africa. The case studies also include a wide range of cities with different populations, geographic scale, and growth rates. Final projects are an in-depth study of one particular city of the student’s choice and its attempts to implement programs for sustainability. Offered online, annually. Prerequisite: 420.614 Environmental Policymaking and Policy Analysis, equivalent course, or experience.

AS.420.646. Transportation Policy and Smart Growth. 3 Credits.
This course examines how transportation policy and decisions can alleviate or prevent problems resulting from urban sprawl. How can transportation decisions and planning contribute to more livable urban design and land use patterns that promote smart growth that is environmentally and ecologically sustainable? Students discuss how different environmental media land, water, and air are affected by our transportation systems and resulting development patterns, and how the design of transportation systems the highways, roads, transit systems, and bike and walk paths can more closely harmonize with nature and provide communities with a better quality of life. A wide range of policy options is examined, from altering the structure of road pricing to redesigning neighborhoods and altering urban form. A number of case studies are examined to illuminate the issues and principles raised in the course. Offered online at least every other year. Prerequisite: 420.614 Environmental Policymaking and Policy Analysis, equivalent course, or experience.
AS.420.650. International Environmental Policy. 3 Credits.
This course explores the methods and strategies for promoting solutions to global environmental problems. Through consideration of issues such as stratospheric ozone depletion, global climate change, tropical deforestation, loss of biodiversity, transnational pollution, and other threats to the international commons, students examine policymaking from the perspective of developed and developing countries, the United Nations system, international financial entities, and nongovernmental interest groups. By investigating important international agreements, students determine how far the international community has come in solving specific problems, what obstacles prevent effective international solutions, and what needs to be done to overcome barriers. Offered onsite or online, infrequently. Prerequisite: 420.614 Environmental Policymaking and Policy Analysis, equivalent course, or experience.
Prerequisite(s): Must satisfy the prerequisite course (AS.420.614) prior to enrolling in AS.420.614

AS.420.651. Environmental Risk in Decision Making. 3 Credits.
Analysis of risk is one of the most powerful tools and components of regulatory decision making. Based on the premise that risk assessment has no "right" answers, this course explores what risk perception, risk management, and risk communication mean. Students are introduced to terminology and concepts necessary in risk communication. Case studies help to explain the complexities of risk assessment and management. Students learn how to balance the costs and benefits of risk reduction and how to account for the uncertainties in risk estimates. Prerequisite: 420.614 Environmental Policymaking and Policy Analysis, equivalent course, or experience.

AS.420.652. Environmental Justice. 3 Credits.
The field of environmental justice is riven with conflicts over the scope, measurement, evaluation, nature and seriousness of environmental problems. This course takes a seminar approach to develop options for resolving environmental justice problems using both practical and theoretical approaches for communication, understanding and analysis to bridge interests, reconcile differences, reduce confusions and improve environmental decision making. The course will investigate and evaluate the effectiveness and possibilities of policies that can highlight, educate and develop understanding among communities concerned with environmental issues. The course will focus on how communication can encourage discussion about potential causes and responses to environmental justice concerns. A primary area of the course will be to examine how disenfranchised groups understand environmental justice within a hierarchy of community concerns, accumulated experience and particular histories within communities. The course has an applied aspect and will look at a local manifestation of how environmental justice is inseparable from broader components of justice such as living and working conditions, violence, powerlessness, marginalization, and processes producing and reproducing inequities. Offered online, annually. Prerequisite: 420.614 Environmental Policymaking and Policy Analysis, equivalent course, or experience.

AS.420.654. Environmental & Natural Resource Economics. 3 Credits.
This course presents the fundamental concepts and applications of economic theory related to environmental protection and the management of natural resources, including renewable resources (i.e., fisheries) and exhaustible resources (i.e., petroleum). Topics covered include sustainability, the relationship between the environment and the economy as a whole, the role of government in addressing market failures, how economic incentives can be used to protect the environment, concepts and methods for valuing environmental benefits and cost-benefit analysis of environmental regulatory policies. Prerequisite: AS.420.614 - Environmental Policymaking and Policy Analysis, equivalent course, or experience.
Prerequisite(s): Must satisfy prerequisite course (AS.420.614) prior to enrolling in AS.420.654

AS.420.656. Environmental Impact Assessment & Decision Methods. 3 Credits.
This course introduces the process of environmental impact assessment and policy decision making as required under the National Environmental Policy Act (NEPA) and the regulations of the Council of Environmental Quality (CEQ). Topics include identification of purpose and need for any actions affecting the environment, development of objectives and decision criteria, and various techniques for assessing impact and comparing alternatives for a given environmental intervention. The strengths and weaknesses of various approaches are evaluated with techniques that allow analysis of multiple objectives and conflicting uses of environmental resources. The importance of scientific credibility and public acceptance is demonstrated with actual cases. Offered onsite or online annually. Prerequisite: 420.614 Environmental Policymaking and Policy Analysis, equivalent course, or experience.

AS.420.659. Management for Environmental Results with Performance-based Measurement. 3 Credits.
At all levels of government and throughout private industry, performance-based initiatives now place unprecedented demands on environmental managers to achieve measurable environmental results. The goal of the various performance based initiatives is to give environmental managers a systematic understanding of the causes of environmental problems, both natural and anthropogenic, and their human, ecological and economic effects. It is also at the heart of sound environmental impact analysis, risk assessment, and benefit-cost analysis. In this course, students learn the foundations and applications of modern performance-based initiatives. Using case studies taken from a variety of environmental programs, students learn to use available scientific knowledge to uncover the likely keys to program success. Students learn why success has so often eluded environmental managers in the past. The goal of this class is for students to critically assess the design, performance measurement and management of environmental programs on all scales and to recommend effective improvements. Students will develop skills for implementing results oriented environmental management. Offered onsite or online, annually.
AS.420.660. Strategies in Watershed Management. 3 Credits.
Watersheds are often thought of as the basic organizing units for landscapes and the natural resources they support. As water is a fundamental resource that shapes landscapes, nourishes life, provides habitat and recreation, and transports sediments, nutrients, and wastes, prudent management of watersheds is critical for thriving ecosystems and human populations. The course comprises ten on-line modules: students, each with topical content, web pages to visit, readings in the required text, and a quiz. Most modules also have discussions, and some have other assignments. The final discussion is a brief essay on a relevant topic of the student's choice. Students are introduced to definitions of 'watershed' and 'watershed management' in the context of natural resources science and policy. There is a brief review of basic hydrology, a look at the history of watershed management, and examination of the institutions and legislation that control activities affect watershed management. We discuss threats to watershed health, sources of information to guide watershed managers, and practices that can ameliorate the threats. Through case histories, the students are exposed to the collaborative process for assessing, protecting, and restoring watersheds. Offered online, annually.

AS.420.662. Coral Reefs and Caves: The Geology of the Bahamas. 3 Credits.
This course presents an opportunity to study the physical, chemical and biological processes that operate to produce carbonate platforms (e.g. tides, waves and the growth of corals), geomorphic processes that operate to further shape carbonate platforms (e.g. ground-water flow, cave development and soil development), and the environmental impacts of human activities on carbonate platforms. The course consists of two weeks of intensive, online study followed by a week of field study at the Forfar Field Station on Andros Island in the Bahamas. Offered only as a compressed field course every other January Intersession. Prerequisite: 420.601 Geological Foundations for Environmental Science.

AS.420.665. Climate Change on the Front Lines: The Study of Adaptation in Developing Countries. 3 Credits.
Poor and developing countries are predicted to bear the brunt of climate change. This course will focus on key sectors such as agriculture, forestry, biodiversity, water resources, human health, and tourism and the ways in which poorer and developing countries are impacted by and adapting to climate change. This course may focus on a region or a specific country depending on the instructor. Assessment and evaluation of demographic trends, environmental challenges such as retreating ice, potential flood hazards, ecosystem impacts, as well as health issues will be incorporated. International instruments such as adaptation funds, carbon funds, clean development mechanisms, and reduced deforestation/degradation strategies and policies will be investigated in a comparative analysis of impacts and adaptation responses of countries around the world. Offered online, annually.

AS.420.666. Community Development and Sustainability in developing countries. 3 Credits.
This course introduces community development concepts via discussion of the environmental-social-economic nexus in developing countries. Students will seek answers to key questions such as: (a) How rural communities in developing countries interact with their natural environment (b) What are the drivers, tradeoffs, and feedback loops of such interactions and what lessons can be drawn to seek common ground for sustainability (c) how do interaction between social, environmental, and economic dimensions shape communities to adapt to changes in these dimensions (d) what are some of the successful models of sustainable community development and environmental management (e) what is the fundamental concept of sustainability and factors that influence sustainability and its pathways (f) what are some of the efforts in place through government, nonprofits, and the private sector to assist developing countries in attaining sustainability. Students will discuss topics ranging from energy saving stoves in the Himalayas; to indigenous practices in Africa for mitigating human-wildlife conflict within buffer zones; to community-driven approaches for water management and agriculture; to community forestry and leasehold forestry models. In addition to key problems and challenges, students will be introduced to important tools used to translate ideas into sustainable action, such as project logical frameworks. By the end of the course, students interested in international, community, and sustainable development would be able to engage in related debates and be familiar with approaches and techniques for designing sustainability solutions.

AS.420.667. Analysis of Environmental & Ecological Data. 3 Credits.
This course will teach participants how to develop work flows going from raw data to graphics and statistical analysis, using the programming language and statistical environment R. Topics will focus exclusively on the biological sciences and will cover foundational concepts in statistical modeling (ANOVA, Regression, ANCOVA, PCR, etc); emphasis is on conceptual underpinnings of statistics not methodology, with a focus on defining statistical models and the major inference paradigms in use today.

AS.420.668. Sustainable Food Systems. 3 Credits.
This course considers the environmental and social challenges of providing a sustainable global food system. We will investigate the geographic patterns of agricultural and food production systems, emphasizing contemporary patterns and how these came to be. Attention will be given to agricultural systems from the local to the global scale and we will consider the global distribution of production and consumption of agricultural products. The impacts of global change issues such as climate change, energy crops, population growth, and urbanization on food production will be also be part of the course. Offered online or onsite, annually.

AS.420.669. Applied Sustainability. 3 Credits.
This course examines the history and current trends in the expanding field of sustainability. Students will be exposed to a wide range of case studies, visit many field sites and have discussions with sustainability practitioners in Maryland to determine the current state of the science as well as impediments to progress. Additional work includes practical application through development and implementation of a sustainability-related vision project. Offered only as a compressed field course every other summer. Offered as intensive field course every other summer.
AS.420.670. Sustainability Leadership. 3 Credits. Using a highly interactive format, this course examines practical, state-of-the-art concepts in leadership, with a focus on the unique challenges of sustainability facing our world. Students will examine the essential components of leadership, including vision, communication, strategy, organization, synergy and strategy. Recognition of barriers and risks and how to work around them will be stressed, and the restricted conditions under which leadership is actually exercised will be revealed. Students will also practice self-reflection/assessment and become familiar with advanced tools to improve their leadership ability. Coursework will include frequent work in small groups, review of leadership case studies and a practical, 'real-world' vision development project. Offered only as a compressed field course every other January intersession.

AS.420.671. Global Land Use Change. 3 Credits. This course provides a comprehensive examination of global land use change including the current spatial and historical extent of forests and grasslands, methods used to detect forest cover and its current and historical changes. Reviewing these patterns will lead to an understanding of the past and present drivers of land use change. In this course, we will consider the hydrological, and major biogeochemical cycles (i.e., carbon, nitrogen and phosphorus) and the impacts that forests and grasslands (and the loss of these ecosystems) has had on these cycles. The impact of forest loss on biodiversity, long term functioning of ecosystems and climate will also be discussed. After reviewing the effects of a loss of these environmental processes, we will bridge the physical and biological sciences with the social sciences by examining economic impacts and socioeconomic drivers of deforestation. Lastly, current policies and the potential effect of policies that aim to reduce deforestation such as REDD will be discussed.

AS.420.672. Environmental Ethics. 3 Credits. Environmental Ethics is a philosophical discipline that examines the moral relationship between humans and the natural environment. For individuals and societies, it can help structure our experience of nature, environmental problems, human-environmental relations, and ecological awareness. Beginning with a comprehensive analysis of their own values, students will explore complex ethical questions, philosophical paradigms and real-life case studies through readings, films and seminar discussions. Traditional ethical theories, including consequentialism, deontology, and virtue ethics will be examined and applied. Environmental moral worldviews, ranging from anthropocentric to ecocentric perspectives, will be critically evaluated. Organized debates will help students strengthen their ability to deconstruct and assess ethical arguments and to communicate viewpoints rooted in ethical principles. Students will apply ethical reasoning skills to an examination of contemporary environmental issues including, among others, biodiversity conservation, environmental justice, climate change, and overpopulation. Students will also develop, defend and apply their own personal environmental ethical framework. A basic understanding of modern environmental history and contemporary environmental issues is required. Prior experience with philosophy and ethics is not required.

AS.420.673. Ecology and Evolution of the Galapagos. 3 Credits. The Galapagos Islands have often been called the laboratory of evolution, where scientists have been able to study in detail many of the processes that have shaped the face of life on our planet. There are few places in the world, where it is possible to find such a variety of species, both animal and plant, which show so many degrees of evolutionary change, in such a restricted area. This course will focus on the tectonic development of the Islands and of the origin, evolution, and ecology of flora and fauna, and the reasons for the concentration of threatened and endangered species in the forests and on the Galapagos Islands. In the marine environment, emphasis will be placed on the ecological processes that maintain biodiversity, community organization, and the impacts of climate change which are threatening such communities.

AS.420.674. Applied Energy Policy in the 21st Century. 3 Credits. This course provides an overview of clean energy technology and deployment, infrastructure and finance for environmental scientists and policy makers. Topics include civics, climate science, renewable energy, energy efficiency, sustainable transportation, city infrastructure (energy, transportation, water), and public private partnerships. Emphasis is placed on a place-based approach to energy policy, including climate smart resilient cities and how new urban mobility can address social problems.

AS.420.675. Geology and Tropical Ecology of Hawai‘i. 3 Credits. The breathtaking beauty and unfettered access to the soaring Mauna Kea, the highest mountain when measured from the ocean floor, and home to the Big Island's eight major climate zones, from desert to alpine, inspire countless superlatives. The volcanoes of the Big Island of Hawai‘i are one of the premier examples of active hotspot volcanism in the world, and are by far the most accessible. This location offers an unparalleled opportunity to observe the planetary processes of destruction and creation through Hawai‘i’s geology and tropical ecology. This field course explores the unique marine, freshwater and terrestrial habitats of the island interconnections between the geology and the ecology and the integrated management of natural resources from volcanic mountain tops to the biodiversity of the coral reef. The primary goal of this interdisciplinary course will be to provide a solid foundation in field science for both geologic and ecologic methods. Specifically, we will examine the geological development of Hot Spot generated Hawaiian ocean islands we will describe the biological development of the ecosystems on the islands, and examine the interaction between humans (landscape use and introduction of exotic species) and the island environments (major biomes and anthropomorphic systems). As a field course natural communities will be a major emphasis. On land, focus will be placed on the tectonic development of the Islands and of the origin, evolution, and ecology of flora and fauna, and the reasons for the concentration of threatened and endangered species in Hawaii. In the marine environment, emphasis will be placed on the ecological processes that maintain biodiversity, community organization, and the impacts on coral reefs.
AS.420.676. Global Scarcity in Freshwater Systems: Crisis and Solutions. 3 Credits.
This graduate-level course explores the dual nature of water scarcity worldwide, including both natural and human causes, and what is being done to help people and ecosystems cope with scarcity. The course covers definitions of water scarcity, the geographic extent of the problem, and trends in factors that contribute to it. It also examines several types of actions that are being taken to deal constructively with water scarcity. These actions fall into the general categories of monitoring, supply enhancement, conservation, re-use, pollution control, lifestyle changes to lower our water footprint, and public policy changes. Many of these actions, especially those related to public policy, are incorporated into seven principles of sustainable water management detailed in the course textbook, "Chasing Water: A guide for moving from scarcity to sustainability", by Brian Richter of the Nature Conservancy. Examination of the principles helps to end the course on a hopeful note by reminding us that humans collectively use only 5-10 percent of the water that falls as precipitation, and we have the capacity to greatly reduce the human suffering and environmental damage caused by poorly managed use of freshwater resources.

AS.420.677. Spatial Statistics. 3 Credits.
Spatial Statistics is a rapidly developing tool in the discipline of ecology that analyzes both 2-D and 3-D data that contain a spatial component. Many ecologists use continuous data (e.g., vegetation density and height, net aboveground primary production, percent of biomass killed by disturbance, etc...) that violates the assumption of spatial independence; therefore, necessitating the need to analyze the data using spatial statistics. Thus, spatial statistics provides concepts, tools, and approaches that will enhance the analyses of population data, sample data, partitioning of regions (patch and boundary), spatial interpolation, and data that are spatially autocorrelated. The goal of this course is to give students a firm grasp of the concepts of spatial statistics in ecology and of how they can be applied to analyze continuous data for environmental policy, management, and assessment. Uses of case studies, data analysis in the R spatial statistics package, and discussions help to examine and apply the concepts.

AS.420.678. Nature Conservation and Sustainability in Cuba. 3 Credits.
This cultural and scientific emersion program will investigate Cuba's agroecology, tropical marine and terrestrial ecosystems as well as the countries unique geology. As wildlife and habitat have fadded from the tropics, Cuba's importance as an ecological bastion has risen. The island has the largest tracts of untouched rain forest, unspoiled reefs and intact wetlands in the Caribbean islands. Cuba also is home to many unique, or endemic, species, including the solenodon, and the bee hummingbird, the world's smallest bird. In this course, students will have the opportunity to learn about the marine ecology through first-hand investigation of the reefs off the shores of Cuba, and learn about rainforest ecology through observations of Cuban forests. The course will also examine the interplay between geology, ecology, evolution and adaptation in areas such as coastal xeromorphic vegetation, swamp ecosystems, and Viñales National Park.

AS.420.679. International Water Issues and Policies. 3 Credits.
This course is a broad survey of the international water issues facing the 21st century. Topics to be covered include, water security, privatization of water service delivery, conflict and cooperation on trans-boundary rivers, the role of large multi-purpose reservoirs (for hydropower, water supply, irrigation), water as a human right, achieving the Sustainable Development Goals on water supply and sanitation, the role of water in food security, water institutions and policies, and climate change. Any discourse today on sustainable development is not complete without a discussion of the important role of water to society, economic growth, and poverty reduction. Our objective in this course is to gain a broad overview of these issues, primarily from the sustainable development lens, and to critically evaluate these challenges from a multi-disciplinary perspective (e.g. economics, environment, social, engineering, public health). This is important as solutions to water problems will require many different disciplines and expertise working together.

AS.420.681. Climate Change Adaptation and Development in Nepal. 3 Credits.
This is a field course that takes a firsthand look at the reality of climate change adaptation at various scales as it is experienced in a developing country such as Nepal. Specifically it considers Nepal's vulnerability and resilience to climate change at the national, district and community levels, and will review adaptation instruments and actions at all levels and the political context in which they are executed. Specific topics to be covered include climate change by sector, vulnerability at various scales, institutional and community-based plans for mitigation and adaptation, institutional and legal mechanisms that address climate change, extension efforts, climate change integration into development, and current effort by developing countries such as Nepal in carbon-financing and other topics. The course will also consider how funding to support climate change adaptation intersects and overlaps with development aid and planning. The course will start and end in Kathmandu, the capital city, where students will meet with policy makers, government officials and experts. We will also travel to communities in the three biophysical regions of Nepal, the highlands, the middle hills and the lowlands (Terai). In all locales students will interact with stakeholders all various kinds and be exposed to the great cultural, economic, political, and biophysical diversity of Nepal. Course prerequisite: 420.665.81, Climate Change on the Front Lines: The Study of Adaptation in Developing Countries, or permission of the instructor.

AS.420.687. Science Communication and Policy Engagement. 3 Credits.
This course provides students with an introduction to the theory and practice of communicating science and engaging with different types of audiences including policymakers, the public, and the media. Science is valued by many and sharing our understanding of science and technology is a crucial part of engaging beyond the scientific community. In this course, we will explore current research on the science of science communication, as well as how to create narratives for engagement based on the goals and audience. Students will have the opportunity to discuss engagement strategies and communication methods, design an engagement plan, and practice using their skills for engaging with policymakers, public audiences, the media, and more.
AS.420.690. Environmental Health. 3 Credits.
The environment plays an important role affecting public health. This course will explore major topics in the area of environmental health, examining sources, routes, and health outcomes associated with exposure to microbial, chemical and physical agents in the environment. This course will cover how such agents affect human disease at the individual, community, and population level. Students will also explore how environmental health challenges are addressed through development of policy in a regulatory framework.

AS.420.703. Open Source GIScience for Environmental Research. 3 Credits.
This course on Free and Open Source GIS is targeted at students who already have some experience working with ArcGIS and want to learn about alternative software packages. The course will discuss the advantages and disadvantages of open source GIS in contrast with more commercial GIS offerings. Geographic Information Science is now embedded in just about everything we do. From Google Maps to geotagging to wearable technology. Depending on your career choice, commercial software may not always be available for use or affordable. However, there are free, Open Source GIS software options available and as these tools become more powerful, more employers are adding knowledge of these software packages as required or desired skills.
In this course, students will use free, publicly available environmental geographic data to perform GIS and remote sensing tasks using Open Source Software (e.g. QGIS, Remap, EO Browser). Students will learn how to obtain, create, analyze, assess, generate, and visualize environmental data relevant to environmental science fields like habitat assessment, natural disturbances, conservation, and landscape ecology.

AS.420.704. Practical Engineering Approaches to Climate Adaptation. 3 Credits.
This course will briefly examine what risks recent POLICY actions pose to the environmental, economic and social infrastructure of the US and global community — especially the less developed nations — from the standpoint of climate-related natural disasters [floods, droughts, tsunamis, landslides, hurricanes, typhoons, monsoons, storm surges, forest fires, etc.], and what technologies and technical options can be enlisted to mitigate the adverse [and some positive] effects associated with global warming. This course will focus on a few technical mitigation [e.g. geo-engineering] options, but will focus mainly on practical adaptation options and strategies related to contemporary [and future innovative] infrastructure solutions and existing ‘best management practices’ for coastal erosion, storm preparedness, flood/drought management and preservation of ecological systems. Real case studies, based on recent disasters, such as Hurricane Katrina [New Orleans] and Superstorm Sandy [New York metropolitan region], as well as international examples from the Great Lakes, Columbia R. basin, Rio Grande basin, Mekong River basin, small island states, and both European and African case studies will be used to highlight each of the major engineering-based adaptation strategies.

AS.420.705. Natural Resources Sustainability: Field Study in Alaska. 3 Credits.
This interdisciplinary field-based course examines the natural, cultural history and resource management in the ecosystems of Southeast Alaska. Through class lecture/discussion and field excursions, students obtain an understanding of integrated resource management and sustainability in protected areas while assessing options for addressing impacts and perturbations in habitats where species have and continue to be affected. The course will emphasize a variety of disciplines including: marine science and fisheries, wildlife management, geology, energy resources, forestry, botany, eco-tourism and anthropomorphic impacts to biodiversity, marine and wilderness areas.

AS.420.738. Newfoundland and Labrador: A Journey Through Time. 3 Credits.
The field course will examine the origins of the North American Continent and the Appalachians including the creation and destruction of oceans, human ecology, climate change, tectonics, whaling, and marine fisheries around the Labrador Sea and the Grand Banks. Field locations include four UNESCO World Heritage sites: Gros Morne National Park, featuring majestic fjords and glacial valleys; L’Anse aux Meadows, North America’s first authenticated Viking settlement; Red Bay, the 16th-century Labrador home to over 1,500 Basque whalers; and Mistaken Point Ecological Reserve, site representing the oldest multicellular life on Earth.

AS.420.800. Independent Research Project in Environmental Sciences and Policy. 3 Credits.
The independent research project enables students to apply and synthesize the material learned in their courses, develop expertise on a specific environmental topic, work closely with an expert in the field, and improve their professional writing skills. Students who take this elective must identify a project topic and a Mentor who is both familiar with the chosen topic and willing to guide and oversee the project. The Mentor may be a faculty member teaching in the program or elsewhere at JHU, a qualified and appropriate person from the student’s place of work, or any expert with appropriate credentials. A preliminary proposal must be approved by the Mentor and the Course Instructor prior to enrollment in the course. In order to enroll in the class, permission of instructor is required. Final proposals for the IRP must be approved by the Mentor and the Course Instructor at least two weeks prior to the start of the semester in which the IRP is to be completed. A Mentor Agreement form must be completed and returned at the beginning of the semester in which the student in take the I.R.P. course. This form is sent to the Mentor by the Course Instructor once the final proposal is approved. For more information please go to the ESP website => The Experience => IRP. Offered every term and scheduled as needed.

AS.420.801. Independent Study. 3 Credits.
AS.420.805. Internship and Capstone Thesis. 3 Credits.
This course is designed to allow students to have a Capstone/Thesis Internship Experience, a Group Research Project as well as the standard Capstone (Independent Research Project) in an internship format. Advanced students in the MS in Environmental Science and Policy program may propose an internship to receive on-the-job experience in science or science policy or a related profession. An approved internship receives one full course credit toward the MS in ESP degree usually an elective. Students may propose to participate in existing internship programs, or they may arrange a unique experience. In most cases, students should have completed four or more courses toward their degree before seeking an internship, and proposals must be submitted in writing to program leadership at least 30 days before the start of the target term. Proposals are evaluated on a competitive basis. Only a limited number will be approved, and priority will be given to students who have completed the most degree-level courses and who submit proposals that demonstrate the best internship experience. Internships may be paid or unpaid. To complete the course, students must write a robust paper designed for peer-review. The adviser for the paper will be the faculty member teaching the course in conjunction with a mentor as part of the internship experience. Because students receive academic course credit for internships, they pay tuition levels equal to one graduate course.

AS.420.888. Capstone or Thesis Continuation.
Noncredit. This course is for students who completed 420.801 Independent Research Project or 420.805 Internship and Thesis but failed to finish an approved paper or thesis. Required for those who have completed all of their coursework and have taken the above course but have not yet completed their paper. Students must register for this course and pay its accompanying fee for every term until a final paper is approved.
AS.425.605. Introduction to Energy Law & Policy. 3 Credits.
This course will provide an overview of the major laws and policies that shape and regulate the complex energy system the United States and, to a lesser degree, the world. The goal is to provide students with a framework for understanding the energy laws and policies of today and those likely to be important in coming years. The course will review laws and policies for all major types of energy, including fossil fuels, nuclear, and renewables, as well as issues related to extraction, conversion, distribution, use, and conservation. Laws and policies ranging from local level to state, federal, and international levels will be included. Laws and policies will be presented again in the context of profound and rate changes occurring in the energy system, climate change and other environmental issues, economics, national security, and population growth. The course will be largely empirical, but attention will be given to major theories. Most aspects of the course will be illustrated by reference to contemporary issues, such as the recently unveiled Clean Power Plan, court decisions, climate change negotiations, and changes in state policies and federal tax policies for renewables. Offered on-site at least once every two years.

AS.425.615. Understanding Public Attitudes for the Communication of Climate and Energy Policy. 3 Credits.
Public attitudes influence the political feasibility of passing new legislation on climate change policy, and consumer decisions contribute to as much as 40% of national emissions. As a result, governmental, non-profit, and commercial sectors have become interested in low-cost, non-regulatory “soft policy” approaches based on social science to inform public decision-making and behavior change. Communication—whether in the form of information provision, participatory decision-making, or social marketing—is among the foremost of these strategies. This course aims to expose students to social science research and methodology on human attitudes, behaviors, and decision-making with respect to climate and energy policy so they can directly apply it in their professional organizations. This course will challenge students not only to think about the varied communication factors that influence human decision-making and behavior, but to use information in designing and evaluating programs. Special attention is given to the application of behavioral economics to climate, energy, and other environmental issues, and students will learn the fundamentals of social science statistical analysis using SPSS software.Prerequisite: AS.420.301 – Quantitative Methods or Statistics

AS.425.617. Energy, Eutrophication, and Inundation in Coastal Louisiana. 3 Credits.
This course will evaluate the many compounding factors of wetlands loss and sea-level rise in coastal Louisiana, will assess the impact of wetlands and habitat loss on wildlife and bird populations in the coastal zone of Louisiana, and will examine the ongoing menace of eutrophication in Gulf of Mexico waters. A portion of the course will be spent analyzing flood control efforts in New Orleans and along the Mississippi River Delta, their advantages and disadvantages, and future risk in the context of global climate change. Vulnerability analysis, environmental impact, and mitigation strategies associated with energy infrastructure, pipelines, and pipeline canals connecting offshore oil and gas to south Louisiana will be considered and assessed. Further contemplation will be given to efforts by oil and gas companies to minimize environmental impact along the Louisiana coast. The impact of the Coastal Wetlands Planning and Restoration Act will be debated and other policy initiatives explored. Students will leave this field experience with a better understanding of the complex cultural, environmental and climate, economic, and political factors at play in southern Louisiana.
AS.425.618. Energy, Policy and Environmental Impact in China. 3 Credits.
Climate change is a direct result of anthropogenic emissions over decades (since the beginnings of the Industrial Revolution). This most populated country (more than 1.3 billion) in the world has experienced considerable economic growth in the past 20 years, and as a result, some of the world’s largest local environmental impacts have been experienced. The impacts are sweeping, and only recently, the country is attempting to address the issues by monitoring, using replacement technologies and implementing nationwide policies (e.g., favoring electric vehicles and limiting car traffic in cities). This field trip will explore some of the impacted sites from environmental pollution and state-of-the-art research to improve energy technologies and policies to improve the situation in China.

AS.425.619. Renewable Energy and Climate Change Projects in California. 3 Credits.
California has abundant natural resources and has long been the center of attention for renewable energy within the USA. The US Department of Energy indicates that California has just over 24% of its energy coming from renewable energy production, one of the highest for a large population state. Traditionally, California has also lead the nation in terms of proactive climate change and sustainability issues. This field trip will explore very innovative and leading sustainability projects in San Francisco. We will also visit the solar labs in nearby University of California, Berkeley, followed by a visit to nearby energy projects (e.g. Tesla, Google). Part of the trip will include discussing renewable energy projects with city and state officials.

AS.425.621. Renewable Energy and Climate Change Projects in Australia. 3 Credits.
This course will explore the technologies and the supporting policy and is planned for a period of 10 days. The trip will include travel to Sydney and to one other city amongst a list: Melbourne, Canberra, Brisbane or Adelaide (details are to be decided on the reconnaissance trip in January 2017). The course will visit a number of renewable energy projects, including experimental and commercial sites. We will also visit the rich collection of projects in the Victoria and New South Wales area. We will also discuss with experts from some of the major climate labs including the Commonwealth Scientific and Industrial Research Organization and the Australian Bureau of Meteorology.

AS.425.622. Renewable Energy and Proactive Climate Change in Benelux. 3 Credits.
Scientific evidence for warming of the climate system is unequivocal, according to the international Panel on Climate Change. Facing the combined issues of limited fossil fuel reserves and that ongoing CO2 emissions are contributing to global warming, the governments in Europe have decided to move toward more sustainable energy systems and to develop national projects to protect vulnerable coastal areas from expected sea level rise. European Union nations are world leaders in the development of renewable energy sources and have recently proposed a common renewable energy policy in the European Renewable Energy Directive, creating the binding obligations to all of its members with the aim of reaching the EU target of consuming 20 percent of its energy in form of renewables by 2020. On the climate side, the 2030 framework for climate and energy policies in Europe proposes a centerpiece policy of reduction of greenhouse gas emissions by at least 40 percent.

AS.425.623. Transportation Policy in a Carbon-constrained World. 3 Credits.
Transportation systems provide essential services for individuals, business, and every sector of the economy. However, transportation is a major expense, causes significant negative side effects, and is now the largest source of greenhouse gas emissions in the United States. This course examines the complex system-of-systems that is modern transportation as well as the many technologies and policies that can mitigate the negative effects of transportation while maintaining or improving transportation services. These include cleaner vehicles, lower emission fuels, and changes to travel demand. It also explores disruptive innovation in transportation, including the emerging roles of information technology and the potential transition to connected and automated vehicles. Estimates of impacts of these technologies and policies on energy use, infrastructure, emissions, and other metrics are presented and discussed. This course has a U.S. focus with a balance of technology and policy content and a strong interactive component. Course Prerequisite: AS.425.601 – Principles and Applications of Energy Technology.

AS.425.624. Wind Energy: Science, Technology and Policy. 3 Credits.
Topics include the assessment of wind resources, basic principles of wind turbines and power transmission, electric markets and wind power, technological and economic aspect of storage of intermittent wind power, legal issues at state and federal levels, international water issues, and environmental impact assessment processes for wind developments. Offered on-site at least once every two years. Prerequisite: 425.601

AS.425.625. Solar Energy: Science, Technology & Policy. 3 Credits.
This course focuses on the two primary solar technologies i the contemporary market: photovoltaic cells and concentrate solar power, with a focus on PV. The course will investigate techniques for increasing efficiency, expanding storage, and decreasing price. Solar energy for use as both distributed and grid-independent resources is considered. The course covers science and technologies, as well as the environmental impact on solar technologies. Additionally, the course examines the main structure considerations for solar technology development. Prerequisite: 425.601 Principles and Applications of Energy Technology.
AS.425.628. Renewable Energy Project Development and Finance. 3 Credits.
This course examines the financial, legal and regulatory topics related to the development of renewable energy (RE) projects (wind, solar, geothermal, hydro etc.) in the US. The bulk of the course focuses on utility scale projects, with the latter section on smaller scale renewable distributed energy resources (DER). The course is divided into sections on finance, siting, basic technical features of the electric grid, and regulatory background. The finance section will provide fundamentals of corporate and project finance, then focus on the ownership and financing structures used for developing renewable energy projects. Basic financial terms and conditions such as power purchase agreements, engineering/ construction/procurement contract, fuel supply arrangements, and operation and maintenance contracts will be reviewed. The project siting and development section will review models for feasibility studies, environmental assessment and permitting at state and Federal levels. The electrical grid section will discuss at a high level how the power system works, including basics of transmission and generation, with a focus on concepts useful for developing projects, including the transmission interconnection process. Multiple case studies will be used throughout the course to highlight successful models and approaches. At the end of the course the students will have critical skills to work on project development and finance components of RE projects in the US. Prerequisite: There are no prerequisites.

AS.425.630. Cities and Climate Change. 3 Credits.
This course examines cities as the primary centers of energy demand; as major sources of greenhouse gases; as places most vulnerable to climate change impacts; and as logical focal points for mitigation and adaptation solutions. Local level government climate policy and financing options are also examined, including alternative energy production, resilient water systems, green buildings, energy efficient transport and sustainable infrastructure generally, local level offsets, and urban-based Clean Development Mechanisms. Analytical methods are introduced to understand current approaches to decision-making. Offered online at least once every two years. Prerequisites: Climate Change Policy Analysis.

AS.425.634. Climate Change and Health. 3 Credits.
This course examines the potential impacts on human health from global climate change and the possible responses to and adaptations for these impacts. Topics include impacts on health of climate extremes, climate change and infectious diseases, health and climate refugees, national assessments of health impacts of climate change, monitoring the health effects of climate change, and public health policies for climate change. Prerequisite: Science of Climate Change and Its Impacts.

AS.425.636. Emerging Energy Technologies and Applications. 3 Credits.
This elective course builds on a number of ideas covered in the core Principles and Applications of Energy Technology course (425.601) - and as with the first course uses and integrates a broad range of ideas from science, engineering and economics. The main focus of the course will be to broaden and deepen the coverage of the how some of the emerging energy technologies work, that were either not covered or only lightly covered in the core course. Electricity generation or storage related topics include (1) Fuel cells and batteries, including hydrogen fuel cells, batteries with different lithium-ion chemistries, and flow batteries, including integration with solar and wind (2) ocean wave devices, with an emphasis on the energy in traveling ocean waves, and how some of this wave energy can be absorbed and converted to electricity, through ideas related to natural frequency and forced damped oscillations, (3) new approaches to carbon capture and sequestration (CCS), such as the proposed Allam cycle - which is a type of closed cycle combustion turbine (CT), where the use of super-critical carbon dioxide rather air as the working fluid facilitates CCS (4) nuclear energy, from small modular fission to fusion. The course will also look at some important applications of electricity, including light emitting diodes (LEDs). The 2014 Nobel prize for physics went to inventors of the first blue LEDs using high band-gap semi-conductors, like indium gallium nitride which has made their widespread use for high quality white light applications possible. LEDs - as will be explained - are similar to (the p-n junctions in) PV cells but with higher band gaps, and operated to run backwards using an electrical source, so that electrical power is converted to visible light with much higher efficiency than with traditional incandescent light bulbs. Prerequisite: 425.601 Principles and Applications of Energy Technology, equivalent experience, or permission of instructor. Prerequisite(s): Prerequisite: 425.601 Principles and Applications of Energy Technology, equivalent experience, or permission of instructor.

AS.425.637. International Climate Change Policy. 3 Credits.
This course focuses on the development and implementation of international frameworks, policies, and mechanisms for responding to climate change. It includes a review of the history of international responses to climate change at the multilateral and bilateral levels, including in depth examination of the recent Paris Agreement from COP21. The course explores how climate change impacts and issues relate to the national vision, governmental priorities, and capacity needs of countries, and how these circumstances shape the evolution of climate change policy and related policy areas, such as trade and energy. It also explores the interplay between subnational, national, and international policy formation and implementation. Offered onsite at least once every two years. Prerequisite: Science of Climate Change and Its Impacts, Climate Change Policy Analysis.
AS.425.638. Adaptation to Climate Change. 3 Credits.
Global climate change risks are increasingly complex and may ultimately affect virtually every facet of our economic, energy, community, and environmental systems. At the same time, policy and investment responses to climate resiliency needs are similarly complex, controversial, and high stakes. Perhaps no issue facing leaders of today and tomorrow is more cross-cutting in nature or in greater need of improved understanding and capability than climate change risk. This course will provide a comprehensive framework for understanding, assessing, and applying climate change risk, vulnerability, a hazard assessment for the development of risk reduction an adaptation response. In the process, it will examine the status, limitations, and strengths of current assessment and action planning approaches across varying sectors, scales, and impact areas. The course will also include a review of methods prioritizing actions and addressing feasibility, flexibility, and logistical needs as applied to specific facilities, such as military installations, as well broader communities and multistate regions. Individual and group learning exercises will be involved. Offered on-site at least once every two years.

AS.425.644. Principles & Applications of Energy Technology II. 3 Credits.
This course builds on a number of ideas covered in the core EPT course, and as the first course uses and integrates a bro range of ideas from science, engineering, and economics. The course has two distinct but overlapping themes that will be often be covered in parallel. First, the course will broaden and deepen the coverage of the how some of the energy technologies discussed in the core course work, with a slight more formal discussion and use of ideas from mechanics and thermodynamics, including the role of entropy; a few newer potential technologies, such as fusion and ocean, will also be covered. Second, the course will extend the coverage of the economics and operation of energy markets to provide a deep understanding of how to value energy generation assets facing an uncertain future on both a stand-alone and integrate basis, and how these considerations play out in real electric markets, including the role of energy, capacity, and ancillary services. The course will include coverage of the potential role of energy storage and/or demand side management in integrating large-scale renewable energy into the grid from both an operational and economic perspective. Offered on-site at least once every two years.

AS.425.645. Global Energy Policy. 3 Credits.
Energy policy is about more than sheer market design. Policy agendas have become increasingly complex, adding sustainability and development to traditional energy security concerns. In response, a patchwork of institutional frameworks has emerged, including clubs (OPEC, IEA), treaties, the Energy Charter Treaty (ECT), agencies, the International Renewable Energy Agency or policy networks, and the Renewable Energy & Energy Efficiency Partnership. The course introduces students to the global dimensions of energy policy, discusses shifting agendas, and assesses the institutional spectrum of global energy governance. Offered online at least once every two years.

AS.425.646. US Offshore Energy: Policy, Science and Technology. 3 Credits.
Offshore energy is progressively becoming a significant part of the U.S. energy mix. Oil from offshore platforms now accounts for roughly one-third of the U.S. domestic production, and significant interest has emerged for developing renewable energy resources in the ocean and the Great Lakes. Large-scale offshore wind projects have been proposed along the East Coast, and there is also interest in developing wave energy off the West Coast and the Pacific islands. Ocean current and tidal energy are the other emerging sources. This course will take a multi-disciplinary approach to offshore energy analysis. We will discuss both renewable resources such as offshore wind, and conventional resources such as offshore oil and gas. Topics covered will include: resource assessment, state and federal regulations, economics of offshore energy, environmental impact and benefits, space-use conflicts, cultural/tribal issues, public perception, offshore energy technology, and energy infrastructure. We will also review case studies on the proposed Cape Wind project and the Deepwater Horizon oil spill. In addition, we will discuss the recently launched National Ocean Policy initiative and how it is influencing offshore energy regulation. Subject-matter experts from federal regulatory agencies will be invited as guest speakers. By the end of the course, students will understand policies and regulations governing offshore energy in the U.S. They will also be conversant with the economics of resource development, technological drivers for harnessing the resources, and the scientific advances in assessing and mitigating environmental impact from energy production in offshore areas. Offered onsite at least once every two years.
AS.425.647. Energy and Water Security in South Asia. 3 Credits.

South Asia (India, Pakistan, Bangladesh, Afghanistan, Nepal, Sri Lanka, Bhutan and Maldives) is home to more than 1.7 billion people (nearly 25% of the global population). It is also a region of rapidly growing economies, rising energy consumption, and increasing environmental stress. Fossil fuels, particularly coal is the major source of electricity in the region, contributing to rising greenhouse gas emissions and worsening air quality. India in particular is promoting the use of indigenous coal to power its economic growth. At the household level, inefficient use of biomass for cooking and heating continues to be a major health and environmental hazard. Moreover, fresh water stress and pollution has reached alarming levels in the region with far reaching impacts on agriculture and human health. South Asia is uniquely vulnerable to climate change impacts. On the one hand, receding Himalayan glaciers in Nepal, India, Pakistan and Bhutan are exacerbating water stress and threatening food security for more than a 1 billion people. And on the other hand, Bangladesh and Maldives are prone to sea level rise and coastal flooding from powerful tropical storms. Creating a sustainable energy and freshwater pathway is intrinsically linked to innovative development approaches tailored to local and regional variabilities. In order to curb growing emissions, the region is promoting renewable energy sources such as solar, wind, and micro hydro power. However, the unmet demand for energy, particularly electricity remains so large in South Asia that fossil fuels are expected to be a major part of the future energy mix. Water stress is being managed through a mix of traditional and modern techniques.

AS.425.651. The Electric Grid: Technology and Policy. 3 Credits.

This course aims to introduce the students with an overview of electric power industry including the fundamentals of power system generation, transmission, and markets. Various power generation technologies and system network characteristics will be introduced. Key elements of power system operation such as unit commitment, economic dispatch, and optimal power flow will be discussed to provide the background for understanding how the power grid operates and to lay the foundation for understanding the environmental impact from power generation and system operation. An overview of grid planning will be provided. Students will also be exposed to power markets and complex relationship between market and system. Later, students will be exposed to the topics of US energy policy that particularly pertains to power industry. Relevant energy policies of certain countries on global setting for the electricity sector will also be discussed. The latest developments in power industry such as smart grid, microgrid, distributed energy resources and other topics will also be covered.

AS.425.652. Nuclear Energy: Technology, Policy, and Regulations. 3 Credits.

Nuclear energy is a potent energy source that is widely feared and misunderstood, yet continues to play an integral role in the global energy landscape today and in the future. This course will focus on the different forms and use of nuclear energy, the history of nuclear energy and regulation, the fundamentals of fission and fusion nuclear power, the radiological health applications, and the electromagnetic and other radiation in the environment. Students will also learn about federal and international policies and regulations that govern the civilian use of nuclear energy and implications for climate mitigation. Current events related to nuclear power at the international level will also be covered in the course. Prerequisite: AS.425.601 – Principles and Applications of Energy Technology or permission of instructor.

Prerequisite(s): Prerequisite: AS.425.601 – Principles and Applications of Energy Technology or permission of instructor.

AS.425.689. Energy and Environmental Graduate Seminar. 3 Credits.

This graduate seminar course provides exposure to leading topics and vanguard research in environmental science, conservation science, energy and environmental law, and climate change science and adaptation, and offers discussion on practical applications of energy technology and energy/environmental policy. Students will evaluate how each study contributes to the advancement of theory, builds on previous research, and poses questions for future research. Students will also critically analyze professional presentation styles and technical content throughout the semester and will then synthesize best practices for professional communication in their own practice. This course does not meet the Environmental Science and Policy residency requirement.

AS.425.800. Research Design for Capstone Projects in Energy and Environmental Sciences. 3 Credits.

The Capstone Project enables students to apply and synthesize the material learned in other courses, develop expertise on a specific topic related to climate change science or policy, work closely with experts in the field of study, and improve professional writing and presentation skills. In the semester prior to conducting the project, students must identify a proper topic and mentor who is both familiar with the chosen topic and willing to guide and oversee the project. The mentor must be a faculty member teaching in the program, a supervisor from the student’s place of work, or any expert with appropriate credentials. Formal proposals must be submitted at least two weeks prior to the start of the semester in which the project be completed. Prior to the enrollment in the course, the proposal must be reviewed and accepted by the course instructor.
AS.430 (GEOGRAPHIC INFORMATION SYSTEMS)

AS.430.600. Web GIS. 4 Credits.
Web GIS is an important foundation course in which students will become familiar with the current platforms available for delivering Web GIS and sharing geographic content over the web. Professionals in various industries often have to make information readily available and with current developments this has become easier than ever. The class offers a fundamental understanding of creating and designing web maps and web apps using various approaches and platforms. Capabilities such as editing, geoprocessing, geocoding, image analysis, 3D, mobile and real-time GIS in a web environment will be examined. Cloud-based and on premises infrastructure to deliver Web GIS will be utilized. Offered twice a year.

In this introductory course, students become familiar with the concepts and gain the experience necessary to appreciate the utility of Geographic Information Systems in decision-making. Topics covered include the fundamentals of data structures, georeferencing, data classification, querying, cartography, and basic spatial data analysis. The course provides an overview of the capabilities of GIS software and applications of GIS. Class time is divided between lectures and GIS exercises that reinforce critical concepts. Students must complete a term project as part of the course. Offered every semester. Elective option for Govt. Analytics students.

This course introduces remote sensing as an important technology to further our understanding of Earth's land, atmospheric, and oceanic processes. Students study remote sensing science, techniques, and satellite technologies to become familiar with the types of information that can be obtained and how this information can be applied in the natural and social sciences. Applications include assessment of land cover and land use, mapping and analysis of natural resources, weather and climate studies, pollution detection and monitoring, disaster monitoring, and identification of oceanographic features. Offered once a year in Spring.

AS.430.603. Geospatial Statistics. 4 Credits.
This course introduces theory and practical application of statistical methods in spatial analysis. Statistical fundamentals will be introduced to expose students to descriptive and inferential methods in spatial statistics. Geostatistical fundamentals will also be covered to introduce methods (in particular, kriging) for modelling spatial and spatio-temporal phenomena. This course will provide working knowledge of theory and practice in spatial statistics and Geostatistics, and will serve as a primer to more advanced courses in spatial statistics and machine learning. Theoretical knowledge will be supplemented with real-world use cases through in-class projects and assignments. Throughout the course, students will be exposed to open-source statistics libraries in R, no previous programming knowledge will be assumed. Offered twice a year.

AS.430.604. Spatial Analytics. 4 Credits.
This course introduces students to using various techniques for solving spatial problems. The course teaches a proven process one can utilize to address common inquiries related to understanding spatial relationships and patterns. Traditional analytical methods such as suitability analysis, network analysis, geostatistical analysis, spatial interpolation, etc. are examined, along with recent data science and analytics methodologies that help us extract knowledge and insights from data. Examples and assignments are drawn from many applications, such as business, urban planning, public safety, public health, transportation and natural sciences. Offered twice a year. Elective option for Govt. Analytics students.

AS.430.605. Development and Management of GIS Projects. 4 Credits.
This course introduces students to project, program, and portfolio management standards, which will guide them on how to successfully manage GIS projects. Students will learn how to apply core project management principles and guidelines to real project scenarios. The course will impart knowledge and skills for managing GIS projects throughout their entire lifecycle, while addressing technical, ethical, and institutional problems. Students will explore key issues in organizational management, including earned-value management, resource planning, and communications. During the course, students will learn how to determine the return on investment of a GIS project, create a comprehensive schedule and budget, and determine risk management, quality control, and contract management skills in support of your GIS project. Offered once a year.

AS.430.606. Programming in GIS. 4 Credits.
In this course students will learn how to automate workflows and develop tools using Python as a fundamental language for geospatial technology. The course will first cover introductory python basics, then move into geospatial concepts. It will teach students how to automate simple and complex GIS tasks and functionality, thus simplifying workflows and increasing efficiency. Focus will be placed on following proper coding techniques and patterns. The course will introduce students to Python, ArcPy, Python API, Pandas, Numpy, Jupyter, and Markdown to name a few. Offered twice a year. Prerequisites: 430.600 Web GIS
Prerequisite(s): You must enroll in AS.430.600 prior to enrolling in AS.430.606.

AS.430.607. Spatial Databases and Data Interoperability. 4 Credits.
A well-designed database is necessary to construct relevant spatial data queries. In this course, students learn the different database designs for stand-alone databases and enterprise database systems. This course examines the requirements for a GIS Decision Support System by focusing on the design of the data schema, identifying the necessary data elements and their formats, and exploring data interoperability as a designed constituent of a database. Data management routines for maintaining the spatial integrity will also be introduced. Offered once a year. Prerequisites: 430.600 Web GIS.
Prerequisite(s): You must enroll in AS.430.600 before you enroll in AS.430.607.
AS.430.608. GIS and Spatial Decision Support Systems. 4 Credits.
GIS can be a very effective tool to assist in making decisions for a wide range of applications at the local, regional, and global scale. This course will examine the use of GIS as a spatial decision support system for systematic policy analysis and scenario modeling. Case studies will be used from the areas of agriculture, conservation planning, homeland security, land use planning, natural disasters, transportation, urban planning, and water resources. Offered once a year. Prerequisites: 430.601 Geographic Information Systems, 430.604 Spatial Analysis with GIS.
Prerequisite(s): You must enroll in AS.430.601 before you can enroll in AS.430.608.

AS.430.609. Spatial Data Management: Quality and Control. 4 Credits.
Spatial data quality is a major concern for any GIS. This course examines the nature of errors in spatial data and various aspects of spatial data quality, including positional and thematic accuracy, resolution, precision, completeness and logical consistency. The impacts of errors on the reliability of GIS-based analysis are explored. Various strategies to improve the quality of spatial data are addressed, including the use of standards for spatial data (FGDC, OGC and ISO) and data management tools. Offered once a year. Prerequisite: 430.601 Geographic Information Systems.
Prerequisite(s): You must enroll in AS.430.601 before you can enroll in AS.430.609.

AS.430.610. GIS for Infrastructure Management. 4 Credits.
This course will familiarize students with applications of Geographic Information Systems (GIS) for infrastructure management. Building, utilizing and sharing reliable asset information and integrating enterprise data will be emphasized, in order to help stakeholders make informed decisions and capitalize on efficiencies of using GIS to support various kinds of facilities and infrastructure. Students will have the opportunity to use GIS applications to do project work in support of facility operations, strategic planning, real estate management, architecture design and construction, sustainability, utilities, buildings and interior space management, drones mapping, among others. Samples will be drawn from large university enterprise with multiple campus locations yet applicable to cities and various other settings. Research and spatial analysis will be conducted using recently acquired GIs orthomagery, LIDAR and planimetric data for the Johns Hopkins' own Homewood campus. Prerequisite: 430.601 Geographic Information Systems.
Prerequisite(s): You must enroll in AS.430.601 before you can enroll in AS.430.610.

AS.430.611. Geospatial Ontologies and Semantics. 4 Credits.
The development of very large databases requires innovative approaches to data handling to efficiently communicate information meaning to users. The Geospatial Semantics and Ontologies course examines the foundations, design, and use of data structured as linked data, geospatial ontology, knowledge graphs, and related technology. Linked data and knowledge graphs are based on the node-edge-node triple data model to form graphs that can represent information networks. Triple graphs formatted as Resource Description Framework (RDF) can address challenges associated with information management such as inconsistencies within GIS applications, data associations within related enterprises, and information exchange over the Internet. The course begins with some general approaches to semantics and ontology, and basics of information interchange on the Internet. Linked Data in the form of Extensible Markup Language (XML), its extension Geography Markup Language (GML), and other standards for formal semantics such as Well Known Text (WKT) for specifying geographic coordinate geometries, SPARQL and GeoSPARQL query language, and Web Ontology Language (OWL) for automated logical reasoning and data inference are discussed. Subsequent lessons examine semantic system architecture, ontology design, and linked data mapping. No programming is required, but some required technical literacies, such as Java Script Object Notation (JSON) and Scalable Vector Graphics (SVG), are reviewed. Students complete a project in the last few weeks of the semester. The introductory skills offered in this course build a foundation for advanced geospatial Linked Data and Knowledge Graph applications in the future. Offered once a year. Prerequisite: 430.600 Web GIS
Prerequisite(s): You must enroll in AS.430.601 before you can enroll in AS.430.611.

AS.430.612. Cartographic Design and Visualization. 4 Credits.
The Cartographic Design and Visualization course focuses on the fundamentals of cartography, spatial statistics, thematic mapping techniques, 3D mapping, and web based mapping. Students will gain an inter-disciplinary understanding of cartographic representation and visualization with hands on applications using cutting edge GIS and graphic design software to create purpose tailored maps. Upon successful completion of this course, students will be able to interpret and appropriately communicate spatial data; will have developed a personalized cartographic style; will have created a professional GIS portfolio for current/potential employers; and most importantly will have developed a keen appreciation for maps and spatial awareness! Offered once a year. Prerequisite: 430.601 Geographic Information Systems.
Prerequisite(s): You must enroll in AS.430.601 before you can enroll in AS.430.612.

AS.430.613. Advanced Topics in Remote Sensing. 4 Credits.
This course explores the various remote sensing platforms, collection systems, processing methods, and classification approaches to remotely sensed data. Course content includes the Electromagnetic Spectrum, Lidar, Interferometric SAR, Sonar, Unmanned Autonomous Vehicles (drone technology), 2D vs. 3D modeling, volumetric analysis, ecological research with remote sensing and applications of technology and datasets in GIS models. Offered once a year. Prerequisite: 430.602 Remote Sensing: Systems and Applications.
Prerequisite(s): You must enroll in AS.430.601 AND AS.430.602 before you can enroll in AS.430.613.
AS.430.615. Big Data Analytics: Tools and Techniques. 4 Credits.  
The explosion of data collection methods from a vast array of data sources in volumes previously unimaginable has tested the limits of traditional technology, which are not able to scale to the requirements of massive data. Big Data is the field of data studies where the data is identified by very large volumes, high velocity in data generation, and data format variety. This course explores Big Data technologies while utilizing cloud infrastructures. We will discuss the characteristics and architectural challenges surrounding Big Data, and explore visualization techniques of data processed using Big Data Analytics. Students will work in a cloud computing environment to build Hadoop clusters, NoSQL databases, and work with other open source technologies to process data stores like Census data, and twitter feeds. Offered twice a year. Prerequisites: 430.606 Programming in GIS. Python programming experience is highly recommended.  
Prerequisite(s): You must enroll in AS.430.600 and AS.430.606 before you can enroll in AS.430.615.

AS.430.617. Census Data Mining: Visualization and Analytics. 4 Credits.  
Census data is the most often used data in geospatial studies. Census data provide information on the demographic composition of households all the way through state and national population trends. Census data also serve the data layers that form the basis of most mapping applications. In this course, students will learn how to work with Census data in GIS by understanding the vast amounts of data collected in support of the decadal Census, how to discover and read the various tables that associate with the raw Census data, and how to create custom data layers for demographic models in economics, housing, and population studies. Offered once a year. Prerequisite: 430.601 Geographic Information Systems, or permission of the instructor.  
Prerequisite(s): You must enroll in AS.430.601 before you can enroll in AS.430.617.

AS.430.618. Advanced Python Scripting for GIS. 4 Credits.  
This course focuses on advanced uses of Python as a scripting tool to automate workflows in GIS and create customized applications. This includes the development of script tools, utilizing advanced ArcPy modules, working with third-party modules, implementing Python geoprocessing services, customizing GIS applications, and more advanced Python functionality. Offered once a year. Prerequisites: 430.606 Programming in GIS.  
Prerequisite(s): You must enroll in AS.430.606 before you can enroll in AS.430.618.

AS.430.619. Web Application Development. 4 Credits.  
This course is designed to provide students with experience in web programming and application development. It focuses on uses of Web APIs for developing rich and interactive web mapping applications. HTML, CSS and several popular JavaScript frameworks, such as dojo, JQuery and AngularJS, will be covered. Interchange languages (JSON, XML) and responsive design will also be explored. Widgets will be examined to quickly develop solutions, and emphasis will be placed on tasks which provide further functionality. Conceptual and technical documentation, and samples, will be greatly utilized. The course will facilitate heavy engagement with the large and growing community of Web API developers. Offered once a year. Prerequisite: 430.600 Web GIS

AS.430.621. GIS for Emergency Management. 4 Credits.  
Geographic Information Systems (GIS) have become an integral part of understanding the natural hazards in our world and how emergency management agencies respond to events and mitigate the impact of disasters. Furthermore, the advent of Web GIS has helped agencies overcome many challenges previously associated with GIS in Emergency Management. This course is an opportunity to learn about the use of GIS in studying natural hazards and apply cutting edge GIS technology to help emergency management agencies in the field. In today's device-driven world, maps need to work on mobile devices so there will be an emphasis on enabling GIS in the field. You will use Web GIS to deploy maps that assist agencies with their incident command functions: Planning, Operations, Logistics, Command, and Public Information. While the industry focus will be on Emergency Management, the knowledge, skills and abilities you develop will be widely applicable in both public and private sector industries. Offered once a year. Prerequisite: 430.601 Geographic Information Systems or permission of the instructor.

AS.430.622. Geo Apps. 4 Credits.  
The Geo Apps course is designed to reflect current developments in the GIS industry. The course will teach you to extend your reach beyond common desktop GIS workflows, allowing you to present information and tools to a broader audience. You will learn how to create information models for field and crowdsourced data collection apps, best practices for publishing geospatial information and configuring a range of web and native applications, and how to create meaningful information products that match specific user needs. You will work with different types of 2D and 3D data in desktop, web, and mobile geo apps to simulate how GIS is being used in modern organizations. Offered once a year. Prerequisite: 430.601 Geographic Information Systems, or permission of the instructor.

AS.430.625. System Architecture for Enterprise GIS. 4 Credits.  
This is a project-based course, which allows students to build an Enterprise GIS implementation. Various enterprise architecture components, such as portals, servers, data stores, web adaptors, load balancers, enterprise databases and big data stores, real time servers, geoaanalytics servers, etc. will be examined and implemented in a deployment scenario. Students will first design the enterprise architecture, then implement it. Students will have multiple Amazon EC2 instances configuration available to them at least for part of the semester, in order to practice setting up this enterprise implementation. Topics such as high availability and disaster recovery, enterprise authentication, and administration through scripting, will be applied. Offered once a year. Prerequisites: 430.600 Web GIS.

AS.430.627. Artificial Intelligence and Machine Learning in Geospatial Technology. 4 Credits.  
The transformational impact of artificial intelligence and machine learning in geospatial data science is profound. This course presents a hands-on approach of applying automated modeling and predictive analytics to solve problems. Smart capabilities are powered by machine learning and GeoAI through the use of correlations of pattern detection to build predictive models and classify outcomes for data never seen before. Use cases from various sectors focusing on prediction and optimization, finding patterns and correlations, advanced object detection and automatic feature extraction, are examined. Offered once a year. Prerequisites: 430.606 Programming in GIS. Python programming experience is required.
AS.430.629. Drones in Geospatial Decision Making. 4 Credits.
This compressed format field course will explore current and future techniques of close-range remote sensing utilizing unmanned aerial vehicles (UAVs or drones) for environmental monitoring, urban cybersensing, and infrastructure assessment related to emergency response, leading to FAA Remote Pilot Certification to operate UAVs for commercial, professional, and research purposes. The course will focus on four basic objectives: (1) demonstrating knowledge and operational skills to successfully execute data acquisition using a variety of UAV remote sensing collection devices; (2) applying different methods of data acquisition and processing to identify, cross-validate and interpret data collected from UAV sensors; (3) discussing existing and emerging trends of UAV applications in various academic and professional situations, and (4) synthesizing and extrapolating data from these novel collection techniques to solve real-world problems. Students will act as flight crewmembers and scientific crew on numerous daily missions during the field portion of the course. Prerequisite: 430.600 Web GIS, or 420.603 Environmental Applications of GIS, or introductory GIS course.

AS.430.631. Spatial Algorithms and Data Structures. 4 Credits.
This course will teach students about the fundamental data structures and algorithms behind GIS and computer science. These data structures and algorithms are what all complex GIS systems are built upon. The topics presented are a mixture of computer science data structures and computational geometry topics. This course will stress code optimization and runtime analysis of code, teaching students how to program efficiently – just because a set of code works, it does not mean it is optimal. The course will use Python to cover such fundamental concepts and help students become better GIS Professionals. Offered once a year.

AS.430.633. Advanced Spatio-Temporal Statistics. 4 Credits.
This course will examine the theory and practical application of statistical methods. Students will examine advanced concepts in descriptive and predictive statistical approaches to spatial, temporal and spatio-temporal data. Students will be exposed to time-series analysis in GIS and its applications. The course will include labs to be completed in Python and R, in addition to theoretical work. Students will work on a comprehensive final project. Offered once a year. Prerequisites: 430.601 Geographic Information Systems

AS.430.800. Capstone for Geographic Information Systems. 4 Credits.
The capstone is the culmination of the instruction and training a student receives in the MS in GIS program. In this course, the student selects a mentor, identifies a topic of interest, acquires the relevant data required for the study, develops a data model and/or analysis method, devises the visualization of the data as part of the data interpretation, and summarizes the study in a final report. Students are encouraged to make their presentations at a GIS conference or publish the results of their study in a peer-reviewed GIS publication. Students are responsible for selecting a mentor who may be a JHU faculty member, a qualified and appropriate person from the student’s place of work, or any expert with appropriate credentials. Offered every semester. Prerequisite: core course requirements for MS in GIS, at least eight courses taken in the program.
AS.440.011. Forecasting in Organizations.
This course is required to earn the International Institute of Forecasters Certificate in Forecasting Practice, and introduces students to different types of forecasts including those used in government and the private sector. This is a non-credit mini-course, equivalent to a single class meeting, but with more homework. It is offered during Spring Break, as part of the Spring schedule. Prerequisites: 440.614 Macroeconometrics or 440.618 Microeconometrics. Corequisite: 440.615 Macroeconomic Forecasting.
Prerequisite(s): You must enroll in AS.440.615 AND one of the following course: AS.440.614 OR AS.440.618 prior to taking AS.410.011

AS.440.021. Practicum in Applied Economics.
Internships or external projects applicable to the program curriculum qualify for the course. Permission of the student’s advisor and of the Program Director is required before adding this non-credit course.

AS.440.304. Math Methods for Economists. 3 Credits.
This is a three undergraduate credit, full-length course at half tuition, required of those students who have had only a single course in Calculus. It covers those parts of Integral Calculus, Multivariable Calculus, Optimization Theory, and Linear Algebra, which are necessary to pursue economics. For those required to take Math Methods, the course is treated academically as part of the Core. Thus, all rules applying to the Core apply to Math Methods. Prerequisite: A course in Calculus.

AS.440.601. Microeconomic Theory. 3 Credits.
Corequisite: AS.440.304, Math Methods for EconomistsThis course offers a systematic presentation of consumer theory, theory of the firm, and market equilibrium. Topics covered include constrained optimization, preferences and utility, exchange, production, pricing, market structures, and welfare economics.

AS.440.602. Macroeconomic Theory. 3 Credits.
Corequisite: AS.440.304, Math Methods for EconomistsThis course provides a systematic overview of the theory of aggregate output and employment, the rate of interest, and price level determination. Coverage includes the theories of consumption and investment, the demand and supply of money, inflation, unemployment, and economic growth. These topics are discussed in the context of contemporary empirical work on aggregative relationships.

AS.440.605. Statistics. 3 Credits.
This course provides a general survey of statistical methodology. Topics include descriptive statistics, probability theory, sampling distributions, interval estimation, hypothesis testing, and Analysis of Variance. It is also designed to provide the requisite background for 440.606 Econometrics. Prerequisite: A course in Calculus.

AS.440.606. Econometrics. 3 Credits.
This course focuses on the application of statistical methods to the testing and estimation of economic relationships. After developing the theoretical constructs of classical least squares, common problems encountered when applying this approach, including serial correlation, heteroscedasticity, and multicollinearity, are discussed. Techniques for dealing with these problems are then examined. Models with lagged variables are considered, as is estimation with instrumental variables and two-stage least squares. Prerequisites: 440.605 Statistics.
Prerequisite(s): You must take AS.440.605 Statistics, prior to enrolling in AS.440.606 unless waived.

AS.440.614. Macroeconometrics [Time-Series Analysis]. 3 Credits.
This course focuses on the practical uses of time-series econometrics in a macroeconomic context. The topics covered include autoregressive-moving average processes, non-stationary time series models, unit root tests, vector autoregression models, and cointegration analysis. Prerequisites: 440.602 Macroeconomic Theory and Policy; 440.606 Econometrics.
Prerequisite(s): You must take AS.440.602 AND AS.440.606 prior to enrolling in AS.440.614.

AS.440.615. Macroeconomic Forecasting [Time Series Analysis]. 3 Credits.
This course examines econometric approaches to forecasting macroeconomic activity. The approaches covered span single equation time series to large, complex, simultaneous equations systems. Different measures to assess the forecasting accuracy of these approaches are addressed. A discussion of these approaches and their relevance for policy recommendations is also covered. Prerequisites: 440.602 Macroeconomic Theory and Policy; 440.606 Econometrics.
Prerequisite(s): You must take AS.440.602 AND AS.440.606 prior to enrolling in AS.440.615

AS.440.616. Bayesian Econometrics. 3 Credits.
The main goal of this course is to provide the students the alternative viewpoint of the Bayesian approach vis-à-vis the classical econometric approach based on the frequentist perspective. The course will present the basic principles of Bayesian inference, Bayesian Analysis of the linear regression model and extensions of the regression model, and the numerical methods used for Bayesian implementation. Modern Bayesian econometrics relies heavily on numerical simulation methods and computational algorithms. With the advancement of computing power and the advent of new simulation methods, simulation based Bayesian methods have become increasingly popular in practice with a large and growing number of applications. A significant part of the course will be devoted to explaining and demonstrating how numerical Bayesian methods, particularly, Markov Chain Monte Carlo (MCMC) methods, such as the Gibbs sampling and the Metropolis-Hastings algorithm, can be applied to estimate various interesting models in economics and finance. Students will develop practical experience with posterior simulation through hands on computer exercises involving computer programming. Prerequisites: 440.601 Microeconomic Theory, 440.606 Econometrics.

[formerly 440.647] This course introduces students to the methods most commonly used in empirical finance. Key models and methods are ARCH, GMM, Regime-Switching Models, test of CAPM (Capital Asset Pricing Model), term structure models, and volatility models (implied, stochastic volatility). Students will also learn aspects of time series econometrics for both stationary and non-stationary variables at different time frequencies, with emphasis on financial variables. Prerequisites: 440.601 Microeconomic Theory and Policy; 440.606 Econometrics; 440.614 Macroeconometrics is recommended.
Prerequisite(s): You must take AS.440.601 AND AS.440.606 prior to enrolling in AS.440.617.
Corequisite(s): AS.440.640 is a Corequisite for AS.440.617. You must take AS.440.640 before or concurrently with AS.440.617.
AS.440.618. Microeconometrics [Cross-Section and Panel Analysis]. 3 Credits.
[formerly 440.648] This course covers a number of advanced techniques frequently encountered in applied microeconometric analysis. Topics include generalized method of moments estimation, nonlinear regression, estimation with panel data, systems of regression equations and simultaneous equation models, maximum likelihood estimation and likelihood ratio tests, and limited dependent variable analysis (i.e. Logit, Probit, Tobit, etc.). Prerequisites: 440.601 Microeconomic Theory and Policy; 440.606 Econometrics.
Prerequisite(s): You must take AS.440.601 prior to enrolling in AS.440.622.

AS.440.624. Computable General Equilibrium Modeling. 3 Credits.
This course will provide an understanding of how to independently develop, modify, run and interpret Computable General Equilibrium (CGE) models. CGE models are widely used in the analysis of International Trade, Taxation, Environmental Policy, and other subjects. The specific objectives of this course are as follows: Students will (1) gain an understanding of the underlying economic theory behind CGE modeling; (2) learn how to gather data sources from publicly available information to build CGE models; (3) gain an understanding of the software General Algebraic Modeling Software (GAMS) to run the models; (4) learn how to use and modify existing CGE programs for research purposes; (5) be able to write simple CGE programs in GAMS; (6) be able to analyze public policy with CGE models; (7) how to interpret results from CGE models; (8) understand possible extensions of CGE models for potential future research purposes. Analytical skills developed through this class will assist you in building your careers as researchers, public managers, and policy analysts. Prerequisites: 440.601 Microeconomic Theory; 440.602 Macroeconomic Theory and Policy. Corequisite: 440.606 Econometrics.
Prerequisite(s): You must take AS.440.601 AND AS.440.602 prior to enrolling in AS.440.624.

AS.440.625. Machine Learning in Statistics. 3 Credits.
This course focuses on the use of machine learning methods for in-sample and out-of-sample prediction. The topics include regression, classification, random forests (boosting, and pruning), regularization, Bayesian estimation, neural networks, support vector machines, model selection and ensemble learning. Prerequisite 440.606 Econometrics.

AS.440.629. Survey Research Methods. 3 Credits.
This course introduces students to the theory and practice of conducting surveys. Survey methods combine both social science—economics, sociology, and psychology—and quantitative methods—mathematics, statistics, and computer science—to develop a theory of how surveys can best be used to measure important aspects of the human condition. Key topics include sample design, weighting, data collection modes, administrative operations, questionnaire design, nonresponse, and estimation in surveys. Prerequisites: 440.601 Microeconomic Theory, 440.605 Statistics. Corequisite: 440.606 Econometrics.
Prerequisite(s): You must take AS.440.601 AND AS.440.605 prior to enrolling in AS.440.629

AS.440.630. Monetary Economics. 3 Credits.
This course is designed as a survey of the basic theories in monetary economics for masters level students. The main objective of the course is to help students understand the core aspects of monetary economics: how monetary phenomena and policies are determined, and how they interact with the rest of the macro economy. Several key theoretical frameworks will be constructed, and various monetary economics phenomena, including monetary policy actions, will be analyzed within such frameworks. Among the topics to be covered include: neutrality and super-neutrality of money, money demand and money supply, consumption CAPM and equity premium puzzle, inflation and the optimal inflation rate, public finance and inflation, (new Keynesian) Philips curve, monetary policy transmission mechanisms, the term structure of interest rates, strategy of monetary policy and optimal monetary policy, the time inconsistency problem in monetary policy, monetary policy targets and rules, monetary policy at ZLB, and non-conventional monetary policies. Prerequisites: 440.602 Macroeconomic Theory and Policy; 440.606 Econometrics. Prerequisite(s): You must take AS.440.601 AND AS.440.602 AND AS.440.606 prior to enrolling in AS.440.630.

AS.440.631. Finance and the Macroeconomy. 3 Credits.
[formerly 440.621] This course explores the role of the financial sector in the overall macroeconomy. It begins by reviewing various financial instruments and markets, with a focus on their economic function. The course then examines the challenges to monetary and fiscal policy that arise because of macro-financial linkages. Further, a number of analytical tools for assessing financial stability and vulnerabilities to macro shocks are presented. Several case studies are used to illustrate real-world situations facing policymakers. Prerequisites: 440.601 Microeconomic Theory and Policy; 440.602 Macroeconomic Theory and Policy. Corequisites: 440.606 Econometrics; 440.640 Financial Economics, or equivalent.
Prerequisite(s): You must take AS.440.601 AND AS.440.602 AND AS.440.606 prior to enrolling in AS.440.631.

AS.440.632. Topics in Macroeconomics and Finance. 3 Credits.
This course aims to develop a better understanding of the linkages between the banking system and the broader macroeconomy. Particular attention will be paid to the role of banks and the banking system in propagating and perpetuating the recent financial crisis. Specific topics include the functioning of the banking system in a basic general equilibrium macro model, the Diamond-Dybvig model of bank runs; an empirical look into the economic cost of banking crises, central bank intervention in the face of a banking failure, the link between sovereign debt and the banking system, and the European debt crisis and the response of the ECB. Prerequisites: 440.601 Microeconomic Theory, 440.602 Macroeconomic Theory. Corequisites: 440.606 Econometrics; 440.640 Financial Economics.
Prerequisite(s): You must take AS.440.601, AS.440.602 AND AS.440.606 prior to enrolling in AS.440.632.
AS.440.634. Economic Growth. 3 Credits.
[formerly 440.624] Examines contemporary theories of economic growth and empirically applies them to panels of present day developing and industrialized countries, and to the historical evolution of individual countries and groups of countries. Topics include neoclassical growth models, population and growth, the economics of ideas, endogenous growth models, aid and growth, and policy and growth. Prerequisites: 440.601 Microeconomic Theory and Policy; 440.602 Macroeconomic Theory and Policy. Corequisite: 440.606 Econometrics. Prerequisite(s): You must take AS.440.601 and AS.440.602 prior to enrolling in AS.440.634

AS.440.639. International Finance (Open Economy Macro). 3 Credits.  
[formerly 440.619] This course provides an overview of open economy macroeconomics, and international financial markets and policies. The focus is on exchange rate determination, the importance of the balance of payments for both the domestic economy and the economies of other countries, international capital flows, the impact of internal debt on the balance of trade, and the interaction and potential conflicts between domestic and international economic policy objectives. Prerequisite: 440.601 Microeconomic Theory and 440.602 Macroeconomic Theory. Corequisite: 440.606 Econometrics. Prerequisite(s): You must take AS.440.601 AND AS.440.602 prior to enrolling in AS.440.639

AS.440.640. Financial Economics. 3 Credits.  
[formerly 440.642] Finance treats the transfer of resources across time and the transfer of risk among economic entities. The aim of this course is to develop the microeconomic theory relevant to these types of transactions. A set of underlying economic principles is applied to the determination of the value of basic financial instruments such as stocks and bonds, as well as to more complicated derivative securities, such as futures and options. Valuation concepts, in turn, allow for the analysis of various issues of interest to policy makers as well as portfolio managers and investors, such as the term structure of interest rates, portfolio theory, the capital structure of the firm, and risk management. Prerequisite: 440.601 Microeconomic Theory and Policy. Corequisite: 440.606 Econometrics. Prerequisite(s): You must take AS.440.601 prior to enrolling in AS.440.640

AS.440.641. Financial Intermediation & Financial Markets. 3 Credits.  
[formerly 440.620] Examines why financial intermediaries exist, how they co-exist with financial markets, and how they have been forced to switch from accepting deposits and making loans to using derivatives to manage risk. Shows how risk management differs between bank-based and market-based economies. Analyzes the economic consequences of financial market imperfections, especially for credit market equilibrium and rationing, theories of bank runs and systemic risk; and how different financial systems and governments can cope with financial crises, financial fragility, and credit market frictions. Prerequisite: 440.601 Microeconomic Theory and Policy. Corequisite: 440.606 Econometrics. Prerequisite(s): You must take AS.440.601 and AS.440.602 prior to enrolling in AS.440.641

AS.440.643. Economics of Investments and Financial Management. 3 Credits.  
This course develops a deeper understanding of financial markets in the context of portfolio theory. In addition to understanding how financial markets operate and relate to the broader economy, students will develop skills to analyze investment decisions and manage investment portfolios. Students will learn the efficient market hypothesis (EMH), criticisms and implications of EMH for investment strategies, modern portfolio theory and practice, and tools for evaluating performance. Throughout the course, several financial models will be analyzed especially as they relate to real-world asset allocation decisions. Prerequisite: 440.601 Microeconomic Theory and 440.640 Financial Economic. Corequisites: 440.606 Econometrics. Prerequisite(s): You must take AS.440.601 and 440.640 Financial Economic prior to enrolling in AS.440.643

AS.440.645. Behavioral Economics & Finance. 3 Credits.  
This course treats key topics in behavioral economics and finance theoretically and empirically. We analyze the efficient markets hypothesis and its potential weaknesses, the role of noise trading, consumer choice anomalies and perception biases, and serial correlation in stock prices, as well as other topics in behavioral economics and finance. Prerequisite: 440.601 Microeconomic Theory and Policy. Corequisite: 440.606 Econometrics. Prerequisite(s): You must first complete AS.440.601 prior to enrolling in AS.440.645

AS.440.646. Economics of Derivatives. 3 Credits.  
This course provides students a thorough introduction to the theoretical and practical aspects of forwards, futures, options, and swaps. Derivatives are important tools in financial markets, and students will learn how to price, value, and use them from a practical perspective. This course is particularly important for students seeking to work in finance. Topics covered include no arbitrage-based pricing, the pricing of forwards and futures, interest rate products and commodities, valuation based on market prices, and option pricing and strategies. Prerequisite: 440.601 Microeconomic Theory. Corequisites: 440.606 Econometrics and 440.640 Financial Economics. Prerequisite(s): You must take AS.440.601 prior to enrolling in AS.440.646

AS.440.649. Economics of Investments and Financial Management. 3 Credits.  
This course develops a deeper understanding of financial markets in the context of portfolio theory. In addition to understanding how financial markets operate and relate to the broader economy, students will develop skills to analyze investment decisions and manage investment portfolios. Students will learn the efficient market hypothesis (EMH), criticisms and implications of EMH for investment strategies, modern portfolio theory and practice, and tools for evaluating performance. Throughout the course, several financial models will be analyzed especially as they relate to real-world asset allocation decisions. Prerequisite: 440.601 Microeconomic Theory and 440.640 Financial Economic. Corequisites: 440.606 Econometrics. Prerequisite(s): You must take AS.440.601 and 440.640 Financial Economic prior to enrolling in AS.440.643

AS.440.645. Behavioral Economics & Finance. 3 Credits.  
This course treats key topics in behavioral economics and finance theoretically and empirically. We analyze the efficient markets hypothesis and its potential weaknesses, the role of noise trading, consumer choice anomalies and perception biases, and serial correlation in stock prices, as well as other topics in behavioral economics and finance. Prerequisite: 440.601 Microeconomic Theory and Policy. Corequisite: 440.606 Econometrics. Prerequisite(s): You must first complete AS.440.601 prior to enrolling in AS.440.645

AS.440.646. Economics of Derivatives. 3 Credits.  
This course provides students a thorough introduction to the theoretical and practical aspects of forwards, futures, options, and swaps. Derivatives are important tools in financial markets, and students will learn how to price, value, and use them from a practical perspective. This course is particularly important for students seeking to work in finance. Topics covered include no arbitrage-based pricing, the pricing of forwards and futures, interest rate products and commodities, valuation based on market prices, and option pricing and strategies. Prerequisite: 440.601 Microeconomic Theory. Corequisites: 440.606 Econometrics and 440.640 Financial Economics. Prerequisite(s): You must take AS.440.601 prior to enrolling in AS.440.646

AS.440.650. Environmental & Resource Economics. 3 Credits.  
[formerly 440.640] Beginning with the concept of sustainability, the course develops a framework for an economic assessment of environmental problems including the notion of market failure, valuation of environmental resources, and policy design issues associated with using alternative economic incentives and instruments. The second part of the course examines principles of the economically efficient management of non-depletable and depletable (e.g., fossil fuels, natural ecosystems) resources. Various applied settings are used to demonstrate the principles developed in the course. Prerequisites: 440.601 Microeconomic Theory and Policy. Corequisite: 440.606 Econometrics. Prerequisite(s): You must take AS.440.601 prior to enrolling in AS.440.650
**AS.440.653. Economics of the Labor Market. 3 Credits.**

This course develops the theory and empirics of labor markets by focusing on several leading institutional structures of both labor supply and labor demand. This theory is then applied to issues such as wage determination, wage rigidity, training and retraining programs, and the skills and wage distribution, as well as government policies that correct inefficiencies in labor markets. Prerequisites: 440.601 Microeconomic Theory and 440.602 Macroeconomic Theory. Corequisite: 440.606 Econometrics.

**Prerequisite(s):** You must take AS.440.601 and AS.440.602 prior to enrolling in AS.440.653

**AS.440.656. Political Economy. 3 Credits.**

(formerly 440.616) This course examines how rational choice methodology (including Game Theory and Neoclassical Economics) can be applied to analyze issues related to political economy. Topics include the origin of state, economic origins of political regimes, different models of voting and their outcomes and different aspects of federalism. This course also explores how political economy influences economic development and public debt. Prerequisite: 440.601 Microeconomic Theory and Policy. Corequisite: 440.606 Econometrics.

**Prerequisite(s):** You must take AS.440.601 Microeconomic Theory prior to enrolling in AS.440.656 Political Economy.

**AS.440.658. Industrial Organization. 3 Credits.**

(formerly 440.618) In this course, the focus is on the study of markets and the laws and regulations used to ameliorate some of their imperfections, especially the problems caused by market structure and market power. Many economic models used to explain how markets work and what is necessary for market power to exist are investigated. Subsequently, the course explores how regulators and private litigants try to eliminate or control market power, particularly through antitrust law, with respect to price fixing, mergers, and market dominance. Regulatory issues pertaining to such industries as telecommunication, transportation, electrical power, health, safety, and the environment are covered. Prerequisite: 440.601 Microeconomic Theory and Policy. Corequisite: 440.606 Econometrics.

**Prerequisite(s):** You must take AS.440.601 prior to enrolling in AS.440.658

**AS.440.659. Law and Economics. 3 Credits.**

(formerly 440.639) Techniques of microeconomic theory and game theory are applied to analyze the effects of various laws on individual decisions and on the allocation of resources. Subject areas covered include the theory of public choice, the economics of property rights, contract law, and tort law. Topics include the efficient breach of contract, the determination of damages, the economics of patents and copyrights, optimal liability rules for environmental and other torts, economics of family law, bankruptcy law, zoning law, antitrust law, and the legal process. Prerequisite: 440.601 Microeconomic Theory and Policy. Corequisite: 440.606 Econometrics.

**Prerequisite(s):** You must take AS.440.601 prior to enrolling in AS.440.659

**AS.440.661. Public Economics. 3 Credits.**

This course analyzes the determinants and properties of government expenditures and social regulation. The first part of the course is generic. It addresses efficiency and equity in income redistribution; the provision of public goods; coping with externalities, addiction and risk; and voting and bureaucracy, and taxation. The second part of the course is particular. It examines health policy, education policy, statutory pensions, and welfare policy in a comparative international context. Prerequisites: 440.601 Microeconomic Theory; 440.602 Macroeconomic Theory. Corequisite: 440.606 Econometrics.

**Prerequisite(s):** You must take AS.440.601 AND AS.440.602 prior to taking AS.440.661

**AS.440.663. Development Microeconomics. 3 Credits.**

(formerly 440.623) This course analyzes the constraints on households and policy makers in developing countries using econometric tools. Empirical micro-economic studies of behavior and policy outcomes under different types of market failures are drawn upon. Topics include inter alia inequality, fertility, education, health, poverty, nutrition, and failures in land, labor, credit and insurance markets. Prerequisite: 440.601 Microeconomic Theory and Policy. Corequisite: 440.606 Econometrics.

**Prerequisite(s):** You must take AS.440.601 prior to enrolling in AS.440.663

**AS.440.665. International Trade (Open Economy Micro). 3 Credits.**

The first part of the course examines the causes of trade, the sources of the gains from trade, and the domestic and international distribution of those gains. In addition, it introduces the politico-economic causes of trade policy and addresses the theory and empirics of trade and growth. The second part examines in detail the instruments and consequences of trade policy, namely tariffs and quantitative restrictions, and their modern manifestation as anti-dumping and safeguard measures. The causes and consequences of trade policy, too, are linked to contemporary empirical evidence. Prerequisites: 440.601 Microeconomic Theory and Policy; 440.602 Macroeconomic Theory and Policy. Corequisite: 440.606 Econometrics.

**Prerequisite(s):** You must take AS.440.601 and AS.440.602 prior to enrolling in AS.440.665

**AS.440.666. Regional Economics. 3 Credits.**

Regional economics is a relatively new formal branch of economics which recognizes the crucial importance of geography in the workings of a market economy. By incorporating variables of space and geography into traditional economic models, it has great relevance to real world phenomena and policy questions. We examine the effects of market forces on spatial variables such as the location choices of households and firms; land use policy; labor market agglomeration; urban poverty; the development of transportation infrastructure; and urban and rural housing markets. The roles of natural resources, demographic base, location of industries, and factors determining regional growth and development will also be considered. Prerequisite: 440.601 Microeconomic Theory and Policy. Corequisite: 440.606 Econometrics.

**Prerequisite(s):** You must take AS.440.601 prior to enrolling in AS.440.666

**AS.440.667. Urban Economics. 3 Credits.**

This course develops a framework to analyze how cities operate and how to improve them. The first part of the course addresses basic questions about cities: Why do cities exist? What makes some cities more costly than others? What determines housing prices? The second part of the course examines specialized topics including residential segregation, economic development programs, and suburbanization. Prerequisites: 440.601 Microeconomic Theory and 440.606 Econometrics.
AS.440.672. Economics of Health Care. 3 Credits.
[formerly 440.641] This course explores the economics of the health care system in the United States by examining the demand for health care services, the behavior of health care providers, the influence of government policies, and the relationship between health care services and population health levels. Established health care systems and their potential for change in both the United States and other countries are considered in the context of current policy concerns. Prerequisites: 440.601 Microeconomic Theory and Policy; 440.606 Econometrics. Prerequisite(s): You must take AS.440.601 AND AS.440.606 prior to enrolling in AS.440.672.

AS.440.684. Game Theory. 3 Credits.
[formerly 440.644] Game theory is a mathematical tool developed for the purpose of understanding not only the interaction of economic market participants, but overall observed social phenomena as well. This course provides an introduction to game theory with applications to economics. Moreover, the course presents an approach to modeling a social situation as a game and develops techniques for solving the game in order to gain insight into individual behavior. Topics include repeated games, games with incomplete information, and the experimental testing of hypotheses. Prerequisite: 440.601 Microeconomic Theory. Prerequisite(s): You must take AS.440.601 prior to enrolling in AS.440.684.

AS.440.692. Thesis. 3 Credits.
Students may undertake their own research project as an 11th program course for three additional credits at full tuition. Prior to proposing a project, interested students must have clearly identified a research topic, and submit a formal proposal for review and approval to the Thesis Research Committee, to be received no later than two months prior to the beginning of the term in which the student plans to enroll in the course. The proposal must follow the Applied Economics Thesis Guidelines, which can be obtained by contacting the Program Director. The committee will help identify a mentor who is familiar with their prospective inquiry, and is willing to provide guidance and oversee the project. The mentor must be faculty teaching at the Johns Hopkins University, but the availability of a mentor cannot be guaranteed. Students must meet with the mentor periodically for discussion of the project’s progress, on-site or on-line, and must complete a research paper, to be approved by the mentor and the Committee. Enrollment of the student is undertaken by the Program Director. Candidates must plan on using two semesters to successfully complete Thesis. Prerequisites: All four Core courses and Microeconometrics or Macroeconometrics, and one or more Applied Economics courses in the substantive area of the proposed research, plus a strong academic record (at least B+ average) in at least eight program courses, are absolute minima. Prerequisite: 440.692 Thesis.

[formerly 440.656] Students not finishing their paper during the term in which they enroll must register for Continuation in every ensuing semester (including Summer) until their papers are accepted, but Continuation does not count as a separate course. Such students must pay a continuation-of-enrollment fee of $500 for each subsequent term until a final grade has been submitted. In Applied Economics, taking Continuation once may be considered the norm. Prerequisite: 440.692 Thesis.
AS.450.082. MLA Capstone: Portfolio.  
The MLA Portfolio is a zero-credit Capstone option. Students who select the Portfolio option will take 10 courses in the program (one core course and 9 electives), and register for the zero-credit portfolio in their final semester. The portfolio will be completed within the same semester as the 10th course. The portfolio consists of a sampling of the best papers and projects written over the course of the student’s graduate career, and it is designed to highlight the intellectual points of convergence in each student’s course of study, presenting the student’s reflections on knowledge gained and lessons learned.

AS.450.600. MLA Core: Interdisciplinary Graduate Research Methods. 3 Credits.  
This seminar will introduce students to current trends in interdisciplinary research in the liberal arts. It is recommended for any students who plan to complete a thesis as their Capstone Graduate Project. This course will lead students through the process of designing original scholarly research for the MLA Program: from developing a research question to identifying primary sources and defining current debates concerning their chosen topic. In each session, in addition to weekly discussions, students will be guided through a writing exercise or a new step in the research process. In this course, students will learn how to critically examine sources, define a theoretical framework, use standards of logical reasoning, and develop a comprehensive thesis project proposal.

AS.450.601. Forbidden Knowledge: the ‘Metaphysical Rebel’ in Myth and Literature. 3 Credits.  
But from the tree of the knowledge of good and evil you shall not eat’ (Gen. 2:17). This interdisciplinary course explores the theme of forbidden knowledge in the various forms it takes in the Bible, the Epic of Gilgamesh, Greek tragedy, folklore and folk tale, and in western literary classics ranging from Milton’s Paradise Lost through the versions of the Faust story in Marlowe, Goethe, and Thomas Mann, to short stories by Nathaniel Hawthorne, and Mary Shelley’s Frankenstein. What do we make of the parallels between the Greek hero Prometheus and the Biblical Satan? How are we to understand the figure of Dr. Frankenstein as ‘the Modern Prometheus’? Does Faust’s pursuit of conventionally forbidden areas of knowledge anticipate 20th and 21st century quests to unveil the secrets of nuclear power, or of artificial intelligence, or of genetic engineering of the human genome? In addition to our literary readings, we will discuss a variety of operas and other relevant musical works; films from Bride of Frankenstein and Dr. Strangelove; and transgressive visual imagery from Paleolithic cave art to the work of contemporary performance artists to a collective quest to find and define the boundaries of ‘the forbidden.’

AS.450.605. Art Since 1960. 3 Credits.  
What is contemporary art, and what are the factors that shaped it? This course will attempt to answer those questions through a chronological and thematic investigation of some of the most influential artworks, movements, and theories of the past 60 years. Beginning with a close look at mid-century modernism, we will move into a consideration of Pop, Minimalism, conceptual art, land art, performance art, postmodernism, AIDS activism, and relational aesthetics. Along the way, we will also consider the relevance of feminist and phenomenological theory and of institutional critique and globalization; at the same time, we will explore ways in which art of our own time constitutes both an extension of, and reaction against, some of the historical ideas we encounter. Throughout, students will have a chance to read and discuss both primary and secondary texts, and a range of resources and assignments will offer a variety of analytical angles and interpretive possibilities.

AS.450.606. Ethics for a Multicultural World. 3 Credits.  
This is a course in applied philosophy, a practical approach to ethical thinking based principally on the Discourse Ethic of Jurgen Habermas. Using a “Moral GPS,” the course works through the basic steps of a discernment and decision process that takes into account the particular ethical challenges of the 21st-century multicultural world. Through the work of this course, Students will: <o:p></o:p>(o:p)</p> <ul style='list-style-type:disc'> <li>analyze the principal ethical theories and their relation to each other;</li> <li>evaluate their own ethical assumptions and those of others in relation to those ethical theories;</li> <li>be able to validate ethical claims in ways compatible with cross-cultural dialogue;</li> <li>be able to guide ethical dialog toward consensus for effective action</li>
</ul>

AS.450.607. Through a Glass, Darkly: American Film Noir. 3 Credits.  
In Film Noir (French for “dark, or black film”) the city provides the backdrop for stories featuring the dark underbelly of society. Morally conflicted, cynical hardboiled detectives, corrupt officials, low-lives, mysterious, double-crossing dames and set in a landscape of trash strewn alleys, dimly lit bars, tenements, and other dark corners of the city. There are no happy endings in Film Noir and the mood is one of paranoia, pessimism, desperation and existential angst. The course will employ an interdisciplinary understanding of the characters, themes, and gritty visual style and mood of the classic Film Noirs of the 1940s and 1950s. Roots of the Film Noir form come through a fusion of German Expressionism, 1930s gangster movies, and, in particular, the hard-boiled detective novel upon which some of the greatest noir films were based. The first section of the course utilizes a “read and screen” approach beginning with a close textual reading of Dashiell Hammett’s The Maltese Falcon, James Cain’s Double Indemnity, and Raymond Chandler’s The Big Sleep and then a screening of the films to analyze the distinctive visual style (light and shadow, tilted camera angles, mysterious silhouettes) which contribute to the mood and define the formula. Major auteurs of the form like authors (Chandler), directors (Hawks, Lang, Wilder, Welles) and actors (Bogart and Bacall) will also be studied for what they bring to this formula. Among the films considered are M_. (Germany-1931), _The Maltese Falcon (1941), Double Indemnity_ (1944), _The Big Sleep (1946), Gilda (1946), _ Touch of Evil (1958), The course will conclude with analysis of neo-noir films like Alfred Hitchcock’s Strangers on a Train_ (1951) and Roman Polansky’s Chinatown (1974). Students will need to find these films to screen on your own. (Netflix, Amazon Prime, local libraries).
AS.450.608. Renaissance Women: Portraits, Patrons, and Painters. 3 Credits.
This seminar will explore the artistic experience of women in Renaissance Italy. A large body of recent scholarship has sought to "recover those women...who have been erased from history in modern literature, rendered invisible or obscured by history or scholarship, as well as those who were overshadowed by male relatives, political accident, or spatial location" (Katherine A. McIver, preface to Wives, Widows, Mistresses and Nuns in Early Modern Italy). Drawing upon a consideration of both current research and primary sources, this course will investigate the role women played as the makers, the commissioners, and the subjects of art in Italy during the period from ca. 1250-1600. Among other issues, we will examine the constraints that limited women's contribution to the arts in this period when women's participation in public life were quite circumscribed, as well as the various means they found to overcome them. We will investigate what types of women were able to become artists. We will learn what categories of women were most likely to commission art, and what kinds of art they generally commissioned. Lastly, we will examine portraits of women, to understand what these representations tell us about the view of women in Renaissance society. Students will develop their own critical positions on the issues through a close reading of both texts and works of art, participation in online discussions, and in several substantial writing assignments.

AS.450.609. 1900: The Birth of Modernism in Vienna, Paris, and London. 3 Credits.
The year 1900 was the pivotal fulcrum of the turn of the century, that short but crucial era we call the fin-de-siècle, ranging from 1890 to WWI. This explosively creative period of literary and artistic expression witnessed the dramatic transition from the cultural order of old Europe to the new worlds of modernity. Freud's Vienna, Toulouse Lautrec's Paris, and the London of George Bernard Shaw and Oscar Wilde. It was an exciting new era of steam, speed and electrification, of the exhilarating cultural life of world's fairs, crowded boulevards, cafes, music halls, art galleries, and photographer's studios. New styles of painting by Viennese Secessionists Gustav Klimt, Egon Schiele, and Oscar Kokoschka, along with Picasso's Cubist experiments, would change people's ideas of what art could and even of what art was for. Colorful posters featured a new world of travel and consumerism, of daring cabaret performers and uninhibited night-life, and of 'new women' shown smoking cigarettes, riding bicycles, and claiming public space. Radical performances by Diaghilev's innovative company, the Ballets Russes, could provoke controversy, and even rioting in the concert halls. The excitement of Belle Époque Paris is legendary, but London may have felt the most vibrant polarizations of all: on the one hand, the sternly patriarchal imperial and colonialist culture celebrated by Rudyard Kipling, with comic relief provided by Gilbert and Sullivan; and on the other, the subterranean currents of aestheticism and gender-bending decadence explored by Oscar Wilde and Aubrey Beardsley, who pushed the boundaries of what Victorian London would tolerate, up to and beyond its limits. Our interdisciplinary exploration will range from the fine arts and music, through architecture, urban design and city planning, to popular culture and the radical social changes marking this turn of the century epoch.

AS.450.610. Twice-Told Tales: Classic Texts and their Contemporary Retellings. 3 Credits.
This course offers a comparative study of classic texts and their modern or contemporary retellings—in literature and on stage and screen—with a focus on how these ancient stories, which have endured through the ages and helped define our sense of what it means to be human, have been refashioned to reflect modern realities. Examining "second stories" provides the pleasure of seeing the familiar from a fresh and surprising perspective (e.g., the wanderings of Odysseus seen through the eyes of his stay-at-home wife, Penelope) and also allows us to study the cultural content of the tales through a bifocal lens. How does the political protest of Sophocles' Antigone change its thrust when it is retold by a 20th-century French existentialist writing during the Nazi occupation of France? Our twice-told pairings are Homer's Odyssey and Margaret Atwood's Penelopiad; Sophocles' Antigone and Anouilh's Antigone; Shakespeare's The Tempest and Frederick Buechner's The Storm; and Virginia Woolf's Mrs. Dalloway and Michael Cunningham's The Hours.

AS.450.611. Social History of Medicine. 3 Credits.
This course focuses on major developments in modern medicine from the scientific revolution and the Enlightenment to the late 20th century and considers those developments within their social, political, cultural, and economic contexts. The focus is on the growth of scientific/bio medicine. However, the parallel growth of lifestyle choices and holistic medicine is also important. Some of the themes of the course are: the development of the medical profession and institutions; changing concepts of insanity; the impact of industrialization and the linking of dirt with disease; drug discoveries and their consequences; the impact of eugenics theories; gender and medicine; war as a catalyst for medical innovation; growing government involvement in health care provision as well as socialized medicine and its relevance today.

AS.450.612. Tough Neighborhood: A History of U.S.-Central American Relations. 3 Credits.
This course examines the tumultuous history of the United States' relationship with Central America, from William Walker's filibustering in the 1850s to the recent wave of migration from the Northern Triangle. We will consider how US policymakers, organizations, and individuals have judged the isthmus in economic and national security terms and intervened accordingly, and we will examine how Central Americans have viewed the United States as a model of modernization, an interloper, and a site of refuge, as well as the ways in which they have shaped the North-South relationship despite the asymmetry of political, economic, and military power. Sources will include works of scholarship such as Confronting the American Dream and The Last Colonial Massacre, as well as texts from Central American authors, including the poetry of Roque Dalton, the personal testimony of Rigoberta Menchu, and the reporting of Óscar Martínez.

AS.450.613. British Victorian Women. 3 Credits.
This course embraces the broad sweep of primarily British Victorian women's experiences. It analyzes the emergence of the Victorian stereotype of middle and upper class women and compares that stereotype to the reality of individual case studies. It also explores the variety of expectations and demands on working class women - focusing on geographical, industrial and rural factors and the resulting lives of women working and living across the British Isles. In addition, there is an emphasis on Victorian women as agents of change in the fields of literature, medicine, teaching and social work both at home and abroad, as well as in local and national politics.
AS.450.617. The Constitution and the Criminal Justice System. 3 Credits.
Examines how the Supreme Court establishes and enforces the constitutional rules that govern law enforcement in the United States, including the 4th Amendment's provisions on searches and arrests, the 5th and 6th Amendment protections for individuals charged with a crime, and the 8th Amendment's requirement for bail and its ban on cruel and unusual punishments. We will also examine what it means to have a fair trial, the process of plea bargaining which resolves most criminal cases, and the continuing controversy over criminal sentencing. And we will continually be exploring the meaning and the reality of 'justice.'

AS.450.620. Gender and Media. 3 Credits.
This course addresses the intersection of communication, culture, and identity through an examination of gender and the U.S. media system. The course will first introduce students to key approaches to studying gender and media, and will subsequently examine: 1) media representations of gender, sexuality, and intersectionality; 2) diversity in media industries and gendered labor markets; 3) gendered audiences and fan cultures; and 4) gender, power, and identity in a digital era of communication. We will explore these topics through literature from communication and media studies, cultural studies, feminist theory, internet/new media studies, and sociology.

AS.450.621. The Self in Question: Readings in Lit & Psychol. 3 Credits.
What is a “self” and what is its nature? Is the self discovered or invented? Is it synonymous with character, with personality, with soul? Or is the self primarily a storyline? Thinkers throughout the ages have probed the riddle of our human identity and come to distinctly differing conclusions. Buddha considered the self an illusion, while for Plato, the self is a slumbering sage. For Freud, it is an instinctual hunger; for Sartre, a useless passion; for B.F. Skinner, a machine; for Buckminster Fuller, a verb. Modern literature and psychology have further complicated our conceptions of selfhood, challenging traditional notions of the stable ego and expanding our understanding of personal identity to include race, class, gender, and culture. From ‘selves in the making’ to ‘selves under siege,’ from the lonely, existential self to the transpersonal, communal self, in this class we explore questions of selfhood from the perspectives of literature and psychology – two key disciplines devoted to understanding the perplexities of human nature. We consider the approaches of Freudian, Jungian, feminist, Buddhist, Marxist, and existential psychologists, and we read literary selections by Kafka, Thomas Mann, Saul Bellow, Toni Morrison, Milan Kundera, Margaret Atwood, and Z.Z. Packer. Our interdisciplinary focus will enable us to see the ways in which psychology and literature illuminate and enrich each other—and also where they are in conflict, both in their methodologies and in their basic assumptions about the “knowability” of human nature and behavior.

AS.450.622. The Shape of Things: Embodiment and Sexuality in American Culture. 3 Credits.
This course examines theories and experiences of embodiment, sexuality, and bodily difference in contemporary American culture, focusing on understandings, experiences, misconceptions, and marginalizations. Drawing on feminist-informed gender, fat, disability, and critical race studies, the course introduces phenomenological, poststructuralist, and new materialist perspectives on the body, and interrogates the implications of diverse embodiments for human subjectivity and social life.

AS.450.624. Follow the North Star: Hist,Stories of Slaves Escaping MD. 3 Credits.
The course examines the many ways in which slaves sought or were able to escape from slavery by running away, or by assistance from nature. Included will be an examination of the ads for runaway slaves that appeared in newspapers, the stories of the ship Pearl and the brig Enterprise, the fate of slaves who fled to the British during the War of 1812, and the path to freedom followed by slaves who enlisted in the Union Army prior to Maryland's abolition of slavery in 1864. The course is designed to broaden one's understanding of the choices and paths enslaved Maryland residents were able to follow to freedom, from the Declaration of Independence to the case of Elizabeth Turner decided by Chief Justice Salmon P. Chase after the Civil War.

AS.450.627. MLA Core: Critical Theory. 3 Credits.
This course introduces critical theory in the context of struggles for social justice. From Plato to Judith Jack Halberstam, we will trace the history of Critical Theory by analyzing perspectives from psychoanalysis, Marxism, the Frankfurt School, postcolonial theory, poststructuralism, deconstruction, feminism, critical race theory, and queer theory. We will pay particular attention to how critical theory has been intimately and contentiously linked with politics and social justice. Among the authors studied are: Plato, Aristotle, Edmund Burke, Karl Marx, Sigmund Freud, Ferdinand De Saussure, Walter Benjamin, Claude Levi-Strauss, Jacques Lacan, Roland Barthes, Frantz Fanon, Michel Foucault, Monique Wittig, Helene Cixous, Eve Sedgwick, bell hooks, Paul Gilroy, Judith Jack Halberstam.
AS.450.630. 'Orientalism' vs. 'Occidentalism': A Brief History of Two Illusions. 3 Credits.
This course examines the evolution of regional attitudes that shape national discourses that create global discourse that influence the ways peoples and therefore nations at both ends of the Eurasian continent perceive and deal or do not deal with each other. Primary focus will be upon the sectarian religious, ethnic, social-economic conflicts that frame popular images, upon competitive power groups, international and domestic, that manage and model leadership politics, and upon the domestic and international press that play a significant role in shaping public perceptions. Students will view documentaries and films, read, weigh, consider and discuss a wide range of literary and media sources, including a film based upon Kipling's The Man Who Would Be King and other films, essays by world leaders, from the 19th-century father of modern India, Raja Rammohan Ray and Henry Louis Vivian Derozio, to the 20th- and 21st-century writers, such as Kishore Mahbubani (Can Asians Think), Steward Gordon (When Asia Was the World), Edward Said (Orientalism), and Ian Buruma and Avishai Margalit (Occidentalism, The West in the Eyes of Its Enemies). (Available online)

AS.450.631. Western Theatre History: The Dynamic Interplay of Social, Economic and Cultural Forces. 3 Credits.
Theatre offers unique insight into the development of western civilization by depicting people in their relationships to themselves, to each other, and to society. Theatre history provides a distinctive lens through which to explore the social, economic, cultural, geographical and other forces shaping those relationships over the past 2500 years. Beginning with the inception of theatre in religious ritual up to the present postmodern era, Western Theatre History. The Dynamic Interplay of Social, Economic and Cultural Forces will explore the demographics of audiences, the reasons for attending the theatre, who presented theatre, where theatres were located, what theatre space looked like and why they looked that way in order to track the dynamics of western political and social history. Major works of dramatic literature will serve as the entry point into various periods and as reflections of the historical forces at work. The major periods to be studied are: Classical Greek and Rome, Medieval, Renaissance (Italy, England and Spain), 18th and early 19th centuries, the modern era and the postmodern present.

AS.450.634. Italian Renaissance Art and Thought. 3 Credits.
In what sorts of intellectual contexts was Italian Renaissance art produced and received? What, in other words, were the connections among Renaissance art, philosophy, theology, mathematics, rhetoric, and history? This seminar will investigate a number of answers to such questions through a consideration of primary evidence and recent scholarship. Among other things, we will consider Aristotle's theory of magnificence as it was applied to Renaissance architecture, the development of perspectival systems, the notion of a Renaissance or golden age, and Vasari's efforts to conceptualize art of the Renaissance in metaphorical terms. Several substantial writing assignments will allow students to develop critical positions of their own, and throughout the term there will be an emphasis upon close reading of both texts and artworks. (Available online)

AS.450.635. How the War was Remembered: The Film and Literature of the Vietnam War. 3 Credits.
The Vietnam War continues to be one of the most controversial and deeply divisive events in U.S. history. The seeds for the war began early in the 20th century, intensified within the Cold War emerging in the years after 1945, and tore the country apart when boots hit the ground in 1965 to fight a war with no clear objectives or enemies. The legacy of Vietnam is difficult to understand but it is clear that the lessons of the war have been most “remembered” through the films and the powerful perspective of the veteran's voice in the literature of the war. We will ask how writers and film makers presented the experience of those on the battlefield and the home front; how very public and symbolic battles were fought over how the war should be interpreted and remembered; and how these artifacts help to illustrate the construction of a mediated cultural memory of the war. Particular attention will be paid to the ‘veteran’s voice’ and the role of autobiography. The course will consider the war from both liberal and conservative perspectives, and we will add an often-missing voice from the story; that of the Vietnamese. Ken Burn’s new documentary series, The Vietnam War will anchor the class. Other films to be considered may include The Quiet American, The Green Berets, Apocalypse Now, Rambo, The Deer Hunter and Platoon, The Little Girl of Hanoi (Em bé Hà Noi) as well as other documentaries including Why Vietnam, Peter Davis’ Hearts and Minds, and Four Hours in My Lai. Important literary works by veterans of the war may include those by Michael Herr, Philip Caputo, Bao Ninh, Le Ly Hayslip, Tim O’Brien and Ron Kovic among others. Please note that most of the films are readily available from multiple streaming sources (e.g. Netflix, Amazon Prime, Public Library, etc.). Students will be required to have watched a particular film in advance of class as noted in the syllabus.

AS.450.637. Native American Art History. 3 Credits.
This course examines Native American art as both internal and external communication centered in American Indian households, workshops, studios, and communities. Internal communication has met community and Tribal expectations for thousands of years as art has been engaged in ongoing economic, religious, political, and social activities that have created and maintained ethnic identity. External communication has placed art in the relationship between American Indian communities and non-Indian participants in the process of military conquest and colonization; and in galleries, museums, Powwows, and other public events. From the Colonial period to the present day Native American art has been admired and collected and has, in this way, mediated the relationships between Native communities and dominant American culture. We will use powerpoint slides, readings, and in-person consideration of Native American art at the National Museum of the American Indian to look at stylistic characteristics of various regions and time periods, and the messages and relationships embodied in specific examples of art.
AS.450.638. MLA Core: What is History?. 3 Credits.
What is history? What makes history, as a field of scholarship and a way of knowing, different from any other discipline? This course will introduce students to a vibrant and evolving field of study, and to the tensions, diversity, debates and controversies that shape it. Themes explored will include an examination of the parameters of the field (such as the relationship between popular and academic history; the tension between description and interpretation; the evaluation of sources; the role of the historian as a public intellectual; the craft of historical writing; and digital history as a new field of study) as well as an analysis of the topics and approaches undertaken by contemporary historians (such as the reframing of dominant narratives; the emergence of dominated voices and of new thematic fields such as sexuality, globalism and popular culture; and ongoing critiques of previously established narratives and theoretical frameworks). Students will read historical scholarship in a wide variety of fields, as well as critical theory, popular literature and documentaries.

AS.450.639. The American Southwest: Crossroads of Cultures. 3 Credits.
The course begins at the time when the Southwest was the homeland of the ancient Pueblo people (the "Anasazi"). Our survey moves from the major archaeological sites such as Chaco Canyon and Mesa Verde to the historical communities of the Hopi and Zuni and other Pueblo peoples of New Mexico and Arizona, along with the Navajo and Apache. We then move on to focus on the period of Spanish incursion, when the region became first part of colonial New Spain and then part of independent Mexico. We look at the narratives of the earliest Spanish arrival, and at the long tradition of Spanish colonial art and architecture, culture and religion in the region. We then move on to the incorporation of the region into the U.S. after the Mexican-American war, and with its impact on the Native American and Hispanic populations. The 19th century saw the arrival of the railroads and of an Anglo population of Easterners, and the genesis of the Southwest as a fine art center, sometimes called the Santa Fe-ization of the Southwest. More recently, the area has witnessed the "re-arrival" of a Mexican-American, or Chicano, population along with the retrieval and revival of Mexican cultural traditions such as the Day of the Dead and the cult of Guadalupe. Today the region, for all its cultural conflicts, is the site of an ongoing evolution of a modern multicultural Southwest. The course includes reading and discussion of literary works by such authors as Willa Cather, Leslie Marmon Silko, Gloria Anzaldúa, Ed Abbey and Tony Hillerman, and an extensive look at the arts of the Pueblo and Navajo peoples, the paintings of the Taos School and the work of Georgia O'Keeffe, and the contemporary revival of Southwest folk art.

AS.450.640. Nature and the American Imagination. 3 Credits.
This course offers an interdisciplinary study of the American landscape and the role it has played in shaping American identity. We anchor our study by looking at the way the idea of land has been constructed throughout our history as a kindred spirit by Native Americans, as a "howling wilderness" by the early colonists, as a school for spirit by the New England Transcendentalists, as a precious inheritance in need of preservation by 19th century conservationists such as John Muir and Teddy Roosevelt, and in keeping with Manifest Destiny, as a rich resource that was 'ours for the taking.' Philosophically, we explore the influence on early colonists of Biblical and Enlightenment thought, of the European Romantic movement, the moral ambiguities of the slave experience of the American land, the ideas of Romanticism that gave rise to Emersonian Transcendentalism (America's first homegrown philosophy), the competing theories behind the national park movement, and more recently the revival of Native American holistic values in ecological paradigms. Beginning with Thoreau, who "went to the woods to learn to live deliberately," we read primary texts of American nature writing, arguably one of America's finest contributions to world literature, and we experiment with keeping nature journals. Finally, we discuss the bridging of the two cultures, science and art, in the writings of paleontologist Loren Eiseley and conservationists Aldo Leopold, Rachel Carson, and Al Gore.

AS.450.642. Yesterday's Tomorrows: Utopian and Dystopian Futures in Science Fiction Literature. 3 Credits.
Beginning with Thomas More's seminal work Utopia (1516), this course will engage in an interdisciplinary discussion of the construction of utopian/dystopian-cacotopian worlds in science fiction, or more broadly speculative fiction, and the accompanying philosophical issues and concerns raised in these stories. We'll draw on novels, history, philosophy, graphic novels, and film to grapple with the meaning and importance of utopian and dystopian thinking and writing across the 20th century. The authors react to and against major historical paradigm shifts caused by, for example, the Industrial Revolution, Modernity, War, the Cyber Revolution, and millennialism, along with the overarching "End of Days" stories. Some of the authors under consideration are H.G. Wells, Edward Bellamy, Yevgeny Zamyatin, Aldous Huxley, Ursula Le Guin, Philip K. Dick, Margaret Atwood, William Gibson, Octavia Butler, Marge Piercy, and Neil Stephenson. Through these stories the authors project both possible futures and offer incisive commentary on contemporary realities.

AS.450.643. Leadership and the Classics. 3 Credits.
This course explores constants and changes in leadership over time through a selection of readings that ranges from ancient philosophy to 20th-century fiction, including works by Confucius, Plato, Sophocles, Shakespeare, Machiavelli, Hannah Arendt, Martin Luther King, Jr., Anne Tyler, and others. Through directed reading and discussion, students gain valuable insights into how leaders can foster creative initiatives and responses to change. A historical perspective enables students to understand and appreciate the challenge of leadership in the 21st-century multicultural world. They can then develop a framework for interpreting and evaluating responses to that challenge. (Available online)
AS.450.644. U.S. Environmental History. 3 Credits.
Environmentalism is a multifaceted phenomenon infused with many different schools of thought about the nature of environmental problems as well as the most appropriate solutions for those problems. This course will examine the major historical influences on the varied approaches to environmentalism and environmental practice. Students will explore the influence of environmental ideas and actions in the US from the 19th century to the present. The goal is to deepen our understanding of contemporary environmental practice — by others and ourselves — by tracing the influence of these historical trends in current debates and actions. Topics include conservationism, preservationism, transcendentalism and green romanticism, toxic construct, the wilderness construct, and sustainability.

AS.450.648. Fakes, Lies, and Forgeries: A History of "Fake News" from The Flood to the Apocalypse. 3 Credits.
In our digital age of hacking, on-line bots, and trolls stealing, faking, and confounding information across the Internet, it is often forgotten that "fake news" has, in fact, always been with us. The history of fakes, lies, and forgeries transcends human history and encompasses nearly every discipline within the liberal Arts, from literature, art, and philosophy, to history, religion, and archaeology. Human civilization has been filling gaps in the historical record and inventing alternative narratives for all sorts of reasons: political, commercial, evangelical, and personal. This course examines this dark undercurrent within human achievement across historical time, exploring specific examples of historical and literary forgeries that date from the biblical Flood to the future Apocalypse.

AS.450.651. Western Political Philosophy. 3 Credits.
This is intended as a broad survey of Western political thought, particularly as it developed in the European historical context from the classical era to the 20th century. The thinkers we will discuss can be thought of as engaged in what Robert Hutchins called a ‘great conversation’ across the centuries on the central questions of political philosophy. These questions include: What are the purposes of government? What is the best form of government? How are justice and liberty best realized in a political system? What are rights - and where do they come from? What is sovereignty and in whom does it reside? What principles make political authority legitimate? Is disobedience to political authority ever justified? In many ways these questions are perennial ones, as relevant in our own time as in the distant past. Moreover the divergent systems of thought developed to answer these questions continue to shape much of contemporary political life - e.g. democracy, constitutionalism, liberalism, socialism, and conservatism. Among the political philosophers who will be examined are Plato, Aristotle, Augustine, Thomas Aquinas, Machiavelli, John Locke, Edmund Burke, Thomas Hobbes, Jean Jacques Rousseau, Friedrich Nietzsche, Karl Marx, Hannah Arendt, and Leo Strauss. (Available online)

AS.450.654. ‘When the lamps went out”: WWI as history, memory and commemoration. 3 Credits.
The centenary of the conclusion of World War One is a fitting moment to re-examine the cataclysmic impact that war had on world affairs at both a micro and macro level. The war ended the "long nineteenth century" and ushered in an era of questioning and doubt for many who survived. It was the first manifestation of total war, made both necessary and possible because of industrialization and advances in transportation and weaponry. The resulting catastrophic loss of life among the military and civilians led to the assumption of new roles. This course looks at the different theaters of war; the social impact of the war on gender and class; the effect the war had on colonies in Africa and Asia; and the overall global political and economic ramifications of the war. There will be scope for students to pursue research on a specialized topic within this framework and within the following themes: World War One and literature, art, gender, medicine, propaganda, music, independence movements.

AS.450.661. History of Russia. 3 Credits.
This course will first address the issue of Geography, which more than history dominated the thinking of the Eurasian Steppe, a centrifugal plain which caused the people to adopt centripetal institutions; it will include study of the region of Siberia—the land of the Shaman east of the sun; the constant stream of foreign invasions throughout Russian history and their indelible marks on the character and culture of the people; the periodization of important leaders (Peter the Great, Ivan the Terrible, Catherine the Great, etc) of Russian History; the enormous contribution of its 19th century literature (Pushkin, Dosteovsky, Tolstoy, Chekov, etc); the spiritual influence of the Russian Orthodox Church; the causes and effects of the Russian Revolution in 1917--and arguably the most important world event in the 20th Century; Stalin, Khrushchev and the age of the Cold War; and the Post-Communist search for identity (Gorbachev, Yeltsen, Putin, and Dmitry Medvedev).

AS.450.667. The Bildungsroman as Literary Form-Chronicling Personal Growth in Countries and Cultures. 3 Credits.
The bildungsroman, often referred to as the Novel of Adolescence or Coming of Age novel, is one of the world's most fascinating literary forms because of its manifestations in the literatures of many cultures and countries. The development of the form closely parallels the development of nations, the emergence of philosophical, social, and literary movements which have defined the world from the Eighteenth Century onward. Many major writers of the Romantic, Modern, and Post-modern periods have experimented with the form in compelling works such as Portrait of the Artist as A Young Man, Mrs. Dalloway, Madame Bovary, Great Expectations, Native Son, Catcher in the Rye, and The Famished Road. The illusiveness of the form derives in part from its ubiquitous nature. The classical German bildungsroman differs significantly from its English, French, American, African American, Asian, and African counterparts. This course examines the bildungsroman in several of its manifestations: the rise of the form in Eighteenth Century Germany, its adoption among French and English writers, its adaptation in Joyce's Ireland, its popularity among American and African American writers, and its unique presentation in Asian and African literatures. Students will read several major bildungsromans and discuss the constructs of the form as well as the ways it differs among countries and cultures, races and ethnicities, and between genders. Some attention will be paid to the social and societal contexts associated with the form, as well as the ways in which it has been shaped by prevailing philosophies. Students will be encouraged to participate in The Bildungsroman Project, a Digital Humanities project designed to catalog and explore the form (http://bildungsromanproject.com/). (Available online)
AS.450.669. Family in Cross-Cultural Perspective. 3 Credits.
This course examines the family from various cross-cultural perspectives. Throughout the semester we will examine the family as a social institution through the lenses of race, gender, age, social class, and sexual orientation. First we will explore how the notion of family has changed over time in the United States. Next we will explore the social processes that take place within the context of the family such as dating, courtship, marriage, and parenting. We will also look at other issues that affect families such as immigration policy, work inside and outside the home, poverty, and domestic violence. (Available online)

AS.450.673. Monstrosity & Metamorphosis: Imagining Animals in Early Art & Literature. 3 Credits.
From humankind’s earliest artistic expressions on the walls of caves, animals have figured centrally in the human imagination. One can argue, in fact, that much of early art and literature does not differentiate fully between the human and the animal, that human self-awareness evolved, in part, through interactions with animals, and through the imaginative fusion of human and animal forms. This course will study the representation of animals and of human/animal hybrids in the ancient and medieval worlds, weaving together stories presented through visual art and literature. Our journey will take us through East and West, touching on texts including (but not limited to) the Epic of Gilgamesh, the Hebrew Scriptures, the Vedas, and Ovid’s Metamorphoses.

AS.450.675. Literary Analysis of the Hebrew Bible. 3 Credits.
This course focuses on narrative criticism of the Hebrew Bible, comparing it to similar methodologies (poetics, rhetorical criticism, etc.) and contrasting it with other forms of exegesis (historical criticism, deconstruction, etc.). Students will study key literary terms and discuss the elements that work together to form a story. The class will consider the narrator’s voice in relation to the text and the reader, examining narrative omniscience, key type scenes, and themes in the Hebrew Bible and ancient Near Eastern (ANE) literature. This course attempts to discern narrative criticism’s place in the history of Biblical interpretation. Long overshadowed by historical criticism and increasingly seeking to find its place in the midst of a number of reader oriented approaches, narrative criticism can be a valuable partner to both. This class examines narrative criticism’s value as a tool for exegesis by studying its roots and the methodologies incorporated by narrative critics of the Hebrew Bible. (Available online)

AS.450.678. Religions of the Emerging World. 3 Credits.
The emerging world of the 21st century is globally interconnected: AI peoples are now neighbors. In this world, competing religious claims to unique truth pose a serious threat. Yet abandoning such claims can reduce religions to quaint cultural relics. How can religious believers maintain the vitality of their spiritual heritage while fully appreciating the faith/wisdom traditions of others? This course explores the insights of one man who has sought that balance of religious consciousness—philosopher Huston Smith—as he reflects on Hinduism, Buddhism, Confucianism, Taoism, Judaism, Christianity, and Islam. Rather than competing, he found, the world’s religious traditions can greatly enrich one another. (Available online)

AS.450.683. The History of the Book from the Ancient World to the Digital Humanities. 3 Credits.
What is the future of the book? This course will tackle that question in two distinct ways. First, we will delve into the distant historical past together and explore the circumstances governing the transmission of knowledge itself, from its origins in Bronze Age cuneiform, hieroglyphic and Semitic-language manuscripts, up to the Greco-Roman period, in the form of inscribed tablets, papyrus rolls, and epigraphic fragments. The next portion of the course will address the medieval “manuscript revolution,” marking the epochal technological transition to the codex book-form still in use today. Here we will address the progress of paleography—the forensic development of Western handwriting over time—and the proliferation of book illustration and illumination alongside the parallel development of traditional sacred and novel secular textual genres, partly made possible through these same innovations in book production. In the interest of presenting an especially focused study over the final half of the course, we will then move from the late Middle Ages to the “Printing Revolution,” from the middle of the 15th c. up to the close of the 17th c. We will hone in on the first era of “information overload” (before our present-day digital revolution) and its broader cultural impact on the cultures of book history and the reception of knowledge over time. (Available Online)

AS.450.689. Introduction to Digital Humanities in the Liberal Arts. 3 Credits.
This introductory course in the MLA program's digital humanities concentration is designed to familiarize students with digital encoding tools, web platforms, assorted search engines and other methodologies directly relevant to a wide range of research agendas in the liberal arts. In the course of the semester, students will receive a comprehensive introduction to selected tools and methodologies, such as the Text Encoding Initiative (TEI) and text mining software (e.g. Voyant and Collatex). Assigned text encoding projects will guide students in identifying appropriate textual markup strategies, resolving issues generated through digital research, and finally in selecting appropriate tools for edition making. The semester will conclude with group critiques of these assigned projects from the standpoint of both content and user experience. (Available online)

AS.450.694. Philosophy of Beauty. 3 Credits.
Since Plato, ‘Beauty’ has proven to be a crucial topic in Western Philosophy. Philosophers have seen fit to address numerous questions surrounding the topic: what is beauty, what distinguishes and constitutes it, who can create it, who can discern and appreciate it? Is it subjective or objective? We will consider a variety of other critical questions via the prominent thinkers we will read in this class, such as: what is the point in creating art? Who or what is it for? What is its desired or intended impact on the audience? What are the germs of creativity, or what is the critical environment for its emergence? Is creativity and artistic inspiration an individual privilege, or can it be shared broadly in society, or in a community? What is the political role or place of the artist and his/her work? Philosophers read in this class may include Plato, of course, but also Aristotle, Augustin, Aquinas, Hume, Burke, Kant, Hegel, Schopenhauer and Nietzsche, among others. If time permits, we will also look at more recent philosophers writing on the topic—and why beauty might no longer be a concern for art and artists.
AS.450.695. American Political Theory and Practice. 3 Credits.
Our purpose in this course is not to provide an account of the mechanics of American government, but to examine the principles that underlie those mechanics, and the way in which those principles change over time. In other words, we are going to examine the political philosophy that serves as a basis for the American regime (or regimes, if one is so inclined). This means that in addition to questions of justice and right we will examine how the thinkers of the Founding era understood the human being, and the sort of governmental structures that are built on this understanding. We will also consider the revolution in American politics that occurs in the 20th century. The progressive movement of the 20th century builds on a different view of human nature and metaphysics (originating in, but ultimately transcending, Hegelian Idealism), and therefore finds itself in tension with the principles of the Founding. This tension is one of the animating forces of American political partisanship today, so an understanding of the development of American political theory will help us to better understand political disagreements in our own day. (Available online)

AS.450.697. All in the Family: Power, Scandal, and Fall. 3 Credits.
From the Roman Empire through today, ruling families have had a profound effect on the social, political, and cultural lives of their people. It was believed wealth, power, and nobility from birth formed the perfect formula to rule over the lower class. However, the rise of humanistic study, merchants, explorers, revolutions, and colonialism threatened and ultimately destabilized their wealth and power. As a result, the rise of the middle class, emerging political systems, and development of national identities gave way, arguably, to the dissolution of absolute power predominately in the Western world. We will consider the following ruling families: the Julio-Claudian, Ptolemaic, Ming, Hoehnstaufen, Habsburg, Medici, Aragon-Castille, Tutors, Capetian, Romanovs, and current House of Windsor.

AS.450.698. African American Poetry and Poetics. 3 Credits.
This course will explore the category, history, and development of African American poetry from Phillis Wheatley to the present. We will focus on poetry and poetics specifically but will consider the general movement of literature produced by African American writers over the course of three centuries. We will read works by the key contributors to this particular American literary tradition with the goal of understanding the aesthetic, cultural, and critical legacy of African American poetry to the American literary and musical sensibility of the twenty-first century. From eighteenth-century odes to the blues, hip hop, and rap tradition, we will examine the role that race, cultural identity, legal status, and the impersonal structures (or shackles) of poetic forms have played in shaping and reshaping African American verse. We will use several Digital Humanities tools (e.g. Voyant Tools and NGram Viewer) to map the evolution of African American poetry from the 18th century to the present. (Available online)

AS.450.699. Great Books in Great Contexts. 3 Credits.
What makes a "great book" great? In this course, which emphasizes deep reading and discussion of some of the influential writings that have shaped the intellectual and cultural heritage of our world, we will begin to try to answer that question. Along our journey, we will explore seminal texts including Homer's Odyssey, The Song of Roland, Shakespeare's Henry V, Shelley's Frankenstein, and Conrad's Heart of Darkness. In studying these great books and their historical contexts, we will employ elements of literary criticism, identify common and enduring narrative themes, and reflect on the inclusion of each of these texts as part of the Western Canon. Students will select one text on which to write an in-depth research paper (in consultation with the instructor).

AS.450.700. 'The Souls of Black Folk': Evolving Conceptions of Leadership in African American Literature and Culture. 3 Credits.
Equal parts historical study, sociological investigation, and cultural analysis, W. E. B. Du Bois' classic work, The Souls of Black Folk, exemplifies the type of interdisciplinary and multidimensional approach employed by political and social theorists in their efforts to make sense of the fundamental conditions, contours, and characteristics of political life in modern societies. Paying particular attention to Du Bois' account of race, the role political leadership, and the relationship between leaders and the masses, we will put Du Bois' seminal work in conversation with a number of other prominent Afro-American voices, including Frederick Douglass, Booker T. Washington, Ralph Ellison, Martin Luther King Jr., James Baldwin, Cornel West, Barack Obama, Ta-Nehisi Coates, and Keeanga-Yamahtta Taylor. By attending to Du Bois' political engagements as well as literary representations of political leadership that have been influenced by him in one way or another, students will have the opportunity to explore the premises and implications of racial politics as well as some of the creative ways in which African Americans have sought to overcome racial domination. What are the appropriate roles and responsibilities of political leaders? What is the nature of their relationship to the community? What are the foundations of legitimate leadership and authority? What form should black politics take in order to overcome white supremacy? How should we understand the relationship between class, gender, race, and sexuality? (Available online)

AS.450.704. Poetry and the Visual Arts. 3 Credits.
This seminar will explore relationships between the languages of poems and those of the visual arts, including painting, drawing, sculpture, and photography. We will begin by discussing theoretical essays contrasting verbal and visual artistic expression, and go on to consider, for example, poems based on paintings (Auden's Musee des Beaux Arts and Breughel's Fall of Icarus); poetic images that make use of a pictorial tradition (Chinese ink painting in Li-Young Lee's Persimmons); reciprocal tensions in the poetry and visual art of a single artist (Derek Wolcott); the use of similar techniques, such as the symbolic coding of color, in poems (Wallace Stevens) and in painting (Marc Chagall); and the individual responses of several poets to the same work. The class will use a blog for the posting of visual images and other class-related materials. Requirements will include short papers/commentaries and one long paper.

AS.450.710. The Mind of Leonardo Da Vinci. 3 Credits.
Leonardo da Vinci (1452–1519) was one of the most fascinating individuals in history. He is the creator of what are arguably the world's two most famous paintings: the Last Supper and the Mona Lisa. He was also a brilliant scientist and engineer; he made dozens of original anatomical discoveries (for example, he injected hot wax into an ox brain to demonstrate the shape of the ventricles), and he invented hundreds of devices (from ball bearings to a steam cannon). He was well-known as a musician, court entertainer, and even as a practical joker. Who was Leonardo? What do we know of his personal life, including his thoughts on religion, sexuality, or politics? What personal traits shaped his genius? This course explores his thousands of pages of manuscripts; his paintings and other artistic projects; his scientific projects (including anatomy, physiology, botany, and geology); and his civil and military engineering projects. (Available online)
AS.450.716. The Photo Essay, Phyllis Berger. 3 Credits.
In this photography course, students combine images and text to create a narrative. On field trips to places such as Baltimore's old Chinatown and the ghostly shopping district of Howard Street they will learn the art of the interview, elements of composition and camera operation. In the classroom, students will become adept at the art of post-processing images and will gain insight into the art of the photo essay by examining the great practitioners of that art such as Margaret Bourke-White, James Agee and Walker Evans and Cornell Capa. This course has a limit of 10 students. It will be held in the Center for Digital Arts lab., Mattin 204.

AS.450.717. School and Society: Education Reimagined, Possibilities Disclosed. 3 Credits.
This course will engage in a discussion of the current realities and challenges presented within the United States' PK-12 education system. We will examine a range of perspectives on what does (and doesn't) work in our educational policies and practices. While this endeavor will entail a critical examination of the status quo, it also will invite students to recognize what is possible and inspiring in the work many courageous educators accomplish in the midst of challenging times. The course will address the following questions:<o:p></o:p></p><ul style='list-style-type:disc'><li>What are the aims and purposes of education?<o:p></o:p></li><li>What should be the content of the curriculum?<o:p></o:p></li><li>What are the implications of structural inequality in schools?<o:p></o:p></li><li>The factors that characterize the relationship that exists between school and society?<o:p></o:p></li><li>The principles that underlie the decisions made by those who have the power or capacity to alter that relationship; and<o:p></o:p></li><li>The challenges faced by those who strive (and usually struggle) to resolve competing demands upon this relationship.<o:p></o:p></ul><p>Please note: this course does not require a background in the field of education. Although practicing teachers are welcome to join this course, it has been developed for a wider audience. <o:p></o:p></p>

AS.450.723. WWII in Visual and Literary Art. 3 Credits.
The length and massive scope of World War II make it singular in the history of warfare: never before had the entire globe been involved in such a protracted and technologically sophisticated war. Since the end of World War I, the weapons and machinery of war had become increasingly lethal, culminating in the advent of advanced, long-range aircraft and the successful manufacture of the atomic bomb. Fighting took place on land, at sea, and in the air, and casualties were huge: over 60 million people were killed, including c. 50 million civilians. Predictably, the war generated new forms of literature and art and made particular use of photography, which for the first time enabled a detailed and often horrific visual record of events. In this seminar, students will focus on important novels and films that appeared in response to WWII, as well as on the photographic record of the war. An emphasis will be placed on using these sources to understand the major historical and military events of World War II as well as the efforts made by soldiers and civilians to survive it.

AS.450.724. Science Fiction Film in the 20th Century. 3 Credits.
This course provides a survey of Science Fiction Film from the early part of the 20th century and the very beginnings of film, through 2002. We will look at influential filmmakers including George Melies, Fritz Lang, Stanley Kubrick, George Lucas, and Steven Spielberg and will analyze the basic components of the genre through science fiction origins (A Trip to the Moon, Metropolis), "classics" (The Day the Earth Stood Still, Invasion of the Body Snatchers), cult/fan favorites (Blade Runner) and will conclude with a section focused on the 1990s and the dystopic imagination (The Matrix, Minority Report, 12 Monkeys,Gattaca, Handmaid's Tale, and Dark City among others). The goal is to develop critical analytical skills in understanding the role of science fiction within culture. How is science fiction defined? What is the role of science fiction literature in the creation and development of the formula? What is the "science" that drives the science fiction? What does it mean to be human? What is the view of the future, of technology? How are cultural and social concerns expressed through formula? The films and filmmakers are placed within a larger historical, cultural, and social context as we explore film as an industry, as a technology, as a form of communication, and as an artifact of culture.

AS.450.728. On the Shoulders of Giants. 3 Credits.
Since the year 1865 and the passage of the 13th Amendment, America has struggled with its ability to assure the right of all Americans to achieve full participation in our democracy. There have been short periods of advancement, but they have typically been followed by devastating rollbacks of hard fought gains. The new Jim Crow has become a chameleon-like character, disguising its true intent and malevolent designs with code words and strategic policies that erode the rights of all citizens, but are detrimental to African Americans and communities of color more than to others. <o:p></o:p></p><ul style='list-style-type:disc'><li>What factors that characterize the relationship that exists between school and society?<o:p></o:p></li><li>The principles that underlie the decisions made by those who have the power or capacity to alter that relationship; and<o:p></o:p></li><li>The challenges faced by those who strive (and usually struggle) to resolve competing demands upon this relationship.<o:p></o:p></ul><p>This course will focus on a number of social justice giants and critical movements or organizations from the 1940s through the present. Key topics will include an examination of certain critical flashpoints in U.S. history that are strikingly similar to the years immediately leading up to, encompassing and following the Obama presidency, with an eye to identifying the social, economic and cultural forces that are at once the precipitants and undoing of these unique movements in time. We will attempt to understand how these forces shaped and were in turn shaped by powerful women like Anna Julia Cooper, Nancy Cunard, and Audre Lord whose life work inspired and provided the intellectual framework for the activism of later generations, led by Angela Davis, Fannie Lou Hamer, and Kimberle Crenshaw. The poet, novelist, playwright, and columnist Langston Hughes, who, along with WEB Dubois, was one of the most committed artists and intellectuals of the Harlem Renaissance, provides a bridge from that period to a new vanguard of voices like James Baldwin, Ralph Ellison, Lorraine Hansberry, Gwendolyn Brooks, Sonia Sanchez, Nikki Giovanni, Maya Angelou, Toni Morrison, August Wilson and many others. This period of cultural literacy was also responsible for rediscovery of influential writers like Zora Neal Hurston, who shared the stage with Langston Hughes during the Renaissance. Hughes, along with Paul Robeson, a true giant among men, confront head on, the worst of American paranoia and censorship, providing an example of courage and perseverance with enormous relevance to the writers, actors, and filmmakers of today and to the artists of all future generations. <o:p></o:p></p>
AS.450.731. History of the Papacy: Pope Francis in Context. 3 Credits.
This course will cover the history of the papacy from Late Antiquity up to the present day. It will pay particular attention to the growth of the papacy as an institution, its ideological expression, and the historical roots of today’s Pope. The acclaimed historian, Thomas F.X. Noble, has noted that the papacy is the “world’s oldest continuously functioning institution.” Its longevity alone has prompted curiosity and interest, inspired scholarly works and attracted popular attention; to many, it has been the model of tradition for two millennia. But upon closer inspection, another story, one of transformation, also emerges. The approach of most papal histories, beginning with the Liber Pontificalis in the sixth century up to and including many twentieth-century accounts, is to weave a seamless narrative. These histories attempt to reinforce the notion that the papacy was (and still is) moving inexorably toward some preordained end. Most historians today agree with this approach, and prefer to acknowledge far more contingency: the papacy as an institution has witnessed periods of monumental transformation over its 2000-year history. This course will highlight these developments, place them within their proper historical context, and demonstrate that perhaps no institution has witnessed more change and continuity than the papacy. This course satisfies the interdisciplinary core requirement. (available online)

AS.450.733. Why Tonality Matters: Symphonic Music and its Practitioners in Western Cultures. 3 Credits.
<p>Early in the 20th century, composers of the “Second Viennese School,” believed that tonality and Romanticism in western music had gone far enough, and their answer was “atonality,” music written to avoid any formal relation to a central key. In this course, students will learn why this theory largely failed, and why tonality won out. Through in-class demonstration and listening, students will discover that tonality is likely an unavoidable phenomenon of nature, and that we, as human beings, naturally seek harmonic structure. Important to the discussion will be the study of the harmonic series, a physical reality, and the tempered scale. With assigned readings, there will be on-going discussion about the composers who succeeded where others failed and why. Assignments will include required viewing of Leonard Bernstein’s six Norton lectures recorded in 1973 at Harvard University, “The Unanswered Question.”</p>
<p>Listening assignments will feature popular symphonies, operas, and other works by Mozart in the 18th century; Beethoven, Schumann, Brahms, Dvorak, Sibelius in the 19th century; and Rachmaninov, Vaughan Williams, Hindemith, and William Walton in the 20th century. Several classes will be devoted to Sonata-Allegro form, the foundation upon which all of the above mentioned composers relied. We will also listen to contemporary examples of the same tonal relationships in music for the stage, for film, and for TV. By course end, students will become better aware of, and better listeners to, an art form that has influenced western culture for over 200 years. They will also begin to identify tonal relationships between resolving chordal structures in music, and recognize how important the harmonic series and the tempered scale was and remains in the development of western symphonic music to this day. With the knowledge thereof, students will begin to know what to listen for.</p>

AS.450.734. Rebirth of a Nation: The Harlem Renaissance. 3 Credits.
This course will examine twentieth century American history through the lens of the Harlem Renaissance, probing the music, literature, theatre, film, and other visual arts of that era for the key themes and messages that would profoundly influence the twentieth century civil rights movement and radically transform the cultural, social, and political landscape of post-slavery America. This course intends to ‘humanize’ American history by exposing students to a uniquely powerful artistic movement through which ordinary people gave expression to their personal experience of key historical events as witnesses, participants, and agents of change. It is anticipated that the integration of cultural material into the analysis of historical facts will awaken students to dimensions of America's racial past not previously explored and provide a platform from which they may engage in critical and constructive analysis of the sociopolitical landscape of twenty-first America.

AS.450.736. Medieval England: From Beowulf to the Battle of Bosworth. 3 Credits.
This course traces this history of England from the Anglo-Saxon invasions of the fifth and sixth centuries to the political unrest and economic crises of the fourteenth and fifteenth centuries. Approaching medieval England through the broad lenses of myth-making, nation-building, and identity-creation, we will focus on some of the larger trends and developments that help explain the distinctive liberalism and individualism of English culture, e.g. the breakdown of feudalism, life in the medieval town and on the manor, the origins and evolution of the common law, and the rise of Parliament. Our exploration will take the shape of a multidisciplinary journey and will include in-depth analysis of art and literature as well as religious and political texts.

AS.450.738. MLA Core: Why Read the Classics?. 3 Credits.
There are three questions that rest at the heart of this course: What is meant by the term “classic” when we refer to works of literature and poetry? Why is it worthwhile to read the classics? and What would you include in your personal library of the classics? We will turn to authors, poets, and philosophers for their wisdom and guidance on the topic, and we will read a number of works to help refine our understanding of what the classics mean to us. In doing so, we will engage in close readings of each text, find ways to bring them into dialogue with one another, contemplate the insights they give into the human experience, and explore their relevance in our everyday lives. Students will be asked to write analytical, creative, and reflective responses to these works and to consider the classics that are meaningful to them.

AS.450.739. Race and Jazz. 3 Credits.
The music known as jazz has been celebrated and performed by peoples throughout the world. This course will examine the music itself as well as the role that race has played in the creation of jazz, the perception of its history, and the perceived authenticity of present-day jazz. We will examine the music from a historical perspective through the study of the music and lives of its creators and practitioners beginning with precursors in ragtime and minstrelsy and continuing into the modern era. Students will learn to make aesthetic judgments, identify various jazz styles, and discuss their relevance to their time and to the present. Classes are planned to include guest artists from the Baltimore jazz scene, examples in various media, and live performances by the instructor. (Available online)
AS.450.741. Apocalyptic in the Bible, Religion, and Popular Culture. 3 Credits.
This course explores primary sources of apocalyptic literature in the Bible, the ancient Near Eastern world, and various religions and cultures. In seeking to define the term “apocalypse,” the class will study the political, social, and economic forces that contribute to the formation of this rich genre of literature. Utilizing this knowledge, students will analyze manifestations of apocalyptic in movies, television shows, comic books, and other media.

AS.450.745. Aristotle and Hobbes: Physics, Psychology, Ethics and Politics. 3 Credits.
This will be a course focused on two goals: clarifying the importance of foundational principles (in this case, the different teachings on physics we find in Aristotle and Hobbes), and clarifying the distinctions between the ancients and the moderns. We will be concerned with questions about nature, matter, motion, the soul, ethics, politics, philosophy, and human life – both as such, and in their complex interrelationships.

To address these questions, we will read the works of two extremely important thinkers – the ancient Greek philosopher Aristotle, and the 17th century English philosopher Thomas Hobbes. Aristotle, writing at the dawn of what becomes the Western tradition of philosophy and science, investigates everything under the sun, writing foundational works in fields as diverse as rhetoric, psychology, biology, logic, physics, and metaphysics. If one understands Aristotle, one can understand much of what comes after. Thomas Hobbes writes after the modern “revolution” – a revolution accomplished in the thought of diverse thinkers, especially Machiavelli, Bacon, and Descartes. One crucial element of this revolution is the rejection of both Aristotle and Scholasticism (Christian Aristotelianism). In this course, we will engage in close readings of Aristotle's Nicomachean Ethics, as well as parts of his Physics and his On the Soul, and Hobbes's Leviathan. Reading these two thinkers in dialogue with one another will allow us to see how their fundamental disagreements about physics and causality give rise to subsequent differences in how they conceive humanity, psychology, ethics, and politics. In attending to these differences, we can more clearly identify the debts that we owe to both Aristotle and Hobbes for our understanding of ourselves and our civilization.

AS.450.746. Deep Ecology: Environmental Ethic. 3 Credits.
Today, the concerns of Deep Ecology's movement that started in the so-called Ecological Revolution of the 1960s continue to be debated and addressed as "climate change" with a sense of immediate urgency. Deep Ecology asks deep questions and aims to bring about long-range goals in moving away from anthropocentrism to ecocentrism, calling for a major paradigm shift in perception, values, and lifestyles. Planetary and human survival is at stake due to climate change — this is humanity’s global ultimate concern. Scientists, environmental activists, and representatives of humanities agree that we need a new paradigm shift, that it is unsustainable to treat the living earth organism as an infinite resource of "energy." Western environmental practices have been based on anthropocentric view of nature where humans occupy the top of the hierarchy in the chain of life. There is an urgent need for a new environmental ethic that will fundamentally reorient humans in their thinking and relating to the natural environment. The course examines cross-cultural perspectives of environmental ethics that are rooted in Western/scientific, Eastern, and Indigenous worldviews and religions. This semester's readings include current debates concerning climate change, selections from Deep Ecology movement and indigenous perspectives.

AS.450.748. The Black Politics of Michael Jackson. 3 Credits.
Michael Jackson was a global superstar who reached crossover appeal in the late 20th century. More than a mainstream pop performer, Michael Jackson was musician, singer, dancer and visual artist who transformed his artistic heritage, deeply grounded in the African American tradition, to reach a broad audience, in the United States and globally. This course aims at reframing Michael Jackson's cultural and social origins to reveal his anchor in the African American musical, philosophical and political traditions. This course will explore the African American historical context of the 1960s, Black vernacular practices, the Civil Rights Movement, the Great Migration, Black Minstrelsy, the intersection of Blackness, Sexuality and Gender in pop culture, Black Globalism, and 1980s Black Hyper-visibility. In this course, students will closely examine Michael Jackson's music, videos, writing and performances, Jackson's meta-narratives, in addition to theoretical texts on critical race theory, American History, gender studies, performance studies and African American Studies.

AS.450.749. Exploring the Liberal Arts. 3 Credits.
What do we mean by the 'liberal arts' and why are they more important today than ever before? How do the humanities, social sciences, natural sciences, and arts compare and contrast in terms of their methods of acquiring, analyzing, and conveying knowledge? Are the 'ways of knowing' for each discipline incremental or sudden and why or when? The course is taught using a thematic approach. Previous versions of the class have included a focus on 'The DaVinci Code,' 'Time,' 'The American Landscape and the American Imagination,' 'Interdisciplinary Perspectives on the Fifties,' 'Seeing,' 'Memory,' and 'Nature and the American Imagination.'

AS.450.752. Spies, Code-Breaking in WW II. 3 Credits.
Even though it is common knowledge that the Allied generals and admirals won the Second World War on the battlefields and the high seas, it remains almost unknown and opaque to the general public as to how much information the espionage agents, the deciphering of the Axis codes, the resistance fighters, etc. were able to provide in contributing to the ultimate Allied victory over Nazi Germany and Militarist Japan. Texts for the course include: Spyglass: An Autobiography of a French Female Spy, Cast No Shadow: The Story of an American Female Spy, Agent Zigzag: The True Story of Nazi Espionage, Escape from Davao: The Forgotten Story of the Most Daring Prison Break of the Pacific War, and Codebreakers: The Inside Story of Bletchley Park, among others.

AS.450.756. Navin, Inferno, and Milton's Paradise Lost. 3 Credits.
Long before Socrates and Plato mapped the course of underground rivers as pictured in the Phaedo, poets and philosophers had been fascinated by the metaphorical implications the earth’s mysterious subterranean landscapes. Flowing through this netherworld under various names were rivers that remain familiar today—Acheron, Cocytus, Plegethon, Lethe, and Styx. Our goal in this course will be to follow in detail the course of these rivers through the vastly different landscapes created by three epic poets: the grey world of Shades in the watery depths of Homer’s Odyssey; the elaborately structured geography of punishment in Dante’s Inferno; and, finally, the strangely contiguous landscapes of Hell and Eden in Milton’s Paradise Lost. Along the way, we will touch briefly on discussions of the underworld in other Western classics; as a class, we will also investigate parallel stories of subterranean rivers in the literature and mythology of world cultures.
AS.450.758. American Literature and the Archive. 3 Credits.

Why are some literary works from the past reprinted, anthologized, and considered worthy of study, but not others? Why are some works "lost" and some "rediscovered," while others simply fall out of favor? What is the relationship between the canon and the archive? Focusing on the relationship between authorship and status in nineteenth- and early twentieth-century American literary history, we will use rare books and archival materials from JHU libraries and digital collections to investigate the writings, publications, archives, and legacies of authors such as Edgar Allan Poe, Walt Whitman, Emily Dickinson, Stephen Crane, Charles Chesnutt, Gertrude Stein, Ezra Pound, Zora Neale Hurston, and Langston Hughes.

AS.450.761. Documenting Baltimore Through the Photographic Image. 3 Credits.

In this course, students will explore and photograph six of Baltimore's historic areas: Waverly and Greenmount Avenue, The East Side: Milton at Preston, Druid Hill Park, Old Chinatown and Howard Street, The Northern Arts Districts, Stony Run. In the process they will gain proficiency using digital cameras and learn the fundamentals of image processing in Lightroom and Photoshop. There will be a photography field trip and lab each week as well as lectures that concentrate on the documentary image, its history, theory and practice. As the culmination of the course, students will submit a final paper and portfolio of ten images that work together in a series.

AS.450.762. America's Cultural Diversity: the history of race and ethnicity in the United States. 3 Credits.

This course examines the historical, cultural, and structural dimensions of race and ethnicity in the United States. We will examine key theories about the ways race and ethnicity are constructed and influence intergroup dynamics; engage in debates regarding definitions of race and ethnicity and forms of prejudice and discrimination; and review and analyze empirical evidence related to racial and ethnic disparities in economic status, educational attainment, health, employment, and the criminal justice system. The course will examine the racial and ethnic experiences of a range of individuals and communities, including intersections with gender and immigration status. We will begin by reviewing a series of key readings in racial and ethnic studies that establish central concepts, theories, and historical contexts. Using a variety of sources, this course will examine the racial diversity of America and the enduring implications of racial and ethnic pluralism. Throughout the course, students will work to expand their critical thinking and reflection skills, make meaningful connections between ideas and everyday experiences, and better understand how the personal experience of race and ethnicity interacts with larger social and historical forces. We will also discuss the ways people work to mitigate and overcome racial and ethnic disparities. (Available online)

AS.450.766. Deconstructing Capitalism. 3 Credits.

After the fall of the Communist regimes 25 years ago, it was assumed in the West, and throughout much of the world, that the Capitalist economic system is the best possible economic system, indeed, the best by nature, and our destiny as a species. This was of course not always the preponderant view. For most of its history, Capitalism was not supreme, and its supremacy was not self-evident, but rather, it knew significant competition. In recent years, important criticisms of Capitalism have emerged. It seems the Capitalist system may not be so 'inevitable' after all—there are many unhappy with the way it has been rolled out globally, and how it has progressed (or regressed) in the US and Europe. Some critics argue that we just have not been capitalist enough; the key to more widespread prosperity is to embrace capitalism more fully, and a purer version thereof. Some argue that the economic system is not engineered correctly, at the moment, to share its fruits. As a result, we are mired in ever worse inequality, which may prove to pose major political problems in the near future. And then some critics still argue—in light of the environmental damages due to market expansion, for example—that capitalism is incompatible with our furtherance as a species. In this course, we will visit a number of authors and theorists making such cases.

AS.450.767. American Civil War and Reconstruction. 3 Credits.

The American Civil War and Reconstruction will include an analysis of the origins, interpretations and causes of the conflict, a study of the institution of slavery and its legacy, a review of the ante-bellum culture of the Old South, a comparison of the political leadership in the Confederacy and the Union, a study of the war years, a comparison of military leaders and their strategies, an examination of the outcomes of the war, an introduction to the rise of the new south and a review of the legacy of Reconstruction.

AS.450.771. Black Queer History. 3 Credits.

This course explores the history of black queer cultures in America. In continuous dialogues with mainstream black and LGBT cultures, black queer discourses have unceasingly redefined the boundaries of sexuality, class, color and gender through history. Starting from slavery, this course will explore black queer struggles, desires, imaginations and victories to understand present-day discourses on race and sexuality. Topics explored include: cross-gender behaviors in slavery, same-sex sexualities in slave narratives, homoerotic sadism and lynching, sexological categories and scientific racism, intimate friendships, Drag Balls, The Harlem Renaissance, rent parties, black-and-tan clubs, Jazz, black queer religious leaders, black queer DC, black nationalists and sexuality, Disco, House music, HIV/AIDS, trans identities and TV black queer characters.

AS.450.772. MLA Core: Ways of Knowing: Historical and Epistemological Foundations of the Liberal Arts. 3 Credits.

This course addresses the philosophical foundations, historical traditions, and contemporary debates associated with liberal arts education. It will explore the underlying theories and principles of liberal education and it will assist students in understanding the different epistemological principles and assumptions that are present within the disciplines that are associated with the liberal arts. Students will compare the interpretations of knowledge, truth, and validity that exist across quantitative, qualitative, and conceptual ways of knowing and conducting research. By the end of the course, students should have developed a greater understanding of the significance of their MLA degree as well as greater clarity concerning the epistemological foundations of their studies.
AS.450.774. Existentialism: Philosophy and Social Critique. 3 Credits.

Alienation, ambiguity, anxiety, absurdity, authenticity, belief, despair, dread, death, freedom, joy, and responsibility—all of these are concerns associated with existentialism and its pursuit of what it means to exist, to be a self, to be a being. This course is structured around a series of critical engagements with some of the most prominent and profound thinkers who contributed to the formation, development, and extension of existentialism; together we will trace trajectories of existentialist thought from early articulations in the 19th century (Kierkegaard, Nietzsche, Dostoevsky), through prominent European pronouncements in the wake of the First and Second World Wars (Jaspers, Sartre, De Beauvoir), to the works of Afro-diasporic writers (Fanon, Wright, Baldwin) who explore the complex relation between being and being black. Through these engagements we will approach existentialism not just as a series of abstract claims, questions, and concerns, but also as a critical method for interrogating issues related to the embodied, interpersonal, and historical dimensions of human life. What critical resources can we find in existentialism for illuminating questions of identity and difference and for making sense of contemporary struggles regarding race, gender, class, and sexuality?

AS.450.777. Tonality in the Symphonies of Gustav Mahler. 3 Credits.

Early in the 20th century, composers of the “Second Viennese School” led by Arnold Schoenberg, Alban Berg, and Anton Webern, believed that tonality and Romanticism in western music had gone far enough, and their answer was “atonality,” music written to avoid any formal relation to a central key. In this course, students will learn why atonality largely failed, and why the symphonies of Mahler, “rediscovered” some 50 years after his death in 1911, aided and abetted that failure. Through in-class demonstration and listening, students will discover what tonality means and why it is likely an unavoidable force of nature, and that we, as human beings, naturally seek harmonic structure. The class will study each symphony in numerical order, and the course will end with a field trip to New York City in May 2018 to hear a performance of Mahler’s 10th symphony by the London Symphony Orchestra, Sir Simon Rattle conducting.

AS.450.781. The Global Cold War. 3 Credits.

The Cold War was anything but for much of the so-called Third World. Although the United States and Soviet Union did not come to blows, millions of lives were lost throughout Latin America, Africa, and Asia as the superpower struggle fueled local and transnational conflicts over decolonization and modernization. This course will examine the Cold War’s effects across the globe and, conversely, the ways in which conflicts and actors in the global South shaped the outcome of the US-Soviet standoff and shaped the contemporary geopolitical landscape. Sources will include works of scholarship such as Conflicting Missions, Hanoi’s War, and The Last Colonial Massacre; primary works like Discourse on Colonialism and essays from Jawharal Nehru, Fidel Castro, and Ché Guevara; and films such as The Battle of Chile and The Act of Killing.

AS.450.789. Reading the Sea: Narratives of Oceans, Rivers, and Other Waters. 3 Credits.

Our planet’s waters have long inspired and engaged writers, with a fascination that stretches from rivers and bays to lakes and the deepest oceans. This fiction/nonfiction reading course, to be first offered in 2016 in Annapolis, Maryland, and around the Chesapeake Bay, features essays, short stories, novels, or factual books that, as Norman Mclean wrote, are haunted by waters. Students read, discuss and learn as they also enjoy writing exercises, field trips, and other activities focused on the Chesapeake and its surrounding lands. This intensive one-week course, which requires advance reading of most material, provides a full elective credit for degree students.

AS.450.790. Six Degrees of Miles Davis. 3 Credits.

Miles Davis is one of the most important and influential figures in modern music. His innovations as a bandleader, composer, and musician have made an enormous impact on our concept of jazz music as well as our perception of a jazz musician. Following his personal life leads to Picasso, Norman Mailer, Jimi Hendrix, Prince, Cecily Tyson, and many more. This course will examine his contributions to jazz in particular and his impact on society in general through his autobiography, biographies, and documentaries with special emphasis on his recorded works. We will also use the popular ‘six degrees of separation’ theory as a starting point in discussing the nature of innovation. (Available online)

AS.450.791. A Cultural History of New York City II: World’s Fair to World Trade Center. 3 Credits.

This interdisciplinary course begins with a look at what architect Rem Koolhaas has called “Delirious New York”: the competitive mania of the skyscraper wars, and the rambunctious and over-the-top worlds of Coney Island, Times Square, and Broadway theater in the early 20th century. We then turn to the decisive turning point of the 1930s when, in the face of the Great Depression, New York City witnessed some of its greatest building projects: the Empire State Building, Rockefeller Center, and the monumental projects overseen by NYC’s controversial “master builder”, Robert Moses. The New York World’s Fair of 1939 serves as a fitting symbol for what the Fair itself proclaimed as “The World of Tomorrow”, the world of middle class consumerism, the automobile, the highway and the suburb. A major focus of our study is the unfolding and increasingly controversial career of Robert Moses in attempting to implement this ‘World of Tomorrow’, and the gathering forces of opposition galvanized by the book The Death and Life of Great American Cities written by the Greenwich Village activist Jane Jacobs.

AS.450.792. Inventing the Tudors: Renaissance Art, Power, and Material Culture. 3 Credits.

This course will explore the simultaneous processes of invention, imitation, and appropriation that defined England’s rise in the 16th and early 17th centuries, from the advent of the Tudor dynasty to the age of William Shakespeare, as a culture of the “Renaissance.” This will be conducted through an exploration of works of art in Baltimore and beyond, rare books and manuscripts in the Hopkins Collections, as well as through other forms of material cultural evidence of the period: architecture (from palaces to prisons), music (sacred and secular), fashion (male and female), and so forth.
AS.450.797. Happiness, Virtue--and Vice: Philosophy in Ancient Rome. 3 Credits.
In this course, we will study philosophers of the Roman Empire, who were profoundly influenced by their ancient Greek forbears, and reacting to the imperialism, political and cultural crises--surrounding them in Rome. We will work towards texts of the very late Roman Empire, which already usher in the dawn of Christianity, and its particular adoption and adaptation of Greek and Roman thought. The authors we will read include Seneca, Epictetus, Lucretius, Cicero, Marcus Aurelius, Augustine and Boethius. Through these eminent thinkers, we will consider, debate, discuss major philosophical questions from Antiquity, and from all time: what is the good life? What constitutes human happiness? Is happiness even possible? Is there a God, and what might his/her intentions or plan be?

AS.450.801. MLA Independent Study. 3 Credits.

AS.450.830. MLA Capstone: Graduate Project. 3 Credits.
The Graduate Project allows students to conclude the MLA degree by completing a project of their own design on a topic of their choosing. Students complete this project under the guidance of a faculty member. The graduate project is interdisciplinary in scope and reflects an emphasis or interest that a student has discovered through the MLA program. The project provides the opportunity for the student to apply the concepts and knowledge gained through the program to an independent project of his/her design. The project should be thirty to fifty pages and can include a range of multimedia materials. The final project is generally in the form of a research paper, though it may be in a creative format as well (such as a play or visual arts project).

AS.450.850. MLA Capstone: Internship. 3 Credits.
A third option in the MLA Capstone is the Internship; students who choose this option take one IC course, 8 electives, and register for a particular internship, which will culminate in a detailed research report, as the their tenth course. Please contact the program director for more information on internship options.

AS.450.888. Continuation of Enrollment.
AS.455.610. Foundations of Immersive Storytelling: Theory & Practice. 3 Credits.
This introductory course will provide students with the tools and the mind set for making compelling VR/AR experiences. While the industry is nascent, the technological and storytelling innovations move forward at breakneck speed. Students will also, each class, dissect to understand the approaches to the current catalog of immersive experiences, ranging from 360 film, to animation and room scale installation experiences, often with creators who made them to understand challenges and lessons learned. Subsequently, after this overview, students will have the option to build their own prototypes and, also, to support a VR/AR project housed within the program with a leading artist.

AS.455.611. Screenwriting Workshop 1-The Step Outline. 3 Credits.
The focus of the class will be the structure of the feature screenplay as a function of thematic coherence. We will analyze films by act, sequence, and scene to understand dramatic action as a tension between different possible outcomes. There will be five weekend intensive workshop sessions, divided between Friday evening and Saturday that will include some lecture components, some viewing and discussion of films, and, more and more as the semesters develop, reading and discussion of student work. Between the weekend workshops there will be weekly writing assignments and individual internet or telephone conferences. By the end of the first semester, each student will be required to have completed an outline for a feature film, organized by act, sequence, and scene, and including character, setting, and aesthetic details.

AS.455.612. Screenwriting Workshop 2 - The Draft. 3 Credits.
Students will write the first draft of their feature-length script in the first few weeks. Aided by class discussion and targeted screenings of films related to their specific challenges, students will go through two full revisions of their script.

AS.455.613. Immersive Storytelling for Social Impact. 3 Credits.
This course will enable students to study and design projects that affect the way we see the world. Covering the topics of immersion and narration in the new immersive media landscape, it will also discuss questions of flow, art history, and the goal of social impact. Each session will include case studies, and presentation by experts followed by in-class discussions.

AS.455.614. Acting for Screenwriters. 3 Credits.
This course taught by a professional actor and director introduces students to the craft of screen acting, using the student's own scenes and screenplays as text. The first part of the course focuses on the basics of screen acting, using scenes from produced films and episodic series. Students will learn how to analyze a scene, find the truth of the moment and prepare for a scene as actors, as they act the scenes themselves. Essential actions, super objectives, dramatic beats and physical actions are some of the subjects covered. The second part of the course finds the students analyzing, preparing for and acting in scenes from their own screenplays. As the group acts, films and discusses each scene, students will revise the scenes and screenplays, informed by the insights gleaned from the dynamic.

AS.455.615. Episodic Writing Workshop 1 – The Pilot. 3 Credits.
This course will expose students to the mechanics and realities of writing an original pilot for a television series, from concept through beat sheet to draft. Each student will finish the semester with a mini-series bible, a detailed outline and the first half of the draft of the pilot. Dramatic goals, character arcs, operational themes will be a few of the many subjects covered.

AS.455.616. Episodic Writing Workshop 2 – Comedy. 3 Credits.
This workshop teaches you how to write a television script for your favorite half-hour comedy. In this class students will learn the basics of script writing, from premise lines and beat sheet, to writing pages, punching up dialogue and polishing the draft. The focus here will be on a writing a 'spec' script for a current television half-hour comedy, critiquing and workshoping the script as one would in a professional writers’ room. Though in this class we will not be developing and writing pilots, we will discuss the process and students will learn the basics of pitching an idea to networks. This course is designed to prepare students for the professional world.

AS.455.617. Episodic Writing Workshop III – The Limited Series. 3 Credits.
In this innovative learning experience, students will have an opportunity to engage with Oscar-nominated film and television screenwriter Jeremy Pikser (Bulworth) and veteran executive producer Erica Motley (FX's Taboo) as they develop a “limited series” concept and outline for six one-hour dramas about writer James Baldwin's “exile” from the US in Paris between 1948 and 1964. The students will operate as a research and discussion collective in what would essentially be an apprentice, or intern relationship with the faculty members (similar to law students working on a case or art students working on a large installation with a senior professor). Through their direct involvement with the writer and producer, students will gain invaluable firsthand experience of the creative and practical process of developing a historically-based limited (or “mini”) series for television.

AS.455.618. Episodic Writing Workshop II - The Writers' Room. 3 Credits.
Imagine your one hour dramatic pilot script has just been picked up to series, congratulations. Find out what really happens in the writers room to turn one pilot into many episodes. Learn how to add depth to your original characters, create new ones and develop future storylines. Having already completed or substantially completed a one hour dramatic pilot script is a plus, but not required. Taught by Tammy Ader Green, a writers room veteran and the creator/showrunner of the long-running Sony series “Strong Medicine.”

AS.455.619. Business of Non Fiction Film & TV. 3 Credits.
In an era of record-setting festival acquisitions and a thriving demand for nonfiction content from television, theatrical and streaming platforms, it is evident why our cultural moment has been described as a modern “golden age” of documentary filmmaking. But for an aspiring filmmaker, what is the best way to break through and navigate this terrain from the business perspective? Covering avenues related to storytelling approach (feature-length, series, short form etc.), producing and exhibiting work (pitching, budgeting, fundraising, proposal-writing, festival strategy, distribution, etc.), and the organizations and outlets on the forefront of documentary decision-making, this course aims to situate students in the contemporary market of nonfiction filmmaking. Over the course of the semester, students will develop an idea for a nonfiction film or series into a refined pitch and proposal, applying the strategic knowledge gained from a series of lectures, screenings, case studies, and conversations with established industry professionals and filmmakers.
AS.455.620. Fundamentals of Business 1. 3 Credits.
This comprehensive business seminar is centered on presentations and interactive sessions with experts in the field, the study of relevant case studies and the creation of sample plans and strategies by the students. During the first semester we cover such subjects as entertainment law, film finance, production, marketing, public relations and distribution. Emphasis is placed on analyzing and recreating actual and relevant case studies and business situations. Other subjects include sales estimates, comps, tax credits, festivals, release strategies and the art of the pitch.

AS.455.621. Entertainment Law for Independent Filmmakers. 3 Credits.
Using real-life case studies as basis for discussion, students in this course will explore the legal and business affairs aspect of filmmaking. We will explore option agreements, distribution agreements, tax credit/rebate laws, international co-production agreements and challenges and labor law, among other topics.

AS.455.622. Fundamentals of Business II. 3 Credits.
This comprehensive business seminar will be centered on presentations and interactive sessions with experts in the field, the study of relevant case studies and the creation of sample plans and strategies by the students. During the second semester we will cover such subjects as alternative financing, crowdfunding, branded content, episodic content, straight to series and international co-productions. Emphasis will be placed on analyzing and recreating actual and relevant case studies and business situations. Other subjects will include micro budgets and over the top content.

AS.455.624. Social Impact Documentary Filmmaking. 3 Credits.
In this hands on course, students will learn the basics of documentary filmmaking from development through post production and social impact. Through a series of screenings, discussions and real-time filmmaking exercises, students will engage in a process of exploration and discovery focused on honing each filmmaker's personal voice. There will be a strong focus on telling stories with a clear and provocative point of view. Students will leave the course with a strong bio and personal statement, and having completed 3-5 minute documentary on the subject of their choosing.

AS.455.625. Creative Producing & Line Producing. 3 Credits.
Through in-class projects, interactions with working producers, line producers and AD's and on-going independent productions, students will be exposed to the myriad responsibilities of producers, from the creative and on-the-field perspectives. We will explore the many elements that make up the creation of films and television shows, with a focus on a producer's creative input from development to post production to a producer's understanding of the nuts and bolts fundamentals of how to budget and schedule.

AS.455.626. Mixing Sound for Picture. 3 Credits.
This course is a practical exploration of all aspects of mixing audio for film and TV. The students will prepare to mix during the first half of the semester, topics will include dialog editing, automated dialog replacement (ADR, or "looping"), Foley, music editing and sound effects spotting as well as basic sound design. Recording of ADR and Foley will take place in the studio at the JHU-MICA Film Centre using condenser and dynamic microphones. The class will shift its focus in the second half of the semester to re-recording mixing, exploring both the technical and creative aspects of mixing. Students will learn to mix in the Film Centre's control room using Avid Pro Tools HD software for Apple macOS with proprietary and third-party software plug-ins. Upon completion of the course, students will know how to provide final mix files as well as stems, i.e. mix minus, M&E, dialog, sound effects, and music. Projects will include spotting, prepping, building and mixing a short film or series of scenes. Class will occur during a three-hour weekday evening throughout the semester in the sound studio of The JHU-MICA Film Centre, where students will work as a class to record and edit group projects and, schedule permitting, individual projects.

AS.455.627. Film and Media Internship. 3 Credits.
Summer internship course with an established and pre-approved film and television distribution company in Los Angeles. During the internship, student will analyze and provide coverage of scripts, research potential new projects and acquisitions and track submissions, while growing her professional network.

AS.455.628. Digital Narratives. 3 Credits.
The Digital Narratives course will prepare students to launch a short form series from conception through distribution for the Mobile First Generation. During the past few years, Mobile First consumption has changed fictional formats and the viewing habits of Generation Z are set to revolutionize the industry. As younger audiences move away from the TV set in favor of smart phones, tablets, and computers, we are witnessing the rise of mobile-first content. Their shift to viewing on smart phones is influencing the sort of dramas that get made. These trends are changing content by giving rise to new formats, casting different types of talent and using data to boost ratings (data is driving development and casting) Students will develop a 10 minute x 10 episode digital narrative, produce the pilot episode and pitch the series to a panel of industry veterans.

AS.455.629. Key Business and Legal Considerations for Creators. 3 Credits.
It is an exciting time to be a creator, but with constant and vast changes in the media industry including the ongoing emergence of new technologies and evolution of distribution platforms, threshold business and legal considerations have never been more complicated, or important. This class is structured around a single production project, from conception to exploitation. Students will learn to form a Limited Liability Company, understand and negotiate key agreements, strategically engage cast and crew members, negotiate licensing deals, obtain production insurance, participate in festivals/live events and distribute their project.
AS.455.630. Recording Sound for Film. 3 Credits.
This course serves as an orientation to the recording studio and the craft of capturing sound with microphones. Topics will include sound behavior (i.e., basic acoustics), human perception of sound (i.e., basic psychoacoustics), microphone theory and techniques, signal flow and processing, basic digital audio theory, and the digital audio workstation (Pro Tools and Logic Pro). Projects will include in-studio and location recordings. By the end of the semester students will be able to effectively navigate the studio at the Ten East North facility and capture sound on location for use in subsequent classes. Should be taken prior to or concurrently with AS.445.631 Designing Sound for Film.

AS.455.631. Sound Fundamentals II: The Studio as a Compositional Tool. 3 Credits.
This course explores the use of software and hardware in the music studio as a means by which composers and sound designers create sound for use in soundtracks. Topics will include exploration of software instruments using synthesis and sampling, as well as instrumentation and orchestration of acoustic instruments. The art of Foley will be explored whereby students create sound effects and background ambience using a variety of objects. Projects will incorporate the creation of soundscapes and musical compositions with both software and ‘real’ acoustic instruments. Should be taken concurrently with Recording Sound for Film.

AS.455.632. Sound on Film I. 3 Credits.
This course builds on the training from Recording Sound for Film and Designing Sound for Film by utilizing the knowledge and skills acquired in the operation of the recording studio and use of software and hardware instruments. Students will study finished works and analyze the use of sound by filmmakers in different genres, and apply those techniques to short film projects created by filmmakers also in the MA program. The ProTools digital audio workstation will be the primary tool used during the course but students are welcome and encouraged to integrate their knowledge of other audio systems into their work. Grading will be based on the quality of work, use of the tools and techniques discussed in class and classroom participation. Prerequisites: Recording Sound for Film, Designing Sound for Film.

AS.455.634. Designing Sound for Film and Media. 3 Credits.
Explore the use of software and hardware as a means to create, capture, and edit music and sound for picture. Examine the role of music and sound in media and develop the skills to operate software instruments and Digital Audio Workstations. Gain an appreciation for the craft of composing music for picture - including fundamentals of music, ‘spotting’ a scene, and creating simple music ‘cues’. Additionally, learn about editing and recording sound effects and dialogue to create complete soundtracks that incorporate soundscapes and musical compositions.

AS.455.635. Sales, Acquisitions and Marketing. 3 Credits.
This class will explore the ways films reach an audience. We will examine festival strategy and traditional theatrical distribution as well as changing ancillary and online markets. Case studies of successful marketing campaigns across genres and platforms will be used as evidence. Testimonies by guest lecturers who work in the field of distribution will supplement the core syllabus.

AS.455.637. Comedy Writing - TV Spec Script. 3 Credits.
This course will expose students to the mechanics and realities of writing a spec script or pilot script for episodic comedy, from concept through beat sheet to draft. We will study, analyze and break down a specific television show then proceed to sketch out a spec episode based on that show. Each student will finish the semester with a detailed outline and the first pages of the draft. Genre, act structure, dramatic dialogue and cold-opens will be a few of the many subjects covered. In this course, students will be working on a half-hour comedy series.

AS.455.638. Technology and the Future of Humanity. 3 Credits.
Humanity at once refers both to all human beings, in their different forms and manifestations, and to standards of humaneness – including love, benevolence, care, and dignity. This course will examine questions of how are we to be in this world (individually and collectively) with technology, how are we now; and how should we be. It will do so by engaging in a wide-ranging survey – delving into questions of ethics (of information, of privacy, of environment) and complexifying what forms of knowledge we ascribe value to (drawing on indigeneity and indigenous forms of knowledge, for example). The course will then examine specific instances of humane applications of new technology in the fields of peacemaking and peacebuilding, psychiatry and intergroup relations, and storytelling by those on the margins (indigenous communities, victims of climate change, conflict and violence, and the socioeconomically disempowered). From that point, using a speculative design and thinking framework, the course will challenge students to reflect on desirable and undesirable futures, and likely futures. With a backcasting approach, the course will ask students to consider what systems, milestones, decisions, activities, policies and strategies need to be in place to effect desirable futures.

AS.455.640. Graduate Filmmaking Studio I. 3 Credits.
This two-semester course is the centerpiece of the graduate experience. The studio meets for four hours weekly and is co-taught with the MICA MFA Program. This hands-on studio is where good, smart and compelling movies are born. Students will work in groups, particularly during their first semester. While writing and editing are often solitary activities, production is not. Great films are collaborations and students will be expected to work in teams. Group discussions and critiques are balanced with individual meetings with faculty and visits with guest filmmakers. Class meetings will often include a screening in conjunction with the Maryland Film Festival. Special emphasis will be placed on ways that filmmakers can build and reach an audience. Students will explore the diverse ways filmmakers are sustaining careers while creating high impact films.

AS.455.641. Graduate Filmmaking Studio II. 3 Credits.
This two-semester course is the centerpiece of the graduate experience. The studio meets for four hours weekly and is co-taught with the MICA MFA Program. This hands-on studio is where good, smart and compelling movies are born. While writing and editing are often solitary activities, production is not. Students will work on their own project, teaming up with fellow students and other filmmakers. Group discussions and critiques are balanced with individual meetings with faculty and visits with guest filmmakers. Class meetings will often include a screening in conjunction with the Maryland Film Festival. Special emphasis will be placed on ways that filmmakers can build and reach an audience. Students will explore the diverse ways filmmakers are sustaining careers while creating high impact films. Pre-Requisite: Graduate Filmmaking Studio I.
AS.455.642. Advanced Cinematography Workshop. 3 Credits.
The Director of Photography has instrumental role in crafting the final look of a film. In the course, the four creative roles of the cinematography department – Camera Operator, Gaffer, Key Grip, and Dolly Grip are examined in-depth. Through a series of screenings, discussions and workshops, the students learn many of the dynamics between these roles. In class, students will mount detailed and intricately lighted shots. Students will work with the Arri Amira, a professional motion picture camera. Camera topics include camera settings & trouble shooting, onset data management, ALEXA color science, working with LogC, look management, and dailies creation. Prerequisites: AS.455.640 (Graduate Studio I) or a demonstrated basic camera proficiency

AS.455.643. The Future of Cinematic Gaming. 3 Credits.
An introductory course that provides students with an overview of the process to create innovative and meaningful cinematic stories in the evolving field of interactive games. From concept to completion, the class will explore the creative architecture, production process and technical considerations necessary for developing for the new wave of interactive entertainment across platforms. Drawing from theoretical and production frameworks in game design, narrative and documentary filmmaking, art, immersive theatre, and motion capture—critical attention will be given to intuitive and engaging design. The hands on portion of the class will culminate with students developing a prototype for their own original interactive cinematic project.

AS.455.644. Podcasting Fundamentals. 3 Credits.
In this introductory course, students will ultimately create their own short podcasts around stories that are meaningful to them and their intended audiences. Students will enact principles of listener-centered design, they’ll work to find stories worth telling, and they’ll learn to tell those stories powerfully. This course will build competency in recording and editing techniques, interviewing skills, creating story structure, and understanding the potential social impact of documentary work. Students will also study current monetization strategies in the booming podcast market and learn how to find, keep, and grow an audience.

AS.455.645. Production for Creative Technology. 3 Credits.
This intermediate course takes you through the workflows of producing compelling narratives with emerging technologies like VR, AR and AI. Students will get an opportunity to work collectively on a project with the deadlines, pressures and challenges that come with delivering a quality product for a world class client. Students will also prototype existing ideas and proposals developed in other ISET courses, or new ideas generated from class, to create something that can be showcased in their portfolio, or be utilized long term as a capstone project. Prerequisite: Students must have taken as least one ISET course though some exceptions will be granted on a case by case basis.

AS.455.646. TV Series Development: Pitching, Process, Pilot. 3 Credits.
Do you have an idea for what you believe would make a great TV show? Find out what really happens in the television development process. Over the course of the semester, you will develop and pitch up to three ideas as well as write a series bible and select script scenes for one. Taught by television writer/creator/showrunner and pitching veteran Tammy Ader Green, this course will teach you what it takes to go from dreaming to streaming.

AS.455.648. Directing Workshop. 3 Credits.
Students develop and workshop short narrative scripts that they write. The course covers working with actors and understanding the filmmaking process from the actor’s point of view. Students visualize their scripts so they are prepared to work with a Producer, Director of Photography and additional crew. The course also explores techniques of blocking and staging action for the camera, with emphasis on the practical problems and aesthetic questions that arise.

AS.455.650. Script to Screen. 3 Credits.
This course de-mystifies the film development process and teaches students the key tools necessary for a successful career as a film executive or producer. This course will chart the key stages of finding and preparing a good project for production. These steps include how to find, evaluate, obtain rights and shape material from the producer’s perspective. The course will examine strategies employed by filmmakers who adapt existing IP and literary works to the screen. Detailed comparisons between cinematic adaptations and the novels, plays, and short stories on which they are based. Case studies of literary works that pose a variety of challenges to filmmakers.

AS.455.651. Film Financing. 3 Credits.
Successful producing involves the bridging of the creative with the commercial. Effective producers need the skills to structure and manage fundraising efforts on behalf of their productions and establish a comfort level in defining and promoting their projects as commercial ventures. At its conclusion, students should have a working command of both the theory and the practice of raising money for film, television and new media productions and the skill-base to embark confidently on their own fundraising efforts. Students will learn of the various mindsets of attorneys, financiers, and other professionals and master the vocabulary of content as investment. Finally, students will understand how to mix-match financing strategies and approaches as is appropriate for each particular project.

AS.455.652. Digital Media: Storytelling & Strategy. 3 Credits.
We live in a world where content is queen and more money is being poured into original content than ever before, but what does this deluge of money and distributors mean for creators? In this course we’ll take a dual-pronged approach to the digital media landscape—looking at business strategy and creative process in tandem to understand how to take a holistic approach to selling content in a shifting marketplace with an ever-increasing number of buyers. How is digital distribution of video changing the traditional media business models? How does a content developer create a scalable business in this environment? This course will feature a practical element in which all students will pitch, develop and produce digital content, molding business strategy with creativity to create saleable IP with potential for multiple distribution partners and revenue streams. The course will feature industry executives and independent creators as guest lecturers.

AS.455.800. Capstone for Film & Media. 3 Credits.
Guided by meetings with the instructor and other guest speakers from the industry, students research, develop and deliver a final project that demonstrates skill in one or both of their concentrations. Ideally, this project will be completed in collaboration with a student or students from the JHU MA or MICA MFA program who are completing their own capstone projects.

AS.455.801. Independent Study. 3 Credits.
AS.455.802. Independent Study. 3 Credits.
AS.455.803. Capstone Continuation for Film and Media (non-credit).
Capstone Continuation is required for those students who have taken the Capstone Course but not yet finished the required and approved work.
AS.460 (MUSEUM STUDIES)

AS.460.601. Exploring Museum Professions. 3 Credits.
Managing a 21st-century museum relies upon the coordinated efforts of a wide range of specially skilled staff from directors, curators, and educators to collection managers, conservators, and exhibition designers to event planners, press officers, fundraisers, and administrators to media, IT, membership, security, and facilities management teams. These professionals working behind-the-scenes or out front with the public define the quality of the institution and each visitor’s experience. Through readings and interviews with leaders in the field, this course examines the core functions of a museum and explores how the roles and responsibilities of museum professionals assure an organization’s daily operation, growth and sustainability. Current issues facing museums, including diversity in the workforce, financial challenges, and the effects of technology will also be addressed. In addition, students will engage in activities to help strategize their own museum career. Note: This course may be taken as an elective, if you have taken 460.602 to meet the requirement.

AS.460.602. Museums in the Digital Age. 3 Credits.
With the emergence of new media and the ever-expanding use of the Internet, the traditional role and scope of the museum is changing. The museum has a new position in global communication, dissemination of information and cultural understanding. The introduction of technology into the museum is challenging traditional exhibition concepts, introducing new interactions with museum audiences, and affecting the museum’s core operations. This course introduces students to the museum field and explores the impact of media and technology on the museum, including an overview of the historical role of the museum in society and an examination of the current uses and effects of digitization, the Internet, and wireless technologies in these institutions, as well as basic concepts underlying the planning of a technology project for a museum. Note: This course may be taken as an elective, if you have taken 460.601 to meet the requirement.

AS.460.604. Introduction to Museum Education. 3 Credits.
This course introduces students to the critical and fundamental educational function of museums, the core responsibilities of museum educators, and the impact of museum education practices in a pluralistic society. We review theories of how people learn, current teaching practices in museums, and the unique roles that objects play in an informal learning environment. We analyze the wide range of audiences for education programs, approaches to developing museum programs and interpretive projects, and strategies for measuring success. We learn how museum educators advocate for and activate diverse perspectives internally and externally in order to make museums more inclusive, empathetic, and user-centered.

AS.460.606. Exhibition Strategies. 3 Credits.
This course introduces the diverse strategies and approaches used in exhibition planning, development and implementation. It asks students to think critically about exhibitions and the interface between objects, concept and experience. The course focuses on visitor-centered interpretive design and is applicable to a wide range of institutions. Students spend much of the semester working together in small teams, collaboratively producing a comprehensive exhibition project as they walk through the practical steps in exhibition development and design. Note: Because of the high level of online group work, this course is not recommended for first semester students.

AS.460.608. The Business of Museums. 3 Credits.
Museums are stewards of cultural patrimony, disseminators of knowledge, and agents of civic and social awareness. They are community icons, places of respite, economic drivers, and centers of informal education and public engagement. In serving these functions, museums must deal within a hyper-competitive entertainment and commercial environment. While they serve the greater good, they must function as businesses. As nonprofits, they cultivate financial and community support from individuals and donors. They also rely on fees, grants, sponsorships, retail operations and other strategies to survive. This course is a journey through the business side of the museum world. Students will explore the range, fundamentals, and subtleties of the museum world including mission, governance, programming, management, finance, fundraising, public relations, legal and ethical issues, technologies, risk management, audience engagement, leadership, and strategic planning, all in the context of current news stories and events.

AS.460.609. Museums in a Global Perspective. 3 Credits.
In this intensive course, students participate in collaborative role play to debate urgent issues confronting museums in the 21st century. Through readings, research, and extensive teamwork, students explore, analyze, develop, and discuss a range of policies and procedures that link museums to international communities and trends. Students examine and experience (through simulation) the significant effects and challenges of a globalizing world on museum mission, preservation of cultural heritage, and exhibition practice. Students gain experience in debating global issues that will have an impact on the future of museums as well as developing and writing effective program proposals. The collaborative aspect of this course requires the flexibility to schedule working sessions every other week with an assigned team. Note: Students must have completed two courses in the program to register for this course.

AS.460.610. Two-Week Onsite Seminar. 3 Credits.
A two-week intensive period of on-ground museum study in a location organized by the MA in Museum Studies program is a required component of the program. The seminar includes practicum opportunities in a variety of museum settings, conversations with local museum professionals, observation of and interaction with museum visitors, and class sessions to integrate the daily experiences. Using the rich diversity of museums, this course provides students with the chance to use what they have learned in their prior courses, develop networks with fellow students and museum experts, and explore the latest in museum practice, including exhibition design and development, public programming, collections management, conservation, and the uses of technology in the museum. Seminars have taken place in locations as diverse as Washington, DC, New York, Philadelphia, Atlanta, Chicago, San Diego, London, Berlin, and Barcelona. Students work in teams on directed activities during the two-week period. Note: Students must have completed a minimum of two courses in the program, although four or more courses are encouraged, to register for this course. One of these courses must be 460.601 or 460.602 and some seminars may have other specific requirements. Students are responsible for travel to and from the location, accommodations, and meals, as well as any specified field trip fees. Waiver option: Students who are unable to travel to a seminar location due to accommodation needs, financial hardship, or family challenges may apply to the program director for an exemption to the two-week seminar. If a waiver is granted, the student must enroll in the internship option (460.750) to fulfill the on-site component of the degree requirement.
AS.460.611. History & Philosophy of Museums. 3 Credits.
From cabinets of curiosities to historical monuments and sites of memory, this course surveys museum history from a global perspective to examine how the museum's function has changed over time. Students create a comprehensive timeline of museum history and philosophy—thinking through and visualizing the way certain concepts and events are related in time and across space. Through case studies and course readings in museum history, theory and methods, students will contextualize the philosophical trends that have impacted organizational structures, outreach, collection strategies, and the museum's role and relationship to its public.

AS.460.615. Museums and Community Engagement. 3 Credits.
This course explores how museums and cultural organizations of all sizes can strengthen their relationships with the communities they serve. No longer are museums measured and judged solely by their internal resources—collections, endowments, facilities, and staff—but rather by the external benefits and value they create for individuals and communities. Growing numbers of museums are learning to make their organizations more meaningful and relevant by involving their communities in ongoing planning and decision-making. They are reframing museum activities to focus on what matters to their communities. By getting involved in community challenges and developing new partnerships, they are identifying underserved audiences and creating memorable visitor experiences. As museums begin this journey towards community engagement, they are initiating and facilitating social change and moving towards social entrepreneurship. This course includes the theory and skills of community engagement, drawing on both research and practice for examples.

AS.460.616. Museums, Law, and Policy. 3 Credits.
Legal issues and concepts are a fundamental part of the day-to-day management of museums and the policies that shape the nature of museums. This course introduces students to the ways in which museums are affected by the law and key legal concepts. Discussions and assignments will address practical concerns as well as policy and conceptual matters, incorporated cases, mock negotiations, and group discussions. Students will be able to identify issues from hypotheticals and relevant legal concerns and resources. The course will help students understand legal matters in museum practice in an applied manner. Legal and policy discussions will include current issues in copyright, freedom of speech and censorship matters, and collections issues including cultural heritage developments.

AS.460.618. Museum Controversies: Ethical Issues in Museums. 3 Credits.
Museum directors, curators, and other staffers have faced an array of political and ethical dilemmas in an increasingly contentious environment. This course explores the historical, political, and cultural backgrounds to controversies surrounding exhibitions such as the Smithsonian's display of the Enola Gay, the Brooklyn Museum of Art's "Sensation," the British Museum's Elgin Marbles, and the showing of illegally acquired antiquities at various art museums. Nationalism, religious beliefs, obscenity, and "edutainment" are among the issues discussed.

AS.460.619. Museums, Race, and Inclusion. 3 Credits.
For over two decades, museums have been grappling with how to increase participation and engagement with community members who are historically under-engaged. By and large, the 2012 Center for the Future of Museum's Report informs us that of the core group of museum visitors, less than 10% represent visitors of color. This course will examine the historical arch of diversity and inclusion initiatives in the field including recent activism as engineered by museum activists and change-makers of the Inclusive Museum Movement. We will explore and define discourses of participation within museum scholarship. This course will use interdisciplinary pedagogies such as Critical Race Theory and Social Inclusion Theory as informative frameworks to help us interrogate our current museum praxis, the museum space, and how invisible social structures such as institutional racism, privilege, and oppression impact our understanding of terms such as diversity, inclusion, equity, and access. In this course, we will explore why race matters in museums and seek to create and identify new discourses on diversity and inclusion for a more vibrant, 21st century museum social ecosystem.

AS.460.620. Accessibility in the Museum. 3 Credits.
Making museums and their information and collections accessible to people with disabilities concerns more than ramps and restrooms. People with disabilities can encounter barriers to every aspect of the museum experience, from finding out about exhibitions and educational offerings before a visit through advertising or the museum's website; to getting to, into and around the museum galleries and other public spaces; to hearing tours and lectures, reading labels and signs, and using interactive tools; to participating in educational programs. This course will introduce students to the key concepts and issues associated with making museums accessible to and inclusive of people with disabilities.

AS.460.621. Museum Evaluation and Audience Research. 3 Credits.
This course explores audience research and evaluation theory, methodologies, and practical implementation in museums and similar environments. The class explores the three major stages of research and evaluation - front end, formative and summative - and what can be achieved at each stage, with a focus on exhibition and program evaluation. Each semester a museum client presents a real project; in small groups students develop clear research questions, an evaluation plan, an interview tool and an observation tool, all in conjunction with the client. A final presentation ensures the client's evaluation needs are met and workable tools have been created. Students also spend time developing individual projects for their own museums, or museums in their communities. Emphasis is given on evaluating the holistic visitor experience, examining what is working and what is not - educationally, physically, and socially. This course is useful to all museum professionals, in any role within a museum, whether you plan to conduct, oversee, or in any way participate in audience research and evaluation.

AS.460.622. Evaluation Projects and Practice. 3 Credits.
Building on the successful introductory evaluation course, this more advanced course will allow students who have completed the initial course to develop and complete a full evaluation project. It will emphasize hands-on application, including tool development, data collection, data management, and data analysis. Students will begin with a project in their community, they will develop evaluation questions and an overall evaluation plan, collect a rigorous sample size, and then analyze and present their findings in both written and oral final presentations. Prerequisite: Evaluation Theory & Techniques for Museums (460.621)
AS.460.628. Architecture of Museums. 3 Credits.
This course serves as an introduction to museum architecture, including the history of museum buildings, as well as current case studies of renovations, expansions and new facilities. We will discuss the relevant topics in creating a physical museum space, such as developing a museum program, planning the visitor experience, developing wayfinding systems, building a green museum, and incorporating technology in the initial plan. We will analyze museum buildings from multiple perspectives, including visitors, staff and collections. Students will learn how to evaluate an existing museum building and will be guided through a mini-POE (post-occupancy evaluation) of a museum in their community.

AS.460.630. Exhibition Design, Construction, and Documentation. 3 Credits.
Understanding the exhibition design process, from concept to implementation, is valuable not just for exhibition developers, but also for registrars, curators and museum educators. Looking beyond artifacts, storyline and aesthetics, this course examines the rarely explored, but essential, aspects of exhibition design, from drawings and specifications to contracting and installation. Topics will include drawing packages and project documentation, schedules, client and developer responsibilities, project budget, architectural coordination, fabrication techniques, and legal and practical contracting considerations. As with general construction, the exhibition designers and fabricators follow industry standards, and whether a museum is a public or private organization, specific rules must be followed for solicitation and contracting. Prerequisite: Exhibition Strategies 460.606
Prerequisite(s): 460.606 is a pre-requisite for 460.630

AS.460.632. Practice of Public History. 3 Credits.
The overarching theme of the course is to introduce students—both traditional and professional—to public history as it is, and might be, practiced. From historic houses to battlefields, institutes, and preservation advocacy, the course is intended to blend theory and experience by providing an informed and engaging overview of the many practical aspects of, trends in, and professional opportunities offered by public history, as well as introduce them to the challenges that currently face the field. By the end of the course, students will know the many different ways in which public history is practiced today within and without the museum, and be able to broadly evaluate public history sites, from programming and interpretation to marketing and fundraising.

Conservation-Restoration has existed for hundreds of years, and conservators have been active in museums and the heritage industry since their inception. This course will explore the history of conservation-restoration, how it has changed over time, where it is today and where it might be going tomorrow. Students will become fluent in conservation-restoration research methods and publishing sources, able to identify good sources for information, and to understand the ethical issues in the field. The Getty Art and Archaeological Technical Abstracts (AATA) Online have partnered with this course to provide material for students to review, abstract, and publish on their online bibliographical database. The final project will be the culmination of a semester’s worth of research and writing about a conservation-restoration or collections topic and presented as an encyclopedic article in Wikipedia.org. On completion of this course students will be able to call themselves a Wikipedian and a Getty AATA abstractor and they will have a working knowledge of the field of conservation-restoration as it applies to museums and the heritage industry. Prerequisite: Collection Management 460.666.
Prerequisite(s): 460.666 is a pre-requisite for 460.633

AS.460.634. Museums, Libraries, and Archives: Issues of Convergence for Collecting Institutions. 3 Credits.
“Convergence” has been a buzzword for archives, museums, and libraries for most of the past decade. This course will look at areas of convergence among the three communities, focusing on issues that relate specifically to collecting institutions. Class work will involve the history of collecting and the development of the three communities (archives, libraries and museums) in the United States in the late 19th century/early 20th century, before delving more deeply into ideas and ideals, missions, professional training, conservation, ethics, and services that are shared among these communities. In the final weeks we will focus on how technology can help shape ongoing dialogues.

AS.460.635. Curatorship: Principles and Practices. 3 Credits.
What does it mean to curate? The idea and meaning of curation has evolved and developed in recent years. Traditional notions of curatorial authority have come under question as the concept of curating has expanded. In this course, students will study principles and practices relating to core curatorial functions, learn about the traditional role of curators in different museums, and consider how and why those roles are changing. Students will consider ethical and other challenges facing museums and will investigate the role that technology is playing in changing curatorial functions. Students will visit museums to critique specific curatorial practices, write and present an acquisition proposal, and work collaboratively in a group to create and present an exhibition proposal.

AS.460.636. Living Collections. 3 Credits.
Zoos, aquaria, botanical gardens, and nature preserves, like many other museums, are collection-based institutions. This course explores the unique character of these institutions in their core functional areas including the special considerations and challenges of caring for, interpreting, and exhibiting living collections. Developed by three museum professionals with specialties in terrestrial, aquatic, and botanic institutions-course topics are explored through the lenses unique to plants, animals, and marine life. In addition to understanding the core functional areas of these museums students will analyze the complex social role of cultural institutions which are devoted to the living world.

AS.460.637. Curating Online Exhibitions and Experiences. 3 Credits.
Today, every museum must have an effective online presence. Increasingly, museum professionals from multiple disciplines—curatorial, collections management, new media, publications, external affairs, etc.—need to collaborate to create online exhibitions and experiences. It is essential that museum professionals have a solid grounding in the theory of online curation, as well as the practical skills to plan, design, and implement online exhibitions and experiences that capture the imagination of online museum visitors. Students will discuss questions such as: What are the unique challenges of curating online? How are the aesthetics of online spaces similar and/or different from traditional bricks and mortar museum galleries and exhibit spaces? What strategies and methodologies can the curator and other museum professionals apply to successfully educate, inform, and engage online exhibition visitors? What are the trends in curating online museum exhibitions, and where does the future lie in this exciting new area of the museum field? Course readings, assignments and discussions will culminate in a research paper on current trends in online curation in museums.
AS.460.638. Preservation of Analog and Digital Photographs.  3 Credits.
This course will explore the main principles in caring for analog and
digital photographic collections. It has been designed as a broad
approach to the subject, but with enough depth to give the student an
approach to the care for photographic collections with both historical
and natively born digital photographs. This course will provide this
insight from looking at the materials that photographs are composed
of, understanding the materials and environment that they are housed
in, and the technologies and workflows needed to care for analog and
natively born digital photographs for long-term preservation. Students
will be required to build and present a case study and a final project
discussing a topic related to the course.

AS.460.639. Material Culture and the Modern Museum.  3 Credits.
From the Mona Lisa to Archie Bunker’s easy chair, museums play a
critical role in the collection, preservation, and interpretation of objects.
This course looks closely at the development of material culture studies
and its connection to museums in the 21st century. Students will explore
collecting as meaningful action, the classification of objects (from
academic categorizations to tags and folksonomies) and their access
(from collections to archives, to physical and virtual display). Student-
developed object biographies will be used throughout the semester to
explore the life history of objects, their changing meanings, and their
relationship to self, society, and the museum. Note: Students are strongly
ecouraged to have completed two courses in the program before
registering for this course.

AS.460.640. Educational Programming for Museum Audiences.  3
Credits.
Educational programming for today’s museums requires more skills
than ever before, from defining mission-driven educational goals to
conducting summative evaluation, from understanding learning theory
and characteristics of a myriad of museum audiences, to designing and
implementing technology solutions. Students in this course will learn the
steps needed to design sound educational programming in museums,
including developmentally appropriate learning theory and strategies
for audiences such as children, families, adults, teachers, and students.
Prerequisite: Introduction to Museum Education (460.604)

AS.460.641. Digital Media in the Museum.  3 Credits.
Digital media is a crucial part of a museum’s visitor engagement strategy
and it plays an integral role in such areas as informational programming,
marketing, wayfinding, and interpretation. Students in this course will
examine the impact of a wide range of technologies including mobile
guides, multi-touch tables, augmented reality games, and immersive
theater environments, on both museum professionals and visitors.
Through readings, interviews with multimedia professionals, hands-on
experience, and papers, students will learn the practical applications
digital technology while developing the critical skills necessary to
evaluate both the use of technology and the best way to integrate it
into the museum environment. This course provides students with the
basic skills to plan, manage, and assess the production of successful
in-museum digital media projects. Students will have the opportunity
to produce their own project plan for a real or imagined production.
Prerequisite: Museums in the Digital Age (460.602)

AS.460.645. Museums and Mobile: Adapting to Change.  3 Credits.
We live in a mobile-first world. The mobile revolution has profoundly
altered our behaviors, transforming our very expectations of how we
interact with the world around us: we now expect to get what we want
on any device, at anytime, anywhere, at the touch of a finger. And we
expect the same when interacting with cultural institutions. The future
of museum technology lies heavily in the use of mobile platforms, but
how should museums adapt to the future? Through presentations,
interviews, guest speakers, hands-on experience, group discussions
and collaborative assignments, this course will explore the many
questions and issues facing cultural institutions as they try to adapt
to this mobile mind shift, and how museums can leverage mobile as
a platform for social conversation, deeper brand engagement, and of
course opportunities for education. Students will learn how to leverage
mobile to engage visitors, balance the need for curatorial direction with
user participation, and how to redefine the museum experience for mobile
visitors, both onsite and offsite. Prerequisite: Museums in the Digital Age
(460.602)
Prerequisite(s): You must take AS.460.602 prior to enrolling in
AS.460.645

AS.460.652. The Practice of Museum Publishing.  3 Credits.
As content originators, museum curators, educators, conservation, public
relations officers, development staff, and others will hold a stake in the
publications process at some point in their careers. This course presents
an overview of the range of print and electronic publications typical—and
not so typical—of museums and the processes required to make them
happen. Students will gain an understanding of schedules and budgets,
the editorial process, design concepts, copyright issues and printing, as
well as how new technologies have affected both the way museums think
about publications and how they get produced.

AS.460.655. Expanding Roles of Museum Marketing and
Communications.  3 Credits.
Major changes in technology have dramatically shifted how people
consume information. It is critical for museum professionals to
understand this and to adapt their marketing and communications
strategies in order to compete for attention in an increasingly busy and
competitive world. Looking through the lens of audience development,
the course explores how museum marketing and communications
professionals are empowered to target and engage audiences and
the strategies they employ to do this work. From understanding the
basics of the marketing mix and the science of public relations to
surveying advances in digital advertising and exploring case studies
highlighting innovative practices within and beyond the field, this course
is a comprehensive primer for museum marketing and communications
today.

AS.460.657. Fundamentals of Museum Fundraising.  3 Credits.
Through a combination of current and historical readings, case studies,
discussions, and written assignments based on “real-life” scenarios, this
course will cover general fundraising strategies and ethics, ePhilanthropy,
prospect research, grant writing, annual and capital campaigns, corporate
giving and cause marketing, special events and stewardship.
AS.460.662. Developing Museum Web Projects. 3 Credits.
How can museums best use the web to further their missions? What are the best practices for planning and sustaining high-quality online projects? In this course, students will survey the application of online technologies for various purposes, including collections, education, exhibition, fundraising, collaboration, and marketing projects. The bulk of the coursework will focus on researching and creating the components of a Web project plan (for a project of the student’s own choice and design). Students will gain hands-on experience with audience research and usability testing, articulating technology solutions to match desired goals, developing information architecture, building a basic online prototype, crafting a marketing and evaluation plan, and pitching a project idea for funding. A range of online technologies will be considered including websites, blogs, email newsletters, mobile applications, and social media.

AS.460.663. Social Media Strategies for Museums. 3 Credits.
From #AskACurator to Snapchat selfies, social media has permeated the work of museum staff and the people who visit them. In this course, we will explore social media trends and their relevance for museums, including marketing, fundraising, education, and curatorial functions. Students will explore case studies, talk with leading museum social media practitioners, and develop social media strategies to meet specific museum objectives.

AS.460.665. Introduction to Archives. 3 Credits.
This course provides an introduction to the theory and practice of archives, including an overview relating to the elements of an archival program and the role and work of archivists. Special attention will be paid to the work of archivists in a museum context. The theoretical component of the course will be supplemented with a variety of hands-on exercises, case studies, and informed anecdotes designed to illustrate the relationship between theory and practice. Although American archival tradition will be the focus, international perspectives on archival theory and practice will play an important role in the course of study. Topics include: acquisition; appraisal; arrangement and description; preservation; reference; outreach; archival access systems; legal and ethical issues; and born-digital curation, including digital preservation.

AS.460.666. Collection Management. 3 Credits.
Museums exist to preserve and share their collections with the world. Collection managers, or registrars, are essential to any collecting institution, whether collections are art, history, science, or live specimens. This course focuses on management principles that can be applied broadly to any type of collection. The course covers all aspects of collections care from the acquisition of objects, evaluation, care and storage, through loans and exhibitions. Safe collections care and handling, using the most current methods, are emphasized so objects may be preserved for future generations. Any student who intends to work at a collecting institution will benefit from mastering the practical knowledge and skills underpinning many phases of museum work, which will be taught in this class.

AS.460.667. Collection Management Systems. 3 Credits.
Collections Management Systems, the workhorses of museum information technology, provide staff members and the public alike with access to collections information for a myriad of purposes. In this course, we will look at how these systems have evolved from their traditional role as registration tools to rich repositories of collection information, with the potential to interface with other types of systems, both inside and beyond the museum walls. This course introduces widely used museum Collections Management Systems in a series of developer-led presentations, providing students with the opportunity to evaluate how collections management transactions are performed using various software. Students will learn the basic features of Collections Information Policies and how to apply museum standards to analyze these policies. Data migration planning—from paper to electronic, and electronic to electronic—will be discussed, as well as emerging technologies used in conjunction with traditional Collections Management Systems. This is a must-have course for students with the goal of becoming a registrar, collections manager, or digital curator. Note: Students are strongly encouraged to take Collection Management (460.666) before enrolling in this course.

AS.460.668. Cataloging Museum Collections: History, Standards, and Applications. 3 Credits.
Cultural heritage institutions—including museums, libraries, and archives—have as core responsibilities the safeguarding of the objects in their care and the education of the public about these objects. To support both of these responsibilities, one of the foundational activities of cultural heritage professionals is the cataloging of the objects in their collections. This course will provide both an overview and practicum of cataloging definitions, philosophies, standards, and practices. Recordkeeping methods, numbering systems and data formats will be emphasized, and professionally accepted standards for cataloging various cultural objects will be reviewed. Discussion of the broad application of cataloging data sets, including cross collection aggregation and search, delivery to the public, and Web 2.0 and 3.0 delivery methods will be covered. Note: Students are strongly encouraged to take Collection Management (460.666) before enrolling in this course.

AS.460.669. 2D Digitization of Collections. 3 Credits.
This course will explore the main principles and best practices for planning and implementing two-dimensional digitization projects. The course is designed as a broad approach to this complex subject to give students the capacity to understand the important concepts, from theory to practice, of what is involved in a 2D, primarily textual and image resources, digitization project. This course will prepare students to have the main skills and critical outlook to be able to participate in digitization projects that entail different approaches and budgets.

AS.460.670. Digital Preservation. 3 Credits.
This course introduces students to the current state of digital preservation, preservation challenges, and basic concepts for designing effective digital preservation plans and programs. Topics include the relevance of digital preservation for museums; archival principles that inform preservation practices; standards and policies; considerations in preservation strategies; issues relating to formats, repositories, and processes; and emerging preservation solutions and services. Note: Students who are not enrolled in the Digital Curation Certificate program are encouraged to take 460.666 Collection Management before enrolling in this course.
AS.460.671. Foundations of Digital Curation. 3 Credits.
This course lays a foundation for managing digital information throughout its life cycle by introducing students to the emerging field of digital curation and by examining the practical issues and tools involved in managing digital collections and repositories over time. Topics include metadata schemas for describing digital assets in different disciplines; sharing digital content beyond the institution to reach wider audiences; requirements for trustworthy repository services; management of research data; policy issues; and user services. Note: Students who are not enrolled in the Digital Curation Certificate program are encouraged to take 460.666 Collection Management before enrolling in this course.

AS.460.672. Managing Digital Information in Museums and Archives. 3 Credits.
This course addresses technical and practical issues involved in the long-term management and preservation of digital assets, with an emphasis on the unique problems facing museums and archives tasked with preserving digital material of historical or aesthetic value. Subjects will include the fundamental models of digital curation and preservation, practical planning and design of digital curation strategy and associated workflows, a survey of the technologies commonly involved at the institutional level (software, metadata schemas), and a review of best practices for format identification, migration, and potential emulation of digital assets. Practical exercises are included that involve the use of Open Source, and free applications, such as the BitCurator digital forensics suite, and applications for packaging digital objects for submission to repositories. These topics will be presented within the context of analyzing the digital asset management practices (in the broadest sense) of individual institutions investigated by students.

AS.460.673. Digital Curation Certificate Internship. 3 Credits.
The internship, including at least 120 hours of field experience, affords students the opportunity to gain hands-on experience working with experts who are leading digital curation activities in museums and related cultural heritage organizations in the U.S. and abroad. The internship is a partnership between the university and the host institution, and is customized to meet each student's needs and career goals. The program will assist students in arranging appropriate internships. Student interns will produce evidence of their accomplishments through work products, project reports, or other documentation in an online course component and will participate in online discussion forums with other students enrolled in digital curation internships during the same semester. The internship is usually taken after completing at least two of the following core courses: Digital Preservation (460.670), Foundations of Digital Curation (460.671), or Managing Digital Information in Museums (460.672). Note: Students should discuss internship plans with the Digital Curation Certificate Program Coordinator at least one semester before enrolling in the course.

AS.460.674. Digital Curation Research Paper. 3 Credits.
The supervised research course enables students to investigate a significant problem or issue in digital curation and to develop and demonstrate critical thinking and communication skills. Ideally, the research paper will build on the student's internship experience. The research paper is expected to result in a publishable or presentable paper that makes a contribution to the literature and field of digital curation. As there is currently a significant need for research in digital curation, and relatively little published literature—especially relating to museums—student research in this program can make a major contribution, and graduates will be prepared for careers as leaders in the field. Course work, assignments, and meetings with a faculty member will take place in an online course environment. The research paper is normally completed as the final requirement in the Digital Curation Certificate program.

AS.460.675. Leadership of Museums. 3 Credits.
Every museum career offers opportunities for leadership. Whether you head an internal project, lead a team, department or an entire institution, you draw from the same attributes and skill sets as leaders everywhere. Understanding that skill set and developing individual leadership competence leads to a career hallmarked by intentionality. Prerequisite: Students must have completed ONE of the following courses to register for this course: Business of Museums (460.608); History and Philosophy (460.611); OR Museums and Community Engagement (460.615).

AS.460.682. Museum Procurement and Contracting. 3 Credits.
Through case studies and case law, sample materials from a variety of museum projects and a smattering of underpinning statutes and regulations, students will learn the hows andwhys of museum outsourcing practice. While conducting market research, drafting a scope of work, evaluating creatives and pricing approaches, and confronting ethical constraints, students will derive a practical roadmap for leveraging the marketplace to address museum needs. Students will learn best practices and acquire a deeper understanding of the contractual, legal, technical, and creative issues that museums typically face when working with vendors. Most importantly, students will acquire the tools necessary to help them navigate and set the expectations of their museum clients to assure successful collaboration between internal teams and external contractors.

AS.460.683. Project Management in Museums. 3 Credits.
Project management is the oversight and process of planning, organizing, and coordinating multiple tasks, resources, and stakeholders. In museum settings it often requires a choreographed juggle of scheduling, budget tracking, content and education considerations, facility and operations issues, and human resources; along with an ability to be flexible and calmly tackle unexpected challenges. This course will present both theoretical and practical concepts for initiating, planning, executing, monitoring, and completing projects in a museum. Using real world scenarios and different types of projects, the course will, provide students with tools and strategies necessary for project scheduling, task supervision, and stakeholder management. Project management is a learned skill, useful not only to those who will ultimately oversee a project, but to everyone who may eventually be part of a project team.
AS.460.684. Museums, Finance, and the Economy. 3 Credits.
This course examines how changes in the economy can affect museum income, expenditures, fundraising, endowments and attendance. It explores how various museum practices can mitigate the effects of a weak economy and capitalize on a strong economy. Through case studies of large and small museums, students examine information sources that managers use to identify changes in the local, regional, and national economy, which might affect their institutions. Students gain familiarity with economic and museum financial information by adopting two museums and tracking how changes in their finances and attendance relate to shifts in the economy. This course is critical for all students interested in the “behind-the-scenes” of museum management, including those with little or no background in finance or economics.

AS.460.685. Private Collectors, Collections, and Museums. 3 Credits.
An increasingly significant amount of our cultural and historical heritage is in private collections and outside the protective sphere of public institutions. Numbering in the tens of thousands in just the U.S., private collections span a great variety of objects reflecting the wide range of enthusiasts who collect them. This course will explore private collectors and trends in their collecting plus the similarities and differences between public and private collections and museums. It will help prepare students for the unique challenges they may face, illustrated by real world examples and interviews with collectors, curators, collections managers, and service providers plus hands-on experience. It will include developing problem solving strategies and project management skills they can use to adapt and implement institutional ethics and best practices, especially as private collections evolve into public museums. Prerequisite: Collection Management (460.666)

AS.460.686. Culturally Specific Museums. 3 Credits.
Museums have the potential to provide safe spaces for comprehensive cultural inquiry. Culturally specific museums provide strategic platforms for showcasing diverse sets of art, history and culture with the intention of reaching a broad set of visitors. This course examines the significance of culturally specific museums, both individually and in relation to mainstream museums, to better understand how public culture engages issues of art, history, aesthetics, religion, ethnicity, and politics. Through the combination of contemporary reading material, survey of six national culturally specific museums, synchronous and asynchronous discussion forums and guest speakers, students will discuss some of the ways in which culturally specific museums help make up the fabric of culture represented in museums in the United States of America.

AS.460.687. Provenance Research: Connecting Histories. 3 Credits.
Every object has a story and a history, and the study of objects and their contexts forms the basis for provenance research. This course will expose students to the historical context of collecting around the world and will explore the various roles that provenance research plays in museums today, including within the realms of collections management, acquisitions, visitor engagement, publications, legal issues, and more. We will consider not only what provenance research is, but how it can be used as a valuable method for understanding the biography of an object, including its provenience, acquisition, and movement through time and space through a series of events and transactions. By focusing on specific areas of various fields of study, we will examine the overlapping but often distinct ways that provenance research can be utilized and what it can reveal. Through hands-on activities and representative case studies, students will undertake their own provenance research in order to understand the process and methodologies of a discipline that often encompasses many facets of inquiry and avenues of investigation.

AS.460.690. Science, Society, and the Museum. 3 Credits.
Museums have been shaping the public discourse on science for centuries. They serve as a bridge between science and society, a way for general citizens to connect with, engage, and increasingly contribute to scientific understanding. “Science, Society, and the Museum” presents the history of this intimate relationship, detailing the connection and affect that science and society have on one another, and the museum as the documentarian of that relationship. From Darwin and Sputnik to global change and extinction, the course emphasizes the responsibility of museums—past and present—to embrace their role in communicating science and increasing the scientific literacy of an engaged population.

AS.460.691. Innovation and the Modern Museum. 3 Credits.
This course explores how museums of all types (art, archaeology, design, history, natural history, science, etc.) around the world are seeking ways to incorporate innovation in their missions, practices, and displays. The current coronavirus pandemic has made innovative solutions all the more urgent. Topics to be addressed include theory and practice of museum innovation; tension between innovation and tradition; historical roots of museum innovation; nurturing an innovative culture; and the power of play. Guest presenters include experts on exhibit design and museum architecture from both conceptual and practical viewpoints. The course also looks to the future. It explores how “virtual museums” and cutting-edge digital technologies, including 3-D imaging and replication, will transform the presentation of as well as public access to artifact collections. Students will be urged to model innovation in discussion forums and in weekly planning exercises, culminating in a term project in which they develop their own original concept for an innovative museum.

AS.460.695. Museums of the Americas: Facing Challenges in the 21st Century. 3 Credits.
Take a journey inspired by the peoples, ecosystems, and cultures of the Americas and explore how museums are responding to our shared hemispheric challenges of socioeconomic disparity, environmental degradation, and cultural heritage preservation, as well as achieving relevance in light of the recent pandemic and civil protest. Through video interviews and live guest sessions with museum leaders and experts throughout the Americas, including the Caribbean; mapping our journey and sharing what we learn; and multimedia assignments; we will focus on innovation, community and civic engagement, and sustainable practices.

AS.460.750. Museum Internship. 3 Credits.
An internship at a student’s local museum, approved by the internship coordinator, may be substituted for one elective course. To fulfill the internship requirement, a student must complete a minimum of 80 hours of work onsite and a project, (either a research paper or a practical product) on an approved topic related to his/her experience, due at the end of the semester. Students also participate in online discussion and course work during the semester. Before registering for the internship option, the student should contact the internship coordinator for approval. At least four to six weeks before the beginning of the semester in which the internship will take place, the student must submit: 1) a description of the internship weekly duties including activities and/or responsibilities; 2) learning objectives and goals; 3) why this experience should be part of the Museum Studies degree; and 4) a signed letter of commitment from the internship supervisor. Students must have completed a minimum of two courses in the program before registering for this internship.
AS.460.755. Museum Projects. 3 Credits.
This course expands opportunities for practical experiences beyond the onsite seminar and internship elective. Offered as an online experience, this course will involve students in an actual museum or museum-related project. Students will work in collaborative teams facilitated by a JHU faculty member and engage with museum professionals outside of the program. The goal of the course will be to establish a prototype or complete a real-life project of value to the museum field while interacting with current museum professionals. Museum Projects will be offered on an occasional basis and will vary in topic. Different prerequisites will be set up each time the course is scheduled depending upon the specific project. In addition to weekly research, writing and asynchronous discussions in the course management system, students should expect to participate in five to seven real-time online meetings throughout the semester, dates of which will be determined by the Museum Project team in tandem with the project requirements and deadlines. Students must submit a Museum Project application form two weeks before registration begins to be approved for enrollment in the Museum Project course. On this form, students will describe their interest in the specific Museum Project offered and other applicable topics as requested, as well as confirm their ability to attend five to seven real-time sessions. A selection committee will review the applications and determine enrollment eligibility before the semester’s registration begins. Enrollment limits may vary depending upon the project.
Prerequisite(s): You must complete one of the following courses before enrolling in this course: AS.460.604 OR AS.460.606 OR AS.460.602.
AS.465 (CULTURAL HERITAGE MANAGEMENT)

AS.465.702. Studies in World Heritage. 3 Credits.
This course offers an in-depth exploration of World Heritage by focusing on the concept of heritage, both tangible and intangible, its historical development, its international conventions, and the role of society and history in its past, present, and future. Students will be asked to engage critically with contemporary heritage concepts such as authenticity, ownership, assessment, value, and preservation that form much of our global understanding of the field of cultural heritage studies. Through case studies, lectures, discussions, and readings, students will explore international heritage policy as structured by the institutional complex, and consider both its local and global impact.

AS.465.704. Cultural Heritage Management/Leadership. 3 Credits.
Cultural heritage management is a complex intersection of theory and practice. This course will explore issues related to cultural sector management and leadership. Through the lens of current practice, we will examine core theoretical concepts and tools, including traditional approaches as well as the incorporation of emergent technology. We will look closely at the roles of the cultural manager and the efficiencies and characteristics needed for effective management and leadership within the cultural sector. We will consider changing definitions of protection and stewardship as they relate to cultural heritage as well as a larger framing of public interest, what publics, which interests.

AS.465.706. Research Methods in Cultural Heritage. 3 Credits.
<p>The supervised research course enables students to investigate a significant problem or issue in cultural heritage and to develop and demonstrate leadership, critical thinking, and communication skills. The research project is expected to result in a written deliverable that makes a contribution to the field of cultural heritage broadly defined. Coursework, assignments, and meetings with a faculty member will take place in an online course environment. This course is normally completed toward the end of the degree program. <p>Students will complete the Turning Your Topic Into A Good Research Question Research Skills Module and submit a Research Proposal/ question form prior to registering. On this form, students will describe their topic and research question. Please reach out to your academic advisor in order to complete this step. The course instructor will review the proposals and determine project appropriateness and enrollment eligibility. Students will register for this course through the add/drop form. <p>This course is recommended for students seeking to satisfy 36 CFR 61 federal qualification standards. These are standards used by the National Park Service previously published in the Code of Federal Regulations. The jobs of History, Archaeology and Architectural History include the following minimal professional qualifications (respectively): <ul style="list-style-type:disc"><li>Substantial contribution through research and publication to the body of scholarly knowledge in the field of history.</li><li>Demonstrated ability to carry research to completion.</li><li>Substantial contribution through research and publication to the body of scholarly knowledge in the field of American architectural history.</li></ul>

AS.465.707. Reading the Landscape: Cultural Heritage at Scale. 3 Credits.
This course examines the unique challenges faced by academics and practitioners in defining, preserving and managing rural, natural, and urban heritage at a landscape scale. The multiplicity of interests involved add to the complexity and require robust engagement strategies. Students will use a regional, national and international perspective to derive best practices for understanding the breadth of the cultural landscape concept and the opportunities for its sustainable development. Students are strongly encouraged to take this course before enrolling in the Two-Week Onsite Cultural Heritage Management Seminar (465.708).

AS.465.708. Two-Week Onsite Cultural Heritage Management Seminar. 3 Credits.
A two-week intensive period of on-ground heritage management study in a location organized by the MA in Cultural Heritage Management program. The seminar includes practicum opportunities related to site management, heritage tourism, and conservation, alongside classroom sessions that integrate daily experiences. Using the rich diversity of the designated location, the seminar provides students with the chance to use what they have learned in their prior courses, develop networks with fellow students and heritage experts, and explore the latest in cultural heritage practice. Students work on directed activities during the two-week period, coupled with multiple site visits focused on the academic work being accomplished. In order to register for this course, students must have completed a minimum of two courses in the program, although four or more courses are recommended. Students are strongly encouraged to take 465.702, 465.704 and 465.707. Some seminars may have other specific requirements. Individual course descriptions will be posted for each location. An individual course description will be posted for each location. Waiver option: Students who are unable to travel to a seminar location due to accommodation needs, financial hardship, or family challenges may apply to the program director for an exemption to the two-week seminar. If a waiver is granted, the student must enroll in the internship option (465.780) to fulfill the on-site component of the degree requirement.

AS.465.710. The Protection of Global Cultural Heritage: Laws, Policies, Politics, and Advocacy. 3 Credits.
This course introduces students to cultural heritage law, as it relates to the interpretation, ownership, management, and protection of both tangible and intangible heritage. Using case studies taken from the court dockets and newspaper headlines, students will develop a solid background in relevant national and international legal concepts, while exploring how the law is implemented through policy and practice. They will also examine the impact of heritage’s continuing politicization, including the use (and misuse) of heritage in public commemoration, nation building, armed conflict, and violent extremism. To this end, from a global perspective, and through a legal and policy lens, the course takes an in depth look at key challenges and controversies affecting the field. It considers what can and cannot—and, for that matter, what should and should not—be done to protect heritage, and how these decisions affect politics, economics, and security from the local to the international levels.
AS.465.714. Culture as Catalyst for Sustainable Development. 3 Credits.
The role of cultural heritage in global developmental policy emphasizes a human centered and inclusive approach. The course will introduce students to the current global discourse on sustainable economic development and unpack the role of cultural heritage including the socio-economic impacts of investment. Students will consider the role of cultural heritage in long term development strategies and policy in order to assess impacts and effects. Cultural heritage will be considered as both a means and an end.

AS.465.720. Issues in Intangible Cultural Heritage. 3 Credits.
Thanks to the efforts of the United Nations Educational, Scientific and Cultural Organization (UNESCO) over several decades, the global heritage enterprise has been expanded to include 'intangible cultural heritage,' the often ephemeral and ever-changing cultural beliefs, practices, and expressions that are embodied and shared by communities, groups, and individuals all over the world. The course, Issues in Intangible Cultural Heritage, explores this relatively new category of heritage, tracing the development of the ICH concept and related policy through pre-cursor concepts, concerns, and activities at the global level, from the 1970s through to today. Grounded in a critical engagement with the heritage and museum studies literature, particularly the thriving international ICH discourse and debates, and through critical analysis of case studies from across the globe, students will explore the challenges that arise with respect to safeguarding and promoting living cultural beliefs, practices, and expressions, as well as engage with key features of conducting community-based ICH work of their own.

AS.465.730. Heritage Interpretation. 3 Credits.
Interpretation is a key component of cultural heritage management and the visible link between heritage and its diverse publics. This course considers current practice and emerging developments in the field as well as a broad range of heritage both tangible and intangible: from museums and sites, to archeological excavations, to urban and rural landscapes, and both the natural and built environment. It asks students to evaluate the role of interpretation in site management and looks critically at interpretation across global landscapes considering both the intended and unintended consequences of chosen narratives. This course looks closely at audience and community, the control of narrative and interpretation, and the short and long-term impact in terms of identity and access. As well as discusses the skills identified across the sector for heritage interpreters and how they are used to create effective experiences.

AS.465.732. Engaging Communities in Heritage. 3 Credits.
Museums and other heritage institutions are increasingly recognizing the value of ‘bottom-up’ heritage programming. This class will explore issues related to community engagement in the heritage sector as well as strategize ways to engage various constituencies in the formulation, collection, and presentation of their heritage. We will use global case studies (as related to memory and memorial, sites of conscience, marginalized histories, indigenous heritage, and eco-museums) to explore the challenges faced by such projects. Examining both the failures and successes will result in a broader understanding of best practices in the field and help us formulate effective strategies for future engagement.

AS.465.734. Heritage Tourism. 3 Credits.
This course explores the practice and theory of heritage tourism and the history of its developments and impacts. Through the lens of sustainable economic development, it will examine the benefits and challenges of tourism and site management in both rural and urban contexts. We will look closely at the relationship between culture, heritage, and tourism by examining a range of topics including the use of natural and cultural heritage resources for tourism development, understanding tourism development and tourist motivations, impacts of heritage tourism, international examples of heritage tourism and the importance of sustainability.

AS.465.736. NAGPRA: Repatriation as Compliance or Ethical Practice. 3 Credits.
In the United States, the Native American Graves Protection and Repatriation Act (NAGPRA) outlines a process by which government agencies (and those who receive government funding) must return human remains and sacred objects to those who claim them. Repatriation is a complicated process because it means something different in almost every case. One of its earliest claims took 20-years to resolve. In 2017, the Ancient One was returned to the tribes of the Columbia River for reburial after DNA tests proved the relationship that tribes had claimed all along. But now reproductions of the Ancient One’s skull are being sold by a company that holds the copyright. When those from outside the culture to which he was returned can examine and/or profit from a replica, the distinction between compliance with the law and the ethics of return is clear. Outside of the United States, few repatriation laws exist and many argue that institutions like The British Museum are the best places to protect world heritage. Is providing care of and access to human remains and cultural objects preferable over returning heritage to those from which it was taken? In this course, we examine repatriation claims around the globe in order to critique NAGPRA and establish a compliance toolkit. Where NAGPRA doesn’t apply, heritage professionals can use the successes and failures of past repatriations, and a firm grounding in ethics, to make repatriation decisions. Nothing in NAGPRA prohibits practitioners from exceeding its scope and seeking out opportunities to build relationships with descendent communities even when repatriation is not required by law.

AS.465.740. Cultural Heritage in the Digital Age. 3 Credits.
A Neolithic settlement in Scotland, at risk due to coastal erosion, is digitally preserved through precise 3D laser scanning; the construction of the massive towers at Cologne Cathedral is brought to life with digital photogrammetry and augmented reality; multilayered cultural heritage information, images, and damage assessments are catalogued in open source databases. These are just a few examples of how a growing number of scholars, researchers, and practitioners are using the latest technology as a means to document, visualize, interpret, and preserve cultural heritage worldwide. This course will explore the ways in which cultural heritage professionals are implementing the latest digital technologies to enhance research, conservation, management and preservation of tangible and intangible heritage, as well as methods of education and engagement for visitors. Through lectures, readings, assignments, and social media, students will identify, analyze and debate the use of documentation, visualization and content creation technology currently being used in the cultural heritage engagement, studies and practice, as well as envision its use for the future.
AS.465.780. Internship. 3 Credits.
An internship at a cultural heritage organization, approved by the internship coordinator, may be substituted for one elective course. To fulfill the internship requirement, a student must complete a minimum of 80 hours of work on-site and a project, (either a research paper or a practical product) on an approved topic related to his/her experience, due at the end of the semester. Students also participate in online discussion and course work during the semester. Before registering for the internship option, the student should contact the internship coordinator for approval. At least four to six weeks before the beginning of the semester in which the internship will take place, the student must submit: 1) a description of the internship weekly duties including activities and/or responsibilities; 2) learning objectives and goals; 3) why this experience should be part of the Cultural Heritage Management degree; and 4) a signed letter of commitment from the internship supervisor. Students must have completed a minimum of two courses in the program before registering for this internship.
AS.470 ( GOVERNMENT)

AS.470.600. Introduction to Graduate Work. 3 Credits.
This course is an introduction to graduate work and will not count toward your degree, but is designed to help students maximize their performance and excel in graduate studies. The course will combine class work with one-on-one advising and tutoring. The course will cover such topics as research, writing, citation, argument, using evidence, study habits, and managing a graduate-level workload. Teacher and student will meet at the beginning of the semester to assess areas of greatest need and tailor the course to meet them.

AS.470.601. Climate Change and National Security. 3 Credits.
This course provides an in-depth examination of how the effects of climate change could impact national security, international relations, and global stability. Students will begin by examining and discussing the current body of academic literature. As the semester progresses, students will learn and practice how to use cross-disciplinary resources and tools to envision potential relationships between climate change effects and security outcomes.

AS.470.602. Government & Politics. 3 Credits.
This course offers an overview of power and politics through the study of the government of the United States. All governments combine coercion and legitimacy. In a stable and legitimate system of government, coercion is hardly noticed. Government comes to be seen as a source of benefits. The purpose of the course is to look behind institutions, practices, and benefits to appreciate how, for what, and for whom we are governed. We shall examine some of the major institutions of American government, some of America's political processes, and some of the key forces competing for power in the U.S. to see how decisions in the areas of economic, social and foreign policy are reached. This is a core course of the Government Program but is open to all students.

AS.470.603. Introduction to Global Security Studies. 3 Credits.
This course introduces students to the basic concepts of global security studies, including theories of international relations, perception and misperception, theories of foreign policy, the varying concepts of security, and the elements of national power. It also includes a brief introduction to social movement theory. It applies these conceptual tools to selected security issues.

AS.470.604. Social Media and The American Presidency. 3 Credits.
This course will investigate the impact that digital technology has had on the institution of the American presidency. The adoption of the internet in the 21st century, both as a tool and as an information distribution mechanism, has had an astonishing impact on the Office of the Presidency. This course is designed to have students operationalize theoretical concepts and apply them to real world situations. Students will engage with scholarly research, analytical arguments, and real-time case studies on the effective use of social media in all aspects of the presidency: campaigning, public debate, electoral processes, and democracy more broadly. In that spirit, we will examine how the first president of the social media age, taught by a member of the first White House Office of Digital Strategy, the primary objective of this course is to provide students with the tools and skills to be informed consumers of political social media, as well as to equip them to participate in the political digital conversation.

AS.470.605. Global Political Economy. 3 Credits.
In the wake of the financial crisis, bank bailouts, and stimulus plans, the relationship between American economic power and national security is especially salient. In this course, students investigate core topics in international political economy, analyzing the security implications of each. Topics include trade relations, international finance, monetary relations, poverty, and development. (Core course for the MA in Global Security Studies. Recommended elective for MA in Public Management)

AS.470.606. U.S. Security in a Disordered World. 3 Credits.
This course provides an overview of the manifold challenges and opportunities for United States security in the current disordered and changing world. It aims to help students assess why events occur and what policies are developed in response. In that endeavor, the course has three major objectives. First, the course will review the major perspectives on, and debates about, U.S. security and the institutions through which policy is made and executed. Second, the course will review some U.S. security issues through scholarly, policy, political, and historical lenses. Third, the course will help students write for both policy and academic audiences. This course is not open to students who have had 470.606 American National Security.

AS.470.608. Public Policy Evaluation & the Policy Process. 3 Credits.
This course is designed to introduce students to the public policymaking process, to the basics of policy analysis, and to the substance of some of today's major policy debates. The first half of the course focuses on establishing a framework in which to analyze public policy formulation within the United States. The class also reviews the tools for developing and implementing policy. The second half of the course turns to policy analysis of some critical contemporary issues. Building on earlier readings, we will study current debates in economic/tax policy, education, health care, social security, and national security. (Core requirement for the MA in Public Management. Elective option for Government. Analytics students)

AS.470.609. Leadership Skills in the 21st Century. 3 Credits.
This course will assist leaders in identifying their personal approach to leadership; provide tips on motivating staff by building trusting relationships and shoring up their credibility; suggest influence and persuasion strategies that leaders need to employ when working with bosses, colleagues, direct reports, and critical stakeholders, including funding agencies; develop strategies to build effective work teams; and consider approaches to monitor organizational performance in an ongoing fashion.

AS.470.611. Introduction to Terrorism Studies. 3 Credits.
This course provides an overview of the principal areas important to the study of terrorism. The course offers a variety of academic, policy, and operational models, theories, approaches, and concepts regarding the definitions of terrorism, the nature and functioning of various terrorist groups across the globe, and a variety of domestic and international governmental operational and policy responses. Through this exploration, students will be able to identify patterns of behavior of both terrorist groups and governmental responses, and will also be able to identify gaps, and principal areas of improvements in how we understand, and respond to this important security challenge.
towards the Concentration in Political Communications

This course will also examine proposals to make the government more transparent, and the government interact with the public, while examining the rapid growth of Internet and social media, the ways in which the networks of power can access the brainstorming of the public, and whether the public can access the brainstorming of the networks of power. In an age of government downsizing, the role of the courts bears renewed examination. Students will be encouraged to make the course an interactive one and to share their personal knowledge of successes and failures of governance and risk management. The syllabus can be accessed from the Governmental Studies course descriptions webpage.

AS.470.612. Bureaucratic Politics. 3 Credits.
This seminar will examine the political support for bureaucracy, how bureaucracy functions in contemporary government and society, and selected current controversies over the purpose and reach of bureaucracy. How does bureaucracy enhance or frustrate liberal democratic ideals? We will take up case studies involving current political issues, such as civil rights enforcement, the war on terror, the role of regulatory agencies, judicial policymaking, relevant student experiences, and the instructor's own experience in various federal and state agencies.

AS.470.613. Managing Risk and Performance: Improving Decisionmaking in Government Agencies. 3 Credits.
The United States has experienced the most significant failure of its financial system since the Great Depression. Differences in governance and management between the survivors and the others are instructive not only for financial firms, but for government agencies and private companies in other sectors of the economy. This course seeks to present learnings that are potentially relevant to government managers and organizations. The basic lesson, of course, is that new media isn't just impactful; it's a black swan. He argues that the black swan event is more frequent than people expect. Managers must take the possibility of black swans into account even when times are good; that's one factor that distinguishes the survivors from the rest. The federal government and private sector have learned this from Katrina, the massive 2010 Gulf oil spill, homeland security events such as September 11, and the Great Recession that emerged from the financial crisis. All of these occurred within a single decade. Students will be expected to produce a research paper on an approved topic relating to (1) a crosscutting theme of governance and risk management at one or more private companies, (2) government regulation and supervision of private companies at one or more public companies, or (3) a cross-cutting theme of governance and risk management at government agencies. Students will be encouraged to make the course an interactive one and to share their personal knowledge of successes and failures of governance and risk management. The syllabus can be accessed from the Governmental Studies course descriptions webpage.

AS.470.614. Government and Social Media. 3 Credits.
The marble chambers of Congress are now full-time reelection centers. The ranks of the press corps in Washington have been decimated since the 1980s, and lawmakers are gladly filling the void by becoming the first-person story tellers of Capitol Hill. Everyone bemoans witnessing what is arguably the most hyper-partisan Congress in the nation's history, but few understand the technological underpinnings of the devolution of what was once hailed as the world's greatest deliberative body. While the Constitution was crafted explicitly to provide space for great minds to debate, the constraints built into the current system leave lawmakers no distance from interest groups, wealthy donors, and angry voters who often receive only a portion of the story from their increasingly partisan sources of news, including the lawmakers themselves. But new media hasn't just impacted Congress. The White House and Executive Branch agencies have latched on to new forms of media to reach broader audiences. The Supreme Court seems to be the last holdout when it comes to accessibility and transparency, but they have their reasons. This course will explore the history of how politicians and the government interact with the public, while examining the rapid evolution of government and political communications in recent years. It will also examine proposals to make the government more transparent, technologically advanced and less focused on speed. This course counts towards the Concentration in Political Communications.

AS.470.615. Speechwriting: Theory and Practice. 3 Credits.
The theory and practice of speechwriting are the focus of our study of the great political speeches of all time and especially those of the American political tradition. We will examine the content, structure, and purpose of high rhetoric ranging from Pericles to Solzhenitsyn, from Abraham Lincoln, Frederick Douglass, and Franklin D. Roosevelt to contemporary politicians. Based on their knowledge of the best models, students will draft and deliver their own speeches.

AS.470.616. Political Ideas, Strategy, and Policy Implementation. 3 Credits.
It is easy, in this age of reactive 24-hour news, to believe that ideas no longer matter in politics. But ideas are the currency of politics, and are central to both campaigning and governing. What candidates stand for matters, and the best policy is the best politics. This class will discuss the critical role ideas play in our American political system. It will examine how ideas define candidates and governments, shape political strategies, and form campaign communications. But, most importantly, it will discuss how campaigning on ideas leads to successful governing. While compromise and negotiation are often derided as weaknesses in today's political system, we will examine how these techniques have been used to implement policy ideas and further political strategy. From the practical perspective of the instructor's own legislative and political experience, the class will take up case studies involving the interplay between politics and ideas in recent history in areas such as budget reform, national security, tax reform, crime prevention, trade, and poverty. Through these case studies, we will look at how and why policy ideas succeeded or failed through the lens of elections, political communications, and their positive impact on the public.

AS.470.617. The Courts and Public Policy. 3 Credits.
Americans traditionally have viewed the courts as—in the words of a constitutional scholar—"the least dangerous branch of government." They are seen as reflectors, not agents, of change. But in an age of government downsizing, the role of the courts bears renewed examination. Students explore the historical and philosophical roots for the notion that American courts, and whether the lawyers who appear before them, can and should make law and policy, and the alternatives to this function. Students consider prominent areas of public policy that have been shaped by the courts, such as civil rights, family and domestic law, environmental and safety regulation, and the regulation of business and commerce. This course counts towards the Legal Studies Concentration.

AS.470.619. State Politics and Policymaking. 3 Credits.
This course provides an introduction to the form and function of state governments around the United States and the issues they are currently facing. During the semester, the course explores the interplay between the U.S. Congress and State Legislatures, the ways in which policies enacted by state government impact our daily lives, and the intricacies of the political process at the state level. Special emphasis will be placed on key issues currently being debated in many state capitols pertaining to gay marriage, gambling, health care, higher education, transportation infrastructure and the environment. A visit to the Maryland General Assembly for a visit with the Governor and legislative leaders might be arranged.
**AS.470.622. Money and Politics. 3 Credits.**
This course considers the historical and contemporary relationship between money and government. In what ways do moneyed interests have distinctive influences on American politics? Does this threaten the vibrancy of our representative democracy? Are recent controversies over campaign finance reform and lobbying reform signs that American government is in trouble? This course is reading, writing, and discussion intensive, and we consider the large academic literature on this subject, as well as the reflections of journalists and political practitioners. Election law and regulations on money in politics are always changing, and so part of the course is designed to give students tools at tracking these developments. The overall goal of the course is to foster an understanding of the money/politics relationship in ways that facilitate the evaluation of American democracy.

**AS.470.623. Nonprofit Program Development and Evaluation. 3 Credits.**
(Formerly Program Development & Evaluation in Nonprofits.) A major goal of this course is to help students become more proficient in recognizing, evaluating, and encouraging the kinds of benefits or outcomes intended by our society's variety of nonprofit and public programs. We will examine what needs and opportunities are addressed by four major types of programs: those serving individuals, those serving communities, those serving networks or systems, and those serving other organizations. Evaluating each requires different lenses and different tools; we will explore the role of culture and context in choosing particular approaches to evaluation. A view of programs as interconnected rather than isolated will be encouraged. A second goal is to help students become more proficient in managing an evaluation process: We will explore purposes and uses of evaluation, the essential elements of an evaluation inquiry, and ways to communicate and use evaluation results. We will explore the variety of quantitative and qualitative strategies useful for evaluating progress in an organization's attainment of its intended outcomes or benefits. Students can expect to become more proficient in discussing issues of nonprofit and public "program effectiveness," and strategies for improving nonprofit and public program designs. Elective course for the Certificate in Nonprofit Management.

**AS.470.624. Healthcare Analytics and Policy. 3 Credits.**
This course covers the ways in which analytics are being used in the healthcare industry. Topics include data collection opportunities created by the ACA and other laws, the use of analytics to prevent fraud, the use of predictive modeling based on medical records, the insurance industry’s increasing use of data and the ethical issues raised by these practices. Prerequisites: none required (470.681 Probability and Statistics recommended)

**AS.470.625. Resource Development and Marketing in Nonprofits. 3 Credits.**
The goal of this course is to prepare future nonprofit leaders and board members with the international resource development and marketing fundamentals that help every nonprofit thrive. The course focuses on how to create and nurture an organizational culture where everyone on the staff and board understands, embraces, and acts on his or her role in developing strategic relationships with funders, potential funders, and media professionals. You will gain an understanding of the process, the metrics that drive the process, and the milestone markers that lead to success. You will explore how to develop a board and/or cadre of volunteers who give generously, share expertise freely, connect you to the right government officials and media leaders, and invite others to join them. Data-driven decision-making and all aspects of fund development, marketing, and communications will be woven throughout the course. Led by an internationally recognized practitioner, consultant, and master teacher, the course will use scenarios, discussion, social media, audio, and video clips so that you will walk away with the knowledge you need to secure private and government funding and social capital as a CEO, senior staff member, board chair, or member, and the confidence to do it all well. Elective course for the Certificate in Nonprofit Management.

**AS.470.627. Financial Management & Analysis in the Public Sector. 3 Credits.**
This course focuses on financial aspects of public sector organizations and institutions. The objectives of this course include helping students (1) learn the basics of public sector accounting and the construction of their financial reports, (2) become more intelligent users of the financial statements of public sector organizations such as sovereign, state, and municipal institutions, and (3) better understand the factors that affect the financial condition and financial performance of such entities. More specifically, the course focuses on (1) the financial reporting concepts and standards that are applicable to public sector organizations; (2) ratios and other summary indicators used by analysts to evaluate the financial condition and financial performance of public sector and nonprofit organizations; (3) the analysis and interpretation of financial statements of selected public sector organizations; (4) fundamental finance principles; and (5) basic principles of budget formulation.

**AS.470.629. The Politics of Health Care Policy. 3 Credits.**
This course introduces students to the political actors and influences that determine the nature of health care policy. Particular emphasis is placed upon the implementation of Obamacare and the possible reforms and/replacements offered by Republicans and the new Administration.
AS.470.630. Congress and the Making of Foreign Policy. 3 Credits.
This class will examine the role of Congress in the making of American foreign policy. In particular, this class will discuss the role of Congress in war powers, economic sanctions, human rights advocacy, the approval of international agreements including treaties, international affairs budgets and spending, investigations and oversight of the conduct of foreign policy by the executive branch as well as the impact of Congress on the general direction of American foreign policies and priorities. Special attention will be given to the role of Congress in U.S. policy toward Iran over the past few decades, the use of military force in Iraq and Syria, the role of the legislative branch in U.S. policy toward China and Taiwan and the promotion of human rights as a component of American foreign policy. The class will seek to examine the specific actions of Congress on these matters, and their causes and consequences. The class will use books, articles and original source material from committee deliberations and floor action. As we examine these topics, we will come back to larger themes – the balance of power between the executive and legislative branches, the impact of partisan and bureaucratic politics, and the changing role of the United States on the world stage. All this will be discussed with a mind to the role of foreign policy practitioners.

AS.470.631. Economics for Public Decision-Making. 3 Credits.
Economic thinking provides an important set of tools for almost every aspect of public policymaking. This course aims to offer students a basic understanding of economics and its importance in public policymaking. The first half of the course will offer students an understanding of microeconomic and macroeconomic theory, including a discussion of when markets can work to achieve policy goals and when “market failures” call for government intervention. The second half of the class will use these economic tools and theories in order to survey several specific policy areas, including health policy, tax policy, and the national debt. (Core course for the MA in Public Management This course counts toward the Economic Security concentration (GSS). Elective option for Government Analytics students.)

AS.470.632. Security Issues in South Asia. 3 Credits.
The South Asian region, with its complex historical context, a large and diverse population, and contested national borders, especially between nuclearized countries, poses some of the toughest security challenges facing the world. This course highlights salient security challenges in South Asia, and draws out their implications for U.S. strategic interests. It examines the sources and implications of the rivalry between nuclearized India and Pakistan, and how it fuels Sino-Indian security competition. Attention is drawn to the sources of militancy in India, and to the threats to international and regional security arising from the conflict in Afghanistan. The Sri Lankan Tamil Tiger insurgency and its eventual defeat in 2009 are also discussed, alongside the rising Islamist militancy threats in Bangladesh, and the history of Maoist insurgency in Nepal. Finally, some of the climate-based threats to which no South Asian country is immune will also be discussed.

AS.470.633. Transnational Organized Crime: Gangsters of the Global Underworld. 3 Credits.
Transnational organized crime often is not well understood because crime is most often conceptualized as a domestic legal concern. However, transnational organized crime is more than that. It is crime ordered into complex clandestine networks that operates transnationally with little regard for the borders of states. The gravity of the problem lies not only in the increasing complexity of these organizations, but more importantly, with the serious challenge they pose in their ability to penetrate and operate with relative impunity in several states simultaneously. These illegal enterprises not only threaten aspects of state sovereignty and security that traditionally have been taken for granted, but they prove the permeability of national borders and the vulnerability of state institutions. This course will examine a variety of transnational organized criminal groups, their modus operandi, and their illicit activities. It also will focus on some domestic organized crime groups both to provide a depth of understanding of the operations of organized criminal activity in different countries, as well as to show how international groups can make inroads into domestic markets if they cooperate with local groups.

AS.470.634. Open Source Research in Conflict, Politics and Scholarship. 3 Credits.
This course examines the open source research discipline (often called open source intelligence or OSINT), and is primarily concerned with how open source research helps a diverse mix of actors achieve their goals. It is designed to help students develop open source research skills that can have broad utility in their academic and professional careers while considering such topics as how these skills empower governments and a range of nongovernmental actors, including private companies, international aid agencies, and even terrorist groups. In addition to gaining experience applying tools and techniques utilized by OSINT professionals to perform independent research and participate in collaborative exercises, students will become familiar with ethical and legal issues which influence the design of open source research in academic settings.

AS.470.635. Cognitive and Behavioral Foundations for Artificial Intelligence. 3 Credits.
Artificial intelligence is rapidly improving for well-defined tasks and narrow intelligence. But will AI ever have human-like general intelligence? This course is designed to answer this complex question by giving students a working knowledge of the underlying principles and mechanisms of human behavior and cognition. Key topics to be addressed include vision, audition, language, emotion, memory, creativity, and consciousness. We will use current and future advancements in big data and AI as a backdrop for critical and creative analysis.

AS.470.638. Negotiating as a Leadership Skill. 3 Credits.
Conflict is part of organizational life. People in public sector agencies and nonprofit and for-profit organizations disagree over the meaning of regulations, the use of financial resources, office space, leave time, and many other issues. Managers must have the ability to diagnose disputes and to negotiate effectively to resolve conflicts. This course provides the theoretical background and conceptual framework needed for successful negotiation and mediation. Through presentations and discussions students become familiar with the tools necessary for conflict resolution in their agencies and organizations. Analysis of a party's interests, identification of the necessary style, awareness of communication skills, and planning and feedback are part of the process of becoming an accomplished negotiator.
AS.470.640. Challenges of Transnational Security. 3 Credits.
This course focuses on transnational security issues and considers how many of these myriad challenges constitute threats to global peace and security. The combined effects of issues such as drug, weapons, and human trafficking, piracy, terrorism, infectious diseases, and deliberate environmental destruction, along with such critical enablers as corruption, and money movements, are not strangers on the world stage. What is new is their global reach and destructive potential. As a result, these issues have made policy makers consider different conceptions of security and, at times, to move beyond sole considerations of state sovereignty into the realm of human security. Not only are transnational security issues varied in nature and scope, but their effects often are obscured by the fact that many are nascent with gradual and long-term consequences. Further, while some transnational issues may not constitute direct threats to global security, they may threaten the world economy, and quality of life of its citizens. Still others compound and reinforce each other, generating mutations of the original threats. This course will examine a small number of these transnational security issues and relevant policy-making efforts.

AS.470.641. Introduction to Advocacy and Lobbying. 3 Credits.
Lobbying is a Constitutional right guaranteed under the First Amendment. It's also big business in Washington, DC, as more than $4 billion was spent on these efforts in 2015. In fact, for many, the term “lobbying” conjures up an image of a shady character passing a cash-filled envelope to an elected official. (emphasis added) The stereotype of lobbyists as greedy predators of the political system detracts from the efforts made by the tens of thousands of people, from lobbyists and concerned citizens alike, who come to Washington every year to exercise their “Right to Petition” the government to make it more responsive and accountable to the people. This applied course provides students with a practical understanding of how to lobby Congress and the Executive Branch. The course also teaches students about “advocacy” efforts where unregistered public affairs firms employ campaign-styled tactics to persuade decision-makers to support their client’s positions.

AS.470.643. Text as Data. 3 Credits.
In this course students will develop expertise in using the tools necessary to collect, analyze, and visualize large amounts of text. The course begins with a hands-on introduction to the programming concepts necessary to collect and process textual data. The course then proceeds to cover key statistical concepts in machine learning and statistics that are used to analyze text as data. Throughout the course, students will develop a research project that culminates in the display of results from a large-scale textual analysis. Prerequisite: 407.681 Probability and Statistics

AS.470.644. Democracy and Its Modern Critics. 3 Credits.
Much of international politics in the last century can be described as a conflict between liberal democracy and its modern critics. During this period the values and political structures of liberal democracy have been extended to more parts of the world than ever before. Yet the same era also saw the emergence of powerful challengers to liberal democracy from both the right and the left. The resulting clash of ideologies defined such conflicts as World War II and the Cold War. In this course we will survey the intellectual roots of Fascism, National Socialism, and Communism. We will also examine the question of Islam and democracy looking at both its proponents and its radical critics in the Islamic world. Among those whose writings we will examine are Karl Marx, V.I. Lenin, Benito Mussolini, Carl Schmitt, Charles Maurras, Syed Qutb, Ali Shariati, Muktedar Khan, and Ruhollah Khomeini. This course counts towards the Security Studies concentration.

AS.470.645. The Budgetary Process. 3 Credits.
The federal budget process is an enormously complex mixture of administrative routines and mechanisms designed to bias decisions, avoid blame, or reduce conflict. This course explores the structures of federal budgeting in terms of its varied goals and in the context of the wider governing process. The course will review the budgetary process in both the executive and congressional branching, as well as the interaction of those two systems. In order to gain understanding of the difficult policy choices and political pressures policymakers face, students will be asked to do a simulation of a budget process within the executive branch. The role of entitlements, scoring issues, and tax policy will be examined in the context of the debate over budget policy. The course will start with a short primer on finance theory. (Recommended elective for MA in Public Management. Elective option for Government Analytics students.)

AS.470.646. Poverty, Inequality, Opportunity: Theoretical Foundations and Policy Implications. 3 Credits.
This course examines enduring issues in political theory – including poverty, inequality, opportunity, citizenship, compassion, obligation, justice, and the role of government, markets, and charity - and their expression in contemporary social policy. The course provides foundations for understanding the theoretical and political dimensions of social policy - and the implications for policy solutions.

AS.470.648. Presidential Election 2020: Campaigning and Communicating. 3 Credits.
The 2020 presidential election will be based largely on how well voters think the incumbent Donald Trump has handled his first term in office. Trump will be seeking re-election with a pandemic that has killed over 100,000 Americans and with the largest number of Americans unemployed since our Great Depression. In addition, the question of racial justice has become an issue of paramount importance to this election. Trump is a master of distraction and should never be counted out as he has all the advantages of the presidency, while his opponent, former Vice-President Joe Biden will need a large Democratic and Independent voter turnout to win the White House. In short, 2020 is a truly unique and historic election. The class will discuss both sides’ campaign and media strategies-both social media and traditional media- to win the White House. Will Biden be able to put the Obama coalition together again? Will Trump’s base come out in large enough numbers to help him win again? Is America ready for a return to normalcy after the chaotic first term of Trump? Our lively, interactive class will explore all these questions and closely follow the campaign to its conclusion and look at the winning candidate after the November election.
AS.470.649. Separation of Powers and Democratic Governance. 3 Credits.
The separation of powers is America's most profound and useful political contribution to the world. Studying its principles, development, and decay is a requirement for understanding American politics and is as well a potential benefit to students of aspiring democracies throughout the world. For the separation of powers enables self-government, putting democratic principles of equality and liberty into practice while moderating the powers of majorities. We will study the principles and practice of the separation of powers by examining how each elected branch of government protects its rights, while checking the rights of others. The separation of powers can be said to have produced a more just and moderate democratic form of government, but it has also occasioned the complaint that it has produced gridlock and incompetence. To investigate the strengths and drawbacks of the separation of powers, we will pay close attention to the classic texts advocating the separation of powers, such as The Federalist Papers; the great changes in American politics effected by the Civil War, the Progressive movement, and the New Deal; and the domestic and foreign policy debates in recent administrations. Special attention will be paid to the seminal opinions of the unelected branch of American government, the Supreme Court. The course will note in particular the contemporary challenges to the separation of powers, evidenced in the rise of the administrative state, the expanding powers of courts, and the growth of party government. We will also note instances of how parliamentary and presidential governments throughout the world might benefit from separation of powers principles.

AS.470.651. Corruption and Democratic Governance. 3 Credits.
Corruption is ubiquitous. It is a universal phenomenon that has always been around and that can be found almost anywhere. Recent years have seen much focus on the relationship between it and democratic governance. Indeed corruption and politics more generally are inextricably and universally entwined. In this seminar we will take an in-depth look at the relationship between the two. We will ask: What is Corruption? Is it always the same thing everywhere, or does it vary depending on context or place? Do pork barrel politics and political clientelism count as corruption? What are the implications of corruption? Is it necessarily always a bad thing or can it be beneficial? Is the corruption experienced in developed countries qualitatively different from that in developing ones such that democracy suffers more in developing countries? We will seek to answer these and other questions by taking a critical look at the politics of corruption. We will look at the origins, extent, character and significance of corruption from both a developed and developing country perspective. We will cover various theories relating to corruption as well as look at a number of empirical cases.

AS.470.653. Russian National Security Policy. 3 Credits.
Russia plays a key role in most international issues and openly campaigns to realign the international system away from what it sees as American domination. This course considers the substance and process of Russian national security policy. It acquaints students with the main instruments and mechanisms available to Russian leaders to advance the country's national interests and key policy priorities. The course considers how Russia formulates and conducts its national security policy, the history that informs it, the political culture that sustains it, the ideas and interests that drive it, and the people and institutions responsible for it. The course addresses Russia's role in key global and regional issues and its relations with major powers. It places special emphasis on the wars in Ukraine and Syria, Russian concepts of information war, and on Russian military reform.

AS.470.654. Deterrence & Crisis Stability in the New Era of Geopolitical Competition. 3 Credits.
This course will consider the challenges of conventional and nuclear deterrence in the new era of great power competition among the United States, China, and Russia in particular but also with consideration given to challenges posed by new and aspiring nuclear states. Students will also explore issues and challenges for crisis stability raised by the development and field of emerging military capabilities ranging from lethal autonomous weapons systems to hypersonic missiles to counter space weapons. While informed by current and evolving concepts in deterrence and strategic stability theory, the course will nevertheless provide an empirical and policy-relevant survey and appreciation of key issues confronting senior national security decision makers today and in the decades ahead.

AS.470.656. Presidential Power and Politics. 3 Credits.
This course considers the evolution of the presidency from its creation by the founders who had "their fingers crossed" while contemplating an executive agent for the emerging government, to its contemporary massive presence in our political system. The class also examines the interactions of the president with the other branches of government—Congress and the Courts—as well as the dynamics and management challenges presented within the executive branch itself. The course focuses on the leadership attributes of effective presidents, as well as aspects of personality or "character" that influence presidential performance. Finally the class focuses on the power and influence exerted by the presidency in domestic public policy and in foreign affairs. Students will be encouraged to develop their own ideas of what makes a great president in the 21st century.

AS.470.657. Energy, Security, and Defense. 3 Credits.
This course is a seminar-based overview of the role of energy in national security. Using a range of U.S. and non-U.S. case studies, students will review the roles of energy in grand strategy, the role of energy in conflict, and, finally, as a logistical enabler of military operations.

AS.470.658. Religion and American Political Culture. 3 Credits.
The relationship between religion and politics in the American context is one of peculiar complexity in the American context. This course has 3 main objectives: 1) to examine in general terms the role of religion in American public and political life as reflected in the debates concerning the use of religious symbolism and discourse in the public sphere; 2) to analyze how religiously informed moral argument has helped to shape public debate on key issues of public policy including the issues of civil rights, abortion, war and peace, and economic policy; and 3) to provide the necessary historical and philosophical context to help understand the present day intersection of religion and politics, and to see how previous generations of Americans approached similar problems.
AS.470.659. Radicalization and Deradicalization in Terror Networks. 3 Credits.
This course will explore some of the most contested and controversial aspects in contemporary security studies. There are a number of contentious and wide-ranging debates around ideas like radicalization not least concerning its definition, causes, and effects. This course will also prompt you to consider broader issues, such as whether there is a causal link between extremism and violent extremism? Why do some radicalized individuals embrace terrorism, when others don’t? And should security officials concern themselves with radicalization, or only with its violent offshoots? This course will unpack many of these debates, exploring academic and theoretical literature surrounding the issues of radicalization, recruitment, and deradicalization in modern terrorist networks. It will focus primarily on cases in Europe and the United States, while also exploring new phenomena such as homegrown, self-starter, and lone wolf terrorism.

AS.470.660. Program Evaluation. 3 Credits.
This course introduces the student to the literature, theories and approaches to evaluating organizational programs, policies and procedures. Students will acquire a broad perspective on types of program evaluation, including formative and summative evaluation, process evaluation, monitoring of outputs and outcomes, impact assessment, and cost analysis. Students gain practical experience through exercises and assignments involving the design of a conceptual framework, development of indicators, analysis of quantitative and qualitative evaluation data, and development of an evaluation plan to measure impact. In addition, topics such as experimental, quasi-experimental, and non-experimental study designs are introduced in the context of a variety of settings, including schools, welfare agencies, mental health organizations, criminal justice settings, environmental programs, nonprofit organizations, and corporations. Prerequisite: 407.709 Quantitative Methods

AS.470.661. Political Debates and the US Constitution. 3 Credits.
This course explores the political struggles that emerge from the U.S. constitutional system. During the course, we will read contemporary and classic cases in U.S. constitutional law in light of constitutional and political theory. Course discussions will focus on the law as well as the related policy, political, and societal implications of constitutional interpretation. Through paying particular attention to recent decisions and issues before the Court, the course will explore the roles and powers of the branches of federal government, separation of powers, federalism, and the commerce clause. It will also cover individual rights, due process, equal protection, and religious freedoms.

AS.470.662. Human Security. 3 Credits.
The multiple crises plaguing the world today make evident the mutual inter-dependence and vulnerability of people and nations. The idea of human security has gained increasing significance within this increasingly complex and interconnected world. Human security places emphasis on the security needs of individual citizens, rather than being preoccupied by traditional, state-centric conceptions of security. It takes into account the impact of security threats such as economic crises, pandemics, and climate change on the lives of individuals within and across national boundaries. The course thus draws attention to alternative interpretations of what constitute security threats and how to contend with the underlying causes of volatility and human insecurity that prevail around the world.

AS.470.666. Institutional Fundraising: Raising Maximum Dollars from Government Agencies, Corporations and Foundations. 3 Credits.
In this hands-on course, we’ll help you understand the fundamentals of securing funds from institutional donors. As a staff or board leader of a non-profit, understanding the ins and outs of raising funds for priority projects and capacity building from government agencies, corporations and foundations will add to your toolkit for moving your organization forward. We’ll cover how this aspect of fundraising fits into your overall fundraising strategy and plan. We’ll help you identify the right potential funders for important projects, learn how to land capacity-building funds you can use to grow and sustain your organization, cover the basics of relationship-building with institutional decision-makers, help you use data to build credibility with funders, create pitch-perfect corporate presentations and dive into the process of writing winning proposals and applications. Finally, we’ll cover fulfillment and stewardship. Elective course for the Certificate in Nonprofit Management.

AS.470.667. Machine Learning and Neural Networks. 3 Credits.
Machine learning and, more broadly, artificial intelligence, has recently had a series of unprecedented successes in performing tasks such as image recognition and autonomously playing video games at a higher level of accuracy and performance than humans. These successes are driven by accelerated developments in machine learning, notably neural networks. This course covers a variety of machine learning algorithms from linear regression to nonlinear neural networks. Students will learn to implement these algorithms and understand how they work. Further, students will learn how to select and implement an appropriate algorithm depending on the type of dataset they have, and will be able to use the algorithm to generate predictions. Prerequisite: 470.681 Statistics and Political AnalysisThis course will cover a variety of machine learning algorithms from linear regression to nonlinear neural networks. Students will learn to implement these algorithms and understand how they work. Further, students will learn how to select and implement an appropriate algorithm depending on the type of dataset they have, and will be able to use the algorithm to generate predictions. <p>Prerequisite: 470.681 Statistics and Political Analysis.</p> IMPORTANT: Students are REQUIRED to bring a laptop to class; the laptop should be a PC or Mac laptop (not chromebook) with 4GB RAM (preferably 8GB) minimum. Please contact the instructor with questions. <p></p>

AS.470.668. The Politics and Process of American Foreign Policy. 3 Credits.
Overuse is not the only problem with the maxim that American “politics stop at the water’s edge.” The slogan has simply never been true. American foreign policy has always been a result not just of the crises and opportunities the nation has faced but its unique politics and policy processes. American national interests are determined through the democratic processes established by the Constitution and other legislation and affected by the politics that drive the nation’s elections, its conversations and its foreign policies. These politics and processes have been remarkably consistent since the founding even as the nation’s interests have grown significantly. A better understanding of both the politics and processes of American foreign policy will help students appreciate how the country’s policies are made today and will be made in the future.
AS.470.670. The Practice & Politics of U.S. Tax Policy. 3 Credits.
Benjamin Franklin famously observed that “nothing can be said to be certain, except death and taxes.” Since Franklin’s day, however, both the form and prevalence of taxation have undergone a dramatic global transformation. This course will review the history of U.S. federal taxation and delve into the practical mechanics of taxation. It will provide students with an understanding of the processes, institutions, and political influences that shape tax policy. Finally, it will examine alternative methods of taxation and consider what the future may hold for federal tax policy. (Recommended elective for MA in Public Management)

AS.470.671. Risk Management in the Public Sector. 3 Credits.
The demand for robust and resilient risk management practices is increasing in the public sector as organizations continue to struggle with explicitly integrating risks into their executive decision making processes. OMB’s recent revision of A-123 places additional pressure on this imperative. The objective of this course is to introduce students to fundamental risk management and measurement practices and demonstrate their relevance to the government sector. It will help students understand risk management principles and practices and how they might apply to their organization. The goal is to give students a comprehensive view of both the risk management processes and some of the key measurement tools for understanding and mitigating operational, credit, market and enterprise risks exposures.

AS.470.672. Evolution of American Intelligence. 3 Credits.
This course explores the development of US intelligence system and the ways in which it has influenced (and been influenced by) world events. The goal is to understand how an intelligence system evolves as a result of changes in national strategy, technology, and legal & policy factors. By investigating the US intelligence system, students will develop their analytical skills and increase their understanding of the workings of foreign and security policies. The approach will be historical and topical. The history of US intelligence offers a surprising number of illustrative cases and themes—many of which can now be examined in detail using official records and contrarian views, and can even be compared with analogues across nations and time periods. More-recent events are not as well documented in the public, official record, of course, but an understanding of earlier patterns and activities can provide valid insights on contemporary trends.

AS.470.673. Data Visualization. 3 Credits.
This course instructs students in various visualization techniques and software, including R, Tableau, and vector graphics software (e.g., Adobe Illustrator, Inkscape). Students will learn how to ask interesting questions about politics; identify data that can be used to answer those questions; collect, clean and document the data; explore and analyze the data with statistical and graphical techniques; and create compelling, informative and accurate visualizations and present these visualizations to educated audiences. Prerequisite: 470.681 Probability and Statistics

AS.470.674. Advanced Data Visualization: Interactive Web Graphics. 3 Credits.
This course advances students’ understanding of modern data visualization by introducing concepts and tools that enable unconstrained graphical representation of information. Students will learn to create any visualization they can imagine with the expressive and powerful D3 library, used by organizations like the New York Times, the Guardian, and the Urban Institute. The course will examine the design and development of dynamic, interactive presentations that allow for personalized and non-linear modes of data exploration. Each student will publish a final project live on the web, employing the same tools and processes used by professional information designers and web developers, including HTML, CSS, Javascript, version control, and rapid application development. Prerequisite: 470.673 Data Visualization. Note: This course requires students to bring a laptop to on-site class meetings. Prerequisite(s): You must take AS.470.673 prior to enrolling in AS.470.674

AS.470.675. Measurement for Government Analytics. 3 Credits.
Many of the questions posed to government and NGO researchers involve trying to systematically analyze hard-to-measure ideas. Was a program successful? How much popular support might there be for a policy that the public knows little about? How democratic is a country? This course will introduce students to the challenges of and strategies for successfully approaching measurement for government analytics. The focus is on the tasks of conceptualization, operationalization, data collection, and data validation for government analytics. Students will learn to both evaluate and use existing data sources for their own research as well as strategies for collecting and assessing original data.

AS.470.676. From al-Qaeda to Islamic State: Understanding the Roots of the Global Jihad Movement. 3 Credits.
No topic has captured the public imagination of late quite so dramatically as the specter of global jihadism. While much has been said about the way jihadists behave, their ideology remains poorly understood. This course aims to help students explore the intellectual development of jihadist ideology, focusing on how conflict has shaped Islamic theology and law. We go from the movement’s origins in the mountains of the Hindu Kush to the jihadist insurgencies of the 1990s and the 9/11 wars. What emerges is the story of a pragmatic but resilient warrior doctrine that often struggles, as so many utopian ideologies do, to consolidate the idealism of theory with the reality of practice.

AS.470.677. The Invisible Primaries: Building Successful Strategies to Win 2020. 3 Credits.
Our interesting and interactive course will focus on the ongoing 2020 presidential campaign as it is actively unfolding in early 2019. We will analyze the background and personality of the candidates and see how they sell themselves to the voters in the “invisible primary” stage. Questions we will explore include: how and why a candidate decides to run for the presidency as well as what early media strategies emerge and how views on key issues of the day from health care to immigration to Syria and North Korea will figure into the campaigns. Running for president is similar to building a huge Fortune 500 corporation starting 50 state subsidiary offices with the one and only product being the candidate. And, we will be inviting most of the presidential candidates to speak at Hopkins.
AS.470.679. Armed Social Movements: Terrorism Insurgency and Crime. 3 Credits.
Drawing on the social movement literature, this course examines the emergence of irregular armed groups and their decisions to use violence. It explains how social movements turn violent, how violence dictates their nature, and what this nature can tell us in terms of group strengths and weaknesses. It provides the students with the analytical tools needed to distinguish between terrorism, insurgency, and crime – by focusing and understanding group strategies, behavior, and capabilities. Students will thus be familiarized with the theory on armed group formation and evolution – but the course goes further, by counterposing such theory to the complexities of practice through the consideration of key case studies. The course ends with an overview of state strategies intended to counter a wide variety of threats. Particular attention is paid to the notion of operational art and lines of effort to underline the potential and meaning of counterterrorism and counterinsurgency.

AS.470.681. Probability and Statistics. 3 Credits.
This course introduces students to the fundamentals of statistical analysis as well as the R programming language and RStudio environment. Students will learn the building blocks of descriptive and causal inference, including summary statistics, survey sampling, measurement, hypothesis testing, linear regression and probability theory. Students will also learn how to create data visualizations in R, including times series plots, scatter plots and bar graphs. In addition, students will focus on interpreting statistical findings and presenting results in a compelling manner. By the end of the course, students will be able to conduct a statistical analysis to answer a meaningful policy question and will be prepared to take more advanced methods courses. Prerequisites: none

AS.470.682. Mission Meets Profit: Building a Social Enterprise. 3 Credits.
The goal of this course is a comprehensive examination of social enterprises- organizations that, broadly speaking, “apply commercial strategies to maximize improvements in human and environmental well-being”. Social enterprises are a relatively new, 21st century phenomenon, and are typically referred to as hybrids of nonprofits and for-profits. While they are similar to nonprofits in that their missions and social or environmental objectives drive their very existence, social enterprises can have different structures than traditional 501©3s- some much more complex, legally and otherwise. Throughout the course we will learn about the various types of social enterprises that exist, comparing US models to models operating internationally, and analyze their pros and cons, challenges and opportunities. We will also explore how social enterprises challenge traditional business and nonprofit paradigms, what role social enterprises have come to play in international development, and finally, how to go about developing your own social enterprise. Elective course for the Certificate in Nonprofit Management.

AS.470.684. Legislative Language and Policymaking. 3 Credits.
This course examines the process of drafting legislation and the consequences of legislative language in the implementation and adjudication of federal policies. Focusing on the various stages of the legislative process, this course considers the expert and political sources of the legislative language in the U.S. Congress and the importance of language in coalition building for policy passage. Examining the interactions of Congress with the other branches of government, the course also considers how presidents, the executive branch, and the judiciary interpret statutory language.

AS.470.685. The Challenge of Change: Innovation in Military Affairs. 3 Credits.
Change is perennial in national security and military affairs, but knowing how, why, and when to embrace change is both difficult and vital. Strategies and tactics may be outdated, new ideas may be resisted, and science and technology continue to change our world faster than we can optimize. The paradox deepens with context: innovation in peacetime has one logic while innovation in war has another. This course unravels the nature of change in military affairs through four themes: ideas, materials, human capital and structure, and, appreciation of the enemy. The course explores these themes through a series of case studies from around the world. Topics include civilian development/military application of science and technology; learning from failure and success (including from other nations); institutional reactions to change; procurement and the role of industry; and, the impact and limitations of individual “champions” of change.

AS.470.686. Contemporary Congressional Politics. 3 Credits.
What are the political forces that shape the contemporary Congress and how does Congress, in turn, re-shape American politics? This course considers how political, social, and technological changes outside the institution help to explain contemporary congressional politics. Topics include: Congress’s role in the separation of powers; its responsiveness to interest groups, ideology, and partisanship; competitiveness in congressional elections and constituency representation; and contemporary media politics.

AS.470.688. Political Institutions and the Policy Process. 3 Credits.
Bridging the divide between political science theories of policymaking and the actual workings of the policy process in the institutions of national government, this course examines the individual contributions of each of the legislative, executive, and judicial branches of government as well as the interactions and struggles between those branches. How do these various institutions set the policy agenda, develop and deliberate policy alternatives, make authoritative policy decisions, and implement those decisions? In what ways are the interactions between these institutions best considered conflict or cooperation? Also, how do outside actors and institutions – the media, interest groups, public opinion, parties and campaigns – affect policymaking in these various institutional settings? Drawing on the Constitutional design and historical development of these institutions as well as contemporary practice, this course examines the purposes, processes, and outcomes of policymaking from an institutional perspective.

AS.470.689. NGOs in Development and Global Policy-Making. 3 Credits.
(Formerly Overview of Global Public and Nonprofit Relationship). This course provides an overview of the role of both national and international non-governmental organizations (NGOs) in processes of development, humanitarian response, and the promotion of human rights and active citizenship. The last decade has been one of rapid change in which NGO relationships with government, the private sector, and donors has been in a state of flux, with unprecedented challenges raised about the legitimacy and effectiveness of NGO actors. The course will look at how systemic changes the evolution of transnational advocacy, the aid effectiveness process, the emergence of new development actors from countries (such as India, China and Brazil) to the primacy of the private sector has influenced NGOs. Elective course for the Certificate in Nonprofit Management.
AS.470.692. Military Strategy & National Policy. 3 Credits.
This course examines how states (primarily the United States) and other political entities harness military capabilities to pursue policy objectives. It exposes students to levels of strategy—grand strategy, strategy, operations, and tactics—in a national security context. The course will then focus on the practical implications and unique characteristics of military strategy. Students will critically examine topics such as civil-military relations, land warfare, naval warfare, theories of airpower, insurgency and counterinsurgency, and nuclear warfare. The goal is to understand the embedded assumptions of the various theories, the characteristics of the military capabilities animated by them, and, through discussion and case studies, the strengths and limitations of each.

AS.470.693. Comparative Democracies. 3 Credits.
This course uses the comparative method to look at the varieties of democracies that exist today. In the course, we will ask what is democracy, how do we measure it, and how does it vary across space and time? We will look at how democracy manifests in different constitutional forms e.g. parliamentary versus presidential. We will examine how different electoral and party systems influence variation in outcome within the set of democracies, and how social cleavages interact with, and are molded by, these systems. Further, we will use the answers to these questions to explore the issue of democratic consolidation and to ask why some countries become and stay democratic, while others do not. Case studies will be drawn from Europe, Latin America and Asia.

AS.470.694. Big Data Management Systems. 3 Credits.
This course introduces students to big data management systems such as the Hadoop system, MongoDB, Amazon AWS, and Microsoft Azure. The course covers the basics of the Apache Hadoop platform and Hadoop ecosystem; the Hadoop distributed file system (HDFS); MapReduce; common big data tools such as Pig (a procedural data processing language for Hadoop parallel computation), Hive (a declarative SQL-like language to handle Hadoop jobs), HBase (the most popular NoSQL database), and YARN. MongoDB is a popular NoSQL database that handles documents in a free schema design, which gives the developer great flexibility to store and use data. We cover aspects of the cloud computing model with respect to virtualization, multiitenancy, privacy, security, and cloud data management.

Prerequisite: 470.763 Database Management Systems. Technology Requirements: A 64-bit computer with a chip that supports virtualization (set via BIOS) Windows Operating System 7, 8, or 10 at least 8 GB of Physical RAM Oracle VirtualBox version 4.2 (free) Please be in touch with the instructor with questions about the technology requirements.

AS.470.695. Proseminar: Essentials of Public and Private Management. 3 Credits.
(The purpose of the class is to help equip students to operate effectively in both the public and private sectors. The class will cover three major topics: (1) an overview of managing public and private organizations, with special attention to their differing missions, capabilities, and environments; (2) a survey of important relationships between the public and private sectors; and (3) the need for improved coordination between the public and private sectors to achieve important public purposes. Students will be encouraged to make the course an interactive one and to share their personal knowledge in the context of the issues discussed. Students will be expected to complete a significant paper on a relevant topic approved by the instructor. Core course for the MA in Public Management and the MA in Government/MBA program)

AS.470.697. Intelligence and Counterterrorism. 3 Credits.
Counterterrorism is essentially an intelligence war. By definition, both sides use small forces and clandestine means, hiding their presence and activities not only from each other, but often from friends and allies as well. This course will explore the many roles of intelligence in every facet of counterterrorism, and ask students to evaluate their practical, legal, and moral effects and implications. It will also look at the terrorists’ own intelligence activities, and the “intelligence race” between terrorists and counterterrorists. There are no pre-requisites for this course. However, students would be well served to have a basic familiarity with intelligence and terrorism before the class starts.

AS.470.698. American Exceptionalism. 3 Credits.
This course will seek to give students a deeper understanding of where the idea of American exceptionalism comes from and what its implications are for America, both domestically and abroad. Students will gain this understanding from reading classic works in the area that trace America’s political development, starting with its Puritan heritage. Early American works will be studied from this period, along with Alexis de Toqueville’s Democracy in America. Seminal works of modern political science scholarship on this question will also be assigned, including works from Seymour Martin Lipset, Louis Hartz, Daniel Boorstin, and others. The course will then extrapolate from these historic roots to contemporary issues of America’s foreign policy and rationale for its foreign interventions. The course will conclude with questions of America’s standing in the world, which has in recent years, declined and seek to understand why this is so and what it means for the future understanding of American exceptionalism.

AS.470.699. Applied Performance Analytics. 3 Credits.
Data are everywhere, and many elected officials and government managers understand they need it. But how can they use it to solve problems and shape policy? What is the best way to make decisions based on a data analysis? How can they communicate those decisions, and the rationale behind them, to employees, citizens, and stakeholders? This course will provide students with an experiential learning opportunity based on real-world scenarios. Students will each take on a role (mayor, police commissioner, human capital director, budget director, public works director, public health director) and participate in a simulated public policy scenario. Working in small groups, students will apply a practical performance analytics process to develop solutions to address governmental challenges. Students will begin by studying foundational concepts and techniques of data collection, analytics, and decision support. They will also learn how to navigate multiple interests, asymmetrical information, and competing political agendas as they make difficult decisions about resource allocation and public policy. Along the way, they will learn how to turn insights into action by effectively communicating the results of analysis to busy executives and decision makers at all levels of the organization. Prerequisites: none required (470.681 Probability and Statistics recommended)
AS.470.700. Cloud Computing in the Public Sector. 3 Credits.
This course provides insights into how to utilize shared cloud computing resources through a service provider. These resources can be storage space, software as a service, or compute servers. This is a hands-on course in which students will access a variety of cloud services and work with different cloud providers such as Apple, Microsoft, Google, and Amazon. Students will set up virtual servers, work with cloud file storage, learn about a variety of cloud collaboration options, and much more. This practical course will help students make the transition to working in the cloud from any device, anywhere, anytime. All areas of the public sector, such as education, healthcare and law enforcement, increasingly use cloud computing both to deliver information to clients and share information within and across agencies. No prerequisite

AS.470.701. Congress: Why the First Branch Matters. 3 Credits.
Congress is the First Branch, "the People's Branch," and one of the most powerful legislatures the world has ever known. At this moment in history, however, the people do not assess the institution favorably and political scientists and pundits have declared it the "broken branch." Is Congress "broken" or merely reflective of our political times? In an era of "unorthodox lawmaking" is a return to "regular order" and "textbook lawmaking" realistic or a fantasy? This course will discuss these questions in the context of the evolving nature of Congress as an institution. The class will examine the institutional development of Congress and explore changes in its representative and legislative functions, as well as constitutional responsibility of holding the "power of the purse." Congress remains a dynamic institution and it behooves citizens to understand its complexity and centrality to governance in the U.S.

AS.470.703. Urban Data Analytics. 3 Credits.
This class applies data analytic skills to the urban context, analyzing urban problems and datasets. Students will develop the statistical skills to complete data-driven analytical projects using data from city agencies, federal census data, and other sources, including NGOs that work with cities. We will examine a variety of data sets and research projects both historical and contemporary that examine urban problems from a quantitative perspective. Over the course of the term, each student will work on a real-world urban data problem, developing the project from start to finish, including identifying the issue, developing the research project, gathering data, analyzing the data, and producing a finished research paper. Prerequisite: 470.681 Probability and Statistics

AS.470.704. Strategies in Insurgent and Asymmetric Warfare. 3 Credits.
This class examines the phenomenon of irregular warfare—of insurgencies and counterinsurgencies in particular—through a historical lens. The course will give you students insight into the origins, objectives, strategies, and tactics of irregular wars, as well as the principles of counterinsurgency theory and practice. Through the course, you will analyze current irregular wars, understand what caused them and whether they are likely to be successful or unsuccessful, and see how they can be combated.

AS.470.705. The Midterm Elections and the Media in the Trump Era. 3 Credits.
Historically, the party out of power gains seats in the House and Senate in midterm elections. Historically, when there is a president with low poll ratings like Trump has today, the opposition party wins seats in Congress. However, with the polarization of our politics and the constant tweets of our president the 2018 midterm elections for the House, Senate, Governor's races and state legislatures could be much different than analysts are predicting. The interactive class will follow the 2018 midterms in real time as the campaigns are taking place all the way through to election day in November. Social media will play a prominent role in the midterms and we will discuss and analyze the social media and traditional media platforms of the candidates. Plus we will discuss how the so-called mainstream media and other media are covering the midterm elections. We will look at the key issues of the campaign: Is Trump the main issue for many voters? Will issues of impeachment and Special Counsel affect voters? Is immigration and health care the key domestic issues? What role will North Korea, Iran, Syria, Mideast peace, Russian meddling in our elections play in the midterms? We will discuss and analyze whether Democrats move too far to the left and Republicans move too far to the right to capture the votes of their base. And, we will look at the winning campaign strategies of the new members of Congress and how they ran victorious campaigns in the Trump era.

AS.470.706. American Military History from the World Wars to Today. 3 Credits.
This course familiarizes students with the general contours of US national security strategy and military policy from the First World War through the so-called "Long War" era of Iraq and Afghanistan. The United States has a long, complex, and increasingly dysfunctional relationship with the use of violence in pursuit of policy aims (war). The institutions of the United States with responsibility for war-making have, over the past century, been shaped by powerful forces of change and continuity as the US adapts to the evolving character of war. Students will develop an appreciation for these factors that have shaped US security policy since WWI, be able to frame current policy debates in that context, and be able to forecast potential implications for the decades ahead.

AS.470.707. International Security and Intelligence. 3 Credits.
This course offers a unique opportunity to work with leading British and American practitioners and academics from the security and intelligence worlds. It considers the claims of state secrecy, the threat of nuclear proliferation, of cyberattack, terrorism, the problems generated by the demand for regional security, and the security challenges of revolutions and governing diversity. Intelligence collection, analysis of the product, and its dissemination to customers remain at the core of the intelligence cycle. Counterintelligence and covert action play more opaque but still vital roles at the heart of the nation state. Understanding these perspectives, what intelligence can achieve, but also its limitations, are major themes. This four-week course is offered at Cambridge University in the United Kingdom.
AS.470.708. Unleashing Open Data with Python. 3 Credits.
Learning the basics of the computing language, Python, empowers people to retrieve and analyze data in new ways. During the course, students with no prior coding experience will learn how to gather and analyze data in ways that are not possible without the assistance of programming. After covering the fundamentals of syntax and logical thinking, students learn how to read, create and edit files. Then, building on that knowledge, students interact with online resources through web scraping and APIs. Finally, students will use the data they collected to create their own analysis and publish their research to a website. The class equips students to add programming components to their future work, giving them an advantage in a competitive workplace.

AS.470.709. Quantitative Methods. 3 Credits.
Developing solutions to policy problems increasingly requires a data-driven approach. Government agencies analyze data to evaluate programs. Research organizations use data to better understand policy effects. Private companies analyze data to develop their policy positions. This course will provide students with the knowledge and skills needed to perform a cutting-edge statistical analysis. Students will learn how to design and test regression models using Stata, an incredibly powerful and widely used statistical software package. Other topics include interaction terms, measures of fit, internal and external validity, logistic and probit regression, and translating statistical findings for broad audiences. The focus of the course will be on using statistical methods in an applied manner; we will concentrate on using statistics to answer meaningful policy questions. Prerequisite: 470.681 Probability and Statistics

AS.470.710. Advanced Quantitative Methods. 3 Credits.
This course builds upon the concepts taught in 470.709 Quantitative Methods. Students will learn how to construct and evaluate advanced regression models. Topics include experimental data, instrumental variables, panel data, matching and multiple imputation. In addition, you will learn how to use Latex, which is a document preparation system that allows you to incorporate mathematical language, tables and figures into a document in a user-friendly manner. Latex is also incredibly useful for managing references and preparing professional slide presentations. As a culminating project, students will critically evaluate a scholarly article that uses methods covered in the course. Prerequisite: 470.709 Quantitative Methods

AS.470.713. Resisting Tyranny: Strategic Nonviolent Conflict. 3 Credits.
War practitioners, policy makers, and security studies scholars study asymmetric warfare to understand why poorly armed insurgents effectively resist and even defeat technologically advanced and materially stronger armies. This course studies a perfect asymmetry in nonviolent warfare where unarmed ordinary people are able to effectively challenge and eventually defeat a fully armed, resource-rich regimes. In fact, historically, nonviolent movements have been twice as effective against violent regimes as armed insurgencies. This course will consider skills of organized populations in inter-state and intra-state conflicts, including anti-dictatorship, anti-occupation, anti-corruption, anti-violence struggles and analyze how disciplined civilians use nonviolent strategies and tactics to galvanize large and diverse participation, place their violent opponents in dilemma, make repression backfire and cause defections among adversaries’ pillars of support.

AS.470.715. Political Conventions: Communication, Campaigning, and Controversy. 3 Credits.
This class will examine the history of national political conventions from its earliest days to current time, culminating with conventions this summer in Milwaukee and Charlotte. With winner-take-all primaries a thing of the past we could very likely see a brokered convention in Milwaukee for the Democrats this summer. Will Sanders try to change the convention rules if denied the nomination. Will Biden get the support of the superdelegates? Will Mayor Pete and Mayor Bloomberg still be competitive? Will Senators Klobuchar and Warren rally at the convention? In addition, the class will look at the likely "lovefest" convention the Republicans will hold in Charlotte in August. Will there be any disputes on the GOP platform on issues from immigration to health care? We will hold mock GOP and Democratic Conventions in class and discuss the up to the minute political news the first part of each class. We will discuss the role of social media (Trump's tweets) and current events as they arise in real-time in this lively and interactive class!

AS.470.720. Rhetoric v. Reality in Politics: US Campaigns and Elections. 3 Credits.
The art of political persuasion has evolved rapidly in the past few centuries, but the present mimics the past. Conventional political wisdom asserts that the 2020 election – with the bombastic Donald Trump and a slate of unconventional freshmen Democrats on the ballot – is unlike any witnessed in the nation’s history, but with the increase in partisanship over the last few decades, can voters really be persuaded or dissuaded from voting straight party line tickets in November 2020? This course will seek to answer that question in real time, as the students and professor slowly unwrap and examine the packaging – verbal, visual and other – candidates have employed over the last few decades to sell themselves and their platforms to voters. After first laying a historical foundation for understanding the evolution, or devolution, of U.S. rhetoric and campaigns, this course will examine every twist and turn of Election 2020 with an eye towards the means of persuasion employed by candidates, surrogates and PACS. Students will also examine the role money is playing in this post-Citizens United world, along with how free – or “earned” – media and new modes of technology are being employed by contemporary campaigns. The course will also devote a substantial amount of time to examining the media’s role in how the public views current and former candidates. Guest lecturers include some of the nation’s top political reporters.
AS.470.721. Comparative Federalism: The United States and the European Union. 3 Credits.
Federalism, the division of power and sovereignty between a central authority and local governments, has emerged as one of the most important themes of contemporary Western politics in both the United States and Europe. For the United States the division of power between the Federal and State governments lies at the very heart of the American Constitution. At the same time disputes over the precise balance of Federal and State power have been a major fault line in American politics since Federalists and anti-Federalists at the time of the founding. For Europe the destruction of two World Wars showed the destructive side of nationalism and acted as an impetus to leverage Europe’s common history and cultural inheritance to forge a supranational political and economic union dedicated to peace and prosperity. Since the end of the Cold War and the Treaty of Maastricht the process of European integration has speeded up rapidly resulting in a common European currency as well as common legal and political institutions. At the same time concerns about the perceived loss of sovereignty, national identity, and democratic accountability have led in some places to backlashes against Brussels and resurgent nationalism. There is also the broader question of the European Union’s goals and identity is it principally an economic union or is it a super-state in the making? In this course we will explore Federalism in its institutional, legal, philosophical, and historical aspects in both America and Europe.

AS.470.723. Western Political and Constitutional Thought. 3 Credits.
Many of the ideas which shape today’s world: democracy, liberalism, conservatism, capitalism, socialism, nationalism - have their roots in a ‘great conversation’ (Robert Hutchins) that spans some 25 centuries from ancient Greece until today. The conversation motivating the Western tradition has included a set of perennial questions such as: Who ought to rule - and how do we decide? What is the purpose of politics? What is the best form of constitution? What makes political authority legitimate? What is political justice? What is citizenship? This course is intended as a broad survey of some of the most influential political thinkers in the intellectual tradition of Europe and America. Among the many who will be examined are: Thucydides, Plato, Aristotle, Cicero, St. Augustine, St. Thomas Aquinas, Machiavelli, Thomas Hobbes, John Locke, Voltaire, Baron de Montesquieu, Jean-Jacques Rousseau, Immanuel Kant, Adam Smith, Thomas Jefferson, Edmund Burke, Friedrich Nietzsche, G.W.F. Hegel, Karl Marx, John Stuart Mill, Leo Strauss, and Hannah Arendt.

AS.470.724. Managing Dangerous Futures: Global Political Risk Analysis. 3 Credits.
Political risk affects almost every major decision that governments, corporations, nonprofit organizations, and even individuals make, sometimes turning what appears to be a good decision into a bad one, with severe implications. However, few people really understand political risk or how it can be evaluated and mitigated. The goals of this course are to ensure that all students can assess the political risk of a particular country or situation; assess the political risk of a particular business investment; take a much broader perspective on the possible sources of political risk; understand how the way people think and groups function preclude effective decision making (thus making bad decisions more common); evaluate risks using a variety of different risk assessment tools; and leverage a variety of mechanisms to improve risk management.

AS.470.725. China’s Impact on Global Security. 3 Credits.
As China’s role on the international stage continues to grow, how will its behavior affect the dynamics of global peace and security? Beijing has long espoused a principle of non-interference in the internal affairs of other states, but China is becoming a more central player in efforts to address global security challenges. China’s diplomatic outreach in Afghanistan and the Middle East, economic investments in Pakistan and Burma, increased participation in peacekeeping operations, and more vocal presence in multilateral institutions all reflect the country’s expanding influence. Students will put themselves into the position of national security leaders in China, in the United States, and in third countries to explore a range of national interests, priorities, objectives, strategies, and policy tools.

AS.470.727. The Politics of the New Administration. 3 Credits.
The course will allow students to follow the new administration of America’s 45th president as it develops. We will study the politics of the new administration ranging from the selection of the president’s Cabinet to his major domestic programs including health care, the environment and energy programs. We will debate and discuss the new administration’s foreign policy goals and objectives around the world including Iraq and Afghanistan and the War on Terror. The main issue facing the new administration will be the economy and we will study how the new administration handles this ongoing crisis. We will compare how Franklin Roosevelt handled his first 100 days during the great Depression and compare them today’s severe recession and how the new President does or does not rise to the problem of restoring faith in the American economy. The course will also include guest speakers – from members of the new administration-and journalists who cover the White House. Students will take on the role of advisors to the president and present a paper on the political perspectives of a specific domestic or foreign policy initiative the new president has put forth. This course counts towards the concentration in Political Communication.

AS.470.728. Fundamentals of Nonprofits and Nonprofit Management. 3 Credits.
(Formerly Influence and Impact of Nonprofits). The goal of this course is to convey the history, size and impact of the nonprofit and philanthropic sector while providing the fundamentals of nonprofit management and the founding of a nonprofit organization. Successful nonprofits today must have strong management systems in place in order to assure quality programs for service and impact. These systems include management of finances, strategic planning, human resources, information technology, marketing, performance measures and other aspects of operations. The course will help the student understand the current thinking regarding ‘best practices’ in managing and improving nonprofit organizations and appreciate the interplay of environmental and organizational factors that influence managerial decision-making. Throughout the course, there will be a comparative perspective that looks at the scope and status of nongovernmental organizations in other countries and the influences on those organizations by their own governments, foreign aid and international philanthropy. Elective course for the Certificate in Nonprofit Management.
debated at the Capitol during the course on multiple mediums that's focused on one of the hot button issues being on training students to be communications experts in this new, digital environment. The main focus is him on the Hill for at least one day during the semester, though some events later on C-SPAN, though students are encouraged to shadow (some students may not be able to take time off work to accompany the reporter who is offering to bring students enrolled in his course with him to attend press conferences and/or hearings, to witness key votes and public discourse. This course will examine how innovations – like social networking, mobile platforms, behavioral targeting, etc – are providing journalists and political leaders with new ways to interact with citizens. It will look at how the rapid migration of consumers to the web is leading news organizations of all types to rethink how they organize, pay for and think about themselves. Students in this course will use real time news developments in the nation's capital as a laboratory for observing the evolving ways news sources and reporters and the public interact. Questions to be considered include whether this digitized and networked environment has implications for the pace and character of changes in public policy. The course will invite practitioners in journalism and politics who are dealing with these developments daily to share their sense of where all this is leading. This course counts towards the Political Communication Concentration.
AS.470.736. Methods of Policy Analytics. 3 Credits.
Data analytics are an essential part of program and policy evaluation. Policymakers increasingly rely upon analytics when making critical policy decisions. In this course, students will conduct a variety of policy focused data analyses using R. Students will utilize a variety of descriptive and inferential data analysis techniques to inform the design and execution of a policy. Students will utilize data-driven analysis to produce policy memoranda in a variety of domains relevant to today’s practitioners.
A good understanding of basic economics and statistics, and an understanding of American government institutions and programs, will be necessary for a student to participate effectively in the class discussions and complete the assignments. <p>A good understanding of basic economics and statistics, and an understanding of American government institutions and programs, will be necessary for a student to participate effectively in the class discussions and complete the assignments. Please contact the instructor with any questions.</p>Prerequisite: 470.681 Statistics and Political Analysis</p>

AS.470.738. Civic Technology and Smart Cities. 3 Credits.
Civic technology is an emerging field that combines the work of those in and out of government for government innovation. Civic tech initiatives have been used to extend and improve services, increase efficiency, design applications for citizen engagement, and improve communication across a variety of policy domains. Topics covered in the course include open data platforms and policies, algorithms employed in civic tech, and the civic tech organization ecosystem. Smart city technology is a distinct but related field that involves the management of city infrastructure and services with the goal of improving the quality of life of citizens through the use of information and communication technology (ICT). Topics include smart infrastructure, connected technologies, and sustainability. Students will use R to build dashboards, access open data portals, and create maps. Students will use information to identify a community need and design an application that addresses the need. Some familiarity with R programming language and the RStudio environment is necessary. Prerequisite: 470.681 Probability and Statistics

AS.470.740. Cyber Policy, Strategy, Conflict and Deterrence. 3 Credits.
This course will provide an overview of current issues in the cyber realm, focusing on policy and conflict from a U.S. and international perspective. We will begin with an understanding of the power inherent in cyberspace and consider the policy issues facing the civilian, military, intelligence and private business sectors in dealing with offensive and defensive cyber activity. Through the use of case studies, we will examine previous and ongoing cyber conflicts to understand their impacts on international relations. We will analyze the roles of several different types of cyber actors including state actors, non-state actors such as criminal and terror groups and private sector/business responses. This course will also examine the issue of cyber deterrence, and the unique aspects of offensive and defensive cyber activities by all cyber actors. A technical background is not required and basic aspects of cyber operations will be discussed and demonstrated as part of the introductory class sessions.

AS.470.741. Campaigns and Elections. 3 Credits.
This course introduces current theories and controversies concerning political campaigns and elections in the United States. We take advantage of the fact that the class meets during the ‘invisible primary’ of the 2016 presidential campaign, and students are expected to follow journalistic accounts closely. The course is split into two major parts. First, we consider the style and structure of American campaigns. For example, we ask how campaigns have changed in the last fifty years, especially concerning the role of parties, the presence of incumbency advantage, and the role of money. In addition, we consider why candidates decide to run, how they position themselves on important issues, and how they design their campaign messages. We also cover the importance of campaign polling, and the tricky task of forecasting election outcomes. Second, we explore the impact of campaigns on voters. For example, we ask whether campaigns ever convince voters to change their opinion, or whether demographic and socioeconomic factors explain most political behavior. The goal of the course is to review the importance of elections in American politics, and to provide the tools to make normative judgments about the health of American democracy.

AS.470.742. Politics of Cybersecurity. 3 Credits.
In recent years, the United States has become dependent on cyber virtual networks as the engine for our society. However, this digital infrastructure remains extremely vulnerable to cyber attacks. Protecting the networks we rely on presents unique challenges, as networks are without borders and bear the stress of attack millions of times each day. This course will explore the challenges and political factors impacting the judicial, legislative, executive branch agencies of Department of Defense, Homeland Security, National Security Agency, and private industry as they all work to secure and create a national cyber security apparatus. The intelligence community is facing an enormous challenge in working to prevent the transfer of the United States’ intellectual property and identifying the cyber attackers. We will discuss the political implications of establishing laws addressing how information is to be shared between governments and industry and the authorities needed for the DoD and intelligence community to operate domestically. We will discuss the impact of the creation of the Department of Homeland Security and examine the evolving relationship of Congressional oversight and legislative mandates. Issues such as jurisdiction of congressional committees, the budget, and the authorization and appropriations processes will be covered. Major policy and counter-terrorism issues of special concern to Congress will also be addressed in this course. Guest speakers will be invited from DHS, Capitol Hill and the media, allowing us to examine the issues from a variety or perspectives.

AS.470.743. Data Mining and Predictive Analytics. 3 Credits.
Many government agencies engage in data mining to detect unforeseen patterns and advanced analytics (such as classification techniques) to predict future outcomes. In this course, students will utilize IBM SPSS Modeler to investigate patterns and derive predictions in policy areas such as fraud, healthcare, fundraising, human resource and others. In addition, students will build segmentation models using clustering techniques in an applied manner. Integration with other statistical tools and visualization options will also be discussed. Prerequisite: 470.681 Probability and Statistics; Recommended: 470.709 Quantitative Methods
AS.470.744. Trade and Security. 3 Credits.
Since World War II, American trade policy has been implemented through agreements with a growing array of foreign governments to encourage global economic integration by lowering barriers to international trade. The course will begin with a look at the foundation of this approach to trade policy at the end of World War II and the relationship the Roosevelt and Truman administrations saw between integration and security policy. It will then introduce students to the American trade regime of the early 21st century and the WTO, and examine the ways the U.S. governments has adapted this regime to regional challenges arising from relationships with Japan, China, and the Muslim world, and to policy issues, like resource dependence, sanctions and export controls. The course will have a midterm exam on America's trade regime and the concepts that have shaped it, and a final paper, in which students will examine an issue of their choice in depth. (Recommended elective for MA in Public Management)

AS.470.745. Terrorist Financing Analysis and Counterterrorist Finance Techniques. 3 Credits.
The course examines how terrorist groups finance their operations. It also explores current policy approaches to curb financial support to terrorists through the application of U.S. and international sanctions, in particular how multilateral fora, such as the United Nations and the Financial Action Task Force, disrupt and deter terrorist financing. At the completion of this course, students will have a better understanding of the key tools, including law enforcement, diplomacy, and intelligence, that are used to counter terrorists' financial networks and activities. Through this course, students will develop proficiency in a series of analytic methods used to study terrorist financing and counter financing. Students will use structured analytic tools such as weighted ranking methods, scenario trees, causal flow diagramming, hypothesis testing, and utility analysis, as well as game theory and logic to form analytic judgments. Prior coursework or professional experience in intelligence, (counter) terrorism, or finance recommended.

AS.470.746. Iran: Security Policy of a Revolutionary State. 3 Credits.
This course will provide the analytical and contextual skills required to understand the current political and security situation of Iran. After laying out the context of the Iranian Revolution through a brief examination of the Pahlavi years, the course then weaves together Iran's political, military, diplomatic, social, economic development during the turbulent years between Iran's 1978-1979 revolution and the 2015 nuclear agreement—covering a time period of roughly 1941 to the present day. This course covers three main inter-related topics: the history and development of the modern Iranian state; the interaction between state and society in modern Iran; and Iran's diplomatic history in the 20th and 21st centuries. The course concludes with a discussion of Iran's present-day foreign, security, and defense structures and processes.

AS.470.747. The FBI and Fusion Centers: Information Sharing in the Post 9/11 World. 3 Credits.
This course examines the “fusion” of information gathering and sharing between the Federal Bureau of Investigation (FBI) and the 79 fusion centers in a Post-9/11 World. We will address federal, state, and international law enforcement jurisdictional issues, the balancing of privacy/civil liberties with information collection/dissemination, and overall assistance to state/local authorities during critical incidents. Students will address broad public policy and perception implications inherent in law enforcement activities. Students will also analyze and discuss case studies such as the Las Vegas Concert, the Orlando Night Club, and the San Bernardino shootings to illustrate the need for timely fusion of information between federal and state law enforcement. The readings and videos will include a variety of diverse and opposing viewpoints relative to law enforcement with practicums and simulations to allow debate in "real-world" situations. An important objective is to determine ways to improve upon the current law enforcement landscape and generate possible solutions to ensure seamless and timely information sharing while safeguarding individual rights.

AS.470.748. The Art & Practice of Intelligence. 3 Credits.
This course introduces students to the field of intelligence, particularly as practiced in the United States. After a brief overview of the historical foundations of modern intelligence, it discusses how intelligence was conducted during the 20th century including collection, analysis, counterintelligence, covert action, and oversight. It then discusses the disruptive influences of September 11, the Iraq War, and new technologies. The course concludes with a discussion of the "democratization of intelligence."

AS.470.749. Campaigns and Running for Office. 3 Credits.
You can see yourself now – taking the oath of office, giving speeches, and making critical decisions impacting thousands or millions of people. But how do you get there? This class provides a practical guide for students who are interested in exploring a run for elected office. Students will learn how to assess if and when they are ready to run, which office to run for, and most importantly, develop the critical skills needed as a candidate to wage and win a contested campaign. These skills include writing a campaign plan and budget, hiring staff and consultants, learning how to fundraise, and working with the media. This class dispels the myth that only those independently wealthy can serve in office by giving students a real understanding of what it takes to run and win.

AS.470.750. Modern Conflict in the Middle East. 3 Credits.
This course examines the evolution of armed conflict in the Middle East over the past three decades and why the United States’ conventional military dominance has not led to lasting strategic victory. Attention will be paid to how both states and non-state actors in the region have adjusted to America (and Israel)’s overwhelming conventional military superiority through deterrent strategies, asymmetric tactics (i.e. insurgency, terrorism, tunnel warfare), and exploitation of advanced commercial technologies (i.e. improvised explosive devices, UAVs, cyberwarfare, information operations) in lethal and/or strategic operations. Students will utilize ‘rationalist’ and cultural frameworks to critically analyze these innovations across multiple conflicts/operations, including: Operations Iraqi Freedom and Inherent Resolve; various iterations of the Israeli-Palestinian conflict; the civil wars in Syria and Yemen; and strategic conflict between Iran and the United States (and Israel). The course’s objective is to provide a better understanding of the relationship between military technological capability and strategic success in modern conflict, and of the challenges U.S. policymakers may face in future conflicts both in the Middle East and globally against other great powers.
AS.470.751. Politics and Security in the Middle East. 3 Credits.  
This course examines U.S. policy responses to the changing political and security landscape of the Middle East. Bringing together historical events, primary sources and secondary literature and contextual analysis, this course provides the analytical skills required to develop a sophisticated understanding of the current political and security situation in the Middle East. Students will engage key topics in modern Middle Eastern politics and security, including the origins of Islam, Arab nationalism and its rise to prominence, the Arab-Israeli and Palestinian-Israeli conflicts, the internal/external struggles against Western imperialism, the competition among Arab states for regional dominance, the Cold War the Middle East, America’s relations with Iran and Iraq, the oil economy of the Gulf, the challenge minorities pose to the region, the rise of Islamic radicalism, the Arab Spring, and the rise and fall of the Islamic State.

AS.470.752. Intelligence Analysis. 3 Credits.  
Intelligence analysis is fundamentally about understanding and communicating to decision makers what is known, not known, and surmised, as it can best be determined. Students will read seminal texts on intelligence analysis, discuss the complex cognitive, psychological, organizational, ethical, and legal issues surrounding intelligence analysis now and in the past, and apply analytic methodologies to real-world problems.

AS.470.754. Project Management for NGOs. 3 Credits.  
This course will provide an overview on project management as it pertains to nonprofit work. The course will teach students how to manage the five aspects of project management: project initiation, planning, execution, monitoring and evaluation, and closure. Students will learn the full project cycle from start to finish, drawing on actual examples of projects funded by a diverse range of donors, public and private organizations, and foundations. The course will also utilize templates relevant to project management for students to use as a resource in the field. The class will touch on issues relevant to project management such as project scope, objectives, stakeholders, planning, financial tracking, grants compliance, and closing. Elective course towards the Project Management, Evaluation and Leadership track for the Masters in NGO Management.

AS.470.755. Sustainable Cities in Germany: Lessons for the United States. 3 Credits.  
This course addresses two important, but overlooked global urban phenomena – the development of world-class urban sustainability plans in Berlin and the Stuttgart region and their suitable transfer and application to cities in the U.S. This class will be designed to expose the student to the evolution and performance of renewable energy, public transit, water infrastructure, workforce training and social inclusion innovations - in these metropolitan regions and the ways that they may (or not) be considered suitable for adoption in the US. By the end of this course the student will have developed an appreciation for the pioneering urban sustainability programs of Berlin and Stuttgart and the phenomena of cross-national policy transfer to the U.S.

AS.470.756. Understanding Modern War. 3 Credits.  
This course examines the phenomenon of modern warfare through both a theoretical and historical lens. It will provide insight into the definitions, origins, objectives, strategies, and tactics of modern conflict. Throughout the course you will analyze recent and ongoing conventional, irregular, and hybrid wars and understand what caused them, how they were conducted, and why they ended the way they did. Through a combination of lecture and online discussion, students will analyze these conflicts from a variety of perspectives to include state security and military forces, insurgents, criminals, and terrorists. Prerequisite: AS.470.692 Military Strategy & National Policy.

AS.470.757. Language and Power: How to Understand and Use Political Speech. 3 Credits.  
Political writing is a subspecies of language with several manifestations. There is an art to the op-ed and to the editorial, to the polemical essay and to the review. Within government, there are skills particular to ghosting speeches and essays, preparing Congressional testimony, Federal commission reports, policy memoranda, and press releases. There are even special forms and qualities of expression for hosting award and memorial ceremonies, and for writing thank-you notes, toasts, and letters of condolence. <o:p></o:p></span></p><p>
This course is designed to teach an appreciation for the range and nature of political writing and speech in both its public and governmental forms. It also introduces students to the fundamental skills required to do effective political writing. The course is designed to be a writing-heavy course, because (most) people learn by doing. It will therefore be somewhat time-consuming, but within reason. <o:p></o:p></span></p><p>
AS.470.758. Data-Driven Campaigns and Elections. 3 Credits.  
Analytics inform the decision-making process, strategizing, and forecasting of modern American campaigns. This course focuses on the role that analytics play in campaigns and elections in America. Campaign strategists, policy analysts, and social scientists leverage data from voter rolls, consumption and public opinion polls to make better choices. This course surveys the theoretical and empirical literature in American electoral politics to examine how campaigns and political organizations are using field experiments, microtargeting, and public opinion polling to tackle the challenges of getting out the vote and increasing registration and voting rates. Other topics covered include voting behavior, public opinion, partisanship, and campaign finance. Students will gain a rich understanding of how analytics has become a key component of the electoral process. Students will also gain experience analyzing data through simulations and data analysis exercises. Prerequisites: none required (470.681 Probability and Statistics recommended)

AS.470.759. American Political Development. 3 Credits.  
This course examines the factors that promote stability and change in American politics. Broad in historical scope, this course considers the development of the American state and its institutions as well as the continuities and complexities of American political culture by analyzing key moments of institution-building and policy change from the American Founding to the present. Key questions include: What explains the character of the American state? What are the consequences of the American state and its policies? Is America "exceptional" in these and other regards? What roles and functions do political institutions perform? What roles do culture, ideas, and rhetoric play in social, political, and economic life? How have these various roles and functions changed over time?

AS.470.760. Comparative Intelligence Systems. 3 Credits.  
Do all countries conduct their intelligence activities in the same way? If not, what are the reasons for the differences? This class will consider theoretical ways of understanding and assessing national intelligence systems. It will look at political, historical, and cultural factors which may influence the development and functions of nations’ intelligence agencies and systems. The class will include an examination of the ‘ways of intelligence’ of the United States, the United Kingdom, the USSR/Russia, Germany, China, and Iraq, among others.
AS.470.761. Thucydides, International Politics, and War. 3 Credits.
Using the Peloponnesian War as a case study, this course will examine critical aspects of domestic and international politics and their influence on war. It will consider how systemic factors, strategy, alliances, and domestic politics impact the origins, conduct, and termination of conflict. It will also explore the tactical and human factors in ancient Greek warfare. The class will meet via live Zoom teleconferencing.

AS.470.762. Democracy and Security in Israel. 3 Credits.
The influence of the security circumstances of Israel and its point of departure as a nation for democracy in Israel will be the focus of this class. The exigencies of war put tremendous pressure on liberal-democratic ideals and institutions, and very few democracies have endured such long-term conflict as Israel has. How has Israel managed to combine security with liberty without sacrificing one to the other? How might Israel democracy better serve its multi-ethnic constituencies? What is it about the nature of Israel's institutions, its history, and its culture that enables it to persevere as a liberal democracy? With authoritarianism on the rise in the world — will Israel be able to resist it? We have planned a variety of units to look at these facets of Israeli democracy — its strengths, challenges, and vulnerabilities.

AS.470.763. Database Management Systems. 3 Credits.
This course provides students with a strong foundation in database architecture and database management systems. Students will evaluate the principles and methodologies of database design and techniques for database application development. Students will also examine the current trends in modern database technologies such as Relational Database Management Systems (RDBMS), NoSQL Databases Cloud Databases, and Graph Databases. Prerequisite: none

AS.470.764. Survey Methodology. 3 Credits.
This course is a comprehensive examination of all aspects of designing questionnaires, conducting survey research, and analyzing survey data. The class will cover question construction, measurement, sampling, weighting, response quality, scale and index construction, IRBs, ethics, integrity and quality control, modes of data collection (including telephone, mail, face to face and focus groups), post collection processing and quantitative analysis of data (including chi-square and ANOVA), as well as report writing fundamentals. The class culminates by fielding a survey of student created questions and writing an executive summary of the survey with a paper discussing the research findings. Prerequisite: 470.681 Probability and Statistics

AS.470.765. Government Regulation of Business: Price and Entry Controls. 3 Credits.
There are two main approaches for implementing government domestic policy: fiscal and regulatory. This is a one-semester course in economic regulation. Economic regulation includes use of market entry and price controls to deal with market imperfections, such as natural monopolies in which competitive markets fail. The course would cover: the nature of markets and market failure; a political economy/public choice analysis of the genesis of government intervention; an evaluation of corrective policies, and an analysis of alternative regulatory strategies. In addition to the regulation of natural monopolies, potentially competitive markets, and the problem of regulatory capture, the course would cover alternative types of environmental regulation for controlling external social costs. The class would prepare the successful student to examine and interpret problems, policies, programs, and events at all levels of government using the powerful tools of economic analysis applied to government regulation.

AS.470.766. Economic Growth: The Politics of Development in Asia, Africa and Beyond. 3 Credits.
What makes some countries grow while others do not? What accounts for successful economic development versus stagnation? As these questions become ever more relevant in an increasingly globalized world, this course offers an introduction to the topic. The class will provide an overview of the main classic and current theories of economic development. It will then go on to explore specific current issues in development, including: development aid, role of international organizations, sustainable development, corruption, institution building and regime type. Specific case studies will be examined including China and India, the East Asian 'tigers', development failures in Africa and mixed outcomes in Latin America.

AS.470.767. Defense Policy. 3 Credits.
This course describes the principal challenges facing the making of American Defense Policy and explains previous and current policies declared and practiced to meet them. The course is designed to inform students on the most pressing defense issues confronting the United States, and to present them a framework for defense policy analysis. It emphasizes understanding those defense policies, analyzing them, and considering and weighing alternative approaches to achieving national objectives of deterrence and defense. The course fosters an understanding of the array of U.S. military capabilities providing plausible responses to the use of military power in support of U.S. foreign policy objectives. It examines those policies in the areas of nuclear, conventional, and irregular forces, and weighs alternatives in shaping the size and structure of those forces to meet national objectives.

AS.470.768. Programming and Data Management. 3 Credits.
This course introduces students to the R programming language. The R language is one of the most popular tools used today for performing data analytics, statistics, machine learning, data visualization, and much more. By the end of this course, students will understand fundamental programming concepts that apply to all programming languages. These concepts include variables, functions, loops, data structures, and data types. The course will also cover the use of these tools to solve challenging data problems that students may encounter in their academic or professional careers. Note: The course overlaps a small amount with 470.681 Probability and Statistics, but this course focuses much more heavily on the fundamentals of programming. No prerequisite.

AS.470.769. Data Science for Public Policy. 3 Credits.
Data science is a methodology for extracting insights from data. This course is an introduction to the concepts and tools that are used in data science with an emphasis on their application to public policy questions. The course covers some advanced data mining and machine learning processes including classification and decision trees, random forests, cluster analysis, and outlier detection, while also providing you with training in the basics of data management and data exploration. All of the work in the course will be conducted to prepare you to proficiently conduct predictive analytics in a real-world setting. Some familiarity with R programming language and the RStudio environment is necessary. Prerequisite: 470.681 Probability and Statistics
**AS.470.770. Communicating Public Policy. 3 Credits.**
This course will introduce students to today’s most pressing public policy issues, with an emphasis on writing to achieve impact. Public policy professionals must be familiar with a variety of key issues and be able to effectively make a case for a position. This course will examine such topic areas as health care, energy/environment, fiscal policy, international trade, and education and identify core issues and the politics that characterize each of these policy areas. As part of our study, students will learn the art of writing policy memos, issue briefs, op-eds and speeches. When you complete the course successfully, you will be able to demonstrate a basic understanding of five public policy issues through various forms of writing. You will be able to effectively and succinctly write policy memos, issue briefs, op-eds, blogs and speeches, addressing a specified audience, clearly identifying the problem, and making a case for a position or solution.

**AS.470.771. Security and Politics in the South Caucasus. 3 Credits.**
This course addresses security and political issues in the South Caucasus, as well as selected economic, cultural and ethnic topics. It examines the histories of Georgia, Armenia, and Azerbaijan prior to the Russian conquest and during the imperial and Soviet periods; political continuity and change since the fall of the Soviet Union; and the origins and evolution of ethno-territorial conflicts. It discusses the region as an arena of security competition between Russia and NATO and as a venue for frozen conflicts. It also considers democratization and global energy politics as well as the role played by regional powers such as Iran and Turkey. Finally, it looks at how the European Union’s European Partnership initiative is shaping the region. After initial sessions in Washington the course moves to Tbilisi, Georgia for a week for meetings with policy makers and experts, including those on Azerbaijan and Armenia. Side trips include excursions to the area of the Russia-occupied line near South Ossetia and Georgia’s ethnic minorities. The course finishes with a concluding session in Washington.

**AS.470.772. Practical Applications of Artificial Intelligence. 3 Credits.**
This course will address the practical applications of artificial intelligence particularly in the realms of policy and governance. AI and data science are transformational technologies that hold the promise of improving lives and society at large. While excitement about AI and its applications is growing, its adoption is anything but straightforward. The successful application of AI to lower risk, better understand customers and automate decision making requires a deep knowledge of the right use cases where AI can lead to breakthrough innovations. This course will provide students with the opportunity to investigate multiple AI use cases and evaluate their merit. In addition, students will select a specific use case, develop reference architecture and determine an appropriate implementation strategy. The course will culminate in the development and delivery of a lab-to-market strategy for their selected use case. No prerequisite.

**AS.470.773. Energy and Environmental Security. 3 Credits.**
This course examines the nexus of energy, natural resources, and the environment with conflict, war, terrorism, crime, development, diplomacy, politics, and technology. Students critically examine the ways that increased competition for environmental and energy resources, strained resources, and changing conditions can threaten national security. The course also examines how such threats may be mitigated. (Core course for the MA in Global Security Studies)

**AS.470.774. Nonprofit Governance & Executive Leadership. 3 Credits.**
This course advances our understanding of self-governing nonprofit organizations by focusing on the responsibilities, expectations, challenges, and opportunities of nonprofit boards and their executive leadership. This course covers the basic responsibilities of nonprofit boards according to law, custom, and best practices, and it includes ethical concepts, public attitudes, and contemporary legislative and regulatory issues. The course explores theories of effective governance and executive leadership that have had wide influence, and how ethical considerations relate to perceptions of excellence and shape the way staff and volunteer leaders manage people and money. In the discussions, there will be opportunities to compare the role of boards in US nonprofit groups with those in other countries. Elective course for the Certificate in Nonprofit Management.

**AS.470.775. Warfare in Peacetime. 3 Credits.**
‘Warfare’ today is often ambiguous, constant, and non-violent: a combination of low intensity conflict and struggles over information via cyberspace, especially over ‘narratives’ that sway public opinion. Warfare has always included these elements, but our adversaries today fight and stay in this early stage of cyberspace operations, information operations, and limited or no kinetic conflict, careful never to escalate to state-on-state violence. This course will examine how ‘non-kinetic’ warfare (information operations, cyberspace operations, non-violent resistance) takes place today. Students will learn how the control and manipulation of information shapes national security and creates new political realities. Focus will be on Russian hybrid warfare and ‘information confrontation’, Chinese weaponization of business and cyberspace and ‘coercive gradualism’, and terrorist’s use of the internet.

**AS.470.776. Nationalism in the Democratic Age. 3 Credits.**
Nationalism and democracy have been two of the most significant forces shaping the contemporary world. The sense of nationality has provided peoples with a strong sense of shared belonging based around the ideas of a common language, land, and heritage. It has sometimes fuelled the demand for collective freedom and democratic self-determination. At the same time it has been a volatile force generating conflicts within and between nations across the globe. In Europe, the effort at forging a common European identity must confront the challenge of resurgent nationalism in traditional countries like Britain, France, and Austria. Meanwhile traditional states like Britain and Spain must themselves confront secessionist nationalism in Scotland, Catalonia, and elsewhere. The modern Middle East has been shaped in part by the conflicting goals of two major nationalist movements - Arab nationalism and Zionism. In Asia, nationalism is emerging as a dominant theme as countries like China and India rise to political and military power. In spite of economic globalization and the development of international laws and institutions, it is pivotal to understand nationalism if we are to understand world politics today.
AS.470.777. Technology and Terrorism. 3 Credits.

This course explores the phenomenon of terrorism and its nexus with technology. Beginning with an emphasis on terrorist group factors most likely to influence terrorists' perceptions and attitudes towards extant and emerging technologies, the course subsequently investigates cases of terrorist use, and noteworthy non-use, of various technologies. Students also receive a broad understanding of the evolution of technology with an emphasis on current and imminent technologies of acute security concern, including weapons of mass destruction, cyber, robotics, and nanotechnologies. The course then addresses counterterrorism technologies and potential terrorist response actions for overcoming such security efforts. Students operationalize all of these elements in the final phases of the course when engaging in Red Team exercises designed to demonstrate which types of terrorists are most likely to pursue certain types of technologies, the role of tacit versus explicit knowledge, likelihood of successful adoption, targeting options, and potential counterterrorism measures. Please note that students do not need to possess a technical background or prior knowledge of terrorism to succeed in this course.

AS.470.778. Conflict, Security, and Development. 3 Credits.

Over the last two decades, the United States and its partners have sought to "securitize" development assistance to solve a range of national security problems, from resolving conflict, countering violent extremism, insurgencies, and great powers, and promoting democracy. This seminar explores to what extent can and should development be used in these ways, what is the impact of doing so on political order, and has this shift away from supporting longer-term economic growth led to new challenges for both governments and international organizations? The course blends theory with practice and offers students an insider view into how U.S. national security policy is made. The first part of the course examines the theory and practice of using development to achieve short-term political and security goals. The second part of the course examines how the United States and other nations have attempted to address conflict and its drivers through civilian-military approaches in a number of countries.

AS.470.779. Computational Modeling for Policy and Security Analysis. 3 Credits.

This course will introduce computational modeling and demonstrate how it is used in the policy and national security realms. Specifically, the course will focus on agent-based modeling, which is a commonly-used approach to build computer models to better understand proposed policies and political behavior. Agent-based models consist of a number of diverse 'agents,' which can be individuals, groups, firms, states, etc. These agents behave according to behavioral rules determined by the researcher. The interactions with each other and their environment at the micro-level can produce emergent patterns at the macro-level. These models have been used to understand a diverse range of policy issues including voting behavior, international conflict, segregation, health policy, economic markets, ethnic conflict, and a variety of other policy issues. The course will consist of two parts: First, we will examine the theoretical perspective of computational modeling. Second, you will be introduced to a software platform that is commonly used to develop computational, and, in particular agent-based modeling. No prerequisite

AS.470.784. Technology of Weapons of Mass Destruction. 3 Credits.

Students gain the foundational knowledge behind WMD (both weapons of mass destruction and weapons of mass disruption) and about how these weapons threaten U.S. homeland security. Weapons of mass destruction traditionally include nuclear, biological, and chemical weapons, while weapons of mass disruption include radiological weapons, such as 'dirty bombs.' In addition, the course covers the technology behind three WMD delivery vehicles: ballistic missiles, cruise missiles, and unmanned aerial vehicles. In assessing each WMD threat, the course first examines the science and technology for each type of weapon and then applies this theory to real world threats emanating from state and non-state actors. Students apply this knowledge by engaging in red team exercises to identify options for preventing and reducing vulnerabilities from WMD. Please note that students do not need to have prior technical knowledge about WMD issues to succeed in this course.

AS.470.785. Nuclear Proliferation and Non-Proliferation. 3 Credits.

Since 1945, eight states have tested nuclear weapons, and perhaps a dozen others have started and stopped nuclear weapons programs. This course considers why some countries pursue nuclear weapons and why others forgo them, and an issue that bedevils both policymakers, who concerned about the spread of weapons of mass destruction, and political scientists, who attempt to explain and predict it. The class will delve into past and present examples, discussing and evaluating theories of why states pursue such weapons, the technologies that make it possible, and the policy tools available to prevent it. We will also draw on the parallel efforts to control chemical weapons, biological weapons, and ballistic missiles.

AS.470.786. Weapons of War. The Technology and Uses of Weapons. 3 Credits.

Modern warfare utilizes advanced weapons systems. This course will examine various weapon systems ranging from artillery, cruise missiles, aircraft, aircraft launched weapons, ships, submarines and unmanned systems. We will also examine strategic and tactical nuclear weapons. In the examination we will look at capabilities, concepts of operation, and issues surrounding their procurement and use. The course will also involve students working through a crisis scenario utilizing various weapon systems. No pre-existing technical knowledge is assumed nor is any required.

AS.470.789. International/Non-Governmental Organizations and Civil Society in Conflict Zones. 3 Credits.

Since the end of the Cold War the world has seen a scourge of civil conflicts emerging across the globe, such as in Bosnia, Rwanda, Darfur, DRC, South Sudan, and now Syria, global conflicts have put enormous pressure on intergovernmental bodies and governments. Whether too slow to respond, afflicted by political restraints or hindered by bureaucracy, the restrictions on international agencies and governments have often placed NGOs at the fore of response. Partnering with both national governments, military, and international agencies, NGOs have gained recognition for their role in diplomacy, conflict resolution, and peacebuilding. NGOs have gained a prominent role at helping to defuse, mitigate, and prevent conflicts strengthening their influence and recognition. This course will provide an overview on the role that international organizations and civil society (including community based organizations) can have in conflict or post-conflict torn countries. Students will learn how to build strategic partnerships when working with local organizations and NGOs. Elective course for the Certificate in Nonprofit Management.
AS.470.791. Political Writing and Communications. 3 Credits.

'Get me a press release for the candidate ASAP,' barks your boss, the campaign manager. You take a swig of your favorite caffeinated beverage and look at your screen; what will you write? This course will provide students the skills and tools they need to succeed in this situation and others. In this class, students will learn the art of political writing and communications where practitioners use speed, brevity and pith to ensure that their points are conveyed and understood. The course will give students a foundation on strategy and message development, focusing in particular on communications tools like press releases, media advisories, speeches, memos and tweets. All of the classwork and assignments will be based on political or public affairs issues. At the end of this writing intensive course, students should have the skills they need to work in communications whether it be on a political campaign, on the Hill or at a public affairs agency.

AS.470.792. Social Science in National Security and Intelligence. 3 Credits.

This course examines the role of social science in national security decision making and intelligence. The course lectures, readings and classroom discussion are intended to help students understand the ambivalent relationship between social scientists on the one hand and intelligence personnel and national security policy makers on the other. It also considers the opportunities and limitations in the ways social science could contribute to policy making and how social science has contributed to key national issues. The course will help the student become a savvy consumer of social science.

AS.470.794. Fixing American Politics. 3 Credits.

The widespread diagnosis of American politics is that it is “broken.” But what is wrong with American politics? And what, if anything, can be done to fix it? This course will examine the current problems in American politics from a historical, theoretical, and comparative perspective, and explore possible reforms that might make American politics function better.

AS.470.795. The Constitution and National Security. 3 Credits.

This course examines the interpretation of constitutional powers and rights under conditions of heightened national security. We will consider the Supreme Court’s role in constitutional interpretation, and the balance of power among the three branches. The course will also examine the tension between security and liberty during a time of war. Topics covered during this semester will include military tribunals, unitary theory of the executive, congressional oversight, war-making power, intelligence authorities, and treatment of detainees.

AS.470.796. 2020 Presidential Campaign: Pre-Primary Phase: Campaigning, Communicating & Controversy. 3 Credits.

The fall before the Iowa Caucus and New Hampshire primary is a key time for the candidates to put their presidential campaigns into high gear. The Democrat debate series will continue into the fall and we will look at the communications strategies of the candidates for the debates as well as analyze and discuss President Trump’s media and political strategy for re-election, especially how he rallies his base. The class will delve into the threat of impeachment and other congressional investigations and any impact they will have on the road to the White House. We will analyze the social media strategies of all the presidential contenders (and Trump’s Tweets as well) and look at how the mainstream media is covering the race. The class will look at fundraising, policy statements, speeches and the role of personality and character in the 2020 presidential campaign and compare to other presidential elections in American history. We hope to have several of the 2020 presidential candidates speak at Hopkins in the fall.

AS.470.797. Intelligence to Secure the Homeland and Hometown. 3 Credits.

This course provides students with an intellectual foundation for understanding the concepts underpinning homeland security intelligence, as well as an overview of the US national homeland security framework including organization and policies. It examines the underlying intellectual constructs used to frame the comprehension of security issues, intelligence based on those issues and the development of policies and strategies that lead to implementing programs that protect the United States infrastructure and its people from attack. Over the term, students will be challenged to examine the various paradigms that shape homeland security intelligence and critically apply them to contemporary homeland security challenges and examine how well or poorly these paradigms are reflected in current responses, organizations and policies.

AS.470.798. Financial Management and Analysis in Nonprofits. 3 Credits.

From the perspective of a nonprofit leader, this course provides a solid foundation in understanding key financial tools such as audits, financial statements, budgets and tax documents. Using these tools, students will analyze and assess the financial transparency, accountability, and health of various national and international organizations, determine the financial strengths and weaknesses within those organizations, learn how to use that information in the decision-making process, and finally, practice making informed recommendations to organizational leadership. This course is not designed to make students financial experts or practitioners. Instead, it is designed to enlighten students on key financial management concepts that improve their ability to be informed leaders, participants, and donors in the nonprofit sector. Students will also explore the responsibilities and consequences of international nonprofits engaging in activities in the US, as well as implications for US nonprofits operating abroad. This is an elective course for the Certificate in Nonprofit Management.

AS.470.799. State Politics: A Year in the Life. 3 Credits.

State politics and policymaking offer a fascinating contrast to the gridlock in Washington that gets all the media attention. This is a particularly timely issue to study state politics as the country gears up to elect a new president. What impact will the 2020 elections have on policymaking during this legislative session? How has the Trump presidency affected states? We will explore those questions and more in this class.

In this course, each student will be assigned to track a particular state as new legislative sessions begin. This will allow you to compare and contrast the experiences in your state with those of other classmates. During the semester, students will examine the key issues that the legislatures, governors and other branches of state government take up and how social issues, budgets and other challenges are met.
