AS.050.606. Intro to Bilingualism.
Do children get confused when they grow up exposed to more than one language? Is it possible to forget one's native language? Are the first and second language processed in different areas of the brain? How does brain damage impact the different languages of a polyglot? Does knowing a second language affect non-linguistic cognitive processing? This course will address questions such as these through an exploration of mental and neural processes underlying bilingual and multilingual language processing. Also listed as AS.050.206.

AS.050.617. Semantics I.
Also offered as AS.050.317. This is an introduction to the study of meaning in natural language. We address the conceptual and empirical issues in semantic theory and introduce some formal machinery that has been developed to deal with such problems. After discussing foundational questions, we turn to formal semantics and pragmatics, as well as their interfaces with syntax and the lexicon. Specific topics include presupposition, type-driven composition, quantification, lexical aspect, argument structure, and lexical representations of meaning.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.620. Syntax I.
Introduces the basic methods and means of analysis used in contemporary syntax investigations, practicing with data from different languages. Also offered as AS.050.320.

AS.050.622. Semantics II.
Co-taught with AS.050.322. This course extends the material in AS.050.317 to cover advanced but central topics in semantic and pragmatic theory, focusing on intensional semantics (especially possible world semantics and situation semantics). Empirical domains of interest in this class include modality, tense, grammatical aspect, conditionals, attitude and speech reports, questions, and free choice phenomena. Three core theoretical issues addressed in this class are the nature of a compositional account of the above intensional phenomena, the representations of possibilities involved, and the role of the syntax/semantics/pragmatics interface in such an account.

Prerequisite(s): AS.050.617
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.625. Phonology I.
An introduction to the basic principles underlying the mental representation and manipulation of language sounds and their relation to human perception and vocal articulation: how units of sound are both representations of possibilities involved, and the role of the syntax/semantics/pragmatics interface in such an account.

Area: Natural Sciences, Social and Behavioral Sciences

Also offered as AS.050.333. This course provides a broad survey of current research on language processing in adult native speakers and language learners. Topics include speech perception, word recognition, and sentence production and comprehension. We will discuss the nature of representations that are being constructed in real-time language use, as well as how the mental procedures for constructing linguistic representations could be studied by various behavioral and physiological measures.

Writing Intensive

Also offered as AS.050.339. This is a survey course in developmental psychology designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature, and development psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning.

AS.050.648. First Language Acquisition.
This course provides an introduction to the fields of first and second language acquisition by looking at questions such as the following: Can the grammar of a native language be learned solely on the basis of noticing statistical correlations among words? How does native language acquisition explain — or is explained by — the universal properties, shared by all languages, of words and grammars? How does being exposed to multiple languages from birth affect language acquisition and what happens when a child is not exposed to any language early in life? Does the same cognitive mechanism guide language learning in children and adults? What factors account for individual differences in ease and ultimate attainment when a second language is learned later in life? Is it possible to become indistinguishable from a native speaker in a foreign language? What changes take place in the brain when a new language is learned? Recommended background: An introductory course in a linguistic course such as world of language, phonology, or syntax as well as a linguistics course such as language and mind or bilingualism. Also offered as AS.050.348.

First language acquisition is natural and seemingly effortless. The situation is reversed when one tries to learn another language. This course discusses in what ways first and second language acquisition (SLA) differ and how individual differences of the learners as well as external factors contribute to the variability observed in rates and ultimate proficiency of second language learning in children and adults. We will discuss such topics as Universal Grammar access in early and late SLA, first language influence, critical periods, possibility of native-like attainment, and language attrition. Recommended background in AS.050.102 Language and Mind, AS.050.348 Language Acquisition, AS.050.206 Bilingualism or equivalent.

Also offered as AS.050.326. This course explores general issues and methodologies in cognitive science through the reading of classic works (from Plato and Kant through Skinner and Turing) and recent research articles to begin construction of a coherent picture of many seemingly divergent perspectives on the mind/brain. Recent brain-based computational models serve to focus discussion.
Area: Natural Sciences, Social and Behavioral Sciences

Writing Intensive

In-depth examination of the current literature on cognitive development in the context of developmental cognitive neuroscience. Meets with AS.050.332.
AS.050.658. Language & Thought.
Have you ever wondered about the relationships between language and thought? Philosophers, linguists, psychologists, evolutionary theorists and cognitive scientists have too and this course will survey the current thinking on this matter. Classical papers such as those by Whorf and Sapir, more recent philosophical papers by people such as Fodor and Dennett, and recent empirical work by linguists and psychologists on the relationship between language and thinking in development and in adults will be covered. Discussions will focus on the theoretically possible relationships between language and thought and the empirical data that speak to these.

AS.050.660. Computational Psycholinguistics.
How do we understand and produce sentences in a language we speak? How do we acquire the knowledge that underlies this ability? Computational psycholinguistics seeks to address these questions using a combination of two approaches: computational models, which aim to replicate the processes that take place in the human mind; and human experiments, which are designed to test those models. The perspective we will take in this class is that the models and experimental paradigms do not only advance our understanding of the cognitive science, but can also help us advance artificial intelligence and language technologies. While computational psycholinguistics spans all levels of linguistic structure, from speech to discourse, our focus in this class will be at the level of the sentence (syntax and semantics). The course will assume familiarity with programming and computational modeling frameworks in cognitive science, as covered by Introduction to Computational Cognitive Science or equivalent. Also offered as AS.050.360. An optional hands-on lab (AS.050.361) is offered to supplement this course. It is highly recommended that students with less extensive computational and mathematical experience register for this lab.

One of the most foundational concepts in neuroscience is the idea that neural activity encodes information about an animal's sensory environment and internal mental states. This idea is closely connected to the concept of mental representation in cognitive science and philosophy, whereby the mind is proposed to contain internal symbols that represent things in the external world. There have been many fascinating discoveries about how neural signals encode information, but we are still far from a comprehensive theory of neural representation. Recent major developments in neuroscience and machine learning have opened up a new world of possibilities for investigating the underlying principles of information coding in the brains of humans and other animals.

In this course, we will discuss primary research articles on neural representation and information processing, and students will implement computational analyses that address issues in these domains. We will mostly focus on vision as a system that illustrates broader principles of information processing in the human brain. The reading material will include work from philosophy, neuroimaging, electrophysiology, and computational modeling. The topics covered include mental and neural representation, neural tuning, population coding, information theory, encoding and decoding models, dimensionality reduction, computational models, deep learning, and other applications of machine learning in neuroscience. Enrollment is limited to Juniors and Seniors. While this class does not have formal prerequisites, programming experience (e.g., AS.250.205 Introduction to Computing) and mathematical preparation (e.g., AS.110.107 Calculus II) are essential. It is also highly recommended that students have previously taken introductory courses in cognitive or systems neuroscience (e.g., AS.050.203 Neuroscience: Cognitive) and machine learning or neural network modeling (e.g., AS.050.372 Foundations of Neural Network Theory).

This course will be devoted to the study of formal systems that have proven useful in the cognitive science of language. We will discuss a wide range of mathematical structures and techniques and demonstrate their applications in theories of grammatical competence and performance. A major goal of this course is bringing students to a point where they can evaluate the strengths and weaknesses of existing formal theories of cognitive capacities, as well as profitably engage in such formalization, constructing precise and coherent definitions and rigorous proofs. Recommended background in language and mind or computational cognitive science. Also offered as AS.050.370
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.671. Bayesian Inference.
Also offered as AS.050.371. This course introduces techniques for computational modeling of aspects of human cognition, including perception, categorization, and induction. Possible topics include maximum likelihood and Bayesian inference, structured statistical models (including hierarchical and graphical models), nonparametric models. The course emphasizes the close connections among data analysis, theory development, and modeling, with examples drawn from language and vision.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.672. Foundations of Neural Network Theory.
Introduction to continuous mathematics for cognitive science, with applications to biological and cognitive network models: real and complex numbers, differential and integral multi-variable calculus, linear algebra, dynamical systems, numerical optimization. Recommended course background in Calculus I. Also offered as AS.050.372.

The course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modelling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks. Also offered as AS.050.375.

Directed readings on current topics in cognitive science. Instructor approval required.

Participants in this graduate seminar will read and discuss current research articles in cognitive neuropsychology of vision or language, and present their own research.

Permission required. Current issues and ongoing research on human cognition are discussed.

Participants in this seminar will read and discuss current research articles in the fields of cognitive neuroscience, computational neuroscience, machine learning, and artificial intelligence. The seminar will focus on research that provides insights into the representations and algorithms of the human brain, with an emphasis on vision and natural semantic understanding.
This seminar is on computational models for vision and its interaction with language. For Cognitive Science, computational models, like Deep Nets, offer the possibility of developing computational theories which can be tested on natural, or realistically synthetic images. But Deep Nets by themselves are unable to capture the richness and flexibility of human perception, so we will discuss other classes of model with more compositional structure and ability to represent the physical properties of the 3D world. These will be related to, and motivated by, behavioral and electrophysiological experiments.

A specialized research seminar for individuals researching language acquisition, cognitive development and the interface between language and cognition. Students must actively carry out empirical or theoretical research in these areas. Permission required.

This seminar will discuss papers and ongoing research in the areas of computational cognitive neuroscience, with a focus on different areas of visual and social perception.

AS.050.814. Research Seminar in Computer Vision.
This seminar is based on topics in computational vision with the option of attending additional subgroup meetings on specific topics.

Participants in this graduate seminar will read and discuss current research articles in language development and present their own research. Permission required.

Discussion of current computational and experimental research on human language processing.

A critical analysis of current issues and debates in theoretical syntax. Discussion of on-going research.

AS.050.825. Research Seminar in Optimality Theory.
A specialized research seminar on constraint based theories of human language, including Optimality Theory, Harmonic Grammar, and Maximum Entropy models.

Readings and research presentations on varying topics in mathematics, computation, and formal linguistics with bearing on cognitive science.

AS.050.827. Research Seminar in Language Acquisition.
Focus is on current research in acquisition of syntax.

Topics range from mathematical analysis of neural networks to computational studies of linguistic structure. Focus is ongoing research and current literature.

Current topics in any area of cognitive science, including language and vision, with discussion of recent developments in theory, experimental study, and computational modeling.

AS.050.849. Teaching Practicum.
Permission required. Essential for Teaching Assistants.

Instructor permission required. Addresses professional issues such as research ethics, success on the job market and in an academic career, teaching and mentoring and differing professional standards in the sub-disciplines of cognitive science.

Independent study. Intended for graduate students who have completed all degree requirements except for their dissertation but must remain or return to residency status in order to fulfill other obligations. Advisor or department approval required

Cross Listed Courses

Computer Science

EN.601.769. Events Semantics in Theory and Practice. 3 Credits.
This course explores selected topics in the nature of event representations from the perspective of cognitive science, computer science, linguistics, and philosophy. These fields have developed a rich array of scientific theories about the representation of events, and how humans make inferences about them – we investigate how (and if) such theories could be applied to current research topics and tasks in computational semantics such as inference from text, automated summarization, veridicality assessment, and so on. In addition to classic articles dealing with formal semantic theories, the course considers available machine-readable corpora, ontologies, and related resources that bear on event structure, such as WordNet, PropBank, FrameNet, etc.. The course is aimed to marry theory with practice: students with either a computational or linguistic background are encouraged to participate. [Applications]

EN.601.783. Vision as Bayesian Inference. 3 Credits.
This is an advanced course on computer vision from a probabilistic and machine learning perspective. It covers techniques such as linear and non-linear filtering, geometry, energy function methods, markov random fields, conditional random fields, graphical models, probabilistic grammars, and deep neural networks. These are illustrated on a set of vision problems ranging from image segmentation, semantic segmentation, depth estimation, object recognition, object parsing, scene parsing, action recognition, and text captioning. [Analysis orApplications] Required course background: calculus, linear algebra (AS.110.201 or equiv.), probability and statistics (AS.553.311 or equiv.), and the ability to program in Python and C++. Background in computer vision (EN.601.461/661) and machine learning (EN.601.475) suggested but not required.

Music

AS.376.371. Introduction to Music Cognition. 3 Credits.
What underlies our aesthetic response to music? How and why are we able to identify certain sounds as music? To what extent are music and natural language similar? What is it about music that evokes such powerful emotions such as happiness and sadness? What is unique to musical creativity? Examining such questions from cognitive science, neuroscience, psychology, and philosophical perspectives, this course explores relevant research and theory in the emerging domain of music perception and cognition. Students will complete a final research paper on the topic of their choice that integrates the course material.

Area: Natural Sciences, Social and Behavioral Sciences
Cognitive science is the study of the human mind and brain, focusing on how the mind represents and manipulates knowledge and how mental representations and processes are realized in the brain. Conceiving of the mind as an abstract computing device instantiated in the brain, cognitive scientists seek to understand the mental computations underlying cognitive functioning, and how these computations are implemented by neural tissue. Also of central interest in cognitive science are questions about how cognitive functions develop, and how they break down when the brain is damaged.

Cognitive science is a relatively new field, having emerged at the interface of cognitive psychology, linguistics, neuroscience, philosophy, and computer science. As a consequence of this diverse ancestry, cognitive science incorporates a variety of perspectives and methodologies, including linguistic analysis, empirical studies of normal cognitive functioning in adults, developmental studies of children, cognitive neuropsychological research on cognitive deficits, functional neuroimaging studies, and computational modeling.

Our cognitive science undergraduate program reflects the interdisciplinary nature of the field, allowing students to approach the study of the mind and brain from multiple perspectives. Students gain broad knowledge of the field as a whole, plus a greater depth of the understanding in two of the sub-disciplines within the field. Training emphasizes not only learning about the principal theories and evidence, but also development of the conceptual and practical skills needed for understanding and conducting theoretical and empirical work in the field. Undergraduate students in the department also have many opportunities to get involved in research.

Cognitive Science Major Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1584))

The required courses for cognitive science majors are divided into five general areas, as described below. The program is structured so as to ensure some exposure to each of the five areas. In addition, it provides in-depth training in two of the areas, deemed focal areas, chosen by the student. Majors in cognitive science thus acquire a broad perspective which will enable them to situate particular research disciplines within the overall study of the mind/brain.

Focal Areas: Students must take courses in all five focal areas; however, two focal areas must be chosen in which a greater selection of courses is required. The three focal areas not chosen may be referred to as 'non focal' areas for advising purposes. Courses offered by our department and other affiliated departments (e.g., Departments of Psychological and Brain Sciences, Philosophy, Computer Science, Neuroscience, etc.) may be used to satisfy the requirements for these areas. Examples of courses that satisfy the requirements for each area can be found on our website. (http://cogsci.jhu.edu/undergraduate/cognitive-science-major/) However, please note that courses change over time, and some courses are not offered every year. The Director of Undergraduate Studies (http://advising.jhu.edu/completing-your-degree/directors-of-graduate-studies/) can answer questions about which courses qualify for each focal area.

- Cognitive Psychology/Neuropsychology
- Linguistics
- Computational Approaches to Cognition
- Neuroscience
- Philosophy of Mind

General Information

- Departmental requirements may not be taken Satisfactory/Unsatisfactory, with the exception of research and practica.
- A grade of C- or better must be earned in all major requirements.

Math

Select Math Option A or B: ²

6-8
Math Option A
Select two of the following:

AS.110.106  Calculus I (Biology and Social Sciences)
or AS.110.108 Calculus I (Physical Sciences & Engineering)

or AS.110.107 Calculus II (For Biological and Social Science)
or AS.110.110 Calculus II (For Physical Sciences and Engineering)
or AS.110.113 Honors Single Variable Calculus

or AS.110.201/212 Linear Algebra
or EN.553.291 Linear Algebra and Differential Equations

AS.150.118 Introduction to Formal Logic
AS.150.420 Mathematical Logic I
AS.050.370 Mathematical Models of Language
AS.050.371 Bayesian Inference
AS.050.372 Foundations of Neural Network Theory
EN.553.171 Discrete Mathematics

Math Option B: Statistics Sequence
AS.200.200 Research Methods in Psychology & AS.200.201 Design & Statistical Analysis for Psychology

Total Credits 36-45

1 For students with Linguistics as one of their focal areas, one intermediate or advanced foreign language course may be used to partially satisfy the upper-level course requirement for that area and one other intermediate or advanced foreign language course may be used to partially satisfy the Additional Upper-Level Elective Courses requirement.

2 For students with Cognitive Psychology/Neuropsychology as one of their focal areas, Math Option B is required and should be completed, if possible, by the end of the sophomore year.

3 Students who would like to substitute a different statistics course for one of these two Math Option B courses should consult with their Cognitive Science faculty advisor.

Sample Program
The below sample program demonstrates how a student with the focal areas of Cognitive Psychology/Neuropsychology and Linguistics might complete the Cognitive Science major requirements in four years. In this scenario, the student has not placed out of any foreign language requirements. Each student’s path through the program will have variation depending on the two focal areas they choose to pursue within the major.

Total Credits 41-56

* No more than 3 credits of cognitive science research, readings, or practica may apply toward the major requirements.

Honors and Awards
Departmental Honors
To receive Honors in Cognitive Science, graduating seniors must have a major GPA of 3.5 or higher. Students will receive a major GPA calculation worksheet from the department in their graduating semester. The worksheet must be completed and submitted to the department’s Director of Undergraduate Studies (http://advising.jhu.edu/completing-your-degree/directors-of-undergraduate-studies/) in a timely manner for review and approval. Only courses directly applied to a student's cognitive science major, including math and foreign languages, factor into the major GPA calculation. All other elective courses should be excluded from the major GPA calculation. If the GPA requirement is met, departmental honors will appear on the student's transcript and will be indicated in that year's Commencement program.

Excellence in Cognitive Science Award
Each year at Commencement, a cognitive science graduating senior with a stellar academic and research record is selected. The department’s faculty make nominations and the Director of Undergraduate Studies announces the winner. This honor is accompanied by a $500 award.
Expected Learning Outcomes

Undergraduate cognitive science majors are expected to achieve the following learning outcomes:

- Acquire a firm grasp of the basic conception of the mind and brain that defines the discipline of cognitive science.
- Develop the fundamental skills required for understanding theories, evidence, and methods in cognitive science, and for pursuing advanced training in cognitive science or one of its sub-disciplines.
- Develop a basic understanding of the major sub-disciplines of cognitive science (i.e., linguistics, cognitive psychology and neuropsychology, neuroscience, computational approaches, philosophy of mind), and the relationships among sub-disciplines.
- Develop an understanding of theories, evidence, and research methods in the principal content domains within cognitive science (e.g., language, vision).
- Gain a deeper understanding of two sub-disciplines of cognitive science, and the principal content domains within these sub-disciplines.
- Acquire the skills required for clear and cogent written and oral communication in cognitive science.

Cognitive Science, Master of Art

https://cogsci.jhu.edu/graduate/ma-program/

The Department of Cognitive Science’s one-year Master of Arts program is designed to flexibly provide graduate-level training to a wide range of students with diverse backgrounds and interests. This program is intended to appeal to students who have undergraduate degrees in linguistics, psychology, computer science, neuroscience, and other subdisciplines of cognitive science. It may be of particular interest to students who wish to strengthen their qualifications for a PhD program or a career in which an MA in cognitive science would make them more competitive.

A student in the MA program chooses to pursue either the research track or the course track. For both tracks, the student works closely with a faculty mentor throughout the program.

The MA in cognitive science allows students to develop research-oriented expertise needed to pursue a PhD at another institution or research-centered employment, and provides interdisciplinary education beyond the undergraduate level that will be useful for careers related to cognitive science.

There are many career opportunities open to those with advanced degrees in cognitive science and related fields. Outside of academia, these include positions in lab management, grant and technical writing, market research and consulting, computational linguistics, and human-computer interaction (e.g., work on automatic language production and recognition systems).

Please note that the MA program is not a pathway into the department’s PhD program. They are separate and distinct programs. Students in most cognitive science PhD programs generally earn an MA/MS degree on the way to a PhD, but most of the cognitive science departments in the U.S. do not offer stand-alone MA degrees. Few programs can provide pre-PhD training beyond the undergraduate level. The cognitive science MA program is a preparation for those wishing to pursue doctoral studies in a related field or to gain a competitive edge in the job market.

Financial Support

No regular funding is provided to students in the M.A. program, though a one-year (Spring and Fall only) 50% reduction in tuition is offered to students with JHU bachelors degrees. Students may seek funding from other sources.

Program Requirements

General Information

- Courses may not be double-counted. Each course may only be used to satisfy a single degree requirement, even if it may qualify for more than one requirement.
- All courses must be completed with a grade of B- or better, with the exception of the following courses for which a P (passing) grade will be accepted (where P = C- or better):
  - AS.360.625 Responsible Conduct of Research
  - Graduate courses in other departments only offered as Pass/Fail with written approval from the mentor and Director of Graduate Studies.
  - One Cognitive Science course may be converted to Pass/Fail with written approval from the instructor, mentor, and Director of graduate Studies.
- The majority of requirements must be completed in the spring and fall semesters. Only research ethics, research, and readings courses are offered year-round, including the summer and intersession terms.

Research
Student must work on full-time research overseen by their faculty mentor. Student registers in this course once each term: fall, intersession, spring and summer. The mentor determines the distribution of 18 credit-hours across each term.
AS.050.839 Research in Cognitive Science (4x)

Research Ethics
AS.360.625 Responsible Conduct of Research (in-person)

Capstone: Research Paper and Oral Defense
Student must produce and defend a mentor-approved research paper before two faculty members.

Expected Learning Outcomes

The MA program aims to develop and extend the knowledge and research skills of individuals interested in pursuing a PhD in a field of cognitive science or gaining research-centered employment.

Students in the MA program will:

• Acquire a strong background in the empirical findings and theoretical frameworks of one or more areas of cognitive science
• Acquire and apply analytic and technical skills needed to critically evaluate research findings, and to communicate research findings orally and in writing
• Develop the ability to conduct original problem-centered and theory-driven research in the chosen areas of study
• Gain experience with and fully participate in a collaborative lab-based community of researchers from a wide range of backgrounds and fields.

Cognitive Science, PhD

https://cogsci.jhu.edu/graduate/phd-program/

The Department of Cognitive Science's five-year PhD program has a primary goal to train a new generation of cognitive scientists who can meld multiple existing disciplines into a new, genuinely integrated science of the mind/brain. A secondary goal is to train graduates who are competitive for positions in traditional disciplinary departments at research universities. Because many of the most exciting research developments recognized within the related traditional disciplines arise through interdisciplinary research, the training in cognitive science offered by our department can promote a graduate's attractiveness as a candidate for positions in a variety of departments.

The training we offer in cognitive science is highly interdisciplinary, strongly theoretically oriented, and integrated to an extent only possible within a department of cognitive science. In addition, PhD students are provided extensive experience integrating the theory and methods of diverse cognitive sub-disciplines through specially designed integrative courses and regular seminars involving the entire department.

Our program can offer such a breadth and depth of training because, unlike departments in the allied disciplines, in a department of cognitive science, 100% of graduate training can be focused on cognition. Integrated training across the spectrum of cognitive methods allows students to emerge from graduate school as professional cognitive scientists.

Financial Support

The department provides competitive levels of funding for PhD students. This funding includes full tuition, student health insurance, and a 12-month stipend. PhD students are also given access to an annual travel/research allowance for eligible expenses. Assuming satisfactory progress toward the Ph.D. degree and continued funding levels, PhD students may expect this support to continue for five years (10 semesters).

In return, graduate students are expected to dedicate their full time and attention to coursework, teaching, research, etc. within the Department of Cognitive Science, forgoing employment outside of the department. Additionally, they are expected to apply for any outside funding (e.g. NSF fellowship, etc.) for which they are eligible as early as their first semester. Students who receive fellowships or grants are to report this information to the Chair and administrative staff of the department to work out an overall package.

Program Requirements

The Department of Cognitive Science’s PhD requirements are designed to met the goals below.

• Depth: Students become expert in their primary area of research interest and are prepared so that they will be competitive for academic positions in one of the traditional disciplines. Students take several advanced courses or participate in seminars/lab meetings that the student, in conjunction with their advisory committee, determines to be important for achieving expertise in a chosen research area and marketplace competitiveness.
  • In the specialized Computational Cognitive Science Track the students become expert in the area of CCS and are prepared so that they will be competitive in the job market. Students take several advanced courses or participate in seminars/lab meetings that the student, in conjunction with their advisory committee, determines to be important for achieving expertise in CCS research and marketplace competitiveness.

• Breadth: Students develop the ability to understand and critically evaluate work in the various sub-disciplines of cognitive science by completing courses in the areas of cognitive psychology/neuropsychology, computation, linguistics, philosophy, and cognitive neuroscience. Students may place out of breadth courses based on prior equivalent coursework or based on examination.
  • In the specialized Computational Cognitive Science Track students develop an understanding of theoretical and experimental approaches to cognitive science that complement and inform computational approaches. Students may place out of breadth courses based on prior equivalent coursework or examination.

• Integration: Students learn to integrate theory and method across sub-disciplines through a specially designed integrative course.

• Research Ethics: Students complete a research ethics course, which they are encouraged to take in their first year.
• **Professional Development:** Students attend a spring seminar devoted to professional development.

• **Training in Teaching:** Students TA three to five semesters (depending upon external funding). Students are not typically expected to TA in their first semester or in the last two semesters of residency (5th year).  

• **Research Papers and Dissertation:** Students produce two research papers prior to completing a dissertation. These papers, which are due November 1st of the second year and May 1st of the third year, draw on two different research methodologies. These two research papers are typically presented at conferences and often lead to separate journal publications.

## General PhD Track Requirements

Courses may not be double-counted to fulfill more than one degree requirement. Students are expected to attend the Cognitive Science Colloquium Series and Brown Bag Series in addition to completing course requirements.

The Computational Cognitive Science (CCS) Track (p. 1746) within the PhD program in Cognitive Science has requirements that differ somewhat from the program outlined immediately below.

### Code | Title | Credits
--- | --- | ---

#### Breadth

**One breadth course may be audited in consultation with your adviser.**

- **Cognitive Neuroscience**
  - One course

- **Philosophy**
  - One course in philosophy of mind, language, or science

- **Cognitive Psychology/Neuropsychology**
  - AS.200.657 Advanced Statistical Methods (to be completed early in the program, preferably the first semester)

  Select one of the following or an approved course/seminar on a topic outside the area of language:

  - AS.050.639 Cognitive Development

- **Computation**
  - AS.050.672 Foundations of Neural Network Theory

  Select one of the following or an approved course on Programming (C++, Java, etc.), or equivalent (e.g. computational linguistics):

  - AS.050.671 Bayesian Inference
  - AS.050.660 Computational Psycholinguistics

- **Linguistics**
  - AS.050.670 Mathematical Models of Language

  Select one of the following:

  - AS.050.617 Semantics I
  - AS.050.620 Syntax I
  - AS.050.625 Phonology I

- **Integration**
  - AS.050.626 Foundations of Cognitive Science

#### Depth: Area of Focus

Number and scope of courses selected in conjunction with adviser(s) to achieve depth in a chosen research area. Lab meetings may be used to fulfill this requirement.

- **Research Ethics**
  - AS.360.625 Responsible Conduct of Research (encouraged to complete in the first year. In-person RCR required.)

- **Professional Development**
  - AS.050.860 Professional Seminar in Cognitive Science (two mini sessions or one semester-long course)

- **Teaching Assistantships**
  - AS.050.849 Teaching Practicum (x3-5 semesters, depending upon external funding.)

- **Two Research Papers and a Dissertation**

### Computational Cognitive Science Track Requirements

Students in this track will obtain a depth of focus in computational coursework, not achieved in the PhD in Cognitive Science general requirements. Accordingly, some of the breadth coursework has been replaced with computational courses, while aiming to retain the spirit of the breadth requirement.

Courses may not be double-counted to fulfill more than one degree requirement. Students are expected to attend the Cognitive Science Colloquium Series and Brown Bag Series in addition to completing course requirements.

#### Code | Title | Credits
--- | --- | ---

#### Breadth

3-4 courses in the Department of Cognitive Science that collectively develop sophistication in theoretical and (human) experimental approaches to cognitive science.

At least one course must be in each language and vision.

- **Basic Computation**
  - Three courses. Following are examples of courses that apply:
    - AS.050.670 Mathematical Models of Language
    - AS.050.671 Bayesian Inference
    - AS.050.672 Foundations of Neural Network Theory
    - EN.601.675 Machine Learning
    - EN.601.776 Machine Learning: Data to Models

#### Integration

- AS.050.626 Foundations of Cognitive Science

#### Research Ethics

- AS.360.625 Responsible Conduct of Research (encouraged to complete in first year)

#### Depth: Area of Focus

6-8 courses selected in conjunction with advisor(s) to achieve depth and expertise in CCS. Lab meetings may be used to fulfill this requirement. Following are examples of courses that apply:

- AS.050.660 Computational Psycholinguistics
- AS.050.675 Probabilistic Models of the Visual Cortex
- EN.601.665 Natural Language Processing
- EN.601.769 Events Semantics in Theory and Practice
- EN.601.783 Vision as Bayesian Inference

#### Professional Development

- AS.050.860 Professional Seminar in Cognitive Science (two mini sessions or one semester-long course)

#### Teaching Assignments
Two Research Papers and a Dissertation

Linguistics, Minor

Linguistics Minor Requirements

https://cogsci.jhu.edu/undergraduate/linguistics-minor/

A minor in linguistics is available to undergraduates majoring in any department, except for cognitive science majors who choose linguistics as a focal area. Students intending to minor in linguistics should declare their intention, preferably by the beginning of junior year.

The minor requires successful completion of the following with a grade of C- or better:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Foreign Language</td>
<td></td>
</tr>
<tr>
<td></td>
<td>One foreign language through the intermediate level OR two foreign 12-16 languages at the elementary level.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Linguistics Courses</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Six at least four courses from the Linguistics focal area.</td>
<td>18</td>
</tr>
</tbody>
</table>

The department's interdisciplinary nature is one of its main strengths and provides crucial common ground for scholars from humanities departments across the university. Faculty members work in a variety of fields but are unified by a common investment in intellectual curiosity, flexibility, open-mindedness, and careful reading and criticism. Graduate students are encouraged to undertake projects addressing authentic philosophical or theoretical problems without the restriction of disciplinary conventions. Students may also cultivate strong ties with faculty in other departments working in their areas of interest.

Every year, the department hosts at least two associates, who are faculty members from other institutions that stay for an extended period to present lectures, give seminars, and interact with faculty and students. Previous and current associates include many distinguished scholars, such as Anita LaFrance Allen, Susan James, Barbara Cassin, David Wellbery, Robert Pippin, Jean-Luc Marion, Eli Friedlander, Sari Nusseibeh, and Toril Moi.

History

In the mid-20th century, the department, which was then known as the Humanities Center, was established as a meeting ground for the various humanities departments. With Charles Singleton as its first director, the center aimed to strengthen the humanities at Johns Hopkins and provide a place where scholars could engage in theoretical reflections on the human sciences, including recent European movements such as structuralist thought and literary hermeneutics.

The department's first full academic year was 1966–67, and from the outset, its founders sought to establish a focal site for structuralism in the U.S., based on the model of the "sixième section" of the École Pratique des Hautes Études in Paris or the Institut für Sozialforschung at the University of Frankfurt. The conference held in the fall of its inaugural year, "The Languages of Criticism and the Sciences of Man: The Structural Controversy" brought many of the leading figures of European thought together in the U.S. and continues to be cited as both the substantial introduction of structuralist thought into the American academy and an important moment of transition between structuralism and post-structuralism. This model of exchange and innovation continued into the 21st century with a robust program of visiting scholars, professors, and lecturers.

As of January 1, 2018, the name of the Humanities Center has been changed to Department of Comparative Thought and Literature. The new name recognizes the department's ongoing commitment to serious interdisciplinary study, with a focus on questions at the intersection of literature, philosophy, and aesthetics. It also represents the various literatures, philosophies, religions, political systems, cultures, and methodologies that its faculty studies and applies. A search is currently underway to fill the Boone Chair in the newly named department.

The department offers several courses taught by its faculty. These courses provide a broad introduction to the documents and thought of Western culture for all students, from those interested in a general liberal arts preparation to those in one of the university's pre-professional programs.

For qualified juniors and seniors preparing for graduate school, the department also offers the opportunity to pursue an independent and often interdisciplinary research project through the Honors Program (p. 1758).

The Department of Comparative Thought and Literature does not offer a departmental major or minor. Students who wish to concentrate on the courses that it offers should consider a major in another humanities department.
Programs

- Honors Program in the Humanities (p. 1758)
- Humanistic Studies, PhD (p. 1758)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.300.102. Great Minds. 3 Credits.
Introductory survey of foundational texts of modern Western literature and thought. This semester will include works by René Descartes, Max Weber, W. E. B. Du Bois, Virginia Woolf, Ludwig Wittgenstein, Martin Heidegger, Hannah Arendt, Theodor Adorno, Michel Foucault, Cora Diamond, and Stanley Cavell. The course is taught in lectures and seminar discussions led by the course faculty.
Area: Humanities

AS.300.110. Philosophies of Existence. 3 Credits.
The question about the meaning of existence is as old as philosophy itself. In the nineteenth and twentieth centuries, however, this question received renewed attention due to various modern processes, chief among which was the process of secularization, giving rise to a philosophical movement that has come to be known as existentialism. This course will offer an examination of key themes, concepts, and doctrines that are associated with existentialist thought including: the rejection of the Aristotelian-scholastic distinction between essence and existence; the rejection of the Cartesian notions that "nothingness possesses no attributes or qualities" and that the infinite is prior to the finite; the problem of repetition and the thought experiment of the eternal return; the problems of death and suicide; and the philosophical significance of feelings such as anxiety, boredom, and nausea, and of experiences such as loneliness and despair. Reading will include a selection of texts by Pascal, Kierkegaard, Nietzsche, Shestov, Jaspers, Heidegger, Sartre, Camus, and others.
Area: Humanities

AS.300.114. Emotions: An Interdisciplinary Perspective. 3 Credits.
What are emotions? Do they have a history? Can they be studied scientifically? The study of emotions is a newly emerging field that does not belong to a single discipline. Exploring this field form an interdisciplinary perspective, we will read texts by psychologists, biologists, philosophers, anthropologists, sociologists, and historians from the nineteenth century to the present, including, among others, Charles Darwin, William James, Lucien Febvre, Martha Nussbaum, and Ruth Leys.
Area: Humanities

AS.300.129. Capitalism and Tragedy: From the Eighteenth Century to Climate Change (Freshman Seminar). 3 Credits.
In contemporary discussions of climate change, it is an increasingly prevalent view that capitalism will lead to the destruction of civilization as we know it. The notion that capitalism is hostile to what makes human life worth living, however, is one that stretches back at least to the early eighteenth century. In this class, we will examine key moments in the history of this idea in works of literature, philosophy, and politics, from the birth of bourgeois tragedy in the 1720s, through topics such as imperialism and economic exploitation, to the prospects of our ecological future today. Authors to be studied: George Lillo, Balzac, Dickens, Marx and Engels, Ibsen, Weber, Brecht, Arthur Miller, Steinbeck, Pope Francis, and contemporary fiction, politics and philosophy on climate change.
Area: Humanities

AS.300.139. Introduction to Intellectual History. 3 Credits.
This course offers a conceptual and historical introduction to intellectual History. What makes the "history of ideas" different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call "ideas"? In what sense do they have a history? These are examples of the kind of questions addressed in the course.
Area: Humanities

AS.300.145. Humanities Collaboratory. 3 Credits.
The Humanities Collaboratory is designed for new researchers from across the humanities as they gain the applied skills and experience to conduct their own independent research projects in the humanities. The Humanities Collaboratory model uses a high-tech classroom to allow students and instructors to work, learn, and research together. Three sections of this course will share a core list of materials focused on humanities research techniques, but your primary course materials will be individually selected. Students will have the unique opportunity to participate in a humanities lab section where all three course sections merge for discussion. You will choose your own topic to research with no limits of time period, subject, or genre, and through constant collaborative and independent research, each student will develop the expertise in that topic to both write a research paper and create a final oral presentation.
Area: Humanities
Writing Intensive

AS.300.203. Freshman Seminar: How Literature Works: Narrative Imagination from Ancient to Modern Times. 3 Credits.
Is storytelling part of human nature? Do myths and legends have a universal structure? As a bridge between experience and language, narratives inform the way we understand history, gender, politics, emotion, cognition and much more. This course will explore how narratives are composed, how they are experienced, and eventually, how they evolve throughout history. We will be reading a diverse selection of ancient and modern texts, including selections from Plato and Aristotle, the Odyssey, the Hebrew Bible, as well as 19th-and-20th-century authors such as the Brothers Grimm, Gustave Flaubert, James Joyce and Virginia Woolf. The second part of the course focuses on philosophical and critical approaches to narrative in arts and media, concluding with the evolving concept of narrative in the digital age. Theoretical readings include selections from Karl Marx, Roland Barthes, Jacques Derrida and Judith Butler. All readings will be in English.
Area: Humanities
Writing Intensive
AS.300.219. Freshman Seminar: Babblers, Mumblers & Howlers: Languages of Modernist Fiction: Freshman Seminar. 3 Credits.
Does literature represent reality or create it? Is language just a tool we use to communicate, or is it shaped by our culture, or indeed, is our culture—and even our own experiences—shaped by our language? Modernist writers at the turn of the 20th century grappled with these questions, concerned that literature and in fact language itself was ill-equipped to face the changes occurring at the beginning of a new era of modernity. From symbolist and sound poetry to innovations in stream of consciousness narration and non-syntactic fragmentation, the literature of the time reflected a receding faith in the ability for ordinary spoken language to communicate feeling, meaning, and the authentic self. The task of modernism in turn became the reinvention of a new literary language that could either capture this condition of crisis or seek to overcome it. This course will investigate the various responses and solutions to the crisis of language in Anglo-American and European modernist fiction. Authors to be studied: Virginia Woolf, Andrei Bely, Franz Kafka, Jean Toomer, Filippo Marinetti, Andrei Platonov, Mikhail Bakhtin, Yuri Olesha, et al. All readings will be in English.
Area: Humanities
Writing Intensive

AS.300.223. Philosophy and Infinity. 3 Credits.
What is the infinite? Can we comprehend it? Can we experience it? In this course we will explore various ways in which philosophers in the western tradition have answered questions such as these. In the first half of the semester, we will examine theoretical treatments of the infinite that inform how we understand the fabric of our world, from the ordinary objects around us to more sublime concepts of God, space, time, and mathematics. In the second half, we will turn to arguments in aesthetics and ethics that reveal an interplay between infinity and finitude occurring before our very eyes. Philosophers we will cover include Descartes, Spinoza, Locke, Kant, Hegel, Russell, Levinas, and Arendt. Throughout, we will ask such fundamental questions as, what is the starting point of philosophy? what is its methodology? what can it achieve in terms of knowledge? and in terms of practice?
Area: Humanities
Writing Intensive

AS.300.232. Existentialism. 3 Credits.
What is existence and why do we care about it? What happens when we think about the nothing? What is the philosophical significance of issues such as commitment, marriage, death, and suicide, or of feelings such as anxiety, boredom, and nausea? We will consider these themes and read a selection of texts dealing with them by some of the most famous thinkers associated with the existentialist tradition, including Pascal, Kierkegaard, Nietzsche, Heidegger, Sartre, and Camus.
Area: Humanities

AS.300.237. Freshman Seminar: Tolstoy’s War and Peace. 3 Credits.
Leo Tolstoy’s monumental novel War and Peace, which the author Henry James called “a loose baggy monster,” is a sui generis work of modern literature that offered a response and challenge to the European Realist novel and founded a Russian national myth. We will read the novel in translation, alongside its adaptations into opera, film, and Broadway musical.
Area: Humanities
Writing Intensive

AS.300.302. Making Modern Poetry. 3 Credits.
Making Modern Poetry will explore the intersection and conversation between literature, art history, and graphic design by examining the rapid global development of poetry, art, and print from 1890 to 1930. We will read canonical modernist poets such as T.S. Eliot and Ezra Pound as well as those less familiar, like Mina Loy and César Moro, considering texts comparatively across national borders and through their relations to other arts. All readings will be in English.
Area: Humanities
Writing Intensive

AS.300.304. Hopkins/Memes/Lost Hopes and Dreams. 3 Credits.
Find your lost hopes and dreams, through memes. This class is about why we can come to feel lost or disillusioned in the course of our educational journeys and about how we might begin to find our way again. We’ll use memes as a window into our everyday experiences at Hopkins and think about how digital platforms like Facebook, Snapchat, and Tinder might be sources of and/or responses to our modern sense of alienation. The course will be discussion-based and shaped by the interests of those in the class.
Area: Humanities

AS.300.307. Dostoevsky and Critical Theory. 3 Credits.
The tormented, obsessive and sadistic characters of Dostoevsky’s novels posed a challenge to positivism and reason too scandalous and compelling to be ignored. The novels inspired some of the most brilliant and influential thinkers of the nineteenth and twentieth centuries in the fields of religion, philosophy, psychology and literary theory. We will read three of Dostoevsky’s philosophically challenging novels alongside works by these critics and philosophers. While exploring their ideas about faith and unbelief, madness and reason, violence and torture, society and history, we will also inquire into the relationships among literature, philosophy and biography and examine the processes of influence and adaptation.
Area: Humanities

AS.300.309. The Contemporary Philosophical Novel. 3 Credits.
What can literature offer to philosophical reflection? Can literature address experiences that evade theoretical philosophy? Or, does fictional writing conflict with rigorous philosophical inquiry? The long-standing separation of philosophy and literature begins when Plato ban’s poetry and tragedy from the ideal city in the Republic. This seminar focuses on nineteenth and twentieth century thinkers that challenge the predisposition against literature through different attempts to write the “philosophical novel.” In this seminar, we will take seriously the philosophical stakes of literary texts, and investigate how and why literature offers a unique perspective for philosophical reflection. We will read texts by Plato, Fyodor Dostoevsky, Friedrich Nietzsche, Jean-Paul Sartre, Simone de Beauvoir, Albert Camus, Iris Murdoch, and David Foster-Wallace.
Area: Humanities

Writing Intensive
AS.300.310. Imagining Social Change in TV Series. 3 Credits.
How can the imagined worlds of television help us critically reflect on the social and political realities of modern life? This class will look at TV series that offer different ways for their viewers to consider the question: What are the possibilities and limits for social change in the twenty-first century? Each week, selections from a TV series will be paired with a reading from philosophy, literary theory, media studies, political science, theology, or another related field that responds to similar themes and concerns. Our seminar will be discussion-based, and the TV series we watch will be determined by the interests of those in the class, but may include: Atlanta, Euphoria, The Handmaid's Tale, Black Mirror, House of Flowers, Dear White People, The Good Place, and BoJack Horseman.
Area: Humanities

AS.300.311. Introduction to Intellectual History. 3 Credits.
This course offers a conceptual and historical introduction to Intellectual History. What makes the "history of ideas" different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call "ideas"? In what sense do they have a history? These are examples of the kind of questions addressed in the course.
Area: Humanities

AS.300.312. Imagining Revolution and Utopia. 3 Credits.
What form should revolution take, and what should society look like after the revolution? What would happen to the state, family, home, status of women, human interrelations, and everyday life? These questions consumed radicals in 19th century Russia and Europe, and their answers helped to shape the political culture of the 20th century. This course examines theories of revolution and utopia and responses to them in literature, art and film. Primary case study is Russia and the Soviet Union, with a comparative look at influential European works.
Area: Humanities
Writing Intensive

AS.300.313. Maintaining Social Order: Elements of Conservative Political Philosophy and its Critics. 3 Credits.
The seminar will discuss (primarily German) political philosophy of a broadly 'conservative' orientation in relation to three key periods of social and political upheaval: the Reformation, the French Revolution, and the crisis of parliamentary democracy in the Weimar Republic. Readings from these periods of European history will be approached under the common heading of 'conservatism' for their shared preoccupation with how traditional sources of social unity are to be replaced following times of dramatic change and conflict. We will explore why different political crises have always led philosophers to reiterate the fundamental question of what binds political communities together. This preoccupation distinguishes the philosophical currents of conservative thought surveyed in this course from other, more familiar conservatisms with purely reactionary agendas that reassert the superiority of a particular religion, culture, or ethnic group, the rule of elites, or the dismantling of the state in favor of free market forces. Each section on conservative thought will conclude with the most relevant critiques from Leftist political opponents. Readings include Hobbes, Burke, de Maistre, Herder, Hegel, Nietzsche, Schmitt, Kant, Marx, Marcuse.
Area: Humanities
Writing Intensive

AS.300.314. Dreams - From Genesis to Freud. 3 Credits.
Die Traumdeutung is one of the groundbreaking books of the 20th century. Translated into English as The Interpretation of Dreams, this book argues that dreams are both interpretable and meaningful. Unlike the psychiatrists of his days, Freud held that dreams are expressions of the subject and thus positioned himself closer to the ancient conception of dreams than to the views of the positivistic science of his days. He emphasized that dreams represent not so much an objective reality but rather the symbolic manifestation of the truth of the subject's unconscious, a "symptom" of a history.
Area: Humanities

AS.300.315. Philosophical Conceptions of the Infinite. 3 Credits.
What is the infinite? Can we comprehend it? Can we experience it? In this course we will explore various ways in which philosophers in the western tradition have answered questions such as these. In the first half of the semester, we will examine theoretical treatments of the infinite that inform how we understand the fabric of our world, from the ordinary objects around us to more sublime concepts of God, space, time, and mathematics. In the second half, we will turn to arguments in aesthetics and ethics that reveal an interplay between infinity and finitude occurring before our very eyes. Philosophers we will cover include Descartes, Spinoza, Locke, Kant, Hegel, Russell, Levinas, and Arendt. Throughout, we will ask such fundamental questions as, what is the starting point of philosophy? what is its methodology? what can it achieve in terms of knowledge? and in terms of practice?
Area: Humanities

AS.300.316. Philosophy and Revolution: Four Case Studies. 3 Credits.
This course offers a historical and systematic inquiry into the modern idea, most clearly expressed by the young Karl Marx, that revolution should be the realization of philosophy. We will take up four revolutionary moments or four crucial years in four places and study them together with their philosophical influences and / or consequences: the French Revolution of 1789/1792 with Hegel, the Russian/October Revolution of 1917 with Lenin and Georg Lukács, the Iranian Revolution of 1979 with Michel Foucault, the Egyptian Revolution of 2011 with Alain Badiou. Some of the concept with which we will be engaging include freedom, alienation, historical necessity, reification, political spirituality, infinity.
Area: Humanities
Writing Intensive

AS.300.317. The Russian Novel. 3 Credits.
This course introduces students to the nineteenth century Russian novel and considers its lasting impact on world culture. We will read classic masterpieces of the psychological and philosophical novel, and their experimental forerunners. Short lectures on historical and cultural context and on methods of literary analysis will be combined with intensive group discussion. Novels include Anna Karenina, Crime and Punishment, Eugene Onegin, Dead Souls, and Hero of our Time.
Area: Humanities
Writing Intensive

AS.300.318. The Modernist Novel: Mann, Woolf, and Joyce. 3 Credits.
In this course, we will survey the major works of three of the greatest, most relentless innovators of the twentieth century – Thomas Mann, Virginia Woolf, and James Joyce – who explored and exploded narrative techniques for depicting what Woolf called the "luminous halo" of life.
Area: Humanities
Writing Intensive
AS.300.320. Lover's Discourse. 3 Credits.
Much of what we know about love and desire we owe to fiction's ability to evoke these experiences. Consider for example that the publication, in Germany, of The Sorrows of Young Werther inspired young men across Europe to dress and behave just like him. We will study in this course a selection of love stories chosen because they break the mold and question their conventions. Taking a critical distance from these tales of seduction, we will examine not only the manifestations and meanings of love, but also the configurations of gender they inspire and reflect. Indeed, just as nowadays film and television represent, as well as mold, our identities as desiring subject, fictions from the eighteenth-century onwards have shaped our current understanding of gendered subjectivities. The readings for this seminar (all available in English) include: Austin, 'Persuasion'; Balzac, 'The Girl with the Golden Eyes' and 'Sarrasine'; Barthes, 'Lover's Discourse'; Goethe, 'The Sorrows of Young Werther'; Mann, 'Death in Venice'; Rousseau, excerpts from 'Julie or The New Heloise'; Sulzer, 'A Perfect Waiter', Winterson, 'Written on the Body'.
Area: Humanities

AS.300.321. Rise of the Modern Short Story. 3 Credits.
A comparative tour of examples of short stories from three continents that emerged from earlier narrative forms in the 19th and 20th centuries. Attention will be given to new structural, rhetorical, and thematic concerns including the development of new sub-genres, e.g. fictions of detection, case histories, portraits of the artist, and the adaptation of several stories to newer media (at least 2 of the longer narratives translated to film will be screened). A detailed syllabus of our readings will be available later in the summer; because there is no anthology that quite fits our needs, all the texts or translations, as well as critical and contextual notes will be supplied in digital forms. Note: there will also be an optional hour for questions & discussion TBA.
Area: Humanities

Writing Intensive

AS.300.323. Shakespeare and Ibsen. 3 Credits.
William Shakespeare and Henrik Ibsen are the two most frequently performed playwrights in history, and both have been credited with reinventing drama: Shakespeare for the Elizabethan stage and Ibsen for the modern. In this course we will pair together plays by each author – those that stand in an explicit relation of influence as well as those that share a significant set of concerns – in order to investigate how each takes up and transform key problems in the literary, political, and philosophical tradition for their own historical moment. Plays to be studied: by Shakespeare, A Midsummer Night's Dream, Hamlet, Othello, King Lear, The Tempest, A Winter's Tale; by Ibsen, St. John's Night, Hedda Gabler, Rosmersholm, The Wild Duck, The Master Builder, When We Dead Awaken.
Area: Humanities

AS.300.324. Cinema of the 1930s: Communist and Capitalist Fantasies. 3 Credits.
Comedy and musical comedy film flourished in the USA during the Great Depression as well as in the USSR during the Stalinist Great Terror. This course will compare films of the era in a variety of genres (musical, epic, Western, drama), examining the intersections between politics and aesthetics as well as the lasting implications of the films themselves in light of theoretical works on film as a medium, ethics and gender.
Area: Humanities

Writing Intensive

AS.300.325. American Madness – History of the Treatment of the Mentally Ill. 3 Credits.
As mental illnesses became a social issue during the 18th century, community institutions were created in order to handle the needs of individuals with such illnesses collectively. This course will investigate the history of these institutions in the USA from the seemingly quiet, secluded, and peaceful private asylums in country settings, at the beginning of the 19th century, through the notorious crowded public, so-called “psychopathic hospitals” in mid-20th century, to the crisis-services, short-term acute psychiatric units, and out-patient services that followed the “death of the asylum” at the end of the 20th century. The history of the institutional care of the mentally ill in America is also the story of American psychiatry changing attitudes towards these individuals. Reading will include selections from 200 years of writings of asylum superintendents, psychiatrists, patients, and historians of psychiatry such as Foucault, Goffman, Grob, Scull, Lunbeck, Micale, and Mora.
Area: Humanities

AS.300.327. Introduction to Comparative American Cultures: Obama and Philosophy. 3 Credits.
This course will investigate the philosophical as well as theological, juridical and political, and rhetorical and literary backgrounds that have informed and shaped Barack Obama's writings, speeches, and policy strategies leading up to and during his presidency. While paying minute attention to a few selected controversial debates in domestic and international governance and relations, and while discussing the question of Obama's legacy in and after the upcoming elections, our primary focus will be on understanding the curious blend of Christian realism, influenced by the theologian Reinhold Niebuhr, the tradition of American civic republicanism and pragmatism, and Obama's specific brand of post-Civil Rights, if not necessarily post-racial, politics. All these tenets coalesce in a vision and politics that may well be described as one of 'deep' pragmatism. Attention will be paid to Obama's early appeal to 'simple ideas' and 'small miracles,' each of them yielding the Biblical and sobered injunction of a 'hope against hope.' But extensive consideration of his thought and impact in the assessment of biographers and intellectual historians, legal scholars and political theorists, cultural critics and pundits will add to our attempt to understand and take stock of the Obama phenomenon as well.
Area: Humanities

AS.300.329. Literature of the Everyday. 3 Credits.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read closely a set of novels by Flaubert, Mann, Dickens, Zola, Tolstoy, and Woolf from the period between 1850 and 1950 in which the development of realism reaches its climax. These novels explore the nature of work, family, the body, consciousness, and the changing relation between individual and tradition in modernity. We will situate these novels in their social, historical, and literary contexts, and establish a set of terms for the formal study of the novel as a genre (plot, character, setting, narrative, etc).
Area: Humanities

Writing Intensive
AS.300.331. The Authoritarian Image: Russian Cinema from Stalin to Putin. 3 Credits.
Vladimir Putin’s charismatic authority has a deep history in Russian culture. We’ll investigate that history through cinema, which Lenin called “the most important of the arts.” While Soviet cinema often served as immersive propaganda, directors also found ways to question authority and power. Films to be screened range from Sergei Eisenstein’s Ivan the Terrible (1944) to the 2013 documentary Pussy Riot: A Punk Prayer. This course will combine study of Russian and Soviet culture from the end of World War II to the present with study of film history, style, and technique. Area: Humanities Writing Intensive

AS.300.334. Love and its maladies. 3 Credits.
Much of what we know about love and desire we owe to fiction’s ability to evoke these experiences. Consider for example that the publication, in Germany, of The Sorrows of Young Werther inspired young men across Europe to dress and behave just like this lover. Just as nowadays film and television represent, as well as mold our conceptions of love, love-stories from the eighteenth-century onwards have given shape to gendered subjectivities in ways that still matter now. As, intriguingly, illness is a recurrent theme in many modern love stories, we will be prompted to decipher signs and symptoms in the bodies of mind of our protagonists. Why is it that in Western cultures, passion is tightly intertwined with a landscape of pain, suffering, and disease? In studying texts that represent major aspects of a romantic sensibility, we are indeed invited to trace the steps of a history of the body increasingly defined by gender and by medical knowledge. The readings for this class (all available in English) include: Austen, Persuasion; Balzac, The Unknown Masterpiece; Barthes, Lover’s Discourse; Goethe; The Sorrows of Young Werther; Mann, Death in Venice; Winterson, Written on the Body.
Area: Humanities

AS.300.336. Forms of Moral Community: The Contemporary World Novel. 3 Credits.
Literary and philosophical imaginations of moral community in the post-WWII period (1950-2001). Texts include: Coetzee, Disgrace; McEwan, Atonement; Achebe, Things Fall Apart; Ishiguro, An Artist of the Floating World; Roy, The God of Small Things; Lessing, The Grass is Singing; Mistry, A Fine Balance; Morrison, Beloved; and essays by Levi, Strawson, Adorno, Murdoch, and Beauvoir on the deep uncertainty over moral community after the crisis of World War II. Close attention to novelistic style and narrative will inform our study of the philosophical questions that animate these works. What does it means to acknowledge another person’s humanity? Who are the members of a moral community? Why do we hold one another responsible for our actions? How do fundamental moral emotions such as contempt, humiliation, compassion, gratitude, forgiveness, and regret reveal the limits of a moral community?
Area: Humanities

AS.300.337. The Tragic Tradition. 3 Credits.
This course offers a broad survey of tragic drama in the Western tradition, from its origins in ancient Greece to the twentieth century. In weekly lectures and discussion sections, we will study the specific literary features and historical contexts of a range of different works, and trace the continuities and transformations that shape them into a unified tradition. Key questions and themes throughout the semester will include what counts as tragic, the tragedy of social and political conflict, the bearing of tragedy on the meaning and value of life, the antagonistic relation between world and humans, the promises and dangers of tragedy for contemporary culture. Authors to be studied: Sophocles, Euripides, Seneca, Shakespeare, Racine, Goethe, Ibsen, Strindberg, Chekov, Brecht, Pirandello, and Beckett.
Area: Humanities

AS.300.339. Introduction to Comparative Literature. 3 Credits.
This course offers an introduction to the history, theory, and praxis of comparative literature. We will read texts from some of the founding figures of the discipline and look at the most recent debates in the field, including translation studies, literary theory, and world literature, among others. Particular attention will be given to the methodologies and problems of studying literatures in different linguistic traditions and the relation between literature and other areas of thought and culture, such as philosophy, art history, and psychoanalysis. Case studies in comparative approaches to literature will provide concrete examples to our discussions.
Area: Humanities

AS.300.341. Transwar Japanese and Japanophone Literatures. 3 Credits.
A survey of Japanese and Japanese-language literatures produced in Japan and its (former) colonies during the “transwar” period, or the several years before and after the end of WWII. This periodization enables us to take into account the shifting boundaries, sovereignties, and identities amid the intensification of Japanese imperialism and in the aftermath of its eventual demise. We aim to pay particular attention to voices marginalized in this political watershed, such as those of Japanese-language writers from colonial Korea and Taiwan, intra-imperial migrants, and radical critics of Japan’s “postwar” regime. Underlying our investigation is the question of whether literature can be an agent of justice when politics fails to deliver it. We will introduce secondary readings by Adorno, Arendt, Levinas, Derrida, and Scarry, among others, to help us interrogate this question. All readings are in English.
Area: Humanities

AS.300.342. Imagining Climate Change. 3 Credits.
Climate change poses an existential threat to human civilization. Yet the attention and concern it receives in ordinary life and culture is nowhere near what science tells us is required. What are the causes of this mismatch between crisis and response? What accounts for our collective inability to imagine and grasp this new reality, and how can it be overcome? In pursuit of these questions, we will look at texts from politics, philosophy, literary theory, and religion that frame climate change as a fundamental challenge not only to humanity but to the humanities: the disciplines and modes of thought that we rely on to make sense of the human condition. The second part of the course will examine works of literature and film for examples of how contemporary artists attempt to make the climate crisis visible and intelligible to us.
Area: Humanities
AS.300.343. The Cinema of Revolution. 3 Credits.
This course examines global political revolutions through cinema and the ways in which cinema helped to make political revolutions. Early cinema was intimately intertwined with the Russian revolution, and Russian revolutionary cinema had a profound impact on the ways in which media was used for revolutionary purposes through the 20th century and around the world. Students will be introduced to films from a number of different countries, and the history and context of their production and reception. They will also learn methods of film analysis and produce their own video essay.
Area: Humanities

AS.300.344. Literature and the World. 3 Credits.
This course interrogates how modern literature not simply reflects the world but functions as world-making power. What is a world? How do we conceive of, live in, and change it? What if there are multiple worlds? How are literature and other aesthetic forms crucial to tackling these questions? We will survey literary and philosophical texts in a comparative setting, engaging examples from both Europe and East Asia. All readings are in English. Open to graduate students.
Area: Humanities
Writing Intensive

AS.300.349. Capitalism and Tragedy: from the 18th Century to Climate Change. 3 Credits.
In contemporary discussions of climate change, it is an increasingly prevalent view that capitalism will lead to the destruction of civilization as we know it. The notion that capitalism is hostile to what makes human life worth living, however, is one that stretches back at least to the early eighteenth century. In this class, we will examine key moments in the history of this idea in works of literature, philosophy, and politics, from the birth of bourgeois tragedy in the 1720s, through topics such as imperialism and economic exploitation, to the prospects of our ecological future today. Authors to be studied: George Lillo, Balzac, Dickens, Marx and Engels, Ibsen, Weber, Brecht, Arthur Miller, Steinbeck, Pope Francis, and contemporary fiction, politics and philosophy on climate change.
Area: Humanities
Writing Intensive

AS.300.353. Present Mirth: Stages of Comedy. 3 Credits.
A comparative survey of presentational comedies from Aristophanes to Beckett on stage and screen, with some attention to to to the vexed question of theories of comedy [no laughing matter].
Area: Humanities
Writing Intensive

AS.300.357. Forms of Modern Fiction. 3 Credits.
A comparative tour of modern narrative forms from 3 continents. The emphasis is on the development of shorter fictional models, though some of the founders and innovators are better known for their novels. The emphasis will be on the emergence new structural, rhetorical, and thematic concerns, including adaptation to other media. There will be an optional hour for queries and discussion TBA.
Area: Humanities
Writing Intensive

AS.300.366. Russian Avant-Garde Cinema. 3 Credits.
Russian cinema was born out of the intense artistic experimentation of the fin-de-siècle avant-garde and developed in a climate of dramatic political and cultural change in the twenties and thirties. While subject to draconian censorship in the Soviet period, it nonetheless engaged in active dialogue with the film industries of Western Europe and America and had a lasting impact on world cinema. This course examines the extraordinary flourishing of avant-garde cinema in the Soviet Union in the 1920s and 30s including films by Eisenstein, Vertov, Pudovkin, and Dovzhenko, their theoretical writings, and their far-reaching influence on film and film theory. All readings in English, films subtitled in English.
Area: Humanities
Writing Intensive

AS.300.367. Seeing Like a Woman. 3 Credits.
What does it mean to “see,” think, desire, feel, speak, act, or write “like a woman”? Gendered notions of seeing have had an impact on politics and society long before the #metoo movement and far beyond debates about women’s rights in isolation. This seminar examines the issues of female desire, subjectivity, spectatorship and performance in fiction, poetry, memoir and film from a variety of cultures and theoretical perspectives. This is not a course on “the image of the woman” in literature, film or politics, but a course in which we examine the ways in which both male and female theorists, novelists, poets, and filmmakers have imagined how women “see,” feel, think and behave.
Area: Humanities
Writing Intensive

AS.300.372. Dance and the Russian Avant-Garde. 3 Credits.
This course will explore the relationship between art and dance during the explosion of artistic creativity at the time of the Russian Revolution (1900s-1920s) as well as the influence of the Russian Avant-Garde on modern dance and theories of movement through the 20th century. We will examine how dance both gave physical form to aesthetic, philosophical and political ideas and catalyzed new forms of thinking about the human body and modern spaces. Lecture and discussion of readings and screenings will be paired with a weekly movement workshop in the dance studio that will introduce students to different forms and theories of avant-garde and modernist dance and movement theory. No prior dance experience or knowledge of Russian is required.
Area: Social and Behavioral Sciences

AS.300.374. Marxist Theory of Consciousness: Class, Color, Creed, Gender. 3 Credits.
This course takes up the tripartite problematic of class as social context, ideology as false consciousness, and gender as the perception of sexual difference in modern society through philosophical engagements in Marxist tradition with consciousness. It will primarily treat the formation and validity of the individual’s insight into her society as a whole. Our systematic and historical path runs through Marx, Georg Lukács, Adorno, Rosa Luxemburg, Althusser, Judith Butler.
Area: Humanities, Natural Sciences
AS.300.389. Freud's Cases - Source of Psychoanalytic Knowledge. 3 Credits.
Even though major scientific discoveries have been made from the intense study of singular cases, modern science is mostly quantitative in its approach. In this course we will follow psychoanalysis' use of clinical practice as the primary context for the generation of knowledge. We will use two notions from the philosophy of science: "exemplars" (Kuhn) and "personal knowledge" (Polanyi), as we read Freud's cases in which he combines theoretical consideration and detailed investment in the singularity of the person. In his accounts of the "hysteria" of Dora, the "phobia" of Little Hans, the "obsession" of the Rat Man, the "infantile neurosis" of the Wolf Man and Schreber's "paranoia," Freud not only generated theoretical and technical knowledge but also constituted the "single case study" genre of investigation, as the primary source of psychoanalytic knowledge. Readings will include: Freud, Foucault, Polanyi, Kuhn, Hacking, and Forrester. Cross-listed with Film and Media Studies
Area: Humanities

AS.300.399. Cinema and Philosophy. 3 Credits.
Do movies have anything to say about philosophical problems? Why is contemporary philosophy so interested in cinema? What are the most productive ways of bringing films and philosophy into conversation?
Area: Humanities

AS.300.402. What is a Person? Humans, Corporations, Robots, Trees. 3 Credits.
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course investigates recent debates about being a person in literature and law. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Although our explorations will be focused on these questions, the genre of materials examined will be wide-ranging (including legal essays, philosophy, contemporary novels, and film). Texts will include novels by William Gibson and Lydia Millet, essays by John Dewey and Daniel Dennett, and films such as Ex Machina and Her.
Area: Humanities

AS.300.410. China in Imagination. 3 Credits.
What is China? This question has gained new relevance amid the nation's recent rise as a global power. We survey how China was imagined, represented, and conceptualized in literature, film, and philosophical writings from mainland China, overseas Chinese communities, East Asia, and the West from the late nineteenth century to the present. Through exploring this complex history, we aim to understand China and the contemporary world in a diversified, historically self-reflective way. Topics of discussion include, but are not limited to, representation, identity, form, allegory, exile, diaspora, modernism, translation, world history, and universality. All readings are in English; all films subtitled in English.
Area: Humanities

AS.300.414. Starobinski: The Art of Interpretation. 3 Credits.
How can we become better readers of the signs and symptoms that texts, as well as minds and bodies, address to us? An eminent figure of European intellectual life, deeply versed in the world of the arts and of medicine, Jean Starobinski will guide us through this inquiry. With his seminal work Jean-Jacques Rousseau: Transparency and Obstruction as our focus, we will learn why the ideas of this modern humanist have had such a wide-ranging influence on twentieth-century conceptions of subjectivity, interiority, imagination, and illness (e.g. nostalgia, melancholia, paranoia). We will also learn through his work on Rousseau, why Starobinski's groundbreaking ideas about writing (l'écriture) shaped some of the major debates of French theory. This course is taught in English. For graduate students, reading knowledge of French is desirable. Next to Transparency and Obstruction, readings involve selections from Starobinski's essays and from Rousseau. No exams, but a short oral presentation and a final essay.
Area: Humanities

AS.300.422. Luther, Philosophy, Politics: 500 Years After the Reformation. 3 Credits.
As historical legend has it, in 1517 the German monk and then professor of theology Martin Luther inaugurated a revolution in thinking, belief and moral practice, known as the Protestant Reformation by nailing his Ninety-Five Theses, under the title Disputation on the Power of Indulgences, to the door of the Castle Church of Wittenberg. Known for his brutal characterization of reason as ‘the devil’s whore,’ his theology of the hidden god, his catechisms, the doctrine of the two realms, and his condemnation of peasants' revolts of his days, Luther’s influence has been profound and lasting. We will study some of his most influential theses, treatises, and sermons and will seek to gauge the effect they had on the Western narrative of secularization and modernity, together with their deep influence on post-Reformation and, indeed, recent philosophy and political thought. Readings include: Luther, G.W. F. Hegel, Max Weber, Martin Heidegger, Karl Barth, Erik Peterson, Dietrich Bonhoeffer, Kaj Munk, Ernst Bloch, Philippe Lacoue-Labarthe, Marcel Gauchet, Giorgio Agamben, and others.
Area: Humanities

AS.300.424. Psychoanalysis as a Theory of Thinking. 3 Credits.
This course will introduce students to the writings of Wilfred Bion, the British psychoanalyst who expanded Sigmund Freud's and Melanie Klein's metapsychology. Bion developed an epistemological theory of thinking, surmising that the mind grows when it is exposed to the truth of one's emotional experience. In his many writings and lectures, Bion developed a sophisticated theoretical model that conceptualizes the transformation of emotional experience into the capacity for thought. While in his early writings he is inspired by life sciences and mathematics, in his later writings Bion shifts away from the scientific view to an aesthetic/mystical vertex, drawing on poets mystics and philosophers, such as Keats, Milton, Shakespeare, Sophocles, Meister Eckhart, St John of the Cross, Plato, Hume and Kant.
Area: Humanities
AS.300.425. Modernities and Comparison. 3 Credits.
Comparative survey of literary modernities in Europe and East Asia (China, Japan, and Korea). We will study works of modern literature as well as critical and philosophical texts from these civilizations in each other's light. We will, as a working hypothesis, begin our examination by bracketing off the conventional center-periphery (Europe-Asia) scheme and considering literary modernities to be singular and contested, yet mutually resonating atms at reconstruction, restoration, and revolution vis-à-vis the deconstructive forces of capitalist modernity. Ultimately, we will interrogate how we should understand literary modernities in the plural, as they emerged in distant civilizations. Topics of discussion include decadence, repetition, the trope of the human, ideology, the sublime, ritual, and translation. Readings in Hegel, Nietzsche, Mann, Benjamin, Baudelaire, Proust, Breton, Soseki, Kobayashi, Wang Guowei, Lu Xun, and Yi Kwangsu. All readings are in English.
Area: Humanities

AS.300.429. Literature of the Everyday. 3 Credits.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read closely a set of novels by Flaubert, Mann, Dickens, Zola, Tolstoy, and Woolf from the period in which the development of realism reaches it climax. These novels transform the conventions for the representation of lives of lower and middle class subjects, revealing such lives as capable of prompting reflection upon deep and serious questions of human existence.
Area: Humanities
Writing Intensive

AS.300.437. Literature and Philosophy of the Everyday. 3 Credits.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read closely a set of novels by Flaubert, Mann, Dickens, Eliot, Zola, Tolstoy, and Woolf from the period between 1850 and 1950 in which the development of realism reaches it climax. These novels transform the conventions for the representation of lives of lower and middle class subjects, revealing such lives as capable of prompting reflection upon deep and serious questions of human existence. Theoretical and philosophical texts on the everyday by Auerbach, Kierkegaard, Heidegger, Sartre, Beauvoir, Lefebvre, Certeau, and Wittgenstein will accompany our discussions.
Area: Humanities

AS.300.439. Stories of hysteria. 3 Credits.
Many are the stories that recount episodes of hysteria, and we owe them not only to medicine. To the modern observer, they are a puzzle, involving strange beliefs about wandering wombs, demonic possession, and female virtue (or lack thereof). Closer to our time, contemporary media, as well as accounts in the social and clinical sciences have evoked cases of “mass hysteria” in America and across the globe. Marriage, it was thought for a long time, might be the best cure, which might be the reason case-studies of this illness can be as intriguing and troubling as novels. Against a backdrop of medical and historical materials, we will examine a selection of stories, from the 17th century onward, that evoke aspects of hysteria. They serve as our case-studies and as prompts to study an illness born at the convergence of histories and myths, of medical science, and of cultural and gender assumptions. Among the notions we will explore: The birth of psychoanalysis, trauma and PTSD, the concept of repression, the visual aspects of an illness and its spread in the arts, including cinema.
Area: Humanities

AS.300.501. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.300.508. Honors Seminar. 3 Credits.
The Honors Seminar is a mandatory component of the Honors Program in Humanities, which offers qualified undergraduates the possibility of pursuing an independent research project in their Junior and Senior years in any humanistic discipline or combination of disciplines: intellectual history, comparative literature, philosophy, critical theory, psychoanalysis, religion, film, etc., as well as points of intersection between the arts and the sciences. After one year qualified students may apply for admission to the concurrent BA/MA degree program. Sophomores who plan to study abroad in their Junior year should also consider applying to the Program. In the 2017-2018 academic year, the Seminar will focus on a close reading of Coetzee’s Elizabeth Costello and associated texts, which will serve as a point of departure for discussion on the relation between different intellectual disciplines and the idea of the humanities.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
Writing Intensive

AS.300.601. How to Read Proust?.
Given the difficulty of his prose, closely and patiently would seem the best way to read Proust, but who has time — time to read a book that, ironically, begins with “Longtemps” and ends with “le temps”? This course will offer for critical examination surgically selected passages of A la Recherche du Temps Perdu as a training ground for the (lost?) art of close reading and as entry points into wide-ranging aspects of literary criticism and theory. Open to advanced undergraduates with permission of the instructor. Taught in English. Knowledge of French is desirable, but not required.
Area: Humanities

AS.300.608. The Physics and Metaphysics of Handwriting.
When word processing machines that can be held in the palm of a hand, why use pen and paper? Handwriting — and its juxtaposition against digital forms of communication — offers a unique approach to studying human interactions and the ways in which meaning, truth, intimacy, and agency are shaped by our changing technologies. At a time of exponential growth in machine writing, a study of this older form of communication enables a comparative approach that, perhaps surprisingly, opens up what are contemporary political questions. Centered on a few case-studies involving works by Sand, Chopin, Manet, Giacometti, Mallarmé, and Proust, this course takes a backward glance at a culture of written expression at a great remove from our word processing world and yet explicitly vested in an aesthetics of free expression. This modern graphological culture saw in the tracings of the hand, the uniquely personal marks of an intertwining of mind, body, and of subjectivity. Merleau-Ponty and recent word on embodiment will provide us with critical tools for our investigations into the “physics” of this activity, as will the methods of textual criticism and the new domain of creativity studies. The “metaphysics” of handwriting call, meanwhile, for a return to Heidegger, to Derrida and other major contemporary theorists of writing. They will help us see how hand and digital writing emerge as fundamentally different modes of human expression — philosophically and politically. Knowledge of French is not required for this course.
Undergraduates accepted with the permission of the professor.
Area: Humanities
AS.300.609. Bildungsroman, Vollendungsroman: Novels of Youth and Old Age.
This seminar explores the Vollendungsroman, or novel of age, as a twentieth- and twenty-first-century counterpart to the late eighteenth- and nineteenth-century Bildungsroman that Moretti and others view as the symbolic form of modernity. We will examine how Vollendungsromanese broach the relation between subjectivity and ‘age’ (not only in the sense of individual maturity, but also in the sense of historical epoch); how they bring into question traditional conceptions of growth, authority, interiority, body-soul, authenticity, and reconciliation; how they represent alternatives to the modes of moral response and being valorized in the Bildungsroman; and how, in and through their very form, they meditate upon the philosophical significance of the classic phase of the novel. Selected novels by Goethe, Austen, Brontë, Joyce, Woolf, Coetzee, Ishiguro, and McEwan. Open to qualified undergraduates.
Area: Humanities

AS.300.614. The End of Art.
In this course we will examine Hegel’s seminal claim that art has come to an end in the modern world. In addition to Hegel’s original argument, readings will include important elaborations of the idea by Kierkegaard, Heidegger, and Adorno. In a final section of the course, we will relate these texts to reflections on the function and prospects of art under the unprecedented condition of the Anthropocene.
Area: Humanities

AS.300.618. What is a Person? Humans, Corporations, Robots, Trees.
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course investigates recent debates about being a person in literature and law. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Although our explorations will be focused on these questions, the genre of materials examined will be wide-ranging (including legal essays, philosophy, contemporary novels, and film). Texts will include novels by William Gibson and Lydia Millet, essays by John Dewey and Daniel Dennett, and films such as Ex Machina and Her.
Area: Humanities
Writing Intensive

AS.300.620. Cosmopolitanism: Conflicted Legacies, Potential Futures.
In its modern version cosmopolitanism is a defining aspect of Enlightenment that bespeaks its emancipatory aspirations as well as the shortcomings of its Eurocentric and gendered presuppositions. In our time of resurgence of violent nationalisms and mass refugees crises, this seminar aims at reassessing the conflicted legacies of cosmopolitanism and its critical value for the present. Authors studied include: Montaigne, Kant, Marx, Derrida, Lévinas, Kwame A. Appiah, Seyla Benhabib, and others.
Area: Humanities

AS.300.621. Immersive Poetics and Permeable Screens.
Victor Shklovsky claimed that the art exists “to return sensation to life, to make us feel objects, to make a stone feel stony.” This seminar examines various ways of understanding Shklovsky’s concept of ostranenie (“enstrangement”) across media (literature, art, cinema, and beyond) and in comparative perspective, considering the problematics of politics, philosophy, and aesthetic form. Students will be encouraged to present on texts in their own area of expertise over the course of the term.
Area: Humanities

AS.300.625. Russian Literary and Critical Theory.
Close reading of major authors from the Russian literary theoretical and critical tradition including Bakhtin, Elkinenbaum, Jakobson, Lotman, Shklovsky and Tynianov. Student will present primary sources or case studies from their own fields and research.

Area: Humanities

AS.300.629. Theory, Now and Then: Autonomy, Form, Critique.
This course explores recent developments and disputes in critical theory in relation to their longer philosophical genealogies. The three topics—form, autonomy, and critique—have been the subject of much recent debate, contention, and new analysis, yet each was also a source of critical and philosophical interest in years past. Our aim will be to make sense of today’s interventions in conversation with earlier theory. “Historical” theory writing will include Adorno, Lukács, Cavell, and Jameson; contemporary theory will include Nicholas Brown, Rita Felski, Caroline Levine, Mark McGurl, and Toril Moi.
Area: Humanities

AS.300.638. Happy and Unhappy Words: Austin, Wittgenstein, and Cavell.
This seminar studies how words help shaping the world we inhabit and how the power and limits of language affect the possibility of living in a shared world in the works of Austin, Wittgenstein, Cavell and others.
Area: Humanities
Writing Intensive

AS.300.639. Literature and Philosophy of the Everyday.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read closely a set of novels by Flaubert, Mann, Dickens, Eliot, Zola, Tolstoy, and Woolf from the period between 1850 and 1950 in which the development of realism reaches its climax. These novels transform the conventions for the representation of lives of lower and middle class subjects, revealing such lives as capable of prompting reflection upon deep and serious questions of human existence. Theoretical and philosophical texts on the everyday by Auerbach, Kierkegaard, Heidegger, Sartre, Beauvoir, Lefebvre, Certeau, and Wittgenstein will accompany our discussions.

AS.300.642. Philosophy and Literature in Kierkegaard’s Either/Or.
Celebrated and revised alike, Kierkegaard’s 1843 Either/Or has been viewed as both the culmination of the Enlightenment project and the birth of existentialism, a playful work of romantic literature and a piece of late-Hegelian philosophy, a vindication of the secular everyday and the articulation of a modern faith in a transcendent God. In this course we read the work closely and in its entirety and pay particular attention to the relation between its philosophical arguments and literary forms of presentation.
Area: Humanities
AS.300.647. Comparative Methods and Theory: Formalism and Materialism.
This pro-seminar provides a brief overview and map of the theoretical and philosophical positions in the major debate, still ongoing, between formalism and materialism. Its aim is both theoretical and historical: to help graduate students understand the range and depth of these positions as well as their development over time, continuing to this day. We will study fundamental philosophical works (Kant, Hegel, Marx, de Beauvoir), classic theoretical texts (Propp, Lévi-Strauss, Foucault, Derrida), and contemporary variations on these debates (Fish, McGurl, Moi, Allen), to name a few. The course fulfills the pro-seminar requirements in comparative methods and theory for CTL but is open to all graduate students.
Area: Humanities

This seminar analyzes Deleuze’s philosophy in the light of his attempt to renew Kant’s critical and transcendental method and in dialogue with other contemporary conceptions of critiques.
Area: Humanities

AS.300.657. Martin Heidegger, Being and Time: Integral Reading and Current Perspectives, II.
Starting with a brief overview and recapitulation of themes discussed in its Introduction and Division One, this jointly will focus on Division Two of Being and Time and bring phenomenological, hermeneutic, and deconstructive as well as analytic, epistemological, and pragmatist methods and viewpoints to bear upon this modern classic

AS.300.660. Humanities Thesis Seminar.
Required thesis seminar for Humanities Center MA students.
Area: Humanities

AS.300.666. Russian Avant-Garde Cinema.
Russian cinema was born out of the intense artistic experimentation of the fin-de-siècle avant-garde and developed in a climate of dramatic political and cultural change in the twenties and thirties. While subject to draconian censorship in the Soviet period, it nonetheless engaged in active dialogue with the film industries of Western Europe and America and had a lasting impact on world cinema. This course examines the extraordinary flourishing of avant-garde cinema in the Soviet Union in the 1920s and 30s including films by Eisenstein, Vertov, Pudovkin, and Dovzhenko, their theoretical writings, and their far-reaching influence on film and film theory. All readings in English, films subtitled in English.
Area: Humanities

Writing Intensive

AS.300.800. Independent Study.
AS.300.801. Ind Stdy-Field Exams.
AS.300.802. Independent Study Field Exam.
AS.300.804. Dissertation Research.
AS.300.805. Literary Pedagogy.
AS.300.806. Literary Pedagogics.
AS.300.808. In Study Field Exam.
AS.300.810. Thesis Seminar.

Cross Listed Courses

Computer Science
EN.601.769. Events Semantics in Theory and Practice. 3 Credits.
This course explores selected topics in the nature of event representations from the perspective of cognitive science, computer science, linguistics, and philosophy. These fields have developed a rich array of scientific theories about the representation of events, and how humans make inferences about them – we investigate how (and if) such theories could be applied to current research topics and tasks in computational semantics such as inference from text, automated summarization, veridicality assessment, and so on. In addition to classic articles dealing with formal semantic theories, the course considers available machine-readable corpora, ontologies, and related resources that bear on event structure, such as WordNet, PropBank, FrameNet, etc.
The course is aimed to marry theory with practice: students with either a computational or linguistic background are encouraged to participate.

[Applications]

EN.601.783. Vision as Bayesian Inference. 3 Credits.
This is an advanced course on computer vision from a probabilistic and machine learning perspective. It covers techniques such as linear and non-linear filtering, geometry, energy function methods, markov random fields, conditional random fields, graphical models, probabilistic grammars, and deep neural networks. These are illustrated on a set of vision problems ranging from image segmentation, semantic segmentation, depth estimation, object recognition, object parsing, scene parsing, action recognition, and text captioning. [Analysis or Applications]
Required course background: calculus, linear algebra (AS.110.201 or equiv.), probability and statistics (AS.553.311 or equiv.), and the ability to program in Python and C++. Background in computer vision (EN.601.461/661) and machine learning (EN.601.475) suggested but not required.

Music
AS.376.371. Introduction to Music Cognition. 3 Credits.
What underlies our aesthetic response to music? How and why are we able to identify certain sounds as music? To what extent are music and natural language similar? What is it about music that evokes such powerful emotions such as happiness and sadness? What is unique to musical creativity? Examining such questions from cognitive science, neuroscience, psychology, and philosophical perspectives, this course explores relevant research and theory in the emerging domain of music perception and cognition. Students will complete a final research paper on the topic of their choice that integrates the course material.
Area: Natural Sciences, Social and Behavioral Sciences

AS.376.372. Topics in Music Cognition. 3 Credits.
This course explores the similarities and differences between music and language, the effects of musical training on cognitive development, and the expressive power of music, with an introduction to music and its role in film. We will read relevant research and theory on these topics from cognitive science, neuroscience, psychology, musicology, and philosophical perspectives.
Area: Natural Sciences, Social and Behavioral Sciences
Neuroscience
AS.080.320. The Auditory System. 3 Credits.
This course will cover the neuroanatomy and neurophysiology of the human auditory system from the ear to the brain. Behavioral, electrophysiological, and neuroimaging methods for assessing peripheral and central auditory function will be discussed. Acquired and developmental disorders of auditory function will be reviewed using clinical case studies.
Prerequisite(s): AS.080.305 OR AS.080.203 OR AS.050.203 OR AS.200.141 OR AS.020.312 or instructor permission.
Area: Natural Sciences

Psychological Brain Sciences
AS.200.313. Models of Mind and Brain. 3 Credits.
This is a seminar surveying computational approaches to understanding mental and neural processes, including sensory and conceptual representation, categorization, learning and memory. The course will also develop familiarity with computational tools such as numerical simulation, linear transformation and data visualization. Recommended Course Background: AS.110.106 / Calculus I OR AS.110.108 Calculus I, AS.050.101 / Cognition OR AS.200.211 / Sensation & Perception OR AS.080.105 / Introduction to Neuroscience OR other introductory coursework in cognitive & neural sciences. Experience with at least one programming language is strongly recommended.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

Honors Program in the Humanities

Honors Program in the Humanities Requirements
Initiated in 1976, the Honors Program in the Humanities offers all qualified undergraduates the possibility to pursue an independent and often interdisciplinary research project, normally in their junior and senior years. Students can propose a topic in any humanistic discipline, including intellectual or cultural history, English and comparative literatures, women and gender studies, minority literatures and culture, film studies, anthropology, philosophy, etc. Past topics have also examined points of intersection between the arts and sciences, giving majors outside the humanities a chance to broaden and combine their studies through the program.

Application Process
Applications are accepted in the spring of the applicant's sophomore year. Second-semester freshmen who plan to study abroad in their junior year and those who are ready to begin their honors research should consider participating in the honors seminar during their sophomore year.

Program Requirements
• Students must have above average performance in humanities courses.
• The proposed project should show coherence, focus, and seriousness of purpose.
• Each project must be sponsored by two faculty members, one of whom will be the primary adviser. One adviser may be external to the university.
• Students must complete the research thesis and participate in the honors seminar for two years, the second of which must be the student's senior year.

Sample Program of Study
Sophomore Year (Optional)
Sophomores who plan to study abroad in their junior year and those who are ready to begin their honors research should consider participating in the honors seminar during their sophomore year.

Junior Year
1. Two courses chosen from relevant offerings in the Department of Comparative Thought and Literature curriculum.
2. A semester-long honors seminar for all students in the program, in which the general progress of the students' writing and research will be discussed, and senior students will present work-in-progress reports.
3. Optional independent study course on thesis project with one or both advisers.

Junior Agenda
• September-October: Students should identify and meet with prospective faculty advisers. Two faculty advisers are required for the final thesis; at least one of these advisers must be a Department of Comparative Thought and Literature faculty member or affiliate. Once students have received a commitment from two advisers to supervise the thesis, they should begin to compose a comprehensive reading list in consultation with their advisers.
• November-January: Using the reading list as a guide, students will conduct exploratory research in the field of their proposed project.
• February-March: Students will present a three- to five-page prospectus, which formulates the central questions of the thesis, in the honors seminar.

Senior Year
1. Independent study course in the spring semester dedicated to completing the thesis.
2. Two courses taught by department faculty members or affiliates.
3. Continued participation in the two-semester honors seminar with periodic "work-in-progress" reports and an oral presentation of the thesis research in the spring semester.

Senior Agenda
• All year: Students will complete their theses in consultation with their advisers and continue to attend the honors seminar.
• April-May: Students will present their final theses in the honors seminar.

Humanistic Studies, PhD
The department offers a PhD in humanistic studies, which includes a program in comparative thought and literature. Priority is given to highly-
qualified candidates whose proposed course of study is congruent with faculty interests and strengths.

Financial Aid
Tuition grants, stipends, and teaching fellowships are available to doctoral candidates.

Program Requirements
Each PhD student works with a committee of faculty members who helps to design a coherent, individual program of study. During the first two years, the candidate works closely with each of his or her advisers. The course of study, seminars, and tutorials lead to three area examinations administered by the department and committee. During the second year, qualified students are invited to teach under faculty supervision, and occasionally students may offer undergraduate seminars of their own design.

PhD students choosing a focus in comparative literature should be competent in three national literatures and have a general familiarity with critical theory. Students are encouraged to spend at least one year studying abroad, usually working in Paris, Florence, Hamburg, Geneva, or Madrid in programs sponsored by the department or the Department of German and Romance Languages and Literatures.

Students can become supervised teaching assistants in the German Program in the Department of German and Romance Languages and Literatures, and they can earn a master’s degree in German upon completion of the field examinations, before their doctoral degree is completed. Similar arrangements can generally be made with the Department of Classics and the programs in the romance languages and literatures.

Advisers
New PhD students will work with the department chair to select a faculty member to serve as a primary academic adviser. As a student’s interests become defined, he or she may change advisers or work with a faculty member in another department. Students who choose to work with a faculty member outside of the department should meet regularly with the Department of Comparative Thought and Literature’s director of graduate studies.

Third-Year Review
During their third year of residence, after completing all outstanding seminar papers, students will have their work reviewed by a faculty committee. The committee will comprise three faculty members from the department and the faculty members from the other departments with whom the student plans to conduct field exams. The review allows the faculty to assess the student’s progress, clarify his or her status in regards to remaining course work, and define future fields. Prior to the meeting, the student should circulate materials that he or she judges to be work that will best serve the purpose of the review.

Field Examinations
In their third and fourth years, students are expected to complete three field exams. The exams may serve to help students refine their dissertation topics, or they may be a means of extending and deepening students’ knowledge of an area in which they propose to teach and conduct research.

The examinations may take a variety of forms, and the form should be discussed at the student’s third-year review. Examples include:

- Work further on a project begun in a seminar and produce a longer paper that would become part of a dissertation
- Read into and across a particular field, writing a series of short papers on the reading or sitting for a written or oral examination on the material studied
- Design and teach an undergraduate course in an area of interest
- Complete the requirements for an MA degree in another department, as a way of strengthening claim to teach in that field

Undergraduate Teaching
Graduate students have many opportunities to develop their skills and confidence as a teacher. Beginning in the second year, students often serve as teaching assistants for courses taught by the department’s faculty or, if appropriate, for courses in other departments. In the past, PhD students have taught courses in French and German language programs, English composition and literature, history, philosophy, and political science. More experienced students are encouraged to teach courses of their own invention as a way of completing a field exam, in competition for one of the Dean's Teaching Fellowships, or to add to the department’s array of offerings.

Dissertation Review
A second formal review of a student’s work will take place after the completion of field exams, either in the student’s fourth year or in the fall semester of the fifth year. This review will connect the student with the faculty member with whom he or she will write a dissertation.

The review will take place when the student has composed a substantial piece of work associated with the dissertation, e.g., the draft of a chapter. This work will be circulated before the review, along with a prospectus of 10-40 pages, to the faculty members the student wishes to have as dissertation advisers. (If all of these advisers are from outside the Department of Comparative Thought and Literature, one of the department’s faculty members, selected by the student, will also sit in on the review.)

This discussion is not intended to replace the graduate board oral, which will take place after the dissertation has been completed. However, it will mark the transition from work on the field exams to the preparation and writing of a dissertation.

Departmental Presentations
In their fifth year or beginning of their sixth year, students will give a talk on material from their dissertation to the students and faculty of the department and invited guests. This presentation gives students experience formally presenting their work. It also allows for a wider range of response to that work than a dissertation committee can provide and allows all students in the department to become better acquainted with each other’s projects.

To apply, please submit the following to https://grad.jhu.edu/ (http://grad.jhu.edu/apply/apply-now/):

Official Application
Statement of purpose
Three letters of recommendation
Transcripts
Sample of work
Supplementary Application Form (Language Form)
GRE scores and subject (optional)
TOEFL/IELTS scores (if applicable)
The Department of Earth and Planetary Sciences offers programs of study and research in a wide range of disciplines including atmospheric science, ecology, environmental science and studies, geology, geochemistry, geophysics, oceanography, and planetary science. The undergraduate major in Earth and Planetary Sciences is flexible and allows the student, in consultation with a faculty adviser, to devise a program of study that is both rigorous and individualized. The graduate program develops skills in research through independent investigation under the general guidance of one or more members of the faculty, backed up by relevant course work. The department gives particular emphasis to the integration of experimental investigation, theoretical calculation, and quantitative field observations.

The Department also supports an interdisciplinary undergraduate program in Environmental Science and Studies (ENVS), which involves faculty from a range of departments across the university. The two ENVS majors and minor introduce students to the ways in which humans interact with and affect the Earth. ENVS is solution-focused and trains students to help solve the environmental and sustainability problems facing society today using the powerful tools of science and policy. Undergraduate degrees are typically specialized within traditional disciplines, but a primary goal of this program is to develop the ability of students to think outside of those boxes. Students learn theory, research, and practical applications of the natural and social sciences in their coursework, while also examining the relationship between humans and the environment through the lens of the humanities.

Facilities

The Department of Earth and Planetary Sciences is housed in Olin Hall, a modern building dedicated to the Earth sciences, nestled on a wooded knoll on the western edge of campus. Its facilities include state-of-the-art instrumentation, a departmental library, and modern computer equipment. There are laboratories for crystallography, evolutionary biology/ecology, stable isotope geochemistry, materials science, and fluid and solid mechanics. Olin Hall also contains equipment for modern petrographic work (including a computer-controlled image analysis system), darkroom facilities, and a laboratory for sectioning rocks. There is also a substantial collection of rocks, minerals, and fossils. Facilities are available for a wide spectrum of fluid mechanical experiments, including thermal convection and solidification.

A JEOL 8600 electron microprobe in Olin Hall is available to all members of the department. Crystallographic facilities include a modern specimen preparation laboratory for transmission electron microscopy and single-crystal X-ray diffraction studies. The transmission electron microscopy laboratory houses state-of-the-art instruments capable of both high-resolution imaging at the atomic scale and microanalysis at the nanometer scale.

The department contains several computer laboratories containing clusters of workstations and personal computers, together with printers and scanners. These computers are used for numerical simulations, graphics applications, data manipulation, and word processing.

Field studies and excursions form an integral part of the program of instruction and research in geology and are closely integrated with the laboratory and course work. Situated at the fall line between the Coastal Plain and the Piedmont and only an hour's ride from the Blue Ridge and Appalachians, Baltimore is an excellent location for a department with a field-oriented program in geology. The department has a permanent field station for geological research, Camp Singewald, in the Bear Pond Mountains of Washington County, Maryland, and a vehicle for field use.

Supporting facilities on campus include the Milton S. Eisenhower Library, the Space Telescope Science Institute, and the Homewood High-Performance Computing Center. In addition, the JHU Applied Physics Laboratory, the facilities of the Smithsonian Institution and the Geophysical Laboratory and the Department of Terrestrial Magnetism of the Carnegie Institution of Washington are available by special arrangement for students qualified to use them. For students whose research requires substantial computation, special arrangements can be made to use the supercomputers at the NASA Goddard Space Flight Center and the National Center for Atmospheric Research.

Undergraduate Programs

The Earth and Planetary Sciences major focuses on the study of the physical, chemical, and biological processes that shape the Earth and other planets. It is designed primarily for science students who wish to have a career involving research and study of the Earth and planets, although it is also suitable for students planning careers in the health professions.

The interdisciplinary ENVS majors and minor introduce students to human-Earth interactions and processes, our complex relationship with the changing environment, and methods for solving environmental and sustainability problems. The Environmental Science major emphasizes the perspective of the natural sciences, while the Environmental Studies major emphasizes the social science perspective, but there is a set of common core courses shared by both these majors that create a strong interdisciplinary foundation. ENVS is designed to prepare students for a variety of potential career paths, including both graduate study and entry-level jobs in an environmentally related field.

In addition to major requirements, students are required to complete the university requirements for the bachelor's degree. See Requirements for a Bachelor's Degree (p. 1584).

Graduate Programs

Requirements for Admission

Applicants must submit transcripts, Graduate Record Examination scores (aptitude exam only), and supporting letters to show their ability to do advanced study. The applicant should have his/her GRE scores, verbal and quantitative aptitude, sent to the department before the January 1 deadline for filing applications for admission.

The department expects applicants for advanced degrees to have completed undergraduate training in the basic sciences and mathematics. Normally this includes mathematics through at least integral calculus and a year's course each in physics, chemistry, and biology. Further undergraduate study in one or more of these subjects or in mathematics is highly desirable for all programs in the Earth sciences; additional mathematics is essential for geophysics, atmospheric sciences, and dynamical oceanography. Extensive undergraduate work in Earth sciences is not a requirement for admission. If students lack formal training in this area or have deficiencies in the other related sciences, they may be admitted but will have to allow additional time in the graduate program to make up for deficiencies in their preparation.
Requirements for Advanced Degrees

Candidates for the Ph.D. must take courses and meet requirements specified by their advisory committee; must pass a comprehensive examination before a departmental committee and an oral examination administered by the Graduate Board of the university; and must submit an acceptable dissertation involving significant original research. A minimum of two consecutive terms registered as a full-time student is required.

The department rarely accepts candidates for the M.A. degree alone, but Ph.D. students can, with the consent of their advisors, complete a program that will qualify them for the M.A. degree at the end of the second year. Candidates for this degree must pass a comprehensive examination before a departmental committee, and must satisfy the residency requirement specified above for the Ph.D. degree. A student's advisor may require an essay demonstrating research capability.

For further information about graduate study in the Earth and planetary sciences contact the Chair, Department of Earth and Planetary Sciences.

Fields of Graduate Study and Research

The department offers a range of fields of study covering Earth, Space and Environmental Sciences. In recent years we have invested in hiring new faculty in Planetary Sciences, Geosciences and Environmental Science, with seven new assistant professors and two new full professors. What links all of our fields of research together is a focus on treating individual processes—ranging from the formation of rocks to the distribution of organisms—as part of a system, with implications for and feedbacks from other parts of the system. The description below provides a rough grouping of the research areas involved and the faculty associated with each one. Interested applicants are urged to consult individual group web sites for more detail as well as to view presentations made as part of the department's 50th Anniversary celebration (http://eps.jhu.edu/events/50th-anniversary-symposium/). Prospective students should contact individual faculty members with whom they are interested in working. Students with interests that cross disciplinary boundaries or who use techniques found in different groups are strongly encouraged to apply as we believe that the most exciting questions to pursue in science today involve interdisciplinary research.

Planetary Sciences

In the last four years the department has hired four new faculty members in the Planetary Sciences who study bodies ranging from Mercury to Pluto to exoplanets. Key questions include: What role do planetary atmospheres play in the habitability of planets and the origin and/or evolution of life? (Hörst) What can we learn from the sedimentary record on Mars about what processes have shaped the evolution of that planet? (Lewis) How do planetary dynamos work? (Stanley) How can we use the wealth of spectra coming to us from new sensors to learn about planetary atmospheres? (Sing) A common thread across all of this work is the question of habitability—what sort of things need to happen in order for a planet to be able to support life, and for us to detect it? These questions are addressed using a combination of observation (ground-based telescopes and robotic spacecraft), laboratory experimentation, theoretical modeling, and Earth-analog field studies. The program requires an interdisciplinary focus, drawing from a wide variety of fields including astronomy, geosciences, physics and chemistry. Research often includes data from active planetary exploration missions. EPS faculty include members of the Cassini mission to the Saturn system, New Horizons mission to the Pluto system, and Mars Science Laboratory Rover teams, along with a number of proposed future missions to Venus, and Titan, and other worlds.

Students are encouraged to take courses in astrophysics, chemistry, physics, applied mathematics, computer science, and engineering to gain the comprehensive background necessary for interdisciplinary research. The best undergraduate preparation is a broad background in physics, applied mathematics, chemistry, or earth science. Advanced undergraduate courses in these fields (including differential equations, linear algebra, classical mechanics, electricity and magnetism, thermodynamics, organic, and physical chemistry) are strongly recommended. The EPS Planetary Science research program has close ties with the Space Department of the JHU Applied Physics Laboratory (APL), and students may be co-advised by APL researchers. Students in the department additionally benefit from the local availability of outside institutions including the Space Telescope Science Institute (co-located on the JHU campus), NASA Goddard Space Flight Center, the Carnegie Institution for Science, and the Smithsonian Institution.

Deep Earth Geosciences

This area focuses on understanding chemical and physical processes deep within the Earth and other planetary bodies. Key questions include: How do materials behave at very high temperatures and pressures, and what are the implications of this behavior for the whole planet system? (Wicks, Sverjensky) By what processes and at what rates do petrologic and tectonic systems evolve, and what are the feedbacks with the biosphere? (Viete). How is the Earth's geodynamo changing with time - and why? (Stanley) The interdisciplinary techniques used to study these questions include X-ray scattering and laser studies of planet-building minerals at extreme conditions (Wicks), geological field work and observation, and spatially-resolved geochemical and geochronological analysis of crystalline rocks (Viete) and theoretical and laboratory studies of mineral-fluid interactions (Sverjensky).

Aqueous geochemical studies centered in the Sverjensky group focus on the role of water in the evolution of Earth through deep time, particularly the linkages between water in the deep Earth and the near-surface environment. It involves quantitative geochemical modeling of the chemistry of water-rock interactions from Earth's surface into the upper mantle. Students participate in research involving the interpretation of experimental studies of water-rock interactions in terms of fundamental properties of aqueous inorganic and organic species over extreme ranges of pressure and temperature. Developing a thermodynamic characterization of the behavior of fluids at elevated pressures and temperatures enables exciting research into topics such as the origins of diamonds, the development and evolution of the continents and the potential roles of abiogenic hydrocarbons in Earth's deep carbon cycle. Collaborations with experimental laboratories enable a wide range of training in combined theoretical and experimental studies of the role of fluids in the history of Earth and other planets.

Students applying in this area will come from a wide variety of backgrounds, including class and research experience in chemistry, mechanical engineering, material science and condensed matter physics. Recommended classes, depending on the research track, include crystallography, mineralogy, petrology, and field geology, thermodynamics, quantum mechanics, continuum mechanics, and mineral physics.

Research within the fields of petrology and tectonics centered in the Viete group focus on questions of length scales, time scales and drivers. It seeks to understand the tectonic processes that operate at plate...
margins, the nature and utility of the rock record, and interactions between the solid Earth and biosphere. Current foci include crustal heating and the tectonic significance of metamorphic rocks, scales of tectonic organization and episodicity, and petrologic records of seismicity. Student projects begin in the field, first involving mapping, measurement, observation and sampling. With field context established, geological questions are further interrogated through micro-scale structural, geochemical and geochronological analysis of sampled materials. Simple analytical and numerical modeling of processes of deformation and heat and material transfer are used to reproduce observed features and constrain processes recorded in landscapes and rocks.

Students applying in this area should enjoy field work and the outdoors and will preferably have some background and interest in chemistry, physics and/or mathematics. Recommended classes, depending on research track, may include field geology, petrology and petrography, structural geology, sedimentology, transport phenomena, thermodynamics, and rock mechanics.

Geoscience in the Surface Environment
This area focuses on what the geological record can tell us about the evolution of life on Earth and its interaction with climate. A particular focus of this group is the use of isotope geochemistry to examine the carbon, nitrogen, oxygen and sulfur cycles, and to link changes in the rock record to the actual organisms present at the time. Key questions include: What was the physical and chemical context in which the earliest complex life formed? (Smith) How do environmental conditions and/or biological communities influence geochemical signatures found in the rock record? (Gomes)

Students working in this area will learn a range of skills— including the field geology methods necessary to put samples in context, how to make isotopic measurements necessary to characterize the large-scale chemical environment, and how to use this information in conjunction with quantitative and modeling tools to investigate the coevolution of life and the Earth surface. Additionally, the Smith group has expertise in the paleontology of Ediacaran organisms and the Gomes group uses the tools of microbial ecology. Using multi-disciplinary tools, researchers in this area seek to use insight about the coevolution of life and the Earth surface to provide context to understand modern climate change and investigate the tools that can be used to search for life on other planets.

Oceans, Atmospheres and Climate
The Oceans, Atmospheres and Climate area focuses on understanding planetary-scale and regional dynamics with implications for planetary climates, including anthropogenic climate change. The philosophy underlying the department’s program is a rigorous and thorough process-based understanding of the climate system, with a grounding in fluid dynamics, energy exchange, and relevant chemical and biological interactions. Researchers in the department address these processes with theory, laboratory and numerical experiments, and study both remotely sensed and in situ field observations. Johns Hopkins is a member of the University Corporation for Atmospheric Research.

The best preparation for graduate study in this program is an undergraduate degree in physics, applied mathematics, mechanical engineering, or another parent science such as chemistry, oceanography, meteorology, or geology/geophysics. Prior course work in fluid dynamics, while highly desirable, is not mandatory to pursue graduate study in this area. It is strongly recommended to have a broad background in the parent sciences, specialization in one of them, and at least three years of undergraduate mathematics. Research experience is also desirable.

Research in physical oceanography (involving Profs. Haine, Gnanadesikan and Waugh) focuses on the processes that maintain the global ocean circulation and the ocean’s role in climate and global biogeochemical cycling. In particular, attention is on the role of waves, eddies, and small-scale mixing in controlling the ocean’s part in Earth’s heat and freshwater balances. We also study advection, stirring, and mixing processes in the interior ocean and their roles in dispersing atmospheric trace gases and nutrients. The research program also includes computational oceanography, with links to other Hopkins departments and centers.

Research in atmospheric dynamics, (involving Prof. Waugh) focuses on large-scale dynamics, the transport of trace constituents, and understanding the composition of the global atmosphere (e.g., distributions of stratospheric ozone and tropospheric water vapor). Current interests include stratospheric vortex dynamics, troposphere-stratosphere couplings, transport and mixing processes, and global modeling of chemical constituents.

Research in hydroclimate, including atmospheric processes that drive precipitation and terrestrial hydrology, is a focus of Prof. Zaitchik’s group. This research employs satellite image analysis, numerical modeling, and field observation to build a process-based understanding of the ways in which climate shapes landscape and vice versa. Current interests include drivers of rainfall variability in the tropics, coupled natural-human systems, seasonal forecast, and the application of hydroclimate analysis to studies of water resources, agriculture, and human health.

Research on climate and radiation is found across all of the research groups in this area and includes study of the global climate system and its response to radiative forcing due to changes in greenhouse gases and solar luminosity, the feedback effects of water vapor and clouds, and the radiative and hydrological effects of aerosols. These studies involve global and regional scale modeling, and the analysis and interpretation of satellite observations.

Additionally Prof. Gnanadesikan’s group conducts research in global biogeochemical cycling, focusing on applying and developing large-scale computational models that can be combined with observations remotely sensed data to characterize cycling of key elements (including carbon, nitrogen, and oxygen) in the earth system. Opportunities exist to link this work to the observational and theoretical geochemistry work done in the department as well as to simulate key periods and transitions in Earth History.

Ecology: Organisms, Ecosystems and Environmental Change
This area of research involves understanding how organisms interact with each other and with the physical world, and how humans affect ecological processes and ecosystems. Questions include: How does past and present land use change affect species distribution, community assembly and biogeochemical cycles? (Avolio, Szlavecz) How does biodiversity, especially invasive species, affect the rates of soil biogeochemical cycling the production of greenhouse gasses (Szlavecz)? How do urban environments shape the ecology and evolution of plants and soil organisms within these systems (Avolio, Szlavecz)? What are the linkages between plant community composition and ecosystem function and/or services in grasslands and cities (Avolio)? How resistant or resilient are grasslands to global change drivers and what is their capacity to adapt to new environmental conditions (Avolio)? Students are invited to participate in ongoing collaborations at two Long Term
Ecological Research Sites (Baltimore Ecosystem Study and Konza Prairie Biological Station), the Smithsonian Environmental Research Center, the Beltsville Agricultural Research Center, or to design an original research project under the advisement of our faculty.

All Ph.D. students are expected to have a background of general biology, physics, chemistry and calculus. Deficiencies can be made up in the first semesters at Hopkins. Students take a core program of statistics, Earth history, stable isotope geochemistry, and ecology. In conjunction with the Department of Environmental Health and Engineering, Earth and Planetary Sciences offers course work opportunities in aquatic chemistry, microbial ecology, geospatial analysis, and analytical environmental chemistry.

Financial Aid
The university makes available to the department a number of Gilman Fellowships, which provide for complete payment of tuition, together with Johns Hopkins’ fellowships and graduate assistantships that carry a nine-month stipend. Graduate assistantships cannot require more than 10 hours a week of service to the department, and all recipients of financial aid carry a full program of study. In addition, a number of special and endowed fellowships pay as much or more. In many areas of study, summer support is also available.

Applications for admission to graduate study and financial aid (including all supporting documents and GRE scores) should be submitted to the department before January 1.

Courses
AS.270.103. Introduction to Global Environmental Change. 3 Credits.
A broad survey of the Earth as a planet, with emphasis on the processes that control global changes. Topics include: the structure, formation, and evolution of the Earth, the atmosphere, oceans, continents, and biosphere. Special attention is given to present-day issues, such as global climate change, natural hazards, air pollution, resource depletion, human population growth, habitat destruction, and loss of biodiversity. Open to all undergraduates.
Area: Natural Sciences

AS.270.110. Freshman Seminar: Sustainable + Non-Sustainable Resources. 1 Credit.
An introduction to the important resources involved in the origin and production of oil, natural gas, coal, cement, metals and geothermal fluids.
Area: Natural Sciences

AS.270.111. Freshman Seminar: The Story of Earth. 1 Credit.
The four and a half billion year story of Earth’s global changes focusing on the co-evolution of Earth and Life.
Area: Natural Sciences

AS.270.112. The Changing Arctic Environment: Problem or Opportunity?. 3 Credits.
The Arctic is warming three times faster than the global-mean rate. In this course we will be studying this phenomenon and its consequences by looking at the interconnected parts of the Arctic climate system (ocean, atmosphere, and ice), how they are changing, and which socio-economic opportunities and environmental challenges arise from these changes.
Area: Natural Sciences

AS.270.113. Freshman Seminar: Environmental Poisons. 1 Credit.
An exploration of the occurrence and potential effects of poisons in the environment, from naturally occurring ones such as arsenic to those that may be introduced by mankind such as nuclear waste.
Area: Natural Sciences

AS.270.114. Guided Tour: The Planets. 3 Credits.
An introduction to planetary science and planetary exploration primarily for non-science majors. A survey of concepts from astronomy, chemistry, geology, and physics applied to the study of the solar system.
Area: Natural Sciences

AS.270.125. People and the Earth: The Science Behind Our Interactions. 3 Credits.
This course is designed to introduce non-science students to the ways in which humans and the Earth interact. These interactions go in both directions, with Earth processes and materials affecting human society, and human activities altering the Earth. Topics include natural disasters, natural resources, and environmental issues rooted in geology; and they are examined from both a historical perspective and in the context of current events. Class time involves active learning and hands-on experiences. Course open to freshmen, sophomores, and juniors. Seniors by instructor permission only.
Area: Natural Sciences

AS.270.127. Our Moon From Imagination to Exploration. 3 Credits.
People imagined going to the Moon long before Neil Armstrong took those famous steps. Works such as Jules Verne’s 1865 book De la terre à la lune (From the Earth to the Moon) and Georges Méliès’s 1902 movie Le Voyage dans la Lune (A Trip to the Moon) served to inspire later exploration of the Moon in the second half of the 20th century. In 1959, Luna 2 became the first spacecraft to visit the Moon and since then a number of robotic and human missions have successfully explored the Moon. Analyzing data from those missions has led to a detailed scientific understanding of the Moon, yet certain fundamental questions remain unresolved. This calls for future exploration of the Moon. To be active participants of future exploration of the Moon, students in this course will understand the culture, history, engineering, and science of the Moon.
Area: Natural Sciences

AS.270.202. Introduction to Ecology. 3 Credits.
Ecology is the study of organisms and their environment. This course focuses on the patterns of distribution and abundance of organisms. Topics include population dynamics and regulation, competition, predation, host-parasite interactions, patterns of species diversity, community succession, the flow of energy and matter through ecosystems. We will also discuss the role of natural and human disturbances in shaping communities.
Prerequisite(s): AS.270.103 OR AS.020.151
AS.270.205. Introduction to Geographic Information Systems and Geospatial Analysis. 3 Credits.
The course provides a broad introduction to the principles and practice of Geographic Information Systems (GIS) and related tools of Geospatial Analysis. Topics will include history of GIS, GIS data structures, data acquisition and merging, database management, spatial analysis, and GIS applications. In addition, students will get hands-on experience working with GIS software.
Area: Engineering, Natural Sciences

AS.270.219. Natural Hazards. 3 Credits.
This course investigates earth processes that lead to natural hazards and their social and economic consequences. Topics include earthquakes, tsunamis, volcanoes, hurricanes, coastal flooding, drought, fire, and climate change. We will use case studies to explore the scientific principles behind the occurrence of natural disasters, assess their risks, and evaluate how societies have responded to these events.
Area: Natural Sciences

AS.270.220. The Dynamic Earth: An Introduction to Geology. 3 Credits.
Basic concepts in geology, including plate tectonics; Earth's internal structure; geologic time; minerals; formation of igneous, sedimentary, and metamorphic rocks; development of faults, folds and earthquakes; geomagnetism. Corequisite (for EPS Majors): AS.270.221; optional for others. The course is introductory and open to undergraduates at all levels; freshmen are encouraged to enroll.
Area: Natural Sciences

AS.270.221. The Dynamic Earth Laboratory. 2 Credits.
This course is a hands-on learning experience for introductory geological concepts and techniques using geological tools, such as mineral/rock samples, microscopes, and maps. Field trips are its essential part. The course is open to undergraduates at all levels; freshmen who wish to get their hands (and boots) dirty are encouraged to enroll.
Corequisite(s): AS.270.220
Area: Natural Sciences

AS.270.222. Mineralogy. 4 Credits.
An introduction to the properties, occurrence, and origin of the basic constituents of the Earth, including minerals and rocks. Introductory training in the recognition of minerals and rocks in the laboratory and the field.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences

AS.270.224. Oceans & Atmospheres. 3 Credits.
A broad survey of the Earth's oceans and atmospheres, and their role in the environment and climate. Topics covered include waves, tides, ocean and atmosphere circulation, weather systems, tornadoes and hurricanes, El Niño, and climate change. For science and engineering majors
Area: Natural Sciences

AS.270.230. Aqueous Geochemistry. 3 Credits.
Modeling the chemistry of water-rock interactions from weathering and riverine development at Earth's surface to hot springs at depth, fluids in subduction zones in Earth's interior, and the ancient fluids preserved in fluid inclusions. Thermodynamic basis for the calculation of equilibria and irreversible chemical mass transfer involving minerals and aqueous species at low and high temperatures and pressures. The course culminates with practical examples of research interest to individual participants.
Prerequisite(s): (AS.030.101 AND AS.030.102) AND (AS.270.220 AND AS.270.221) or equivalents.
Area: Natural Sciences

AS.270.303. Earth History. 3 Credits.
This course will explore the evolution of life in the context of environmental, ecological, and geological changes to the Earth surface system. The goal of the class is to provide students with an understanding of how geological and paleontological records provide insight into the origin(s) of life, oxygenation of the atmosphere, the evolution of multicellularity, evolutionary radiations and extinctions, and modern global change.
Prerequisite(s): AS.270.103 OR AS.270.220 OR AS.270.224; or permission of the instructor.
Area: Natural Sciences

AS.270.304. Igneous Geology and Volcanoology. 3 Credits.
This course provides an introduction to igneous and volcanic processes on Earth and other planetary bodies. Focus is placed on linking observations made on rocks in hand sample and outcrop to Earth/planetary processes. The course will review crystal chemistry of major rock-forming minerals and progress through how igneous rocks form. Volcanism, including eruption processes, landforms and tectonic settings, will be reviewed. Labs will include rock identification, study of thin sections under microscope and field trips. Teaching is geared toward the graduate and advanced undergraduate level. Recommended course background: AS.270.220 and AS.270.221, or instructor permission.
Area: Natural Sciences

AS.270.305. Energy Resources in the Modern World. 3 Credits.
This in-depth survey will inform students on the non-renewable and renewable energy resources of the world and the future prospects. Topics include petroleum, natural gas, coal, nuclear, hydroelectric, geothermal, solar, wind, biomass, and ocean energy. Global production, distribution, usage, and impacts of these resources will be discussed.
Area: Natural Sciences

AS.270.306. Urban Ecology. 3 Credits.
Urban ecology has been called the ecology in, of, and for cities. In this course, we will explore how ecological concepts are applied to urban ecosystems and the different approaches to urban ecological research. Topics will include: Biodiversity, water dynamics, energy and heat island effects, and nutrient cycling, urban metabolism, design of greenspace, and sustainability of cities. We will use Baltimore as a case study for studying cities.
Prerequisite(s): AS.270.308 OR EN.570.205 OR EN.570.403
Area: Natural Sciences

AS.270.307. Geoscience Modeling. 4 Credits.
An introduction to modern ways to interpret observations in the context of a conceptual model. Topics include model building, hypothesis testing, and inverse methods. Practical examples from geophysics, engineering, and medical physics will be featured.
Area: Natural Sciences
AS.270.308. Population/Community Ecology. 3 Credits.
This course explores the distribution and abundance of organisms and their interactions. Topics include dynamics and regulation of populations, population interactions (competition, predation, mutualism, parasitism, herbivory), biodiversity, organization of equilibrium and non-equilibrium communities, energy flow, and nutrient cycles in ecosystems. Field trip included. Students who have not taken one of the prerequisites may register with the permission of the instructor.
Prerequisite(s): AS.270.103 OR AS.020.151
Area: Natural Sciences

AS.270.310. Evolution and Development of the Vertebrates. 3 Credits.
Modern vertebrates (animals with backbones) are the products of a more than 500-million-year evolutionary history. This course surveys that history and uses it to explore such core evolutionary concepts as adaptive radiation, convergence, extinction, homology, phylogenetic taxonomy, and tree thinking. Emphasis will be placed on the origins of the modern vertebrate fauna and how fossils are being integrated with developmental biology to better understand major transitions in the vertebrate body plan.
Area: Natural Sciences

AS.270.312. Mammalian Evolution. 3 Credits.
An introduction to the evolutionary history and diversity of mammals, with emphasis on the first half of the Cenozoic - the beginning of the Age of Mammals. The course will focus primarily on the adaptive radiation of mammals (including our own order primates) that followed the extinction of the dinosaurs, exploring the origins and relationships of the major groups of mammals as well as the anatomical and ecological reasons for their success. Lectures will be supplemented with relevant fossils and recent specimens.
Area: Natural Sciences

AS.270.315. Natural Catastrophes. 3 Credits.
A survey of naturally occurring catastrophic phenomena, with emphasis on the underlying physical processes. Topics include hurricanes, tornadoes, lightning, earthquakes, tsunamis, landslides, and volcanic eruptions and climate change. Intended for students in science and engineering.
Area: Natural Sciences

AS.270.317. Conservation Biology. 3 Credits.
In this course, students examine the meaning and implications of biodiversity with a focus on disciplines associated with conservation biology, wildlife conservation and wildlife management, including taxonomy, genetics, small population biology, chemical and restoration ecology, and marine biology. This includes exploring how conservation biology differs from other natural sciences in theory and in application. Students learn the major threats to biodiversity and what natural and social science methods and alternatives are used to mitigate, stop, or reverse these threats. The course also includes the economic and cultural tradeoffs associated with each conservation measure at the global, national, regional, and local levels. One required field trip.
Area: Natural Sciences

AS.270.318. Remote Sensing of the Environment. 3 Credits.
This course is an introduction to the use of remote sensing technology to study Earth’s physical and biochemical processes. Topics covered include remote sensing of the atmosphere, land, and oceans, as well as remote sensing as a tool for policy makers. Also offered as 270.618
Area: Natural Sciences

AS.270.319. Geochronology and High-Temperature Isotope Geochemistry. 3 Credits.
Introduction to radioisotope geo/thermochronology and mantle stable and radioisotope geochemistry. Course covers: (1) methods for dating of rocks and geologic processes using long-half-life radioisotope systems, including the various isotope systems available and their applicability; (2) radioisotope techniques for investigation of the geochemical evolution of the crust and mantle; (3) isotope fractionation and utility of traditional and novel stable isotope geochemistry for interrogating high-temperature processes, and (4) thermochronology and methods for interrogating upper-crustal processes. Recommended course background: AS.270.220 and AS.270.221, or instructor permission.

AS.270.320. Seminar in Planetary Science. 1 Credit.
Major problems of current interest in planetary science are critically discussed in depth.
Area: Natural Sciences

AS.270.323. Ocean Biogeochemical Cycles. 3 Credits.
This course will examine the cycling of trace chemicals in the ocean, consider what we can learn from the distributions of these chemicals about the ocean circulation, and ocean ecosystems. Topics covered will include oceanic biological productivity, open water cycling of nutrients and oxygen, ocean acidification and sediment cycling.
Area: Natural Sciences

AS.270.325. Introductory Oceanography. 3 Credits.
This class is an introduction to a wide range of physical, chemical, and biological phenomena in the world’s oceans. Underlying basic principles are exposed wherever possible. Topics covered include: seawater, waves, tides, ocean circulation, chemical oceanography, biogeochemical ocean processes, and remote sensing of the oceans. Recommended Course Background: freshman Physics, Chemistry, Calculus through ordinary differential equations.
Area: Natural Sciences

AS.270.326. Cosmochemistry. 4 Credits.
Students in this course will gain an understanding of the origin of various forms of matter in our Solar System and beyond, along with its evolution through geologic processes. Beginning with the concepts of nucleosynthesis and stellar evolution, this course will then cover the condensation of matter, meteoritics, and petrogenetic evolution of differentiated, rocky bodies (i.e. asteroids, the Moon, Mars). Evolution of matter in extra-Solar planetary systems (i.e. exoplanets) will also be broached. In lab we will examine thin sections of meteorites, lunar material, and terrestrial analogs - a field trip to the Smithsonian Meteorite Collection is planned. Graduate and advanced undergraduate-level students are encouraged, as are interdisciplinary students with an interest in planetary science.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences, Social and Behavioral Sciences
AS.270.328. Planetary Exploration: Techniques and Data Analysis. 3 Credits.
Have you ever wondered what it would be like if you could visit other planets and travel through the space? Students in this course will use state-of-the-art observational techniques in planetary exploration and actual spacecraft data from the Cassini mission to Saturn and the Mars Rover mission to solve problems in planetary science and design a space exploration mission. Important planetary properties, such as atmospheric composition and interior composition of a planet, will be studied using remote sensing and in situ data. Recent discoveries about exoplanets will be integrated into course activities. Recommended Course Background: One semester of Introductory Chemistry (AS.030.101).
Prerequisite(s): ((AS.110.105 AND AS.110.106) OR (AS.110.108 AND AS.110.109) OR (AS.110.202 AND AS.110.211)) AND ((AS.171.101 AND AS.171.102) OR (AS.171.103 AND AS.171.104) OR (AS.171.105 AND AS.171.106) OR (AS.171.107 AND AS.171.108))
Area: Natural Sciences, Social and Behavioral Sciences

AS.270.331. Isotope Geochemistry. 4 Credits.
Introduction to stable isotope and radioisotope geochemistry. Isotope measurements are used to probe fundamental questions in the Earth and environmental sciences because they can be used to extract information about the timing of and/or chemical, physical, and biological processes associated with the formation of geomaterials. The first half of the course focuses on light isotope systems (O, C, S, etc.) and low-temperature applications, including: (1) tracing sources and sinks of fluids, sediments, biological materials, and contaminants, (2) studying rates and mechanisms of biochemical reactions, and (3) paleoenvironmental reconstructions. The second half of the course focuses on heavier isotope systems and high-temperature applications, including: (1) methods for dating of rocks and geologic processes using long-half-life radioisotopes, including the various isotope systems available and their applicability, and (2) isotope fractionation at high temperatures and the utility of radioisotope and novel stable isotope geochemistry for interrogating processes influencing the crust and mantle. Biweekly lab classes (scheduled in first week) will allow students to become familiar with principles of isotope measurements and interpretations. Mid-term and final exams. Recommended course background: AS.270.220 and AS.270.221, or instructor permission.
Prerequisite(s): AS.270.220 AND AS.270.221

AS.270.332. Soil Ecology. 3 Credits.
The course introduces basic aspects of cycles and flows in the soil ecosystem, and provides students with an overview of the higher groups of soil organisms. Laboratory and field surveying methods are also covered.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences

AS.270.333. Mineral Physics Recitation. 2 Credits.
This course is designed for undergraduate students interested in pursuing geophysics research in the topics of solid state physics or inorganic chemistry. It will consist of a weekly seminar paired with a separate paper reading/discussion group, covering a range of topics on the frontiers of mineral physics. Themes rotate each semester, and Fall 2018 will be paired with the Mineralogy Lecture Series on Modeling and Experimental challenges in Cosmochemistry. Recommended Course Background: Relevant coursework such as Mineralogy or equivalent in other department, and instructor permission.

AS.270.334. Astrobiology: Chemical Evolution of Life on Earth and Beyond. 3 Credits.
Have you wondered how life began on Earth or if we are alone in the Universe? This course will explore the prebiotic chemistry and origin of life on Earth, then move on to Mars, icy bodies (Europa, Titan, Enceladus) and newly-found “habitable” exoplanets. Students in this course will learn state-of-the-art methods and techniques used to characterize habitable conditions and to detect life. This course will deepen understanding of the current developments and ongoing discoveries in field of astrobiology.
Prerequisite(s): AS.030.102 or equivalent.
Area: Natural Sciences

AS.270.336. Freshwater Systems. 3 Credits.
A study of streams, lakes, and groundwater with a focus on aspects of water quality, hydrology, geomorphology, and aquatic ecology that are relevant to human impacts on freshwater systems. US environmental policies and water resource management agencies will also be examined in the context of issues such as dams, cattle grazing, climate change, and water allocation.
Prerequisite(s): AS.270.103 OR AS.271.107 or permission of the instructor.
Area: Natural Sciences

AS.270.337. Freshwater Systems Lab. 1 Credit.
A hands-on investigation of the water quality, hydrology, geomorphology, and aquatic ecology of streams and other freshwater bodies. Includes field trips to water-related facilities such as drinking water and wastewater treatment plants.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences

AS.270.338. Field Methods in Ecology. 3 Credits.
This course will introduce student to methods used in field-based ecological research addressing population, community and ecosystem-level questions. Outdoor fieldwork is an essential part of the course. Field activities will center around the riparian ecosystem adjacent to the Homewood campus and on the urban ecology of the greater Baltimore region. Students will build skills in data collection, analysis, synthesis, and presentation. Basic statistical instruction in R will be taught to aid data analysis.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module. AS.270.308 OR EN.570.205
AS.270.339. Topics in Mineralogy. 3 Credits.
This semester, join HEMI’s Designer in residence, and MICA professor Jenna Frye, in a modified version of her popular experimental fabrication course, EPIC FAIL. Discover how thinking with your hands, embracing risk and failure and playful exploration with educational toys, can invigorate your research in mineralogy and deepen your understanding of crystallography visualization. This course is designed as a hands-on, deeply collaborative workshop, where we will investigate the role of creative fabrication technology and invention as it relates to communicating scientific research to outside audiences. Together we will make, tinker and fail our way to improved visualization and presentation strategies so that others may more fully access the complexities in our work. Topics in Mineralogy is a special topics course that rotates in subject and may be taken multiple times for credit. This course is designed for those interested in mineralogy, and we recommend concurrent enrollment in Planetary Interiors, Space Weathering, and/or Advanced Mineralogy seminar.

AS.270.346. Structural Geology Seminar. 1 Credit.
Seminar class on fundamentals of structural geology, as applied in field-based studies. Involves weekly readings/practical exercises on: (1) field techniques for measuring structures; (2) interpretation of structural data on maps and cross-sections; (3) approaches for inferring large-scale structure from limited data; (4) techniques for visualizing structure; (5) deformation style and associated fabrics/textures/structure; (6) metamorphism and deformation, and (7) methods for visualizing and analyzing structure. Topics covered are geared towards developing skills required for a 10-day, field-based Independent Study in Structural Geology course in Scotland in the summer (May–June).
Prerequisite(s): AS.270.220

AS.270.347. Foundations of Ecology. 3 Credits.
In this seminar students will read seminal pieces in ecology. Assigned readings will span early 1900s to present. Students will pair a foundational paper with a more current paper on a similar topic to explore the evolution of ecological concepts and approaches over time. This course is aimed at upper level undergraduates and graduate students.
Prerequisite(s): AS.270.202

AS.270.348. Communicating Climate Science. 3 Credits.
This course is a study of techniques used to effectively communicate scientific knowledge with a focus on climate science. This will be done with three overarching topics: reading and comprehending scientific papers, critically interpreting science news from the media, and communicating complex climate science to a general audience. The course is intended for science and engineering majors and not open to freshman. Recommended pre-requisites: General Calculus and Physics I and/or Oceans and Atmospheres.

AS.270.350. Sedimentary Geology. 4 Credits.
Sedimentary rocks are the historical records of the Earth, documenting climate change, mass extinctions, and the evolution of life. This course will provide an introduction to sedimentary processes and sedimentary rocks. Focus is placed on linking physical observations to the ancient environments in which sedimentary rocks once formed. Fundamental tools for interpreting the sedimentary rock record, such as depositional models, geochronology, and chemostratigraphy will be reviewed. Two 1-day weekend field trips will occur over the course of the semester. There will also be weekly 1-hour labs. Lab and field trip times will be determined in the first week of class. Graduate and advanced undergraduate level. Recommended Course Background: AS.270.220 or instructor permission.
Area: Natural Sciences

AS.270.361. Geodynamics Seminar. 1 Credit.
Seminar class on the dynamics of subduction and accretionary orogenesis. Topics in subduction may include: (1) modes of global subduction through Earth history; (2) models of forced/triggered vs. spontaneous subduction initiation; (3) arc development and implications for growth of continents; (4) subduction zone rollback and arc migration, and (5) subducted slab breakoff and tearing. Topics in accretionary orogenesis may include: (1) stress state of the overriding plate; (2) tectonic mode switches (shortening to extension and vice versa), and (3) length and time scales of the thermal manifestations of accretionary orogenesis.
Prerequisite(s): AS.270.220 AND AS.270.221 or instructor permission.

AS.270.366. Spacecraft Instrumentation Project. 3 Credits.
Co-Listed with EN.530.366Investigation into the content relevant to an ongoing spacecraft instrumentation project. An interdisciplinary team will enhance the skills and knowledge of science and engineering students. Topics include mission background, planetary science, sensor design, spacecraft systems, and mission planning, and sensor fabrication, calibration, integration, and testing, data analysis and interpretation, scientific/technical writing and publication.
Area: Engineering, Natural Sciences

AS.270.369. Geochem Earth/Environmen. 3 Credits.
An introduction to all aspects of Geochemistry: theoretical, experimental, and observational, including the application of geochemistry to issues such as the migration of toxic metals and nuclear waste.
Prerequisite(s): AS.270.220
Area: Natural Sciences

AS.270.378. Present and Future Climate. 3 Credits.
Intended for majors who are interested in the science that underlies the current debate on global warming, the focus is on recent observations one can glean from model simulations. Meets with AS.270.641. Recommended Course Background: AS.110.108-AS.110.109 and AS.171.101-AS.171.102
Prerequisite(s): Student may not receive credit for both AS.270.378 and AS.270.641.
Area: Natural Sciences

AS.270.379. Atmospheric Science. 3 Credits.
A survey of core topics in atmospheric science, including dynamics, thermodynamics, radiative transfer, and chemistry. The course addresses both basic principles and applications to weather and climate. Recommended pre-requisites: General Calculus and Physics I and/or Oceans and Atmospheres.
Area: Natural Sciences

AS.270.380. Seminar in Regional Field Geology. 3 Credits.
Introduction to the regional geology and geological history of the Appalachian system (from Alabama to Newfoundland). Key papers on regional bedrock geology and Mesoproterozoic through Phanerozoic tectonics are reviewed in weekly seminar classes. Two three-day field trips are made on weekends negotiated at the beginning of the semester. Fieldwork will be designed with student input to test ideas and models from the literature. Techniques in sedimentary, metamorphic, igneous and structural field geology are introduced and developed in the field. Recommended course background: AS.270.220 and AS.270.221, or instructor permission.
Area: Natural Sciences, Social and Behavioral Sciences
AS.270.381. Seminar in Field Geology. 3 Credits.
Field experience is an integral part of a geology student's education. During this course, students will spend over a week outdoors, learning to make observations that can be used to interpret the geologic history and structure of natural environments. This course is a spring break field course that will focus on different topics each year. For Spring 2019, the focus of the trip will be on applying concepts and techniques covered in Dynamic Earth (AS.270.220/1), Sedimentary Geology (AS.270.350), and Earth History (AS.270.303). Students will also learn about the different tectonic events that have shaped the landscape that we see today in the western United States. The class is designed for upper level E&PS majors and first or second year E&PS graduate students. For logistical reasons, this class is capped at 10 students. Preference will be given to E&PS majors. Students will be camping during the field course and should be prepared to be hiking outside all day. In the case that obtaining personal field supplies (e.g., hiking boots, sleeping bags) is not possible through Homewood student affairs gear rentals and/or is a financial hardship, please contact the instructor. Any communication about this will be kept confidential. Mandatory class field trip: 9-day field trip to Esmeralda County, NV over spring break (3/16/18-3/24/18).
Prerequisite(s): (AS.270.220 AND AS.270.221) OR AS.270.350 OR AS.270.303

AS.270.385. Seminar in Virtual Field Experiences: Accessibility, Exploration, and Development. 2 Credits.
The Earth Sciences traditionally rely heavily on outdoor field education – the purposeful use of an outdoor environment to achieve educational objectives – in higher education. Observations made at the surface of the Earth are fundamental to understanding the processes that have shaped it, and outdoor field education is often considered an essential way to connect classroom theory with actual data and observations. However, despite the demonstrated benefits of outdoor field education, there are persistent, deep-rooted problems with it in higher education, two of which include accessibility issues and financial barriers. There is overwhelming and demonstrated need to make outdoor field education and research more accepting of all who want to participate. This course aims to explore some of these accessibility issues by 1) reading and discussing peer-reviewed literature on this topic, 2) participating in and learning about already established virtual field trips and tools, and 3) developing our own virtual educational tools and experiences.

AS.270.396. Special Topics in Planetary Exploration. 3 Credits.
Geology in the Outer Solar System: This course will focus on the solid bodies of the outer solar system, addressing their formation, surfaces, interiors, evolution, and how we study them via remote sensing and spacecraft investigation. We will use data from the various missions that have investigated the outer system and cover aspects of instrumentation and remote sensing of outer system bodies from the Voyager missions, Galileo, Cassini, and New Horizons. The course includes lecture, discussion, and hands-on lab work. Recommended pre-requisites: Dynamic Earth and/or Introductory planetary science and/or remote sensing, or instructor approval.
Area: Natural Sciences

AS.270.400. The Carbon Cycle: Past, Present and Future. 3 Credits.
This course will explore how the carbon cycle shapes environmental conditions and influences other biogeochemical cycles through an investigation of the modern carbon cycle, major carbon cycle perturbations in the geological record, and projections of future global change. The majority of the class will be structured as a reading seminar, but students will also develop an understanding of how to use quantitative models to evaluate patterns of change associated with both modern and ancient carbon cycle perturbations with implications for predicting future environmental changes. Recommended Prerequisites: AS.270.103 or AS.270.220 or AS.270.224
Area: Natural Sciences, Quantitative and Mathematical Sciences

AS.270.401. Metamorphic Geology. 3 Credits.
Introduction to metamorphic geology and the concepts on which it is built. Ideas and techniques that underpin metamorphic petrology are introduced in the context of the development and evolution of metamorphic geology as a discipline. Focus is on utility of metamorphic geology in understanding crustal processes and the nature of plate tectonics. One-day, weekend field trips to explore the Baltimore Gneiss Domes. Recommended course background: AS.270.220 and AS.270.221, or instructor permission.
Prerequisite(s): AS.270.220 AND AS.270.221
Area: Natural Sciences

AS.270.404. Planetary Interiors. 3 Credits.
This course investigates the physical processes occurring in planetary interiors. Topics include formation and differentiation of planetary bodies, planetary structure, thermal evolution, convection, and dynamo generation of magnetic fields. Standard remote sensing methods used to investigate planetary interiors and results from recent planetary satellite missions will also be discussed. Recommended: Knowledge of vector calculus, PDEs and introductory physics.
Area: Natural Sciences

AS.270.406. Space Weathering. 1 Credit.
This course will introduce and explore multiple topics of Space Weathering - the interaction of solar system bodies with the space environment. Through a combination of lecture, reading, research, and discussion the course will explore physical and chemical processes of solar and cosmic radiation and particles, micrometeorites, etc., on the surfaces of planets. We will also explore interaction of the space environment with planetary magnetic fields and atmospheres, and with non-planetary materials (such as spacecraft, and astronauts).
Prerequisite(s): AS.270.222

AS.270.408. Petrology Seminar. 1 Credit.
Seminar class on recent developments in igneous and metamorphic petrology. Involves weekly readings on modern methods/understanding in petrogenesis and processes leading to mineral (re)crystallization; rock deformation; fluid transport in rocks; pressure and temperature estimates of rock formation, and rates/durations of thermotectonic processes in the lithosphere. Topics covered will cater to interests and learning goals of those who register in the class.
Prerequisite(s): AS.270.220
AS.270.410. Planetary Surface Processes. 3 Credits.
This course explores processes that influence the evolution of planetary surfaces, including impact cratering, tectonics, volcanism, weathering, and sediment transport. These processes manifest themselves as structural deformation of planetary crusts due to loading by volcanoes, formation of craters by asteroid impacts, modification of surfaces by flowing landslides, rivers and glaciers, and the accumulation and transport of sand in dune fields on various planets. Emphasis is on the relationship to similar Earth processes, and the integrated geologic histories of the terrestrial planets, satellites, and asteroids. The focus will be on developing a physical understanding of these processes to interpret the surface characteristics and evolution of planets, satellites, asteroids, and comets from both qualitative assessments and quantitative measurements obtained from spacecraft data. A key component of the class will be the interpretation of these observations from recent and current planetary missions to the Moon, Mars, and other terrestrial bodies.Recommended Course Background: A sound knowledge of Calculus and Introductory Physics, and some prior knowledge of Earth and/or Planetary Science.
Area: Natural Sciences

AS.270.412. Spring seminar: Geological Field Studies in California. 2 Credits.
Field experience is an integral part of a geology student’s education. During this course, students will learn to digitize, synthesize, and interpret the observations they made during the January field-based class to interpret the geologic history and structure of southern California. Study USA: Geological Field Studies in California is a co-requisite for this course. For Spring 2020, the focus of the field work and course will be on applying concepts and techniques covered in Dynamic Earth (AS.270.220/1), Sedimentary Geology (AS.270.350), Earth History (AS.270.303), Planets, Life and the Universe (AS.020.334), and Isotope Geochemistry (AS.270.331). Sedimentary rocks are spectacularly exposed in this region and record over a billion years of key events in Earth history. Students will learn how these rocks have shaped our understanding of major evolutionary and environmental shifts in Earth’s past, while also learning how to map these units’ regional geographic distribution. Finally, students will also learn about the different tectonic events that have shaped the landscape that we see today in the western United States. The class is designed for upper level E&PS majors and E&PS graduate students.

AS.270.413. Readings in Mineral Physics. 1 Credit.
Mineral Physics is the study of mineralogical problems through the application of condensed matter physics and solid-state chemistry. In this course, students will participate in the journal discussion about the foundational and developing research capabilities in Mineral Physics, with an emphasis this semester on Spectroscopy. Topics will include electron spectroscopy and X-ray scattering (both elastic and inelastic) techniques. Readings in Mineral Physics is a special topics course that rotates in subject and may be taken multiple times for credit.
Prerequisites: Structure of Materials (EN.510.311/601), Mineralogy (AS.270.222) or permission of the instructor.
Prerequisite(s): (EN.510.311 OR EN.510.601) AND AS.270.222 OR Permission of the Instructor.

AS.270.423. Planetary Atmospheres. 3 Credits.
Area: Natural Sciences

AS.270.425. Earth and Planetary Fluids. 3 Credits.
An introductory course on the properties, flow, and transport characteristics of fluids throughout the Earth and planets. Topics covered include: constitutive relationships, fluid rheology, hydrostatics, dimensional analysis, low Reynolds number flow, porous media, waves, stratified and rotating fluids, plus heat, mass, and tracer transport. Illustrative examples and problems are drawn from the atmosphere, ocean, crust, mantle, and core of the Earth and other Planets. Open to graduate and advanced undergraduate students. Recommended Course Background: Basic Physics, Calculus, and familiarity with ordinary differential equations.
Area: Natural Sciences

AS.270.431. Tectonics Seminar. 3 Credits.
Introduction to plate tectonics and its ‘framework’ role in understanding the Earth. Kay papers will be discussed in a weekly seminar class. Focus will be on early works that helped establish the theory, in addition to recent breakthrough contributions that have led to modifications and improvements to the theory of plate tectonics.

AS.270.501. Independent Study. 1 - 3 Credits.
Exploration of topic(s) in earth, planetary, and/or environmental science under the direction of an instructor.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.270.504. Independent Research. 0 - 3 Credits.
Research in earth, planetary, and/or environmental science conducted under the direction of a faculty advisor.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.270.510. Senior Thesis. 1 - 3 Credits.
Senior thesis research project in earth, planetary, and/or environmental science conducted under the direction of a faculty advisor.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
Writing Intensive

AS.270.595. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.270.603. Geochemistry Seminar.
A variety of topics of current interest involving mineral-fluid interactions will be reviewed.

AS.270.605. EPS Colloquium.
A weekly seminar series in which graduate students present their latest research results and attend Departmental seminars. This course is required for all graduate students in the Department of Earth and Planetary Sciences.
AS.270.606. EPS Colloquium. A weekly seminar series in which graduate students present their latest research results and attend Departmental seminars. This course is required for all graduate students in the Department of Earth and Planetary Sciences.

AS.270.611. Global Atmospheric Dynamics. This course will examine the fluid dynamics that determine large-scale atmospheric circulation and variability using Ian James’ “Introduction to Circulating Atmospheres.” Topics covered will include the dynamics of Hadley cells, mid-latitude jets, baroclinic instability, monsoon circulations, and low-frequency variability of the circulation.

AS.270.615. Inversion Modeling & Data Assimilation. This graduate class will introduce modern inverse modeling and data assimilation techniques. These powerful methods are used in atmospheric science, oceanography, and geophysics and are growing more widespread. Topics will include: singular value decomposition, Green's function inversions, Kalman filtering, and variational data assimilation. The class will include lectures on concepts and theory, and practical experience in the computer laboratory. Permission of Instructor Required

AS.270.618. Remote Sensing of the Environment. Also offered as 270.318. Area: Natural Sciences

AS.270.624. Advanced Seminar on Remote Sensing. Discussion of the physical principles that underlie earth remote sensing. Topics to include radiative transfer in Earth’s atmosphere, operating principles of active and passive remote sensing systems, and advanced methods for image analysis.

AS.270.626. Ocean General Circulation. The aim of this course is to achieve conceptual understanding of the large scale low frequency ocean general circulation. The role of the ocean circulation in earth’s climate is emphasized throughout.

AS.270.628. Seminar in regional field geology. Weekend field trip to explore regional geology. Students are required to prepare short presentations on field trip topics in advance of weekend trip. Attendance at two organizational meetings (to be scheduled) is required. Open to E&PS graduate students and upper level E&PS undergraduate majors and minors. Trip date is 11/9/2019. Consult instructors for details.

AS.270.629. Tracer Transport in Geophysical Flows. This course examines the transport of substances in geophysical flows. Topics covered include fundamental transport processes, transport in simple flows, and use of chemical tracers to infer transport properties. These concepts will be illustrated by case studies in a variety of geophysical flows, including the flow in atmospheres, oceans, lakes, and groundwater.

AS.270.630. Physics and Chemistry of Aerosols. This course will cover fundamentals of aerosol physics and chemistry. Topics covered will include aerodynamics and diffusion of aerosol particles, condensation and evaporation, particle size distributions, optics of small particles, characterization of particle composition, and the diversity of aerosols found in planetary atmospheres. Recommended Course Background: Basic Physics and Chemistry. Calculus.

AS.270.631. Tectonics Seminar. Introduction to plate tectonics and its ‘framework’ role in understanding the Earth. Kay papers will be discussed in a weekly seminar class. Focus will be on early works that helped establish the theory, in addition to recent breakthrough contributions that have led to modifications and improvements to the theory of plate tectonics. Area: Natural Sciences

AS.270.641. Present and Future Climate. Meets with AS.270.378. Prerequisite(s): Student may not receive credit for both AS.270.378 and AS.270.641.

Area: Natural Sciences

AS.270.653. Earth and Planetary Fluids II. A sequel to AS.270.425 concentrating on planetary-scale atmospheric and oceanic circulation. Physical understanding of the underlying fluid dynamics will be emphasized.

AS.270.654. Environmental Data Analysis. Environmental data is often messy-contaminated with noise, fundamental nonlinear, potentially stationary. This course will build on Menke and menke's Environmental Data Analysis with Matlab to examine methods of analyzing environmental data that don’t lead us to confuse noise with signal. Topics covered will include significance testing, spectral estimation, nonparametric methods, multivariate data analysis. Applications will be tailored to the student interest.

AS.270.656. Geochemical modeling of water-rock interactions in the deep Earth. Thermodynamic basis for the modeling of irreversible chemical mass transfer involving minerals and aqueous species at elevated temperatures and pressures. Reading will start with classic papers by Helgeson and co-workers and proceed to applications in the literature involving hydrothermal ore deposits, subduction zones, and diamond formation in the upper mantle. The course focuses on developing specific projects of research interest to individual participants. Recommended Course Background: AS.030.101 and AS.030.102 or equivalent, AND AS.270.220 AND AS.270.221 or equivalent, AND AS.270.302 or equivalent.

AS.270.667. Seminar in Soil Ecology. Area: Natural Sciences

AS.270.668. Geobiology Seminar. Geobiology is the study of interactions between life and rocks. In this class we will explore how organisms impact sedimentary records both directly, by leaving behind biosignatures, or indirectly, by affecting their surroundings in a way that promotes formation of certain types of minerals. This will serve as a guide for interpreting geological records during the early evolution of life on Earth, the rise of animals, and major mass extinctions.

Area: Natural Sciences

AS.270.675. Communication for Scientists. Communication for Scientists” and the description is “This course will cover the various ways in which scientists are expected to communicate throughout the life of a project. Topics will include writing proposals, preparing impactful figures, writing press releases, interacting with the press (press conferences, radio/TV, interviews, etc.), writing for and speaking to the public, social media, and interacting with policy makers.”
AS.270.679. Atmospheric Science.  
A survey of core topics in atmospheric science, including dynamics, thermodynamics, radiative transfer, and chemistry. The course addresses both basic principles and applications to weather and climate. Recommended pre-requisites: General Calculus and Physics I and/or Oceans and Atmospheres.  
Area: Natural Sciences

AS.270.680. Seminar in Regional Field Geology.  
Introduction to the regional geology and geological history of the Appalachian system (from Alabama to Newfoundland). Key papers on regional bedrock geology and Mesoproterozoic through Phanerozoic tectonics are reviewed in weekly seminar classes. Two-three day field trips are made on weekends negotiated at the beginning of the semester. Fieldwork will be designed with student input to test ideas and models from the literature. Techniques in sedimentary, metamorphic, igneous and structural field geology are introduced and developed in the field. Recommended course background: AS.270.220 and AS.270.221, or instructor permission.  
Area: Natural Sciences

AS.270.681. Seminar in Field Geology.  
Field experience is an integral part of a geology student's education. During this course, students will spend over a week outdoors, learning to make observations that can be used to interpret the geologic history and structure of natural environments. This course is a spring break field course that will focus on different topics each year. For Spring 2019, the focus of the trip will be on applying concepts and techniques covered in Dynamic Earth (AS.270.220/1), Sedimentary Geology (AS.270.350), and Earth History (AS.270.303). Students will also learn about the different tectonic events that have shaped the landscape that we see today in the western United States. The class is designed for upper level E&PS majors and first or second year E&PS graduate students. For logistical reasons, this class is capped at 10 students. Preference will be given to E&PS majors. Students will be camping during the field course and should be prepared to be hiking outside all day. In the case that obtaining personal field supplies (e.g., hiking boots, sleeping bags) is not possible through Homewood student affairs gear rentals and/or is a financial hardship, please contact the instructor. Any communication about this will be kept confidential. Mandatory class field trip: 9-day field trip to Esmeralda County, NV over spring break (3/16/18-3/24/18).  
Area: Natural Sciences

AS.270.683. Topics in Mineral Physics.  
Mineral Physics is the study of mineralogical problems through the application of condensed matter physics and solid-state chemistry. In this course, students will learn about the foundational and developing research capabilities in Mineral Physics, with an emphasis this year on shock compression and experiments at High Energy Density. Topics will include experimental investigation of equation of states, phase transitions, changes in optical and transport properties and other strain-rate dependent phenomena. Topics in Mineral Physics is a special topics course that rotates in subject and may be taken multiple times for credit. Prerequisite(s): (EN.510.311 OR EN.510.601) OR AS.270.222 or instructor permission.

A range of standard mathematical methods used in earth and planetary science applications will be studied. A core set of topics will include back-of-the-envelope estimates, differential equations, linear algebra, special functions, and transforms. In addition, students will tailor the course to their needs by choosing from a range of extended topics to explore further. Potential topics include perturbation theory, tensors, probability theory and complex analysis. Open to graduate students and senior undergraduate EPS majors with permission of instructor. Recommended preparation includes knowledge of single and multivariable calculus and linear algebra.

AS.270.685. Seminar in Virtual Field Experiences: Accessibility, Exploration, and Development.  
The Earth Sciences traditionally rely heavily on outdoor field education – the purposeful use of an outdoor environment to achieve educational objectives – in higher education. Observations made at the surface of the Earth are fundamental to understanding the processes that have shaped it, and outdoor field education is often considered an essential way to connect classroom theory with actual data and observations. However, despite the demonstrated benefits of outdoor field education, there are persistent, deep-rooted problems with it in higher education, two of which include accessibility issues and financial barriers. There is overwhelming and demonstrated need to make outdoor field education and research more accepting of all who want to participate. This course aims to explore some of these accessibility issues by: 1) reading and discussing peer-reviewed literature on this topic, 2) participating in and learning about already established virtual field trips and tools, and 3) developing our own virtual educational tools and experiences.

AS.270.693. Special Topics in Dynamo Theory.  
Current research literature in planetary magnetic fields and dynamo theory will be studied. Topics will vary year-to-year. Students will be responsible for leading discussions on relevant papers from the literature. Open to graduate students and senior undergraduate EPS majors with permission of instructor. Recommended preparation includes knowledge of fluid dynamics, electromagnetism and planetary science.

AS.270.696. Special Topics in Planetary Exploration.  
A selection of planetary research topics investigated by Prof. Strobel spanning the past 45 years covering the progress that has been made and remaining problems that still need to be addressed. The majority of topics will involve the outer solar system and the science discoveries made by the Voyager, Cassini-Huygens, and New Horizons Missions as well as observations by Earth orbiting satellites – IUE, HUT, HST, FUSE.  
Area: Natural Sciences

AS.270.807. Research.  

AS.270.808. Research.

AS.271.107. Introduction to Sustainability. 3 Credits.  
Humans are having such a massive impact on Earth systems that some call this the Anthropocene epoch. Should we consider this state of affairs progress or catastrophe? How to we find a sustainable path to the future? This course provides an interdisciplinary introduction to the principles and practice of sustainability, exploring such issues as population, pollution, energy and natural resources, biodiversity, food, justice, and climate change through the lens of systems thinking. Course open to freshmen, sophomores, and juniors. Seniors by instructor permission only.  
Area: Social and Behavioral Sciences
AS.271.302. Exploring Nature. 3 Credits.
This course integrates the analysis and production of environmental media with weekly outdoor excursions. Students will survey a range of authors, adventurers, journalists, scientists, photographers, acoustic ecologists and filmmakers that have explored the natural world and chronicled the history of human-environmental relations and environmental problems. Field trips to regional parks and green spaces will encourage students to discover their own sense of place, foster a deeper level of ecological awareness and construct personal environmental narratives through careful exploration, observation, documentation and reflection.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.271.304. Sustainable Food Systems. 3 Credits.
Where does your food come from? What impact does food production have on the environment and human societies? How can food systems become more sustainable as the human population increases? This seminar-style course examines the past, present, and future of agriculture, including topics such as the foodways of indigenous people, modern 'factory farming' versus organic agriculture, genetically modified foods, and the interplay among science, economics, policy, and agriculture. Involves hands-on experiences.
Area: Social and Behavioral Sciences

AS.271.305. Special Topics in Environmental Studies. 3 Credits.
Environmental Policy in the Age of Trump. This course will analyze the effects of the current administration's actions on environmental issues by assessing the policies in question and estimating the potential impacts on climate change, human health, and ecology. Policies that have been overturned or are under review represent a number of environmental issues, including climate change and greenhouse gas emissions, offshore drilling, national monuments, mining pollution, toxic discharge into public waterways, the development of oil pipelines, public land use planning, coal leases, a harmful insecticide, hunting in wildlife refuges, airborne mercury emissions, protection of tributaries and wetlands under the Clean Water Act, energy and fuel-efficiency standards, and resource extraction from federal lands. Students will examine the historical roles environmental organizations and government agencies have played in advocating for, creating and enforcing U.S. environmental policy and will discuss the future roles of these actors and other stakeholders in implementing effective environmental policy.
Area: Social and Behavioral Sciences

AS.271.320. Environmental Photojournalism. 3 Credits.
Environmental cognition, consciousness and communication are produced, reproduced, interpreted and remembered with the support of visual representations and, in particular, photography. Images increasingly structure our experience of nature, environmental problems, human-environmental relations, and ecological awareness. Students will review critical literature focusing on visual representation theory, the relationship between images and social change, the practice of journalism and the history and typology of environmental photography. An understanding of environmental issues is required. Students will engage with the local community, identify and investigate environmental issues facing Baltimore, participate in photographic critiques, and develop a documentary project. This studio/seminar course is designed with an emphasis on independent research and practice.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.271.345. Society and Nature Conflicts: Interdisciplinary Approaches to Studying Environmental Problems Over Time. 3 Credits.
In this seminar students will read seminal pieces in the field of socio-environmental research. Socio-environmental research recognizes that society and nature inherently interact in such a way that they affect and change one-another - it is not only that society affects the nature or that nature only affects society. Solving environmental problems necessitates understanding this duality and thus an interdisciplinary background. Assigned readings will span early from thinkers on environmental problems (Before 1900) to current approaches to studying and solving environmental problems. It is aimed at upper level undergraduates and graduate students.

AS.271.360. Climate Change: Science & Policy. 3 Credits.
Prereq: 270.103 or permission of instructor. This course will investigate the policy and scientific debate over global warming. It will review the current state of scientific knowledge about climate change, examine the potential impacts and implications of climate change, explore our options for responding to climate change, and discuss the present political debate over global warming.
Area: Natural Sciences

AS.271.399. Research Design. 1 Credit.
This course supports students in the design of their senior capstone project, including crafting a suitable research question, identifying appropriate methodologies, and writing a formal project proposal.

AS.271.401. Environmental Ethics. 3 Credits.
Environmental Ethics is a philosophical discipline that examines the moral relationship between humans and the natural environment. For individuals and societies, it can help structure our experience of nature, environmental problems, human-environmental relations, and ecological awareness. Beginning with a comprehensive analysis of their own values, students will explore complex ethical questions, philosophical paradigms and real-life case studies through readings, films and seminar discussions. Traditional ethical theories, including consequentialism, deontology, and virtue ethics will be examined and applied. Environmental moral worldviews, ranging from anthropocentric to eco-centric perspectives, will be critically evaluated. Organized debates will help students strengthen their ability to deconstruct and assess ethical arguments and to communicate viewpoints rooted in ethical principles. Students will apply ethical reasoning skills to an examination of contemporary environmental issues including, among others, biodiversity conservation, environmental justice, climate change, and overpopulation. Students will also develop, defend and apply their own personal environmental ethical framework. A basic understanding of modern environmental history and contemporary environmental issues is required. Prior experience with philosophy and ethics is not required.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.271.402. Water, Energy, and Food. 3 Credits.
The water, energy and food (WEF) nexus is a topic of growing interest in the research and policy communities. This course will survey WEF concepts and principles, introduce tools of analysis, and engage students in case studies of critical WEF issues in the United States and internationally.
AS.271.403. Environmental Policymaking and Policy Analysis. 3 Credits.
This course provides students with a broad introduction to US environmental policymaking and policy analysis. Included are a historical perspective as well as an analysis of future policymaking strategies. Students examine the political and legal framework, become familiar with precedent-setting statutes such as NEPA, RCRA, and the Clean Air and Clean Water Acts, and study models for environmental policy analysis. Cost benefit studies, the limits of science in policymaking, and the impact of environmental policies on society are important aspects of this course. A comparison of national and international policymaking is designed to provide students with the proper perspective. This course is taught in conjunction with an identical graduate course. All students will be expected to perform at a graduate level.
Area: Social and Behavioral Sciences

AS.271.404. GIS Workshop. 1 Credit.
An accompaniment to the GECS Senior Capstone Seminar for students whose research project involves a GIS component. Designed to enable beginner to advanced GIS users to acquire the data and skills needed to accomplish their research goals.
Area: Natural Sciences

AS.271.405. Energy and Politics. 3 Credits.
In the 21st century, energy supply and consumption are critical subjects for international politics, social development, and the future of the environment. Policies that determine energy supply and consumption come to being in complex institutional, national, and international contexts. This course will equip students with the necessary background to analyze energy policy issues and contribute to them in a meaningful manner. It also involves examination of wide-ranging debates over the switch to renewables, the use of unconventional energy sources, and the environmental consequences of energy choices.
Area: Social and Behavioral Sciences

AS.271.496. Senior Capstone Experience. 3 Credits.
This seminar will provide the academic space, time, and mentoring for students to integrate, synthesize and apply the knowledge and skills obtained through the ENVS curriculum into a tangible environmental project.

AS.271.499. Senior Seminar. 1 Credit.
This seminar explores topics related to career development and current events to support senior environmental majors as they transition to post-graduate life and work.

AS.271.502. Independent Study. 1 - 3 Credits.
Exploration of topic(s) in environmental studies under the direction of an instructor.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.271.506. Independent Research. 1 - 3 Credits.
Research in environmental studies conducted under the direction of a faculty advisor.

AS.271.507. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.271.509. Applied Experience. 1 Credit.
This course is designed to accompany a supervised, hands-on experience working on an environmental or sustainability-related research project or internship. While completing 80 hours of applied work, students will prepare a reflective journal, paper, and poster presentation about their experience. Graded S/U only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.271.511. Senior Thesis. 1 - 3 Credits.
Senior thesis research project in environmental studies conducted under the direction of a faculty advisor.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

Writing Intensive

Cross Listed Courses

Anthropology
AS.070.379. Social Ecology Studio. 3 Credits.
This course will grapple with the social and cultural dimensions of contemporary ecological problems through a local, project-based approach. Coursework will be organized on a studio basis in partnership with a local environmental organization, Friends of Stony Run. Continuing a collaborative project initiated in the fall of 2019, we will work together to develop interpretive materials for the Stony Run stream and urban watershed adjoining our campus.
Area: Humanities, Social and Behavioral Sciences

German Romance Languages Literatures
AS.211.327. Ecocinema: Framing Italy's Environmental Crises. 3 Credits.
Over the past decade, growing numbers of filmmakers in Italy have addressed ecological crises in their work. This class takes an eco-critical approach to contemporary Italian cinema, examining a body of compelling place-centered stories that deal with local and global issues. Defining the scope of eco-cinema and the ways we can interrogate films as ecological texts, we shall screen earth-centered films that raise consciousness about the consequences of human manipulation of the natural world; the complicity of industry, government, and organized crime in creating environmental crises; and the effects of economic and social malaise. Screenings include iconic films such as Michelangelo Antonioni's Red Desert (1963), more recent, critically acclaimed films such as Matteo Garrone's Gomorrah (2008), Alice Rohrwacher's Happy as Lazzaro (2018), and many others.
Area: Humanities

Interdepartmental
AS.360.339. Planets, Life and the Universe. 3 Credits.
This multidisciplinary course explores the origins of life, planet formation, Earth's evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions, and planetary protection. Recommended Course Background: Three upper level (300+) courses in sciences (Biophysics, Biology, Chemistry, Physics, Astronomy, Math, or Computer Science)
Prerequisite(s): Students may not register for this class if they have already received credit for AS.020.334 OR AS.020.616 OR AS.171.333 OR AS.171.699 OR AS 270.335 OR AS.360.671
Area: Natural Sciences
AS.360.671. Planets, Life and the Universe.
This multidisciplinary course explores the origins of life, planet formation, Earth’s evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions, and planetary protection. Recommended Course Background: Three upper level courses in sciences and buy textbooks
Prerequisite(s): Students may not register for this class if they have already received credit for AS.020.616 OR AS.020.334 OR AS.171.333 OR AS.171.699 OR AS.270.335 OR AS.360.339.
Area: Natural Sciences

Near Eastern Studies
AS.130.378. Geoarchaeology: Applications of Earth Science to Archaeology. 3 Credits.
Geoarchaeology is a multidisciplinary subfield that applies the tools and techniques of earth science to understand ancient humans and their interactions with environments. This course examines basic topics and concepts, including archaeological site formation, paleo-environmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar.
Area: Natural Sciences, Social and Behavioral Sciences

AS.131.678. Geoarchaeology: Applications of Earth Science to Archaeology. 3 Credits.
Geoarchaeology is a multidisciplinary subfield that applies the tools and techniques of earth science to understand ancient humans and their interactions with environments. This course examines basic topics and concepts, including archaeological site formation, paleo-environmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar.

Earth and Planetary Science (EPS), PhD
Program Overview
Requirements
Sample Program

Earth and Planetary Sciences (EPS), Bachelor of Arts
Earth and Planetary Sciences Major Requirements
(Also see Requirements for a Bachelor’s Degree. (p. 1584))

The Bachelor of Arts in Earth and Planetary Sciences is for undergraduates interested in the study of the physical, chemical, and biological processes that shape the Earth and the other planets, drawing on the disciplines of geology, geochemistry, geophysics, hydrology, ecology, geobiology, oceanography, and atmospheric science.

Students should design a specific plan of appropriate courses in consultation with their advisor and the EPS Director of Undergraduate Studies (DUS). Those who wish to be majors may proceed directly to the introductory courses at the 200-level, but depending on the student’s background, it may be appropriate initially to take a freshman seminar or 100-level course designed for the non-major. Our courses provide a broad educational base in the Earth, planetary, and environmental sciences and enable exploration of a set of electives at the 300- and 400-level, depending on the area of interest.

The department requires a total of 9 credits at the 100- or 200-level and 12 credits at the 300-level or above within the department, as well as science and math foundation courses from other departments. All courses must be taken for a letter grade, and students must earn a grade of C- or better to apply the course to the major.

Earth and Planetary Sciences, Minor Earth and Planetary Sciences Minor Requirements

The Earth and Planetary Sciences (EPS) minor is for science undergraduates interested in learning about Earth and other planets through geology, geochemistry, geophysics, hydrology, ecology, geobiology, oceanography, and atmospheric science. Students take 12 credits of EPS courses, at least six of which are at the 300-level, and at least 16 credits of other natural sciences, quantitative studies, or engineering. No AS.271.xxx courses may count toward the minor. All courses must be taken for a letter grade, and students must earn a grade of C- or better to apply the course towards the minor.

Environmental Science, Bachelor of Science

Environmental Science Major Requirements (B.S)

(Also see Requirements for a Bachelor’s Degree. (p. 1584))

The Bachelor of Science in Environmental Science is an interdisciplinary major that introduces students to the ways in which human activities impact Earth systems and vice versa. It equips students to use a variety of tools, such as science, policy, communication, and individual and societal behavior change, to solve environmental and sustainability problems, with an emphasis on the perspectives and tools of the natural sciences. Environmental Science majors must complete a set of core courses common to both ENVS majors, including a research-focused senior capstone course and an applied experience involving an internship, plus several additional natural science core courses and a suite of electives in the student’s area of interest.

The ENVS senior capstone experience involves both the completion of a research project or comparable scholarly endeavor under the supervision of a JHU faculty member and participation in a 1-credit senior seminar that explores career development and current events to support seniors as they transition to post-graduate life and work. A 1-credit research design course taken in the junior year guides students in the development of their senior research project proposal. All ENVS majors must enroll in the capstone and senior seminar courses in the fall semester of their senior year.

The applied experience can be completed during any semester including summers and involves at least 80 hours of supervised, hands-on experience working with an organization on environmental or sustainability issues through an internship or similar work or volunteer experience. Synthesizing assignments reflecting on the experience are

Honors in EPS Major

To receive honors in Earth and Planetary Sciences, students must meet the following criteria:

- Take a challenging set of courses during the four years of study.
- Earn a GPA of 3.5 or higher in the major requirements.
- Complete a senior thesis (6 credits of AS.270.510 Senior Thesis taken over two semesters) at a level judged to be sufficiently high by the faculty of the Department of Earth and Planetary Sciences.
- Present the results of the thesis orally in the Department of Earth and Planetary Sciences.
also required. The goal of the applied experience requirement is to ensure that students have practical experience in a workplace or community setting that will help prepare them for the next step in their education and career.

The Environmental Science major requires a total of 75 or more credits to complete. All courses must be taken for a letter grade, and students must earn a grade of C- or better to apply the course to the major. All ENVS majors are encouraged to consider studying abroad at some point during their undergraduate years to develop a more global, culturally sensitive perspective on environmental and sustainability issues. Students are not permitted to double-major in both Environmental Science and Environmental Studies. Consult the ENVS program’s website for additional information: http://krieger.jhu.edu/envs/requirements/

**Natural Sciences Core**

| AS.110.107 | Calculus II (For Biological and Social Science)         | 4       |
| or AS.110.109 | Calculus II (For Physical Sciences and Engineering)   |         |
| AS.030.102 | Introductory Chemistry II                               | 3       |
| or AS.030.103 | Applied Chemical Equilibrium and Reactivity w/lab       |         |

Select two of the following science courses: 6-8

| AS.020.151 | General Biology I                                      |         |
| AS.020.152 | General Biology II                                     |         |

### Lab Experiences

3 approved science lab courses are required. Lab courses waived due to Advanced Placement Exam credit cannot count toward this requirement. Approved labs include but are not limited to:

| AS.020.153 | General Biology Laboratory I                          |         |
| AS.020.154 | General Biology Lab II                                 |         |
| AS.030.105 | Introductory Chemistry Laboratory I                   |         |
| AS.030.106 | Introductory Chemistry Laboratory II                  |         |
| AS.173.111 | General Physics Laboratory I                           |         |
| AS.173.112 | General Physics Laboratory II                          |         |
| AS.173.115 | Classical Mechanics Laboratory                        |         |
| AS.173.116 | Electricity and Magnetism Laboratory                   |         |
| AS.270.221 | The Dynamic Earth Laboratory                          |         |
| AS.270.337 | Freshwater Systems Lab                                 |         |
| AS.270.338 | Field Methods in Ecology (If used to satisfy the lab requirement, this course cannot count as an elective.) |         |

### Electives

Choose 15 credits of approved courses related to the student’s area of interest, at least 12 credits of which are at the 300-level or above. 15

| Total Credits | 75-80 |

### Electives

Each student should work with their advisor to choose a coherent suite of elective courses totaling at least 15 credits, 12 of which are at the 300-level or above. These courses should be relevant to the student’s individual interests and career plans and may center around one or more environmental/sustainability issues or environmental science disciplines, such as earth science or ecology. Appropriate elective courses are those that concentrate directly on environmental or sustainability issues. The ENVS Director of Undergraduate Studies (DUS) distributes a list of pre-approved elective courses each semester, and approval for other courses can be sought by emailing the major advisor and DUS.

### Course

#### First Year

**First Semester**

| AS.270.103 | Introduction to Global Environmental Change | 3       |
| AS.030.101 | Introductory Chemistry I                    | 3       |
| AS.110.108 | Calculus I (Physical Sciences & Engineering) | 4       |
| AS.190.111 | Introduction to Global Studies               | 3       |
| AS.190.226 | Global Governance                           | 3       |

**Second Semester**

| AS.271.107 | Introduction to Sustainability                | 3       |
| AS.030.102 | Introductory Chemistry II                    | 3       |

Credits 13
To qualify for honors in the major, a student must:

- Earn a cumulative GPA of 3.5 in the courses taken to fulfill the major requirements.
- Successfully complete 3 credits of senior thesis, AS.271.511 Senior Thesis, beyond the senior capstone experience involving an environmental or sustainability-related research project or other comparable scholarly endeavor.
- Earn a rating of good or excellent on the final product of the thesis, as determined by the faculty research advisor.
- Present the results of the thesis orally in an appropriate JHU department.

**B.A./M.S. Option**

Undergraduates majoring in Environmental Science may apply for accelerated status toward an M.S. in Environmental Sciences and Policy (ESP) or an M.S. in Geographic Information Systems (GIS) through the JHU Krieger School of Arts & Sciences’ Advanced Academic Programs. Interested students should speak with their advisor and the Director of the ESP and GIS Programs, Jerry Burgess (jerry.burgess@jhu.edu), in their senior year. Students may apply up to three courses taken as undergraduates toward the M.S. in Environmental Science and Policy and up to two courses toward the M.S. in GIS, thereby leaving only seven to eight more courses to complete the M.S. following receipt of their bachelor’s degree. Students will receive two separate degrees, so the requirements of both degrees must be fulfilled. Students cannot earn the M.S. degree without completion of the B.A. or B.S.; however, students who do not complete the M.S. retain their B.A. or B.S.

**Environmental Studies, Bachelor of Arts**

**Environmental Studies Major Requirements (B.A.)**

(Also see Requirements for a Bachelor's Degree. (p. 1584))

The Bachelor of Arts in Environmental Studies is an interdisciplinary major that introduces students to the ways in which human activities impact Earth systems and vice versa. It equips students to use a variety of tools, such as policy, science, communication, and individual and societal behavior change, to solve environmental and sustainability problems, with an emphasis on the perspectives and tools of the social sciences. Environmental Studies majors must complete a set of core courses common to both ENVS majors, including a research-focused senior capstone course and an applied experience involving an internship, plus three additional social science core courses and a suite of electives in the student’s area of interest.

The ENVS senior capstone experience involves both the completion of a research project or comparable scholarly endeavor under the supervision of a JHU faculty member and participation in a 1-credit senior seminar that explores career development and current events to support seniors as they transition to post-graduate life and work. A 1-credit research design course taken in the junior year guides students in the development of their senior research project proposal. All ENVS majors must enroll in the capstone and senior seminar courses in the fall semester of their senior year.

The applied experience can be completed during any semester including summers and involves at least 80 hours of supervised, hands-on experience working with an organization on environmental or sustainability issues through an internship or similar work or volunteer experience. Synthesizing assignments reflecting on the experience are also required. The goal of the applied experience requirement is to ensure that students have practical experience in a workplace or community setting that will help prepare them for the next step in their education and career.

The Environmental Studies major requires a total of 65 or more credits to complete. All courses must be taken for a letter grade, and students must earn a grade of C- or better to apply the course to the major. All

### Honors in the Environmental Science Major

To qualify for honors in the major, a student must:

- Earn a cumulative GPA of 3.5 in the courses taken to fulfill the major requirements.
- Successfully complete 3 credits of senior thesis, AS.271.511 Senior Thesis, beyond the senior capstone experience involving an environmental or sustainability-related research project or other comparable scholarly endeavor.
- Earn a rating of good or excellent on the final product of the thesis, as determined by the faculty research advisor.

#### Electives

Choose 12 credits of approved courses related to the student's area of interest, at least 9 credits of which are at the 300-level or above.

#### Total Credits

**65**

---

**Electives**

Each student should work with their advisor to choose a coherent suite of elective courses totaling at least 12 credits, 9 of which are at the 300-level or above. These courses should be relevant to the student’s individual interests and career plans and may center around one or more environmental/sustainability issues or environmental studies disciplines, such as anthropology or economics. Appropriate elective courses are those that concentrate directly on environmental or sustainability issues. The ENVS Director of Undergraduate Studies (DUS) distributes a list of approved focus area courses each semester, and approval for other courses can be sought by emailing the major advisor and DUS.

### Honors in the Environmental Studies Major
To qualify for honors in the major, a student must:

- Earn a cumulative GPA of 3.5 in the courses taken to fulfill the major requirements.
- Successfully complete 3 credits of senior thesis, AS.271.511 Senior Thesis, beyond the senior capstone experience involving an environmental or sustainability-related research project or other comparable scholarly endeavor.
- Earn a rating of good or excellent on the final product of the thesis, as determined by the faculty research advisor.
- Present the results of the thesis orally in an appropriate JHU department.

### B.A./M.S. Option
Undergraduates majoring in Environmental Studies may apply for accelerated status toward an M.S. in Environmental Sciences and Policy (ESP) or an M.S. in Geographic Information Systems (GIS) through the JHU Krieger School of Arts & Sciences’ Advanced Academic Programs. Interested students should speak with their advisor and the Director of the ESP and GIS Programs, Jerry Burgess (jerry.burgess@jhu.edu), in their senior year. Students may apply up to three courses taken as undergraduates toward the M.S. in Environmental Science and Policy and up to two courses toward the M.S. in GIS, thereby leaving only seven to eight more courses to complete the M.S. following receipt of their bachelor’s degree. Students will receive two separate degrees, so the requirements of both degrees must be fulfilled. Students cannot earn the M.S. degree without completion of the B.A. or B.S., however, students who do not complete the M.S. retain their B.A. or B.S.

### Environmental Studies, Minor
#### Environmental Studies Minor Requirements
The Environmental Studies minor is designed to allow students majoring in other disciplines to develop additional expertise in environmental issues and sustainability. It consists of 18 credits of environmental or sustainability-related courses, including two introductory core courses. At least 6 credits must be at the 300-level or above. Students are encouraged to select electives from relevant courses in both the social and natural sciences but can tailor their coursework to fit their particular interests and career goals. Appropriate elective courses are those focused directly on environmental or sustainability issues. The ENVS Director of Undergraduate Studies (DUS) distributes a list of approved courses for the minor each semester, and approval for other courses can be sought by emailing the DUS. All courses must be taken for a letter grade, and students must earn a grade of C- or better to apply the course to the minor. Consult the ENVS program’s website for additional information: https://krieger.jhu.edu/envs/requirements/minor/

### East Asian Studies
#### http://krieger.jhu.edu/east-asian/

#### East Asian Studies Major and Minor
The East Asian Studies program is interdisciplinary and interdepartmental. It includes both a major and a minor. The primary purpose of the program is to introduce undergraduates to the knowledge, language skills, and research methods they will need to enter various academic and professional paths relating to China, Japan, and Korea. Majors in East Asian Studies engage in intensive Chinese, Japanese and/or Korean language study through the Center for Language Education and work with faculty on such topics as China in the global economy, nationalism in East Asia, Korean politics, modern Japanese history and politics, Chinese urban history, and women in modern China. Students are encouraged to pursue original research projects in East Asia with the support of intersession and summer travel grants, stipends for conference presentations, a senior thesis honors option, and seminars that bring together research scholars, faculty, graduate students and undergraduates in a manner that is distinctly Hopkins. Many students choose to combine the major in East Asian Studies with another major. Alumni of the program are making their mark around the world in business and finance, academia, law, international development, medicine and public health, engineering, media, public service, and the arts.

#### BA/MA Program with SAIS
For students wishing to both develop their language skills and to pursue a master’s degree after graduation from Hopkins, the university offers an accelerated and competitive International Studies B.A./M.A. Program drawing upon its resources at the School of Advanced International Studies (SAIS), located in Washington, D.C., and the Hopkins-Nanjing Center in Nanjing, China. Combining a liberal arts curriculum with a strong specialization in international studies, the program allows those enrolled to receive the B.A. and M.A. degrees in five years instead of the usual six. Students spend three years in Baltimore, one year in Nanjing, and their final year in Washington, D.C.

Approximately eight sophomores are selected for the accelerated BA/MA program each year. Admission is limited to those majoring in East Asian Studies (the combined program via the Nanjing, China campus only), International Studies, and Political Science and who are highly motivated toward careers for which a background in international studies is essential: research, teaching, or practice in international affairs. Financial assistance is available to those admitted based on need and on academic achievement. For more information go to http://krieger.jhu.edu/internationalstudies/bama-programs/bama-program-with-sais/.
Hopkins in Tokyo

In fall 2012, we inaugurated a full-year undergraduate exchange program with the University of Tokyo. This study abroad program was designed with Hopkins’ East Asian Studies majors and Japanese language students in mind. As with other departmental study abroad programs at Hopkins, students’ credits and grades will be transferred between the two universities.

This is a direct exchange program between our universities, rather than a program run by Hopkins. For each Hopkins student who attends the University of Tokyo, one University of Tokyo student will attend Hopkins. Each Hopkins student has a Japanese student as his/her personal tutor. The tutors assist students in both academic matters and in daily life.

Limited to 1-3 students per year, admission to the University of Tokyo program is competitive. Students must have completed 4 semesters of college-level Japanese or the equivalent, have a term GPA of 3.0 or above, and submit two faculty references, one of which should be from a Japanese language instructor. For more information and application instructions, visit http://krieger.jhu.edu/east-asian/study-abroad/hopkins-in-tokyo/

Courses

AS.310.106. Introduction to Korean History and Culture. 3 Credits.
This course offers a comprehensive overview of Korean history and culture from ancient times to the modern era. Through primary, secondary, and audio-visual sources, students will become familiar not only with the overall contours of the entirety of Korean history, but also with its cultural and religious legacy. The course combines lectures and class discussions.
Area: Humanities

AS.310.222. The Religions of Korea. 3 Credits.
This course offers an overview of the religions of Korea, both indigenous and foreign, old and new. Attention will be paid to the history of these religions, their impact on society, as well as their teachings and objectives. Students will engage with various forms of secondary as well as primary sources including scriptures, sermons, and religious tracts.
Area: Humanities

AS.310.230. Chinese Politics and Society. 3 Credits.
This introductory course will familiarize students with the major dynamics of political and social change in contemporary China since 1949. The course will be divided chronologically into four main topics: 1. The contested processes of nation-state making in modern China before 1949; 2. The making of the socialist system during the Mao Years and its dismantling since 1978; 3. The Reform Era transformation to a market economy with Chinese characteristics; 4. The dynamic relationships among the state, market and society since the new millennium. Students will explore how scholars have explained major political and social changes with reference to individual and collective rationalities, specific organizational and institutional arrangements, and specific strategic and cultural mechanisms of Chinese political and social habits.
Area: Humanities, Social and Behavioral Sciences

AS.310.302. China, Human Rights, and U.S. Policy Responses. 3 Credits.
This seminar explores select human rights issues in China (e.g., human rights impacts of the management of COVID-19, the Hong Kong protests, mass detentions/forced labor in Xinjiang province) and the extraterritorial reach of China’s human rights challenges. As a practice and policy-oriented course, we will also investigate different responses and actions taken by the U.S. government and Congress, including hearings, legislation, reports, statements, etc. Class assignments include advocacy for Chinese prisoners of conscience (each student will “adopt” one currently detained PoC), and written work that mirrors real-world writing. We’ll also have several human rights advocates and experts visit the class to share their experiences and insights. This seminar explores select human rights issues in China (e.g., human rights impacts of the management of COVID-19, the Hong Kong protests, mass detentions/forced labor in Xinjiang province) and the extraterritorial reach of China’s human rights challenges. As a practice and policy-oriented course, we will also investigate different responses and actions taken by the U.S. government and Congress, including hearings, legislation, reports, statements, etc. Class assignments include advocacy for Chinese prisoners of conscience (each student will “adopt” one currently detained PoC), and written work that mirrors real-world writing. We’ll also have several human rights advocates and experts visit the class to share their experiences and insights.
Area: Social and Behavioral Sciences
AS.310.305. Southeast Asia and US Security Strategy. 3 Credits.
This survey course is designed to introduce students to Southeast Asia – the ten member countries of the Association of Southeast Asian Nations (ASEAN) plus Australia and New Zealand. Southeast Asia is an integral part of the broader region of East Asia and a geographic bridge to the Indian subcontinent (South Asia). Southeast Asia has been one of the great success stories in the saga of modernization and development of post-colonial Afro-Asia over the last six decades. Its resulting economic importance is matched by its strategic significance given the presence of imbedded jihadist networks and the emergence of China as a regional great power and aspirant superpower. Nevertheless, the region has been largely overlooked by senior foreign policy and defense officials in Washington. This course will equip students to fill that void by examining the region from the perspective of national security strategy – broadly understood in its multiple dimensions. Students will be challenged to formulate some element of a viable U.S. national security strategy for the region.
Area: Social and Behavioral Sciences

AS.310.312. Masterpieces of Chinese Literature: Song through 20th Century, a Literature-in-Translation class. 3 Credits.
In the millennium from the Song Dynasty (960-1280) to the modern era court poets and master storytellers, eccentric misfits and satiric novelists, as well as courtesans and film makers all considered a complex and changing China. We will look at the masterpieces of this millennium, examining both text and cultural context. In examining the texts we will rely on close reading in order to develop sound critical interpretations. We will also place the text in cultural context, considering the multiple forces-political, economic, artistic and religious- that shaped the lives of these writers and the cultures they observed.
Area: Humanities
Writing Intensive

AS.310.316. First Year Classical Chinese: Philosophers, Poets and Fantasists: An Introduction to Chinese Literature in the Original Classical Texts. 3 Credits.
We will read arguments, anecdotes and stories, beginning with the philosophers of the ancient period, including the imaginative paradigms of the Daoist writer Zhuangzi, and continue with the strange writings allied with shamanism and goddess-worship. We will continue with the fantastical writers of the medieval world and finish with anecdotes of the strange from the Ming and Qing. Because this is a language as well as a literature class, in addition to literary content and social history as background, we will emphasize grammar and vocabulary. Class preparation will require language exercises, translations, readings in English and there will be a final translation/research paper.
Prerequisite(s): (AS.373.115 AND AS.373.116) OR (AS.378.115 OR AS.378.116) or Instructor permission.
Area: Humanities

AS.310.320. Sociology of Urban China. 3 Credits.
Urban China has gone through two major social transformations since 1949: the embrace of a central planning socialist system between early 1950s and late 70s, and the embrace of neo-liberal market economy in the so-call “socialism with Chinese characteristics” since 1980. While the political regime remains the same over time, many profound changes have occurred in economic life, social life, cultural life, spiritual life and civil life. What really happened in the social transformation of urban China? What would explain those changes? How did people in different walk of life deal with those huge and deep social transformation? To address these concerns, we will exam a list of issues. Topics includes changes in population and demographic characteristics, employment structure and job market, workplace and residential communities, income and wealth distributions, segregation impacts of urban household registration systems, urban consumption patterns, courting cultures and dressing codes, spiritual practices, and social mobility and social stratifications. In the realm of public policies, we will pay special attentions to the issues of transportation, housing, medical service, public education, social insurance, and environmental protection. We will also study the characteristics of contentious politics and how social conflicts of power, interest, justice, cultural and belief were processed in urban China.
Area: Social and Behavioral Sciences

AS.310.322. Korean History Through Film and Literature. 3 Credits.
In this course, students will engage with select topics in Korean history from premodern and modern times and examine how the past has been represented through various forms of film and literature. This will be combined with readings of academic articles to allow students to gauge the distance between scholarship and cultural expressions of history. Through this, students will be introduced to the highly contested and often polarizing nature of Korean history and the competition surrounding historical memory. Prior coursework in East Asian Studies strongly recommended.
Area: Humanities
Writing Intensive

AS.310.323. The History and Culture of North Korea. 3 Credits.
This is a seminar that investigates the history and culture of North Korea. Course materials include scholarly articles, political tracts, biographies, movies, as well as works of fiction. For the final project, students will write an extended research paper on a topic of their choice.
Area: Humanities, Social and Behavioral Sciences

AS.310.340. Development and Social Change in Rural China. 3 Credits.
This course will survey the major issues of development and social change in rural China since 1950s. These issues will be addressed in chronological order. They include land ownership and land grabbing, organization of rural economic, political, and social life, rural elections and village governance, development strategies, urban-rural relationship in resource allocation, rural modernization strategies in regard to irrigation, clean drinking water, electricity supply, hard paved road, education and rural medical service, women’s rights and family life, rural consumption, and etc. This course will prepare students, both empirically and analytically, to understand what happened in rural China from 1949 to the present, and how we can engage in policy and theoretical discussions based on what we learn.
Area: Humanities, Social and Behavioral Sciences
AS.310.402. Labor Politics in China. 3 Credits.
This course explores the transformation of labor relations in China over the past century. It will cover the origins of the labor movement, the changes brought about by the 1949 Revolution, the industrial battles of the Cultural Revolution, the traumatic restructuring of state-owned enterprises over the past two decades, the rise of private enterprise and export-oriented industry, the conditions faced by migrant workers today, and recent developments in industrial relations and labor conflict. The course is designed for upper division undergraduates and graduate students. Cross-listed with Sociology and International Studies (CP).
Area: Social and Behavioral Sciences
Writing Intensive

AS.310.404. Korea in the World. 3 Credits.
This seminar examines Korea's interactions with the outside world including Japan, China, and the Americas, as well as Europe and Southeast Asia. We will touch upon a wide range of topics, including political, economic, and military interactions, as well as cultural, intellectual, and religious engagements. The purpose is to identify larger transnational trends and parallels in understanding Korea's position in the world.
Area: Humanities, Social and Behavioral Sciences

AS.310.431. Senior Thesis Seminar: East Asian Studies. 3 Credits.
Students may earn honors in the East Asian Studies major by maintaining a 3.7 average in the major and completing a senior thesis by taking the year-long AS.310.431 & AS.310.432 Senior Thesis Seminar: East Asian Studies. Students are required to secure the mentorship of an adviser among the EAS faculty before asking for permission to enroll in the course. Students who decide, after the fall semester, that they are unable to complete the senior thesis and who do not enroll for the spring will be graded S/U for the fall semester. Only students who complete the fall semester course will be permitted to enroll for the spring.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.310.432. Senior Thesis Seminar: East Asian Studies. 3 Credits.
This course is the continuation of Senior Thesis Course AS.360.431 for students completing their thesis in the East Asian Studies program.
Prerequisite(s): AS.310.431
Area: Social and Behavioral Sciences
Writing Intensive

AS.310.501. Independent Study: East Asia. 1 - 3 Credits.
Students carry out an independent research project involving East Asia.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.310.592. Summer Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

Cross Listed Courses

Anthropology
AS.070.359. Korean War. 3 Credits.
This course takes the Korean War as a site to both explore: 1) contemporary historical and political transformations in East Asia and globally and 2) the ways in which violence, catastrophic loss, and separation are woven into everyday life. It will explore the Korean War through film, fiction, historiography, and draw on comparative materials in anthropology.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.389. Precarity in South Korea through TV and Film: Aesthetics and everyday life. 3 Credits.
This seminar explores how precarity in South Korea gains expression in the medium of TV and film. In particular, this seminar will focus on how the moving image brings the viewer into the texture of everyday life. We will focus on the TV show Misaeng and include films such as Parasite and Burning. TV and film will be paired with readings on the transformations of intimate life in contemporary South Korea and comparative work on precarity.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

Center for Language Education
AS.373.111. First Year Heritage Chinese. 3.5 Credits.
This course is designed for students who were raised in an environment in which Chinese is spoken by parents or guardians at home and for those who are familiar with the language and possess native-like abilities in comprehension and speaking. The course therefore focuses on reading and writing (including the correct use of grammar). Cross-listed with East Asian Studies

AS.373.112. First Year Heritage Chinese II. 3 Credits.
For students who have significant previously-acquired ability to understand and speak Modern Standard Chinese. Course focuses on reading and writing. Teaching materials are the same as used in AS.373.115-116; however, both traditional and simplified versions of written Chinese characters are used. Lab required. Continuation of AS.373.111. Recommended Course Background: AS.373.111 or permission required.
Prerequisite(s): AS.373.111 or or instructor permission

AS.373.115. First Year Chinese. 5 Credits.
This course is designed primarily for students who have no prior exposure to Chinese. The objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. Note: Students with existing demonstrable skills in spoken Chinese should take AS.373.111-112. No Satisfactory/ Unsatisfactory. Students may choose to attend either lecture at 12pm or 3pm on TTh. Cross-listed with East Asian Studies

AS.373.116. First Year Chinese II. 5 Credits.
Introductory course in Modern Standard Chinese. Goals: mastery of elements of pronunciation and control of basic vocabulary of 800-900 words and most basic grammatical patterns. Students work first with Pin-Yin system, then with simplified version of written Chinese characters.
Continuation of AS.373.115. Note: Student with existing demonstrable skills in spoken Chinese should take AS.373.111-112. Recommended Course Background: AS.373.115 or permission required.
Prerequisite(s): AS.373.115 or instructor permission]
AS.373.211. Second Year Heritage Chinese. 3.5 Credits.
This course is designed for students who finished AS.373.112 with C+ and above (or equivalent). Students in this course possess native-like abilities in comprehension and speaking. The course focuses on reading and writing. Cross-listed with East Asian Studies
Prerequisite(s): AS.373.112 or equivalent.
Area: Humanities

AS.373.212. Second Year Heritage Chinese II. 3 Credits.
For students who have significant previously-acquired ability to understand and speak Modern Standard Chinese. Course focuses on reading and writing. Teaching materials are the same as used in AS.373.115-116; however, both traditional and simplified versions of written Chinese characters are used. Continuation of AS.373.211.
Recommended Course Background: AS.373.211 or permission required.
Prerequisite(s): AS.373.211 or instructor permission
Area: Humanities

AS.373.215. Second Year Chinese. 5 Credits.
Consolidation of the foundation that students have laid in their first year of study and continued drill and practice in the spoken language, with continued expansion of reading and writing vocabulary and sentence patterns. Students will work with both simplified and traditional characters. Note: Students who have native-like abilities in comprehension and speaking should take AS.373.211-212. Cross-listed with East Asian Studies
Prerequisite(s): AS.373.116 or equivalent
Area: Humanities

AS.373.216. Second Year Chinese II. 5 Credits.
Consolidation of the foundation that students have laid in their first year of study and continued drill and practice in the spoken language, with continued expansion of reading and writing vocabulary and sentence patterns. Students will work with both simplified and traditional characters. Note: Students who have native-like abilities in comprehension and speaking should take AS.373.211-212. Recommended Course Background: AS.373.215 or Permission Required. Cross-listed with East Asian Studies
Prerequisite(s): AS.373.215 or instructor permission.
Area: Humanities

AS.373.313. Third Year Heritage Chinese. 3 Credits.
This course is designed for those who have already taken AS.373.212 or equivalent. Students need to have native-level fluency in speaking and understanding Chinese. The course focuses on reading and writing. In addition to the textbooks, downloaded articles on current affairs may also be introduced on a regular basis. Cross-listed with East Asian Studies
Prerequisite(s): AS.373.211 AND AS.373.212 or instructor’s permission
Area: Humanities

AS.373.314. Third Year Heritage Chinese II. 3 Credits.
This course is a continuation of AS.373.313. Students need to have native-level fluency in speaking and understanding Chinese. The course focuses on reading and writing. In addition to the textbooks, downloaded articles on current affairs may also be included on a regular basis. Recommended Course Background: AS.373.313 or Permission Required. Lab required.
Prerequisite(s): AS.373.313 or equivalent
Area: Humanities

AS.373.315. Third Year Chinese. 3 Credits.
This two-semester course consolidates and further expands students’ knowledge of grammar and vocabulary and further develops reading ability through work with textbook material and selected modern essays and short stories. Class discussions will be in Chinese insofar as feasible and written assignments will be given. Cross-listed with East Asian Studies
Prerequisite(s): AS.373.216 or instructor permission
Area: Humanities

AS.373.316. Third Year Chinese II. 3 Credits.
This two-semester course consolidates and further expands students’ knowledge of grammar and vocabulary and further develops reading ability through work with textbook material and selected modern essays and short stories. Class discussions will be in Chinese insofar as feasible, and written assignments will be given. Continuation of AS.373.315.
Recommended Course Background: AS.373.315 or permission required.
Prerequisite(s): AS.373.315 or instructor permission
Area: Humanities

AS.373.415. Fourth Year Chinese. 3 Credits.
This course is designed for students who finished AS.373.316 with a C+ or above (or equivalent). Readings in modern Chinese prose, including outstanding examples of literature, newspaper articles, etc. Students are supposed to be able to understand most of the readings with the aid of a dictionary, so that class discussion is not focused primarily on detailed explanation of grammar. Discussion, to be conducted in Chinese, will concentrate on the cultural significance of the readings’ content. Cross-listed with East Asian Studies
Prerequisite(s): AS.373.316 or instructor permission
Area: Humanities

AS.373.416. Fourth Year Chinese II. 3 Credits.

Discussion, to be conducted in Chinese, will concentrate on the cultural significance of the readings’ content. Recommended Course Background: AS.373.415 or Permission Required. Cross-listed with East Asian Studies
Prerequisite(s): AS.373.415 or instructor permission
Area: Humanities

AS.373.491. 5th Year Chinese. 3 Credits.
Fifth Year Chinese is designed for students who finished fourth year regular or third year heritage Chinese course at JHU or its equivalent and wish to achieve a higher advanced proficiency level in Chinese. The goal of the course is to help students further develop their listening, speaking, reading and writing skills cohesively and to enhance students’ understanding of Chinese culture and society through language learning.
Prerequisite(s): AS.373.416 OR AS.373.314 or equivalent
Area: Humanities
AS.378.115. First Year Japanese. 5 Credits.
This course is designed for students who have no background or previous knowledge in Japanese. The course consists of lectures on Tuesday/Thursday and conversation classes on Monday/Wednesdays/Fridays. The goal of the course is the simultaneous progression of four skills (speaking, listening, writing, and reading) as well as familiarity with aspects of Japanese culture. By the end of the year, students will have basic speaking and listening comprehension skills, a solid grasp of basic grammar items, reading and writing skills, and a recognition and production of approximately 150 kanji in context. Knowledge of grammar will be expanded significantly in AS.378.315. Instructor permission required. Recommended Course Background: AS.378.115 or equivalent.

Prerequisite(s): Prereq: AS.378.115 or instructor permission.

AS.378.215. Second Year Japanese. 5 Credits.
Training in spoken and written language, increasing their knowledge of more complex patterns. At completion, students will have a working knowledge of about 250 Kanji. Recommended Course Background: AS.378.115 and AS.378.116 or equivalent.

Prerequisite(s): AS.378.116 or equivalent
Area: Humanities

AS.378.216. Second Year Japanese II. 5 Credits.
Continuation of Beginning Japanese and Intermediate Japanese I. Training in spoken and written language, increasing students' knowledge of more complex patterns. At completion, students will have a working knowledge of about 250 Kanji. Lab required. Recommended Course Background: AS.378.215 or equivalent.

Prerequisite(s): AS.378.215 or instructor permission
Area: Humanities

AS.378.315. Third Year Japanese. 3 Credits.
Emphasis shifts toward reading, while development of oral-aural skills also continues apace. The course presents graded readings in expository prose and requires students to expand their knowledge of Kanji, grammar, and both spoken and written vocabulary. Cross-listed with East Asian Studies

Prerequisite(s): AS.378.215 AND AS.378.216 or instructor permission
Area: Humanities

AS.378.316. Third Year Japanese II. 3 Credits.
Emphasis shifts toward reading, while development of oral-aural skills also continues apace. The course presents graded readings in expository prose and requires students to expand their knowledge of Kanji, grammar, and both spoken and written vocabulary. Lab required. Continuation of AS.378.315. Recommended Course Background: AS.378.315 or equivalent.

Prerequisite(s): AS.378.315 or equivalent.
Area: Humanities

AS.378.396. Fundamentals of Japanese Grammar. 2 Credits.
This course is designed for students who have already studied 1st Year Japanese grammar and wish to develop a thorough knowledge of Japanese grammar in order to advance all aspects of language skills to a higher level. It is also appropriate for graduate students who need to be able to read materials written in Japanese. The goal of the course is to provide students with a thorough knowledge of Japanese grammar; therefore, knowledge of vocabulary (including kanji) in depth is not requisite. In addition, since this is not a language course that places equal focus on all four skills (speaking, listening, writing, and reading), there will be no conversation practice – this is a lecture course on grammar. 2 credits. Pass-fail grade option only

Prerequisite(s): AS.378.115
Area: Humanities

AS.378.415. Fourth Year Japanese. 3 Credits.
By using four skills in participatory activities (reading, writing, presentation, and discussion), students will develop reading skills in modern Japanese and deepen and enhance their knowledge on Kanji and Japanese culture. Recommended Course Background: AS.378.315 and AS.378.316 or equivalent.

Prerequisite(s): AS.378.316 or equivalent
Area: Humanities

AS.378.416. Fourth Year Japanese II. 3 Credits.
By using four skills in participatory activities (reading, writing, presentation, and discussion), students will develop reading skills in modern Japanese and deepen and enhance their knowledge on Kanji and Japanese culture. Lab required. Recommended Course Background: AS.378.415

Prerequisite(s): AS.378.415 or equivalent.
Area: Humanities

AS.378.493. Grammar and Readings in Japanese Studies. 2 Credits.
This course is designed for graduate students (in East Asian Studies, Public Health, History of Medicine, History, etc.) and undergraduate students with a strong interest in developing a thorough knowledge of Japanese grammar from both linguistic and cultural perspectives in depth well beyond regular language courses in order to advance reading and comprehension of materials written in Japanese without use of a dictionary. We first review the primary components of Japanese grammar, such as tense, aspect, particles, conditionals, passive and causative, etc., followed by readings of articles demonstrating particular grammatical items. Specific strategies and techniques are also introduced, followed by practice. Class materials include a broad spectrum of native materials, including novels, newspapers, scholarly articles, essays, and historical papers. A diverse range of articles and essays are selected by students to introduce and enforce various ways of reading Japanese effectively. 2 credits. Pass-fail grade option only.
Area: Humanities

AS.378.611. Readings in Japanese Studies. 2 Credits.
This course is designed for graduate students (in East Asian Studies, Public Health, History of Medicine, History, etc.) and undergraduate students with a strong interest in improving Japanese reading skills. The main goal of the course is to learn strategies for reading and comprehending materials written in Japanese without using a dictionary. Specific strategies and techniques are introduced, followed by practice. Class materials include a broad spectrum of native materials, including novels, newspapers, scholarly articles, essays, and historical papers, and so forth. A diverse range of articles and essays are selected to introduce and enforce various ways of reading Japanese effectively. 2 credits for undergraduate students.
Area: Humanities
AS.380.101. First Year Korean. 5 Credits.
Introduces the Korean alphabet, hangeul. Covers basic elements of the Korean language, high-frequency words and phrases, including cultural aspects. Focuses on oral fluency reaching Limited Proficiency where one can handle simple daily conversations. No Satisfactory/ Unsatisfactory. Cross-listed with East Asian Studies

AS.380.102. First Year Korean II. 3 Credits.
Focuses on improving speaking fluency to Limited Proficiency so that one can handle simple daily conversations with confidence. It provides basic high-frequency structures and covers Korean holidays. Continuation of AS.380.101. Recommended Course Background: AS.380.101 or permission required. Prerequisite(s): AS.380.101 or instructor permission

AS.380.201. Second Year Korean. 4 Credits.
Aims for improving oral proficiency and confident control of grammar with vocabulary building and correct spelling intended. Reading materials of Korean people, places, and societies will enhance cultural understanding and awareness. Project due on Korean cities. Existing demonstrable skills in spoken Korean preferred. Prerequisite(s): AS.380.201 or equivalent

AS.380.202. Second Year Korean II. 3 Credits.
Aims for improving writing skills with correct spelling. Reading materials of Korean people, places, and societies will enhance cultural understanding and awareness, including discussion on family tree. Continuation of AS.380.201. Recommended Course Background: AS.380.201 or equivalent. Prerequisite(s): AS.380.201 or equivalent

AS.380.301. Third Year Korean. 3 Credits.
Emphasizes reading literacy in classic and modern Korean prose, from easy essays to difficult short stories. Vocabulary refinement and native-like grasp of grammar explored. Project due on Korean culture. Cross-listed with East Asian Studies Prerequisite(s): AS.380.202 or equivalent

AS.380.302. Third Year Korean II. 3 Credits.
Emphasizes reading literacy in classic and modern Korean prose. By reading Korean newspapers and professional articles in one's major, it enables one to be well-versed and truly literate. Cross-listed with AS.380.301. Cross-listed with East Asian Studies Prerequisite: AS.380.301 or equivalent. Prerequisite(s): AS.380.301 or instructor permission

AS.380.401. Fourth Year Korean. 2 Credits.
This course is designed for those who have finished AS.380.302 or beyond advanced mid level of competency in Korean in four skills. By dealing with various topics on authentic materials including news, articles on websites, short stories, this course aims to help students enhance not only linguistics knowledge and skills, but also current issues in Korea. It is expected that, by the end of the term, students will be able to discuss a variety of topics and express opinions fluently in both spoken and written language. Prerequisite(s): AS.380.302 or instructor permission

Comparative Thought and Literature
AS.300.341. Transwar Japanese and Japanophone Literatures. 3 Credits.
A survey of Japanese and Japanese-language literatures produced in Japan and its (former) colonies during the “transwar” period, or the several years before and after the end of WWII. This periodization enables us to take into account the shifting boundaries, sovereignties, and identities amid the intensification of Japanese imperialism and in the aftermath of its eventual demise. We aim to pay particular attention to voices marginalized in this political watershed, such as those of Japanese-language writers from colonial Korea and Taiwan, intra-imperial migrants, and radical critics of Japan’s “postwar” regime. Underlying our investigation is the question of whether literature can be an agent of justice when politics fails to deliver it. We will introduce secondary readings by Adorno, Arendt, Levinas, Derrida, and Scarry, among others, to help us interrogate this question. All readings are in English. Area: Humanities

AS.300.344. Literature and the World. 3 Credits.
This course interrogates how modern literature not simply reflects the world but functions as world-making power. What is a world? How do we conceive of, live in, and change it? What if there are multiple worlds? How are literature and other aesthetic forms crucial to tackling these questions? We will survey literary and philosophical texts in a comparative setting, engaging examples from both Europe and East Asia. All readings are in English. Open to graduate students. Area: Humanities Writing Intensive

AS.300.410. China in Imagination. 3 Credits.
What is China? This question has gained new relevance amid the nation’s recent rise as a global power. We survey how China was imagined, represented, and conceptualized in literature, film, and philosophical writings from mainland China, overseas Chinese communities, East Asia, and the West from the late nineteenth century to the present. Through exploring this complex history, we aim to understand China and the contemporary world in a diversified, historically self-reflective way. Topics of discussion include, but not limited to, representation, identity, form, allegory, exile, diaspora, modernism, translation, world history, and universality. All readings are in English; all films subtitled in English. Area: Humanities

AS.300.425. Modernities and Comparison. 3 Credits.
Comparative survey of literary modernities in Europe and East Asia (China, Japan, and Korea). We will study works of modern literature as well as critical and philosophical texts from these civilizations in each other’s light. We will, as a working hypothesis, begin our examination by bracketing off the conventional center-periphery (Europe-Asia) scheme and considering literary modernities to be singular and contested, yet mutually resonating attempts at reconstruction, restoration, and revolution vis-à-vis the deconstructive forces of capitalist modernity. Ultimately, we will interrogate how we should understand literary modernities in the plural, as they emerged in distant civilizations. Topics of discussion include decadence, repetition, the trope of the human, ideology, the sublime, ritual, and translation. Readings in Hegel, Nietzsche, Mann, Benjamin, Baudelaire, Proust, Breton, Soseki, Kobayashi, Wang Guowei, Lu Xun, and Yi Kwangsu. All readings are in English. Area: Humanities
Economics
AS.180.210. Migrating to Opportunity? Economic Evidence from East Asia, the U.S. and the EU. 3 Credits.
Increased mobility of people across national borders, whether by choice or by force, has become an integral part of the modern world. Using a comparative perspective and an applied economics approach, the course explores the economic and political determinants, and (likely) consequences of migration flows for East Asia, the US and the EU. Lectures, assignments and in class discussions, will be built around the following topics: i) migrants’ self-selection; ii) human capital investment decision-making; iii) remittance decisions and effects; iv) impacts on labor markets of both receiving and sending countries; and v) the economic benefits from immigration. Overall, the course will give students perspective on the why people choose or feel compelled to leave their countries, how receiving countries respond to migrants’ presence, and the key economic policy concerns that are influencing the shaping of immigration policy in East Asia, the US, and the EU.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

History
AS.100.170. Chinese Cultural Revolution. 3 Credits.
The Cultural Revolution was Mao Zedong’s last attempt to transform Chinese society spiritually and structurally. The events of this period were marked by social upheaval, personal vendettas, violence, massive youth movements, and extreme ideological pressure. This course will explore the Cultural Revolution from a variety of perspectives, focusing on the relationship between events in China from 1966-1976, and their interpretation in China and the West during the Cultural Revolution decade and since. (Previously offered as AS.100.219 and AS.100.236.)
Area: Humanities, Social and Behavioral Sciences

AS.100.243. China: Neolithic to Song. 3 Credits.
This class offers a broad overview of changes in China from Neolithic times through the Song Dynasty (roughly from 5000 BCE through the 13th century CE) and will include discussion of art, material culture, and literature as well as politics and society. Close readings of primary sources in discussion sections and extensive use of visual material in lectures will help students gain firsthand perspective on the materials covered. Not open to students who have previously taken AS.100.208.
Cross listed with East Asian Studies
Area: Humanities, Social and Behavioral Sciences

AS.100.248. Japan in the World. 3 Credits.
An introduction to Japan's history from 1700 to the present, with emphasis on the influences of an increasing global circulation of ideas, goods, and people in early modern and modern times. Topics include samurai, nation-building, gender, imperialism, World War II, the postwar economy, and contemporary popular culture.
Area: Humanities, Social and Behavioral Sciences

AS.100.301. America after the Civil Rights Movement. 3 Credits.
This course explores the history of late twentieth-century America by examining the social, economic, and political legacies of 1960s civil rights protest for the 1970s, 1980s, and 1990s.
Area: Humanities
Writing Intensive

AS.100.330. National Identity in 20th Century China & Japan. 3 Credits.
Using primary sources, including literature and film, we will explore the changing ways in which ideologues, intellectuals, and ordinary citizens defined national identity in 20th century China and Japan.
Area: Humanities, Social and Behavioral Sciences

AS.100.331. Reading through Things: Early Modern Chinese Medicine, Technology, and Art. 3 Credits.
This course introduces the history of late imperial China from the perspective of medicine, technology, and the arts.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.347. Early Modern China. 3 Credits.
The history of China from the 16th to the late 19th centuries.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.348. 20th-Century China. 3 Credits.
A survey of the history of China from the late Qing era to the early People's Republic.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.398. Images of Postwar Japan. 3 Credits.
This seminar explores Japan's changing place in the world in the decades following World War II, with an emphasis on analyzing visual media such as photographs, films, advertisements, and comic books. Topics include relations with the U.S. and other countries in East Asia, particularly the two Koreas; the atomic bombings of Hiroshima and Nagasaki; and the global contexts for an expanding Japanese consumerism in the late 20th century.
Writing Intensive

AS.100.422. Society & Social Change in 18th Century China. 3 Credits.
What did Chinese local society look like under the Qing Empire, and how did it change over the early modern era?
Area: Humanities, Social and Behavioral Sciences

AS.100.423. Multiethnic Japan. 3 Credits.
An advanced undergraduate seminar on the intertwined histories of race, ethnicity, and empire in Japan and its former colonies from the early twentieth century to the present.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.424. Women & Modern Chinese History. 3 Credits.
This course examines the experience of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women’s experiences for their own political and social agendas.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.478. Japan from its Peripheries. 3 Credits.
An advanced undergraduate seminar on the history of modern Japan from the perspective of regions and people often considered as belonging to its geographical, cultural, social, and political peripheries.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.482. Historiography of Modern China. 3 Credits.
Reading and discussion of major approaches to Chinese history by Western, Chinese, and Japanese scholars and intellectuals, and of the cultural attitudes and policies they foster.
Area: Humanities, Social and Behavioral Sciences

A reading seminar on the interconnected histories and historiographies of Japan and Korea in the nineteenth and twentieth centuries.
Area: Humanities, Social and Behavioral Sciences
AS.100.614. Seminar in Modern Chinese History.
A seminar covering major milestones in research on late imperial and modern Chinese history, primarily in English. Open to undergraduates with the permission of the instructor.
Area: Humanities, Social and Behavioral Sciences

AS.100.733. Reading Qing Documents.
Open to advanced undergraduates with at least one semester of Classical Chinese. This course has several objectives. First and foremost, it is a hands-on document reading class designed to familiarize students with the skills, sources, and reference materials necessary to conduct research in Qing history. To that end, we will spend much of our time reading documents. At the same time, we will engage in problem-solving exercises designed to develop and enhance basic research skills. Finally, several important archive-based secondary works in the secondary literature are available on reserve for your reference. These works demonstrate the ways in which historians have recently applied archival skills (and materials).

AS.100.756. Reading Seminar in Chinese History.
A seminar covering recent work on late imperial and modern Chinese history, primarily in English.
Area: Humanities, Social and Behavioral Sciences

History of Art

AS.010.103. Introduction to the Art of Asia. 3 Credits.
A survey of the art and architecture of Asia, from the ancient world to the present and including the Indian subcontinent, China, Japan, Korea, and Southeast Asia.
Area: Humanities

AS.010.233. Asian Art Since 1945. 3 Credits.
This course examines the art and architecture of East, South, and Southeast Asia produced since the mid-twentieth century. We will engage with theoretical, visual, and political developments in the recent art of this region, reading statements by artists and architects, discussing the rising commercial and international profile of contemporary Asian art, and exploring established and emerging art histories of this period. Cross-list with East Asian Studies
Area: Humanities

AS.010.327. Asia America: Art and Architecture. 3 Credits.
This course examines a set of case studies spanning the last century that will enable us to explore the shifting landscape of Asian transnational art and architecture. Each week will focus on a different artist, group, exhibition, architect, urban space, or site to unpack artists’ and architects’ engagements with the changing landscape of immigration policies, movements to build solidarity with other artists of color, and campaigns for gender and sexual equality. The course will situate these artists within American art, and build an expansive idea of Asia America to include the discussion of artists whose work directly addresses the fluidity of location and the transnational studio practice.
Area: Humanities
Writing Intensive

History of Science, Medicine, and Technology

AS.140.146. History of Public Health in East Asia. 3 Credits.
This course examines the history of disease, epidemics, and public health responses in East Asia from the 17th-20th centuries. This public health history emphasizes the interactions, connections, and comparisons among China, Japan, Korea, and Taiwan.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.176. Public Health in East Asia Through Films & Documentaries. 1 Credit.
This course uses contemporary films and documentaries to address issues in public health in East Asia, past & present. Topics covered include medicine in turn-of-the-twentieth century Japan and China, revolutionary medicine, STDS, mental illness, HIV/AIDS in China, industrial pollution, the politics of universal health care insurance, and pandemics in East Asia.
Area: Humanities, Social and Behavioral Sciences

AS.140.198. Technology and Environment in Japanese Films and Anime. 1 Credit.
In the course of the semester we will watch Japanese films and animation that touch upon topics of technology and environment. The list of screenings includes several blockbusters, classics in film studies, and documentaries. The course is a companion course to 140.398 "Godzilla and Fukushima," but it is also open to anyone interested. Students who do not take 140.398 will be required to write a short review paper by the end of the semester.
Area: Humanities, Social and Behavioral Sciences

AS.140.305. From the Compass to Androids: History of Science, Technology, and Medicine in Asia. 3 Credits.
The course explores the history and cultural context of science, medicine, and technology in East Asia, from the ancient Chinese science to the latest scientific and technological developments in Japan.
Area: Humanities, Social and Behavioral Sciences

AS.140.341. Humanoid Robots in Global History. 3 Credits.
Humanoid machines reflect their creators’ ideals of humanity. Comparing examples from societies across the globe we will investigate what factors shaped these ideals, and how they manifested in technological design.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.346. History of Chinese Medicine. 3 Credits.
Students will study the most recent anthropological, philosophical, and historical scholarship on medicine in traditional and modern Chinese society. They will approach the topic from several angles including medical pluralism, the range of healers, domestic and literate medicine, gender, emergence of new disciplines, public health and the history of disease. The course relies on secondary sources and primary sources in English translation. Cross-listed with East Asian Studies.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.398. Godzilla and Fukushima: Japanese Environment in History and Films. 3 Credits.
Japan is often described as “nature-loving,” and is considered to be one of world leaders in environmental protection policies. Yet current environmental successes come on the heels of numerous environmental disasters that plagued Japan in the past centuries. Juxtaposing Japanese environmental history and its reflection in popular media, the course will explore the intersection between technology, environment, and culture. Students are encouraged to enroll in AS.140.198, “Technology and Environment in Japanese Films and Anime” (1 credit) to attend movie screenings accompanying the course.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.140.423. Science and Science Fiction in Global Perspective. 3 Credits.
What can we learn from science fiction about the history of science and technology? What ideas about science do Sci-Fi novels manifest? Is the relationship between science and science fiction always the same, across different time periods and geographical areas? This course will explore these questions by taking a comparative perspective. Each meeting we will read a Sci-Fi novel from Europe, America, South and East Asia, and discuss it in conjunction with historical writing about relevant scientific developments. Reading Sci-Fi novels from 17th-century Germany, 19th-century England and India, and 20th-century Japan, Korea and the US, the students will explore how actual scientific developments were reflected in fiction, and what fictional depictions say about the aspirations and anxieties provoked by new technologies.
Writing Intensive

AS.140.665. History of Science and Technology in Asia. 3 Credits.
Graduate level discussion of major historiography of science and technology in East Asia.

International Studies
AS.192.225. Economic Growth and Development in East Asia. 3 Credits.
The course offers an overview of the complexities of East Asia's development experience from a variety of perspectives, and it is divided into three parts to allow students to develop expertise in one or more countries and/or policy arenas, while also cultivating a broad grasp of the region and the distinct challenges of "East Asia fast-paced, sustained economic growth." Part I considers the origins of Asian economic development, analyses the common economic variables behind the region's success, looks at the East Asian financial crisis and its lessons and assesses whether or not East Asian countries have learned them. Part II will focus on the development experiences of individual countries, with an emphasis on the ASEAN economies, NIEs, Japan and China. Part III considers topics of special interest to Asia, including trends toward greater regional economic cooperation, both in the real and financial/monetary sectors, and issues related to poverty, migration, and inclusiveness.
Area: Social and Behavioral Sciences

AS.192.280. China Under Revolution and Reform. 3 Credits.
China is an emerging world power with a long history, a rich culture, and complex political structures and processes. As a modern state, the People's Republic of China (PRC) continues to amaze and confound observers both inside and outside its borders. More than three decades after opening its doors to the outside world, China remains as important as it is misunderstood. This course is designed to provide you with a road map to help understand the fascinating world of Chinese politics and the contemporary Chinese state. The course presumes no prior knowledge of China.
Area: Social and Behavioral Sciences

AS.192.404. Democracy, Autocracy and Economic Development: Korea, Indonesia, and Myanmar. 3 Credits.
East Asia's "miracle growth" has not gone hand in hand with a decisive move toward democracy. The course explores the reasons why democratization proceeds slowly in East Asia, and seems to be essentially decoupled from the region's fast-paced economic growth. The course is divided into three parts. Part I introduces the specifics of East Asia's economic development strategies as well as key concepts of democracy, authoritarianism and military rule and the tensions between these theories and the East Asian experience. Part II will focus on the economic and political development experiences of Korea, Indonesia and Myanmar in light of what discussed in Part I. Finally, Part III presents lessons emerging from the comparison of Korea's, Indonesia's and Myanmar's economic and political developmental trajectories.
Area: Humanities

Political Science
AS.190.315. Asian American Politics. 3 Credits.
This course examines issues of political identity, political incorporation, and political participation of Asian Americans. Themes include Asian American panethnicity, the struggle for immigration and citizenship, Asian American electoral politics, political activism and resistance since the 1960s, and the impact of Asian Americans on the politics of race and ethnicity in the United States.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.320. Politics Of East Asia. 3 Credits.
Examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. Topics include state-society relations, late development, nationalism, democratization, political culture, social movements, and globalization.
Area: Social and Behavioral Sciences

AS.190.330. Japanese Politics. 3 Credits.
This course introduces students to the major debates and issues of postwar Japanese politics. Topics include nationalism, electoral politics, civil society, and immigration.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.341. Korean Politics. 3 Credits.
This course introduces students to the historical and institutional foundations of modern South Korean politics. Topics include nationalism, political economic development, civil society, globalization, and ROK-DPRK relations.(CP)
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.348. Business, Finance, and Government in E. Asia. 3 Credits.
Business, Finance, and Government in East Asia explores the dynamics of East Asia's economic growth (and crises) over the last fifty years. We will examine Japan's post-war development strategy, the Asian tiger economies, and China's dramatic rise. Centered on case studies of major corporations, this course examines the interplay between politics and economics in East Asia, and considers the following questions: How have businesses navigated East Asia's complex market environment? In what ways can the state foster economic development? How has the financial system been organized to facilitate investment? What are the long-term prospects for growth in the region?
Area: Social and Behavioral Sciences
AS.190.427. Political Economy of Japan and Korea. 3 Credits.
This upper-level seminar examines some of the major debates and issues of postwar Japanese and South Korean political economy. Topics include nationalism, gender politics, civil society, immigration, and US-Japan-South Korea trilateral relations.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.442. Civil Society. 3 Credits.
This course explores classic and contemporary debates on the concept of civil society and critically examines its analytical value in light of recent developments. Topics include the relationship between civil society, the state, and markets, the role of civil society in development and democratization, social capital, and global civil society. This course is open to graduate students from any discipline. Advanced undergraduates must obtain permission from the instructor and are expected to keep up with graduate students during class discussions.
Writing Intensive

AS.190.612. Comparative Citizenship and Immigration Politics.
Graduate students only. Examines the contemporary political dynamics of migration, citizenship, and race concentrating on North America, Europe and East Asia. We will focus on how citizenship and immigration policies shape immigrant political identities, claims, and strategies as well as how immigrants impact public debates and policies in receiving societies.
Area: Social and Behavioral Sciences

AS.191.347. The Political Economy of Climate Change. 3 Credits.
Scientists tell us that continued reliance on fossil fuels to drive our economies causes global warming, which in turn poses an existential threat to humanity as we know it. But the major tools of societies to steer a clean energy transition—climate and energy policies—often fail, lack ambition, and vary widely from country to country. This is puzzling: Why is it so difficult to pass meaningful policies even though the stakes are so high? How to explain the varying responses to the same problem? In this course, students study the struggle over energy and climate policies through case studies of large industrialized countries. Besides other things, we will ask why the US failed to install any kind of meaningful climate policy, if and how the problems of the EU’s carbon market can be solved, why China cancelled over 100 coal-fired power plants in 2017, and why cloudy Germany became a solar energy powerhouse.
Writing Intensive

Sociology

AS.230.175. Chinese Revolutions. 3 Credits.
This course introduces the origins, operation and impacts of five major revolutions in modern China between 1850 and 1950. These include the Taiping Rebellion, the republican revolutions, federalist and southern autocratic movements, labor strikes as well as peasant rebellions. It draws on the existing historiography that examines China’s transition from an empire to a republic, impacts of western and Japanese influences to China, as well as the continuity and change of Chinese social organizations. Cross list with International Studies and East Asian Studies. Fulfills IS History requirement.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.228. Colonialism in Asia and Its Contested Legacies. 3 Credits.
This course surveys the impacts of colonialism in East and Southeast Asia. Special attention will be paid to the social and economic development in British Singapore and Hong Kong as well as Japanese Korea and Taiwan. Topics include free-trade imperialism, colonial modernity, anticolonial movements, pan-Asianism, and post-war U.S. hegemony.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.233. Inequality and Social Change in Contemporary China. 3 Credits.
This course examines the trajectory of economic development in China since the beginning of market reforms in the late 1970s, with a special focus on social inequality and forms of resistance that have emerged in response to the expansion of the market economy. The first part of the course focuses on understanding the academic debates around China’s economic miracle and introduces students to theories about the relationship between market expansion and social resistance. The second part focuses on key thematic topics including the rural/urban divide, rural protest, urban inequality and labor unrest, gender and sexuality in social movements, environmental protests, and the politics of ethnic relations.
Area: Social and Behavioral Sciences

AS.230.275. Revolution, Reform and Social Inequality in China. 3 Credits.
This course explores various aspects of social inequality in China during the Mao Zedong and the post-Mao reform eras. We will examine inequality within villages, the rural/urban divide, urban inequality, education and health policies, and gender and ethnic inequality. Each of these issue areas will be tackled analytically, but the aim is also to understand what it was/is like to live in China during and after the Mao era. Formerly offered as AS.230.321.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.351. Capitalism, Development and Resistance in South Korea. 3 Credits.
This course examines the trajectory of capitalist development in South Korea (hereafter, Korea) in the twentieth and the early twenty-first centuries. We will examine debates around the political economy of development in Korea as well as class formation and social and labor protest. This course is designed to help students explore the dynamics of capitalist development and workers’ movements in Korea as a case of late development in the global South. The course also draws on theoretical perspectives and methodological tools from comparative and world-historical sociology to better understand the Korean case.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.352. Chinese Diaspora: Networks and Identity. 3 Credits.
This course combines lecture and class discussion. It examines the history and historiography of Chinese overseas migration. Major issues include overseas Chinese as “merchants without empire,” Chinese exclusion acts in the age of mass migration, the “Chinese question” in postcolonial Southeast Asia, as well as the making and unmaking of Chinese identity in the current wave of globalization.
Prerequisite(s): Students may not have completed AS.230.217 previously.
Area: Social and Behavioral Sciences
AS.230.377. Colonialism and Anti-Colonialism. 3 Credits.
This seminar examines the theories and historiography of colonialism and anti-colonial movements. It focuses on the establishment of the colonial division of labor, comparative colonialism, identity formation, and nationalism as well as anti-colonial movement.
Area: Social and Behavioral Sciences

AS.230.415. Social Problems in Contemporary China. 3 Credits.
In this course we will examine contemporary Chinese society, looking at economic development, rural transformation, urbanization and migration, labor relations, changes in class structure and family organization, health care, environmental problems, governance, and popular protest. The course is designed for both graduate and undergraduate students. Undergraduates must have already completed a course about China at Hopkins. Cross-listed with East Asian Studies.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.435. The China Boom. 3 Credits.
This course addresses the origins, global impacts, and demise of China's economic ascendency as a world economic and political powerhouse at the turn of the twenty-first century. The course will cover the historical origins of the China boom and impacts of the boom on global political economic order. It will also address the social-political imbalances within China that contribute to the global financial crisis and recent slowdown of the Chinese economy. Particular topics include late imperial and Maoist legacies' relation to contemporary economic growth, stages of China's capitalist development, China's outward investment in the developing world, formation and limits of US-China economic symbiosis, and China's participation in global governance, among others.
Area: Social and Behavioral Sciences
Writing Intensive

Writing Seminars

AS.220.230. Reading Contemporary Korean Fiction in Translation. 3 Credits.
This course examines a range of contemporary Korean fiction produced since political liberalization of Korea in the 1990s. Students will see the many different ways in which individual selves relate to the world, question the value systems of a globalized society, and celebrate the instinct to survive and thrive. While exploring these things, students will develop their analytical skills and identify the central components of new Korean narratives.
Area: Humanities

East Asian Studies, Bachelor of Arts

East Asian Studies Major Requirements
(See also Requirements of a Bachelor's Degree (p. 1584).)

The curriculum of the East Asian Studies major consists of a balanced mixture of language and area studies. All majors must study an East Asian language during their time at Hopkins. They also have the opportunity to choose from a rich menu of content courses dealing with East Asia.

In addition to solid language training and content courses about the region, EAS majors receive training in the methods and theory of the particular academic discipline they select as a focus area. Students select from among four discipline-based focus areas - history, political science, history of science and technology, or sociology - or create an individualized focus area. Possible individualized focus areas include art history, archaeology, or business. The individualized focus area requires consultation and approval of the program director.

If they choose, East Asian Studies majors may double major in International Studies, as the requirements of each of the four focus areas overlap with those of International Studies. Students may also find it convenient to double major in history, political science, sociology, or history of science, medicine and technology.

No major requirements may be taken satisfactory/unsatisfactory. All courses required for the major must be passed with a grade of C- or higher. The University encourages students enrolled in this program to take advantage of foreign study options. Courses and programs must be pre-approved by the program director. Seven of the 14 courses required for the major are required to be taken at JHU.

Additional East Asian Studies Courses

Two East Asian Studies courses at any level 6
One East Asian Studies course at the 300- or 400-level 3

East Asian Foreign Language
Six courses in an East Asian Language 2
24

Focus Area - History, Political Science, Sociology, or History of Science and Technology

Select one of the following focus areas: 12-14

History focus area

AS.100.193 | Undergraduate Seminar In History                     | 3       |
AS.100.194 | Undergraduate Seminar In History                     | 3       |
One East Asian history course at any level 3
One East Asian history course at the 300- or 400-level 3

Political Science focus area

Two core courses at the 100- or 200-level in two of the following subfields - American Politics, Comparative Politics, International Relations, or Political Theory. 6
One East Asian political science or sociology courses at any level 3
One East Asian political science or sociology course at the 300- or 400-level 3

Sociology focus area

Select two of the following: 3-4

AS.230.101 | Introduction to Sociology                             |         |
AS.230.202 | Research Methods for the Social Sciences             |         |
AS.230.205 | Introduction to Social Statistics                    |         |
AS.230.213 | Social Theory                                        |         |
One East Asian sociology or political science course at any level 3
One East Asian sociology or political science course at the 300- or 400-level 3

History of Science and Technology focus area

Select two survey courses of the following list: 3

AS.140.105 | History of Medicine                                  |         |
AS.140.106 History of Modern Medicine
AS.140.301 History of Science: Antiquity To Renaissance
AS.140.302 Rise Of Modern Science

Select two upper level East Asian courses from the following list:

AS.140.305 From the Compass to Androids: History of Science, Technology, and Medicine in Asia
AS.140.398 Godzilla and Fukushima: Japanese Environment in History and Films
AS.140.346 History of Chinese Medicine
AS.140.146 History of Public Health in East Asia

**Individualized focus**

Requires approval of the EAS director. Focus requirements to be determined in consultation with the director.

</tbody>
</table>

1. Or students may take another East Asian survey course as approved by the program director.
2. Students must complete 6 courses in East Asian languages (Korean, Japanese, and/or Chinese) after high school graduation and while the student is in college working towards their degree. Students may not use language waivers towards this requirement. The student can use at most two different languages towards the 6 course requirement (they can count courses in a third language as electives). If using one East Asian language – the student must demonstrate proficiency through the advanced level (as indicated by proficiency through the Third Year, semester two). If using two East Asian Languages – the minimum proficiency demonstrated must be through the intermediate level (as indicated by proficiency through the Second Year, semester two) for the language to count.

3. AS.310.xxx courses cross-listed with History, Sociology, or Political Science can be used to fulfill focus area requirements in the discipline for which they are cross-listed. For example, an AS.310.xxx course cross-listed in Sociology is equivalent to a course in the Sociology Department for purposes of fulfilling focus area requirements in the Sociology or Political Science tracks. Courses cross-listed with History can be counted toward the History track.

4. Courses taught by professors Yulia Frumer, Marta Hanson, and Hayang Yumi Kim may be applicable even if not coded AS.140.xxx, pending permission.

**Sample Program of Study**

The plan below assumes the student begins language study in Chinese at JHU.

**Second Semester**

AS.373.216 Second Year Chinese II

Required survey course

Focus area requirement

**Third Year**

**First Semester**

AS.373.315 Third Year Chinese

Focus area requirement

**Fourth Year**

**First Semester**

East Asian Studies course at any level

Additional language study (optional)

**Second Semester**

Focus area requirement

Additional language study (optional)

**Honors in East Asian Studies**

- Honors in the major may be earned by maintaining a GPA of 3.7 in the major and writing a senior honors thesis by taking a two-semester seminar, AS.310.431 Senior Thesis Seminar: East Asian Studies and AS.310.432 Senior Thesis Seminar: East Asian Studies. The thesis seminar is a total of six credits and may count toward two of the required EAS courses.

**East Asian Studies, Minor**

**East Asian Studies Minor Requirements**

This minor is new, effective Fall 2020. The minor consists of six courses. Up to two of these can be advanced East Asian language courses at the 300 level or above; language courses at the 100 or 200 level do not count towards the minor. At least four and up to six of these will be content courses listed or cross-listed with East Asian Studies, two of which must be at the 300 or 400 level. Students must demonstrate language proficiency through the advanced level (third-year level) in either Chinese, Japanese, or Korean by taking a placement examination through the Center for Language Education or by taking language courses at the 300 level or above.

No minor requirements may be taken satisfactory/unsatisfactory. All courses required for the minor must be passed with a grade of C- or higher.
Carl Christ Fellowship

In the academic year 1989–90, the department established the Carl Christ Fellowship fund to honor one of its faculty members for his distinguished service and achievements. The proceeds of the fund are used to support outstanding graduate students at the dissertation stage of their research.

Center for Financial Economics (CFE)

Founded in 2008 and housed in the Economics Department in the Krieger School of Arts and Sciences at Johns Hopkins, the Center for Financial Economics blends the study of finance and economics, providing in-depth training and cutting-edge research in both. The dual research and teaching missions of the Center are premised on the belief that a deep understanding of modern economies requires an integrated treatment of finance and the broader economic forces driving economic progress. The recent financial crisis vividly illustrates the vital need for improved understanding of these issues on the part of practitioners, policymakers, and academics.

The CFE offers an undergraduate minor, producing expertise in finance within the context of a top-notch liberal arts education. The minor will equip students with a thorough foundation in the workings of financial markets and their role in the broader economy, providing a foundation for careers in finance, business, academics, and government. The Center is working toward offering a financial economics major and a Ph.D. in financial economics.

Economics

http://www.econ.jhu.edu/

The Department of Economics offers programs designed to improve the understanding of important economic problems and to provide the tools needed for the critical analysis of these problems and for dealing with them in practice.

On the undergraduate level, the department provides both for those who want to become professional economists and for those interested in a specialty related to economics, such as business, law, government, history, health care management, or environmental engineering. Still other students are simply interested in improving their understanding of society or making informed assessments of economic policies as citizens or making wise decisions about personal finances.

On the graduate level, the department provides advanced training for students preparing for careers as professional economists. The program encompasses such fields as macroeconomics, microeconomic theory, econometrics, labor economics, international economics, industrial organization, economic development, and finance, with an emphasis on the application of economic theory and quantitative methods. Because of the small number of graduate students admitted, they can work closely with faculty in graduate courses and seminars, and have easy and informal access to faculty members.

Financial Aid

The department offers a Departmental Fellowship to all enrolled students. This fellowship covers full tuition costs plus an annual stipend of $29,000 and full student health insurance coverage. During a student’s first year of study, this fellowship support is provided with no teaching assistantship duties. Beginning in the second year of study, students who are performing satisfactorily, will again receive the same Departmental Fellowship coverage as in their first year. In addition, during years 2, 3, 4 and 5, this will involve a teaching or research assistantship assignment. The department guarantees financial support for a minimum of five years of graduate study, conditional on satisfactory performance and potentially a sixth year as well depending on student performance and the availability of funds.

For further information about graduate study in economics, contact the director of graduate admissions, Department of Economics at econadmissions@jhu.edu.

Courses

The Center for Financial Economics (CFE) is working toward offering a financial economics major and a Ph.D. in financial economics.
AS.180.210. Migrating to Opportunity? Economic Evidence from East Asia, the U.S. and the EU. 3 Credits.
Increased mobility of people across national borders, whether by choice or by force, has become an integral part of the modern world. Using a comparative perspective and an applied economics approach, the course explores the economic and political determinants, and (likely) consequences of migration flows for East Asia, the US and the EU. Lectures, assignments and in class discussions, will be built around the following topics: i) migrants’ self-selection; ii) human capital investment decision-making; iii) remittance decisions and effects; iv) impacts on labor markets of both receiving and sending countries; and v) the economic benefits from immigration. Overall, the course will give students perspective on the why people choose or feel compelled to leave their countries, how receiving countries respond to migrants’ presence, and the key economic policy concerns that are influencing the shaping of immigration policy in East Asia, the US, and the EU.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.214. The Economic Experience of the BRIC Countries. 3 Credits.
In 2001, Jim O’Neill, the Chief Economist at Goldman Sachs, coined the acronym BRIC to identify the four large emerging economies, Brazil, Russia, India and China. These economies have since had an amazing run, and have emerged as the biggest and fastest growing emerging markets. In this course, we look at the economic experiences of the BRIC countries for the past 50 years. We discuss the reasons that have contributed to their exceptional growth rates, with particular emphasis on their transformation into market economies. We also analyze the challenges that these countries continue to face in their development process.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.217. Game Theory in Social Sciences. 3 Credits.
Game Theory is the study of multiple person decision problems in which the well-being of a decision maker depends not only on his own actions but also on those of others. Such problems arise frequently in economics, political science, business, military science and many other areas. In this course, we will learn how to model different social situations as games and how to use solution concepts to understand players’ behavior. We will consider various examples from different fields and will play several games in class. The emphasis of the class is on the conceptual analysis and applications and we will keep the level of mathematical technicalities at the minimum – high school algebra and one term of calculus will be sufficient. Students who took AS.180.117 are not eligible to take AS.180.217.
Prerequisite(s): Students may not have previously taken AS.180.117; AS.180.102 or instructor permission
Area: Social and Behavioral Sciences

AS.180.221. The Informal Economy: Who Wins, Who Loses, and Why We Care About It. 3 Credits.
The informal economy is one of the most complex economic and political phenomena of our time. It exists in rich and poor countries alike, currently employs almost half of the world’s workers, about 1.8 billion people, and totals to economic activity of around $10 trillion. If the informal economy were an independent nation, it would be the second-largest economy in the world, after the United States and before China. In today’s globalizing environment, are informal economies a poverty trap or an engine of growth? Do they stimulate entrepreneurship and popular empowerment, or promote exploitation? How does an improved understanding of the size and organization of informal economies affect service provision, social policy or taxation? What are the implications of the informal economy for social cohesion and popular politics? The proposed course will address these (as well as other) questions related to the informal economy to offer students an understanding of such complex phenomenon from a variety of perspectives. The course will comprise three parts. Part 1 will explore the complexities of the informal economy, and the effects of informality on policies of inclusive growth. Part 2 will draw on empirical evidence and comparative case studies to examine informal economies in various regions, including Africa, East Asia, North and South America, and Europe, highlighting variations in activities, relations with the state, global integration and economic outcomes. Finally, Part 3 will discuss the ongoing economic policy shift from punitive measures to accepting informality as a virtual space through which citizens flow from job-seeker to compliant entrepreneurs.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.228. Economic Development. 3 Credits.
A comprehensive survey of economic behavior by households, farms and firms in poor countries and the role of and for governments. Discussions include measurement of income levels, economy-wide equilibrium, sources of growth, agriculture and industry, international trade and investment, savings, population, fertility, education, health, income distribution and public finances. Applies economic theory rigorously to interpret and evaluate the economic experience of poor countries. Diagnostic test on Elements of Economics is required in the second week. Grading based on 3 exams and one paper.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences
Writing Intensive

AS.180.231. Debates in Macroeconomics. 3 Credits.
This course covers some of the more contentious current debates in macroeconomics. Topics include: the recent tax reform (who gains and for how long?); unconventional monetary policies (have they helped?); modern monetary theory (sound doctrine or hokum?); secular stagnation (the right diagnosis?); backlash against globalization (warranted? unprecedented?); immigration (economic bane or boon?); rising income inequality (causes? consequences? pervasiveness?). Students will use the tools of economics to analyze these and other pressing issues. Though definitive answers may prove elusive, sound economic analysis can shed considerable light, not least by unmasking the political biases that often drive protagonists on both sides of these debates.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences
AS.180.233. Economics of Transition and Institutional Change. 3 Credits.
This course will introduce students to the comparative analysis of institutions of existing capitalist systems and to the historical evolution of those institutions. By comparing the economic systems of different nations, we will try to reveal the institutional setups that either contribute or hinder economic performance. We will also examine the process of countries transforming their economies and investigate the factors that determine the differences in reforms’ outcomes between countries.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences
Writing Intensive

AS.180.238. Rethinking Economics After the Great Recession. 3 Credits.
The financial crisis that began in the United States in 2007 threw virtually the entire world into recession. This class will look at the causes of the crisis and at how it unfolded. It will look into the conventional wisdom of economists, circa 2006, and why that wisdom proved to be so wrong. It will examine the financial innovations that contributed to the crisis, at the reasons financial regulators were blindsided, and at the reforms enacted after the crisis.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences
Writing Intensive

AS.180.239. Urban Economics. 3 Credits.
This course introduces students to the major ideas of modern urban economics focused on the causes and consequences of urban economic growth, urban poverty and a city’s quality of life. We will analyze basic questions such as: Why is Silicon Valley in Silicon Valley? Why did Beijing become so polluted? Why is crime high in Baltimore? Why does rich San Francisco face a homelessness challenge? The role of federal, state, and local government in urban life will be explored.
Prerequisite(s): AS.180.102
Area: Social and Behavioral Sciences
Writing Intensive

AS.180.240. JHU Bologna: History of Banking. 3 Credits.
Economics course offered on the JHU Summer Program in Bologna. Permission required. Must be taken for a letter grade. Open to students on the JHU/Bologna summer program only.
Area: Social and Behavioral Sciences

AS.180.241. International Trade. 3 Credits.
Theory of comparative advantage and the international division of labor: the determinants and pattern of trade, factor price equalization, factor mobility, gains from trade and distribution of income, and theory and practice or tariffs and other trade restrictions. Recommended Course Background: AS.180.101.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.242. International Monetary Economics. 3 Credits.
This course presents International Monetary Economics theory and applies it towards gaining an understanding of recent events and current policy issues. The theory presented in this course covers a broad range of topics including exchange rate determination, monetary and fiscal policy in an open economy, balance of payments crisis, the choice of exchange rate, and international debt. The insights provided by these theoretical frameworks will enable us to discuss topics such as the global financial crisis, global financial imbalances, the Chinese exchange rate regime, and proposed changes in the international financial architecture.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.244. Market Design. 3 Credits.
We will study how the rules of a market impact behavior, and in turn whether this behavior leads to (un)desirable outcomes. We will cover how the lessons learned from both successful and failing markets have been used by economists to design new markets. It will help us address questions such as: (i) Can economics help with the shortage of donated kidneys? (ii) How should a ride share service assign cars to clients? (iii) Can changing the way school seats are assigned change the welfare of students in a city? The material is intended to be as accessible as possible, keeping the mathematical technicalities to a minimum (i.e. one-term of calculus would be sufficient).
Prerequisite(s): AS.180.102

AS.180.246. Environmental Economics. 3 Credits.
This course presents a broad overview of the key issues in modern environmental economics with a focus on understanding and solving urban pollution challenges in developed and developing nations. This course explores how cities and nations can achieve the ‘win-win’ of economic growth and reduced urban pollution. Special attention is paid to the incentives of households, firms and governments in reducing the production of pollution. The course examines a number of pollution challenges including; air, water, noise, garbage and the global challenge of climate change.
Area: Humanities

AS.180.248. Financial Writing and Analysis. 3 Credits.
There is an immense chasm between economic and financial commentary in academic discussions and that provided by private sector analysts and the press. Some of the difference is merely semantic, but much of the difference has real substance. Academic and nonacademic commentators tend to simply write off the other as being clueless in some way. Sorting out which bits of each style of analysis are most valuable and synthesizing them into a coherent commentary is a rare and valuable skill. This is a hands-on course with a goal of building skills reading and writing commentary in financial economics. The course begins critically studying commentary regarding prominent topics in the news over the recent months and then moves to writing ‘explainer’ pieces for publication on the Center for Financial Economics blog. Students will work in teams both analyzing commentary, and writing and critiquing the work of fellow students.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences
Writing Intensive

AS.180.252. Economics of Discrimination. 3 Credits.
This course examines labor market discrimination by gender, race and ethnicity in the United States. What does the empirical evidence show, and how can we explain it? How much of the difference in observed outcomes is driven by differences in productivity characteristics and how much is due to discrimination? How have economists theorized about discrimination and what methodologies can be employed to test those theories? What has been the impact of public policy in this area; how do large corporations and educational institutions respond; and what can we learn from landmark lawsuits? The course will reinforce skills relevant to all fields of applied economics, including critical evaluation of the theoretical and empirical literature, the reasoned application of statistical techniques, and analysis of current policy issues.
Prerequisite(s): AS.180.102
Area: Social and Behavioral Sciences
Writing Intensive
AS.180.260. Real Estate Economics and Finance. 3 Credits.
An introduction to the economic analysis of real estate markets. Various perspectives will be considered, including individual homeowners and renters, investors and financiers, and policymakers. Topics include the determinants of property valuations, financing considerations, real estate development, and analysis of real estate as an investment class. The course qualifies as an elective for the Financial Economics Minor.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.261. Monetary Analysis. 3 Credits.
This course analyzes the financial and monetary system of the U.S. economy and the design and implementation of U.S. monetary policy. Among other topics, we will examine the role of banks in the economy, the term structure of interest rates, the stock market, the supply of money, the role of the Federal Reserve in the economy, the objectives of monetary policy in the United States and current monetary policy practice.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.263. Corporate Finance. 3 Credits.
This course is an introduction to the financial management of a corporation. Students study the following broad questions. How should a firm decide whether to invest in a new project? How much debt and equity should a firm use to finance its activities? How should a firm pay its investors? How do taxes affect a firm’s investment and financing decisions? What determines the value of a firm? The emphasis throughout the course is on the economic principles that underlie answers to these questions.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.266. Financial Markets and Institutions. 3 Credits.
Understanding design and functioning of financial markets and institutions, connecting theoretical foundations and real-world applications and cases. Basic principles of asymmetric information problems, management of risk. Money, bond, and equity markets; investment banking, security brokers, and venture capital firms; structure, competition, and regulation of commercial banks. Importance of electronic technology on financial systems.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.268. Seminar on Financial Regulation. 3 Credits.
This course examines regulation of the financial system in the United States and its effects on the economy. It considers proposals for reform and the ongoing implementation of the Dodd-Frank Act of 2010. A major part of the course will be student research projects and class discussion of the projects.
Area: Social and Behavioral Sciences

AS.180.280. The History and Future of the Hedge Fund Industry. 3 Credits.
The precursors to modern hedge funds began more than 50 years ago, but in the 1990s the hedge fund, or alternative investments, industry began a period of rapid growth and evolution. With growth came controversy. Some argue that hedge funds, by allowing immense amounts of capital to be rapidly and freely deployed, play a vital role in pushing prices toward the efficient markets ideal. Others claim that hedge funds may accentuate speculative price dynamics, threatening the stability of the financial sector. While many hedge funds claim to offer outstanding returns to investors, data suggest that many clients end up paying high fees for unspectacular results. This course examines these and other controversies, while tracing the history of the alternative investments industry over the last 25 years.
Prerequisite(s): AS.180.101 AND AS.180.102 AND (AS.180.266 OR AS.180.263 OR AS.180.367)
Area: Social and Behavioral Sciences

AS.180.285. Information and Investing Seminar. 3 Credits.
The course will seek to discuss and illuminate the information (news reports, industry reports, government statistics, and proprietary indicators) that investors use to make investment decisions. The course will be conducted in the framework of a weekly investment committee format wherein information is processed to maximize an investment portfolio’s return to risk. Each class will be conducted in two parts. The first part will require students to share with the class information gathered from their assigned specialty (e.g.: fixed income, equities, emerging markets, commodities) and the second part will require group interaction as to what decisions need to be made to a hypothetical portfolio in order to maximize objectives. The course will require regular reading of financial and economic news as well as numerous assigned industry and academic research related to global finance. Other: this course will require quite a bit of reading and regular interaction in group discussion and with the instructor.
Prerequisite(s): AS.180.280 or permission of instructor Kevin Heerdt or Robert Barbera
Area: Social and Behavioral Sciences

AS.180.289. Economics Of Health. 3 Credits.
Application of economic concepts and analysis to the health services system. Review of empirical studies of demand for health services, behavior of providers, and relationship of health services to population health levels. Discussion of current policy issues relating to financing and resource allocation.
Prerequisite(s): AS.180.102
Area: Social and Behavioral Sciences

AS.180.301. Microeconomic Theory. 4.5 Credits.
An introduction to the modern theory of allocation of resources, starting with the theories of the individual consumer and producer, and proceeding to analysis of systems of interacting individuals, first in the theory of exchange, then to systems which include production as well.
Prerequisite(s): AS.180.102 AND (AS.110.106 OR AS.110.107 OR AS.110.108 OR AS.110.109) OR equivalent.; AS.180.101 may be taken concurrently.
Area: Social and Behavioral Sciences
AS.180.302. **Macroeconomic Theory.** 4.5 Credits.
The course provides a treatment of macroeconomic theory including a static analysis of the determination of output, employment, the price level, the rate of interest, and a dynamic analysis of growth, inflation, and business cycles. In addition, the use and effectiveness of monetary and fiscal policy to bring about full employment, price stability, and steady economic growth will be discussed.

**Prerequisite(s):** AS.180.101 and (AS.110.106 or AS.110.107 or AS.110.108 or AS.110.109); AS.180.102 can be taken at the same time as AS.180.302.

Area: Social and Behavioral Sciences

AS.180.303. **Topics in International Macroeconomics and Finance.** 3 Credits.
The course will review selected topics in international macroeconomics and finance. The topics for the Fall of 2019 include: financial globalization; international portfolio diversification; capital account liberalization and the choice of the exchange rate regime in emerging markets; the global financial safety net; macroeconomic adjustment in the euro area.

**Prerequisite(s):** AS.180.101 AND AS.180.102 AND AS.180.302

Area: Social and Behavioral Sciences

AS.180.309. **Economics of Uncertainty and Information.** 3 Credits.
In this course we'll discuss the theory of decision making in the face of risk, the theory of risk aversion and its applications to financial and insurance markets. Building on the theory of individual decision making under risk, we will study the economic implications of asymmetric information, the type of market failures produced by adverse selection and moral hazard problems, and the models that were advanced to analyze these problems, including incentive contracts, screening and signaling equilibria.

**Prerequisite(s):** AS.180.301 OR AS.180.401

AS.180.310. **Economics Of Antitrust.** 3 Credits.
This course explores the economic rationale for, and consequence of, antitrust laws. In addition to economic analysis we will study landmark antitrust cases.

**Prerequisite(s):** AS.180.301 OR AS.180.401

Area: Social and Behavioral Sciences

AS.180.312. **Evaluating Public Policy: Experimental and Quasi-Experimental Research Design in Social Science.** 3 Credits.
The purpose of the course is to show how experimental, quasi-experimental and non-experimental methods can be used to advance scientific knowledge about topics in economics. It will teach students the empirical techniques required to analyze experimental and non-experimental data to draw causal inference. The course will begin with a primer on the use of experimental methods in economics, specifically in the context of evaluating welfare programs and labor market policies. Students will then proceed to learn the empirical methods that can be employed to establish cause and effect, both when data is obtained through a randomized control trial (experimental data), or when randomization occurs naturally (quasi-experimental data). The tools and topics that are covered will not only be relevant to economics students, but will also be of interest to students from other social science departments.

**Prerequisite(s):** AS.180.301 AND (EN.550.420 OR EN.550.310 OR EN.550.112 OR EN.550.113 OR EN.550.211 OR EN.550.311 OR EN.550.430 OR EN.550.435 OR EN.550.111 OR AS.280.345)

Area: Social and Behavioral Sciences

Writing Intensive

AS.180.314. **Mathematical Economics.** 3 Credits.
This course traces the extent to which modern economic theory, particularly as it pertains to pure competition in market and non-market games under the rationality postulate.

**Prerequisite(s):** AS.180.301

Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.180.315. **Housing Problems and Policy: An Economics Perspective.** 3 Credits.
This course uses economic theory and econometric research approaches as a lens on housing issues and policy. Housing is at the center of the effects of segregation and the Great Recession, and bears a significant connection to the labor market as well. This course briefly explores macroeconomic theory specifically relevant to the housing market, then uses readings from academic social science literatures to dive deeper into these issues and others. Finally, students will examine public housing policies, using the literature and proposing statistical techniques to assess their effectiveness. The course will improve the understanding and use of basic econometric techniques with respect to policy questions as well as the ability to critically read academic literature.

**Prerequisite(s):** (AS.180.301 OR AS.180.401) AND (EN.550.420 OR EN.550.310 OR EN.550.112 OR EN.550.113 OR EN.550.211 OR EN.550.311 OR EN.550.430 OR EN.550.435 OR EN.550.111 OR AS.280.345)

Area: Social and Behavioral Sciences

AS.180.317. **Economics of Fixed Income Instruments.** 3 Credits.
Students study economic principles and state-of-the-art mathematical models used to value fixed income securities and their derivatives. The course emphasizes advanced practical applications as well as theory. Students will develop their own computer code to price fixed-income instruments and evaluate their risks. Students must be familiar with both statistics and differential equations.

**Prerequisite(s):** AS.180.301 AND (EN.550.111 OR EN.550.112 OR EN.550.310 OR EN.550.420 OR EN.550.430) AND (AS.110.302 OR EN.550.291) or permission of the instructor

Area: Social and Behavioral Sciences

AS.180.334. **Econometrics.** 3 Credits.
Introduction to the methods of estimation in economic research. The first part of the course develops the primary method employed in economic research, the method of least squares. This is followed by an investigation of the performance of the method in a variety of important situations. The development of a way to handle many of the situations in which ordinary least squares is not useful, the method of instrumental variables, concludes the course.

**Prerequisite(s):** AS.180.301 OR AS.180.401, may be taken concurrently. One semester of calculus, AS.280.345 OR EN.540.305 OR EN.553.211 OR EN.553.111 OR EN.553.310 OR EN.553.311 OR EN.553.420 OR EN.560.435 OR EN.560.348 OR EN.553.112

Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.180.336. **Macroeconomic Strategies.** 3 Credits.
Will sketch out a strategy for anticipating economic turning points. Business cycle basics, monetary policy/financial market/real economy interactions will be reviewed. Long-term growth issues will be explored.

**Prerequisite(s):** AS.180.101 AND AS.180.102 AND AS.180.302 or instructor permission

Area: Social and Behavioral Sciences
AS.180.338. Political Economy and Development. 3 Credits.
Good governance is associated with desirable outcomes across countries and societies: higher life satisfaction, greater income per capita, lower child mortality, longer life expectancy, less disease, etc. But these statistical associations in the data are not sufficient to establish either that good governance truly causes such societal outcomes, or what types of policies produce them. This course asks: What are the determinants of good governance? Is good governance ‘good’ beyond its intrinsic desirability? If so, how? We use a data-driven approach, focusing on quantitative empirical methods and their applications to policy. The goal is to develop skills to be savvy consumers, as well as producers, of policy-relevant evidence related to issues of governance, in rich and poor countries alike. Topics will include: democracy, corruption, conflict, culture, mass media, quotas, and foreign aid.
Prerequisite(s): (AS.180.301 OR AS.180.401) AND AS.180.334
Area: Social and Behavioral Sciences

AS.180.345. Rationality: Meaning and Measurement. 3 Credits.
Economists generally work with a number of classic models of how people behave in different contexts. These models (such as utility maximization and expected utility maximization) are widely used because they are tractable and elegant, but are they also accurate models of human behavior? In this course, we will examine the axiomatic foundations of these models, explore their implications for choice behavior, and discuss the empirical and experimental strategies economists have developed to test these models.
Prerequisite(s): AS.180.301
Area: Social and Behavioral Sciences

AS.180.351. Labor Economics. 3 Credits.
The course discusses various issues in labor markets from the perspective of economic theory. We first study the major forces at work that shape labor market behavior; firms’ labor demand and workers’ labor supply. Then we discuss the equilibrium behavior of employment and wages. Using these tools, we also cover various applied topics in labor economics, such as minimum wage regulations, male-female wage differentials, human capital investment, worker mobility, and unemployment.
Prerequisite(s): AS.180.301 OR AS.180.401
Area: Social and Behavioral Sciences

AS.180.352. Public Economics. 3 Credits.
This course explores issues related to expenditure and tax policies of governments, as well as views regarding the purpose of government and criteria for evaluating government actions. The course also includes a discussion of how group or collective choices are made within society, how environmental policies affect the level of pollution, and the importance of public debt.
Prerequisite(s): AS.180.301 OR AS.180.401
Area: Social and Behavioral Sciences

AS.180.354. Econometrics of Unobservables. 3 Credits.
Empirical data may not contain all the variables suggested by economic theories. This course introduces methodologies to identify and estimate economic models containing unobservables. Recommended Course Background: AS.180.301 and AS.180.334.
Area: Social and Behavioral Sciences

AS.180.355. Economics of Poverty/Inequality. 3 Credits.
This course focuses on the economics of poverty and inequality. It covers the measurement of poverty and inequality, facts and trends over time, the causes of poverty and inequality with a focus on those related to earnings and the labor market, and public policy toward poverty and inequality, covering both taxation and government expenditure and programs. By the nature of the material, the course is fairly statistical and quantitative. Students should have an intermediate understanding of microeconomic concepts. Basic knowledge of regression analysis is also helpful.
Prerequisite(s): AS.180.301
Area: Social and Behavioral Sciences

AS.180.357. Numerical Simulations For Merger and Competition Policy. 3 Credits.
This course discusses several empirical and numerical methods used in economics and then applies them to the analysis of recent antitrust issues. Specifically, we learn estimation of demand and supply, and computation of equilibrium of oligopolistic models. Then, we apply these methods to simulating mergers, which were recently proposed or already took place in the US and Europe. We evaluate the welfare impact of these mergers. To perform these analyses, we use STATA and MATLAB, but prior knowledge of these software is not required. If time allows, we will also cover other topics in antitrust, such as detecting collusion/cartels.
Prerequisite(s): AS.180.102
Area: Social and Behavioral Sciences

AS.180.361. Rich Countries, Poor Countries. 3 Credits.
Why are some countries rich while some other countries poor? Why does a country’s income per person generally grow over time? We try to analyze these questions using the theoretical and empirical growth literature. We will study seminal growth models, and also try to explain cross-country income differences in terms of factors like geography, institutions and global integration. Knowledge of regression analysis (including instrumental variables estimation) is required.
Prerequisite(s): AS.180.302 AND (AS.180.334 OR AS.180.434)
Area: Social and Behavioral Sciences

AS.180.363. Sex, Drugs and Dynamic Optimization: The Economics of Risky Behavior. 3 Credits.
We apply the tools of economic analysis to understand behaviors that are enjoyable today, but may have negative consequences in the future.
Prerequisite(s): (AS.180.301 OR AS.180.401) AND AS.180.302; AS.180.334 can be taken concurrently.
Area: Social and Behavioral Sciences

AS.180.365. Topics in Macroeconomics. 3 Credits.
This course builds on AS.180.302 (Macroeconomic Theory) to consider the leading macroeconomic controversies of today (such as the appropriate monetary and fiscal policies of the Federal Reserve and U.S. Government). The classes will include frequent student presentations.
Prerequisite(s): AS.180.302
Area: Social and Behavioral Sciences

AS.180.367. Investment-Portfolio Management. 3 Credits.
Prerequisite(s): (AS.180.301 OR AS.180.401) AND (EN.550.111 OR EN.550.112 OR EN.550.310 OR EN.550.311 OR EN.550.420 OR EN.550.430)
Area: Social and Behavioral Sciences
AS.180.368. Managerial Economics and Business Strategy. 3 Credits.
Seminar on quantitative concepts, decision-making, and strategy in business organizations. Overall context is ‘value’ – how it is measured and maximized long term. Microeconomic theory of the firm, competitive analysis, corporate finance.
Prerequisite(s): (AS.180.301 OR AS.180.401) AND (EN.550.111 OR AS.180.367 OR AS.180.263) or permission of the instructor.
Area: Social and Behavioral Sciences

AS.180.371. Industrial Organization. 3 Credits.
Investigation of firm behavior in markets characterized by imperfect competition. Imperfect competition lies in between monopoly and perfect competition and characterizes most major industries in modern capitalist economies. Central issues to be covered in the course include what determines the intensity of competition? What determines the extent of entry and exit? How is it that some firms consistently dominate their industries?
Prerequisite(s): AS.180.301 or AS.180.401
Area: Social and Behavioral Sciences

AS.180.389. Social Policy Implications of Behavioral Economics. 3 Credits.
Economists increasingly incorporate insights from psychology into models of rational decision-making. Known as ‘behavioral economics’, this line of research considers how, for example, emotions, rules-of-thumb, biased beliefs and time-inconsistent preferences influence how we make choices. Behavioral economics increasingly pervades policy discussions on topics as diverse as: obesity, the role of media, subprime mortgages and voting patterns. Behavioral models are certainly novel, but do they help us to design superior social policies? With the goal of preparing students to address this question, this course (1) provides a thorough overview of the main contributions of behavioral economics, highlighting departures from more traditional economic models and (2) emphasizes how behavioral economic models might (or might not) improve our thinking about social policy.
Prerequisite(s): AS.180.301 OR AS.180.401; AS.180.334 OR AS.180.434 can be taken concurrently.
Area: Social and Behavioral Sciences

AS.180.390. Health Economics & Developing Countries. 3 Credits.
Benefits of good health and its costs. Health demand and supply in poor countries. Welfare economics of Public Health. This is a writing seminar. There are some lectures on how to write a paper and on the substance of the economics of international health but the focus and only assignment is a 40-page paper by each student under the supervision of the instructor.
Prerequisite(s): AS.180.301 or AS.180.401; Students may not take AS.180.390 if they took AS.180.391.
Area: Social and Behavioral Sciences

AS.180.391. Economics of China. 3 Credits.
Discussion of the economic experience of Post-War China, primarily emphasizing topics rather than historical narrative: agriculture, industry including corporate governance and public enterprises, international trade, population, migration, education, health, public finances among other topics. This course is writing intensive and the only assignment for the course is a 40-page paper on some aspect of the Chinese economy to be done under the close supervision of the instructor. The course is not primarily a lecture course, although there will be some lectures on how to do a paper and on the substance of the Chinese economic experience.
Prerequisite(s): AS.180.301 OR AS.180.401; Students may not take AS.180.390 if they took AS.180.391.
Writing Intensive

AS.180.401. Advanced Microeconomic Theory. 3 Credits.
This course covers roughly the same material as Microeconomic Theory 180.301 but in a more formal and mathematically rigorous way. You can use either 180.301 or 180.401 to satisfy the requirement for the economics major. 180.301 and 180.401 are offered during the same time slot, so the logistics of switching from 180.301 to 180.401 should be seamless, should you decide to make the switch. This course is suitable for those students who prefer a more formal treatment of economic theory and who are planning to take some of the more technically demanding electives in economics at a later stage. NOTE: you may not take both 180.301 and 180.401.
Prerequisite(s): You may not take both AS.180.401 and AS.180.102 and any two semesters of calculus (or equivalent)
Area: Social and Behavioral Sciences

AS.180.434. Advanced Econometrics. 3 Credits.
This is a faster-paced and more intensive version of Econometrics 180.334. You can use either 180.334 or 180.434 to satisfy the requirement for the economics major. This course is suitable for those students who prefer a more technical treatment of econometric methodologies. NOTE: Students may not take both 180.334 and 180.434.
Prerequisite(s): Students may only receive credit for either AS.180.334 or AS.180.434, AS.180.301 or AS.180.401, one semester of linear algebra, one semester of calculus, AS.280.345 or EN.550.305 or EN.550.211 or EN.550.111 or EN.550.310 or EN.550.311 or EN.550.420 or EN.560.435 or EN.560.348.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.180.501. Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.180.502. Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.180.521. Research in Economics. 2 Credits.
The assignment in this course is to complete the initial stages of research for the Senior Honors Thesis in Economics. Students will work independently under the supervision of a research/thesis advisor. The contact (in spring of Junior year) should be the course instructor listed for this course. He/she will coordinate registration and grade-reporting, and will also be available to discuss research ideas and to help put students in touch with possible thesis advisors. Open to Senior and Junior Economics majors. Note: This course can not be counted as one of the five elective economics courses required for the Economics major.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.180.522. Senior Thesis. 3 Credits.
Students enrolled in this course will complete the Senior Honors Thesis under the supervision of a thesis advisor (who will have been chosen by the student prior to registration for AS.180.521). The formal course instructor will be in charge of overseeing registration and submitting grades. He/she will also be available for discussions of progress or problems on the thesis. Please note that your thesis advisor can be any faculty member in the Department of Economics, and need not be the same person as the course instructor. (This course cannot be counted as one of the 5 elective economics courses required for the Economics Major.)
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms; AS.180.521

Writing Intensive

AS.180.595. Economic Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.180.597. Research. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.180.599. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

The mathematical theory of general static equilibrium. The course will emphasize the formal mathematical expression of economic ideas and the ability to give a loose economic intuition a coherent logical meaning. Different mathematical structures in general equilibrium theory will be isolated and discussed. The text will be Debreu’s book ‘Theory of Value’. Recommended Course Background: AS.110.106, AS.180.301, and AS.180.302 or permission of the instructor.
Area: Social and Behavioral Sciences

The course will cover decision theories relevant to economics and their related analytical tools. We aim to discuss the following topics: standard theories of firm and consumer behavior; decision making under risk; revealed preference analysis; monotone comparative statics; bounded rationality.

AS.180.603. Macroeconomic Theory I.
A comprehensive treatment of macroeconomic theory, including static analysis of aggregate output employment, the rate of interest, and the price level; aggregate theory of investment, consumption, demand and supply of money; empirical work on aggregate relationships.

AS.180.604. Macroeconomic Theory II.
First term: a comprehensive treatment of macroeconomic theory, including static analysis of aggregate output employment, the rate of interest, and the price level; aggregate theory of investment, consumption, demand and supply of money; empirical work on aggregate relationships. Second term: the macrodynamic theory of growth, cycles, unemployment and inflation, and selected subjects.

AS.180.605. Advanced Macroeconomics I.
Topics of recent research in macroeconomics. Content will vary from year to year. Likely topics include implicit contract theory, search theory and unemployment, disequilibrium macroeconomic models, monetary policy and the control of inflation, contract-based rational expectations models, imperfect competition in macrodynamic models, business cycle models, empirical tests of rational expectations models, theories of investment behavior, and debt neutrality. Open to 2nd year Grad Students and up.

AS.180.606. Advanced Macroeconomics II.
Topics of recent research in macroeconomics. Prof. Ball's course covers nominal rigidities, dynamic-consistency theories of inflation, inflation inertia and the costs of disinflation, monetary policy, costs and benefits of price stability, benefits of output stabilization, alternative policy rules, measuring inflation, unemployment, efficiency-wage theories, the behavior of the NAIRU, macro in middle-income countries, high inflation and stabilization, currency crises. Prof. Carroll's course analyzes implications of the buffer-stock and habit formation theories of consumption for comovement of aggregate variables and asset pricing. The models are applied to study the phenomena of declining U.S. saving rate, the dynamic relationship between saving rates and growth, and the equity premium puzzle.
Prerequisite(s): AS.180.603

AS.180.607. Macroeconometrics I.
The course is an attempt to provide a framework for discussing the techniques that are used in macroeconomic analysis. Generally the bias that it has is one of looking at these from the perspective of someone analyzing macroeconomic data for policy analysis. Consequently, many of the applications considered are drawn from the type of research conducted in central banks and finance ministries. Its emphasis is therefore upon the issues raised by the analysis of time series of macro-economic data. Today there is an emerging literature that looks at micro-economic data as well as conducting cross-country studies. We will tend to ignore that material as the methods used in such research are essentially those of micro-econometrics, although sometimes with adjustments made to reflect the nature of macro-economic time series.
Prerequisite(s): AS.180.633

AS.180.608. Macroeconometrics II.
This course will cover a range of topics in time series econometrics and empirical macroeconomics and finance that arise in current research and policy analysis. Key topics include GMM estimation, filtering, forecasting, structural VARs, and modeling stock and bond returns. It assumes a knowledge of the basics of time series econometrics. Both theoretical and empirical work will be included. Bayesian simulation methods that are very important in current research methods will be emphasized. This course should be taken by people with an interest in either empirical macro or empirical finance and may be helpful in searching for a dissertation topic.

AS.180.609. Core Mathematics for Economics.
This course will develop the necessary mathematical language and tools that are to be regarded as a pre-requisite for graduate study in economics at Johns Hopkins. Specifically, the course will focus on set theory, linear algebra and real analysis.
Area: Social and Behavioral Sciences
AS.180.611. Economics of Uncertainty.
This course offers a review of subjective expected utility theory of decision making under uncertainty and choice based subjective probabilities. It also explores the motivation for the recent developments of non-expected utility theories under risk and under uncertainty. It examines the role of completeness and awareness in these theories as well as the theories of menu choice and random choice behavior.
Area: Social and Behavioral Sciences

This course traces the extent to which modern economic theory, particularly as it pertains to pure competition in market and non-market games under the rationality postulate, is grounded in the language of probability and measure theory. Special attention will be paid to the formal expression of ideas such as economic and numerical negligibility, on the one hand, and diffuseness and conditional independence of information, on the other. Towards this end, the course will develop rigorous formulations of basic ideas of (conceptual rather than computational) probability and apply them: first, to develop the fundamental theorems of welfare economics, including the core theorems; and second, to large anonymous and non-anonymous games as well as to finite-agent games with private information. The course will be self-contained from the technical point of view but will presuppose a level of mathematical maturity that ought typically to be achieved by taking courses such as AS.180.615 and AS.180.601

This course concerns dynamic optimization in both continuous and discrete time. More specifically, it develops Pontryagin's maximum principle and the Euler-Lagrange conditions in the calculus of variations, on the one hand, and the basic tools of deterministic dynamic programming, on the other. The course will be self-contained from the technical point of view but will presuppose a level of mathematical maturity that ought typically to be achieved by taking a course such as AS.180.600.

AS.180.622. Game Theory.
The topics covered include solutions concepts such as dominance, rationalizability, Nash equilibrium, correlated equilibrium, subgame perfect equilibrium and Perfect Bayesian equilibrium. We will discuss both static and dynamic games and games of complete and incomplete information.
Prerequisite(s): AS.180.623
Corequisite(s): AS.180.623
Area: Social and Behavioral Sciences

AS.180.623. Economics of Information.
The course introduces the economic issues associated asymmetric information and analyses the institutions and mechanisms designed to mitigate the resulting inefficiencies. Topics include: Adverse selection; moral hazard; incentive contracts; and mechanism design.
Prerequisite(s): AS.180.600 AND AS.180.601
Corequisite(s): AS.180.622
Area: Social and Behavioral Sciences

AS.180.626. Computational Methods.
This class will introduce students to the computational tools that are used to get things done in scientific research. Such tools include, but are not limited to, unix bash shell scripting, LaTeX/Beamer, virtual machines, git and github, tools for parallel computation, cloud services, and others. Brief treatments of special-purpose tools (like Mathematica for symbolic math) will conclude this part of the class. After this introduction, the course will involve an intensive introduction to the use of the Python language for scientific computation purposes, including a discussion of why Python dominates other choices like Matlab and Julia. The final third of the course will apply the tools in a practical application to a specific problem identified jointly between the instructor and the student. There is no required text; readings will be assigned in class. (The characteristic that distinguishes this class from alternatives is that this class will not teach specific algorithms nor frontier computational techniques; rather, it aims to expose students to a broad set of tools that they will use regularly thereafter).
Area: Social and Behavioral Sciences

AS.180.632. Topics in Applied Microeconometrics.
This course teaches methods for using micro-data to recover structural parameters of microeconomic models. We cover static models, but focus largely on single-agent dynamic programming, including “full solution” methods along with innovations that permit circumvention of daunting computational tasks. Additional topics will be partially based on students’ interests, but will likely include: general equilibrium models, static and dynamic games, matching models, unobserved heterogeneity, structural methods with experimental data and biased expectations. The goal is to teach students to use structural methods in their own research, and so we will delve into the nuts and bolts of structural work, examining how researchers actually get from raw data to results. This includes: how the sub-sample for analysis is chosen, how the model is specified, how the programming problem is solved, which moments are generated, how these are matched to the analogous moments in the data and, importantly, how identification is established.

Mathematical models of economic behavior and the use of statistical methods for testing economic theories and estimating economic parameters. Subject matter will vary from year to year; statistical methods, such as linear regression, multivariate analysis, and identification, estimation and testing in simultaneous equation models, will be stressed.
Prerequisite(s): AS.180.636

AS.180.634. Panel Data Models & Applications.
This course is a reading course for the panel data models in the economics department. We will focus on econometric theories that are commonly used in panel data analysis, although many of these techniques can be applied to other areas as well. In addition, we will discuss applications of these theories. The course material will start form chapter 10 & 11 in Wooldridge's book which covers linear panel data models. And then we discuss the discrete choice models from chapter 7 of Hsiao's book. After these, we will try to read papers related to panel data models.

AS.180.636. Statistical Inference.
Theory and applications of statistical inference. Topics include probability and sampling, distribution theory, estimation, hypothesis testing, and simple regression analysis. Statistical applications will be drawn from economics. Limited to graduate students in Economics except by permission of the chair. Recommended Course Background: AS.110.201, AS.110.302
AS.180.637. Microeconometrics I.
This is an advanced graduate course on major econometric techniques and models that are used in empirical microeconomics. The first half of the course introduces econometric theories of nonlinear extremal estimation, nonparametric estimation, and semiparametric estimation. The second half of the course illustrates applications of these theories to limited dependent variable models, selection models, and endogenous treatment models with unobserved heterogeneity.
Prerequisite(s): AS.180.601 AND AS.180.622 AND AS.180.633 AND AS.180.636

AS.180.638. Microeconometrics II.
This course is the second in the microeconometrics sequence in the Economics Department. It will introduce a selection of models and techniques that are useful when a researcher wants to estimate a structural model, i.e. a model derived from economic theory. Structural models that try to incorporate restrictions derived from economic theory are used in empirical IQ, but also in quantitative marketing research, labor economics and other fields that consider individual decision making. No attempt will be made to be comprehensive. Instead we will focus on a few areas that have been well-researched in recent years: dynamic discrete choice, microeconomic models with latent variables, program evaluation, the empirical analysis of auctions and nonseparable models. Some topics will be included only if time permits. The models and methods developed for these areas are relevant for other cases. The emphasis is on the interaction between economic theory and econometrics. Basic issues are specification and (nonparametric) identification, computational problems and the use of simulation, semiparametric estimation to avoid functional form and distributional assumptions that cannot be derived from economic theory.
Prerequisite(s): AS.180.601 AND AS.180.622

AS.180.640. Topics in Economic Theory.
In this course we will discuss a variety of topics in Economic Theory that are either not covered or only partially covered in the regular courses. Topics may include Individual and Social Choice Theory, Auctions Theory, Medical Decision Making. For each subject there will be introductory lectures followed by readings and students' presentations of recent contributions.
Prerequisite(s): AS.180.601 AND AS.180.622
Area: Social and Behavioral Sciences

This is a graduate course in international trade. It will develop basic analytical tools and frameworks used in the general equilibrium analysis of international trade. Recent research topics will be discussed in the second half of the course.
Prerequisite(s): AS.180.601 AND AS.180.603

AS.180.642. International Monetary Economics.
A link between the balance of payments and asset accumulation/devaluation, microeconomics of international finance and open-economy macroeconomics. The section on open-economy macroeconomics covers approaches to balance-of-payments adjustments, theories of exchange rate determination and monetary, fiscal, and exchange-market policies under fixed and flexible rate regimes.

AS.180.643. Topics of Game Theory.
This course covers topics such as repeated games, dynamic games, bargaining and strategic communication.
Prerequisite(s): AS.180.622
Area: Social and Behavioral Sciences

AS.180.645. Topics in Economic Theory.
The course will cover matching markets, which typically deal with assignment problems with and without the use of transfers. Examples of these include school choice, course allocation, and organ exchange. We will cover the theoretical underpinnings, field applications, and empirical evaluations of these markets.
Area: Social and Behavioral Sciences

AS.180.646. Revealed Preference and Comparative Statics.
The overall theme of this course is the observable implications of optimizing choice. We will cover the theory of monotone comparative statics and supermodular games. We also discuss results in the revealed preference literature, such as Afriat's Theorem, that deal with the consistency of data with different canonical models. The course is useful to students doing research in pure or applied theory, where comparative statics tools/insights are often needed for model building. It could also be interesting to those with an empirical focus who like to know more about revealed preference approaches to testing models and drawing inferences from them.
Area: Social and Behavioral Sciences

This course studies the theory of asset trading in which agents hold different information and/or beliefs. Foundational papers as well as recent ones will be covered, with applications both within and outside of Finance. Topics include: information aggregation via prices; rational expectations equilibrium; market micro-structure; large auctions; herding/information cascades/price bubbles; dynamic models and learning.
Area: Social and Behavioral Sciences

AS.180.648. Topics in Applied Microeconomics.
This course will cover popular research designs in applied microeconomics, from reduced-form approach to structural estimation. The first half of this course will be devoted to studying methodologies in reduced-form approach and the second half will be about structural estimation. Students must be familiar with at least one programming language of own choice (python, matlab, R, Julia, Fortran, C/C++) and statistical package (STATA, R) to solve problem sets in this course. The course will introduce various papers related to unobserved heterogeneity in applied microeconomics literature. Basic programming skills are needed for dynamic programming in this course.
Prerequisite(s): AS.180.600 AND AS.180.601
Area: Social and Behavioral Sciences

This course will introduce structural approach in applied microeconomics, with emphasis on models including endogenous unobservable heterogeneity. The first half of this course will cover popular estimators, such as simulated method of moments, indirect inference, conditional choice probability estimator. The course will cover both single agent problem and multi-agents problem, potentially including endogenous unobservable heterogeneity. The second half of this course will discuss multiple decision maker problem, so-called collective model, and family formation and dissolution model, and cultural economics.
Area: Humanities

AS.180.651. Labor Economics I.
Theories of the allocation of time and supply of labor, human capital, demand for labor, market equilibrium, and income distribution. As time allows, other topics, such as unemployment, unions, and compensating differences are discussed. Corequisite: AS.180.601
AS.180.662. Asset Pricing.
This course is an introduction and guide to the most important issues in asset pricing. It begins with classic concepts such as the Capital Asset Pricing Model and the Arbitrage Pricing Theory and continues through continuous-time dynamic no-arbitrage models. It covers both basic theory and classic empirical research. Recommended Course Background: AS.180.604, AS.180.633, AS.180.636 or instructor’s permission.

AS.180.672. Industrial Organization.
First term: This course covers methods in applied empirical Industrial Organization. The focus will be on the use of econometric analysis and data both for descriptive and measurement purposes, and to test the predictions of economic theories. The course will cover demand estimation, cost and production function estimation, and estimation of auction models. Second term: The emphasis in this course is on empirical analysis of firm behavior. The first part of the course focuses on models of the internal organization of the firm. The second part considers empirical analysis of firm behavior in markets, with an emphasis on the “new industrial economics.”
Prerequisite(s): AS.180.601

AS.180.673. Advanced Economics of Labor.
This course is for graduate students at the 3rd year and above who wish to participate in a semester in-depth readings and discussion topics in labor economics and in econometric methods typically used in labor economics and in many other applied microeconomics fields. Students will have to participate in discussions of materials in each class. The topics covered in each semester are partly a function of student interest and their dissertation topics.
Area: Social and Behavioral Sciences

AS.180.690. Advanced Econometrics.
Advanced econometric techniques are often essential to innovative empirical work, but finding and implementing the right methods for a particular problem poses formidable challenges. This course/seminar aims to address these challenges by combining lectures and discussions of foundational econometric methods in areas of student interest (whether those interests be specific for thesis work or more speculative) with examples of implementation, including software development, in more of a “workshop” environment. The emphasis will be on drawing on the resources of econometric theory to address specific empirical issues while at the same time developing implementation skills.

This course is for students working on the dissertation for the Ph.D. in Economics. It is graded pass-fail.
Area: Social and Behavioral Sciences

This is a weekly seminar series that brings in speakers from other universities to present their research in the field of applied microeconomics. Graduate Students only.
Writing Intensive

This is a seminar series devoted to the presentation of research in microeconomic theory, typically by speakers from outside the department. Graduate students only.

This course features lectures by economists from other universities. They present research findings at the frontier of the field. Graduate students only.

The purpose of this seminar is to train students to do research in economics. This course is for second year graduate students in the PhD program in Economics. For Graduate Students Only.

AS.180.698. Research/Teaching Practicums.
The purpose of the Ph.D. program in economics is to train students to teach and to do research in economics. This course is for graduate students in the Ph.D. program in economics to obtain graduate credit for work off campus that provides training and the development of skills in teaching and/or research. Before the practicum is begun, the graduate student must identify a sponsoring faculty member or seek permission from the student’s faculty adviser. The faculty member or adviser must sign a form that certifies that graduate credit will be granted, verifies the nature of the work to be performed by the student, and explains how the practicum helps to fulfill a degree requirement. Once completed, the sponsoring faculty member or adviser submits a grade of pass or fail for the student. The course may be used for curricular practical training. Economic majors / Graduate students only.

AS.180.899. Independent Study.

Cross Listed Courses
Canadian Studies Program
SA.840.712. Dynamics of Commodity Economies. 4 Credits.
Examines the pluses and minuses of small open economies that are commodity exporters, with the Canadian case study as the pivotal focus. Uses developing and other developed commodity exporters to contrast and compare. (This is a cross-listed course offered by the Canadian Studies Program that also can fulfill a requirement for the Latin American Studies Program.) <a href='http://bit.ly/1bep5s' target='_blank'>Click here to see evaluations, syllabi, and faculty bios</a>

SA.840.715. Economics Of Immigration. 4 Credits.
Examines the economic causes and consequences of international migration. The central focus is an economic analysis of the general patterns of population flows, their determinants and their impact. Analyzes these primarily within the context of the North American experience, although also considers other case studies. Includes consideration of the Canadian experience, in that Canada is both a significant receiving and sending country. Prerequisite: Microeconomics or Accelerated Microeconomics. (This is a cross-listed course offered by the Canadian Studies Program that also can fulfill a requirement for the International Economics Program and the Latin American Studies Program.) <a href='http://bit.ly/1bep5s' target='_blank'>Click here to see evaluations, syllabi, and faculty bios</a>

Prerequisite(s): Students may not register for this class if they have already received credit for SA.840.714[C].
Energy, Resources Environment
Energy holds a unique position at the nexus of multiple disciplines, including microeconomics, macroeconomics, finance, politics, security, environment, and science and technology. It forms a constant source of anxiety and opportunity to the private sector and policymakers, yet its breadth, complexity, and multi-dimensional nature challenges all participants in the energy space. This course provides a quantitatively rigorous introduction to the principles of energy economics, including the fundamentals of demand and supply, storage, transportation, transmission, and processing. The course also covers the associated financial markets for futures and other derivatives, the linkages between energy and the broader global macroeconomy, the political, environmental, and security externalities and their policy implications, the valuation of energy assets, and finally a survey of some unique characteristics and outlook for various sources of energy, including hydrocarbon, nuclear, biofuel, and renewable sources.<a href="http://bit.ly/1bep5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>

SA.680.851. Environmental and Natural Resource Economics. 4 Credits.
This course will give a broad overview of how economists think about environmental issues and translate it into policy applications. The class will be divided in three parts. Part I will cover ways in which markets fail to efficiently allocate resources in the presence of environmental externalities like pollution, along with policies to correct those failures. Part II will focus on the inefficient allocation of natural resources when property rights are poorly designed. Part III will provide an overview of the role of private actors in environmental sustainability. The objective of this course is to stimulate critical thinking about environmental challenges and solutions.<a href="http://bit.ly/2bc20Uv" target="_blank">Click here to see a video introduction for the course.</a><a href="http://bit.ly/1bep5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>

Environmental Health and Engineering
EN.570.428. Problems in Applied Economics. 3 Credits.
This course focuses on a monetary approach to national income determination and the balance of payments. Money and banking, as well as commodity and financial markets, are dealt with under both central banking, as well as alternative monetary regimes. Particular emphasis is placed on currency board systems. Students learn how to properly conduct substantive economic research, utilizing primary data sources, statistical techniques and lessons from economic history. Findings are presented in the form of either memoranda or working papers of publishable quality. Exceptional work may be suitable for publication through the Johns Hopkins Institute for Applied Economics, Global Health, and the Study of Business Enterprise. Advanced excel programming skills are required and students are expected to be pre-screened for research at the Library of Congress in Washington, D.C.. Bloomberg certification is a pre-requisite.

Prerequisite(s): EN.660.203 AND AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences
Writing Intensive

EN.570.470. Applied Economics & Finance. 3 Credits.
This course focuses on company valuations, using a Probabilistic Discounted Cash Flow Model. Students use the model and primary data from financial statements filed with the Securities and Exchange Commission to calculate the value of publically-traded companies. Using Monte Carlo simulations, students also generate forecast scenarios, project likely share-price ranges and assess potential gains/losses. Stress is placed on using these simulations to diagnose the subjective market expectations contained in current objective market prices, and the robustness of these expectations. During the weekly seminar, students company valuations are reviewed and critiqued. A heavy emphasis is placed on research and writing. Exceptional work may be suitable for publication through the Johns Hopkins Institute for Applied Economics, Global Health, and the Study of Business Enterprise. Advanced excel programming skills are required and students are expected to be pre-screened for research at the Library of Congress in Washington, D.C.. Bloomberg certification is a pre-requisite.

Prerequisite(s): EN.660.203 AND (EN.570.428 OR AS.360.528)
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
Writing Intensive

EN.570.504. Financial Market Research. 3 Credits.
This course investigates the workings of financial, foreign exchange, and commodity futures markets. Research is focused on price behavior, speculation, and hedging in these markets. Extensive research and writing of publishable quality are required. Exceptional work may be suitable for publication through the Johns Hopkins Institute for Applied Economics, Global Health, and the Study of Business Enterprise. An approved research proposal is a pre-requisite.

Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Writing Intensive

History
AS.100.442. The Intellectual History of Capitalism, 1900 to present. 3 Credits.
This course examines shifting understandings of the philosophical foundations, political implications, and social effects of the market economy since the early twentieth century.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
Interdepartmental

AS.360.247. Introduction to Social Policy: Baltimore and Beyond. 3 Credits.

This course will introduce students to basic concepts in economics, political science and sociology relevant to the study of social problems and the programs designed to remedy them. It will address the many inequalities in access to education and health care, unequal treatment in the criminal justice system, disparities in income and wealth, and differential access to political power. The focus will be on designing effective policies at the national and local level to address these pressing issues. This course is open to all students, but will be required for the new Social Policy Minor. The course is also recommended for students who are interested in law school, medical school, programs in public health, and graduate school in related social science fields. This course does not count as one of the required courses for the Economics major or minor, but it is required for the Social Policy Minor. Cross list with Sociology, Economics and Political Science. Freshman, Sophomore and Juniors only.

Area: Social and Behavioral Sciences
Writing Intensive

AS.360.528. Problems in Applied Economics. 2 Credits.

This course focuses on a monetary approach to national income determination and the balance of payments. Money and banking, as well as commodity and financial markets, are dealt with under both central banking, as well as alternative monetary regimes. Particular emphasis is placed on currency board systems. Students learn how to properly conduct substantive economic research, utilizing primary data sources, statistical techniques and lessons from economic history. Findings are presented in the form of either memoranda or working papers of publishable quality. Exceptional work may be suitable for publication through the Johns Hopkins Institute for Applied Economics, Global Health, and the Study of Business Enterprise. Advanced excel programming skills are required and students are expected to be pre-screened for research at the Library of Congress in Washington, D.C.. Bloomberg certification is a requisite.

Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms. Writing Intensive

International Development

SA.400.774. Financial Crises, Emerging Markets and Policy Dilemmas. 4 Credits.

This course addresses policy issues in emerging markets with a particular focus on financial crises and their implications. Over the last several years, we have witnessed a number of episodes of financial distress often leading to macroeconomic chaos, particularly in emerging markets. Financial fragility and market distress can come in many forms: Currency crises, banking crises, debt crises, or a mix of two or more of these crises. The purpose of this course is to provide students with frameworks and tools for analyzing the causes and consequences of financial fragilities and crises, as well as the policy responses they entail. To this end, the course will mix economic theory, country experiences, and actual policy responses to provide an in-depth understanding of the boom-bust cycles characteristic of emerging market economies. The course will also address the 2008 financial crisis, drawing on aspects that make this particular episode stand out from previous instances of turmoil. Emerging market policy responses to the 2008 crisis, as well as the effects on these countries of unconventional policy stimulus adopted by developed economies will also be discussed.

Prerequisite(s): \( (\text{SA.300.699[C]} \lor \text{SA.300.700[C]} \lor \text{SA.310.700[C]} \lor \text{SA.999.699[C]} \lor \text{SA.999.700[C]} ) \land ( \text{SA.300.708[C]} \lor \text{SA.300.852[C]} ) \)

SA.400.794. Public-Private Partnerships: Creating Public Value in Economic and Social Infrastructure. 2 Credits.

The course has been designed to help students understand what public value can be created and what complex public policy problems can be addressed by employing the techniques and structures used in public-private partnerships (PPPs). Public-Private Partnerships are collaborative structures supported by public, private and other partners who agree to share risks, resources and decisions in building and implementing certain projects. PPPs address issues with financing, operational capacity, and human capital requirements. The parties to a solution may share motivations to create public value by addressing a particular problem but may not agree on how it should be addressed, by whom, at what risk, and for what incentives. The course will discuss how economic and social PPPs can improve a country’s competitiveness. While economic PPPs are created to address strategic economic development goals, social PPPs focus more on assets that lack adequate revenue sources and require subsidies. The skills needed to effectively develop economic and social PPPs include negotiation, political management, innovation, and financial structuring. Case studies and readings will be used to illustrate the wide spectrum of situations and challenges associated with managing PPPs and the types of issues that will benefit from PPPs in international development. This is a 2 credit class to be paired with Development Finance.\( \langle \text{a href='http://bit.ly/1beb5p5e' target='_blank'}\rangle\text{Click here to see evaluations, syllabi, and faculty bios}</a\>

Prerequisite(s): SA.380.760[C]; Students may not register for this class if they have already received credit for SA.400.756[c]
SA.300.819. Financial Sector Developments and Reform in Emerging Markets. 4 Credits.
Explores developments and policy issues in the financial structures of selected emerging-market economies, including the functioning of the bond market, the equity market and the banking system; the role of central banks and official oversight; and issues of information, corporate governance, privatization, risk management and legal foundations. Prerequisites: Microeconomics or Accelerated Microeconomics and Macroeconomics or Accelerated Macroeconomics. (This is a cross-listed course offered by the International Development Program that also can fulfill a requirement for the Latin American Studies and International Economics programs.) <a href="http://bit.ly/1beb5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>
Prerequisite(s): SA.300.701[C] OR SA.300.706[C] OR SA.999.701[C]; SA.300.699[C] OR SA.300.700[C] OR SA.300.704[C] OR SA.999.699[C] OR SA.999.700[C]

International Economics
SA.300.700. Microeconomics. 4 Credits.
Theory of decision-making under conditions of scarcity and uncertainty. Analyzes choice and demand, production, cost, the firm and market structure, market failure and uncertainty. Emphasizes economics efficiency and application of theory to decisions and policy problems. Introduces game theory. Taught at the intermediate level and includes a mathematics tutorial for basic calculus skills. The course meets more frequently than other courses. Together with Macroeconomics constitutes the foundation for all other economics courses at SAIS. MA students may not audit.<a href="http://bit.ly/1beb5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>
Prerequisite(s): SA.300.699[C] OR SA.300.700[C] OR SA.999.699[C] OR SA.999.700[C]

SA.300.701. Macroeconomics. 4 Credits.
Develops analytic tools used to understand how the economy functions in aggregate. Primary purpose of the tools is to explain national levels of output, employment, prices and the rate of interest, as well as changes in these variables over time. Assesses the role of government policy in determining these outcomes. Devotes attention to both short-run economics fluctuations and long-run economic phenomena, including growth. Taught at an intermediate level. Together with Microeconomics constitutes the foundation for all other economics courses at SAIS. Prerequisite: Microeconomics or Accelerated Microeconomics. May be taken concurrently with Microeconomics or Accelerated Microeconomics. MA students may not audit.<a href="http://bit.ly/1beb5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>
Prerequisite(s): SA.300.699[C] OR SA.300.700[C] OR SA.999.699[C] OR SA.999.700[C]

SA.300.707. International Trade Theory. 4 Credits.
Considers the theory and practice of international trade and investment. First part of the course examines the cause of trade, the sources of the gains from trade and the domestic and international distribution of those gains. Second part examines the instruments and consequences of trade policy measures, especially tariffs and quantitative restrictions. Addresses preferential trade agreements and the practice of trade policy. Prerequisite: Microeconomics or Accelerated Microeconomics. MA students may not audit.<a href="http://bit.ly/1beb5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>
Prerequisite(s): SA.300.699[C] OR SA.300.700[C] OR SA.999.699[C] OR SA.999.700[C]

SA.300.708. International Monetary Theory. 4 Credits.
Covers the basic theory underlying the international monetary system. Topics include international financial markets and the macroeconomics of open economies; balance of payments and the trade balance; exchange rates and the foreign exchange market; expectations, interests rates and capital flows; central banking and monetary policy in open economies; exchange rate regimes; and macroeconomic policy in open economics. Prerequisite: Macroeconomics or Accelerated Macroeconomics. MA students may not audit.<a href="http://bit.ly/1beb5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>
Prerequisite(s): SA.300.701[C] OR SA.300.706[C] OR SA.999.701[C]

SA.300.713. Game Theory. 4 Credits.
Traditional economic theory tends to avoid interactive influences among decision-makers. Game theory focuses on analyzing the effects of interaction among individuals and groups with competing and conflicting goals. The course covers cooperative and noncooperative game theory, explaining the nature and selection of pure and mixed strategies, the various equilibrium concepts used and the theory's relationship to traditional optimization analysis. Draws examples from microeconomic theory, international trade and trade policy, arms control, international relations as well as other fields. The course is self-contained with respect to mathematics content. Prerequisite: Microeconomics or Accelerated Microeconomics.<a href="http://bit.ly/1beb5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>
Prerequisite(s): SA.300.699[C] OR SA.300.700[C] OR SA.999.699[C] OR SA.999.700[C] OR SA.310.700[C]

SA.300.728. Public Sector Economics. 4 Credits.

SA.300.729. European Economic Integration. 4 Credits.
Recreated to change code; moved from 380.737;

SA.300.732. European Economic History. 4 Credits.
Created new to have correct code (was 380.733);

SA.300.851. Accelerated International Trade Theory. 4 Credits.
Topic coverage is similar to that of the standard International Trade Theory course, but uses advanced analytical techniques and requires some calculus. Considers the theory and practice of international trade and investment. First part examines the cause of trade, the sources of the gains from trade and the domestic and international distribution of those gains. Second part examines the instruments and consequences of trade policy measures, especially tariffs and quantitative restrictions. Addresses preferential trade agreements and the practice of trade policy. Prerequisite: Microeconomics or Accelerated Microeconomics. MA students may not audit.<a href="http://bit.ly/1beb5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>
Prerequisite(s): SA.300.700[C] OR SA.300.699[C] OR SA.300.704[C] OR SA.999.700[C] OR SA.999.699[C]
addresses topics similar to those of International Monetary Theory, but makes greater use of quantitative methods and covers the material more rapidly and deeply. Emphasizes developing a familiarity with the tools and analytical techniques used by economists in making policy recommendations. Covers the basic theory of international macroeconomics. Main objective is to develop an understanding of the workings of the international monetary system and a conceptual framework for analyzing macroeconomic policy in an open economy. Prerequisite: Macroeconomics or Accelerated Macroeconomics. MA students may not audit. <a href="http://bit.ly/1beb5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>

Prerequisite(s): SA.300.701[C] OR SA.300.706[C] OR SA.999.701[C]

**SA.320.715. Theories & Models of Econ Development. 4 Credits.**

The course intends to familiarize students with key economic concepts underlying the basic process of economic growth and development and to familiarize students with some of the prominent theories and models associated with this debate. The course will examine (i) why countries grow and develop (and other don't); (ii) the barriers to economic growth in poor countries; (iii) how these barriers can be overcome. In addition to standard approaches to economic development, the course looks at human capital and institutions as components in the growth process and briefly assesses the impacts of development aid on economic growth. An important feature of the course is to help students apply theoretical concepts studied in class to particular developing countries. For this purpose each student will select one developing country and practice the application of conceptual approaches discussed in class. Pre-requisites: Macroeconomics, Microeconomics, statistics desirable. Class size: max. 25 students.

**SA.320.724. Introduction to Economic Development. 4 Credits.**

Covers the main patterns of economic growth and development since the mid-19th century. Highlights the most significant ideas behind economic growth, with emphasis on those that came to the fore in the second half of the 20th century, the so-called development theories. Also describes the salient characteristics of underdeveloped countries today. This is an introductory course, without prerequisites, and is appropriate for students without prior course work in development. <a href="http://bit.ly/1beb5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>

**SA.320.729. Asian Economic Development. 4 Credits.**

Over the past three decades, Asia has been the most dynamic region in the world. In fact, during much of this period, Asia was able to grow while other developing regions (and some developed countries) stagnated. What were the sources of this economic success story? Is there an "Asian economic model" and is it "exportable"? What does the Asian Financial Crisis of 1997-98 teach us regarding the shortcomings of the East Asian policy experience? In what ways has Asia been developing as a region, i.e., through regional economic integration initiatives, and how far can the "East Asian Vision" of a common economic space go? In this class, we will endeavor to address these as well as other questions. In doing this, you will probably find that we will raise more questions than we will answer. But the Asian development experience is a complicated one, and one which often defies generalizations. Our focus will be on East Asia; however, we will also be discussing issues of South Asian development, albeit mostly in a comparative context.
SA.320.744. Economic Development. 4 Credits.
The course provides a big picture view of the Economic Development discipline through the current debate on the future of Economic Development. It answers the central questions: 1) why are some countries so much poorer than others?, 2) what are the main barriers to the process of economic development? and 3) why do those barriers exist and persist? This course provides an overview of how the discipline of Economic Development approaches these questions and to review its recent findings. It is required for students pursuing the specialization in Economic Development. Pre-requisites: Although most of the course will be presented in a non-technical fashion, there will be some formal economic models and review academic empirical papers. Students should be comfortable with basic economic concepts and should have completed or be concurrently enrolled in an intermediate level microeconomics course and econometrics or statistics. Students that do not fulfill this requirement should discuss their background with the professor before enrolling in the course.<a href='http://bit.ly/1beb5p5' target='_blank'>Click here to see evaluations, syllabi, and faculty bios</a>

Prerequisite(s): SA.300.701(C) OR SA.300.706(C) OR SA.310.701(C) OR SA.999.701(C);SA.300.699(C) OR SA.300.700(C) OR SA.999.699(C) OR SA.999.700(C)

SA.340.709. Statistical Methods for Business & Economics. 4 Credits.
Covers basic statistical tools for data analysis. Emphasizes facility in problem-solving in statistical inference and two-variable regression and correlation analysis. Presents descriptive statistics, probability and probability distributions and their use in hypothesis testing. Uses computer to solve problems and to reinforce statistical concepts. <a href='http://bit.ly/1beb5p5' target='_blank'>Click here to see evaluations, syllabi, and faculty bios</a>

SA.340.710. Econometrics. 4 Credits.
Provides comprehensive introduction to econometrics. Develops tools for estimating functional relationships and critically reading empirical studies that use different econometric techniques; presents assumptions of multivariate regression and discusses the most common econometric problems and the potential consequences and remedies; and discusses omitted variables, sample selection, heteroscedasticity, autocorrelation, multicollinearity and use of discrete variables. Introduces instrumental variable technique. Uses statistical software in applied exercises. Prerequisite: Statistical Methods for Business and Economics.<a href='http://bit.ly/1beb5p5' target='_blank'>Click here to see evaluations, syllabi, and faculty bios</a>

Prerequisite(s): SA.340.709(C) OR SA.999.702(C) OR SA.630.724(C)

SA.380.771. Financial Derivatives and Risk Management. 4 Credits.
Introduces options, futures and swaps presented in Corporate Finance. Reviews basics of valuation methods and institutional context in which derivative contracts are traded. Describes use of basic derivative instruments as "building blocks" to construct more complex positions that increase, decrease or transform exposure to specific financial risks. Focuses on how such combinations of derivatives may be used to implement overall risk-management strategy and introduces techniques to manage financial derivatives portfolios, including value-at-risk and credit mitigation. Uses case discussions and culminates in oral presentation of a group project. Prerequisite: Corporate Finance. Limited to 25 students. <a href='http://bit.ly/1beb5p5' target='_blank'>Click here to see evaluations, syllabi, and faculty bios</a>

Prerequisite(s): SA.380.760(C) OR SA.380.761(C) OR SA.380.781(C) OR SA.630.725(C) OR SA.310.722(C)

Latin American Studies Program
SA.810.727. Financial Crises and Policy Dilemmas in Emerging Markets and Latin America. 4 Credits.
This course addresses policy issues in emerging markets with a particular focus on financial crises and their implications. Over the last several years, we have witnessed a number of episodes of financial distress often leading to macroeconomic chaos, particularly in emerging markets. Financial fragility and market distress can come in many forms: Currency crises, banking crises, debt crises, or a mix of two or more of these crises. The purpose of this course is to provide students with frameworks and tools for analyzing the causes and consequences of financial fragilities and crises, as well as the policy responses they entail. To this end, the course will mix economic theory, country experiences, and actual policy responses to provide an in-depth understanding of the boom-bust cycles characteristic of emerging market economies. The course will also address the 2008 financial crisis, drawing on aspects that make this particular episode stand out from previous instances of turmoil. Emerging market policy responses to the 2008 crisis, as well as the effects on these countries of unconventional policy stimulus adopted by developed economies will also be discussed. Please note that this course was previously denoted by course number SA.400.774. The course content and syllabus remain the same.<a href='http://bit.ly/1beb5p5' target='_blank'>Click here to see evaluations, syllabi, and faculty bios</a>

Prerequisite(s): Students may not register for this class if they have already received credit for SA.400.774(C)

South Asia Studies
SA.790.729. Economic Development and Policy in India. 4 Credits.
The main aim of this course is to familiarize students with India’s economy. We will discuss some of the principal themes in the India’s economic development, its integration in the world economy, the political economy of reforms and growth, as well as India’s institutional development. By the end of the course, students should be able think critically about Indian economic developments and related policy issues. We will begin by assessing India’s economic evolution in her post-independence years, placing particular emphasis on the market oriented reforms undertaken in recent decades. Topics in both microeconomics (domestic de-regulation, trade reform, sectoral shifts from agriculture to industry and services, education and health) and macroeconomics (deficits, debt and crises, the exchange rate, inflation and monetary policy) will be covered. In addition, we will discuss the structure of Indian economic and political institutions and their impact on economic performance. We will focus on both conceptual issues in economics and their application in the Indian setting; this course is intended for students interested in the Indian economy as well as those interested, more broadly, in the economic issues that arise in developing countries with diversified economies and a complex political economy.<a href='http://bit.ly/1beb5p5' target='_blank'>Click here to see evaluations, syllabi, and faculty bios</a>

Prerequisite(s): Students may not register for this class if they have already received credit for SA.790.724(C)

For current faculty and contact information go to http://econ.jhu.edu/ directoryindex/faculty/

Economics, Bachelor of Arts
Economics Major Requirements
(Also see Requirements for a Bachelor's Degree. (p. 1584))
The introductory courses AS.180.101 Elements of Macroeconomics and AS.180.102 Elements of Microeconomics are open to all students. Courses at the 200-level have Elements of Economics (AS.180.101 and AS.180.102) as prerequisites.

AS.180.301 Microeconomic Theory (or AS.180.401 Advanced Microeconomic Theory see below) and AS.180.302 Macroeconomic Theory courses have AS.180.101 Elements of Macroeconomics and AS.180.102 Elements of Microeconomics as well as Calculus I (AS.110.106 or equivalent) as prerequisites. (AS.180.301 Microeconomic Theory can be taken concurrently with AS.180.101 Elements of Macroeconomics but only if student has completed AS.180.102 Elements of Microeconomics.) All 300-level courses above 301 and 302 have Macroeconomic and/or Macroeconomic Theory (AS.180.301, AS.180.302) as prerequisites (or, with permission of the instructor, corequisites), as well as Elements of Economics and Calculus. Some 300-level courses have additional prerequisites; see individual course listings. Independent study is available, subject to the consent of the department and of the faculty member with whom the student wants to work.

Subject to the consent of the instructor, graduate courses at the 600-level are open to qualified undergraduates. The 600-level courses for which advanced undergraduates are most likely to be qualified are AS.180.601 Consumer & Producer Theory and AS.180.603 Macroeconomic Theory I.

For the economics major, a minimum grade of C- or better is required for all courses meeting the requirements and courses may not be taken satisfactory/unsatisfactory. Courses directly equivalent to JHU courses for all courses meeting the requirements and courses may not be taken concurrently. However, non-direct equivalent courses must be approved by the department’s director of undergraduate studies. In all cases, at least 5 of the 10 required economics courses of the major must be taken by the department’s director of undergraduate studies. Some 300-level courses have additional prerequisites; see individual course listings. Independent study is available, subject to the consent of the department and of the faculty member with whom the student wants to work.

Total Credits 41

¹ Students who use exam credits to satisfy the AS.180.101 Elements of Macroeconomics and/or AS.180.102 Elements of Microeconomics requirements must take additional courses in the department to reach a total of 10 courses in the department.

² AS.180.401 Advanced Microeconomic Theory is a faster-paced and more intensive version of AS.180.301 Microeconomic Theory. You can use either AS.180.301 Microeconomic Theory or AS.180.401 Advanced Microeconomic Theory to satisfy the requirement for the economics major.

³ AS.180.434 Advanced Econometrics is a faster-paced and more intensive version of AS.180.334 Econometrics. You can use either AS.180.334 Econometrics or AS.180.434 Advanced Econometrics to satisfy the requirement for the economics major.

⁴ Please note: AS.180.203 Faculty Research in Economics, a S/U one-credit course, does not count as one of these three courses.

Additional Notes for Students

- EN.553.111 Statistical Analysis I or equivalent (any of the Statistics courses listed above) is a prerequisite for Econometrics.
- Except for AS.180.301 Microeconomic Theory, AS.180.302 Macroeconomic, AS.180.334 Econometrics, AS.180.521 Research in Economics, and AS.180.522 Senior Thesis the department does not necessarily offer all 200- to 500-level courses every year. Students should plan their programs accordingly, in consultation with faculty.
- The Senior Honors Thesis sequence (AS.180.521 Research in Economics and AS.180.522 Senior Thesis) cannot be used to satisfy any of the requirements for the major. Anybody interested in pursuing the senior honors thesis should discuss this with the student’s academic advisor not later than the end of the fall semester junior year.
Sample Program of Study

A typical program might include the following sequence of courses:

Economics, Minor

Economics Minor Requirements

For the economics minor, a minimum grade of C- or better is required for all courses meeting the requirements and courses may not be taken satisfactory/unsatisfactory. Courses directly equivalent to JHU courses from study abroad or taken at other universities may count towards requirements; however non-direct equivalent courses must be approved by the department’s director of undergraduate studies. In all cases, at least 50% of the 6 required economics courses of the minor must be taken at JHU. Internships and independent studies courses do not apply towards minor requirements.

</tbody>
</table>

- Please note: 180.203 ‘Faculty Research in Economics’, a S/U one-credit course, does not count as one of these courses.

No substitution of courses in other departments for economics electives may be made. Students who use exam credits to satisfy the AS.180.101 Elements of Macroeconomics and/or AS.180.102 Elements of Microeconomics requirements must take additional courses in the department to reach a total of 6 courses.

Economics, PhD

Admission Requirements

The admission of each applicant is decided by the Department as a whole and rests upon his/her academic record (especially economics and mathematics courses), GRE test scores, recommendations of scholars and instructors, and other pertinent information including a match between the research interests of the applicant and the faculty. To apply for admission, applicants are required to upload unofficial transcripts of all previous college and university study to their online application. Failure to upload unofficial transcripts will result in an inability to complete and submit the online application. In addition, we require at least two letters of recommendation. These recommendation letters should come from individuals who can comment on your scholarly skills. All applicants must submit scores from the Graduate Record Examination. Admitted students nearly always have very high quantitative GRE scores. Foreign applicants, who have not earned a degree in a university where English is the sole language of instruction, must take the TOEFL to satisfy the department that they are fluent in English. The department requires the TOEFL with a minimum score of 100 (internet based), 600 (paper based) or 250 (computer based), or IELTS with a bandscore of 7 in place of the TOEFL.

Students should have a knowledge of economic theory and statistics and a strong background in mathematics including differential and integral calculus and linear algebra. Almost all of our students enter with at least two semesters of calculus and linear algebra. In admissions decisions, we like applicants to have taken other mathematics courses as well.

Honors in Economics

Departmental honors are awarded to those students who satisfy the following requirements:

- All economics courses applied to the major have been taken in the department.
- AS.180.521 Research in Economics and AS.180.522 Senior Thesis. The thesis may not be counted as one of the five economics electives.
- A grade point average of at least 3.5 for all economics courses.
- The total credit count for the major includes AS.110.106 and EN.553.111. Students trying to take these courses after freshman or sophomore year are likely to run into serious schedule conflicts in the junior and senior years because of the need to fulfill the prerequisites for advanced courses. Consult with faculty at an early stage.

- A grade point average of at least 3.5 for all economics courses.

- The thesis may not be counted as one of the five economics electives.
- All economics courses applied to the major have been taken in the department.
- AS.180.521 Research in Economics and AS.180.522 Senior Thesis. The thesis may not be counted as one of the five economics electives.
- A grade point average of at least 3.5 for all economics courses.

Students trying to take these courses after freshman or sophomore year are likely to run into serious schedule conflicts in the junior and senior years because of the need to fulfill the prerequisites for advanced courses. Consult with faculty at an early stage.
including more advanced calculus, differential equations, probability, and real analysis. We especially welcome applications from under-represented minorities, as diversity is important in our graduate program.

**Program Requirements**

**Preparation for the Dissertation.** The program’s first year is comprised of two semesters each of courses in microeconomic theory, macroeconomic theory, and mathematical methods, and one-semester courses in statistics and econometrics. Second-year students take courses in specific fields within economics. If necessary, students may take relevant courses in other departments such as Mathematics, Applied Mathematics and Statistics, Political Science, Public Health, Sociology, and Anthropology. Second-year students also begin their exposure to original research through research mentorships with faculty. A research paper is submitted near the end of the second year. Third-year students complete any remaining course work and prepare a dissertation proposal.

**Comprehensive Exam.** This exam is administered by the department and consists of two written examinations designed to test the candidate’s knowledge of both microeconomics and macroeconomics. The written examinations are taken prior to the start of the second year.

**Dissertation.** The dissertation is an original investigation worthy of publication, prepared under the supervision of three members of the faculty. A dissertation proposal is due near the end of the third year. Though it is feasible to finish the program in four years, students typically complete the Ph.D. in five or six years. The final requirement is a Graduate Board Oral Examination on the dissertation. The committee that administers the examination includes faculty from outside the department.

**Requirements for the M.A. Degree**
The department does not admit students from outside Johns Hopkins University who intend to work only for an M.A. However, it does offer this degree as an intermediate step toward the Ph.D. or as a final degree to some of those who do not complete their doctoral work.

Beyond the general university requirements, the department requires for the master’s degree either two years of satisfactory graduate course work or one year of satisfactory graduate course work and an acceptable master’s essay.

**Financial Economics, Minor**

**Financial Economics Minor Requirements**
The main objective of the minor is to provide students with training in the conceptual framework, guiding concepts, and technical tools of modern finance. The broader goal is to provide insights into the large and the small—the macro and micro—of how this framework helps us understand the workings of the economy.

The minor in financial economics includes five required courses and two elective courses chosen from the list below.

<table>

</table>

**Elective Courses**

Select two of the following:

- AS.180.242 International Monetary Economics
- AS.180.238 Rethinking Economics After the Great Recession
- AS.180.248 Financial Writing and Analysis
- AS.180.261 Monetary Analysis
- AS.180.266 Financial Markets and Institutions
- AS.180.280 The History and Future of the Hedge Fund Industry
- AS.180.303 Topics in International Macroeconomics and Finance
- AS.180.317 Economics of Fixed Income Instruments
- AS.180.336 Macroeconomic Strategies
- EN.660.203 Financial Accounting

Total Credits: 22.5

The minor is open to all majors. A minimum grade of C- or better is required for all courses and they may not be taken satisfactory/unsatisfactory. One cannot take both the economics and financial economics minor. For economics majors, there is a restriction on double-counting: two courses counting toward the minor cannot also count toward the economics major.

**English**

http://english.jhu.edu/

The Department of English offers separate undergraduate and graduate programs, each designed to suit the needs of its particular student body. The undergraduate program, in the context of university requirements and elective courses, provides the basis for a liberal education and prepares students for graduate work or professional schools, such as medicine and law, as well as professional teaching and literary scholarship. The graduate program prepares advanced students for professional teaching careers in English literature.

**Facilities**

Besides the Sheridan Libraries, Hopkins students have easy access to the 12 million volumes and innumerable historical manuscripts of the Library of Congress, as well as the library at Dumbarton Oaks, the Folger Library, the Freer Library, the library of the National Gallery, and many other specialized public collections. Students learn about advances in research and criticism and confer with leading American and European scholars and critics through participation in the activities of the Tudor and Stuart Club, the ELH Colloquium, and the department’s other programming.

**Programs**

- English, Bachelor of Arts (p. 1837)
- English, Minor (p. 1838)
- English, PhD (p. 1838)

For current course information and registration go to https://sis.jhu.edu/classes/
Courses

AS.060.100. Introduction to Expository Writing. 3 Credits.
Introduction to “Expos” is designed to introduce less experienced writers to the elements of academic argument. Students learn to recognize “The Fundamental Structure of Academic Argument” as they learn to read and summarize academic essays, and then they apply the fundamental structure in academic essays of their own. Classes are small, no more than 10 students, and are organized around three major writing assignments. Each course guides students’ practice through pre-writing, drafting, and revising, and includes discussions, workshops, and tutorials with the instructor. In addition to its central focus on the elements of academic argument, each “Intro” course teaches students to avoid plagiarism and document sources correctly. “Intro” courses do not specialize in a particular topic or theme and are available to freshmen only.
Area: Humanities
Writing Intensive

AS.060.107. Introduction to Literary Study. 3 Credits.
This course serves as an introduction to the basic methods of and critical approaches to the study of literature. Some sections may have further individual topic descriptions; please check in SIS when searching for courses.
Area: Humanities
Writing Intensive

AS.060.108. Time Travel. 3 Credits.
Why is time travel such a consistent and perplexing theme in literature and film over the last 150 years? Why is modernity so concerned with peeking backwards or forwards? This course will examine the history of time-travel fiction, from its beginning in utopian fiction through its box-office dominance in the 1980s, and into today. Writers will likely include Mark Twain, Edward Bellamy, Harold Steele Mackay, Ray Bradbury, Robert Heinlein, and Philip K. Dick. Movies will include *The Terminator*, *Back to the Future*, and *Primer*.
Area: Humanities
Writing Intensive

AS.060.111. Freshman Seminar: How Not to Be Afraid of Poetry. 3 Credits.
What is poetry? And why don’t we like it? This course will explore what makes poetry turn ordinary language into something extraordinary, into shapes and sounds so that sometimes we find it difficult to understand and sometimes we find it gives us great delight. This seminar will open up a range of poetry written in English, including some of the greatest writers of the English language. This course is designed for the students without a strong background in reading poetry but who have the desire to gain it; the main emphasis is exploration of the world and words of poetry and developing an appreciation and analytical understanding of the ways poetry can express, advocate, record, and move. Assignments will include reading poems, becoming an expert about a single poet, attending public poetry readings, creating poems, and writing short weekly assignments about poems. You will be expected to be an active member in classroom discussion and activities. Pre 1800 course.
Area: Humanities
Writing Intensive

AS.060.112. Major Authors: Dickens and Film. 3 Credits.
From the earliest moments of cinema, Charles Dickens’ writing has proven extraordinarily stimulating for film-makers. Why might this be? What does it tell us about Dickens—and what does it tell us about the pleasures and demands of both fiction and film? To address these complex questions we’ll read a handful of Dickens’ works (most likely Oliver Twist, Great Expectations, Christmas Carol and Little Dorrit), watch their adaptations, and read a small set of critical essays. Requirements are likely to include two papers, response papers, and a class presentation.
Area: Humanities

AS.060.113. Expository Writing. 3 Credits.
“Expos” is designed to introduce more confident student writers to the elements of academic argument. Students learn to apply “The Fundamental Structure of Academic Argument” in academic essays of their own. Classes are capped at 15 students and organized around three major essay assignments. Each course guides students’ practice through pre-writing, drafting, and revising, and includes discussions, workshops, and tutorials with the instructor. In addition to its central focus on the elements of academic argument, each “Expos” course teaches students to document sources correctly and provides its own topic or theme to engage students’ writing and thinking. Please see the following list of individual course descriptions to decide which sections of “Expos” will most interest you. “Expos” courses are available to freshmen, sophomores, and juniors, and to seniors by special permission.
Area: Humanities
Writing Intensive

AS.060.114. Expository Writing. 3 Credits.
“Expos” is designed to introduce more confident student writers to the elements of academic argument. Students learn to apply the paradigm of academic argument in academic essays of their own. Classes are capped at 15 students and organized around four major writing assignments. Each course guides students’ practice through pre-writing, drafting, and revising, and includes discussions, workshops, and tutorials with the instructor. In addition to its central focus on the elements of academic argument, each “Expos” course teaches students to document sources correctly and provides its own topic or theme to engage students’ writing and thinking. Please see the Expository Writing Program’s website for individual course descriptions to decide which sections of “Expos” will most interest you. “Expos” courses are available to freshmen, sophomores, and juniors, and to seniors by special permission from the English Department.
Area: Humanities
Writing Intensive
AS.060.120. Realism Unsettled: The Colonial and Postcolonial Novel at Sea. 3 Credits.
A haloed claim about the realist novel is that it tells us stories that help make sense of the world—but is it possible to represent the complexity of social life under global capitalism? How do novels engage with the problem of knowledge posed by empire and colonization? We will look at writers from within the imperial metropolis as they struggle to imagine the totality of the geopolitical world, and also at writers from formerly colonized regions who “write back” to the imperial center, bending novelistic conventions along the way. The course starts by asking how new conventions and quirky techniques of novel-writing emerge when novelists try leaving the certainty of their national and regional boundaries to enter the confusion of uncharted territories. It then turns to postcolonial novels, to consider how these write against, or claim power through, the notion that their regions are chaotic and undecipherable. Primary texts: Moby Dick, Lord Jim, A Passage to India, Sea of Poppies, The White Tiger.
Area: Humanities

AS.060.124. Politics, History and Autobiography. 3 Credits.
Students will write a mini-autobiography in the form of seven 3000 word essays, work shopped in class. Readings include A Small Place by Jamaica Kincaid and Brothers and Keepers by John Edgar Wideman.
Area: Humanities
Writing Intensive

AS.060.126. Feminist Fiction: Fundamentals. 3 Credits.
Area: Humanities

AS.060.129. Writing Africa Now. 3 Credits.
This course surveys post-2000 literary and cultural production from sub-Saharan Africa. Topics will include debates over genre and fiction’s relevance to African experience, legacies of canonical writing about independence, urban Africa as violent or “tragic” landscape, and problems of scale and geographical context. Readings by authors such as Adichie, Wainaina, Duiker, and Vladislavic, and students will be introduced to the main print and online arteries of African intellectual discussion. This class is for non-majors and does not count towards the English major or minor.
Area: Humanities
Writing Intensive

AS.060.131. Race and Pop-Culture in America. 4 Credits.
How does American pop-culture deal with race? Through primary sources like Fresh Off the Boat and Jane the Virgin, comic books like Ms. Marvel, and books like The Hate U Give and Crazy Rich Asians, and their filmic adaptations, we examine and question how race is represented and overlooked under the label of entertainment.
Area: Humanities

AS.060.135. American Nightmares: Burroughs, Highsmith, Dick. 3 Credits.
These three authors share a common starting point: Patricia Highsmith, William S. Burroughs and Philip K. Dick all began their careers writing mass market genre fiction in pre-Stonewall, pre-civil rights, Cold War 1950s America. Absorbing the stylistic codes of their respective marketplaces of suspense writing and lesbian romance, ‘drug fiend’ confessional, and science fiction, each writer’s conformist apprenticeship in pulp resurfaces in increasingly nightmarish forms in the violent and paranoid scenarios that dominate their mature work. Reading broadly in each author’s short fiction, novels, and prose, we will sequentially examine Burroughs’ ‘cut-up’ techniques and ‘routines’, Highsmith’s free indirect discourse gone wrong, and Dick’s disorienting temporal experiments as inflamed allergic reactions to generic codes. We will also examine the cinematic afterlives of these authors by looking at key scenes from three adaptations of their work: Alfred Hitchcock’s Strangers on a Train (1951), David Cronenberg’s Naked Lunch (1991), and Richard Linklater’s A Scanner Darkly (2006).
Area: Humanities

AS.060.137. Doctors Without Borders: Literature, Medicine, and the Human Condition. 3 Credits.
Doctors play a significant role in shaping literary history as both writers and fictional subjects. From Chekhov to Sherlock Holmes, W. Somerset Maugham to Middlemarch, medical practice is imagined to bestow a privileged understanding of humanity in confrontation with questions of life and death. This course explores how writing about medicine connects long-established themes of mortality, authority, and ways of knowing to timely questions of global migration, cultural contact, and social justice. We will read literary writing by physicians as well as writing that depicts their work in detail, by authors including Nawal El Saadawi, Atul Gawande, Abraham Verghese, Damon Galgut, and Taiye Selasi.
Area: Humanities

AS.060.139. Expository Writing: The Narrative Essay. 3 Credits.
Telling stories is one of the first and most important ways that human beings try to make sense of the world and their experience of it. The narrative art informs fiction and nonfiction alike, is central to the writing of history, anthropology, crime reports and laboratory reports, sports stories and political documentaries. What happened? The answer may be imagined or factual, but it will almost certainly be narrative. This course focuses on the narrative essay, a nonfiction prose form that answers the question of “what happened” in a variety of contexts and aims to make sense not only of what happened but how and why. We will begin by summarizing narrative essays, will move to analyzing them, and in the second half of the course you will write two narrative essays of your own, the first based on a choice of topics and sources, the second of your own design. Authors may include James Baldwin, Annie Dillard, Chang Rae Lee, Danielle Otrí, George Orwell, Richard Rodriguez, Richard Selzer, and Abraham Verghese. You will learn the power of narrative to inform and persuade as you test that power in your own writing.
Area: Humanities
Writing Intensive

AS.060.141. Nineteenth Century Narrative and Early Film. 3 Credits.
This course will situate the birth of the movies within the context of 19th century fiction and visual technology. Filmmakers are likely to include Georges Melies, Sergei Eisenstein, D. W. Griffiths, Charlie Chaplin, Buster Keaton, King Vidor, and Rouben Mamoulian; novelists are likely to include Charles Dickens (Christmas Carol or Oliver Twist), Robert Louis Stevenson (Jekyll and Hyde), and perhaps Virginia Woolf (Mrs. Dalloway).
Area: Humanities
Writing Intensive
AS.060.142. Indigenous Science Fiction: (Re)making Worlds. 3 Credits.
This discussion-based seminar will survey science fiction written by indigenous authors in what are now the United States, Canada, and Australia. We will investigate by what means and to what ends this particular genre has been taken up by indigenous peoples both to reflect on their settler-colonial pasts and presents and to imagine decolonial futures. Texts may include: Leslie Marmon Silko, Almanac of the Dead; William Sanders, ‘The Undiscovered’; Daniel Heath Justice, The Way of Thorn and Thunder; Blake Hausman, Riding the Trail of Tears; Waubgeshig Rice, Moon of the Crusted Snow; Claire Coleman, Terra Nullius; Tanya Tagaq, Split Tooth. Fulfills the Global and Minority Literatures requirement.
Area: Humanities
Writing Intensive

AS.060.146. Detective Fiction. 3 Credits.
This course will look at the history of English-language detective fiction through the nineteenth and twentieth centuries. We will pay special attention to the way clues and suspense operate, the role of the reader in figuring out the mystery, and the complicated relationship of the detective with official authority. Authors will likely include some selection of Wilkie Collins, Edgar Allan Poe, Arthur Conan Doyle, Agatha Christie, Dashiell Hammett, and Raymond Chandler. This class is for non-majors.
Area: Humanities
Writing Intensive

AS.060.151. Doubles, Demons, and Dummies: The Literature of the Fantastic. 3 Credits.
Talking reflections. Dolls with knives. Dancing automatons. They are all part of the strange and dangerous world of the fantastic. This course examines the literature of the fantastic, or what we can refer to as creepy double, demon, and dummy stories. We’ll look at everything from Poe to American Psycho in an attempt to figure out what just happened, why, and how it relates to literary meaning.
Area: Humanities

AS.060.155. Expository Writing: Introduction to the Research Paper - Controversies in Adolescence. 3 Credits.
"Introduction to the Research Paper" is designed to introduce more experienced student writers to the fundamental skills of the research process. These include asking research questions, evaluating the usefulness of sources to answer them, synthesizing sources, reading sources critically, and developing arguments that depart from an original thesis. Students will work with a research librarian at the Eisenhower Library, with whom they will learn to navigate traditional databases as well as new media sources. The Research Paper is topic-based and divided into three linked units of instruction. The course culminates with a paper of 10-12 pages that draws upon the cumulative skills of the semester. Each course is capped at ten students and available only to those who have taken "Expository Writing" (060.113/114)
Prerequisite(s): AS.060.113 OR AS.060.114
Area: Humanities
Writing Intensive

AS.060.201. The Nineteenth Century British Novel. 3 Credits.
Reading major novelists from the nineteenth century including Austen, C. Brontë, Dickens, Eliot, Hardy, and Conrad. We will pay attention to formal conventions, and relation to social and historical context.
Area: Humanities

AS.060.203. Bible as Literature. 3 Credits.
This course looks at the ways in which the Bible has and can be read as literature.
Area: Humanities

AS.060.205. Feminist Fiction: Violence, Sex and Gender. 3 Credits.
This course will start with passages from Lysistrata and the Book of Judges, and have as a running concern the overlapping structures of violence, race and gender. Novels will include the following pairs: Jane Eyre and Wide Sargasso Sea, The Bluest Eye and Bastard Out of Carolina, The Handmaid’s Tale and Octavia Butler’s novella Bloodchild.
Area: Humanities

AS.060.207. Shakespeare. 3 Credits.
Reading the major comedies, histories and tragedies alongside the narrative poem “Venus and Adonis” and the sonnets, this survey course considers Shakespeare’s hybrid career as poet and playwright. Pre 1800 course.
Area: Humanities

AS.060.208. English Literature from Beowulf to Milton. 3 Credits.
British Literature I is a survey of English writing on the isle of Britain from the seventh to the seventeenth centuries. It traces the formal experimentation in poetry and prose, and in narrative, lyric, and drama, through which that writing eventually became pre-eminent in Britain. It will also attend to the social and cultural circumstances—in the court, in church, and in the evolving public and private spheres—that shaped the many genres that emerged in this rich 1000 years and developed a definition of ‘literature’ itself. Author’s read include Chaucer, Langland, Kempe, Spenser, Shakespeare, Lanyer, Donne Herbert, Marvel, and Milton. Through lectures, class discussion, written responses, and longer essay assignments, students will master the fundamentals of English literary history as well as the techniques of critical reading and writing.
Area: Humanities

AS.060.209. The Literary History of the Devil to 1800. 3 Credits.
This course reads major works in European literature before 1800 (give or take) depicting the devil. It examines the history of the various social, cultural and political guises under which the devil appears, and the function that representing radical evil performs, in literature and society. Among our readings will be Dante’s Inferno; Milton’s Paradise Lost; Goethe’s Faust, Part One, and many other major Satanic works.
Area: Humanities

AS.060.210. British Literature II. 3 Credits.
This course provides a framework for grasping the dazzling variety and explosive innovation of literature in English during the last quarter-millennium. Attending both to textual details and to historical contexts, we will see how Wordsworth, Austen, Keats, Tennyson, Dickens, Wilde, Woolf, Rushdie, and other writers extend and undo tradition, illuminate their times and places as well as our own, and conspire to bring to us the intense experience distinctive to great literary art.
Area: Humanities

AS.060.211. How Not to be Afraid of Poetry. 3 Credits.
What is poetry? And why don’t we like it? This course will explore what makes poetry turn ordinary language into something extraordinary. Opening up a range of poetry in English, the course will involve reading poetry aloud, thinking about poetry and its forms, and gaining experience in understanding poetry. Assignments will include attending to details small and large in poems, becoming an expert about a single poet, debating aesthetic issues, and composing short analytical papers about poems. There are two required written assignments, a midterm and a final examination.
Area: Humanities
AS.060.214. Jane Austen. 3 Credits.
An in-depth study of Austen's writing, from her juvenilia through her posthumously published novels, with an occasional glance to movie adaptations. The course will focus on persistent questions about Austen's relationship to feminism, and issues of gender and sexuality, as well as issues of style and technique.
Area: Humanities

AS.060.216. Zombies. 3 Credits.
This lecture survey will attempt to answer why the zombie has become such a fixture in contemporary literature and cinema. We will track this figure across its many incarnations—from its late-eighteenth-century appearance in ethnographic fictions growing out of the modern cultures of racialized slavery in the Americas up to twenty-first-century Hollywood blockbusters in which the origins of the figure in the cultures of racialized slavery are perhaps not overt yet continue to manifest. What are the implications of the zombie's arc from a particular human being targeted for domination by a sorcerer to a living-dead horde created by radiation or epidemic? 'Texts' may include: Mary Shelley, Frankenstein; Edgar Allan Poe, 'The Man Who Was Used Up'; H.P. Lovecraft, 'Herbert West--Re-Animator'; Zora Neale Hurston, Tell My Horse; Victor Halperin, dir., White Zombie; George Romero, dir., Dead series; Edgar Wright, dir., Shaun of the Dead; Alejandro Brugués, dir., Juan de los Muertos; Colm McCarthy, dir., The Girl with All the Gifts; Colson Whitehead, Zone One; Jordan Peele, dir., Get Out. Fulfills the Global and Minority Literatures requirement.
Area: Humanities

AS.060.219. American Literature to 1865. 3 Credits.
A survey course of American literature from contact to the Civil War.
Area: Humanities

AS.060.222. American Literature, 1865 to today. 3 Credits.
This course is a survey of major developments in American poetry and narrative fiction from the end of the Civil War to the present day. Authors to be covered may include Mark Twain, Willa Cather, Henry James, James Baldwin, Toni Morrison, Emily Dickinson, Walt Whitman, Wallace Stevens, and John Ashbery.
Area: Humanities

AS.060.223. African American Literature from 1900 to Present. 3 Credits.
A survey of the major and minor texts written by African Americans during the twentieth century, beginning with Charles Chesnutt's The Marrow of Tradition and concluding with Toni Morrison's Beloved.
Area: Humanities

AS.060.224. Detective Fiction. 3 Credits.
This lecture will trace the history of English-language detective fiction through the nineteenth and twentieth centuries. Why does the figure of the detective appear when it does? How does it change over time, and what can we learn from that? We will pay special attention to the way clues and suspense operate, the role of the reader in figuring out the mystery, and the complicated relationship of the detective with official authority. Authors will likely include some selection of Wilkie Collins, Edgar Allen Poe, Arthur Conan Doyle, Agatha Christie, Dashiell Hammet, and Raymond Chandler.
Area: Humanities

AS.060.265. Nineteenth Century British Novel. 3 Credits.
Reading major novelists from the nineteenth century including Austen, C. Brontë, Dickens, Eliot, Hardy, and Conrad. We will pay attention to formal conventions, and relation to social and historical context.
Area: Humanities

AS.060.301. Literary Theory. 3 Credits.
This course serves as an introduction to a wide range of critical approaches to literature through various canonical theoretical studies of the Book of Genesis.
Area: Humanities
Writing Intensive

AS.060.304. Large Novels. 3 Credits.
This course will look at novels that are not only large in size, but which also think about the meaning and methods of trying to capture huge segments of the world into a piece of art. How much can be fit into a novel? What is gained and what is lost? How large is too large? We will read Charles Dickens's Bleak House, Lev Tolstoy's War and Peace, and Herman Melville's Moby Dick.
Area: Humanities
Writing Intensive

AS.060.305. Sir Philip Sidney. 3 Credits.
Courtier, theorist, diplomat, soldier, and martyr, Sir Philip Sidney exemplified but also changed the cultural ideals of his Elizabethan moment. Hoping to evaluate Sidney's extravagant claim that "the poet, lifted up with the vigor of his own invention doth grow, in effect, into another nature", this course reads Sir Philip Sidney's innovations across a range of genres: literary theory ("An Apology for Poetry"), poetry ("Astrophel and Stella"), scriptural translation ("The Sidney Psalms") and prose romance ("The Countess of Pembroke's Arcadia"). The course concludes with an examination of his many afterlives as exemplary subject for biography, adaptation, homage and critical argument.
Area: Humanities
Writing Intensive

AS.060.306. The Historical Novel. 3 Credits.
We're in the middle of dramatic social, technological and political change: how are we to understand it? This course will address this question by studying the historical novel. We're likely to start by reading Scott's Waverley and end with contemporary fiction. Throughout our focus will not be on particular historical facts or events but on the idea of history itself, the role of institutions and individuals within it, and the powers and limits of literary narrative.
Area: Humanities
Writing Intensive

AS.060.307. TrainingWriting Consln. 1 Credit.
A one credit course for those undergrads who have been nominated as Writing Center tutors. Permission required.
Area: Humanities
Writing Intensive

AS.060.308. The Essay Form and Creative Non-Fiction. 3 Credits.
We'll focus on the essay form, with special attention to recent creative non-fiction that responds to art and literature itself. Theoretical, stylistic, and formal issues will all be considered.
Area: Humanities
Writing Intensive
AS.060.309. Slavery in Renaissance Literature. 3 Credits.
Against the backdrop of the rise of the European slave trade, how were slaves represented in early modern English literature? How was the condition of enslavement inflected by emergent nationalism, colonialism and theological constructions of difference? This course puts Renaissance literature into conversation with comparative histories of slavery and critical race theory. Authors include Aristotle, Terence, Epictetus, Christopher Marlowe, William Shakespeare, John Milton, Aphra Behn, Orlando Patterson, Kim Hall, Stephen Greenblatt, Mary Nyquist, Moses Finley and others.
Area: Humanities
Writing Intensive

AS.060.310. A Century of Queer Literature. 3 Credits.
This course is designed to offer a broad, non-exhaustive overview of queer literature written in the past hundred years. Although not every text on the syllabus was published in the U.S., the relation of these works to U.S. LGBTQ culture and politics will be our main interest. Individual weeks are designed to focus on particular facets of queer experience—how place (urban or rural), class stature (wealthy or working class), and race inform what is possible for queer individuals, relationships, and larger communities. Students will be encouraged to pursue their own larger critical questions around queer literary canon formation, but discussions will return to the question of how queer life and literature changes in the transition from the margins to the mainstream. What possibilities and what constrictions emerge as queerness seems to become more legible to larger numbers of people? Other routes of inquiry will address the varying ways these works address the relation between gender and sexuality, and whether there is such a thing as a cohesive queer narrative style or form. While our reading list primarily is composed of shorter works of fiction (usually <200 pages) by lesbian, gay, queer, and trans writers, the syllabus also includes memoir, drama, and poetry.
Area: Humanities
Writing Intensive

AS.060.311. Literature in the Age of Mass Incarceration. 3 Credits.
The United States in 2018 held more than two million people behind bars, and each year it imprisons more people per capita than any other nation in the world. Understood in terms of "mass incarceration," a "new Jim Crow," or "carceral capitalism," scholars and activists have come increasingly to characterize contemporary U.S. society in light of these facts. Despite this, there has been only sporadic attention within literary studies to the prison as a driving force in American literature, even as canonical works in world literature, from Antigone to Les Misérables to Native Son, feature prominent prison plots. This course in American literature aims to examine how writers, both within and beyond the walls of the prison, have responded to the shifting role of incarceration in the U.S. We will read examples of both "prison literature" and literature that thematizes the prison as an institution across the period of explosive growth in imprisoned populations in the U.S. We will ask what kinds of writing—what genres, modes, styles, and forms—emerge from experiences of incarceration and the literary history of its representation. And we will investigate how a focus on the history of the prison might reshape readings in American literature. Finally, we will consider the role of writing and reading in political struggles against racism, militarism, and heteropatriarchy in the U.S. By developing a critical account of the prison through the kaleidoscope of literature, we will look to develop tools to better understand a central feature of contemporary social life in the U.S. Authors covered may include: Chester Himes, Malcolm X, Jimmy Santiago Baca, Audre Lorde, Piper Kerman, Mohamedu Ould Slahi, and Colson Whitehead, among others.
Area: Humanities
Writing Intensive

AS.060.312. Bad Mothers: Nineteenth-Century Novels and Contemporary Theories of Maternity. 3 Credits.
What makes a "bad" mother? Are bad mothers doomed to be bad, or are they produced by their circumstances? Why did so many nineteenth-century texts fixate on the different ways in which maternity could be flawed? This course pursues these questions in order to consider the psychology and politics of motherhood, an identity and a performance that for some has been synonymous with womanhood itself. Even as our primary texts naturalize and idealize motherhood, they encounter again and again maternity’s instability, its undesirability, its pain, its banality, and its failures. To dive into these questions, we will turn to twentieth- and twenty-first century theorists—including Sigmund Freud, Audre Lorde, Adrienne Rich, Jacqueline Rose, and bell hooks—for their insights about how individuals and societies think about mothers. Starting with maternal archetypes like the Grimms’ Evil Stepmother and the classical infanticide Medea, our primary texts will include works by Charles Dickens, Elizabeth Barrett Browning, Thomas Hardy, Virginia Woolf, Amy Tan, and at least one recent film/TV episode (TBD). Assignments include short reflections, one presentation, and one final research paper.
Area: Humanities
Writing Intensive

AS.060.314. Social Media Fictions. 3 Credits.
Writers around the world are now searching for ways to incorporate new modes of social interaction - e.g. Facebook, Twitter, text messaging, and Skype - into their print work. This course explores the various techniques they have adopted for this purpose, with an eye to critically evaluating their implications for narrative structure and its 'reality effect.' From Teju Cole’s very public experiments with the Twitter novel to a Zimbabwean writer's attempt to capture plot turns through SMS, we will discuss the ways in which narrative is helped or hindered by the ubiquity of social media. Writers studied will include Tendai Huchu, Zadie Smith, Jonathan Franzen, and Eben Venter.
Area: Humanities
Writing Intensive

AS.060.316. Mapping the Global Metropolis. 3 Credits.
Cities have long taken on a central role in literature, but much of our reading about urban space is confined to a few Western hubs. And while the city has traditionally been a space for fictional characters to develop into national subjects, much of the most innovative contemporary writing sees the city as a character of its own. This course will address the representational challenges of globalization through fiction and genre-bending memoir about contemporary metropolises that act as its microcosm: Johannesburg, Lagos, Delhi, London, and New York. We will read primary works by Ivan Vladisavic, Chris Abani, Aravind Adiga, Zadie Smith, and Teju Cole, as well as supplementary excerpts from books including Capital, by Rana Dasgupta, Mike Davis’ Planet of Slums, Ata Quayson’s Oxford Street, Accra, and Loren Kruger’s Imagining the Edgy City. Finally, the course will include theoretical readings about globality and representation, such as Fredric Jameson’s essay on "Cognitive Mapping" and Arjun Appadurai’s seminal book Modernity at Large.
Area: Humanities
Writing Intensive
AS.060.317. Jane Austen Beyond England. 3 Credits.
This will be an in-depth study of Austen's novels with an emphasis on how they have traveled outside of the country of her birth—e.g. to the United States, India, and East Asia—through the work of individuals and the flows of global capitalism. Students will gain perhaps a disorienting sense of what Austen means in different cultures at different historical moments, and conduct individual research to learn more. Knowledge of another language is not necessary but could prove useful. The course will include a field-trip to the Alberta Burke Austen collection at Goucher College.
Prerequisite(s): AS.060.107
Area: Humanities
Writing Intensive

AS.060.318. Contemporary Literature and Climate Change. 3 Credits.
In this course we will study the ways literary texts have imagined and addressed climate change, from the turn of the 20th century until today. We will primarily focus on novels, but I will provide non-fictional background reading on the history of how we’ve conceptualized "climate," and we will also read some poetry. We’ll think a lot about genre: how does climate change look in realist fiction? Science fiction? Poetry? Is apocalypse the only framework in which to view it? How do race, gender, class and geopolitics alter writers’ views on climate? Texts will include HG Wells, The Time Machine; Kim Stanley Robinson, New York 2140; Octavia Butler, Parable of The Sower; Emily St. John Mandel, Station Eleven; Brenda Hillman, Seasonal Works with Letters on Fire; and Allison Cobb, After We All Died. We’ll also draw on the Yale University Press anthology of climate writing, The Future of Nature.
Area: Humanities
Writing Intensive

AS.060.319. Introduction to Disability Studies. 3 Credits.
Disability has historically occupied a very narrow place in our cultural imaginations. In modern times, disability is almost always considered a medical issue. Yet, seemingly able-bodied, normal observers often exhibit a wide range of reactions when they encounter a disabled body. What would happen, therefore, if we shifted our focus away from the medical and toward these aesthetic and affective reactions? What if we focused on the pity, fear, and horror that encountering disability engenders in a so-called normal person? What if we considered normalcy itself as something that is socially constructed? In pursuit of answers to these questions, this course introduces students to the field of disability studies. Through an investigation of how disability is represented across a wide range of different media, the course will challenge students to rethink what they may think they know about culture, embodiment, and the politics of medical categories. Readings for this course may include Cece Bell, Ken Kesey, Virginia Woolf, Jordan Scott, Carson McCullers, Nina Raine, Lennard J. Davis, Ellen Jean Samuels, Tobin Siebers, Anlor Davin, Robert McRuer, Mladen Dolar, Jasbir K. Puar, Melanie Yergeau, Marilyn Wann, and April Henndon.
Area: Humanities
Writing Intensive

AS.060.320. Icons of Feminism. 3 Credits.
This course looks at four crucial figures who have haunted feminist thought and responses to feminism over the centuries. Sappho, known as the first female poet, remains an enigmatic icon of feminine desire and creativity; Antigone, the daughter of Oedipus and the heroine of Sophocles’s play Antigone, still inspires feminist analyses of women’s relationship to law, the state and civil society; and Joan of Arc, the militant maid of Orleans, troubles thinking about women and violence as well as women, religion and spirituality. The last figure is Mary Wollstonecraft, often cited as the first modern feminist. The course will examine literary works written about these iconic figures, as well as contemporary feminist writing about their influence and viability as models for the future of feminism.
Area: Humanities
Writing Intensive

AS.060.321. Literature and Anti-Slavery in the Caribbean and Beyond. 3 Credits.
This course provides an introduction to the texts and rhetoric of the movement to abolish slavery in the Caribbean. Our exploration of the literary and discursive patterns that bind the struggle against slavery in this diverse region (including the British West Indies, Cuba, and Haiti) will be guided by several questions. How did the formerly enslaved represent their experiences and level critiques against the slave system? What arguments did abolitionists - black and white, enslaved and free - make against slavery, and how did they imagine emancipation? What techniques do novelists, poets, and other artists use to represent the horrors of slavery and emancipatory struggles? To explore these and other problems, this class focuses on novels, poems, images, films, political treatises and first-person histories produced (mainly) by individuals who had either experienced Caribbean slavery or participated in the network of Transatlantic abolition. These texts to chart a complex journey, from the middle passage and eighteenth-century plantation life to international abolition, resistance to slavery, and the memories of racial slavery. The final section considers how the cultural legacy of Caribbean slavery and antislavery are taken up by artists from the Harlem Renaissance and various anti-colonial movements, and more recently by critics of mass incarceration in the US. Authors include, among others: Olaudah Equiano, Mary Prince, Esteban Montejo, Cirilo Villaverde, Frederick Douglass, Herman Melville, Langston Hughes, Aimé Césaire, and Ava DuVernay (all texts will be available in English).

**Writing Intensive Area: Humanities**

address the themes of power, gender and sexuality, family dynamics, literature (plays vs novels), the canon, imitation, adaptation, and also (Tyler). Students will take up important literary questions about kinds of confront -- those plays (Jane Smiley, Caryl Phillips, J. M. Coetzee, Anne Shakespeare plays (King Lear, The Tempest, The Taming of the Shrew, play and bring the plays into our own world. In this course, we will read novels rewrite Shakespeare, they pose questions left hanging in the was the hero, not the villain? What if Miranda chose Caliban over her AS.060.326.

**AS.060.325. George Eliot. 3 Credits.**

In this course we will read the major novels (and some essays) by George Eliot, one of the most intellectually engaging of British novelists. Her fiction explores ethical, social, and aesthetic issues concerning sexual politics, the limits of morality, the demands of family, the desperation of skepticism, and the capacities of the novel form. Students should leave the course with a heightened sense of the powers of the novel and the seriousness of its ambitions. Texts are likely to include Adam Bede and The Mill on the Floss, but our focus will be on her two last and most ambitious novels, Middlemarch and Daniel Deronda.

Area: Humanities
Writing Intensive

**AS.060.326. Shakespeare: The Novel. 3 Credits.**

What if King Lear had been a mother? What if the we thought about Othello through the lens of the holocaust? What if the indigene Caliban was the hero, not the villain? What if Miranda chose Caliban over her European suitor? (The Tempest) Could a modern-day Kate be tricked into marriage and “tamed” (The Taming of the Shrew)? When contemporary novelists rewrite Shakespeare, they pose questions left hanging in the play and bring the plays into our own world. In this course, we will read Shakespeare plays (King Lear, The Tempest, The Taming of the Shrew, Merchant of Venice) along with contemporary novelists that rewrite — and confront — those plays (Jane Smiley, Caryl Phillips, J. M. Coetzee, Anne Tyler). Students will take up important literary questions about kinds of literature (plays vs novels), the canon, imitation, adaptation, and also address the themes of power, gender and sexuality, family dynamics, authority, colonization and the environment.

Area: Humanities
Writing Intensive

**AS.060.327. ‘All Art is Propaganda’. 3 Credits.**

This course will explore black literature written as protest. We will examine how, in the face of threats to black life, Frances E. W. Harper, Richard Wright, Amiri Baraka, and others have realized versions of W.E.B. Du Bois’s objective: “all art is propaganda and ever must be, despite the wailing of the purists.”

Area: Humanities
Writing Intensive

**AS.060.328. Malcolm and Martin: An Introduction to the Lives and Thought of Two Icons of the Black Freedom Struggle. 3 Credits.**

Using their recorded speeches, written lectures and published writings and drawing from their biographies, this course will explore the important life work of Malcolm X and Martin Luther King Jr. We intend to upend traditional conversations about political radicalism and ethnic politics by analyzing these spokesmen associated most indelibly with black nationalism and racial integration, respectively.

Area: Humanities
Writing Intensive

**AS.060.329. Fantasy and Failure: Inventing Worlds in the English Renaissance. 3 Credits.**

What did the English Renaissance think humans were capable of? What worlds could they build, how far could they travel, and what limits could they transgress? In his Oration on the Dignity of Man, Pico della Mirandola asserted that, in contrast to vegetables, animals, or even angels, “man is granted to have what he chooses, to be what he wills to be.” While Renaissance humanism was enthusiastic about the seemingly limitless abilities of the “Renaissance man,” English literature of the period from roughly 1500-1700 is often more skeptical of this optimism. If humans could activate their divine potential and achieve godlike status, they were still always in danger of regressing into one of the baser states of animality or vegetation. This course examines literary explorations of the ways that individual ambition fails or the ideal society proves unattainable. The course is divided into three units: utopia and early science fiction, theater, and poetry. Topics for discussion may include political ambition, gender inequality, ecological dangers, and Renaissance magic; authors will include Thomas More, Margaret Cavendish, William Shakespeare, Christopher Marlowe, Amelia Lanyer, and John Donne, among others.

Area: Humanities
Writing Intensive

**AS.060.330. Literature and the Environment: 1500-1700. 3 Credits.**

This is an introduction to study of literature and the environment with a focus on early modern literature. During the period 1500-1700, the ground was laid for a modern understanding of the relationship between humans and their environment, and we will explore how literature shaped that relation. Topics and authors may include: Nature v. Nurture (Sidney, Spenser, Shakespeare); Environmental genres (pastoral, georgic, creation stories); Nature v. Civilization (Montaigne, Bacon, Milton); Climate, Extreme Weather, the Little Ice Age (The Tempest, Dekker, Heywood’s Play of the weather); Land management, gardens, forestry, rivers (Marvell, Denham, Herrick, Jonson, Lanyer); Health and plague (Nashe, Defoe, Dekker); Country v. City (Philips). We will take up current discussions in ecocriticism, and students should be ready to engage with some critical reading and theory.

Area: Humanities
Writing Intensive
AS.060.331. The Literature of the Atlantic Slavery. 3 Credits.
This seminar will trace the historical development of the slavery debate in the Atlantic world through examination of key texts from a host of genres and locations—Quaker religious tracts, political documents like the Haitian Declaration of Independence, Cuban antislavery novels, slave narratives, and “classics” of American literature like Melville’s Benito Cereno. We will consider how the institution of Atlantic slavery was variously represented, justified, and criticized, discovering in the process the deep structures of modern slavery discourse.
Area: Humanities
Writing Intensive

AS.060.333. God on Trial. 3 Credits.
This course traces an illustrious literary tradition, spanning centuries, that dramatizes the subjection of a deity to a human legal inquiry. We will especially attend to how and with what implications massive theological and philosophical questions such as the existence and nature of the divine and the meaning of and proper ethical response to suffering are worked out through this very specific representational gambit. Texts may include: The Book of Job; Voltaire, Candide; Herman Melville, Moby-Dick; Fyodor Dostoevsky, The Brothers Karamazov; Rebecca Harding Davis, Life in the Iron-Mills; Elie Wiesel, The Trial of God; Tony Kushner, Angels in America; Margaret Atwood, The Handmaid's Tale; James Morrow, Blameless in Abaddon; OMG: Oh My God! dir. Umesh Shukla; graphic novelists Jonathan Hickman et al., God is Dead.
Area: Humanities
Writing Intensive

AS.060.335. Black Satire. 3 Credits.
In this course, we will explore the use of satire in black literary and artistic traditions. Reading will likely include poems and novels by Paul Laurence Dunbar, George S. Schuyler, Claude McKay, William Melvin Kelly, Ishmael Reed, Fran Ross, Percival Everett, and others. In addition, we will venture into the genres of film (“Get Out”) and visual art (work by Glenn Ligon and Kara Walker, the latter currently on exhibit at the BMA). The politics of satire emerge in these texts particularly through the treatment of racial uplift and respectability ideologies, race relations, the legacies and histories of slavery, visions of utopia and dystopia, and the concept of the “post-racial.” With attention to the historical and cultural conditions under which these works were produced, we will address the ways in which satire can (or cannot) effect change in the world.

AS.060.337. James Joyce’s Ulysses. 3 Credits.
A careful semester-long reading of James Joyce's masterpiece Ulysses, one of the greatest and most intimidating novels in world literature.
Area: Humanities
Writing Intensive

AS.060.341. Milton. 3 Credits.
This class will study Milton's poetry and prose across the whole of his writing career, with special attention to Paradise Lost, the great epic poem retelling the story of the fall of humankind. We will consider Milton’s literary background, his contemporary political and social milieu, as well as critical debates that surrounding the poet, who was accused of being ‘of the devil's party.’ Pre-1800 course.
Area: Humanities
Writing Intensive

AS.060.342. Contemporary Novel of Ideas. 3 Credits.
The novel of ideas is often traced to 18th century French or 19th century Russian writing, but it has come broadly to signify works of robust philosophical contemplation. The inherently slippery term seems to indicate a work in which “form” is subsidiary to “content;” or at least, in which narrative structures adapt to prioritize thought rather than style, image, or even character. But how, exactly, and about what, do novels “think?” In large part, the novel of ideas is now conflationed with a rote and recognizable brand of social realism. This course asks what might qualify as a novel of ideas today, both in terms of the novel's changing relation to geographical space (and thereby the formal spaces in which philosophy might lurk), and of the particular “ideas” it critiques or puts forth. We will read novelists including J.M. Coetzee, Marlene van Niekerk, Jonathan Franzen, Teju Cole, and Ronan Bennett within a longer literary-philosophical tradition, with reference to works such as Candide, War and Peace, Thus Spoke Zarathustra, and Kierkegaard's Diary of a Seducer.
Area: Humanities
Writing Intensive

AS.060.343. Marxism and Literature. 3 Credits.
This course will provide a survey of some of the concepts in Marx’s work, especially those to be found in volume 1 of Capital, that might help us get a clearer sense of 21st-century politics and culture. We will move outward from reading Marx to reading recent and classic texts in the Marxist critical tradition. We will discuss explicitly economic ideas about commodities, surplus value, and concrete and abstract labor, as well as historical and political ideas like “primitive accumulation” and the “uneven and combined development” of nations. We will think about what reading Marx and the Marxist tradition can help us see about colonialism, gender, race, technology, and the environment, as well as how it can clarify the character of economic crises. Toward the end of the term we will turn to literary texts, not necessarily “Marxist” themselves, to help us understand important questions that Marxism cannot tackle by itself, like: who are people, anyway? What do they hope for, when they write? Is there a Marxist idea of beauty, and is it different than everybody else’s? Along with Marx, and anti-colonial, anti-racist and feminist writers in the Marxist tradition, we’ll read work by the novelist NK Jemisin, and the poet Stephanie Young.
Area: Humanities
Writing Intensive

AS.060.345. Sympathy and the Machine. 3 Credits.
Is the rise of the machine eroding human connection? How does literature imagine the place of human connection in a world marked by the rise of the machine? This course thinks about Industrial Age fiction, which swims in a heady mixture that's part-dream and part-nightmare. Are machines bettering us, are they replacing us, will they miss us? We will look at how nineteenth century British writers tried to come to terms with an increasingly mechanized world: Literature of this time attempts new ways of articulating how machines were reshaping people’s lives, their sense of self, their ideas of love, personal growth, community, and social order. The three novels we will read for this course—Charles Dickens's Hard Times, Elizabeth Gaskell's Mary Barton, and George Eliot’s Mill on the Floss—are enmeshed in larger conversations and debates about the machine and the human. Readings of each novel will be paired with surrounding sociological, political, and critical discussions, in order to develop a richer understanding. A Dean's Teaching Fellowship Course.
Area: Humanities
Writing Intensive
AS.060.346. The American Romance. 3 Credits.

Reviewers in the nineteenth century noted that narrative fiction on either side of the Atlantic seemed to be moving in different directions—the social-realist panoramas of Charles Dickens and George Eliot were confronted by the metaphysical puzzle-boxes, allegorical curios, and sentimental interfaces of Edgar Allan Poe, Nathaniel Hawthorne, Herman Melville, Lydia Maria Child, and Harriet Beecher Stowe. In the period, this divergence was often characterized by reference to a generic or modal distinction between the novel—the very name of which advertised its modernity—and the romance, which was associated with medieval literary traditions. British novelists sensibly confined themselves to representing and anatomizing that which was probable in contemporary social reality, whereas American romancers insisted on violating verisimilitude via flights of fancy (e.g., deathless black cats and white whales), whether out of political activism, aestheticist indulgence, or esoteric exploration. The twofold objective of this course is, first and foremost, simply to engross ourselves with a series of compellingly weird narrative fictions by American writers that self-identify as—and self-consciously theorize—modern romance—a reward in itself; and, second, to trace the history of the romance/novel distinction from early nineteenth-century reviews to contemporary criticism, discovering in the process the cultural work this distinction—and its elision—has been made to do. Primary texts may include: Lydia Maria Child, Hobomok; Catharine Maria Sedgwick, Hope Leslie; Edgar Allan Poe, tales, Narrative of Arthur Gordon Pym; Nathaniel Hawthorne, tales, The House of Seven Gables, The Blithedale Romance; Herman Melville, Mardi; Harriet Beecher Stowe, The Minister’s Wooing.

Writing Intensive

AS.060.348. Virginia Woolf and Bloomsbury. 3 Credits.

An exploration of the achievements and investments of one of the most influential coteries in the history of Britain. In addition to delving into key fictions by Virginia Woolf, we will examine novels by Leonard Woolf and E. M. Forster, art criticism by Roger Fry and Clive Bell, biographical essays by Lytton Strachey, economic writings by John Maynard Keynes, and poetry by T. S. Eliot.

Area: Humanities
Writing Intensive

AS.060.349. Clint Eastwood, Race, and the American Western. 3 Credits.

Drawing from the body of work reflecting the Hollywood gunfighter and outlaw folk-hero Clint Eastwood, the course will investigate American cinematic representations of slavery (and more specifically its absence), the Civil War and racial formation along the United States’ southwestern frontier in films produced from the 1950s through the contemporary period. A focus on the cultural icon Clint Eastwood enables a close examination of American cinematic fantasies of the frontier, frontier violence and the desire to escape or erase the tensions of race and slavery that have deeply permeated the American cultural consciousness, particularly the creation of American masculine ideals. The course will also take decided note of the national shift from liberal “Great Society Programs” of the 1960s to the conservative “neoliberal” social and cultural ideals in the 1980s and 1990s. Our purpose is to consider the organization and reformation of hegemonic power by way of the complex morality play the western film evokes, typically considering the interstitial geographies between civilization and savagery, belonging and alienation, and metropolitan and colonial outpost. We will privilege in our discussions the contested frontiers of racial dominion. The curriculum is complicated by several significant points of departure from the traditional category of the Hollywood-based American western: a film to frame the question of colonialism and resistance, as well as examples of black cinematic efforts re-drawing boundaries of the racial frontier. (Are they formed at the Caribbean, the easternmost littoral? The postindustrial city? Do they correspond to the romance of organized crime and its fantasy of empire?)

Area: Humanities
Writing Intensive

AS.060.352. John Keats’ Guide to City Living. 3 Credits.

This course will take John Keats’ poems and letter as a guide to London in the 1810’s; from the anatomy theaters of the hospitals where he trained, to the raucous parties and poetry slams of his radical literary friends; from museums and theaters to brothels and sickrooms. Keats’ intensely sensual poems are at once bookish and attuned to his environment: they provide lessons on how to abide in a large urban center. For his writing is intensely urban, even when it ventures far from the gloom of the metropolis. Reading the letters he wrote to his brother on the (then-) frontier in Kentucky, we can find yet another key to how he shaped London. We will look at maps of the city, see where the new housing developments were being constructed as old buildings were torn down, visit the jail where his friend, Leigh Hunt, was incarcerated for ridiculing the Prince Regent, see the theater posters and pamphlets Keats saw, as well as the parks and squares he could not enter. The goal for this course is to learn about Keats’ work, but also to try to reconstruct how his city looked and sounded and felt and what, finally, it meant to the poet. Ideally, the course will collectively create a digitized map of Keats’s London that serves as well as a guide to his poems.

AS.060.360. Politics, History and Autobiography. 3 Credits.

This is an intensive seminar exploring the political and historical dimensions of personal experience. The class is designed to introduce students to writing critically about their own lives and to understanding the function of autobiographical writing in the lives of black Americans. We function partly as a writers’ workshop and partly as a critical review. The final goal of the seminar is a polished 15-20 page autobiographical essay and a 5-7 page critical review of an autobiography, such as would be found in the New York Review of Books.

Area: Humanities
Writing Intensive
AS.060.363. Henry James. 3 Credits.
This seminar will focus on the novels and short fiction of one of the most brilliant crafters of prose and plot ever to write in English. Extensive attention will be devoted to the intricacies of James’s language; to his transatlantic situation; to his relationship to other authors; and to his place in the histories of literature, criticism, and theory. In a few instances, we will read his work in relation to writing by his brother, the pioneering philosopher and psychologist William James.
Area: Humanities
Writing Intensive

AS.060.367. The Fallen Woman in Victorian Literature and Culture. 3 Credits.
This course aims to trace how Victorian literature and culture created, negotiated, or even contested “the fallen woman,” the stereotype of a woman who transgressed the norms of appropriate sexual conduct. A fallen woman was a figure of illegitimacy: an adulteress, an unmarried mother, a seduced maiden, a prostitute, or even just a woman who didn’t meet the norms of gender and sexuality. Although such a phrase itself has disappeared today, we continue to see similar stereotypes of women in our own cultural imagination. By looking at a range of Victorian fiction, poems, and images, we will trace how representations of the fallen woman created, negotiated, or even contested stereotypes that were circulating around them. Students will read novels that address questions of gender and sexuality in Victorian discourse, including Elizabeth Gaskell’s Ruth, George Eliot’s The Mill on the Floss, and George Moore’s Esther Waters. Shorter texts will include Gaskell’s short stories, and poems by Christina Rossetti, Augusta Wester, and Thomas Hardy.
Area: Humanities
Writing Intensive

AS.060.370. The Nineteenth Century Novel. 3 Credits.
In this course we will read some of the most significant—and enjoyable—of nineteenth-century novels, focusing on the questions they presented for their first readers and present for readers today. Our focus will be on the technical means by which the novelists achieve their effects. How do they convey the thoughts and feelings of their characters, for instance? How do they represent the interactions between their characters within broader social environments? How do these novels represent history? How do they represent different genders? By means of what literary devices do they do all this? Our aims in the course will be to understand the fiction of the period and to see how the devices used by these authors to conceive their psychological, ethical and political worlds continue to inform our conception of our world.
Area: Humanities
Writing Intensive

AS.060.371. Race and Space. 3 Credits.
Though we often think of the human fascination with the cosmos and the stars as universal and timeless, it has a history, including a literary one. This becomes especially vivid when we pay attention to the history of race. In this course we will explore the crucial role the cosmos and outer space have played in shaping understandings of emancipatory struggle, past and present.
Area: Humanities
Writing Intensive

AS.060.372. ‘Things of Darkness’: Shakespeare and the Legacy of Early Modern Racialization. 3 Credits.
How and why do Shakespeare’s works channel racism and supremacist ideologies? How and why is it that they have also been used for inspiration and aspiration by people of color and thinkers on the political left? This course uses performance history from the Elizabethan moment to the present to explore how early modern topics such as anti-Semitism, bodily monstrosity, blood lineage, colonialism, and religious concession have allowed Shakespeare’s plays to function as vehicles for thinking about race across time. Case studies include anti-Semitism in The Merchant of Venice at a time when it was illegal for Jews to be in England; the eighteenth and nineteenth-century blackface traditions of Othello and the careers of Edmund Kean and Ira Aldridge; Duke Ellington’s exploration into Shakespeare in his 1957 jazz album Such Sweet Thunder; and Julie Taymor’s 1994 Titus Andronicus, which was optioned and championed by Steve Bannon, former executive chairman of Breitbart News. Each unit of the course features an early modern play, readings about the performance tradition of that play, and an article or book chapter on that play.
Area: Humanities
Writing Intensive

AS.060.378. Advanced Introduction to African Literature. 3 Credits.
This course reaches beyond the much-taught postcolonial African realist canon to explore less-studied, more formally challenging works from across the continent, focusing on long-form prose and poetry. While texts will be clearly placed in an historical context, the emphasis in our readings will be on the inception, evolution, and intermingling of literary genres. How do seminal moments in African literary history complicate our received understandings of periodicity, mimesis, and the relation among selfhood, collectivity, and narration? What possibilities exist for theorizing African literature as a corpus, and what, conversely, are the descriptive and institutional limitations of “African Literature”? Primary texts will include “Ethiopia Unbound” (J.E. Casely Hayford); “Chaka” (Thomas Mofolo); “The Wrath of the Ancestors” (A.C. Jordan); “Song of Lawino” (Okot p’Bitek); and “The Promised Land” (Grace Ogot), as well as poetry by Shaaban bin Robert and H.I.E. Dhlomo, among others. We’ll pay some attention, too, to critical trends and contextualization.
Area: Humanities
Writing Intensive

AS.060.380. Romantic Poetry: Imagining the People. 3 Credits.
Perhaps the most influential moment in modern letters, the Romantic period not only straddled the age of democratic revolutions, abolition, mass media and industrialization, it ushered in the modern concept of Literature and its social role. Among the most pressing issues of Romantic poetry were those related to representing, speaking for and speaking to an imaginary creature called The People, not wholly commensurate with that other imaginary creature, The Nation or its Citizens. So for instance, the Ballad revival of the period brought into print the ancient songs of “the folk,” but the movement was riddled with fakes and forgeries. Rising literacy inspired working class poets, women and ethnic minorities to reshape the English language through poetry. Yet at the same moment, literary gentlemen began to produce their own version of a marginalized and dispossessed “people.” All these efforts can be set against a State effort to introduce the first national census, to account for all subjects of the crown. A struggle over who “counts” in the realm of literature clashed with fights over political institutions and the new science of political economy.

AS.060.383. Contemporary Russian Novel in English. 3 Credits.

Russia is back in the headlines, and its resurgence seems unlikely to waver anytime soon. But while many students are familiar with nineteenth-century novelists like Tolstoy and Dostoevsky, more recent Russian writing is often a mystery. This course approaches contemporary Russia through the careers of its two major living novelists, Vladimir Sorokin and Ludmila Ulitskaya, both of whose work spans the late Soviet period (1980s and 90s) through today. In addition to questions of genre, translation, and contemporary Russian literary culture’s relation to Soviet models, we will consider how Sorokin and Ulitskaya have brokered Russia’s intellectual standing on a world stage. Works studied will include Ulitskaya’s Sonechka, The Funeral Party, and Daniel Stein, Interpreter, and Sorokin’s The Queue, Day of the Oprichnik, and The Blizzard.

Area: Humanities
Writing Intensive

AS.060.384. The Contemporary Novel. 3 Credits.

In the first two decades of the twenty-first century, writers of narrative fiction have been working furiously to keep up with the turbulence that global capitalism has visited on the world — war, political chaos, environmental catastrophe, massive forced migration and displacement — while trying to maintain ties to the techniques of narrative that gave the 19th-century reality novel its successes and its prestige. In this course we will read a range of texts, mostly in translation, that stretch and deform those conventions in order to represent the lives and struggles of characters who are caught up in immense historical change. More and more often, novelists are choosing to depict characters drawn from what Marx would have called “surplus populations” — people for whom economic stability and personal safety are out of reach, partly because they are seen as not worth employing (or exploiting). Under these conditions, we will ask, is it only possible to tell tragic stories? What do happy endings look like? What do changes do character development and point of view have to undergo, for instance, to keep up with 21st-century history? Is realism still the best vehicle for telling these stories? Readings will include novels by Sally Rooney, Eduard Louis, Fernanda Melchor, Elena Ferrante, Marlon James, and Manoranjan Byapari, as well as secondary material by Sarah Chihaya, Merve Emre, Katherine Hill, Jill Richards, and the Endnotes collective.

Area: Humanities
Writing Intensive

AS.060.386. Reading the American Swamp. 3 Credits.

The Shape of Water, Creature from the Black Lagoon, Swamp Thing — what is it about the terrain of swamplands that inspires us to dream up hybrid creatures that live within them? This course takes a long view of the American fearful fascination with these amphibious landscapes, from the 18th century to today. In the 19th century especially, swampy landscapes came to evoke anxious fear of revolt and rebellion among white slaveholders while as many as two thousand escaped slaves found shelter and sustenance in the swamp’s mazy topography. Who and what was lurking just beyond the swamp’s wall of vines and veil of mist? Though the swamp of the 20th and 21st centuries retains a sense of dreary, forbidding mystery, a relatively new ecological discourse on swamplands (now called “wetlands”) has emerged calling for protection of the strange and delicate balance of marsh life. The precariousness of such ecosystems as the Florida Everglades comes to represent the toll two and a half centuries of environmental plunder has taken on the American landscape. At the same time, the 2016 presidential election saw the reemergence in American political rhetoric of calls to “drain the swamp” of the federal government. By turns, the swamp has represented growth and abundance, stagnation and decay, moral depravity, organic sanctuary, and has played the roles of both harbinger of devastation and safe-haven of the oppressed. At each twist, texts imagining swamplands give us a unique glimpse into the aesthetic, social, and political anxieties and struggles of the moment. This course aims to track these historical shifts and develop an understanding of precisely how and why they occur, all the while asking what it is about swamplands that attracts our deepest worries and our eeriest curiosities.

Area: Humanities
Writing Intensive

AS.060.387. Black Empire. 3 Credits.

This course examines the transnational visions of Black Empire as articulated and framed by black thinkers, writers, and visual artists around the world, roughly between 1850 and 1950. We will consider how both individuals and groups (such as the United Negro Improvement Association) responded to imperialist maneuvers through discourses of Ethiopianism, Pan-Africanism, and anti-colonialism, and how these discourses interacted with one another in surprising ways, ways that reveal the black world’s simultaneous attraction to and rejection of the imperial model in the nineteenth and twentieth centuries. Our reading will include novels, poems, essays, and critical texts—at least two of which share a title with this course—by W. E. B. Du Bois, Pauline E. Hopkins, Sutton E. Griggs, J. A. Rogers, Langston Hughes, George S. Schuyler, Claude McKay, Brent Hayes Edwards, Paul Gilroy, Wilson Jeremiah Moses, Michelle Ann Stephens, and others.

Area: Humanities
Writing Intensive

AS.060.388. Old World/New World Women. 3 Credits.

The course considers the transatlantic writing of three women in the early modern period, Anne Bradstreet, Aphra Behn, and Phillis Wheatley. We will consider issues of identity, spatiality, religion, commerce, enforced labor, sexuality, race, and gender, along with literary tradition, formal analysis and poetics. We will read a good deal of these early women writers. Foremost in our mind will be the question of how perceptions of space and time are mediated through the global experiences of early modernity.

Area: Humanities

AS.060.389. Emily Dickinson. 3 Credits.
Dickinson's poetry, more than most, has seemed to prompt creativity in others. In the past two decades, especially, poets, writers, critics, and filmmakers have found their own voices in response to hers. We will focus on the formal, aesthetic, historical and gendered aspects of her poetry as we try to understand, and benefit from, this power to elicit response. Exams are unlikely. Instead, expect close attention to your own writing, as we pay close attention to hers.
Area: Humanities
Writing Intensive

AS.060.390. Literature and Visual Modernity. 3 Credits.
This course will study the idea of modernity, a term that has been of continuing use in trying to understand ourselves and our society. We will focus on the major works of prose, poetry, and painting that attempted to come to terms with modernity in the nineteenth century. Texts are likely to include non-fiction prose by Mill, Baudelaire, Darwin, and Benjamin; fiction by Henry James, Conrad, and Vernon Lee; poetry by the Brownings, Tennyson, and Hardy; and paintings (some at the BMA) by D.G. Rossetti, Turner and Cezanne.
Area: Humanities
Writing Intensive

AS.060.391. Early American Literature. 3 Credits.
This course is an introduction to literatures drawn from across the Americas, although primarily the British North American colonies that would eventually become the United States, from first contact in 1492 up through the American wars of independence. Our readings are roughly organized according to chronology and genre. We will think about the adapted and emergent generic forms through which “the New World” was ongoingly invented, including genres like the Indian captivity narrative and the slave narrative that arguably make their debut in world literary history in the Americas during this time frame. We will conclude by attending to the rather late emergence of the novel in American literary history, reading four novels that appeared in the early US national period. The objective of the course is simply to contextualize and analyze a wide array of texts, each of which richly rewards the engaged reader, in order to trace the origins of American literatures. Course texts may include contact narratives (Columbus, Caminha, Smith, Hennepin); conquest narratives (Mather, Las Casas, Poma de Ayala); Indian captivity narratives (Cabeza de Vaca, Rowlandson, Staden); slave narratives (Gronniosaw, Jea, Cugoano); revolutionary polemics (Paine, Bolívar); and the earliest American novels: William Hill Brown, The Power of Sympathy; Hannah Webster Foster, The Coquette; Leonora Sansay, Secret History or, the Horrors of Santo Domingo; Charles Brockden Brown, Arthur Mervyn. Fulfills the pre-1800 requirement.
Area: Humanities
Writing Intensive

AS.060.392. Reading Ayn Rand. 3 Credits.
This course will investigate Ayn Rand, both as a novelist and as an enormously influential thinker. Special attention will be paid to the Soviet and American contexts that produced Rand's work, as well as her place in a lineage of conservative thought, and the influence she has had on American politics. The approach of this course will be critical, but, I hope, fair. Readings will likely include Anthem and Atlas Shrugged, as well as selections from Rand’s philosophical works: Capitalism: The Unknown Ideal and The Virtue of Selfishness.
Area: Humanities
Writing Intensive

AS.060.393. Geoffrey Chaucer: Ribaldry, Romance and Radical Religion. 3 Credits.
Geoffrey Chaucer is sometimes called the ‘father of English literature’, but the deftness with which he captured the variety of the human condition, in poetic forms that were each, in themselves, startlingly new, was in so many ways an inheritance too rich for literary tradition to absorb. One reason to return to Chaucer’s writing now is to see how funny (and even obscene) verse narrative can be, and how compelling a fourteenth-century love story remains. It is also to open a window onto a culture entirely different from our own but in which the power of language (the role of free speech), the freedom of the individual, the status of women, violent tensions between cultures and ethnicities and the role of religion in civil society were not only topical, but made the more so by Chaucer’s powerful political vision and thought. Chaucer is timeless because he wrote so well that he always rewards reading (and the Middle English in which he wrote is very easy to master) but he is always worth reading because reading him is at once so eye-opening and such a pleasure, a way of stretching one’s sense of the present by understanding (really understanding) a particular moment in the past. This class will pursue such understanding by paying particular attention to Chaucer’s masterpieces, Troilus and Criseyde and The Canterbury Tales. But we will begin with a quick and easy workshop on Chaucer’s language, and try to define, along the way, some of the more interesting aspects of his style. Our goal will be to learn to enjoy Chaucer’s poetry by reading it carefully enough to take the full measure of what exactly it was about.
Area: Humanities
Writing Intensive

AS.060.394. Class Fictions. 3 Credits.
This seminar investigates one of the central concerns of nineteenth-century fiction: social and economic class. Why did raising oneself from humble beginnings, and falling into poverty, become such familiar stories? And why are they still so familiar today? We will look at how a number of writers approached the topic of class mobility, each with a unique blend of excitement and anxiety. Authors will likely include Jane Austen, Honoré de Balzac (in translation), Charles Dickens, and William Dean Howells. In order to understand our topic better, we will also look at a selection of theoretical work on the nature of class.
Area: Humanities
Writing Intensive

AS.060.397. Thomas Pynchon. 3 Credits.
Intensive reading of two major Pynchon novels, along with theories of modernity, postmodernity, etc.
Area: Humanities
Writing Intensive
AS.060.400. Billie Holiday's Baltimore 1870-1960: A Reverse Classroom Journey in the Archives. 3 Credits.
This course will use the tools of the historical archive to etch a social history of Baltimore during the long Billie Holiday (1915-1959) era from the Reconstruction through post-World War II. Holiday's remarkable and unique art has earned her the title of the premier jazz singer of all-time, but unknown to most, her voice and experience were strongly shaped by her early life in Baltimore City, the city's black habitation and migration, its musical culture, its black middle and lower class, its urban density, as well as its cabaret and underworld life. Our task is to examine the city as an unfolding, racializing process, and to glean the evidence from multiple local archival sources to reconstruct some of the rough margins of possibility for the lived experience of Holiday's grandparents and parents, all born in Baltimore, as well as her own experience as truant, orphan, and sex assault victim in the 1920s. Two questions will occupy our interests intensely. How did the two black communities she lived in extensively evolve from the late 19th through the early 20th centuries? Second, what information can be unearthed about black musical culture—ragtime, marching bands, banjo and fiddle ditties, riverboat music—as it evolved in the post-World War I "jazz" age of sound recording and broadcasting? What was the artist's relationship to her urban geography? How did it change over space and time? What dimension of shared fate did she have with the community of black Baltimore domestic workers, laborers, artisans, and small business people from the first half of the twentieth century? In what manner did Baltimore's racial segregation and racism define her life and art? How was her consciousness as a vocal opponent to segregation shaped by her grooming in the city?
Area: Humanities
Writing Intensive

AS.060.402. The Computer in Modern Literature. 3 Credits.
How have computers, and human interactions with computers, been represented in twentieth- and twenty-first-century literature? How have attitudes toward computers changed over that time? Now most books are written on computers, and many are read on them as well: what traces of these forms of production and consumption can we find in literary texts?
Area: Humanities
Writing Intensive

AS.060.405. Psychoanalysis and Literature. 3 Credits.
In this course we will read some foundational texts by Sigmund Freud, and pair them with a select group of literary works—Sophocles' "Oedipus the King" and "Oedipus at Colonus", William Shakespeare's "Hamlet", Edgar Allan Poe's "The Purloined Letter", Wilhelm Jensen's "Gravida"—which have inspired psychoanalytic ideas and generations of psychoanalytic literary interpretation.
Area: Humanities
Writing Intensive

AS.060.406. Transfiguring the Renaissance. 3 Credits.
Tracing the poetics of bodily transformation then and now, this course puts early modern literature into dialogue with medical epistemologies of the sexed body and contemporary critical reflections upon transgender experience, embodiment and transition. Early modern texts might include Arthur Golding's translation of Ovid's "Metamorphosis", John Lyly's "Gallathea", Francis Beaumont's "Salmacis and Hermaphroditus", Ben Jonson's "Epicoene, or The Silent Woman", Middleton & Dekker's "The Roaring Girl" and John Milton's "Paradise Lost."

AS.060.509. Senior Essay. 3 Credits.
The English Department offers qualified majors the option of writing a senior essay. This is to be a one-semester project undertaken in the fall of the senior year, resulting in an essay of 30-35 pages. The senior essay counts as a three-credit course which can be applied toward the requirements for the major. Each project will be assigned both an advisor and a second reader. In addition, students writing essays will meet as a group with the Director of Undergraduate Study once or twice in the course of the project. The senior essay option is open to all students with a cumulative GPA of 3.6 or higher in English Department courses at the end of the fall term of their junior year. Project descriptions (generally of one to two pages) and a preliminary bibliography should be submitted to a prospective advisor selected by the student from the core faculty. All proposals must be received at least two weeks prior to the beginning of registration period during the spring term of the junior year. Students should meet with the prospective advisor to discuss the project in general terms before submitting a formal proposal. The advisor will determine whether the proposed project is feasible and worthwhile. Individual faculty need not direct more than one approved senior essay per academic year. Acceptance of a proposal will therefore depend on faculty availability as well as on the strength of the proposal itself. When completed, the senior essay will be judged and graded by the advisor in consultation with the second reader. The senior essay will not be part of the Department's honors program, which will continue to be based solely on a cumulative GPA of 3.6 in English Department courses.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

Writing Intensive

**AS.060.605. The Decolonial Intellectual.**
A recent resurgence of interest in decolonial theory raises important questions about the relationship between postcolonial literature and the institutions, as well as disciplinary frameworks, by which it's advanced. From Ngugi wa Thiong'o, to the writers of South Africa's Drum generation, to the contemporary Afropolitan theorist Achille Mbembe, U.S. universities have been host to many of decolonization's notable intellectuals. This seminar takes a synthetic approach to understanding the forms and histories by which decolonization has been articulated: we'll survey fiction, personal and political essays, and "theory" to make sense of the various tensions at decolonization's core (e.g. territorialization vs. de-territorialization, internationalism vs. cosmopolitanism, or text vs. context). Writers studied will include Frantz Fanon, Lewis Nkosi, Ayi Kwei Armah, Ngugi wa Thiong'o, Walter Mignolo, An Yountae, Kwame Nkrumah, Hamid Dabashi, Buchi Emecheta, and Sylvia Wynter, among others.
Area: Humanities
Writing Intensive

**AS.060.607. Fiction and Doubt After 1888.**
Examines the interrelation between fiction and doubt since the late nineteenth century. Authors may include Ward, Conrad, Joyce, Eliot, Stevens, Woolf, Baldwin, Flannery O'Connor, Ishmael Reed, Sefi Atta, R. O. Kwon.
Area: Humanities
Writing Intensive

**AS.060.608. The Idea of Tradition.**
The idea of tradition -- of a body from texts from the past that helps explain the genealogy of the present -- is central to literary criticism, and indeed to all of the humanities. But where did we get the idea that the present could be understood best through texts from the past? Can we imagine a humanities without it? This course will look at the development of the idea of tradition in the eighteenth and nineteenth centuries. We will pay particular attention to the connections between the developing ideas of tradition and the changing forms of literary expression in those periods—particularly the developmental novel. Novelists who will likely include Goethe, Scott, Austen, Eliot and James. In terms of theory we will pay particular attention to questions of historicity and presentism in historiometry, hermeneutics, and theory. Theorists who will likely include Vico, Shaftesbury, Dilthey, Lukacs, Heidegger, Adorno, Horkeheimer, Gadamer, Jauss, Koselleck, and T.S. Eliot.
Area: Humanities
Writing Intensive

**AS.060.609. Extreme Criticism.**
"How far can I go?" It is a question (memorably posed by Neil Hertz) of what we might call interpretive tact: what will your readers or listeners accept? How far can you take them with you as you enter into the interpretive possibilities that have come to matter to you, that you believe to be true, meaningful, important, interesting . . . When, eyes slowly unfocusing, do they start drifting away? That most of the critics we read are determinedly tactful is an occasionally dismaying thought. This seminar, by contrast, will engage the issue of interpretive tact by reading critics who might be thought to violate it. I'd like to think about the issue with a collection of interested students. Among the potentially tactless works we might discuss are Stanley Cavell's essay on King Lear, Laura Kipnis's Against Love: A Polemic T.J. Clark's The Sight of Death, Michael Fried's Flaubert's 'Gueuloi', Avita Ronnell's Telephone Book (or perhaps her less extreme Stupidity), Roland Barthes' S/Z, Garrett Stewart's Reading Voices, Franco Moretti's Distant Reading, Lauren Berlant's Desire/Love, William Empson's Seven Types of Ambiguity, Lee Edelman's No Future, Barbara Johnson's "Bringing Out D. A. Miller" I'd be open to other suggestions by seminar members.
Area: Humanities
Writing Intensive

**AS.060.612. Poetry and Poetics After the Linguistic Turn.**
This course is a survey of recent critical work on English-language poetry, mostly North American. Much of the work is by younger scholars. I have chosen to highlight this recent body of writing because I think that, taken together, it signals a shift away from what since the 1980s had been the dominant model for "reading" poetry, which was under the sign of "Theory." Readings will include work by Jasper Bernes, Joel Nickels, Nadia Nurhussein, Margaret Ronda, Daniel Tiffany, and others.
Area: Humanities
Writing Intensive

**AS.060.613. American Movement.**
This seminar will examine representations of people in motion in U.S. writing from 1900 to the present. Migration, international and intranational, will be central to our study, but we'll also consider other forms of travel, transits of authorial and readerly attention, the policing and pleasures of vagrancy, and predicaments of stasis in both primary texts and critical/theoretical work around mobility. Our syllabus is still in process, but authors and directors studied may include Henry James, Anzia Yezierska, Claude McKay, Gertrude Stein, Muriel Rukeyser, John Steinbeck, John Ford, Simone de Beauvoir, Victor Villaseñor, Juliana Spahr, and Jayne Anne Phillips.
Area: Humanities
Writing Intensive

**AS.060.614. Postcolonial/Global/World.**
The field now known as "global Anglophone literature" has emerged from a complicated and rapidly advancing disciplinary lineage. A host of past and present recordings -- including postcolonial, Commonwealth, Third World, global, transnational, world, and the Global South -- provide a record of the wider profession's anxieties in relation to non-Western literary traditions. This course prepares graduate students to be able to articulate some of the subtle differences in approach that this nexus of closely related terms may obscure, from the heyday of postcolonial theory in the 1980s and 90s to contemporary subfields like Indian Ocean studies. In addition to key critical texts by theorists including Edward Said, Gayatri Spivak, Franco Moretti, Peter Hallward, and Emily Apter, students will be introduced to some outstanding recent methodologies and critiques from the adjacent body of work on comparative literature.
Area: Humanities
Writing Intensive
AS.060.616. Milton.
A seminar covering the career of John Milton, including all his major poetry and much of his prose. There will be attention to the history of printing, publication and concepts of reading and writing, as well as to current issues and topics within early modern studies that bear on Milton (e.g. materialism, secularization, ‘surface’ reading, political theology, quantitative vs hermeneutic methods, actor-network theory). As such, the course will also be an introduction to various methods in early modern studies.
Area: Humanities
Writing Intensive

AS.060.617. Black Print Culture.
Students interested in black print culture will engage in intensive archival research, both collaborative and individual, using the Sheridan Library’s Rare Book and Manuscript collections. Texts include poems, printed lectures, pamphlets, novels, periodicals, ephemera, correspondence, etc., alongside relevant critical and theoretical reading.
Area: Humanities
Writing Intensive

AS.060.619. Sentimental Reasons.
Recent work in cognitive approaches to literature have led critics to return to the sentimental novel of the eighteenth-century as a “laboratory,” in Daniel Goss’s words, for the investigation of human emotion. There is no easy “fit” between these literary narratives and the narratives of cognitive science, nor between them and the regnant moral philosophy of the age (built upon the mechanism of human sympathy or upon “nervous” association). There is rather a discomfort that reveals social inequities as well as alternative possibilities for both thinking and feeling. The sentimental mode took hold in the circuits of the Atlantic world. This course will study several sentimental narratives that traveled promiscuously through these circuits: Bernardin de St. Pierre’s Paul and Virginia, Sterne’s Sentimental Journey, Mackenzie’s Man of Feeling; Equiano’s Interesting Narrative; Williams’ Peru; and Brown’s The Power of Sympathy. Alongside these works we will read studies by critics working the seams between affect and cognition, philosophy and literature, rhetoric and science. The course will provide a broad history of the sentimental mode, stretching to reflections on the links between the sentimental and the melodramatic. It will simultaneously attend to the experience of reading for sentiment, to forms of feeling and what those feelings know.
Area: Humanities
Writing Intensive

AS.060.620. Thinking with Scale: Frameworks in Early Modernity.
Concepts include expansion, crowding, data collection, the miniscule, temporality, the planetary and the cosmic in the first age of European mercantile activity and colonial expansion. With readings from world-systems theory and theories of the anthropocene, our case studies will comprise pre-modern English literary texts, including Milton, Paradise Lost, Anne Bradstreet, The Four Monarchies, early modern science (Hooke, Newton), Defoe, The Storm, and early British and colonial American holdings in the Garrett Library. The class will be hands-on, working with material from Special Collections, and will include working towards a digital project (no digital project background necessary).
Area: Humanities
Writing Intensive

AS.060.621. The Cultures of the Sonnet in the English Renaissance.
This is a course on lyric theory in the Renaissance and as such is a good introduction to early modern literary study. We will take up the early modern form of the sonnet as a test case for the interaction between vernacularity and globalization. We will consider early modern topics including “invention,” “imitation,” and rhetoric, as well as explore formal concerns that are intertwined with political, social, cultural and economic experiences of early modernity. Along with the consideration of the emergence of literatures in new languages and nationalist differentiation, we will also consider mechanization (whether in print or literary trope) that produced both early modern literature and political life in an international system. We will consider such topics as sequence; modes of address; vernacularity and linguistic nationalism; the themes of love v. empire; the social role of the sonnet; the nature and materiality of writing; patronage and circulation; the question of private, occasional, and public poetry; the place of sonnets in manuscript collections; the histories of books; poetic subjectivity and objective thought; and we will also read a good many sonnets, largely in English, through close attention to language, media and transmission histories. Some contemporary literary theory on the sonnet will be introduced, as well as sonnets in European languages other than English, depending on the students’ interests and proclivities. Students will be expected to work in the manuscript and print collections of the Bodleian library to prepare a class report on their chosen topics. The class puts the sonnet in relation to other forms in Renaissance literature and thus should serve as a good survey of the period and its issues.
Area: Humanities
Writing Intensive

AS.060.624. Romanticism and the Ends of Affect.
This seminar will consider both what affect studies have learned from Romanticism and the limits –practical, ethical, intellectual –of reading Romantic poetry within the framework that has been constructed by affect studies over the past two decades. It will provide a general survey of scholarship on affect, of criticism attending to the self-consciously affecting literary experiments of the age, and to primary works by a select number of romantic writers, most probably Wordsworth and Coleridge’s Lyrical ballads, Joanna Baillie’s Plays and the letters and poems of John Keats.
Area: Humanities
Writing Intensive

AS.060.625. Theory of the Novel.
This course will look at the development of novel theory from the eighteenth century until the present. Authors will include Scott, Barbauld, Dallas, Lewes, Eliot, James, Shklovsky, Tomashevsky, Jakobson, Bakhtin, Lukács, Auerbach, Barthes, Jameson, Girard, Sedgwick, Moretti, Armstrong, Miller, Hale, Lynch, and Woloch. Novelists will likely include Madame de Lafayette, Austen, Goethe, and Wolfe.
Area: Humanities
Writing Intensive

AS.060.626. Reading for Race at the Movies and on TV, in the years 2015-16.
2015-16 was a radical, decisive two-year period for many things, including film by and about African-Americans. This course seeks to understand this phenomenon through current events, wider aesthetic and historical trends, and the body of critical work devoted to reading filmic representations of cultural and political ideologies. 2015-16 films and TV shows under consideration will include: Moonlight; Creed; Hidden Figures; Fences; Birth of a Nation; Straight Outta Compton; O.J.: Made in America; Atlanta; Black-ish; This Is Us; Luke Cage; The People v. OJ Simpson.
AS.060.627. Poetry and Performance.
This course will be devoted to the histories and theories of 19th-, 20th-, and 21st-century poetry and performance, beginning with William Wordsworth's and Samuel Taylor Coleridge's Lyrical Ballads. Upon hearing the poets read, William Hazlitt remarked that "[t]here is a chant in the recitation both of Coleridge and Wordsworth, which acts as a spell upon the hearer, and disarms the judgment." This early instance of reception history will provide the backdrop for our discussion throughout the semester. Besides Wordsworth and Coleridge, our reading list will include verse, theory, and criticism by Robert Browning, Walt Whitman, T.S. Eliot, James Weldon Johnson, Langston Hughes, William Carlos Williams, Charles Olson, Allen Ginsberg, Norman Pritchard, Amiri Baraka, Tracie Morris, Christian Bök, Lisa Gitelman, Frederick Kittler, Peter Middleton, John M. Picker, Susan Stewart, and others.

Area: Humanities
Writing Intensive

Today human rights and capabilities are two intertwined concepts. In the early modern period, these were much debated and literature was a key site for the development of these imperfect, variable and contested discourses. Reading literary works from the European tradition, in particular in Europeans' engagement with dissident groups both within and outside Europe, we will explore themes of embodiment, power, risk, vulnerability and the languages and practices of equivalence and domination in the variable discourses of humanitarianism, natural law, and rights in authors including Shakespeare, Grotius, Montaigne, Hobbes, Milton, Behn, Locke, Swift, Montagu and Defoe.

Area: Humanities
Writing Intensive

AS.060.629. The History of the Book.
The course will account for the major transformations in the media used for writing from the scroll to the web as well as the rich account of this history and its theorizations.

Area: Humanities
Writing Intensive

AS.060.630. Mapping Frederick Douglass's Escape: An Historic Maryland Odyssey.
This course provides an in-depth portrait of the historic Marylander Frederick Douglass, born near Hillsboro in Talbot County, Maryland around 1818, and who successfully escaped slavery in Baltimore in September 1838. We will read Douglass's three autobiographies and other writings, as well as two biographies of Douglass to understand his importance in American life over time. The course includes three "living classroom" components. At the Douglass/Meyers Museum at Fells Point, Baltimore, students will learn 19th century techniques to build a sailing such as Douglass learned when he worked in the shipyards. Students will tour the Anacostia, DC Frederick Douglass Museum. The course culminates with a sailing trip from Baltimore's Fells Point to historic St. Michael's, kayaking along the Tuckahoe and Miles Rivers, and overnight camping on the grounds of a former plantation on Maryland's Eastern Shore.

Area: Humanities

AS.060.631. Tyranny in Early Modern Literature.
In the Epistle to the Romans, Paul writes: "Let every soul be subject unto the higher powers: for there is no power but of God: and the powers that be, are ordained of God." In the wake of such a declaration, what constitutes tyranny? When is resistance to tyranny justified? What forms of recourse are compatible with the Christian obedience enjoined by Paul? How did early modern literature offer a means of leverage, redress and coping with the depredations of "the powers that be"? In search of provisional answers to these questions, this course tracks the representation and rhetorical evaluation of the tyrant figure at the intersection of political philosophy and literature. Political writings by Aristotle, Plato, Marsilius of Padua, Dante, Jean Bodin, James I, John Milton and Hanna Arendt are placed in dialogue with historical and theoretical writing by Greg Walker, Stanley Cavell, Mary Nyquist and Terri Snyder on tyranny, slavery, resistance theory and biopolitics. Literary texts, principally drama and prose romances, will include The Wakefield Master's "Herod the Great", Sir Philip Sidney's "The New Arcadia", Christopher Marlowe's "Tamburlaine", Robert Greene's "Planetomachia", William Shakespeare's "Richard III" and "The Winter's Tale", Ben Jonson's "Sejanus His Fall", and Elizabeth Cary's "The Tragedy of Mariam, Fair Queen of Jewry".

Area: Humanities
Writing Intensive

AS.060.633. Biography and African American Subjects from the 19th and 20th Centuries.
This course will read through contemporary biographical treatments of prominent 19th and 20th century African American writers to explore the prominent ideological predispositions as well as the structure of archival sourcing in the creation of life-writing on black subjects. Students will make research trips to the Library of Congress, the University of Delaware, Morgan State University and other local archives for instruction in research methodology and the collection of primary source materials. Student final projects will use primary archival sources to intervene in debates about the interpretation of historical subjects and historical events.

Area: Humanities
Writing Intensive

In recent years, the literature of the middle of the twentieth century has come into its own. Now recognized as a period of exceptional invention, not merely the weak successor to the great age of high modernism, the 1930s through the 1960s gave us texts that, among other things, offer windows onto the birth of the postwar order. This course will examine challenging, fascinating, sometimes infuriating writing about World War II, the rise of the welfare state, and the "colonization in reverse" that brought the Windrush writers from the Caribbean to England. Authors studied may include Elizabeth Bowen, Anthony Burgess, T.S. Eliot, H.D., Richard Hoggart, George Lamming, Philip Larkin, Marghanita Laski, Sam Selvon, Alan Sillitoe, John Wain, Virginia Woolf, and John Wyndham.

Area: Humanities
Writing Intensive
This seminar offers an introduction to a key concept in contemporary critical theory and literary and cultural studies: settler colonialism, understood as a specific form of colonialism focused on the appropriation of land rather than the exploitation of labor and thereby involving the attempted elimination and replacement of indigenous polities and societies by an invading force. The course will have a dual focus: 1) tracing the theoretical distinction of settler colonialism from other forms of colonialism and tracking the critique implicit in this distinction of dominant forms of leftism that arguably presuppose a settler-colonial frame of reference; 2) tracking the history of what James Belich has called the “Anglo settler revolution” of the nineteenth century and engaging in a comparative analysis of the literatures produced in the course of that revolution in what are now Ireland, the United States, Canada, Australia, and elsewhere in the Pacific. We will especially attend to narrative fictions—often (self-) identified as “romances”—that chronicle settlement and register the temporal disruption of indigenous persistence and resistance. Secondary texts may include: Belich, Replenishing the Earth; Glen Coulthard, Red Skin, White Masks; Aileen Moreton-Robinson, The White Possessive; Eve Tuck and K. Wayne Yang, "Decolonization is Not a Metaphor"; Patrick Wolfe, Settler Colonialism and the Transformation of Anthropology. Primary texts may include: Charles Brockden Brown, Edgar Huntly; S. Alice Callahan, A Child of the Forest; Marcus Clarke, His Natural Life; Susanna Moodie, Roughing It in the Bush; Herman Melville, Typee; Sydney Owenson, The Wild Irish Girl; Simon Pokagon, Ogimawkwe Mitigwaki (Queen of the Woods); John Richardson, Wacousta or, The Prophecy; Catharine Maria Sedgwick, Hope Leslie; and the FX television series, Taboo.
Area: Humanities
Writing Intensive

AS.060.637. Counterfactual Literature.
This course will focus on the formal, affective, ethical, and conceptual issues associated with forking-path texts—poems, fictions and films that openly offer alternative paths to the experience of individuals.
Area: Humanities
Writing Intensive

AS.060.638. Whitman and the Whitmanian.
This course will take the occasion of the bicentennial of the birth of Walt Whitman as an occasion to think about the legacies of his poetry in American literary history, especially in contemporary poetry. We will read key texts of Whitman's then move to more recent writing, paying attention to the key scholarship on Whitman from the last few decades, as well as to recent scholarship on poetry that is in dialog with the questions of democracy, capitalism, on the one hand, and form and address, on the other, that have shaped our reading of Whitman and of poetry in the Whitmanian mode.
Area: Humanities
Writing Intensive

This seminar will provide an intensive introduction to antebellum nineteenth-century U.S. literature by way of tracking a critical formulation foundational to the field of American studies as whole: 'the American Renaissance.' Coined by F.O. Matthiessen in 1941, 'the American Renaissance' initially referred to a canon of five white male writers (Ralph Waldo Emerson, Nathaniel Hawthorne, Herman Melville, Henry David Thoreau, and Walt Whitman) alleged to have produced work of distinction in two interrelated senses—the first specifically 'American' literature deserving of academic study. We will follow the fortunes of this critical formulation, tracing how some of the authors in Matthiessen's canon have subsequently been reinterpreted and repositioned as well as how 'the American Renaissance' canon has been expanded and its very conceptualization contested. Primary authors whose work may be examined include William Apess, William Wells Brown, Lydia Maria Child, Frederick Douglass, Emerson, Margaret Fuller, Hawthorne, Harriet Jacobs, Melville, Harriet Beecher Stowe, and the anonymous author of Xicotencatl. Secondary works may include: Matthiessen, The American Renaissance (1941); Reynolds, Beneath the American Renaissance (1988); Michaels and Pease, The American Renaissance Reconsidered (1989); Crews, 'Whose American Renaissance?' (1988); Colacurcio, 'The American-Renaissance Renaissance' (1991); Avallone, 'What American Renaissance?' (1997); Grossman, Reconstituting the American Renaissance (2003); Brickhouse, Transamerican Literary Relations (2004); Fluck, Romance with America (2009); Hager and Marrs, 'Against 1865' (2013).
Area: Humanities
Writing Intensive

How much can you say about a novel? How much of a novel can a critic interpret? The large scale of the novel form seems to resist the interpretive techniques of literary criticism, which look closely at a small number of textual examples. But what if we tried to read every word of a novel, and see it in all its forms: genre, structure, history, politics, biography, and so on? This seminar will look closely at a small number of Victorian novels (probably Dickens’ *David Copperfield* and Eliot’s *Daniel Deronda*, subject to change). We will approach these novels through a variety of theoretical lenses. There will be a special emphasis placed on the relations between form, history, and politics. This seminar will also offer students a chance to apply theories of literature and the novel often considered in abstract.
Area: Humanities
Writing Intensive
AS.060.642. Reading Capital Now.
Since the 2008 financial crash, there’s been rising popular consciousness of capitalism’s crisis-bound character and, therefore, its vulnerability. But finance isn’t the only thing that capitalism has brought to a boiling point: for attentive readers of Marx, the mounting climate disaster, the COVID pandemic, and the struggle for Black Lives have only further highlighted the complex interconnections among our energy and food infrastructures, histories of racist and settler-colonial violence, the patriarchal organization of sexuality, and the maintenance of capitalist profitability no matter the social cost. The aim of this seminar is, first, to show how a thorough reading of the first volume of Marx’s Capital goes a long way toward helping us see all these histories and crises as part of a single, many-faceted dynamic, and second, to highlight 20th- and 21st-century Marxist work that takes Marx in new directions, from critiques of racial capitalism, colonialism, and the patriarchy of the wage, to studies of climate crisis and the global recomposition of the labor pool. Along with Marx, we’ll read work by WEB DuBois, James Boggs, Silvia Federici, Thiti Bhattacharya, Jairus Banaji, Nikhil Singh, Andreas Malm, the Endnotes collective, James Parisot, and others.
Area: Humanities
Writing Intensive

This course will read the major writings of William Wordsworth as experiments in tracking feeling between individual and multitude. It will take advantage of two currents in recent criticism to work through the problem of how one feels with and for large numbers. On the one hand, this requires taking up models of sympathy and feeling that depart from those established since the eighteenth century, where models of sympathy relied on a 1-1 relationship between human persons. These alternative models attend to “multitudes,” and thus a different scale of life, human and not (e.g. Spinoza, Virno, Hardt and Negri). On the other hand, reading Wordsworth in this light requires a reconsideration of the art of numbers — that is, poetry — alongside and sometimes in opposition to the science of numbers called political economy.
Area: Humanities
Writing Intensive

AS.060.644. Oceanic Studies & the Black Diaspora.
In this course, we take up Hester Blum’s blunt observation that “the sea is not a metaphor” in order to consider the visions and hopes black writers have associated with the sea, as well as the despair and trauma transatlantic slavery has left “in the wake,” to quote Christina Sharpe.
Area: Humanities
Writing Intensive

AS.060.647. Capitalism for Humanists.
Recent global crises of capital accumulation have obliged both scholarly and journalistic accounts of capitalism to become more sophisticated and comprehensive. This course will be an introduction to some of those accounts. We will approach the problem of describing capital and its dynamics from several angles: conversations about combined and uneven development, about the racialization of enslaved and “surplus” populations; about the forms of social reproduction (often gendered) proximate to the wage; about technological change, robotification, and its implications for the production of capitalist value; about theories of the value-form itself. One aim of this course will be to think about how a better understanding of capital — its history and its mechanics — can make us better scholars of literature, so we will also devote ourselves to assessing the resources and the limits of earlier literary-critical accounts of literature’s relationship to capital accumulation.
Area: Humanities
Writing Intensive

George Eliot’s novels have been the focus of some of the most deeply thought criticism of the Victorian period. In this seminar we’ll read a selection of those novels as they have invited the study of topics which may include the theory of the novel and of narrative; aesthetics and continental philosophy; representation and the nature of individuation; sympathy; the history of affect; formalism, politics, and ethics; the novel and emergent sciences. We’ll spend most of our time on Middlemarch and Daniel Deronda, along with her non-fiction prose and some of her translation work of Spinoza and Feuerbach. We’re likely to read criticism by Gallagher, Hertz, Woloch, Plotz, Anderson, and Duncan. Depending on student interest, we may also take up Eliot’s relation to earlier literary figures—Wordsworth being a likely candidate.
Area: Humanities
Writing Intensive

AS.060.668. The Slavery Debate in the Atlantic World.
This graduate seminar will trace the historical development of the slavery debate in the Atlantic world through examination of key texts from a host of genres and locations—Quaker religious tracts, political documents like the Haitian Declaration of Independence, Cuban antislavery novels, slave narratives, and “classics” of “American” literature like Melville’s Benito Cereno. Our historical investigations into the rhetorical field of anti- and proslavery will be framed by a theoretical interest in political theology. How might critical reflection on sovereignty, recent and not so recent—from Derrida back to Bodin (widely acknowledged as having provided one of the first philosophical defenses of antislavery)—help us recast the intellectual history of the slavery debate and Atlantic radicalism, more generally?
Area: Humanities
Writing Intensive

AS.060.692. The Enlightenment, Aesthetics and Race.
This course examines the philosophical interplay between Enlightenment aesthetics and the construction of the concept of race. We will read texts in aesthetics and on human difference by Rousseau, Voltaire, Condorcet, Kant, Herder, Jefferson, Burke, Hume and others, in an attempt to see the points at which reflections on art and notions of human biological hierarchy intersect. Particular attention will be paid to the idea of the sublime as it pertains to early anthropological thought.
Area: Humanities

AS.060.800. Independent Study.
This course is a semester-long independent research course for graduate students. Students will have one-on-one assignments and check-in’s with designated faculty throughout the semester.

AS.060.801. Teaching Practicum.
Area: Humanities

AS.060.893. Individual Work.

Cross Listed Courses

Center for Africana Studies

AS.362.111. Introduction to African American Studies. 3 Credits.
This course introduces students to the interdisciplinary field of African American Studies, with attention to the literature, film, culture, history, and politics of black life in the United States. Our reading list will likely include texts by David Walker, Frederick Douglass, Frances E.W. Harper, W.E.B. Du Bois, James Baldwin, Amiri Baraka, Toni Morrison, and others.
Area: Humanities, Social and Behavioral Sciences

AS.362.201. African American Poetry and Poetics. 3 Credits.
In this course, we will follow the development of black poetry primarily as it has evolved in the United States. Beginning with the first published African American writers of the eighteenth century and ending with several important poets writing and performing today, we will consider the shape of the African American poetic tradition as commonly anthologized and as defined by our own theoretically-informed readings of the assigned literature. Attention will be given to both canonical and neglected literary movements and groups. Readings will include poetry and essays by Frances E.W. Harper, James Weldon Johnson, Langston Hughes, Gwendolyn Brooks, Amiri Baraka, Harryette Mullen, Tracie Morris, and others.
Area: Humanities

AS.362.305. Black Periodical Studies. 3 Credits.
This course explores the ways in which nineteenth- and twentieth-century black periodical culture fostered (and, at times, hampered) the literary and cultural production of the African diaspora. Authors will likely include Frederick Douglass, "Ethiop (William J. Wilson)," Frances E.W. Harper, Pauline Hopkins, W.E.B. Du Bois, Marcus Garvey, Jean Toomer, Langston Hughes, Richard Bruce Nugent, and others.
Area: Humanities

Writing Intensive

AS.362.311. Black Utopias. 3 Credits.
In this course, we will read literary and historical texts that present visions of black utopia. Authors include "Ethiop (William J. Wilson)," Marcus Garvey, Octavia Butler, Toni Morrison, and others.
Area: Humanities, Social and Behavioral Sciences

Classics

AS.040.145. Story and Argument from Homer to Petrarch. 3 Credits.
Stories entertain us, but we also tell them to make a point. This course will explore the ways that stories were used to make points by Greek and Latin authors from Homer to Petrarch, while also looking at, and comparing them to, the techniques of argument contemporaneous thinkers were developing. This is a course about narrative and rhetoric but also about how and in what way stories matter.
Area: Humanities

Writing Intensive

AS.040.420. Classics Research Lab: The Symonds Project. 3 Credits.
This course gives participants a unique opportunity to engage directly in empirical research and its interpretation and dissemination. Topics vary. This semester's offering is organized around a project to reconstruct digitally the library of the nineteenth-century writer John Addington Symonds, author of one of the first studies of ancient sexuality. No prerequisites, but potential students should contact instructor for permission to enroll.
Area: Humanities

Comparative Thought and Literature

AS.300.203. Freshman Seminar: How Literature Works: Narrative Imagination from Ancient to Modern Times. 3 Credits.
Is storytelling part of human nature? Do myths and legends have a universal structure? As a bridge between experience and language, narratives inform the way we understand history, gender, politics, emotion, cognition and much more. This course will explore how narratives are composed, how they are experienced, and eventually, how they evolve throughout history. We will be reading a diverse selection of ancient and modern texts, including selections from Plato and Aristotle, the Odyssey, the Hebrew Bible, as well as 19th-and-20th-century authors such as the Brothers Grimm, Gustave Flaubert, James Joyce and Virginia Woolf. The second part of the course focuses on philosophical and critical approaches to narrative in arts and media, concluding with the evolving concept of narrative in the digital age. Theoretical readings include selections from Karl Marx, Roland Barthes, Jacques Derrida and Judith Butler. All readings will be in English.
Area: Humanities

Writing Intensive

AS.300.219. Freshman Seminar: Babblers, Mumblers & Howlers: Languages of Modernist Fiction: Freshman Seminar. 3 Credits.
Does literature represent reality or create it? Is language just a tool we use to communicate, or is it shaped by our culture, or indeed, is our culture—and even our own experiences—shaped by our language? Modernist writers at the turn of the 20th century grappled with these questions, concerned that literature and in fact language itself was ill-equipped to face the changes occurring at the beginning of a new era of modernity. From symbolist and sound poetry to innovations in stream of consciousness narration and non-syntactic fragmentation, the literature of the time reflected a receding faith in the ability for ordinary spoken language to communicate feeling, meaning, and the authentic self. The task of modernism in turn became the reinvention of a new literary language that could either capture this condition of crisis or seek to overcome it. This course will investigate the various responses and solutions to the crisis of language in Anglo-American and European modernist fiction. Authors to be studied: Virginia Woolf, André Bely, Franz Kafka, Jean Toomer, Filippo Marinetti, Andrei Platonov, Mikhail Bakhtin, Yuri Olesha, et al. All readings will be in English.
Area: Humanities

Writing Intensive

AS.300.302. Making Modern Poetry. 3 Credits.
Making Modern Poetry’ will explore the intersection and conversation between literature, art history, and graphic design by examining the rapid global development of poetry, art, and print from 1890 to 1930. We will read canonical modernist poets such as T.S. Eliot and Ezra Pound as well as those less familiar, like Mina Loy and César Moro, considering texts comparatively across national borders and through their relations to other arts. All readings will be in English.
Area: Humanities

Writing Intensive
AS.300.309. The Contemporary Philosophical Novel. 3 Credits. What can literature offer to philosophical reflection? Can literature address experiences that evade theoretical philosophy? Or, does fictional writing conflict with rigorous philosophical inquiry? The long-standing separation of philosophy and literature begins when Plato bans poetry and tragedy from the ideal city in the Republic. This seminar focuses on nineteenth and twentieth century thinkers that challenge the predisposition against literature through different attempts to write the "philosophical novel." In this seminar, we will take seriously the philosophical stakes of literary texts, and investigate how and why literature offers a unique perspective for philosophical reflection. We will read texts by Plato, Fyodor Dostoevsky, Friedrich Nietzsche, Jean-Paul Sartre, Simone de Beauvoir, Albert Camus, Iris Murdoch, and David Foster-Wallace.
Area: Humanities
Writing Intensive

AS.300.319. The Modernist Novel: Mann, Woolf, and Joyce. 3 Credits. In this course, we will survey the major works of three of the greatest, most relentless innovators of the twentieth century — Thomas Mann, Virginia Woolf, and James Joyce — who explored and exploded narrative techniques for depicting what Woolf called the "luminous halo" of life.
Area: Humanities
Writing Intensive

AS.300.320. Lover's Discourse. 3 Credits. Much of what we know about love and desire we owe to fiction's ability to evoke these experiences. Consider for example that the publication, in Germany, of The Sorrows of Young Werther inspired young men across Europe to dress and behave just like him. We will study in this course a selection of love stories chosen because they break the mold and question their conventions. Taking a critical distance from these tales of seduction, we will examine not only the manifestations and meanings of love, but also the configurations of gender they inspire and reflect. Indeed, just as nowadays film and television represent, as well as mold, our identities as desiring subject, fictions from the eighteenth-century onwards have shaped our current understanding of gendered subjectivities. The readings for this seminar (all available in English) include: Austen, 'Persuasion'; Balzac, 'The Girl with the Golden Eyes' and 'Sarrasine'; Barthes, 'Lover's Discourse'; Goethe, 'The Sorrows of Young Werther'; Mann, 'Death in Venice'; Rousseau, excerpts from 'Julie or The New Heloise'; Sulzer, 'A Perfect Waiter', Winterson, 'Written on the Body'.
Area: Humanities

AS.300.321. Rise of the Modern Short Story. 3 Credits. A comparative tour of examples of short stories from three continents that emerged from earlier narrative forms in the 19th and 20th centuries. Attention will be given to new structural, rhetorical, and thematic concerns including the development of new sub-genres, e.g. fictions of detection, case histories, portraits of the artist, and the adaptation of several stories to newer media [at least 2 of the longer narratives translated to film will be screened]. A detailed syllabus of our readings will be available later in the summer; because there is no anthology that quite fits our needs, all the texts or translations, as well as critical and contextual notes will be supplied in digital forms. Note: there will also be an optional hour for questions & discussion TBA.
Area: Humanities
Writing Intensive

AS.300.323. Shakespeare and Ibsen. 3 Credits. William Shakespeare and Henrik Ibsen are the two most frequently performed playwrights in history, and both have been credited with reinventing drama: Shakespeare for the Elizabethan stage and Ibsen for the modern. In this course we will pair together plays by each author — those that stand in an explicit relation of influence as well as those that share a significant set of concerns — in order to investigate how each takes up and transforms key problems in the literary, political, and philosophical tradition for their own historical moment. Plays to be studied: by Shakespeare, A Midsummer Night's Dream, Hamlet, Othello, King Lear, The Tempest, A Winter's Tale; by Ibsen, St. John's Night, Hedda Gabler, Rosmersholm, The Wild Duck, The Master Builder, When We Dead Awaken.
Area: Humanities

AS.300.329. Literature of the Everyday. 3 Credits. The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read closely a set of novels by Flaubert, Mann, Dickens, Zola, Tolstoy, and Woolf from the period between 1850 and 1950 in which the development of realism reaches its climax. These novels explore the nature of work, family, the body, consciousness, and the changing relation between individual and tradition in modernity. We will situate these novels in their social, historical, and literary contexts, and establish a set of terms for the formal study of the novel as a genre (plot, character, setting, narrative, etc).
Area: Humanities
Writing Intensive

AS.300.336. Forms of Moral Community: The Contemporary World Novel. 3 Credits. Literary and philosophical imaginations of moral community in the post-WWII period (1950-2001). Texts include: Coetzee, Disgrace; McEwan, Atonement; Achebe, Things Fall Apart; Ishiguro, An Artist of the Floating World; Roy, The God of Small Things; Lessing, The Grass is Singing; Mistry, A Fine Balance; Morrison, Beloved; and essays by Levi, Strawson, Adorno, Murdoch, and Beauvoir on the deep uncertainty over moral community after the crisis of World War II. Close attention to novelistic style and narrative will inform our study of the philosophical questions that animate these works. What does it means to acknowledge another person's humanity? Who are the members of a moral community? Why do we hold one another responsible for our actions? How do fundamental moral emotions such as contempt, humiliation, compassion, gratitude, forgiveness, and regret reveal the limits of a moral community?
Area: Humanities

AS.300.337. The Tragic Tradition. 3 Credits. This course offers a broad survey of tragic drama in the Western tradition, from its origins in ancient Greece to the twentieth century. In weekly lectures and discussion sections, we will study the specific literary features and historical contexts of a range of different works, and trace the continuities and transformations that shape them into a unified tradition. Key questions and themes throughout the semester will include what counts as tragic, the tragedy of social and political conflict, the bearing of tragedy on the meaning and value of life, the antagonistic relation between world and humans, the promises and dangers of tragedy for contemporary culture. Authors to be studied: Sophocles, Euripides, Seneca, Shakespeare, Racine, Goethe, Ibsen, Strindberg, Chekov, Brecht, Pirandello, and Beckett.
Area: Humanities
AS.300.339. Introduction to Comparative Literature. 3 Credits.
This course offers an introduction to the history, theory, and praxis of comparative literature. We will read texts from some of the founding figures of the discipline and look at the most recent debates in the field, including translation studies, literary theory, and world literature, among others. Particular attention will be given to the methodologies and problems of studying literatures in different linguistic traditions and the relation between literature and other areas of thought and culture, such as philosophy, art history, and psychoanalysis. Case studies in comparative approaches to literature will provide concrete examples to our discussions.
Area: Humanities

AS.300.349. Capitalism and Tragedy: from the 18th Century to Climate Change. 3 Credits.
In contemporary discussions of climate change, it is an increasingly prevalent view that capitalism will lead to the destruction of civilization as we know it. The notion that capitalism is hostile to what makes human life worth living, however, is one that stretches back at least to the early eighteenth century. In this class, we will examine key moments in the history of this idea in works of literature, philosophy, and politics, from the birth of bourgeois tragedy in the 1720s, through topics such as imperialism and economic exploitation, to the prospects of our ecological future today. Authors to be studied: George Lillo, Balzac, Dickens, Marx and Engels, Ibsen, Weber, Brecht, Arthur Miller, Steinbeck, Pope Francis, and contemporary fiction, politics and philosophy on climate change.
Area: Humanities

AS.300.402. What is a Person? Humans, Corporations, Robots, Trees. 3 Credits.
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course investigates recent debates about being a person in literature and law. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Although our explorations will be focused on these questions, the genre of materials examined will be wide-ranging (including legal essays, philosophy, contemporary novels, and film). Texts will include novels by William Gibson and Lydia Millet, essays by John Dewey and Daniel Dennett, and films such as Ex Machina and Her.
Area: Humanities

AS.300.429. Literature of the Everyday. 3 Credits.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read closely a set of novels by Flaubert, Mann, Dickens, Eliot, Zola, Tolstoy, and Woolf from the period between 1850 and 1950 in which the development of realism reaches it climax. These novels transform the conventions for the representation of lives of lower and middle class subjects, revealing such lives as capable of prompting reflection upon deep and serious questions of human existence.
Area: Humanities
Writing Intensive

AS.300.437. Literature and Philosophy of the Everyday. 3 Credits.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read closely a set of novels by Flaubert, Mann, Dickens, Eliot, Zola, Tolstoy, and Woolf from the period between 1850 and 1950 in which the development of realism reaches it climax. These novels transform the conventions for the representation of lives of lower and middle class subjects, revealing such lives as capable of prompting reflection upon deep and serious questions of human existence. Theoretical and philosophical texts on the everyday by Auerbach, Kierkegaard, Heidegger, Sartre, Beauvoir, Lefebvre, Certeau, and Wittgenstein will accompany our discussions.
Area: Humanities

AS.300.609. Bildungsroman, Vollendungsroman: Novels of Youth and Old Age.
This seminar explores the Vollendungsroman, or novel of age, as a twentieth- and twenty-first-century counterpart to the late eighteenth- and nineteenth-century Bildungsroman that Moretti and others view as the symbolic form of modernity. We will examine how Vollendungsmane broach the relation between subjectivity and ‘age’ (not only in the sense of individual maturity, but also in the sense of historical epoch); how they bring into question traditional conceptions of growth, authority, interiority, body-soul, authenticity, and reconciliation; how they represent alternatives to the modes of moral response and being valorized in the Bildungsroman; and how, in and through their very form, they mediate upon the philosophical significance of the classic phase of the novel. Selected novels by Goethe, Austen, Brontë, Joyce, Woolf, Coetzee, Ishiguro, and McEwan. Open to qualified undergraduates.
Area: Humanities

AS.300.618. What is a Person? Humans, Corporations, Robots, Trees.
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course investigates recent debates about being a person in literature and law. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Although our explorations will be focused on these questions, the genre of materials examined will be wide-ranging (including legal essays, philosophy, contemporary novels, and film). Texts will include novels by William Gibson and Lydia Millet, essays by John Dewey and Daniel Dennett, and films such as Ex Machina and Her.
Area: Humanities
Writing Intensive

AS.300.629. Theory, Now and Then: Autonomy, Form, Critique.
This course explores recent developments and disputes in critical theory in relation to their longer philosophical genealogies. The three topics—form, autonomy, and critique—have been the subject of much recent debate, contention, and new analysis, yet each was also a source of critical and philosophical interest in years past. Our aim will be to make sense of today’s interventions in conversation with earlier theory. “Historical” theory writing will include Adorno, Lukács, Cavell, and Jameson; contemporary theory will include Nicholas Brown, Rita Felski, Caroline Levine, Mark McGurl, and Toril Moi.
Area: Humanities
AS.300.639. Literature and Philosophy of the Everyday. 3 Credits.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read closely a set of novels by Flaubert, Mann, Dickens, Eliot, Zola, Tolstoy, and Woolf from the period between 1850 and 1950 in which the development of realism reaches its climax. German Romance Languages Literatures

AS.211.203. Propaganda: From Blut und Boden to Post-Fact. 3 Credits.
This course taught by Writing Seminars professor Wayne Biddle and Media Studies professor Bernadette Wegenstein covers the 20th-century history of propaganda with special focus on its visual techniques, on censorship, and how media serve as sites of both control and resistance to power. We will pay particular attention to the influence of misinformation abetted by the new media revolution, and both the rise of the political rhetoric of “fake news” and the massive dissemination of actual fake news since the 2016 election. Students will write papers pegged to current issues and events using the critical framework developed in class. Cap 30 students. Reader: Jason Stanley: How Propaganda Works, Princeton University Press, 2015. Writing Intensive

AS.211.325. Representing Otherness in Literature and Film. 3 Credits.
The term ‘Otherness’ is known to be rooted in the Self-Other opposition as it emerged in German Idealism, adopted by psychoanalysis and transformed to Post-Colonial and Feminist theories. This theoretical framework will allow us to explore the role of the Other in literature and cinema. Students will become familiar with the historical development of the notion of the stranger through reading and analyzing various contemporary works of prose, poetry and cinema from various countries. We will analyze the ways in which these works depict Otherness and will investigate questions regarding their social, political and philosophical framework as well as the literary and cinematographic devices they employ. The course will have a comparative nature with the aim of learning more about the differences between the literary and cinematic representations.
Area: Humanities

AS.211.333. Representing the Holocaust. 3 Credits.
How has the Holocaust been represented in literature and film? Are there special challenges posed by genocide to the traditions of visual and literary representation? Where does the Holocaust fit in to the array of concerns that the visual arts and literature express? And where do art and literature fit in to the commemoration of communal tragedy and the working through of individual trauma entailed by thinking about and representing the Holocaust? These questions will guide our consideration of a range of texts — nonfiction, novels, poetry — in Yiddish, German, English, French and other languages (including works by Primo Levi and Isaac Bashevis Singer), as well as films from French documentaries to Hollywood blockbusters (including films by Alain Resnais, Claude Lanzmann, and Steven Spielberg). All readings in English. Prerequisite(s): Cannot be taken by anyone who previously took AS.213.361. Area: Humanities

AS.211.337. Wandering Jews? Jewish Migration in Film and Literature. 3 Credits.
Migration in all its forms has played a major role in shaping Jewish identity throughout history. From the Biblical exodus from Egypt through the beginnings of the diaspora under the Romans to the massive European Jewish immigration to America in the late 19th and early 20th centuries to the founding of the state of Israel, the migrations of Jews have also had a major place in Jewish literature. Going all the way back to the Bible, but focusing on the 20th century, this course will explore the ways in which literature and film represent the experience of migration, whether negative (compelled by expulsion or violence); positive (lured by economic or social opportunity); or somewhere in-between. We will examine poetry, plays, prose and film in Yiddish, German, Hebrew, and English (all in translation) on aspects of Jewish migration including the social and political factors motivating migration from the countryside to the shtetl (town) to the city and from Central and Eastern Europe to the Americas, Palestine, and Israel. Issues under discussion will include: adaptation and assimilation; minority rights; what is the relationship of old and new or major and minor languages and literatures; what is the place of tradition and heritage in a diasporic context? We will also consider the resonances between contemporary debates on migration and historical examples of these issues as they are reflected in literature and film.
Area: Humanities Writing Intensive

AS.211.361. Narratives of Dissent in Israeli Society and Culture. 3 Credits.
In this course we will study and analyze the notion of dissent in Israeli society and culture on its various literary and artistic forms. We will examine the emergence and the formation of various political and social protest movements, such as the Israeli Black Panthers, Israeli feminism and the 2011 Social Justice protest. We will discuss at length the history and the nature of dissent in the military and in relation to Israeli wars and will track changes in these relation. Significant portion of the course will be dedicated to the literary, cinematic and artistic aspects of Israeli protest and their influence on Israeli discourse. We will explore the nature and role of specific genres and media such as the Israeli satire, Israeli television, newspaper op-ed and the recent emergence of social media. Students wishing to work in English exclusively for 3 credits should enroll in section one. Students who are fluent in Hebrew and are wishing to attend an additional hour-long Hebrew discussion session per week with Professor Cohen (time TBD in consultation with enrolled students) for 4 credits should enroll in section 2.
Area: Humanities

AS.211.445. Rogues, Tricksters, and Saints: Boccaccio’s Decameron. 3 Credits.
Boccaccio’s Decameron (1352), a collection of 100 short stories, ranges from the bawdy through the cynical to the romantic and even fantastic. It has inspired numerous writers, artists, musicians and film-makers. We will read Boccaccio’s masterpiece on its own terms and in relation to the development of story-telling, from gossipy “news” (novelle) to artistic short story, theatrical adaptation, literary fairy-tale, and the fantastic. The Decameron will be compared with its forerunners in saints’ lives, bawdy fabliaux, and moral exempla, and with its literary, theatrical, and cinematic imitators in Italy and Europe. Italian graduate students and undergraduate majors will attend an extra weekly meeting conducted in Italian. Prerequisite(s): Students may not have taken AS.214.445.
Area: Humanities Writing Intensive
AS.211.477. Witchcraft and Demonology in Literature and the Arts. 3 Credits.
Who were the witches? Why were they persecuted for hundreds of years? Why were women identified as the witches par excellence? How many witches were put to death between 1400 and 1800? What traits did European witch-mythologies share with other societies? After the witch-hunts ended, how did “The Witch” go from being “monstrous” to being “admirable” and even “sexy”? Answers are found in history and anthropology, but also in theology, literature, folklore, music, and the visual arts, including cinema.
Prerequisite(s): Students who have already taken AS.214.171 cannot take AS.211.477.
Area: Humanities
Writing Intensive

AS.211.479. Dante’s Journey through the Afterlife. 3 Credits.
Dante’s Divine Comedy presents a complete picture of the medieval world-view in all its aspects: physical (the structure of the cosmos), historical (the major actors from Adam to Dante himself) and moral (a complete system of right and wrong). Dante shows how the Christian religion portrayed itself, other religions, the nature of God, humans, angels and devils, and human society. We will explore these topics both from the viewpoint of Dante’s own time, and in terms of its relevance to our own societal and cultural concerns.
Prerequisite(s): AS.214.479
Area: Humanities
Writing Intensive

AS.211.480. Religious Themes in Film and Literature. 3 Credits.
This course would be of interest to anyone who would like to learn about the intersection of religion and modern culture. At the center of the course will stand a close study of the representation of religious themes and their role in modern literature and cinema. The works which we will deal with are not considered religious and yet they include religious themes as part of their narrative, images, language or symbolic meaning. We will trace in various works from various countries and genre, themes such as: divine justice, providence, creation, revelation, the apocalypse, prophecy, sacrifice and religious devotion. We will also study the ways in which Biblical and New Testament stories and figures are represented in these works. The course will have a comparative nature with the aim of learning more about the differences between the literary and cinematic representations.
Area: Humanities

AS.211.754. Modernist Primitivism.
This course will explore the aesthetics and politics of primitivism in European modernity, focusing on the visual arts and literature in German and Yiddish, but looking at the wider European context, including France and Russia. We will begin with the backgrounds of primitivism in Romanticism, looking especially at its ethnographic and colonial sources. We will then focus on the presence of anthropological and ethnographic discourses within various registers of modernist thought, literature, and visual culture, with special attention to visual and literary primitivism. Our central concerns will include: the attempt to create a modernist aesthetics grounded in ethnography; the primitivist critique of modernity; the place of primitivism in the historical avant-garde; the development of the notion of “culture” in modernity; and the aesthetics of modern ethnic and national identity. &nbsp;Key thinkers, artists, and writers to be considered include Herder, Gauguin; Picasso; Wilhelm Worringer; Carl Einstein; Hannah Höch; and Emil Nolde.
Area: Humanities

Criticism in the 21st century has tended to relegate psychoanalysis to a dustbin of fads that proliferated at the end of the prior century but that today are of interest only to balkanized cliques of devotees. Bucking this trend, this seminar will examine the intellectual history and abiding influence of psychoanalysis’s key critical concept: the unconscious. Basing our discussions on in-depth readings from key thinkers in the analytic tradition such as Freud, Lacan, and Klein, as well as the post-analytic philosophical tradition, including Zizek, Butler, Laclau and Mouffe, Deleuze and Guattari, and Jameson, we will work to distill an understanding of the unconscious as essential to the practice of criticism tout court, and as inhering even in those discourses that have sought most stridently to distance themselves from it. Seminar discussions will take place in English; readings will be available in the original as well as in translation.
Area: Humanities
Writing Intensive

AS.213.321. Bodies and Pleasures. 3 Credits.
Taught in English. This course traces a literary history of sexuality from the Middle Ages to contemporary women’s writing. We will analyze how sexual pleasure changed over time. In particular, we will discuss what role literature plays in the reproduction and transformation of bodily pleasures. The course explores how the pleasures of bodies are imagined in and through literature, but also whether words are bodies that give pleasure and perhaps even have their own pleasures. Authors discussed will include Boccaccio, Cleland, Rousseau, Schlegel, Kleist, Hoffmann, Novalis, Arnim, Büchner, Freud, Rilke, Kafka, Rich, Foucault, Kristeva, Cixous, Giddens, and Winterson.
Area: Humanities

AS.213.328. German Literary Modernism. 3 Credits.
Taught in English. German Literary Modernism focuses on modernist works of literature between 1900-1930, considering central modernist authors against the backdrop of dramatic changes and events in European culture and society, including urbanization, technological change, the First World War, and social and artistic movements. Students will engage literary works–by such authors as Kafka, Rilke, Hofmannsthall and Thomas Mann–that express a sense of crisis about modern life, or provoke questions about the nature of reality, the human self, the reliability of perception, and the possibilities of language and art. ? Students have the option of an additional hour of German discussion and doing all the assignments in German for German-language credit (3+1) towards the major or minor. Students interested in that option should register for section 2.
Area: Humanities

AS.213.374. Existentialism in Literature and Philosophy. 3 Credits.
This course explores the themes of existentialism, including the meaning of existence, the nature of the self, authenticity and inauthenticity, the inescapability of death, the experience of time, anxiety, freedom and responsibility to others, in literary and philosophical works. It will be examined why these philosophical ideas often seem to demand literary expression, or bear a close relation to literary works. Readings may include writings by Kierkegaard, Nietzsche, Dostoëvsky, Heidegger, Rilke, Kafka, Simmel, Jaspers, Buber, Sartre, de Beauvoir, and Camus.
Area: Humanities
Writing Intensive
AS.213.446. Nature and Ecology in German Literature and Thought. 3 Credits.
Nature and Ecology in German Literature and Thought considers the understanding and representation of the natural world in literary works and aesthetic theory from the 18th to the 20th centuries. We will consider such topics as poetic reverence for nature, anthropocentric representations of nature in literature, the thematization of landscape, the representation of animal life, the distinction between the human and animal as explored by literary writers, and ecologically-oriented critique of human consciousness. Readings may include works by such writers and thinkers as Goethe, Kant, Hölderlin, Nietzsche, Heidegger, Rilke, and Kafka, and more recent works of literary ecocriticism.

Area: Humanities

AS.213.616. The Aesthetic Discourse of Modernity.
When, in 1985, Jürgen Habermas published his lectures on The Aesthetic Discourse of Modernity, he pursued a double aim. He offered a critique of French Theory while at the same time providing a foundation for a normative category of modernity in the tradition of Hegel. Curiously there is one subject he does not touch on, though it seems necessary for a sufficient understanding of modernity: the realm of art and literature. This course will develop a critique of Habermas' normative notion of modernity through re-readings of texts by Nietzsche, Benjamin, Horkheimer/Adorno, Derrida, Bataille and Foucault to elaborate an alternative category of aesthetic modernity. Taught in English. Reading knowledge of German and French is not required, but recommended.

Area: Humanities

AS.213.639. On the Difficulty of Saying I.
This course takes as its point of departure the position that language carries within it the traces of something that exceeds the cognitive grasp of the subject and to this extent undoes any claim to knowledge the subject might make. This position has been central to twentieth and twenty-first century thought from psychoanalysis and poststructuralism to media theory and new materialism. This course will not take issue with this position. It will examine instead how this position evolved from the Idealism of Fichte to the eerily inhuman, if not mechanical, talking figures in texts by Novalis ("Monolog"), Poe ("Maelzel's Chess Player"), Hoffmann ("Die Automate"), Büchner (Leonce und Lena), and Kafka ("Ein Bericht für eine Akademie"). We will explore the literature of the personal and impersonal in romantic and modernist texts in order to ask what moves and motivates works in which the first-person narrator would seem to be nothing more than a fiction—a staged phenomenon or a mechanical device.

Area: Humanities

AS.213.643. Franz Kafka in Philosophical and Literary Perspective.
This course is devoted to close study of the writings of Franz Kafka from both philosophical and literary perspectives. Writings will include Kafka's short prose works and novels along with philosophical and literary critical interpretations thereof. Readings may include commentaries by Walter Benjamin, Theodor Adorno, Hannah Arendt, Albert Camus, Giles Deleuze, and Giorgio Agamben. Primary texts for students from the German section will be in original; any other students may read Kafka in translation.

AS.213.687. Imagination in Philosophy and Literary Theory.
Imagination in Philosophy and Literary Theory is devoted to studying theories of imagination in the history of philosophy and literary theory, from the ancient Greeks to the present day. We will study philosophical conceptions of the role of imagination in memory, cognition, perception, and creativity, and assess traditional philosophical oppositions between imagination and reason, the imaginary and the real. Readings may include selections from Aristotle, Kant, Coleridge, Nietzsche, Husserl, Heidegger, Merleau-Ponty, Sartre, Dufренне, Stevens, Iser, Ricoeur, Ryle, Wittgenstein, and Nussbaum.

Area: Humanities

AS.214.477. Magic, Marvel, and Monstrosity in the Renaissance. 3 Credits.
Magic, Monstrosity, and Marvels or Wonders call into question what we see and experience: what is reality, what is illusion; what's natural and what's supernatural? What's human and what's more, or less, than human? During the Renaissance, ideas about the nature of reality were bound up with questions and issues very different from those of our time. With the exact sciences still being invented, the nature of the world was much less hard and fast for Renaissance people than it is for the modern educated person. The literary masterpieces of the Italian Renaissance provide vivid illustrations of the early modern sense of wonder. Foremost among these are the theatrical comedies which Italian authors revived in imitation of the ancients, and the romances, especially Ariosto's Orlando furioso (1532) and Tasso's Gerusalemme liberata (1581). These and other works influenced ideas about magical and marvelous phenomena across Europe for centuries to come. Works will be read and discussed in English. Italian majors and graduate students (who should enroll in section 2) will attend a weekly supplemental discussion in Italian and compose their written work in Italian.

Area: Humanities

AS.214.479. Dante Visits the Afterlife: The Divine Comedy. 3 Credits.
Dante's Divina commedia is the greatest long poem of the Middle Ages; some say the greatest poem of all time. We will study the Commedia critically to find: (1) What it reveals about the worldview of late-medieval Europe; (2) how it works as poetry; (3) its relation to the intellectual cultures of pagan antiquity and Latin (Catholic) Christianity; (4) its presentation of political and social issues; (5) its influence on intellectual history, in Italy and elsewhere; (6) the challenges it presents to modern readers and translators; (7) what it reveals about Dante's understanding of cosmology, world history and culture. We will read and discuss the Commedia in English, but students will be expected to familiarize themselves with key Italian terms and concepts. Students taking section 02 (for 4 credits) will spend an additional hour working in Italian at a time to be mutually decided upon by students and professor.

Area: Humanities

Writing Intensive

AS.214.640. Film Theory.
The seminar deals with film theory in its history and its current trends. We will examine structuralist, post-structuralist, feminist, Marxist, psycho-analytic and other theoretical approaches to understanding and interpreting the cinematic medium. We will look at several different genres of contemporary films from Italy, France, Spain, and Latin American Film, from auteur-films to independent documentary collectives, animation films to blockbusters. We will invite at least one film theorist and one filmmaker to class during the semester.

Area: Humanities
AS.215.290. Latin American Critical Perspectives on Colonialism: From the 'World Upside Down' to the 'Coloniality of Power'. 3 Credits.
This course, taught in English, examines how indigenous and local (postcolonial) intellectuals in Latin America responded to the ideology and practices of Spanish Colonialism in the earliest post-conquest years (1532), continued to battle colonialism during the period of the wars of independence, and finally arrived at the production of an analysis that shows how modernity is but the other face of colonialism. Among key works to be discussed are Guaman Poma's illustrated sixteenth-century chronicles, D.F. Sarramiento's _Civilization and Barbarism_ (1845), and Aníbal Quijano's 'Coloniality of Power' (2000).
Area: Humanities
Writing Intensive

AS.215.307. Cervantes: Don Quixote and The Exemplary Novels. 3 Credits.
In this course we will read the most important narrative works of Miguel de Cervantes, Don Quixote and the Exemplary Novels, works that are widely understood to have changed western literature. We will read both works in the English translation by renowned translator Edith Grossman, who will also visit Hopkins during the semester. Those who wish to receive credit toward the Spanish major will read the books in the original and attend a separate section conducted in Spanish. Those students should enroll in section 2 of the course.
Area: Humanities
Writing Intensive

AS.215.312. The Great Latin American novel according to Carlos Fuentes. 3 Credits.
An investigation into the historical development of the great Latin American novel according to Carlos Fuentes new book on the subject. Course includes reading novels by machado de Assis, Garcia Marquez, Carlos Fuentes, Vargas Llosa, Cortazar and Piglia
Area: Humanities

AS.215.361. A multidisciplinary Introduction to the Study of Latin America. 3 Credits.
The course brings together knowledges drawn from the fields of geography, history, anthropology, literature and art in order to provide access to the complexity of 'Latin America'. Students may opt do the reading in the original Spanish or Portuguese and also write in either language.
Area: Humanities
Writing Intensive

AS.215.406. Novelist Intellectuals. 3 Credits.
What does a novelist's op-ed about economics have to do with her literary writing? In what ways does a fiction writer's essays on the environment inform how we read her novels? What happens when we find the political opinions of a writer objectionable? This undergraduate seminar will consider what the Spanish writer Francisco Ayala termed "novelist intellectuals," that is, literary writers who actively participate in a society's public sphere. Considering writers from Madrid to New York, from London to Buenos Aires, we will ask how one should hold a novelist’s fictional and non-fictional writings in the balance and explore ways of reading that allow us to consider the public intellectual side and the aesthetic side of a novelist together.
Area: Humanities

AS.215.417. Literature of the Great Recession. 3 Credits.
The Great Recession—sometimes called the financial crisis or the economic crisis of 2008—brought financial markets to a halt and created significant political turmoil across the North Atlantic. But its impact on culture, and literature especially, has often been ignored. This seminar will travel across Europe, from Dublin to Madrid, from London to Reykjavík in order to examine how literature has registered this most recent economic crisis. We will focus on how crisis is narrated and the ways in which literary works have managed to provide a voice for marginalized social, economic, and political demands.
Area: Humanities

AS.215.489. Poetry in Latin America: A multilingual survey from 1200 to the present. 3 Credits.
The course focuses on a presentation of the multiple traditions of poetry writing that make up the Latin American tradition from the Mexica poets at about 1200 to current writers in Latin America. Original poetry in Nahuatl, Maya-Quiche, Spanish and Portuguese will be read along side translations into English. Attention will be paid to translation theory.
Area: Humanities
Writing Intensive

How should one study contemporary literature and culture? Is “the contemporary” a period in and of itself? Does it require a distinct conceptual approach? This graduate seminar will examine various approaches that have emerged since Michel Foucault called his genealogies a “history of the present.” We will pay special attention to contemporary literature and culture’s most distinguishing feature today: crisis. Considering theories of crisis and “the contemporary” together, the course will explore how living in a time of overlapping crises—economic, political, social, cultural, environmental, and others—affects the way we interpret the world.
Area: Humanities

The course engages close readings of Borges critical essays and some of his fiction in order to establish the points of interpellation that Postmodern theory takes from or shares with Borges’s meditation on the problem of writing.

History

AS.100.257. From Voice to Parchment: Media and Communication before the Printing Press, 800-1440. 3 Credits.
Epic traditions, call to Crusade, public curses, music of the troubadours: this course examines oral tradition and music—the ‘viral media’ of premodern Europe—while tracing the impact of new recording technologies: early musical notation, manuscripts, and book production.
Area: Humanities, Social and Behavioral Sciences

AS.100.326. The High Middle Ages, 1000-1400. 3 Credits.
Explores the development of society and institutions in the medieval west including kingship and law, religion and difference, gender and ideology. Looks closely at social responses to change and adversity.
Area: Humanities, Social and Behavioral Sciences

AS.100.334. Billie Holiday and American Culture. 3 Credits.
A course examining introducing students to the life, times and music of Billie Holiday. We will read biographies, autobiographies, novels, and listen to music.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
**AS.100.354. Playing in the White: Black Writers, the Literary Colorline and Writing Whiteness. 3 Credits.**

This course will turn to known and not-so-known black writers during the early to mid-twentieth century who defied literary expectation and wrote stories that featured or focused on whiteness. We will consider what whiteness offered black writers and the political work that their literary experimentations did for a white American publishing industry.

Area: Humanities, Social and Behavioral Sciences

**AS.100.373. Crime, Punishment, Felony and Freedom: Law and Society in Pre-Modern England. 3 Credits.**

Using legal texts as a window into English society, we will address the changing nature of royal power, trial by jury, treason, felony, and the freedoms enshrined in the Magna Carta.

Area: Humanities, Social and Behavioral Sciences

**AS.100.672. Medieval Materialities: Objects, Ontologies, Texts and Contexts.**

We will use the meanings and methodologies of “materiality” to examine the medieval world, by analyzing objects, texts, networks, patterns of circulation and appropriation, aesthetics and enshrinement, production and knowledge communities.

Area: Humanities, Social and Behavioral Sciences

**AS.100.725. Sex and Slavery II.**

Research and methods in the field of sexuality and slavery studies. Part 2: Caribbean & African Continent.

Area: Humanities, Social and Behavioral Sciences

**History of Science, Medicine, and Technology**

**AS.140.674. Science and Medicine in Early Modern Atlantic World Culture.**

How were changes in scientific and medical ideas reflected in cultural products of the early modern Atlantic world? We will study these ideas as they appeared in literary genres such as poetry, utopias, natural histories and travel narratives. Likewise, we will examine the visual culture of the Atlantic space for clues about changing conceptions about the natural world. Our expedition will encompass Anglophone, French and Hispanic regions, and will pay careful attention to hybrid cultural products that reflect the interaction between indigenous cultures and the (changing) European understanding of the natural world.

**Interdepartmental**

**AS.360.133. Freshman Seminar: Great Books at Hopkins. 3 Credits.**

Students attend lectures by an interdepartmental group of Hopkins faculty and meet for discussion in smaller seminar groups; each of these seminars is led by one of the course faculty. In lectures, panels, multimedia presentations, and curatorial sessions among the University's rare book holdings, we will explore some of the greatest works of the literary and philosophical traditions in Europe and the Americas. Close reading and intensive writing instruction are hallmarks of this course; authors for Fall 2023 include Homer, Plato, Dante, John Donne, George Herbert, Christina Rossetti, Mary Shelley, Frederick Nietzsche, Isaac Bashevis Singer, Frederick Douglass.

Area: Humanities

**Writing Intensive**

**Program in Museums and Society**

**AS.389.329. Author/Canon/Archive. 3 Credits.**

Why are some literary works from the past reprinted, anthologized, and considered worthy of study, but not others? Why are some works “lost” and some “rediscovered,” while others simply fall out of favor? Focusing on nineteenth- and early twentieth-century American literary culture, we will use rare books and archival materials from JHU collections to examine Edgar Allan Poe, Walt Whitman, Emily Dickinson, Stephen Crane, Charles Chesnutt, and Zora Neale Hurston, along with a few authors you’ve never heard of, in terms of the relationship between authorship, stewardship, and status.

Area: Humanities, Social and Behavioral Sciences

**AS.389.343. Edgar Allan Poe and His Afterlives. 3 Credits.**

We will investigate the creative development and iconic afterlife of a canonical American author, Edgar Allan Poe, as a case-study in literary legacy and cultural heritage. What is the lifespan of a literary work, and how do works “stay alive” for later generations? Students will examine rare Poe materials and create a digital exhibition of Poe archives.

Area: Humanities, Social and Behavioral Sciences

**AS.389.346. Scribbling Women in the Literary Archive. 3 Credits.**

Students examine select texts and archival materials related to Emily Dickinson, Frances Ellen Watkins Harper, Edith Wharton, Ida B. Wells, Charlotte Perkins Gilman, Sui Sin Far, Alice Duer Miller, and Zora Neale Hurston. Students interrogate how these writers navigated the constraints of gender, as informed by race and class, in the decades before and after the 19th Amendment and consider literary collecting in relation to gendered cultural politics.

Area: Humanities, Social and Behavioral Sciences

**AS.389.359. Modernist Networks in the Archive. 3 Credits.**

This class examines three American writers who built important and enduring networks, Ezra Pound, Gertrude Stein, and Langston Hughes. We will investigate the artefactual traces of their networks through recently acquired special collections materials and digital representations, in order to address questions about aesthetics and style, politics and power, race and gender, and what is and is not present in the literary archive.

Area: Humanities

**Study of Women, Gender, Sexuality**

**AS.363.331. Gender and Sexuality beyond the Global West: Stitching Women-Sewing and Gender, Labor, and Art. 3 Credits.**

What's radical about stitching? And how did sewing coming to be viewed—across centuries, cultures, regions, and political epochs—as (in embroidery artist Hannah Hill's words) "women's work"? This course will analyze and discuss how work with needle and thread has been associated with women, their bodies, and the domestic space where the repetitive labor of mending, the mixed opportunity for making, and the devalued practice of the "applied arts" took place. Looking at histories of work, fictions, and visual objects, we will explore stitching's gendered past and its potential for oppressive normativity and radical, creative expression alike. Over the semester, our course follows the "red thread" of stitching via four short response papers (or one Unessay), one in-class presentation, and one final oral history/research project on an interdisciplinary discussion related to the (often radical) politics and poetics of women's lives and works. Authors and artists may include Elizabeth Barrett Browning, Emily Dickinson, Elizabeth Gaskell, Virginia Woolf, Alice Walker, Carol Ann Duffy, Alice Dunbar-Nelson, Tracey Emin, Louise Bourgeois, Elaine Reichek, Silvia Federici, Mariarosa dalla Costa, Kyung-Ah Ham, and Project Runway.

Area: Humanities
English, Bachelor of Arts

English Major Requirements

(Also see Requirements for a Bachelor’s Degree (p. 1584).)

In addition to demonstrating foreign language proficiency in at least one classical or modern foreign language, the English major requires students complete general courses in the humanities and social science, a required course in literary study (AS.060.107 Introduction to Literary Study), and nine additional English courses, of which at least three must be literature before 1800. Within the nine additional English courses, at least two and no more than four courses must be designated as lecture courses. Students may identify lecture courses by the presence of the POS-Tag ENGL-LEC in a course description in the schedule of classes. Pre-1800 literature courses are identified by the POS-Tag ENGL-PR1800, and Global and Minority Literature courses are identified by the POS-Tag ENGL-GLOBAL. Additional details include:

- Only two courses towards the nine required English courses for the major may be taken outside of the department and those must be cross-listed with the English department.
- Only two independent studies or senior essay courses may apply towards the major.
- Students must earn a grade of C- or better in all major requirements and courses may not be taken satisfactory/unsatisfactory.

* Should be taken no later than sophomore year.
** Students are required to take at least two lecture courses and up to four lecture courses may apply towards this requirement. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the English course requirements of the major without permission of the Director of Undergraduate Studies. Typically, up to two courses taken through approved study abroad programs may be applied towards the major with approval of the director of undergraduate studies.

*** One of these three courses must be a non-lecture course.

the following major literary fields: the Renaissance, the 18th century, the Romantic period, the Victorian period, American literature, and 20th-century literature.

The department accepts only full-time students working toward the Ph.D.; there is no autonomous M.A. program. Because of its small size and the close association between faculty and students, the department is able to offer an intensive program leading to the Ph.D. in five years.

Program Requirements

Students are required to enroll in three graduate courses in each of the semesters of their first year of study and two in each of the semesters of their second year. By the end of the third year, students will have completed 10 graduate seminars, an oral examination in two fields, and examinations in one or two foreign languages. Fourth-year students will receive dissertation fellowships.

Teaching experience is regarded as an important part of the graduate program, and graduate students are required to teach in the department's literature and expository writing courses during their second, third, and fifth years at Hopkins.

For further information about graduate study, contact the graduate coordinator at the Department of English or go to http://english.jhu.edu/graduate/.

Film and Media Studies

The Film and Media Studies Program offers a comprehensive education in all aspects of the art, theory, and history of the moving image. We offer courses in critical studies, screenwriting and filmmaking—narrative, documentary, experimental film, animation —within a rigorous curriculum designed to foster critical understanding and historical knowledge. Student filmmakers and scholars explore the relationship of film and media to modern cultures, literatures, art, history, and philosophy in a new 20,000 square foot facility that offers an enhanced learning environment as well as all the tools available to professional filmmakers: a large sound stage, a recording studio, computer labs, editing suites, a screening room, classrooms, and state-of-the-art equipment.

Our faculty, comprised of renowned scholars and filmmakers, is known for its dedication to teaching and promoting a highly collaborative and nurturing environment. Our small size allows us to offer undergraduates an unusual amount of hands-on experience, intensive mentoring, individual attention, and access to special opportunities.

Many of our students go on to attend graduate film school or to work in the film and media industries after graduation. Among our graduates are directors, screenwriters, producers, editors, actors, cinematographers, financial and marketing executives, film scholars and curators, entertainment lawyers, agents, digital technicians, and web designers. Our rapidly growing network of alumni provides graduates with essential support and mentoring, opening doors to a wide range of opportunities in the film and media industry. In addition, our undergraduates avail themselves of generous filmmaking grants and funding opportunities from a range of resources available only to FMS majors and minors.

Advising for Students

All students, whether their goals are professional or not, should choose courses in consultation with their major advisor to suit their individual needs and satisfy departmental requirements. Students planning to enter graduate school in English should study a second foreign language. Students who have not yet been assigned to a major advisor may discuss departmental requirements and curriculum planning with the director of undergraduate studies.

Honors in English

Departmental honors are awarded to undergraduate English majors who achieve a cumulative average of 3.6 or higher for all English courses taken to satisfy the major requirements. For more information about Honors in English, contact the director of undergraduate studies in English.

Senior Essay Option

Majors with a cumulative G.P.A. of 3.6 in English courses by the end of the fall semester of their junior year may apply to write a senior essay in the fall of their senior year. For further information and deadlines, contact the director of undergraduate studies in English.

English, Minor

English Minor Requirements

Students who wish to graduate with a minor in English must take AS.060.107 Introduction to Literary Study, generally within one year of declaring the minor. Six additional English courses are required, of which at least two and no more than three must be lecture courses. At least one of the six courses must be a pre-1800 course and at least one course must be a Global and Minority Literatures course. Students must earn a grade of C- or better in all minor requirements and courses may not be taken satisfactory/unsatisfactory.

Courses

AS.061.102. The Cannes Film Festival: Introduction and History. 1 Credit.
In recent decades, film festivals have become important venues for generating international audiences by simultaneously fostering aesthetic communities and creating marketing opportunities. This course considers the purpose and function of the film festival by examining the singularly influential festivals of Cannes. We will read about the culture, politics, and commerce of the festival, and compare Official Selection films with more the more unorthodox choices of the parallel sections: A Certain Regard and Directors’ Fortnight. Meets 5x during the semester. Required for students participating in the Cannes Study Abroad. Open to all.
Area: Humanities

AS.061.105. Freshman Seminar: The Films of 1968. 2 Credits.
1968 was a year of protest and revolution around the globe, and a new audience of youthful cinephiles was hungry for movies that reflected the changing political and cultural landscape. The films of 1968 rose to the challenge, comprising a remarkable document of the times that collectively upended cinematic traditions and old ways of viewing with bold new forms and content. This course examines those cinematic visions—from classics like 2001: A Space Odyssey, Once Upon A Time in the West and Night of the Living Dead to influential groundbreakers like John Cassavetes’ Faces, Jean-Luc Godard’s La Chinoise and Lindsay Anderson’s If, . . . - looking closely at individual films and examining both their contemporary contexts and their relevance today. Films will be viewed and discussed in class.
Area: Humanities

AS.061.138. Acting for Filmmakers. 1 Credit.
This is a series of 3 workshops. 1. ACTORS’ HOMEWORK & CAMERA AS OBSERVER—Students will discuss and experiment with different methods of preparing for a role. Trying different methods, feel what works for them. We will work on short scenes and have an open discussion about goals, believability, emotional fatigue, distortions of the filming process. ~On the Sound Stage working in front of the camera: ~show how the camera watches performers’ thoughts. ~differences between working in front of a camera and playing to a live audience. ~Shooting: coverage continuity eye lines & marks blocking & restricted movement 2. AUDITIONS AND CASTING: ~Students will be given a variety of scripts to audition for. ~Discussion of casting: from actors’, directors’ and casting directors’ perspectives. ~How others perceive you- an exercise in diplomacy and self awareness. ~Preparing for an audition. both cold and rehearsed. ~Improvis during auditions. ~Memorization (quick!) for auditions. ~We will rehearse and film auditions. ~Review and analyze audition videos. 3. ACTORS DIRECTING DIRECTORS. Working in groups and/or pairs, students will explore what kinds of direction works for them and for others. Students will have an open discussion as to what they need to hear from their director. This will be a class where it is safe to learn what does and doesn’t work when communicating with actors—especially from the actors’ perspective. The goal is not to deliver a professional performance in the class, but to explore how it feels to be directed.
Area: Humanities

AS.061.140. Introduction to Cinema, 1892-1941. 3 Credits.
This course explores the fundamentals of film analysis and encourages students to embark on an exploration of the first half of our first century of movies. It teaches the basic elements of film form, as well as their use in films across the globe from the turn of the twentieth century through the start of World War II. Movements discussed include the silent comedy of Charlie Chaplin, Buster Keaton, and Harold Lloyd, moody German Expressionism, the playful anarchy of Surrealism, the fundamentals of editing with Soviet Montage, the beauty of French poetic realism, the rule-breaking of Pre-Production Code cinema, the work of the young Alfred Hitchcock, and, of course, highlights of classical Hollywood filmmaking. Fee $50 lab fee.
Area: Humanities

Writing Intensive

AS.061.141. Introduction to Cinema, 1941-present. 3 Credits.
Introduction to Cinema provides an overview of American and international cinema from the post World War II era to the present. Through lectures and discussion, weekly screenings, and an intensive visual analysis of individual films, we will explore the aesthetic, cultural, political, and economic forces that have shaped the art and industry of film over the past 70 years. Regular quizzes, writing assignments, class participation required. Mandatory film screenings. Lab Fee $50.
Area: Humanities

AS.061.145. Introduction to Digital Video Production: Visual Language. 3 Credits.
This course is a study of the visual language used to create a moving picture. Through screenings and discussion of films, videos, and related readings, students will develop a visual critical facility and will demonstrate this facility in a few response papers to screenings and video projects. The course will focus on image construction, including composition, framing, movement inside the frame and use of light as well as use of sound. Students will learn to be attentive to rhythm and tempo in picture editing and sound. In-class video assignments included, in which students will work in small groups of three. Lab fee: $100
Area: Humanities

Writing Intensive

AS.061.148. Storytelling for Film and Fiction. 3 Credits.
Through the analysis of narrative films, short fiction, myths, fairy tales, and ghost stories, and through the workshopping of their own creative writing, students will explore the art and science of 'a good story well told.' The course will offer an introduction to dramatic and visual storytelling, and is an essential primer for upper-level screenwriting. Lab fee $50.
Area: Humanities

Writing Intensive

AS.061.150. Introduction to Film Production. 3 Credits.
This course introduces students to basic considerations of shooting 16mm film. Through lectures and practice, the course approaches the basics of light meter readings, basic camera operations and shot composition. The course also highlights specific readings from classical film theory to augment weekly shooting exercises. Each week students, working in groups, shoot film exercises, providing a general overview of film production. For the final project, each group shoots and edits (physical edits) a short (3-5 minutes) film on 16mm black and white reversal film stock. Lab fee: $200
Area: Humanities
AS.061.152. Introduction to Digital Video Production. 3 Credits.
This course introduces students to the world of digital filmmaking. Through screenings, production assignments, and in-class labs, students will develop proficiency in digital cameras, sound recording devices, and software. Students will work individually and in groups to produce several video projects. For their final projects students will pitch an idea and develop a more complex film. Lab fee: $100
Area: Humanities

AS.061.154. Lights, Camera, Action: Bogart. 1 Credit.
This mini-course will offer an introduction to the basics of film analysis through a survey of films starring the legendary Humphrey Bogart. Short weekly written responses. No prior experience in film studies required; non-majors welcome. This one-credit course will meet September 3, 10, 17, 24, and will be graded Pass/Fail. Due to the limited number of meetings, perfect attendance is required.
Area: Humanities

AS.061.155. Lights, Camera, Action: Coming of Age Films. 1 Credit.
This mini-course will offer an introduction to the basics of film analysis through a survey of coming of age films. Short weekly written responses, in-class screenings, and emphasis on discussion over lecture. No prior experience in film studies required. This one-credit course will meet September 5, 12, 19, 26, and will be graded Pass/Fail. Due to the limited number of meetings, perfect attendance is required.
Area: Humanities

AS.061.156. Lights, Camera, Action: On Location. 1 Credit.
This mini-course will explore the role of place in film; location not merely as setting, but as character, condition, mode of thought. Real and imagined, found and constructed worlds will be considered. Are all cinematic worlds virtual? In-class screenings and an emphasis on discussion over lecture. This 1-credit course will be graded Pass/Fail. Perfect attendance required. Class meets September 19, 26, October 3, 10.
Area: Humanities

This mini-course will explore how cinema makes the invisible visible; how image and audio can reveal not only cultures and practices 'invisible' to the mainstream, but also nuance and dimension in a world we only imagine we already see and hear. The camera is itself, in Pater's words, the 'sudden light [that] transfigures a trivial thing'. Fiction, nonfiction, and experimental films will be considered. In-class screenings and an emphasis on discussion over lecture. Four short written responses. Perfect attendance required.
Area: Humanities

AS.061.158. Lights, Camera, Action: David Lynch. 1 Credit.
An introduction to the basics of film analysis, through the work of contemporary American film and television director David Lynch. Though essentially cinematic, Lynch's mysterious, dreamlike style, as evidenced by movies like Wild at Heart, Blue Velvet, Mulholland Drive, and Twin Peaks: Fire Walk With Me, invites a multitude of entry points for discourse. Short weekly written responses, in-class screenings, and emphasis on discussion over lecture. No prior experience in film studies required.
Area: Humanities

AS.061.159. Lights, Camera, Action: Hitchcock. 1 Credit.
An introduction to the basics of film analysis, focusing on the work of the 'Master of Suspense,' Alfred Hitchcock. Short weekly written responses, in-class screenings, and emphasis on discussion over lecture. No prior experience in film studies required. This one-credit course will meet on Sept. 21, Sept. 28, Oct. 5, and Oct. 12 and will be graded pass/fail.
Area: Humanities

AS.061.161. Introduction to Short Film Making. 3 Credits.
In this introductory course, students will create short films using digital camera equipment, sound recording devices and the film editing software program, PremierePro. We will watch a variety of films in class; hold readings and discussions based on assigned text, take technical workshops on sound, lighting and hold a short workshop on 16mm film. We will study the history of filmmaking, with a strong focus on the avant-garde and experimental genres. We will also learn about current movements and trends that have developed throughout the world and have the opportunity to meet with Baltimore filmmakers in class. Students will finish the course with a greater understanding of the lineage of cinema and will have learned a range of techniques to create, experiment and develop their own language of visual storytelling. We will discuss, engage, explore and most of all have fun! No prior experience with film or video required.
Area: Humanities

AS.061.201. Intermediate Video Production: Sound Art for Filmmakers. 3 Credits.
David Lynch once said 'Films are 50 percent visual and 50 percent sound. Sometimes sound even overplays the visual! This course is dedicated to challenging young filmmakers to conceptualize sound as sculpture and mine the evocative potential of sonic arts. Students will learn and create with a variety of modular synthesizers, digital recorders, and samplers. We will listen to a diverse spectrum of audio content such as musique concrète, plunderphonics, sound collage, and sound design for radio and cinema. Throughout the semester students will create several "imageless films." In the final month of the semester, students will choose one sound project to refine and incorporate moving image. $100 Lab Fee.
Prerequisite(s): AS.061.150 OR AS.061.152
Area: Humanities

AS.061.202. Intermediate Film Production: Personal Essay Film. 3 Credits.
In this course students will consider variations of the personal essay film, wherein filmmakers explore their own experiences, both real and imagined. These films constitute dialogues between filmmaker and world using subjective approaches, including but not limited to first person narration. Students will make a short (4-6 minutes) 16mm film from original and possibly archival footage; their own filmic essays based upon personal experiences. We will look at the works of several essay filmmakers including Ross McElwee, Jean Luc Godard, Chris Marker, and Su Friedrich.
Area: Humanities
AS.061.205. Introduction to Screenwriting. 3 Credits.
In this course we will explore the basic principles of visual storytelling in narrative film as they apply to the design, creation, and revision of the screenplay. Specifically, we will focus on learning the craft of screenwriting — strategies, processes, and philosophies that writers can develop, practice, and rely upon as they progress through a series of screenwriting exercises and write three short screenplays, which will be critiqued in-class during weekly table reads and with the Instructor (one-on-one) during office hours. Select professional screenplays will be read and analyzed — and clips from select films viewed — to further explore what works well on the page, and how it translates to working well onscreen. Final Draft screenwriting software is required; a FREE 18-week trial will be made available for all students who don’t already have Final Draft.
Area: Humanities
Writing Intensive

AS.061.211. Intermediate Film Production: First Person/Third Person Essay Film. 3 Credits.
Each student shoots an essay film (16mm color and/or black and white) written either in first person or third person, or perhaps, both. The third person essay incorporates the ideas of various authors while the first person film is written chiefly from personal experience. Each film should run between 4-8 minutes. Lab Fee: $200. This course satisfies the Intermediate Film Production requirement.
Prerequisite(s): AS.061.150
Area: Humanities

AS.061.212. Assembling an Idea: The Documentary Process. 3 Credits.
A compelling documentary begins with a compelling idea. (The term “documentary, for our purposes, resists categorization.) But by the time that documentary is completed, the initial idea has likely gone through a radical and rigorous exploration. The initial idea may emerge from a sudden thought, a chance encounter. It is the moment when a constellation begins to form. The final driving idea behind a documentary may bear little resemblance to that first thought. We will begin with each of your ideas, perhaps, little more than a vague feeling. The painter, Paul Klee, wrote that “drawing is taking a line for a walk.” In this course we will take each of your ideas for a walk, imagining why and how the idea might be realized. The why and the how will involve imaginative thinking, seeking additional ideas that coalesce with that first thought. In this way we begin to assemble the constellation that is your idea. To some degree we are less concerned with the initial idea than the subsequent ideas it suggests. The process may involve archival image research, readings, your own writing, listening to music and sounds, and sometimes, just letting your idea wander off on its own. Our goal is to experience the growth of an idea into an articulated intention. That intention is then expressed through a plan incorporating visual style, sound design, and, if appropriate, text. There is no production requirement for this course. There is no requirement of film or video experience. You are required to bring with you an idea that has found you. The point of all of this is for each of you to engage, on a deep and thoughtful level, with an idea that has asked for your help.

AS.061.213. Screening Difference: Race in American Film. 3 Credits.
This course will explore how race and ethnicity have been represented in American film from the early 20th century to the present. Through in-class screenings, open discussion, and short, analytical written responses, students will learn the basics of film analysis and improve their critical thinking skills. No prior experience in film studies required.
Area: Humanities
Writing Intensive

AS.061.214. Demystifying the Entertainment Business. 3 Credits.
For many, the entertainment business is alluring. For all, it’s pretty confusing. Demystifying the Entertainment Business is a two-week online course that offers students insight into: behind-the-camera careers in the field (specifically writing, directing, producing, and developing); how to best prepare for those careers; and how to break into the industry once graduation finally comes. Students should be prepared to write and read scripts, offer feedback to their fellow students, shoot and edit videos, and create career goal maps and resumes. (Note: some level of basic shooting and video editing acumen will be necessary, as a short film deliverable will be required for successful course completion.) By the end of the course students will understand the basic mechanics of the entertainment industry and where they might like to fall within it, and they will walk away with a complete short film they’ve written and directed.
Area: Humanities

AS.061.215. Special Topics: Producing the Independent Film. 3 Credits.
This course will explore the exchange of ideas and techniques between literary modernism and modernist cinema: how Virginia Woolf’s writings on the cinema connect with her use of shifting points-of-view as literary devices, how James Joyce influenced the Soviet filmmaker Sergei Eisenstein and how Eisenstein in turn influenced the American novelist John Dos Passos, how Franz Kafka’s frequent trips to the movies reflect in his fiction, and how artists ventured broadly to develop experimental languages for expressing the new speeds and scales of modern life. Additional texts will be drawn from novels, essays, poems, and films from Ezra Pound, T. S. Eliot, Charlie Chaplin, Claude McKay, Zora Neale Hurston, Anita Loos, Andrei Bely, Dziga Vertov, Gertrude Stein, Louis Aragon, and René Clair. The course fulfills the writing intensive requirement and involves a series of essays on literature and cinema from a critical perspective.
Area: Humanities
Writing Intensive

AS.061.216. Special Topics: Silent Classics. 3 Credits.
A survey of silent era masterpieces. From Murnau’s horror film Nosferatu to Keaton’s slapstick comedy Sherlock Jr to Dreyer’s great tragedy The Passion of Joan of Arc, these are films of exceptional beauty and artistry. Chaplin, Eisenstein, von Sternberg, and others also considered. Recommended course background: AS.061.140 or AS.061.141 or AS.061.145. Lab Fee: $50. Counts toward 200-Level critical studies requirement.
Area: Humanities
Writing Intensive

AS.061.217. Special Topics: Demystifying the Entertainment Business. 3 Credits.
This class will guide students through the process of producing an independent film in the United States. The chronology of lectures and coursework will follow the timeline of a project, from conception through financing and development, production, postproduction, marketing, and exhibition. Students will learn how to package and pitch projects, budget and schedule a screenplay, develop a financing plan, supervise production and post-production, and mount a viable festival and distribution strategy. Lab Fee: $40
Area: Humanities
Writing Intensive

AS.061.218. Modernist Literature and Film. 3 Credits.

AS.061.219. Special Topics: Animation Workshop. 3 Credits.

AS.061.220. Special Topics: Silent Classics. 3 Credits.

AS.061.221. Special Topics: Producing the Independent Film. 3 Credits.
AS.061.222. Analyzing Popular Culture. 3 Credits.
This course provides an introduction to the critical analysis of popular culture through the major theoretical paradigms of media and cultural theory. The teaching method uses a combination of media studies and sociology to explore popular culture and is designed to encourage students to become more active critics. The course presents a range of media from contemporary popular music to film and television. Smaller subjects include the teen ‘pop’ love song, the politics of representation, and the formation of subcultures.
Area: Humanities
Writing Intensive

AS.061.224. Special Topics: The Business of Film. 3 Credits.
Law and economics shape the movie business. This course will survey the legal doctrine and financial concepts of film production and distribution, providing both an overview of one particular industry (i.e., Hollywood) as well as an introduction to fundamental principles applicable to any industry. $40 Lab fee
Area: Humanities

AS.061.225. Almost Grown. 3 Credits.
An introduction to the basics of film analysis through a survey of American coming of age films from the mid 20th century to the present. Attention to questions of race, class, and gender. A variety of genres considered. No prior experience in film studies required. In-class screenings and emphasis on discussion over lecture. Each student will write regular film responses, give an oral presentation, and write a short essay, 8-10pp., with a revision.
Area: Humanities
Writing Intensive

AS.061.226. French New Wave. 3 Credits.
An exploration of the major films and directors of the French New Wave that is also designed to help students consolidate their skills in the analysis of film. The course will examine the origins of the French New Wave, looking at the directors as critics and as passionate film fans, along with the institutional and historical context of the films. It will also ask how the French New Wave changed the process of filmmaking, and transformed the way we think about the work of the director–inspiring more vocations in filmmaking than any other movement in cinema history. Film screenings T 7:30-10:00PM. $40 lab fee.
Area: Humanities
Writing Intensive

AS.061.227. Intermediate Video: Dreams, Psychosis, and Altered States in Cinema. 3 Credits.
In this production course, students will create multiple video projects that reflect the representation of dreams, psychosis, and altered states in cinema. We will screen and deconstruct a variety of feature films, video artworks, and music videos to understand the mechanics and language of subjective realism as a narrative form. We will trace this stylistic lineage from its roots in art house cinema to its rise as an accepted Hollywood modality. We will also explore editing and software techniques that will further students’ ability to create stunning works of strange beauty. Basic proficiency with digital cameras and editing is required. This class fulfills the intermediate film production requirement.
Area: Humanities

AS.061.228. Almost Grown. 3 Credits.
A workshop that focuses on writing critical and analytical essays about movies recent and classic. Students will write progressively longer and more complex essays– submitting working drafts and making revisions– and participate in critiques and discussions of one another’s writings. Fulfills Film and Media Studies expository writing requirement. Lab Fee: $50
Area: Humanities
Writing Intensive

AS.061.229. Intermediate Digital Video Production: Advanced Camera. 3 Credits.
This course will serve as an introduction to Adobe After Effects. Students will learn a variety of motion graphics techniques such as digital character animation, rotoscoping, motion tracking, chroma key compositing and automating 3D cameras. Through screenings and discussions students will gain insight into the myriad of ways After Effects is used in Film and Television. Throughout the semester students will complete several short video art projects.
Prerequisite(s): AS.061.152 OR AS.061.145
Area: Humanities

AS.061.230. Intermediate Digital Video Production: Experimental Forms. 3 Credits.
This production course focuses on key movements in both Experimental Film and Video Art. Production assignments will arise from: Structural Film, Performance Art, Lyrical Film, Psychedelic Video, and Experimental Ethnography. Students will explore how these movements developed outside (and at times in opposition to) the mainstream, and became integral to the aesthetics of contemporary art, film, and television. Students will think critically about the personal and societal function that video artwork serves, and gain insight into the history of Experimental Film. At the end of this course, students will have a more nuanced understanding of contemporary media art, and they will be more proficient in video editing and cinematography, which they can apply to future work on: commercials, music videos, webcasts, and feature films.
Prerequisite(s): AS.061.152 OR AS.061.145
Area: Humanities

AS.061.231. Intermediate Digital Video Production: After Effects. 3 Credits.
In this production course students will gain proficiency on a variety of Digital Cinema Cameras. Students will work with the Canon C300, C500, and FS7. We will discuss picture profiles, different lens options, external capture devices, and shotgun microphones. We will thoroughly explore the various unique functionality of each camera. Throughout the semester students will complete several cinematography focused video projects.
Prerequisite(s): AS.061.145 OR AS.061.152
Area: Humanities

AS.061.232. Reading the Moving Image. 3 Credits.
This course will emphasize close observation and critical thinking. Through weekly screenings and class discussion, students will practice noticing; seeing and hearing with fresh eyes and ears, and taking nothing on screen for granted. And they’ll learn to reflect on and contextualize what they find, drawing evolved conclusions about how film texts communicate ideas and what those ideas may be. They’ll consider all elements of cinematic form; an array of analytical frameworks including genre, historical era, authorship, and modes of production; and representations of gender, race, and class. Regular quizzes, a short oral presentation, and a short written analysis. No prior experience in film studies required; majors and non-majors welcome.
Area: Humanities
Writing Intensive

AS.061.233. Intermediate Digital Video Production: Adobe After Effects. 3 Credits.
This course will serve as an introduction to Adobe After Effects. Students will learn a variety of motion graphics techniques such as digital character animation, rotoscoping, motion tracking, chroma key compositing and automating 3D cameras. Through screenings and discussions students will gain insight into the myriad of ways After Effects is used in Film and Television. Throughout the semester students will complete several short video art projects.
Prerequisite(s): AS.061.152 OR AS.061.145
Area: Humanities

AS.061.234. Intermediate Digital Video Production: Experimental Forms. 3 Credits.
This production course focuses on key movements in both Experimental Film and Video Art. Production assignments will arise from: Structural Film, Performance Art, Lyrical Film, Psychedelic Video, and Experimental Ethnography. Students will explore how these movements developed outside (and at times in opposition to) the mainstream, and became integral to the aesthetics of contemporary art, film, and television. Students will think critically about the personal and societal function that video artwork serves, and gain insight into the history of Experimental Film. At the end of this course, students will have a more nuanced understanding of contemporary media art, and they will be more proficient in video editing and cinematography, which they can apply to future work on: commercials, music videos, webcasts, and feature films.
Prerequisite(s): AS.061.152 OR AS.061.145
Area: Humanities

AS.061.235. Intermediate Digital Video Production: Advanced Camera. 3 Credits.
In this production course students will gain proficiency on a variety of Digital Cinema Cameras. Students will work with the Canon C300, C500, and FS7. We will discuss picture profiles, different lens options, external capture devices, and shotgun microphones. We will thoroughly explore the various unique functionality of each camera. Throughout the semester students will complete several cinematography focused video projects.
Prerequisite(s): AS.061.145 OR AS.061.152
Area: Humanities

AS.061.236. Reading the Moving Image. 3 Credits.
This course will emphasize close observation and critical thinking. Through weekly screenings and class discussion, students will practice noticing; seeing and hearing with fresh eyes and ears, and taking nothing on screen for granted. And they’ll learn to reflect on and contextualize what they find, drawing evolved conclusions about how film texts communicate ideas and what those ideas may be. They’ll consider all elements of cinematic form; an array of analytical frameworks including genre, historical era, authorship, and modes of production; and representations of gender, race, and class. Regular quizzes, a short oral presentation, and a short written analysis. No prior experience in film studies required; majors and non-majors welcome.
Area: Humanities
Writing Intensive
AS.061.239. Film in the Age of Trump. 3 Credits.
As the unprecedented ascendency of Donald Trump has changed the world in record time, so has it changed the way we look at the world. Along with the attendant political and social implications, the rise of Trump has engendered altered perspectives on art and entertainment, posing questions about the power of film in an age of protest. This course will explore how films speak to us differently in this time of political and social upheaval. Through weekly screenings and discussion, a range of JHU faculty will look with fresh eyes at both classic and recent films—from Casablanca to Selma—whose narratives take on new meaning in the age of Trump. In addition, a series of renowned contemporary filmmakers will share their recent work and address how film and filmmaking have changed since the 2016 election. Course requirements are attendance, participation, and 3-4 short response papers. Screening and discussion will take place Wednesdays in the beautifully restored Parkway Film Center, a historic 1915 movie theater that opens in Station North in spring, 2017. $50 lab fee.

AS.061.244. Film Genres. 3 Credits.
$40 lab feeA survey of American genres: the Western, the Gangster Film, Science Fiction, Horror, Comedy, Melodrama, and others. Twice-weekly screenings. Short film responses and a final paper, 10pp.
Area: Humanities
Writing Intensive

AS.061.245. Introduction to Film Theory. 3 Credits.
This course offers an introduction to the major paradigms of film theory, covering how significant thinkers have conceived of the medium from its inception to the present day. Frequent film screenings help to illustrate key concepts. Topics include the classical opposition between formalist and realist film theories as well as critical approaches to narrative, spectatorship, and representation. Students are expected to enter the course ready to engage in discussion. Weekly film screenings. $50 lab fee.
Prerequisite(s): AS.061.140 OR AS.061.141
Area: Humanities
Writing Intensive

AS.061.252. School Daze. 3 Credits.
Teen angst and togas in comedies of American youth from The Graduate to Animal House to Lost in Translation. Course will provide an introduction to the basics of film analysis with an emphasis on discussion over lecture. Several short film responses and an essay with optional revision. No prior experience in the subject required.
Area: Humanities
Writing Intensive

AS.061.263. Poetry and the Moving Image. 3 Credits.
Using P. Adams Sitney’s text: The Cinema of Poetry, this course will explore the relationship between poetry and the moving image. When experimental film began to define itself in the 1950s and 60s the terms cine-poem and film-poem were ubiquitous as identifying avant-garde cinema. Poetic structures in the moving image will be studied in relation to language, images and formation of meaning. Students will independently research a poet who greatly inspired and influenced a filmmaker/moving image artist and write on that filmmaker’s work. One moving image project will be undertaken and completed during the semester as well. Weekly assignments will include screenings, reading, writing, and or video work.
Area: Humanities
Writing Intensive

AS.061.264. Acting in Film. 3 Credits.
This class is intended for all students of film with the goal of providing them with the experience of acting in film, in both dramatic and comedic roles. The ability of the students as actors is not the focus. Instead they will understand how the writer, director and cinematographer can influence, inhibit or enhance performance. The students will explore practical methods used on set, different approaches to acting and working with directors, writers and crew. It will also include discussions of professional performances and screenings. Students must have strong verbal skills and be prepared to actively and regularly engage in acting exercises, including improvisation and reading aloud.
Area: Humanities

AS.061.265. Comedic Storytelling for Page and Screen. 3 Credits.
A workshop devoted to the art and science of a funny story well told. Students will analyze comic fiction, film, and classic television, and create their own short, comic works. 220.105, 220.106, or 061.148 recommended. This course satisfies the Film and Media Studies screenwriting requirement.
Area: Humanities
Writing Intensive

AS.061.266. Introduction to Writing for Television. 3 Credits.
This course will teach the basics of dramatic structure and plotting for the television series, with a focus on content designed for serial formats. Students will read analytical work on what makes a successful television series; dramatic structure; and effective characterization, and will engage in both critical written responses to readings and the creation of their own original five-episode series arc that will be drafted and redrafted, creating a complete mini-series with which they will leave the course.
Prerequisite(s): AS.061.205
Area: Humanities
Writing Intensive

AS.061.267. Cultural History of the Internet. 3 Credits.
This course offers an introduction to internet studies through the many ways digital culture has touched our everyday lives: memes, blogs, gaming, social networking, instant messaging, and more. From its origins in connecting scientific researchers to its present form as a multi-device, multi-platform web connecting us to everything from each other to our smart homes, the internet has proven that nearly our entire social world can be processed as data and linked up. While this has meant greater connection, it has also raised questions about how we learn, communicate, behave, and organize. The internet has long promised new avenues of personal expression, but it has also brought with it the quandaries of echo chambers, information silos, and disinformation campaigns. In response to these complicating effects, the course offers an opportunity for students to develop the critical mapping tools necessary to orient oneself within this vast cultural network and its rapid historical unfolding.
Area: Humanities
AS.061.269. Feminist Filmmaking: A Theory and Practice Workshop. 3 Credits.

In this workshop for 10 students (no gender preference) documentary filmmaker and media theorist Bernadette Wegenstein and filmmaker and director of the Saul Zaentz Film Innovation Fund co-teach the fundamental principles of gender theory and feminism as applied to practical filmmaking. We will cover the history of women filmmakers, as well as embark on a concrete mini-production where students will be placed in the roles of writers, directors, producers, cinematographers, and editors to make a feminist film. The anthology Feminist Film Studies(Hollinger) and Feminism and Documentary(Waldman/Walker) will be among the readings that our workshop is based on.

Prerequisite(s): AS.061.145 OR AS.061.152
Area: Humanities

AS.061.301. Advanced Film Production: The mongrel film. 3 Credits.

In this course, each student is responsible for the design and production of a short 16mm film. The film may be shot on color and/or black and white negative stock. The format is Super 16mm. The film may include sync and/or non-sync sound. The idea behind the "mongrel" film is for the student to incorporate a variety of genres within this project. These may include stylistic elements typically associated with documentaries, experimental, narrative, animation, and lost and found films. Students are expected to have previously completed AS.061.150 and an intermediate level film production class.

Prerequisite(s): AS.061.150
Area: Humanities

AS.061.303. Podcasting: Critical and Creative Practice. 3 Credits.

In this critical studies course with a creative component, students will learn about the history and cultural significance of podcasting, develop tools for critically listening to and analyzing podcasts, and learn how to research, write for, and produce podcasts. Examples will come from a broad sample of narrative, documentary, interview, and discussion-based podcasts. While no formal training in audio production is necessary to take the course, students will be expected to learn the necessary skills to create their own podcasts. In-class demonstrations of microphones, editing software, and approaches to sound design will be offered, and students are encouraged to take advantage of office hours for further help with audio production.

Area: Humanities

AS.061.304. After Effects: Intermediate and Advanced Technique. 3 Credits.

This hybrid After Effects course will offer two simultaneous tracks of study. One for students using After Effects for the first time, the other for intermediate After Effects users who are looking to master the program. The class will meet to learn new techniques and to discuss each other's work and the instructor will regularly introduce exciting new material applicable for all skill levels. Students will have the option to create a motion graphics reel for their final project, a valuable asset when applying for any post-production job. The coursework will be supported with robust video tutorials, weekly group instruction, and critique as well as periodic individual meetings with the instructor. Additionally, the entire class will gather for several Zoom sessions with professionals working in the industry.

Area: Humanities

AS.061.309. Advanced Video Production: Influence and Anxiety. 3 Credits.

This is an advanced production course focusing on artistic influence. Each student will be working with and around a filmmaker who greatly inspires and influences their work. The evolution of style will be considered. The work will include screenings, readings, and short projects all feeding into a final movie. This course fulfills the advanced production requirement. Students should have completed a Introductory and Intermediate Digital Video Production course prior to enrollment. $100 Lab fee.

Area: Humanities

AS.061.314. Screenwriting: Introduction to Scene. 3 Credits.

In the first half of the semester, students will be presented with prompts from a variety of media photography, literature, popular music, et al. intended to stimulate the imagination and spark ideas. These ideas will be explored, cultivated, and mined for their visual information, with emphasis on information that might appear in their filmic representation. In the second half of the semester, students will search independently for cinematic ideas with an eye toward the details of a scene. As students identify scenic elements, their ideas will be developed and carried through the traditional workflow: outline, scenario, and screenplay. At the end of the semester, students will have prepared short scripts ready for pre-production. Lab fee: $50

Area: Humanities

AS.061.315. Screenwriting By Genre. 3 Credits.

Story design for the screenplay with special attention to the genres of comedy, horror, melodrama, and adventure. Regular workshops, short written exercises, and a longer final project.

Prerequisite(s): AS.061.148 OR AS.061.205 OR AS.061.270 OR permission of the instructor.

Area: Humanities

AS.061.316. Characters for the Screenplay. 3 Credits.

A workshop devoted to creating complex characters for the screen. Students will examine memorable film characters from the silent era to the present, with attention to how these characters are revealed through both the drama and the mise en scene. Weekly screenings. Short critical and creative written exercises and a longer, creative final project. Recommended Course Background: AS.061.148 OR AS.061.205 OR AS.061.265

Area: Humanities

AS.061.318. Advanced Environmental Cinema. 3 Credits.

An exploration of cinema's unique capacity to reveal the world, this course presents an international and richly historical survey of environmental films. Examples come from narrative, documentary, and experimental filmmaking, including blockbusters, exposés of waste and pollution, guerrilla media projects, and poetic contemplations of landscapes and oceans. Filmmakers and artists include Andrei Tarkovsky, Angès Varda, Jia Zhangke, Lucy Walker, Ai Weiwei, Edward Burtynsky, and Werner Herzog.

Area: Humanities

AS.061.322. Women in Popular Film and Television. 3 Credits.

A survey of female beauty, villainy, comedy, and humanity in film and television from the silent era to the present. $50 lab fee.

Prerequisite(s): AS.061.140 OR AS.061.141 or permission of instructor.

Area: Humanities
AS.061.328.  Gangster Films.  3 Credits.
The bad guy as hero from Little Caesar to Goodfellas. Film screenings Th 7:30-10:00 PM, Sun 7:00-9:30 PM. Lab fee: $40.
Area: Humanities

AS.061.329.  Left-Handed Endeavors: Crime Film.  3 Credits.
Prerequisite(s): AS.061.140 AND AS.061.141 AND AS.061.238 AND AS.061.144 or Instructor Permission.
Area: Humanities

AS.061.335.  Monster Films.  3 Credits.
$50 and one core course or permission required. Monstrous others and monstrous selves in classic 20th century horror. One core course or permission required.
Prerequisite(s): AS.061.140 OR AS.061.141 OR AS.061.238 or permission of instructor is required.
Area: Humanities

AS.061.336.  American Landscapes on Film.  3 Credits.
American setting and identity: the frontier, the city, the highway, the sea, the small town, the suburb, and outer space as represented in popular film from the silent era to the present.
Prerequisite(s): AS.061.140 OR AS.061.141 OR AS.061.238 OR AS.061.244 or instructor permission.
Area: Humanities

AS.061.339.  A Cinema Of Anxiety: Film Noir.  3 Credits.
Postwar film noir: Fuller, Huston, Lang, Mann, Tourneur, and others.
Area: Humanities

AS.061.340.  The Body in French Cinema; Sexuality, Physicality, Vulnerability.  3 Credits.
This course explores how French films have interrogated the body. We will ask how they have attempted to come to terms with human physicality, desire, and fragility—and with the ability of cinema itself to move spectators emotionally and even physically. Themes explored will include sexuality, gender identity and disability. AS.061.140 or AS.061.141 or permission of instructor. $50 lab fee.
Prerequisite(s): AS.061.140 OR AS.061.141 or instructor permission.
Area: Humanities

AS.061.341.  The Wilderness Within and Without.  3 Credits.
Savage landscapes and savage states of mind in films by Ford, Herzog, Boorman, Weir, and others. Lab fee: $50 Counts toward 300 or 400-level critical studies requirement.
Area: Humanities

AS.061.346.  Persistence of Vision: Time, Memory and the Past in Recent Global Cinema.  3 Credits.
This course will examine the ways film represents, remakes, and re-visions cultural and personal memory in a range of recent national and international films, including those by Chantal Akerman, Pedro Almodóvar, Lee Chang-dong, Claire Denis, Joanna Hogg, Hirokazu Koreeda, Terrence Malick, Joshua Oppenheimer, Christian Petzold, Sarah Polley, Hong Sang Soo, and Jia Zhangke.
Area: Humanities

AS.061.347.  Teens On Screen.  3 Credits.
This course will explore changing representations of adolescence in films from the 1950s to today across a range of mainstream Hollywood, independent, and international films. We'll examine how this dynamic and misunderstood genre shapes and reshapes perceptions of youth, and we'll discuss the frank and sometimes explosive ways teen films address difficult questions of race, class and sexual identity, often in the guise of "pure" entertainment. Recommended Course Background: Introduction to Cinema I or Introduction to Cinema II, or permission of instructor.
Area: Humanities

AS.061.348.  Acting and Screenwriting for Narrative Productions.  3 Credits.
This pre-production course brings together student filmmakers from Maryland Institute College of Art (MICA) and from Johns Hopkins University (JHU), providing intensive training in the crucial aspects of preparing to shoot a successful narrative film. Students work with a professional screenwriter, allowing students to hone and improve their existing screenplays, practice the elements of writing for film, and learn how to do a script breakdown. Workshops on working with actors, taught by a professional actor, will teach students the ins and outs of casting and directing. Supplemental workshops will cover elements of pre-production such as budgets, production schedules, call sheets, and legal issues. Film screenings will train students to see films as festival curators do, with an eye toward what constitutes exciting, innovative filmmaking. This course is the prelude and prerequisite to Narrative Filmmaking II, a production course during which students will collaborate to shoot a short narrative film based on student screenplays.
Area: Humanities

AS.061.352.  Media Workshop.  4 Credits.
Media Workshop mixes the theory and practice of media-making in a workshop environment that allows upper-level students to hone their craft as filmmakers. Based upon the idea of a creative community, the workshop is an advanced lab designed to give students a place to share ideas, create new work, and receive intensive and supportive critique. Work produced in this class will consist of non-narrative experimental exercises, exploring issues of the image, editing, perception, and sound. Students will read filmmaker-theorists like Sergei Eisenstein, Robert Bresson, Stan Brakhage, Maya Deren and Wim Wenders and will produce creative work inspired by the texts.
Area: Humanities

AS.061.353.  Documentary Film Production.  6 Credits.
'7 in the City' is a multimedia journalism project that explores what it is like to be a seven-year-old growing up in Baltimore today. The project is modeled after the legendary British documentary Up series. The goal is to screen and publish the resulting documentaries and articles in partnership with a major media outlet. The class is being taught in partnership with the Hopkins MA in Writing Program. Students in this class will produce short documentaries (4 to 6 minutes) while the writing students will produce a series of articles and in-depth written profiles of seven year olds in different neighborhoods across Baltimore—focusing on public health issues, race, class, educational and economic disparities. With an eye toward documenting the ethics and social justice issues surrounding disparate childhoods in the city, film students will gain hands-on practical experience in filming, editing, and producing a short documentary about a particular 7 year old living in the city. This course counts toward the advanced production requirement for FMS majors and minors in the production track. Students should anticipate extensive work outside of the scheduled class time.
Area: Humanities
AS.061.356. Narrative Productions. 6 Credits.
Narrative Productions is a joint production course for JHU and MICA undergraduates who have completed Acting and Screenwriting for Narrative Productions (AS.061.348). Students work in teams to produce a narrative short from a script written in AS.061.348. Students are assigned a primary and a secondary role on the production or post-production of their chosen film. Students fill all roles from casting, producing, direction, design, cinematography, sound recording and editing. Throughout the course, instructors will facilitate contact with relevant films and film professionals to illuminate the key creative roles necessary in the making of a successful narrative film. Instructors serve in an advisory role in the production of student projects, offering technical information and guidance throughout the filmmaking process. Students should be prepared to spend a significant amount of time outside of class working on their films.
Prerequisite(s): AS.061.348
Area: Humanities

AS.061.361. Documentary Film Theory. 3 Credits.
Documentary Film Theory: The Work of Documentary in the Age of Reality Reproduction This course explores contemporary documentary film and video with an emphasis on selected directors and the theoretical implications suggested by their work. In particular, we look at the notion of the ‘real’ as it is constructed and maintained through and by documentaries. This inquiry necessarily involves a reflection that is philosophically as well as politically motivated. Directors include Errol Morris, Trinh Minh-ha, Ross McElwee, and Werner Herzog. Readings are eclectic, ranging from Annie Dillard to Martin Heidegger. Counts toward 300 or 400-level critical studies requirement.
Area: Humanities

AS.061.364. The Films of Alfred Hitchcock. 3 Credits.
Close examinations of Hitchcock’s films from the Lodger to Frenzy. $40 lab fee.
Area: Humanities
Writing Intensive

AS.061.365. The New Hollywood: American Films of the Seventies. 3 Credits.
This course will explore the extraordinary renaissance in American film that arose from the death of the studio system and ended with the advent of the blockbuster. We’ll discuss how the political and cultural struggles of the Vietnam era affected what came to be called New Hollywood cinema; how classical Hollywood narrative was (or wasn’t) upended by the likes of Altman, Scorsese, Coppola, and Peckinpah; and how the films of this crucial period addressed or failed to address race, class and gender. Lab fee $50.
Area: Humanities
Writing Intensive

AS.061.370. Theorizing Popular Culture. 3 Credits.
This course examines popular culture’s role in everyday life, tracing its path from its origins to the present. It explores the aesthetics, politics and theory of cinema, television, popular music and internet culture, as well as the study of subcultures and fandom. The endpoint of the experience is to draw students into a more complex and conscious relationship to the mediascape that surrounds them. It also encourages the cultivation of an active practice of cultural critique. Students will debate issues central to a long history of dealing in popular culture, including the potential ‘dumbing down’ of mass culture, the use of artistic formulas in the creation of popular works, the celebration of the popular in the notion of ‘popular art’; representations of race, gender, and sexuality in media, power and the question of the popular, and the basis of taste in media. It will apply to a range of media as diverse as films, television programs, the punk and ‘pop’ movements, and internet phenomena. A background in writing on media is encouraged. Lab fee: $40
Area: Humanities
Writing Intensive

AS.061.373. Intermediate Screenwriting. 3 Credits.
This course will explore strategy and process for developing a short screenplay from pre-existing literary or journalistic source material (short story, news/feature article, etc.). By exploring several “case studies” — feature films and the source material that inspired them — students will identify the practical strategies employed by professional screenwriters with the goal of employing such strategies with their own screenplay adaptations. Bulk of class will focus on designing, writing, and rewriting a 20-30 page screenplay, and sharing multiple drafts with the class (and with the professor one-on-one) for critique over the course of the semester. Each student should have 2-3 pieces of material under consideration for possible adaptation by the start of class. Discussions from time to time will also touch on the business of screenwriting. Students will be required to purchase a license for Final Draft screenwriting software for $99. Students are expected to have previously completed AS.061.205 or another lower level screenwriting class.
Area: Humanities
Writing Intensive

AS.061.374. Terrence Malick: The Poetics of Space. 3 Credits.
This course will closely examine Malick’s films, with particular emphasis on his visionary manipulation of the epic vastness and lyrical intimacies of screen space. With this primary concern in mind, we will consider his films’ engagement with philosophies of history and time; their increasingly experimental approach to narrative and stylistic conventions; and their enduring fascination with the interaction among the human, natural, and spiritual worlds. We will also look at recent films influenced by his work, including Carlos Reygadas’s Silent Light and Shane Carruth’s Upstream Color, addressing the question of what constitutes a ‘Malickian’ cinema.
Prerequisite(s): AS.061.140 OR AS.061.141
Writing Intensive
AS.061.375. Surrealism and Film. 3 Credits.
We will define Surrealism through primary texts, including those of Andre Breton, Antonin Artaud and Rene Daumal and other works that defined and influenced the movement in the early part of the 20th century. Using an understanding of the practice of surrealism found in the readings, as well as in surrealist games and automatic writing, we'll study a diverse group of filmmakers influenced by the practice, including Luis Buñuel, Joseph Cornell, Raul Ruiz and contemporary artists such as David Lynch. Assignments include weekly papers and one final creative project. Weekly film screenings Thursday 7:30-10:00 PM. $50 lab fee. Media, Online Writing Intensive

AS.061.378. Automatic Animation. 3 Credits.
A hand-made, 2-D animation course based on ideas of automatism. Students will create their own animated movie during the semester with in-class animation exercises. Readings will include Dada and Surrealist texts, poetry and theory of poetics. Sounds ideas will be discussed and pursued related to the ideas explored throughout the semester. $125 lab fee.
Prerequisite(s): AS.061.145 OR AS.061.152

AS.061.380. French Cinema of Immigration, Cultural Identity, and Difference. 3 Credits.
An exploration of a series of contemporary French films that bear witness to the contemporary reality of France as a multi-ethnic society and ask essential questions about cultural identity. Is cultural and ethnic identity something that you are born into or is it a role that you elect or perform? How should individuals living today understand their relation to historical injustices? Are there things that we can learn only through relationships with people from other cultures? Screenings include works of Abdellatif Kechiche, Jacques Audiard, Claire Denis, Céline Sciamma, Michael Haneke, Mathieu Kassovitz, the Dardennes. $50 LAB FEE
Area: Humanities

AS.061.381. Sound on Film. 3 Credits.
This 3-credit upper-level course will offer undergraduates from both JHU and MICA an unprecedented opportunity to collaborate on all aspects of designing soundtracks for film. Utilizing a combination of pre-existing and in-progress pieces, student filmmakers will create soundtracks, from the initial phases of concept, ‘spotting’, and ‘temping’ through to composition and scoring in the final stages of recording, sound syncing and mixing. Students will work in small teams in a lab setting to create their soundtracks, exploring a variety of scenarios, following the post-production process typical of today’s film industry. Lab work will be supplemented by guest lecturer presentations on various aspects—practical, theoretical, and historical—of applying sound to film. Guests may include sound designers and engineers, composers, editors, and filmmakers working in live action, animation, and documentaries. At weekly screenings of classic and contemporary cinema masterpieces students will analyze the evolving art and craft of the film soundtrack, applying the principals in their lab exercises. Lab fee: $50
Area: Humanities

AS.061.384. Fabric of the Real. 3 Credits.
Maurice Merleau-Ponty writes, "the real is a closely woven fabric". In this course we will consider how several artistic disciplines weave their own version of that fabric. These disciplines include documentary film, prose poetry, landscape painting, literature, and music. The course will be predicated upon Martin Heidegger's essay, "The Age of the World Picture" and follow the lead of Roland Barthes' essay on the "effect of the real". We will also highlight various hybrid forms within these disciplines, with particular attention to the work of W.G. Sebald and Steven Reich.
Prerequisite(s): AS.061.140 OR AS.061.141
Area: Humanities

AS.061.388. Cinema Workshop - Cannes Film Festival. 3 Credits.
This workshop provides students with access to professional events at the Cannes Film Festival, including screenings, non-competitive programs, tributes, master classes and directors’ showcases. Students are expected to participate in festival events and take an active role in organized discussions, critiques and dialogues. Written and oral assignments. Special Application: Open to JHU Cannes Program participants only.
Area: Humanities

AS.061.389. Women Making Movies (Europe). 3 Credits.
This course introduces students to some of the most exciting female directors of the 20th century, asking how gender shaped the production and reception of their films. Do particular directors attribute any significance to the fact of being a woman? Does a director's gender shape her choice of subject or how she represents it? Does wider knowledge of works directed by women change our sense of the canon and authorship? Covers non-U.S. films, strongly encouraged for FMS majors and minors. Cross-listed with WGS. No pre-requisite.
Area: Humanities

AS.061.390. Modern Paris on Film. 3 Credits.
Examines changing ideals of masculinity in France after 1960 as they found expression on film, rooting the work of iconic stars and directors in their cultural, political and historical contexts.
Area: Humanities

AS.061.391. Love and Film. 3 Credits.
In this course, we explore different understandings of ‘love’ and the ways that film has dealt with the concept as a medium. We explore a variety of approaches to the question of ‘love’ - from the agapic to the familial to the romantic - through a series of interdisciplinary readings ranging from philosophy to anthropology. We will also equally explore the question of how film has engaged with the question of love as a concept, and what depictions of human affection - from the general to the personal - it has offered us. Screenings are required for this course. Lab fee: $50
Area: Humanities

AS.061.393. Violent Attractions. 3 Credits.
Violence, ritualized and anarchic, celebrated and deplored in popular film from silent era melodrama and slapstick comedy to contemporary sports, crime, and combat films. Twice-weekly screenings; oral presentation; two essays, 6 & 12 pp. Lab fee: $50
Area: Humanities

AS.061.396. Modern Paris on Film. 3 Credits.
This course uses French film to examine the history of twentieth-century Paris. We will consider how filmmakers interpreted the social, political, and technological transformations that shaped Paris in the modern era, treating movies as expressions of change and means by which filmmakers comment on it. Taught in English. $50 lab fee.
Area: Humanities

AS.061.397. French Masculinities. 3 Credits.
Examines changing ideals of masculinity in France after 1960 as they found expression on film, rooting the work of iconic stars and directors in their cultural, political and historical contexts.
Area: Humanities

AS.061.399. Stop-Motion Puppet Animation. 3 Credits.
Students will create their own stop-motion models (puppets) based on a wire armature model. In small groups, students will design and create a simple set and make a short stop-motion movie using a DSLR camera. The question of 'why animate' will be explored in student projects and responses to screenings. We will study the history of stop-motion puppet animation from Starewicz to Svankmajer to Nick Park.
Area: Humanities
AS.061.404. **Advanced Screenwriting.** 3 Credits.

Intensive workshop course where students will write a first draft of a feature-length screenplay. Classes will focus on the specific challenges of the students' works-in-progress, with an emphasis on developing a story idea that is suitable for a feature, and the craft to see it through to completion. Particular emphasis will be placed on the feature screenwriter's central challenge: creating enough of a structure in the early writing stages to keep the screenplay on track, while remaining open to new ideas for scenes and sequences that inevitably arise as the characters come to life. Select professional screenplays will be read and analyzed — and clips from select films viewed—to explore what works well on the page, and how it translates to working well onscreen. Students will aim to have a solid and workable first draft at the end of the semester, at which point avenues for further revision may be discussed. Throughout the course, Instructor will also devote a portion of class time to discuss the business of screenwriting. Students will be required to purchase a license for Final Draft screenwriting software for $99.

Writing Intensive

AS.061.405. **Deep Listening: Sound Studies in Film and Media.** 3 Credits.

This course explores the sonic elements of film and media studies, and encourages a form of deep and attentive listening in students. Analyzing film, television, music, sound art, and the newer platforms for sound media, it teaches students the tools for sound analysis as well as the basics of sound theory. This course is designed to allow a deeper sonic appreciation of the media created that is created with the ears in mind, even more than the eyes. In this way, it works to 'fill in' what is often missing from an education in media studies - a focus on the other sense of the audio-visual media we experience every day. Lab fee: $50 Counts toward 300 or 400-level critical studies requirement.

Area: Humanities

AS.061.406. **Animating Cartoons.** 3 Credits.

**Animating Cartoons.** This class will focus on character animation. Through weekly screenings of cartoons and animations and reading comics, the form will be analyzed in class discussions and short papers. Students will create their own hand drawn character and create an extensive storyboard for an animation involving their character. A scene will be chosen and a short hand-drawn animation from the storyboard will be created.

AS.061.409. **The Films of P. T. Anderson: Innovation and Influences.** 3 Credits.

This course will investigate Paul Thomas Anderson's stylistic and narrative innovations, as well as cinematic influences such as Altman, Kubrick, Scorsese, and Welles.

Area: Humanities

AS.061.413. **Lost & Found Film.** 3 Credits.

This course explores various elements of film production and filmic expression through a somewhat nebulous field typically described as lost films. Lost films (or as they are sometimes called, 'orphan' films) can be generally described as films that have, for a variety of reasons, fallen out of the public view. They frequently come from educational, scientific, medical, or industrial films from the 1950s and 1960s. Using these films as source materials, lost film filmmakers explore and expose cultural conventions, visual icons, and historical value materials. Each week, students are responsible for re-editing sources found on an internet archive site. The assignments follow thematic concerns related to film editing. Students complete a final project (4-8 minutes). All editing for the course is accomplished with non-linear software, generally Adobe Premiere or Final Cut.

Area: Humanities

AS.061.421. **History and Film.** 3 Credits.

How do films inform, shape, or fundamentally alter our sense of the past? What are the strengths and limitations of cine-history? This course pairs traditional and avant-garde fiction films and documentaries with essays about history, historiography, memory and the political uses of the past to investigate fast-changing relationships between image and text, film and history. Lab fee: $50 Counts toward 300 or 400-level critical studies requirement.

Area: Humanities

AS.061.440. **Senior Capstone Project: Production.** 3 Credits.

Permission required. Production track students complete an independent project. Should must have completed one advanced level FMS production course (POS tag FILM-PROD).

Area: Humanities

AS.061.441. **Senior Capstone Project: Critical Studies.** 3 Credits.

Critical studies track students complete an independent research project.

Area: Humanities

AS.061.443. **Sen Proj-Digital Vid Prd.** 3 Credits.

Area: Humanities

AS.061.501. **Independent Study - Film.** 0 - 3 Credits.

**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.061.502. **Independent Study:Film & Media.** 1 - 3 Credits.

For students who wish to explore an aspect of film studies not covered by existing courses. The course may be used for research or directed readings/viewings and should include one lengthy essay or several short ones as well as regular meetings with the adviser. Permanently required:

Lab Fee: $100 (if production related)

**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.061.503. **Independent Study-Film/Media.** 0 - 3 Credits.

Permission required

**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.061.599. Internship-Film & Media. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

Cross Listed Courses
Art
AS.371.303. Documentary Photography. 3 Credits.
In this course, we will explore different genres of documentary photography including: the fine art document, photojournalism, social documentary photography, the photo essay and photography of propaganda. Field trips offer opportunities to explore Baltimore neighborhoods such as Waverly, Greenmount Avenue, and Baltimore's old Chinatown. Students will work on a semester-long photo-documentary project on a subject of their choice. Camera experience is a plus, but not a prerequisite. Digital SLRs are available on loan for the semester. Attendance at first class is mandatory. Approval in this course will be considered after enrollment in SIS. Area: Humanities

Comparative Thought and Literature
AS.300.312. Imagining Revolution and Utopia. 3 Credits.
What form should revolution take, and what should society look like after the revolution? What would happen to the state, family, home, status of women, human interrelations, and everyday life? These questions consumed radicals in 19th century Russia and Europe, and their answers helped to shape the political culture of the 20th century. This course examines theories of revolution and utopia and responses to them in literature, art and film. Primary case study is Russia and the Soviet Union, with a comparative look at influential European works. Area: Humanities Writing Intensive

AS.300.324. Cinema of the 1930s: Communist and Capitalist Fantasies. 3 Credits.
Comedy and musical comedy film flourished in the USA during the Great Depression as well as in the USSR during the Stalinist Great Terror. This course will compare films of the era in a variety of genres (musical, epic, Western, drama), examining the intersections between politics and aesthetics as well as the lasting implications of the films themselves in light of theoretical works on film as a medium, ethics and gender. Area: Humanities

AS.300.343. The Cinema of Revolution. 3 Credits.
This course examines global political revolutions through cinema and the ways in which cinema helped to make political revolutions. Early cinema was intimately intertwined with the Russian revolution, and Russian revolutionary cinema had a profound impact on the ways in which media was used for revolutionary purposes through the 20th century and around the world. Students will be introduced to films from a number of different countries, and the history and context of their production and reception. They will also learn methods of film analysis and produce their own video essay. Area: Humanities

AS.300.353. Present Mirth: Stages of Comedy. 3 Credits.
A comparative survey of presentational comedies from Aristophanes to Beckett on stage and screen, with some attention to to the vexed question of theories of comedy [no laughing matter]. Area: Humanities Writing Intensive

AS.300.366. Russian Avant-Garde Cinema. 3 Credits.
Russian cinema was born out of the intense artistic experimentation of the fin-de-siècle avant-garde and developed in a climate of dramatic political and cultural change in the twenties and thirties. While subject to draconian censorship in the Soviet period, it nonetheless engaged in active dialogue with the film industries of Western Europe and America and had a lasting impact on world cinema. This course examines the extraordinary flourishing of avant-garde cinema in the Soviet Union in the 1920s and 30s including films by Eisenstein, Vertov, Pudovkin, and Dovzhenko, their theoretical writings, and their far-reaching influence on film and film theory. All readings in English, films subtitled in English. Area: Humanities Writing Intensive

AS.300.367. Seeing Like a Woman. 3 Credits.
What does it mean to “see,” think, desire, feel, speak, act, or write “like a woman”? Gendered notions of seeing have had an impact on politics and society long before the #metoo movement and far beyond debates about women’s rights in isolation. This seminar examines the issues of female desire, subjectivity, spectatorship and performance in fiction, poetry, memoir and film from a variety of cultures and theoretical perspectives. This is not a course on “the image of the woman” in literature, film or politics, but a course in which we examine the ways in which both male and female theorists, novelists, poets, and filmmakers have imagined how women “see,” feel, think and behave. Area: Humanities Writing Intensive

AS.300.399. Cinema and Philosophy. 3 Credits.
Do movies have anything to say about philosophical problems? Why is contemporary philosophy so interested in cinema? What are the most productive ways of bringing films and philosophy into conversation? Area: Humanities

East Asian Studies
This course aims to inspire students to explore the impacts, meanings, and explanations of social transformation in contemporary China, via the lens of documentary photography. The photographic images of selective topics will include the products of photojournalism and documentary photography, and several documentary films, by both Chinese and non-Chinese photographers. While one picture is worth thousand words, one picture may also provoke countless interpretations. Students are strongly encouraged to read broadly about different aspects of social transformations in contemporary China, and to select and curate their own subjects of photo images. The spirit of comparative study of documentary photography of China and other parts of world will be strongly encouraged. Active class participation is imperative. A small exhibition on the campus will be organized by the Spring semester. The course is designed for upper division undergraduates. Cross-listed with Sociology and International Studies (CP). Area: Social and Behavioral Sciences
AS.211.222. Italian Cinema: The classics, the Forgotten and the Emergent. 3 Credits.
This course traces the history of Italian cinema from the silent era to the new millennium, highlighting its main trends and genres, and reflecting on the major transformations modern and contemporary Italian society experienced over the twentieth and twentieth-first centuries. We shall examine iconic films such as Vittorio De Sica's Bicycle Thieves, Federico Fellini's La Dolce Vita, Michelangelo Antonioni's L'Avventura, and Pier Paolo Pasolini's Mamma Roma, that received international recognition and influenced other national, cinematic productions. We shall also look at the work of less famous, or independent filmmakers who received less critical attention. While this class takes an historical approach, it also includes a theoretical component and introduces students to the specificity of the cinematic language, examining films in relation to the mise-en-scène, frame composition, camera movements, editing, and sound. This class is taught in English.
Area: Humanities

AS.211.316. Brazilian Cinema and Topics in Contemporary Brazilian Society. 3 Credits.
Course is taught in ENGLISH - This course is an introduction to the academic study of cinema as a communicative art and to Brazilian film. The films selected focuses on films from the late 1950s to the present and highlight import episodes and challenges in the advancement of the Brazilian society as well as its cinematic production with a special view to the film aesthetics through analysis from a number of critical perspectives, including class, race, gender as well as ethnicity, nationalism or national identity, colonialism, social changes, and the politics of representation. In this sense, the films and documentaries that we will be watching and studying encompass the period from the rise of New Cinema (Cinema Novo) up to films exploring the most recent trends, including movies launched up to 2016. Students wishing to do the course work in English, for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory / Unsatisfactory basis.
Area: Humanities
Writing Intensive

AS.211.326. We Conduct - Documentary Production Internship. 3 Credits.
To apply for this practicum, you should send an email of motivation to professor Wegenstein at berna@jhu.edu. During this internship will accompany Bernadette Wegenstein (director), Shana Hagan (cinematographer), and Judy Karp (sound recordist) on the documentary Vértex set, as they document the history of women orchestral conductors. The film profiles the conductors’ incredible dedication, devotion, mentorship, and love for music itself, and highlights the camaraderie and mentorship between generations of female conductors and musicians. Most importantly, it shows their power in pursuing a field not historically welcoming to women, breaking down barriers of gender and race. This documentary feature presents women from different walks of life, including Sylvia Caduff, Marin Alsop, Alexandra Arrieche, Lina Gonzalez, 16-year old aspiring conductors Sumaya Elkashif and Maya Johnson, and members of the Baltimore OrchKids afterschool music program for children. The intertwining stories of these women and children, each accompanied by the music they embody, will culminate to reveal their astounding accomplishments as they conduct — the music, and the worlds around them. Filming will take place mainly at the Peabody Conservatory. Some field-trips will be optional (including to foreign destinations). Please note that this class will be held as a practicum, and some of the dates and times will be flexibly adapted to the needs of the artists’ residency. If you have a very full calendar in the Spring it is best advised not to take this class.
Area: Humanities

AS.211.330. Curating Media Artists in Residence at JHU. 3 Credits.
The students will be closely involved with JHU’s Center for Advanced Media Studies (CAMS directed by Bernadette Wegenstein), and the Baltimore Museum of Art (curator Kristen Hileman) in preparing the BMA Black Box exhibit of Mary and Patrick Kelley’s new film, We Are Ghosts, set in a submarine: the film tells the story of life as experienced by the sailors in a U.S. submarine at the end of the second world war. Artist Mary Reid Kelley focuses on “minor aspects of life” in the submarine during non-combat — such as boredom, claustrophobia, and the effects of heavy drinking on the sailors. Included is also a restaging of Harry Truman’s announcement of the bombing of Hiroshima — told from the sailors’ point of view. While this new work will be on display in the BMA’s Black Box, Kelley’s 2016 film This Is Offal (set in a morgue) will be showing at the museum. This film is centered around a dialogue between the ghost of a deceased woman, the victim of a suicide, and her animated organs. Students will also be traveling to Woodstock, NY on a field trip with professor Wegenstein for a studio visit with the artists at the beginning of the semester. Mary Reid Kelley is an artist who makes arresting, playful, and erudite videos that explore the condition of men and women throughout history. Drawing on literary and historical material, the videos involve intensive research and critical reassessments of standard historical narratives. Mary Reid Kelley is involved in every aspect of the videos’ creation—from writing the scripts (typically in highly structured poetic verse), to designing the sets, props, and costumes, to performing the leading roles—and all of the videos are produced by her and her partner, Patrick Kelley, at their private studio. Kelley is known for her feminist videos that recall the theater of the absurd and German Expressionist cinema. Please note that this class will be held as a practicum, and some of the dates and times will be flexibly adapted to the needs of the artists’ residency. If you have a very full calendar in the Spring it is best advised not to take this class.
Area: Humanities
AS.211.331. Vagabonds and Ramblers: Space & Place in Women's Cinema. 3 Credits.
In recent times in Italy, a new generation of women filmmakers has found its own space in the traditionally male dominated film industry. This “counter cinema” abounds with female city walkers, vagabonds, and other types of urban nomads, whose movement through space signifies a quest for freedom, gestures of protest and rebellion, and a search for place. We start by looking at the work of a pioneer filmmakers such as Elvira Notari, the first woman director in Italy, and then discuss the issue of gender and space in contemporary films by directors Francesca Comencini, Alice Rohrwacher, and Eleonora Danco. To enrich the analysis, we shall also examine films directed by non-Italians who deal with the theme of women's mobility and its centrality/ marginality from different socio-geographic contexts. Other directors included will be Agnès Varda (France), Chantal Akerman (Belgium), Haifa al-Mansour (Saudi Arabia), and Xiaolu Guo (China) Readings will include essays by Laura Mulvey, Ann E. Kaplan, Linda Williams, and Patricia White.
Area: Humanities

AS.211.333. Representing the Holocaust. 3 Credits.
How has the Holocaust been represented in literature and film? Are there special challenges posed by genocide to the traditions of visual and literary representation? Where does the Holocaust fit in to the array of concerns that the visual arts and literature express? And where do art and literature fit in to the commemoration of communal tragedy and the working through of individual trauma entailed by thinking about and representing the Holocaust? These questions will guide our consideration of a range of texts — nonfiction, novels, poetry — in Yiddish, German, English, French and other languages (including works by Primo Levi and Isaac Bashevis Singer), as well as films from French documentaries to Hollywood blockbusters (including films by Alain Resnais, Claude Lanzmann, and Steven Spielberg). All readings in English.
Prerequisite(s): Cannot be taken by anyone who previously took AS.213.361
Area: Humanities

AS.211.369. We Conduct: Editing a Documentary. 3 Credits.
This course will provide a hands-on opportunity to work with film director and professor of media studies Bernadette Wegenstein in the editing process of We Conduct, a documentary about the magic of orchestral conducting and the changing face of those who are called to this vocation. The film follows famed conductor Marin Alsop as she breaks new ground in her already distinguished career. The film was shot predominantly in Baltimore, but also in New York, São Paulo, Vienna, Lucerne, and London, with Shana Hagan (Los Angeles) as Director of Photography, additional cinematography by Judith Benedikt (Vienna), and John Benam (Baltimore). During the semester we will be looking at the various narratives in their rough format, and see the film take shape from treatment to full-fledged documentary narrative. Editor Victor Livingston based in Los Angeles will come to work with the class twice during the semester.
Area: Humanities

AS.211.480. Religious Themes in Film and Literature. 3 Credits.
This course would be of interest to anyone who would like to learn about the intersection of religion and modern culture. At the center of the course will stand a close study of the representation of religious themes and their role in modern literature and cinema. The works which we will deal with are not considered religious yet they include religious themes as part of their narrative, images, language or symbolic meaning. We will trace in various works from various countries and genre, themes such as: divine justice, providence, creation, revelation, the apocalypse, prophecy, sacrifice and religious devotion. We will also study the ways in which Biblical and New Testament stories and figures are represented in these works. The course will have a comparative nature with the aim of learning more about the differences between the literary and cinematic representations.
Area: Humanities

AS.214.689. Flânerie and Female Authorship in Contemporary Italian Cinema.
This course examines the prolific production of Italian women filmmakers inscribing their work into a national cinematic tradition. The most prominent visual leitmotif in films by directors such as Marina Spada, Francesca Comencini, Alice Rohrwacher and others, is that of the wandering woman contemplating the cityscape. What does the act of walking signify in these works? How do these filmmakers embrace and transform Italy's cinematic tradition? After highlighting the figure of the city-walker in post-war classics by Roberto Rossellini and Vittorio De Sica, we shall discuss from a gender perspective films such as Fellini's Nights of Cabiria, Pasolini's Mamma Roma, and Antonioni's La Notte, which feature female city-walkers who stroll throughout urban peripheries created during the country's rush toward modernity. Then, we shall analyze the work of women directors who recurrently employ the narrative strategy of flânerie to construct female narratives of displacement and liminality. We shall question how and to what extent this contemporary cinematic production is indebted to the masters of neorealism and the auteurs from the sixties. Critical and theoretical readings will include essays by Michel de Certeau, Siegfried Kracauer, Janet Wolff, Elizabeth Wilson, Anne Friedberg, Giuliana Bruno, and others.
Area: Humanities

AS.216.398. Zionism: Literature, Film, Thought. 3 Credits.
This course studies the relations between modern Hebrew and Israeli culture and Zionism. Based on a close reading of both literary and non-literary Zionist texts, we will explore the thematic, social and political aspects of the Zionist movement. The course focuses on primary sources and its main goal is to familiarize students with the various ways in which Zionism was formed and understood. In the last part of the semester we will investigate the different meanings of Post-Zionism through contemporary literary and non-literary texts as well as recent Israeli films.
Area: Humanities
AS.216.444. The Apocalypse in Literature and Film. 3 Credits.
“Everything which we loved is lost! We are in a desert” – this emotional assertion was the reaction to Kazimir Malevich’s 1915 painting The Black Square, as the artist himself recalled it. This sentiment of fearing, warning and even witnessing the end of the world as we know it, will stand at the center of the course. We will study the literary and cinematic representations of this apocalyptic notion and investigate its theoretical, theological, physiological and aesthetic aspects. We will seek to trace the narrative dynamics as well as literary and cinematic means of apocalyptic representations in works from various periods, languages, cultures and religions. Among the issues to be discussed: what is the apocalypse, biblical apocalypse, dystopia and nostalgia, trauma and post trauma, war and the apocalypse, the Holocaust as the end of civilization, the atomic bomb, realism and anti-realism, political changes and the apocalypse in popular culture.
Area: Humanities
Writing Intensive

History
AS.100.499. Film and Propaganda in Nazi Germany. 3 Credits.
By examining a range of cinematic works—from explicitly ideological pseudo-documentaries to entertainment films—this course will explore the transmission of propaganda into the everyday culture of Nazi Germany.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

Writing Seminars
AS.220.204. Introduction to Dramatic Writing: Film. 3 Credits.
Screenwriting workshop. This course will look at the screenplay as both a literary text and blue-print for production. Several classic screenplays will be analyzed. Students will then embark on their own scripts. We will intensively focus on character development, creating ‘believable’ cinematic dialogue, plot development, conflict, pacing, dramatic foreshadowing, the element of surprise, text and subtext, and visual storytelling. Several classic films will be analyzed and discussed (PSYCHO, CHINATOWN, BLADE RUNNER). Students will learn professional screenplay format and write an 8-12 page screenplay that will be read in class and critiqued.
Area: Humanities
Writing Intensive

AS.220.218. Writers on Film. 3 Credits.
An interdisciplinary course focusing on the film writings of poets, novelists, critics, and essayists such as Virginia Woolf, H.D., James Agee, James Baldwin, and Pauline Kael; and films showing the intertwine and screenplay work of writers such as Anita Loos, F. Scott Fitzgerald, William Faulkner, and Jean Cocteau. Participants will write weekly assignments on film from a critical perspective.
Area: Humanities
Writing Intensive

AS.220.221. Modernist Literature and Film. 3 Credits.
This course explores the exchange of ideas and techniques between modernist literature and cinema in response to the social and technological changes of the twentieth century. Prominent figures include Charlie Chaplin, Ezra Pound, T. S. Eliot, Virginia Woolf, Franz Kafka, Sergei Eisenstein, Jean Epstein, John Dos Passos, Zora Neale Hurston, Paul Strand, and Gertrude Stein. Participants will write weekly assignments on films and readings from a critical perspective.
Area: Humanities

Film and Media Studies, Bachelor of Arts

Film and Media Studies Major Requirements

(See also Requirements for a Bachelor’s Degree (p. 1584).)

Because the program emphasizes the historical, cultural, and social context of cinema, Film and Media Studies is an excellent program for undergraduates interested in a broadly humanistic education as well as for those preparing for a career in the field. A departmental faculty advisor assigned to each undergraduate major helps plan individual courses of study. Undergraduates are encouraged to participate fully in all departmental activities.

In addition to core required courses, each student must complete a critical studies, screenwriting or production track for the major. All courses applied toward the major must be taken for a letter grade and a grade of C- or better must be earned. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the major without permission of the Director of Undergraduate Studies.

Code Title Credits
Core Required Courses
AS.061.140 Introduction to Cinema, 1892-1941 3
AS.061.141 Introduction to Cinema, 1941-present 3
AS.061.226 Special Topics: Writing About Film (preferred) 3
or AS.060.113 Expository Writing
or AS.060.114 Expository Writing
or AS.060.100 Introduction to Expository Writing
or AS.360.133 Freshman Seminar: Great Books at Hopkins
Foreign language (two semesters at elements level or demonstrated proficiency equivalent to one year of elements) 6-9
Completion of One Track in Critical Studies, Screenwriting, or Production 33-36

Total Credits 48-54

Film and Media Studies, Minor
Film and Media Studies Minor Requirements
Students pursuing the minor select the critical studies, screenwriting, or production track. All courses applied toward the minor must be taken for a letter grade and a grade of C- or better must be earned. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the major without permission of the Director of Undergraduate Studies. The minor requirements are as follows:

Critical Studies Track
Code Title Credits
AS.061.140 Introduction to Cinema, 1892-1941 3
or AS.061.141 Introduction to Cinema, 1941-present 3
or AS.061.145 Introduction to Digital Video Production: Visual Language 3
or AS.061.150 Introduction to Film Production 3
or AS.061.152 Introduction to Digital Video Production 3
One (1) 200-level critical studies film course (POS tag FILM-CRITST). Screenwriting courses cannot be applied for this requirement.
Four (4) 300- or 400-level critical studies film courses (POS tag FILM-CRITST). A maximum of one class outside of Film and Media studies can count toward this requirement. Students are strongly encouraged to take at least one course focusing on cinema outside the United States. Screenwriting courses cannot be applied for this requirement. MI.061 classes cannot count toward this requirement.

**History**

http://history.jhu.edu/

The Department of History offers students the opportunity to work intensively in the classroom and with individual faculty to discover the richness and complexity of history. Undergraduates begin with general courses, but progress quickly to courses that explore topics in depth and provide experience in researching, analyzing, and writing about the past. Graduate students work independently and with faculty advisors on reading and research in their fields of interest, while departmental seminars bring them together to discuss their research, forging a collegial intellectual culture. The department emphasizes European history, United States history, and the histories of Africa, Latin America, and China. Faculty and students participate in a variety of interdisciplinary programs, including Africana Studies, East Asian Studies, Latin American Studies, Judaic Studies, Museums and Society, the Program for the Study of Women, Gender & Sexuality, and International Studies.

**Facilities**

In addition to the Milton S. Eisenhower Library at the university, students in the Department of History can use the collections of the Peabody Institute Library, the Enoch Pratt Free Library, and the Maryland Historical Society in Baltimore, and of the Library of Congress, the National Archives, the Folger Shakespeare Library, and other specialized libraries in nearby Washington, D.C. There is provision for regular transportation to and from the Library of Congress. Also within easy distance are the holdings of specialized historical libraries and archives in Annapolis, Richmond, Williamsburg, Charlottesville, Wilmington, Harrisburg, Philadelphia, Trenton, Princeton, Newark, and New York.

**Graduate Programs**

The graduate program prepares professionally motivated students for careers as research scholars and college and university teachers. Hence it is designed for candidates who want to proceed directly to the Ph.D. degree, who have developed historical interests, and who are prepared to work independently. Within the areas of European history, American history, and the histories of Africa, Latin America, and China, the department emphasizes social/economic and intellectual/cultural history. Although diplomatic and political history are not emphasized, attention is given to the social, economic, and cultural bases of politics.

The program is organized around seminars rather than courses, credits, or grades. AS.100.781 The Seminar-AS.100.782 The Seminar and satellite seminars in European, American, and Comparative World History bring together students, faculty, and invited scholars from outside the university to discuss their research work. These departmental seminars create a lively intellectual community in which graduate students quickly become contributing members. The combination of flexibility, independence, and scholarly collegiality offered by the Hopkins program gives it a distinctive character.

Students select four fields (one major and three minor) and make their own arrangements with professors for a study program leading to comprehensive examinations at the end of the second year. Those arrangements may include taking a seminar in the field. One, and exceptionally two, minor field may be taken outside the Department of History. Students have maximum flexibility in the construction of individual plans of study, as well as the opportunity to work closely with several professors.
Admission and Financial Aid

In judging applications, the department puts particularly heavy emphasis on the quality of the student's historical interests and prior research experience. Each applicant must submit a sample of written work. Applicants must also take the general aptitude portions of the Graduate Record Examination. Ordinarily no candidate for admission is accepted whose record does not indicate an ability to read at least one foreign language.

The department accepts only those students who plan to work in the specific fields of the faculty, and each student is admitted only with the approval of a particular professor. Applicants should indicate the proposed field of specialization at the time of application. With the concurrence of a new faculty advisor, students may, of course, later change their major professor.

The department normally provides full fellowship support for all admitted students including both tuition and a stipend. Students are encouraged to apply for external support if eligible.

Programs

- History, Bachelor of Arts (p. 1884)
- History, Bachelor of Arts/Master of Arts Five-Year Barcelona Program (p. 1886)
- History, Bachelor of Arts/Master of Arts Four-Year Program (p. 1886)

Courses

AS.100.102. The Medieval World. 3 Credits.
This course will explore selected topics in the political, economic, social, and intellectual history of Western Europe in the period between the fall of the Roman Empire and the thirteenth century. Special emphasis will be given to understanding the ways in which medieval society functioned as a pioneer civilization, compelled to reorganize itself after the almost total collapse of the ancient world, and to the interplay between material and cultural forces in the processes of social organization.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.103. Early Modern Europe & the Wider World. 3 Credits.
This course surveys the history of Europe and its interactions with Africa, the Americas, and Asia during the early modern period (c. 1400-1800). Topics include: the Renaissance, the Reformation, International Relations and Warfare, Colonialism, the Enlightenment, and the Age of Revolutions.
Area: Humanities, Social and Behavioral Sciences

AS.100.104. Modern Europe and the Wider World. 3 Credits.
The Modern European World familiarizes students with key moments, ideas, communities, individuals, and movements which have formed European History since the Revolutionary era.
Area: Humanities, Social and Behavioral Sciences

AS.100.108. Making America: Black Freedom Struggles to 1896. 3 Credits.
From slave revolts on the West African coast to national conventions and civil war, people of African descent have defined freedom and struggle in terms of kinship, diasporic connection, and fighting antiblack violence. This course explores the arc of that history and its role in the making of America.
Area: Humanities, Social and Behavioral Sciences

AS.100.111. Making America: Mastery & Freedom, 1609-1789. 3 Credits.
Early America from the arrival of Europeans to the US constitution. Covers transatlantic empires and their rivalries; formation of Anglo-American settler societies based on slavery and patriarchal households; conflict with Native Americans; the revolutionary era and its tensions between republican principles of freedom and independence and persisting, even deepening, gender and racial inequalities.
Area: Humanities, Social and Behavioral Sciences

AS.100.112. Making America: Race, Radicalism, and Reform. 3 Credits.
This course examines race and social movements in America from the Revolution to 1921.
Area: Humanities, Social and Behavioral Sciences

AS.100.113. Making America: Race, Radicalism, and Reform. 3 Credits.
From Simón Bolívar to the Mothers of the Plaza de Mayo to the Zapatistas, this course asks what it means to be Latin American through the lenses of state formation, artistic expression, and international relations.
Area: Humanities, Social and Behavioral Sciences

AS.100.117. History of Brazil. 3 Credits.
Area: Humanities

AS.100.122. Introduction to History of Africa (since 1880). 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.123. Introduction to African History: Diversity, Mobility, Innovation. 3 Credits.
An introduction to African history with emphasis on diversity, mobility, and innovation. Considers both early and modern times.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.129. Introduction to Modern Jewish History. 3 Credits.
Jewish history 1750-present in Europe, the Near East, the US, Israel; the challenges of modernity and new forms of Jewish life and conflict from Enlightenment and emancipation, Hasidism, Reform and Orthodox Judaism to capitalism and socialism; empire, nationalism and Zionism; the Holocaust. Extensive attention to US Jewry and State of Israel.
Area: Humanities, Social and Behavioral Sciences

AS.100.130. Freshman Seminar. 3 Credits.
Freshman Seminar course. Topics vary by term.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.135. Freshman Seminar: In the Land of Others: Minorities in the Pre-Modern Mediterranean. 3 Credits.
This course examines the history of ethno-religious minorities in the Mediterranean during the Later Middle Ages and the Early Modern Period.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.100.140. Freshman Seminar: Displacement: A History of U.S. Cities from Urban Renewal to Gentrification. 3 Credits.
“Displacement” explores historical conflicts over urban planning, clearance, and redevelopment. Students will conduct archival research and contribute to an online exhibit that develops the histories of displaced Baltimore neighborhoods.
Area: Humanities, Social and Behavioral Sciences

AS.100.154. Modern Mexico from the Alamo to El Chapo. 3 Credits.
In this course we will use popular depictions of Mexico’s heroes and villains, tragedies and triumphs to delve into both the nation’s history and the importance of thinking historically.
Area: Humanities, Social and Behavioral Sciences

AS.100.163. Modern European History Through Film, 1789 to 1991. 3 Credits.
This course examines the history of Western Europe from the French Revolution through to the end of the Cold War. It examines such themes as revolutions and democratization, the origins of egalitarianism, the spread of secularism, the post-war reshaping and modernization of Western culture and political policies (European and otherwise), Europe’s role in the fall of the Ottoman Empire, and decolonization. Films depicting key periods and events will be used to complement readings.
Area: Humanities

AS.100.170. Chinese Cultural Revolution. 3 Credits.
The Cultural Revolution was Mao Zedong’s last attempt to transform Chinese society spiritually and structurally. The events of this period were marked by social upheaval, personal vendettas, violence, massive youth movements, and extreme ideological pressure. This course will explore the Cultural Revolution from a variety of perspectives, focusing on the relationship between events in China from 1966-1976, and their interpretation in China and the West during the Cultural Revolution decade and since. (Previously offered as AS.100.219 and AS.100.236.)
Area: Humanities, Social and Behavioral Sciences

AS.100.180. Themes and Concepts in Jewish History. 3 Credits.
The course will introduce the student to the main themes and debates in Jewish historiography.
Area: Humanities, Social and Behavioral Sciences

AS.100.193. Undergraduate Seminar In History. 3 Credits.
The first semester of the two-semester sequence required for majors, this course introduces students to the theory and practice of history. Following a survey of approaches to the study of the past and an introduction to research methods, students undertake original research and write an extended essay. Intended for history majors and prospective majors.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.194. Undergraduate Seminar in History. 3 Credits.
The second semester of the two-semester sequence required for majors, this course further introduces students to the theory and practice of history. Students write an essay based on original research.
Prerequisite(s): AS.100.193
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.202. Conflict and Co-Existence: The Early Modern Mediterranean. 3 Credits.
This course explores the dynamic and fluid world of the early modern Mediterranean (1453-1650), where Christians, Jews, and Muslims met, fought, traded with, and enslaved each other.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.216. Reformation and Counter Reformation Europe. 3 Credits.
This course explores the series of religious and political conflicts that make up what are known now as the Reformation and Counter-Reformation in Europe.
Area: Humanities, Social and Behavioral Sciences

AS.100.230. Bones, Blood, and Ecstasy: Religious Culture in Western Christendom, 1100-1700. 3 Credits.
Explores religious culture in medieval and early modern Europe, with an emphasis on spiritual beliefs and practices, relics, miracles, pilgrimage, and saint-making. Emphasis on reading and discussing written sources and visual culture.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.232. American Dreams: The Middle Class in U.S. History. 3 Credits.
Why does so much of America consider itself middle class? And how did we get that way? “American Dreams” traces that history from 19th century elites to 20th century suburbia.
Area: Humanities, Social and Behavioral Sciences

AS.100.234. The Making of the Muslim Middle East, 600-1100 A.D. 3 Credits.
A survey of the major historical transformations of the region we now call the ‘Middle East’ (from late antiquity through the 11th century) in relation to the formation and development of Islam and various Muslim empires. Cross-listed with Near Eastern Studies and the Program in Islamic Studies.
Area: Humanities, Social and Behavioral Sciences

AS.100.238. Expansion and the Early U.S. Republic. 3 Credits.
This course will introduce students to some major issues and problems in the history of the Early U.S. Republic, c. 1750 to 1815, by focusing on the theme of “expansion.”
Area: Humanities, Social and Behavioral Sciences

AS.100.241. American Revolution. 3 Credits.
This course provides an intensive introduction to the causes, character, and consequences of the American Revolution, the colonial rebellion that produced the first republic in the Americas, and set in motion an age of democratic revolutions in the Atlantic world. A remarkable epoch in world history, the revolutionary era was of momentous significance.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.242. Pop History from King Arthur to Game of Thrones. 3 Credits.
This course explores the use of history for cultural & political purposes in the Anglo-American world from 1500-today. Students will examine how real and imaginary histories have functioned as political propaganda, catalysts of national identity, and weapons in culture wars. The course draws on a range of media, including text, YouTube, video games, podcasts, and movies.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.100.243. China: Neolithic to Song. 3 Credits.
This class offers a broad overview of changes in China from Neolithic times through the Song Dynasty (roughly from 5000 BCE through the 13th century CE) and will include discussion of art, material culture, and literature as well as politics and society. Close readings of primary sources in discussion sections and extensive use of visual material in lectures will help students gain firsthand perspective on the materials covered. Not open to students who have previously taken AS.100.208.
Cross listed with East Asian Studies
Area: Humanities, Social and Behavioral Sciences

AS.100.244. The Power and Politics of Clothing in American History. 3 Credits.
This course explores the power of clothing and the politicization of appearances at moments of deep political and social unrest in American history (18th-20th centuries).
Area: Humanities, Social and Behavioral Sciences

AS.100.248. Japan in the World. 3 Credits.
An introduction to Japan's history from 1700 to the present, with emphasis on the influences of an increasing global circulation of ideas, goods, and people in early modern and modern times. Topics include samurai, nation-building, gender, imperialism, World War II, the postwar economy, and contemporary popular culture.
Area: Humanities, Social and Behavioral Sciences

AS.100.249. From Darwin to Babar: Animals and Humans in Historical Perspective. 3 Credits.
This course explores perspectives on the animal/human boundary from the eighteenth century through today. Topics will include biological classification, mosquito-borne diseases, animal rights movements, evolutionary theory, colonialism, Nazism, and conservation.
Area: Humanities, Social and Behavioral Sciences

AS.100.252. Invisible Borders: Exchanges and Migrations in the Modern Mediterranean. 3 Credits.
This course explores the patterns of movement formed and transgressed by empire, trade, sex tourism, cultural exchange, war, and nationalism, starting from the nineteenth century to the present-day refugee crisis.
Area: Humanities, Social and Behavioral Sciences

AS.100.256. Prostitution in a Global Perspective, 1750-2012. 3 Credits.
This course examines topics such as the 'medical model' of prostitution regulation, the rise of international anti-prostitution, and the responses of modern nationalists to sex work in a global context.
Area: Humanities, Social and Behavioral Sciences

AS.100.257. From Voice to Parchment: Media and Communication before the Printing Press, 800-1440. 3 Credits.
Epic traditions, call to Crusade, public curses, music of the troubadours: this course examines oral tradition and music—the ‘viral media’ of pre-modern Europe—while tracing the impact of new recording technologies: early musical notation, manuscripts, and book production.
Area: Humanities, Social and Behavioral Sciences

AS.100.258. Theorizing Marriage in the United States: Historical and Present Considerations. 3 Credits.
This course provides a historical and theoretical overview regarding thinking about marriage. Students will think critically about how matrimony has changed over time, and marriage in contemporary culture.
Area: Humanities, Social and Behavioral Sciences

AS.100.260. Boom, Bust, and the Rise of Financial Capitalism in America, 1700-1900. 3 Credits.
This course explores how legal, social, and political contestation shaped the development of American financial capitalism. The course also focuses on how financial crises precipitated change throughout American history.
Area: Humanities, Social and Behavioral Sciences

AS.100.265. The Medieval City. 3 Credits.
This course focuses on the development and growth of medieval cities in western Europe. Students will explore the various functions of cities, uses of urban space, and challenges they faced.
Area: Humanities, Social and Behavioral Sciences

AS.100.268. Jewish and Christian mysticism in the Middle Ages and the Early Modern Period. 3 Credits.
This course will trace the historical development of Jewish and Christian mysticism between the 12th and the 17th centuries.
Area: Humanities, Social and Behavioral Sciences

AS.100.270. Europe since 1945. 3 Credits.
In this class we focus on such topics as the transatlantic alliance, the Cold War divide, the arms race, détente, migration, European integration and the EU from the end of World War II until today. We will discuss academic literature, movies, documentary films, textual and visual primary sources, and more.
Area: Humanities, Social and Behavioral Sciences

AS.100.272. Online: Prostitution in a Global Perspective, 1750 to Present. 3 Credits.
This course examines topics such as the ‘medical model’ of prostitution regulation, the rise of international anti-prostitution, and the responses of modern nationalists to sex work in a global context. *This course will view films complementary to the subject but it is not considered a Film Studies course. Therefore, montages and mise-en-scene will not be discussed.
Area: Humanities

AS.100.273. A Comparative History of Jewish and Christian Mysticism. 3 Credits.
This course will trace the historical development of Jewish and Christian mysticism between the 11th and the 19th centuries.
Area: Humanities, Social and Behavioral Sciences

AS.100.282. Race & Power in Modern South Africa. 3 Credits.
Overview of modern South African history, with a focus on the origins of the racial state and the development of black liberation movements.
Area: Humanities, Social and Behavioral Sciences

AS.100.283. Making and Unmaking Queer Histories, 1800-Present. 3 Credits.
Making and unmaking queer histories introduces students to some of the major themes and historical developments which shape contemporary understandings of past queer lives and communities in the United States and Western Europe since the nineteenth century.
Area: Humanities, Social and Behavioral Sciences

AS.100.291. Medicine in an Age of Empires, 1500-1800. 3 Credits.
How did medicine emerge as a distinctive body of knowledge and a profession in the early modern period? The answers lie in the histories of disease, empire, and global commerce.
Area: Humanities, Social and Behavioral Sciences
AS.100.292. Radical Spain: Social Movements from the Spanish Empire to the Catalan Crisis. 3 Credits.
This course examines different radical movements such as anarchism, facism, nationalism and feminism in the context of Spanish history from the nineteenth century to the twenty-first century.
Area: Humanities, Social and Behavioral Sciences

AS.100.293. Undergraduate Seminar in History. 3 Credits.
The first semester of the two-semester sequence required for majors, this course introduces students to the theory and practice of history. Following a survey of approaches to the study of the past and an introduction to research methods, students undertake original research and write an extended essay. Intended for history majors and prospective majors.
Area: Humanities, Social and Behavioral Sciences

AS.100.294. Undergraduate Seminar in History. 3 Credits.
The second semester of the two-semester sequence required for majors, this course further introduces students to the theory and practice of history. Students write an essay based on original research.
Area: Humanities, Social and Behavioral Sciences

AS.100.295. American Intellectual History since the Civil War. 3 Credits.
Readings in American social thought since 1865, ranging across developments in philosophy, literature, law, economics, and political theory.
Area: Humanities, Social and Behavioral Sciences

AS.100.296. Myth and History in Medieval Europe. 3 Credits.
Can a myth be history? This class examines how medieval historians used myths to shape, debate, and even forge their past, and how they redefined history writing in the process.
Area: Humanities, Social and Behavioral Sciences

AS.100.297. Old Regime and Revolutionary France. 3 Credits.
Examines the history of France from the reign of Louis XIV to the French Revolution, focusing on early modern society, popular culture, absolutism, the Enlightenment, overseas empire, and the French and Haitian Revolutions.
Area: Humanities, Social and Behavioral Sciences

AS.100.298. America after the Civil Rights Movement. 3 Credits.
This course explores the history of late twentieth-century America by examining the social, economic, and political legacies of 1960s civil rights protest for the 1970s, 1980s, and 1990s.
Area: Humanities

AS.100.299. Peter to Putin: Survey. 3 Credits.
Seminar on modern Russia. No midterm and no final. 6 short weekly journals, two short papers, and two small quizzes.
Area: Humanities, Social and Behavioral Sciences

AS.100.300. America and the Great War, 1898-1920. 3 Credits.
This small, discussion-oriented course covers the period from the Spanish-American War through the end of WWI and the Red Scare that more or less ended in 1920.
Area: Humanities, Social and Behavioral Sciences

AS.100.301. The French Revolution. 3 Credits.
Political, social and cultural history of one of the great turning-points in European history. Previously offered as AS.100.204.
Area: Humanities, Social and Behavioral Sciences

AS.100.302. The Transatlantic Slave Trade, c. 1450-1850. 3 Credits.
The course explores the origins, organization and abolition of the transatlantic slave trade c. 1450-1850. It delves into the historiographical debates over the impact of the trade on the development of Africa, Europe, and the Americas in the early modern period.
Area: Humanities, Social and Behavioral Sciences

AS.100.303. Introduction to the History of Jewish Mysticism. 3 Credits.
The course will familiarize the student with the history of the main phenomena of Jewish mysticism from the ancient times to the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.304. The Domestic Slave Trade in Antebellum America. 3 Credits.
An introduction to the domestic slave trade of the 19th century United States. Topics will include the scale of the trade, its impact on enslaved families and redistributive justice/reparations.
Area: Humanities, Social and Behavioral Sciences

AS.100.305. Writing U.S. Empire. 3 Credits.
Attends to the composition and interpretive problems raised by studying the history of American imperialism, 1880s-1930s.
Writing Intensive

AS.100.306. America in the 1960s. 3 Credits.
The years between 1959, when the course begins, and 1971, when it ends, were tumultuous and divisive. This course explores the political, racial, and cultural struggles of a half century ago.
Area: Humanities, Social and Behavioral Sciences

AS.100.307. Images of War in the 19th and 20th Centuries. 3 Credits.
This course examines the changing face of war in photographs, propaganda posters, comics, and film from the American Civil War to the 'war on terror.'
Area: Humanities, Social and Behavioral Sciences
AS.100.326. From Blood Feud to Black Death: European Society in the High Middle Ages, 1000-1400. 3 Credits.  
Explores the development of society and institutions in the medieval west including kingship and law, religion and difference, gender and ideology. Looks closely at social responses to change and adversity.  
Area: Humanities, Social and Behavioral Sciences

AS.100.327. Gender and Sexuality in Reformation and Counter-Reformation Europe. 3 Credits.  
This course will discuss the centrality of gender, sexuality, and gendered rhetoric to the genesis and development of the Protestant Reformation and Catholic Counter-Reformation in Europe.  
Area: Humanities, Social and Behavioral Sciences

AS.100.328. Caged America: Policing, Confinement, and Criminality in the 'Land of the Free'. 3 Credits.  
This course focuses on the evolution of law enforcement practices, the history of federal and state prison systems, and the ways in which Americans have understood and reacted to crime.  
Area: Humanities, Social and Behavioral Sciences

AS.100.329. Russian Imagination in Three Revolutions. 3 Credits.  
Russian Literature and the arts in Revolutions of 1905, 1917, and Stalin era to 1941. Req: 6 journals of 350 words, 2 papers 1250, 2 quizzes. No midterm or final.  
Area: Humanities, Social and Behavioral Sciences

AS.100.330. National Identity in 20th Century China & Japan. 3 Credits.  
Using primary sources, including literature and film, we will explore the changing ways in which ideologues, intellectuals, and ordinary citizens defined national identity in 20th century China and Japan.  
Area: Humanities, Social and Behavioral Sciences

AS.100.331. Reading through Things: Early Modern Chinese Medicine, Technology, and Art. 3 Credits.  
This course introduces the history of late imperial China from the perspective of medicine, technology, and the arts.  
Area: Humanities, Social and Behavioral Sciences

AS.100.332. Persecution and Toleration in Early Modern Europe. 3 Credits.  
Explores hostilities and fears provoked by religious diversity and deviance from orthodoxy in early modern Europe. Outlines theories, practices, and limits of early modern religious tolerance and intolerance.  
Area: Humanities, Social and Behavioral Sciences

AS.100.333. Making Money in the Atlantic World. 3 Credits.  
The history of money is a history of power exercised by states, institutions, and individuals. It is also a history of the structural possibilities and constraints faced by people in the past. We will address making, using, and conceptualizing money in the early modern Atlantic World, a time and a place of expanding empires, extractive enterprises, and changing categories of difference like race, gender, and class.  
Area: Humanities, Social and Behavioral Sciences

AS.100.334. Billie Holiday and American Culture. 3 Credits.  
A course examining introducing students to the life, times and music of Billie Holiday. We will read biographies, autobiographies, novels, and listen to music.  
Area: Humanities, Social and Behavioral Sciences

AS.100.335. The American West. 3 Credits.  
This course explores the expansion and creation of an American West—and its inhabitants—from the Constitution to the end of the nineteenth century.  
Area: Humanities, Social and Behavioral Sciences

AS.100.336. The United Kingdom? A Cultural History of Four Nations, 1707-Present. 3 Credits.  
This course delves into the variegated, often divergent national politics, social landscapes, and cultural shifts in England, Scotland, Wales, and Ireland since Britain’s Acts of Union in 1707.  
Prerequisite(s): AS.100.101 OR AS.100.102 OR AS.100.103 OR AS.100.104  
Area: Humanities, Social and Behavioral Sciences

AS.100.338. Displacement: A History of U.S. Cities from Urban Renewal to Gentrification. 3 Credits.  
This course explores historical conflicts over urban planning and public health. Working with the Baltimore City Archives, we will piece together histories of Baltimore residents displaced by urban renewal and the social contexts in which they lived. Tours of Baltimore will consider whether recent strategies have addressed the legacies of racism and classism in urban development.  
Area: Humanities, Social and Behavioral Sciences

AS.100.341. Historical Performance in the Age of the Troubadours and Trouvères. 3 Credits.  
This seminar examines the practices of musical and theatrical performance in the era of the trouvères and troubadours, "the long thirteenth century." We look at the context in which trouvère song was composed, performed, and transmitted in manuscript form. Students will also sing trouvère music, and while a knowledge of musical notation is not strictly necessary, it is helpful. The culmination of the course will be a concert and recording session. A final paper based on primary sources about an aspect of medieval performance is required.  
Area: Humanities, Social and Behavioral Sciences

AS.100.346. Soviet-American Cold War. 3 Credits.  
The focus will be on Soviet-American interactions, Cold-War Cultures, and the impact on both societies.  
Area: Humanities, Social and Behavioral Sciences

AS.100.347. Early Modern China. 3 Credits.  
The history of China from the 16th to the late 19th centuries.  
Area: Humanities, Social and Behavioral Sciences

AS.100.348. 20th-Century China. 3 Credits.  
A survey of the history of China from the late Qing era to the early People’s Republic.  
Area: Humanities, Social and Behavioral Sciences

AS.100.349. Entertaining America: Popular Culture from Blackface to Broadcast. 3 Credits.  
"Entertaining America" will trace the history of popular culture in the United States, starting in the 1830s, when blackface minstrelsy initiated a new wave of commercial performance, and ending in the 1920s, when records, films, and radio ushered in the era of mass culture.  
Area: Humanities, Social and Behavioral Sciences
AS.100.350. Capital before Capitalism: Economic Debates in the British Empire, 1600-1800. 3 Credits.
This course explores the events, ideas, and debates that shaped economic thought in early modern Britain and its empire before the advent of Capitalism.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.352. Age Of Pasternak. 3 Credits.
This course concerns Russian literature and the arts, including ballet, from the 1910s to the 1950s. Two short papers, journals, two quizzes, and no midterm or final.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.353. Youth and Youth Movements during 20th Century: Germany, Britain, and the U.S. 3 Credits.
Through texts, music, and films, this course examines the rise of ‘youth’ as a social and cultural category in a variety of forms, ranging from spontaneous (such as Rock’n’Roll and Techno) to state-organized (Hitler Youth).
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.354. Playing in the White: Black Writers, the Literary Colorline and Writing Whiteness. 3 Credits.
This course will turn to known and not-so-known black writers during the early to mid-twentieth century who defied literary expectation and wrote stories that featured or focused on whiteness. We will consider what whiteness offered black writers and the political work that their literary experimentations did for a white American publishing industry.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.355. Sex and Society in Early Modern Europe. 3 Credits.
This course will examine how early modern views on the body, gender, and sexuality shaped beliefs about the abilities and rights of women and men.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.356. W.E.B. Du Bois and the Problem of the Color-Line. 3 Credits.
This seminar will introduce students to the ideas and legacy of the renowned American scholar, journalist, and activist, W.E.B. Du Bois (1868-1963), asking students to locate Du Bois in his historical context and in our own. Through readings and discussions of his key works in various forms, we will assess Du Bois’s impact on major debates in American politics, African-American affairs, and academic disciplines like sociology and history. We will track changes in Du Bois’s thinking over time, including in his views of racism, class, gender, liberalism, radicalism, imperialism, and war. Finally, we will consider the ways in which Du Bois’s work continues to shape our understanding of these issues and debates in contemporary American society.
Area: Humanities

AS.100.357. Panic and Liberation: The Politics of Sex in 20th Century Europe. 3 Credits.
This course examines the 20th century history of sexual attitudes, desires, behaviors, identities, communities, and movements in Western Europe (most notably, Germany, France, and the United Kingdom).
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.358. Black Code Studies: Black History and Digital Media. 3 Credits.
This course explores doing histories of people of African descent in an age of digital and social media. The focus will be on African-descended communities in the United States, but content will range across time space. Examples include: West African digital art communities; the use of slave trade databases to write Caribbean history; and the use of social media in social justice organizing from Paris to Baltimore. Students will explore questions of blackness, race, ethnicity, sex and sexuality, violence and justice while creating digital content using platforms like Wordpress, Omeka, Twitter, and Tumblr. Students will be evaluated on their acquisition of African American and Afro-Diasporic history; their knowledge of digital and social media platforms; and their ability to creatively and accurately relate the histories of blackness and black people to their representation and discussion online.
Area: Humanities, Social and Behavioral Sciences

AS.100.359. Gender, Patriarchy, and the English Revolution. 3 Credits.
This course explores the varied experiences of gender and gender roles in seventeenth-century Britain and analyzes how these roles were challenged, changed, and sometimes upended during the English Revolution (1642-1660).
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.360. The Modern British World: Imperial Encounters, Regimes, and Resistance, from the American Revolution to the present. 3 Credits.
The Modern British World introduces some of the major themes and contestations tied to Britain's rise to global dominance and its ultimate decline as an imperial power.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.361. Age of Tolstoy. 3 Credits.
Tolstoy and his era, 1820s to 1910s. Topics include state and politics, empire, the Russian identity, and forms of cultural expression. Students consider 'War and Peace' and other masterworks.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.362. Children and Childhood in the Middle Ages. 3 Credits.
Seminar on the history of childhood and ideas of childhood around the medieval Mediterranean; themes include child custody; medieval education and punishment; parent-child private letters; child mortality and the arts of bereavement/consolation. Cross-listed with the Program in Islamic Studies and Near Eastern Studies.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.363. The Development of the Sabbatian Movement. 3 Credits.
This course examines the development of Sabbatianism, the most important messianic movement in the history of Judaism. We shall discuss the messianic claims of Sabbatai Tsevi, the spread of religious fervor among the Jews of Middle East, Europe, and North Africa, rabbinic opposition to the movement, and shall compare it to similar phenomena in Islam and Christianity. Special attention will be paid to reading of primary Sabbatian sources in English translation.
Area: Humanities, Social and Behavioral Sciences

AS.100.364. Sacrilegious Jews: Accusations of Ritual Crime in Pre-Modern Europe. 3 Credits.
This course will examine the history of the accusations of the Jews of ritual crime (blood libel, host desecration etc.) in pre-modern Europe.
Area: Humanities, Social and Behavioral Sciences
AS.100.365. Culture & Society in the High Middle Ages. 3 Credits.
History 100.365 will consist of two lectures a week and one discussion section. Readings focus when possible on primary sources. It will cover the social, economic, political and intellectual development of medieval society, beginning with the rise of feudal society, the development of medieval courtly culture, primarily the creation of epic and romance literature in the various courts of Europe; the creation of universities and the intellectual revival of Europe in the form of scholasticism; the re-emergence of trade and, with it, the rise of a middle class, the political development of royal authority which was tantamount to the creation of the modern national state and finally, the emergence of heresy and new forms of spirituality in the late Middle Ages to combat it, especially with the creation of the Dominican and Franciscan monastic orders. Area: Humanities, Social and Behavioral Sciences

AS.100.375. Histories of Women and the Vote. 3 Credits.
The year 2020 will mark 100 years since the 19th Amendment guaranteed American women the right to vote. Or did it? This course will examine the long history of women's voting rights in the United States, including the story that extends from a convention at Seneca Falls, NY to a constitutional amendment. It will also examine alternative stories, especially those of women of color whose campaigns for the vote did not end in 1920 — and continue until today. Area: Humanities, Social and Behavioral Sciences

AS.100.376. The Haitian Revolution in Global Perspective. 3 Credits.
An advanced undergraduate seminar tracing the history of the Haitian Revolution from its origins in the early modern Atlantic world to its global impact and continuing legacies in the present. Area: Humanities, Social and Behavioral Sciences

AS.100.377. The Age of Reason on the Silver Screen: Cinematic Representations of the Enlightenment. 3 Credits.
This course will discuss the problem of historical representation on the basis of an analysis of movies depicting the Age of the Enlightenment. Area: Humanities, Social and Behavioral Sciences

AS.100.378. Race and Capitalism in the City. 3 Credits.
This course examines the intersections of race and capital in U.S. cities since 1800. In addition to classroom lectures and exercises involving various kinds of digital media, students will participate in walking tours exploring the particular conjunctures of race and economic development in Baltimore as manifested through the histories of slavery, segregation, and post-1960s urban growth. Students will also gain practice communicating their ideas through blog posts, policy briefings, and other modes of reporting. Area: Humanities

AS.100.381. Conquest, Conversion, and Language Change in the Middle Ages. 3 Credits.
Examines case-studies of imperial conquests (Islamic, Mongol, reconquista, early colonialism) and attendant changes in religion (Christianization; Islamization) and in language (Arabization; transition from Latin to European vernaculars) across medieval Eurasia. Area: Humanities, Social and Behavioral Sciences

AS.100.382. Early Modern African Atlantic. 3 Credits.
This course examines the history of West and Central Africa and its diasporic people and cultures during the early modern period (c. 1400-1750) in disparate parts of the Atlantic world, including Europe, Latin America, the Caribbean, and Anglo-America. Themes include: West and Central African political and religious cultures; trans-Atlantic slavery; African Christianity; and the question of cultural survivals. Area: Humanities, Social and Behavioral Sciences

AS.100.384. Intoxicated: Commodities & Globalization in the Early Modern World. 3 Credits.
Each week we examine a commodity that defined a new era of global connectivity in the centuries after 1492, including money, medicines, slaves, and fashion. Area: Humanities, Social and Behavioral Sciences

AS.100.386. The Cold War as Sports History. 3 Credits.
Sport is key to understanding the Cold War. We will investigate how the Cold War has shaped sports, the Olympic movement, the role of athletes and international competitions and how sports relate to race, gender, and class. We will discuss the ways in which sports confirm and consolidate but also challenge and change social structures and opportunities of self-fulfillment and social advancement. Area: Humanities, Social and Behavioral Sciences

AS.100.387. Everyday Life in the Medieval Middle East. 3 Credits.
Explores the daily lives of non-elites in the medieval Middle East—food; housing; clothes; marriage and divorce; urban festivals—through primary documents (e.g. letters, court records) and artifacts (e.g. clothing). Prerequisite for enrollment: Students must have taken one history course. Area: Humanities, Social and Behavioral Sciences
AS.100.389. History of Law and Social Justice. 3 Credits.
Cause lawyering aims to change the status quo. This course examines
histories of this approach to social justice, from battles against the slave
trade to contemporary campaigns for marriage equality.
Area: Humanities, Social and Behavioral Sciences

AS.100.390. The Medieval Crusades: Cultural Convergence and Religious
Conflict, 1000-1400. 3 Credits.
This course explores the origins of the idea of crusading, examines the
experiences of those who traveled east, and analyzes the cultures of
contact that developed ca. 1095 and 1291.
Area: Humanities, Social and Behavioral Sciences

AS.100.391. Impeachments and Beyond: Law, Justice, and Politics in
Latin America. 3 Credits.
Students taking this course will explore the intersections of the legal and
political histories in Latin America, from indigenous legalities to current
constitutional thought, corruption scandals, and lawfare.
Prerequisite(s): Students cannot enroll in this course if they have taken/passed AS.100.237.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.392. The Art of Lying: Lie, Dissimulation, and the 'Fake News' in
Pre-modern Europe. 3 Credits.
The course will examine the early modern attitudes to lie and
dissimulation.
Area: Humanities, Social and Behavioral Sciences

AS.100.394. Brazilian Paradoxes: Slavery, Race, and Inequality in Brazil
(from a Portuguese Colony to the World's 8th Largest Economy). 3
Credits.
Place of contrasts, Brazil has a multi-ethnic cultural heritage challenged
by social and racial inequalities. Its political life remains chaotic. We will
examine these problems through Brazilian history and culture.
Area: Humanities, Social and Behavioral Sciences

AS.100.395. History of Global Development. 3 Credits.
This course explores development as an ideology and a practice. From
colonialism to the Cold War to contemporary NGOs, we will interrogate
the history of our attempts to improve the world.
Area: Humanities, Social and Behavioral Sciences

AS.100.398. Images of Postwar Japan. 3 Credits.
This seminar explores Japan's changing place in the world in the decades
following World War II, with an emphasis on analyzing visual media such
as photographs, films, advertisements, and comic books. Topics include
relations with the U.S. and other countries in East Asia, particularly the
two Koreas; the atomic bombings of Hiroshima and Nagasaki; and the
global contexts for an expanding Japanese consumerism in the late 20th
century.
Writing Intensive

AS.100.399. Decolonization and Citizenship in Africa, 1945-2015. 3
Credits.
Critically explores issues of decolonization and citizenship in Africa from
WWII to the present. Emphasis on political inclusion and exclusion, and
violence, fostered by nationalist movements and postcolonial African
governments.
Area: Humanities
Writing Intensive

AS.100.403. Law & Custom in Colonial Africa. 3 Credits.
Examines how colonial rule transformed African legal systems, while
Africans used European law for political resistance and personal gain.
Research project based on colonial South African court records.
Area: Humanities, Social and Behavioral Sciences

AS.100.404. John Locke. 3 Credits.
Seminar-style course in which John Locke's major works will be read
intensively, together with some of his contemporaries' works, and select
scholarly interpretations.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.408. Theorizing the Age of Enormity: Social Theory and the
History of the 20th Century. 3 Credits.
We will read and analyze key works of social and critical theory produced
in relation to 20th and 21st century problems of state and society,
nationalism, empire, totalitarianism, genocide, capitalism, political order,
gender, race, sexuality, secularism, religion, environmental catastrophe.
Possible readings include Weber, Du Bois, Adorno, Arendt, Foucault,
Balibar, Beckamng others.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.413. London 1580-1830: The History of Britain's capital city. 3
Credits.
Seminar-style class analyzing the social, cultural, gender, religious,
economic, and political history of London from Shakespeare's time
through revolutions, plague, fire, and commercial, colonial, and industrial
expansion.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.414. Love, Death, and the Afterlife in the Medieval West. 3
Credits.
Romantic love, it is often claimed, is an invention of the High Middle
Ages. The vocabulary of sexual desire that is still current in the twenty-
first century was authored in the twelfth and thirteenth, by troubadours,
court poets, writers like Dante; even by crusaders returning from the
eastern Mediterranean. How did this devout society come to elevate
the experience of sensual love? This course draws on primary sources
such as medieval songs, folktales, the "epic rap battles" of the thirteenth
century, along with the writings of Boccaccio, Saint Augustine and others,
to understand the unexpected connections between love, death, and
the afterlife from late antiquity to the fourteenth century. Each week, we
will use a literary or artistic work as an interpretive window into cultural
attitudes towards love, death or the afterlife. These readings are analyzed
in tandem with major historical developments, including the rise of
Christianity, the emergence of feudal society and chivalric culture, the
crusading movement, and the social breakdown of the fourteenth century.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.415. The Holocaust in Jewish History and in Global Culture. 3
Credits.
Key works on the history of Nazi Germany's murder of European Jewry
during the Second World War; Jewish responses; the recasting of Jewish
and global thought in relation to this signal event; genocide and 'ethnic
cleansing' since the Holocaust.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.100.416. History through Things: Objects, Circulation, and Encounters in the Medieval World. 3 Credits.
Objects from the past offer a powerful window into a set of experiences not recorded in texts. We will follow objects and things as they appear in lists, letters, and descriptions, as they travel surprising routes, and bring to life the medieval world before 1400.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.417. Capitalism, Socialism, and Democracy. 3 Credits.
This course examines the ideas of Joseph A. Schumpeter, the father of entrepreneurial studies. Each student will develop a perspective on the history of capitalism and socialism.
Area: Humanities, Social and Behavioral Sciences

AS.100.418. Comparative Slavery: Haiti and Brazil. 3 Credits.
Haiti is born after a powerful slave insurrection (1804). Brazil was the last country to abolish slavery (1888). Why did these slave societies, which shared many common characteristics, have such different histories?
Area: Humanities, Social and Behavioral Sciences

AS.100.421. Sex, Law and Islam. 3 Credits.
ISIS, "virgins" in paradise, the sexual slavery of Yazidi women... This course will use anthropological and historical studies to examine the long history of how rules and understandings about sex, sexuality, and gender have mattered in how people think about Islam.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.422. Society & Social Change in 18th Century China. 3 Credits.
What did Chinese local society look like under the Qing Empire, and how did it change over the early modern era?
Area: Humanities, Social and Behavioral Sciences

AS.100.423. Multiethnic Japan. 3 Credits.
An advanced undergraduate seminar on the intertwined histories of race, ethnicity, and empire in Japan and its former colonies from the early twentieth century to the present.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.424. Women & Modern Chinese History. 3 Credits.
This course examines the experiences of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women's experiences for their own political and social agendas.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.426. Popular Culture in Early Modern Europe. 3 Credits.
Witchcraft, magic, carnivals, riots, folk tales, gender roles, fertility cults and violence especially in Britain, Germany, France, and Italy.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.430. Gender and Sexuality in African History. 3 Credits.
An upper-level history reading seminar with a focus on histories of gender and sexuality in colonial and postcolonial Africa.
Area: Humanities, Social and Behavioral Sciences

AS.100.433. Free Speech and Censorship in the United States. 3 Credits.
This undergraduate research seminar will examine censorship laws, practices, and debates from the eighteenth century to the present. In addition to discussing common readings, each student will choose a censorship case to research and present to the class.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.438. The City Victorious: Medieval Cairo. 3 Credits.
What was medieval Cairo like? Students explore urban life in this imperial capital (969-1517), including food and market habits; relations between Jews, Christians, and Muslims; patronage; plague, drought, and famine. Pre-requisite for enrollment: Students must have taken two history courses.
Area: Humanities, Social and Behavioral Sciences

AS.100.441. Migration and the Americas. 3 Credits.
From the Spanish Conquest to contemporary debates in the US, this course looks at the great diversity of migrations that have shaped life in the Americas.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.442. The Intellectual History of Capitalism, 1900 to present. 3 Credits.
This course examines shifting understandings of the philosophical foundations, political implications, and social effects of the market economy since the early twentieth century.
Area: Humanities, Social and Behavioral Sciences

AS.100.444. Migrants and Refugees in Africa. 3 Credits.
A history of forced and voluntary migration and displacement in Africa, its causes and consequences, with a focus on refugees and labor migrants since 1960.
Area: Humanities, Social and Behavioral Sciences

AS.100.456. Getting Medieval? Public Violence in the Middle Ages. 3 Credits.
Traditional studies and popular culture often consider violence as a hallmark of medieval life and hence, present it as a fundamental difference between a ‘brutal and violent’ Middle Ages and a ‘civilized and humane’ (Western) modernity. To evaluate these claims and images, we will examine different forms of violence in medieval societies—European and Middle Eastern—especially (i) martyrdom, (ii) communal violence, and (iii) public punishment. After exploring the specific cultural meanings of these practices, we will re-examine those modern polemics that invoke ‘the medieval’ (often vis-à-vis non-Western traditions and societies).
Area: Humanities, Social and Behavioral Sciences

AS.100.478. Japan from its Peripheries. 3 Credits.
An advanced undergraduate seminar on the history of modern Japan from the perspective of regions and people often considered as belonging to its geographical, cultural, social, and political peripheries.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.482. Historiography of Modern China. 3 Credits.
Reading and discussion of major approaches to Chinese history by Western, Chinese, and Japanese scholars and intellectuals, and of the cultural attitudes and policies they foster.
Area: Humanities, Social and Behavioral Sciences
AS.100.486. Jim Crow in America. 3 Credits.
This course explores the history, politics, and culture of legalized racial segregation in the United States between the mid-nineteenth and twentieth centuries—a regime commonly known as “Jim Crow.”
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.488. The Caribbean World, 1450-1850. 3 Credits.
The Caribbean was the key focal point of overseas European expansion in the early modern world. This course traces developments in the region from the Tainos to Toussaint Louverture.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.490. Writing Power, or Dueling in Print with Light Sabers: An RIC Seminar on Scholarly Composition. 3 Credits.
A first-of-its kind seminar hosted by the Program in Racism, Immigration, and Citizenship, this course explores the practice of composition for professional writers. It considers the “light” and “dark” sides of clear, direct scholarly writing and intentional, academic obfuscation, respectively. Attendees will also learn strategies and potential hazards that accompany the written description of power in the Humanities and Social Sciences.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.494. Senior Honors Seminar. 1 Credit.
A two-semester coordinating seminar for history majors writing senior honors theses. Admission is granted by instructor only after the student has selected a faculty thesis advisor. AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis.
Prerequisite(s): AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.495. Senior Honors Seminar. 1 Credit.
The Senior Honors Seminar is a coordinating seminar for senior history majors who are writing senior honors theses and wish to graduate with departmental honors. To be taken concurrently with AS.100.508, Senior Thesis.
Corequisite(s): AS.100.508
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.497. The Year 1968: Rebels, Revolutions & the Right-Wing Backlash. 3 Credits.
The sixties were a decade of unrest, failed revolutions, and fundamental change across Europe and the US. We will look at how these years changed the world through the lens of national case studies and community engagement.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.498. History of the Family & Gender in the United States. 3 Credits.
Topics include: history of emotions; politics of sexuality and marriage; impact of race, ethnicity, and class on family life; women and gender inequality. Primarily colonial era through the early twentieth century, with some attention to contemporary politics of family, gender, and sexuality.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.499. Film and Propaganda in Nazi Germany. 3 Credits.
By examining a range of cinematic works—from explicitly ideological pseudo-documentaries to entertainment films—this course will explore the transmission of propaganda into the everyday culture of Nazi Germany.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.501. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.502. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.507. Senior Thesis. 3 Credits.
Two semesters. Senior thesis writers will undertake research in primary materials that will explore a significant historical issue or problem. The DUS will confirm admission as soon as the student has selected a faculty thesis advisor: the outside deadline for confirmation is May 1. AS.100.507 is to be taken concurrently with AS.100.494 Senior Honors Seminar.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Writing Intensive

AS.100.508. Senior Thesis. 3 Credits.
This seminar is required for senior history majors who are writing senior honors theses and wish to graduate with departmental honors.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.535. Independent Study. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.536. Independent Study. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.594. Internship - Summer. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.599. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.100.602. The French Revolution.
Introduces graduate students to the rich historiography of the French Revolution. Topics include: revolutionary origins, political culture and radicalization, citizenship, violence, family & gender, the search for stability after the Terror, global revolution, Napoleon's Brumaire coup.
Area: Humanities, Social and Behavioral Sciences
Area: Humanities, Social and Behavioral Sciences

AS.100.604. Readings in the Early U.S. Republic/Nineteenth Century.
Readings in the Early U.S. Republic/Nineteenth Century

AS.100.605. Modern Britain & the British Empire.
Modern Britain and the British World is a graduate seminar which familiarizes students with major themes and historiographic debates in Modern British and Modern British Imperial History.
Area: Humanities, Social and Behavioral Sciences

AS.100.606. South African History and Historiography.
Reading seminar in the history and historiography of South Africa from the late precolonial period through the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.607. Consumer Revolution in Global Perspective.
First semester of year-long seminar examining transformations in European consumption from 1650 to 1800. Topics include cultural theory; fashion, gender, and social identity; capitalism, retail, and credit; Enlightenment and the public sphere; political economy; overseas empire; globalization; and the Atlantic revolutions.
Area: Humanities, Social and Behavioral Sciences

AS.100.608. The Consumer Revolution in Global Perspective.
Second semester of year-long seminar examining transformations in European consumption from 1650 to 1800. Topics include capitalism and consumption; political economy; fashion, gender, and identity; Enlightenment and the public sphere; globalization; empire and colonization; and the Atlantic revolutions.
Area: Humanities, Social and Behavioral Sciences

AS.100.609. 'Baroque' as a Historical Category.
This seminar will discuss the use of the concept of the 'Baroque', as developed in the history of art, architecture, and music, as a category of historical periodization.
Area: Humanities, Social and Behavioral Sciences

AS.100.611. Kabbalah and the Enlightenment: Reading 'The Manuscript' Found in Saragossa.
The course will discuss the European Enlightenment's attitude to the Jewish esoteric lore. As a lens to discuss this topic, we shall use Jan Potocki's novel "The Manuscript Found in Saragossa".
Area: Humanities, Social and Behavioral Sciences

A reading seminar on the interconnected histories and historiographies of Japan and Korea in the nineteenth and twentieth centuries.
Area: Humanities, Social and Behavioral Sciences

AS.100.614. Seminar in Modern Chinese History.
A seminar covering major milestones in research on late imperial and modern Chinese history, primarily in English. Open to undergraduates with the permission of the instructor.
Area: Humanities, Social and Behavioral Sciences

AS.100.615. States, Scribes, and Archives: Medieval Arabic Documentary Cultures.
A historical survey of the bureaucratic practices of medieval Islamic states (in comparative perspective); includes close readings of primary official documents, e.g. petitions, edicts, fiscal receipts, and administrative reports.
Area: Humanities, Social and Behavioral Sciences

AS.100.618. Historiography of Law and Empire.
Reading seminar covering recent work on the history of law in the context of empire. Emphasis on colonial rule in Africa, with some attention to Asia and the Americas.
Area: Humanities, Social and Behavioral Sciences

AS.100.619. Early Modern France.
The second part of a two-semester sequence, this seminar examines the history of France and its empire from the seventeenth century to the French Revolution.
Area: Humanities, Social and Behavioral Sciences

AS.100.620. Early Modern France.
The first part of a two-semester sequence, this seminar examines the history of France and its empire from the seventeenth century to the French Revolution.
Area: Humanities, Social and Behavioral Sciences

AS.100.621. Historiography of the Western European 1970s and 1980s.
How have historians grappled with the quite recent past? We will explore histories of the 1970s and 1980s, with a focus on France, Germany, and the UK, as well as transnational and post-decolonization approaches.
Area: Humanities, Social and Behavioral Sciences

AS.100.622. Religion in Modernity: Theories and Histories.
Drawing on key works in classic and contemporary social theory of religion and secularity as well as historical, ethnographic, and sociological monographs, this course investigates some scholars' answers to the question of why we might want to take 'religion in modernity' as an object of study (or not), what kinds of roles and importance religion (or various institutions, impulses, practices, and ideas connected to major faith traditions) has/have arguably enjoyed in an arguably global modernity often imagined as intrinsically secular, whether and how it matters that the category of religion itself may be a modern invention intertwined with specifically Christian-European and European imperial and colonial projects, whether and how we should take "secularism" or "secularity" as our object of study no less than or more than religion, what special kinds of research agendas and assumptions the empirical study of 'religion' and its workings and significance in modern political and cultural life might demand, and the sorts of scholarly value it might add, and how the answers to those questions change when we look to a global present which is sometimes framed as post-secular. A more theoretically and comparatively oriented first part of the course will give way to focused attention on historical, sociological, and ethnographic monographs, with much attention to European, North American, and Near Eastern histories and societies, but ample room for students interested in East Asian, South Asian, African, and Latin American religious formations to investigate those literatures and bring to bear in class discussion. Readings likely include Weber, Bergson, Asad, Charles Taylor, de Vries, Lambek, Das, Roger Friedland, Wuthnow, Margaret Jacobs, Blackbourn, Mahmood, Susan Harding, William Connolly, Chidester, Bryan Turner.
Area: Humanities, Social and Behavioral Sciences

AS.100.625. The Right and the Far Right in Western Europe, 1870 to the Present.
We will explore both classic and new histories of right-wing and far-right political movements.
Area: Humanities, Social and Behavioral Sciences

AS.100.627. Histories of Development.
Reading seminar on the history of development as both ideology and practice in the nineteenth and twentieth centuries.
Area: Humanities, Social and Behavioral Sciences
AS.100.630. Modern European Imperialism and the History of Sex and Sexuality.
This reading seminar will explore how the history of sexuality has shaped recent historiographies of European empires.

AS.100.631. Ibero-Atlantic History.
A reading seminar on the history and historiography of the Portuguese and Spanish empires c. 1600-1900.
Area: Humanities

AS.100.632. Capetian France: Documents, Devotions and Sovereign Authority.
Through a careful study of texts and objects produced for and by the Capetian rulers during the thirteenth century we will interrogate the creation of the French state, the cultivation of royal ideology, and its practice of sovereign power.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.635. Topics in European Imperial History.
This graduate reading course covers key topics in European Imperial History, c. 1600-1900.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.638. Reading Seminar in Early Modern History.
This is a graduate seminar devoted to reading of sources and scholarship on the Early Modern Period.
Area: Humanities, Social and Behavioral Sciences

AS.100.639. Topics in the History and Sociology of Nationalism.
Advanced topics in the history and sociology of nationalism, with special attention to questions of childhood and education in the age of the nation-state; memory and memory-conflicts; nation and European overseas empire. Open to undergraduates with permission of instructor.
Area: Humanities, Social and Behavioral Sciences

AS.100.640. 20th-Century European Imperial and Transnational Histories.
This course will look at recent historiography on extranational approaches to 20th-century European histories, with a focus on France, the United Kingdom, USSR/Russia, and Germany.
Area: Humanities, Social and Behavioral Sciences

AS.100.641. Global Catholicism in the Early Modern Period.
Explores religious culture in medieval and early modern Europe, with an emphasis on spiritual beliefs and practices, relics, miracles, pilgrimage, and saint-making. Emphasis on reading and discussing written sources and visual culture. Graduate students only.
Area: Humanities, Social and Behavioral Sciences

AS.100.643. Jewish Paths Through Modernity.
Intensive introduction to the key trends and trajectories in modern Jewish history and the major themes in Jewish historiography. Intended to serve both graduate students outside the Jewish history field and graduate students pursuing a field in modern Jewish history.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.644. Approaches to Brazilian History.
A reading seminar on the history and historiography of Brazil (colonial and national periods). Open to undergraduates with the permission of the instructor.
Area: Humanities, Social and Behavioral Sciences

AS.100.645. Race, Law, History.
This seminar examines the relationship of law to the formation of race and inequality in US history, investigating the legal archive through the perspectives of critical race theory and critical legal history. Course can be taken a maximum of two times.
Area: Humanities, Social and Behavioral Sciences

AS.100.646. Marvels and Wonder in medieval Arab Islamic Culture.
Explores the concept of marvels in different genres of medieval Arabic culture: Qur'anic exegesis; travel literature; 'ethnography'; cosmography and geography; marvels of the natural world (e.g. hermaphrodites); Muslim views of pre-Islamic ('pagan') monuments.
Area: Humanities, Social and Behavioral Sciences

AS.100.648. Crown, Court, and Charter: Political Culture in the High Middle Ages.
Explores mechanisms of political power and the rise of the state in Europe during the High Middle Ages by analyzing royal ideology, administrative growth, legal change, and cultural production.
Area: Humanities, Social and Behavioral Sciences

AS.100.653. Africa in the Twentieth Century.
Reading seminar emphasizing key developments in the historiography of Colonial and Postcolonial Africa.
Area: Humanities, Social and Behavioral Sciences

AS.100.655. Reading Koselleck.
The course will be devoted to close reading of the works of Reinhardt Koselleck.
Area: Humanities, Social and Behavioral Sciences

AS.100.656. Reading Koselleck.
The course will be devoted to close reading of the works of Reinhardt Koselleck.
Area: Humanities, Social and Behavioral Sciences

AS.100.661. Racial Literacy in the Archives.
This course explores how to use race as a historical category of analysis, and teaches attendees how to locate how historical actors deploy race and racism to make claims, organize labor and identities, and imagine political possibility.
Area: Humanities, Social and Behavioral Sciences

AS.100.664. Heresy and the Holy: Religion and Society in Medieval Europe.
The course explores the rise of heresy and holiness as categories during the Middle Ages. It traces the advent of religious movements, the effects of religious reform, the centralization of ecclesiastical authority, the rise of vernacular spirituality and dissent, and analyzes the historiographical and methodological approaches to the study of medieval religion.
Area: Humanities, Social and Behavioral Sciences

AS.100.666. Topics in Modern Jewish History.
Continuation of AS.100.668 Colloquium in Modern Jewish History.
Area: Humanities, Social and Behavioral Sciences
AS.100.671. Play and Violence in Medieval France.
Since the work of Geertz, Huizinga, Bakhtin and Caillois, among others, the intersection of play and violence has been a focal point for historians, anthropologists, literary scholars, even psychologists. This seminar traces the twin themes of violence and play as instantiated by the fighting classes in the High Middle Ages, beginning with the emergence of the tournament and the crusading movement in the eleventh century. By examining sources in Old French and Latin, we will contextualize music, dances, comedies, and contests that accompanied the violent rituals around which French aristocratic life revolved. Course may not meet weekly.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.672. Medieval Materialities: Objects, Ontologies, Texts and Contexts.
We will use the meanings and methodologies of “materiality” to examine the medieval world, by analyzing objects, texts, networks, patterns of circulation and appropriation, aesthetics and enshrinement, production and knowledge communities.
Area: Humanities, Social and Behavioral Sciences

AS.100.680. Reading Seminar in Atlantic History 1600-1800.
This reading seminar will highlight some of the major new works and wide-ranging genres in this lively, stimulating field.

AS.100.681. Research Seminar in Atlantic History, 1600-1800.
Writing workshop for graduate students at all stages presenting work in progress. Discussion of theories, methods, and challenges of graduate student writing.
Area: Humanities, Social and Behavioral Sciences

AS.100.684. Research Seminar in the Atlantic World, 1500-1810.
This seminar selectively explores the emergence and subsequent growth of the Atlantic basin as a site for exchange among and within the continents of Europe, Africa, and the Americas in the early modern era.

AS.100.692. Graduate Reading Seminar in Early American History.
A probing look at various genres and classics ranging from Native Americans to the Early Republic.
Area: Humanities, Social and Behavioral Sciences

AS.100.695. Problems in U.S. Social & Cultural History.
A graduate level seminar in social and cultural history in the 19th and 20th centuries.

AS.100.696. Problems in American Society and Culture.
An intensive graduate seminar exploring various topics in US social and cultural history, focusing on the period from the late 19th century to the late 20th century.

AS.100.699. Neoliberalism.
Readings on the history, theory, and politics of neoliberalism, from midcentury to the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.700. American Intellectual History.
Readings on late nineteenth- and twentieth-century American and transatlantic social theory.

AS.100.702. European Empires in the Indian Ocean.
A reading overview of Portuguese, Dutch, English and French empires in the Indian Ocean.
Area: Humanities, Social and Behavioral Sciences

AS.100.703. Nationhood and Nationalism: theory, historiography, sociologies.
Theories, historiographies, and sociologies of nationhood and nationalism. Nationhood as institutional form, practical category, and site of contestation. Nationalisms and nationalist movements, nation-states and nationalizing states, borderlands, memory struggles. The subjectivities generated by nationalism and national conflict, including forms of national minority. Recent work on national indiffere, nation and empire, nation and religion, and supranationalisms and internationalisms.
Area: Humanities, Social and Behavioral Sciences

AS.100.707. The Black World.
This course explores the practice of writing and reading the history of African Americans and the wider African Diaspora. Participants will share written work and do close readings of primary and secondary texts exploring the black experience in Europe, Asia, Africa, and the Americas.
Area: Humanities, Social and Behavioral Sciences

AS.100.711. Approaches to International, Transnational and Global History.
Graduate students will read and analyze classic as well as recent works of International, Transnational and Global History.
Area: Humanities, Social and Behavioral Sciences

AS.100.713. Black Womanhood.
What does a usable history of black womanhood (black queer and trans womanhood inclusive) look like? Black women's history across time and space.
Area: Humanities, Social and Behavioral Sciences

AS.100.716. Cultural Theory For Historians.
An examination of modern cultural theories, with emphasis on mass culture and consumerism. Authors include Simmel, Kracauer, Benjamin, Horkheimer, Adorno, Barthes, Debord, Bourdieu, and de Certeau.

AS.100.721. Topics In African History.
Critical readings on selected themes in African history and historiography.

AS.100.724. Sex and Slavery.
Research and methods in the field of sexuality and slavery studies. Graduate students may take this course up to two times.
Area: Humanities, Social and Behavioral Sciences

AS.100.725. Sex and Slavery II.
Research and methods in the field of sexuality and slavery studies. Part 2: Caribbean & African Continent.
Area: Humanities, Social and Behavioral Sciences

AS.100.728. Historical Writing in the Middle Ages.
The course will begin with readings of literary and critical theory, as a preparation for the study of modes of historical writing in the Middle Ages. We will then read a sampling of medieval historiographical texts, beginning with Eusebius and continuing throughout the Middle Ages.

AS.100.729. Reading Seminar: British America and the Early United States in Atlantic Perspective.
Introduction to the history and historiography on British North America and the United States.
AS.100.730. Reading Seminar: British America and the Early United States in Atlantic Perspective.
Continuation of AS.100.729 for students conducting field exams.

A reading seminar in colonial African history; the focus may be on French African empire.

AS.100.733. Reading Qing Documents.
Open to advanced undergraduates with at least one semester of Classical Chinese. This course has several objectives. First and foremost, it is a hands on document reading class designed to familiarize students with the skills, sources, and reference materials necessary to conduct research in Qing history. To that end, we will spend much of our time reading documents. At the same time, we will engage in problem solving exercises designed to develop and enhance basic research skills. Finally, several important archive-based secondary works in the secondary literature are available on reserve for your reference. These works demonstrate the ways in which historians have recently applied archival skills (and materials).

AS.100.735. Early Modern Britain and the Early Modern British Empire.

AS.100.736. Early Modern Britain and the Early Modern British Empire.

AS.100.738. Women, Genders and Sexualities.
In May 2020, Johns Hopkins will host the meeting of the Berkshire Conference on Women, Gender and Sexualities, a gathering of 1200 scholars from across the world. Our seminar will use the Berkshire Conference program to organize a set of readings that will anticipate the panels, roundtables, performances, and plenaries that will be on campus between May 28 and 31, 2020. Attendance at the conference is not required, but it is recommended.

AS.100.744. Twentieth Century France and the French Empire.
We will explore major recent work in the history of France, with particular attention to transnational and imperial questions.

AS.100.749. Social Theory for Historians: Marx, Durkheim, Weber.
An examination of the works of Marx, Durkheim, and Weber, as examples of the Hegelian, positivist, and hermeneutic traditions of social theory.

AS.100.751. Early Modern European Intellectual History.
Early Modern European Intellectual History
Area: Humanities, Social and Behavioral Sciences

AS.100.753. Modern American Seminar.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in 20th century history. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly

Area: Humanities, Social and Behavioral Sciences

AS.100.755. Modern American Seminar.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in 20th century history. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.756. Reading Seminar in Chinese History.
A seminar covering recent work on late imperial and modern Chinese history, primarily in English.

Area: Humanities, Social and Behavioral Sciences

AS.100.757. Cultural Histories of Late Imperial China.
This reading seminar will introduce graduate students and advanced undergraduates (by permission) to recent studies of Late Imperial and Republican China that can (by various standards) be classified as works of cultural history.

Area: Humanities, Social and Behavioral Sciences

AS.100.759. Arabic Historical Writing in the Middle Ages.
The course examines various genres of Arabic historical writing during the high and late Middle Ages (10th-15th c.). All primary readings are in English/French translation (no Arabic required).

Area: Humanities, Social and Behavioral Sciences

AS.100.761. History of Capitalism.
Readings on the history of capitalism since the mid-nineteenth century, with an emphasis on the American context.

AS.100.762. History and Historiography of 19th France in Europe and the World.
This course will look at recent historiography on France and the French empire, notably in North Africa. We will pay particular attention to transnational and imperial questions.

AS.100.765. Problems in Women and Gender Studies.
An exploration of recent work in women’s and gender history, focusing on some of the following: sexuality, cultural production, politics, family formation, work, religion, difference, and civic orders.

AS.100.766. Problems in the History of Women & Gender.
An exploration of recent work in modern European and US women’s and gender history, focusing on some of the following: sexuality, cultural production, politics, family formation, work, religion, differences, and civic orders. A continuation of AS.100.765.

Area: Humanities, Social and Behavioral Sciences

AS.100.769. Gender History Workshop.
Workshop for presentation of works-in-progress on the history of women, gender, and/or sexuality, including drafts of dissertation chapters, research papers, talks, and proposals. Students in disciplines other than history are welcome.

AS.100.770. Gender History Workshop.
Workshop for presentation of works-in-progress on the history of women, gender, and/or sexuality, including drafts of dissertation chapters, research papers, talks, and proposals. Students in disciplines other than history are welcome. Graduate students only.

Area: Humanities, Social and Behavioral Sciences

AS.100.781. The Seminar.
This course features presentations from invited speakers. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.782. The Seminar.
This course features presentations from invited speakers. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.783. Seminar: Medieval Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Medieval European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
AS.100.784. Seminar: Medieval Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Medieval European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.785. Seminar: Early Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Early Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.786. Seminar: Early Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Early Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.787. Seminar: Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.788. General Seminar: Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.789. Seminar: American.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.790. General Seminar: America.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.791. Seminar: Latin American.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in Latin American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.792. General Seminar: Latin America.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in Latin American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.793. Seminar: African.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in African History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.794. General Seminar: Africa.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in African History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.797. First Year Graduate Workshop.
First-year graduate workshop for History PhD candidates only.
Area: Humanities, Social and Behavioral Sciences

AS.100.798. First Year Graduate Workshop.
First-year graduate workshop for History PhD candidates only.
Area: Humanities, Social and Behavioral Sciences

AS.100.801. Dissertation Research.

AS.100.802. Dissertation Research.

AS.100.803. Independent Study.

AS.100.804. Independent Study.

AS.100.821. Fall Practicum.

AS.100.822. Spring Practicum.

AS.100.890. Independent Study.

AS.100.891. Summer Practicum.

Cross Listed Courses

American Foreign Policy
SA.200.704. History, Strategy, and Statecraft. 4 Credits.
This course will examine the different ways scholarly history is practiced, with a focus on the history of foreign policy and international relations. It will also consider whether a familiarity with historical analysis and methods can improve our understanding of world politics, strategy, and statecraft. Students will be evaluated on the basis of classroom participation and a seminar paper based either upon original research, using primary sources, or a historiographical paper engaging an important and contested issue in the history of international relations (such as the July Crisis, the origins of the Cold War, Vietnam, etc). <a href="http://bit.ly/1bebp55" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>
SA.200.710. Soft Power and Global Politics. 4 Credits.
As the use of military force to resolve disputes between nations becomes less plausible in most regions of the world, the struggle for influence intensifies. Among the results has been the rise to global fame of the concept of ‘Soft Power’, in theory a means to turn a country’s attributes and achievements into a lever for gaining advantage in international competitions of all sorts. Google lists 176m references to the term (11/1/13), China has invested in it heavily and consciously. Even nations such as Russia and Iran are using soft power language and tools. During the Syrian crisis, the term was everywhere. But the course will suggest that the land which gave birth to the term – the US – is still the one which enjoys the greatest advantages in this contest, since the most significant form of soft power leverage over time is the one which most successfully proposes models of modernity. No matter how much weaker the appeal of America’s military, its banks, its politics compared to their heyday, America’s products, icons, technologies, universities, media industries, personalities etc can still produce forms of presence and innovation which the rest of the world must reckon with. The course offers an historical perspective on this dynamic. Specifically it focuses on the great variety of models of modernity the US has produced over time and still can, and how the world has come to terms with them (including militant rejection). The course in its early stages is European in focus. Soon it opens out to other regions of the globe, especially Asia. So often the imperative of innovation that the US brings has encountered waves of anxiety about relations between the state and its citizens, between national communities and the market, between generations, genders, ethnic groups and religions. Efforts to understand ‘soft power’ and the outcomes of the world’s encounter with the American version: these are the central issues of the course.

SA.200.712. America, Europe and the World Political Economy. 4 Credits.
Surveys American economic policy, domestic and foreign, and the ideas, events and geopolitical and military concerns that have shaped it through successive administrations since World War II. Discusses the legacy of the interwar and wartime years. Subsequently tracks U.S. policy and foreign reactions to it from the Truman to the second Bush administration. Blends history, economics and international relations in an effort to explain the interplay in practice of economic ideas and events. (This is a cross-listed course offered by the American Foreign Policy Program that also can fulfill a requirement for the Global Studies Program). <a href="http://bit.ly/1beb5p5" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>

SA.200.734. Kissinger Seminar: Contemporary Issues in American Foreign Policy and Grand Strategy. 4 Credits.
What is America’s purpose in international affairs? What are the major challenges in U.S. foreign policy? What is the future of American power in a changing global system? This course examines these and other critical issues in U.S. foreign policy and global strategy. We will study the opportunities and dilemmas the United States confronts in dealing with terrorism and the Islamic State, great-power competition vis-a-vis Russia and China, the threat of nuclear proliferation and ‘rogue states,’ and other issues from international economics to transnational threats. We will consider whether America can maintain its international primacy, and what alternative strategies it might pursue in the future. <a href="http://bit.ly/1beb5p5" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>

Anthropology
SA.070.300. The Global Artwork. 3 Credits.
This course is about art practice in a postcolonial context, where the techniques and pictorial concepts formed by a European history of art are confronted by other traditions of representation, beset by different kinds of political struggles, and posed against the background of religious traditions other than that of Christianity. What problems of history, difference and the self arise in this context, and what forms of art practice emerge to address these problems? In what ways do these forms of art practice draw upon religious traditions, and how do we think about the displacement of religious traditions in modern art? In this course, we will explore these questions by examining the modern art of the Middle East, South Asia, and China, in conjunction with readings from anthropology, art history, comparative literature, philosophy and religious studies.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

SA.070.318. The Atlantic World. 3 Credits.
This seminar explores the formation of the South Atlantic through a reading of historical and ethnographic texts. We examine the making of history and culture as contentious fields of struggle.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

SA.070.343. On Seeing: Between Religion and Art. 3 Credits.
This course reflects on what it is to see, by examining how different religious traditions have conceived of seeing, and then considering how seeing is organized by modern forms of art practice. Our inquiry will range across a variety of cases—from devotional practices in Christianity and Hinduism; to concepts of vision in the Islamic tradition; to the critique of images during the Protestant Reformation and the legacy of that critique in modernism; and to the development of new technologies like photography and film—and it will draw on readings from anthropology, art history, critical theory and religious studies.
Area: Humanities, Social and Behavioral Sciences

Canadian Studies Program
SA.840.706. Middle Power Diplomacy. 4 Credits.
International relations scholarship pays close attention to the Great Powers, and concern over failed states. With the formation of the G20, there is a multilateral forum where Great Powers and the Rising Powers of Brazil, Russia, India, and China can shape the global agenda. Yet in every era and every stable international order there is an important role for Middle Powers – countries whose capacity to foster or disrupt order leads them to “punch above their weight” in international relations. Canada self-identifies as a Middle Power, but today the status of Middle Power is claimed by states in every region and on every continent. This course considers the dilemmas and strategies of Middle Power diplomacy, and how the United States, Great Powers and Small States interact with them. Over the course of the semester, we will consider what role Middle Powers play in the contemporary international system, and what to do about it. (This is a cross-listed course offered by the Canadian Studies Program that also can fulfill a requirement for the Latin American Studies Program). <a href="http://bit.ly/1beb5p5" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>
SA.840.712. Dynamics of Commodity Economies. 4 Credits.
Examines the pluses and minuses of small open economies that are commodity exporters, with the Canadian case study as the pivotal focus. Uses developing and other developed commodity exporters to contrast and compare. (This is a cross-listed course offered by the Canadian Studies Program that also can fulfill a requirement for the Latin American Studies Program.) <a href="http://bit.ly/1beb5p5" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>.

SA.840.715. Economics Of Immigration. 4 Credits.
Examines the economic causes and consequences of international migration. The central focus is an economic analysis of the general patterns of population flows, their determinants and their impact. Analyzes these primarily within the context of the North American experience, although also considers other case studies. Includes consideration of the Canadian experience, in that Canada is both a significant receiving and sending country. Prerequisite: Microeconomics or Accelerated Microeconomics. (This is a cross-listed course offered by the Canadian Studies Program that also can fulfill a requirement for the International Economics Program and the Latin American Studies Program.) <a href="http://bit.ly/1beb5p5" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>.
Prerequisite(s): Students may not register for this class if they have already received credit for SA.840.714(C).

Center for Africana Studies

AS.362.111. Introduction to African American Studies. 3 Credits.
This course introduces students to the interdisciplinary field of African American Studies, with attention to the literature, film, culture, history, and politics of black life in the United States. Our reading list will likely include texts by David Walker, Frederick Douglass, Frances E.W. Harper, W.E.B. Du Bois, James Baldwin, Amiri Baraka, Toni Morrison, and others.
Area: Humanities, Social and Behavioral Sciences

AS.362.112. Introduction to Africana Studies. 3 Credits.
This course introduces students to the field of Africana Studies. It focuses on the historical experience, intellectual ideas, theories, and cultural production of African-descended people. We will consider how people of the black diaspora remember and encounter Africa. We will explore, too, how such people have lived, spoken, written, and produced art about colonialism and enslavement, gender and mobility, violence and pleasure. This course will be thematically organized and invite you to center your own stories about black people within your understanding of the modern world and its making.
Area: Humanities, Social and Behavioral Sciences

Classics

AS.040.137. Freshman Seminar: Archaeology at the Crossroads: The Eastern Mediterranean through Objects in the JHU Archaeological Museum. 3 Credits.
This seminar investigates the Eastern Mediterranean as a space of intense cultural interaction in the Late Bronze Age, exploring how people, ideas, and things not only came into contact but deeply influenced one another through maritime trade, art, politics, etc. In addition to class discussion, we will work hands-on with artifacts from the JHU Archaeological Museum, focusing on material from Cyprus.
Area: Humanities
Writing Intensive

AS.040.218. Celebration and Performance in Early Greece. 3 Credits.
Surviving imagery suggests that persons in Minoan and Mycenaean societies engaged in various celebratory performances, including processions, feasts, and ecstatic dance. This course explores archaeological evidence of such celebrations, focusing on sociocultural roles, bodily experience, and interpretive challenges.
Area: Humanities

AS.040.366. The Archaeology of Ancient Cyprus: Investigating a Mediterranean Island World in the JHU Museum. 3 Credits.
This course explores the visual and material worlds of ancient Cyprus from the earliest human evidence through the Iron Age. Course topics will include the island's unique position between the Aegean and Near East and how this has impacted both Cyprus' ancient past and the way in which it has been conceived in the modern world. Class involves regular analysis of artifacts based in the Archaeological Museum.
Area: Humanities

AS.040.373. Propaganda and the Art of Visual Politics during the Roman Empire. 3 Credits.
We will examine visual expressions of propaganda in the city of Rome, considering how emperors used public art to promote their political agendas and their ideological vision of power. Dean's Teaching Fellowship course
Area: Humanities

AS.040.420. Classics Research Lab: The Symonds Project. 3 Credits.
This course gives participants a unique opportunity to engage directly in empirical research and its interpretation and dissemination. Topics vary. This semester’s offering is organized around a project to reconstruct digitally the library of the nineteenth-century writer John Addington Symonds, author of one of the first studies of ancient sexuality. No prerequisites, but potential students should contact instructor for permission to enroll.
Area: Humanities

AS.040.425. Classics Research Lab: Ancient Bodies of Modern Baltimore, The Peabody Cast Collection Project. 3 Credits.
The Peabody Cast Collection (PCC) Classics Research Lab project will revolve around a remarkable collection of plaster casts of classical Greek and Roman sculptures, created ca. 1879 for the Peabody Institute (now part of JHU). Such cast collections were a highly valued cultural resource in Europe and North America during the later 17th to early 20th centuries, produced for major museums, academic institutions and wealthy individuals. Because of the technical process of the cast formation, which is based directly upon the ancient sculptural surface, these collections brought contact with the actual classical artifacts into temporally and spatially distant contexts—including the burgeoning urban center of 19th century Baltimore. The PCC Lab's initial objective is archival and field research of the cast collection—its content, formation, access and usage by the people of Baltimore and its eventual disbanding and distribution. From this, we will aim to virtually reassemble its member objects, charting their biographies and, when extant, their current locations. This in part will be accomplished digitally, in a virtual reconstruction of the original display contexts of the casts within the Peabody Institute based on early hand-written ledgers, logs, and photographs. With this we will contribute a new open-access chapter to the collection's biography.
Area: Humanities

AS.040.601. Italian Renaissance Humanism and Modern Humanities.
This course will reflect on certain key moments in the development of Lateinate and Italian Renaissance humanism and will also include reading and discussion of certain recent landmark contributions to the history of the modern humanities.
**Comparative Thought and Literature**

**AS.300.139. Introduction to Intellectual History. 3 Credits.**
This course offers a conceptual and historical introduction to Intellectual History. What makes the "history of ideas" different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call "ideas"? In what sense do they have a history? These are examples of the kind of questions addressed in the course.

Area: Humanities

**AS.300.311. Introduction to Intellectual History. 3 Credits.**
This course offers a conceptual and historical introduction to Intellectual History. What makes the "history of ideas" different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call "ideas"? In what sense do they have a history? These are examples of the kind of questions addressed in the course.

Area: Humanities

**Conflict Management**

**SA.640.714. Alliances and International Relations. 4 Credits.**

**East Asian Studies**

**AS.310.106. Introduction to Korean History and Culture. 3 Credits.**
This course offers a comprehensive overview of Korean history and culture from ancient times to the modern era. Through primary, secondary, and audio-visual sources, students will become familiar not only with the overall contours of the entirety of Korean history, but also with its cultural and religious legacy. The course combines lectures and class discussions.

Area: Humanities

**AS.310.210. Documentary Photography in a Changing China. 3 Credits.**
This course aims to inspire students to explore the impacts, meanings, and explanations of social transformation in contemporary China, via the lens of documentary photography. The photographic images of selective topics will include the products of photojournalism and documentary photography, and several documentary films, by both Chinese and non-Chinese photographers. While one picture is worth thousand words, one picture may also provoke countless interpretations. Students are strongly encouraged to read broadly about different aspects of social transformations in contemporary China, and to select and curate their own subjects of photo images. The spirit of comparative study of documentary photography of China and other parts of world will be strongly encouraged. Active class participation is imperative. A small exhibition on the campus will be organized by the Spring semester. The course is designed for upper division undergraduates. Cross-listed with Sociology and International Studies (CP).

Area: Social and Behavioral Sciences

**AS.310.222. The Religions of Korea. 3 Credits.**
This course offers an overview of the religions of Korea, both indigenous and foreign, old and new. Attention will be paid to the history of these religions, their impact on society, as well as their teachings and objectives. Students will engage with various forms of secondary as well as primary sources including scriptures, sermons, and religious tracts.

Area: Humanities

**AS.310.322. Korean History Through Film and Literature. 3 Credits.**
In this course, students will engage with select topics in Korean history from premodern and modern times and examine how the past has been represented through various forms of film and literature. This will be combined with readings of academic articles to allow students to gauge the distance between scholarship and cultural expressions of history. Through this, students will be introduced to the highly contested and often polarizing nature of Korean history and the competition surrounding historical memory. Prior coursework in East Asian Studies strongly recommended.

Area: Humanities

Writing Intensive

**AS.310.402. Labor Politics in China. 3 Credits.**
This course explores the transformation of labor relations in China over the past century. It will cover the origins of the labor movement, the changes brought about by the 1949 Revolution, the industrial battles of the Cultural Revolution, the traumatic restructuring of state-owned enterprises over the past two decades, the rise of private enterprise and export-oriented industry, the conditions faced by migrant workers today, and recent developments in industrial relations and labor conflict. The course is designed for upper division undergraduates and graduate students. Cross-listed with Sociology and International Studies (CP).

Area: Social and Behavioral Sciences

Writing Intensive

**AS.310.404. Korea in the World. 3 Credits.**
This seminar examines Korea's interactions with the outside world including Japan, China, and the Americas, as well as Europe and Southeast Asia. We will touch upon a wide range of topics, including political, economic, and military interactions, as well as cultural, intellectual, and religious engagements. The purpose is to identify larger transnational trends and parallels in understanding Korea's position in the world.

Area: Humanities, Social and Behavioral Sciences

**Energy, Resources Environment**

**SA.680.759. Facing the Oil Problem: The United States, Canada, OPEC and the World. 4 Credits.**

Every aspect of foreign and domestic policy feels the effect of the oil problem. Solutions will be difficult. The course assesses direct and indirect costs of oil addiction, including global warming. Considers scenarios of supply disruption. Examines who controls oil and how. Explains "peak oil" and the loss of "spare capacity" to cushion price shocks. Looks at heavy oil production from Canada, America's largest oil supplier. Weighs energy initiatives, alternative energy development and future energy RD&D. Unravels complexities of the oil problem and explores what is to be done about it. (This is a cross-listed course offered by the Energy, Resources and Environment Program that also can fulfill a requirement for the Canadian Studies Program and the Latin American Studies Program.)(a href="http://bit.ly/2b5pydQ"

Click here to see a video introduction for the course.<a href="http://

bit.ly/1beb5P5" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>
Using their recorded speeches, written lectures and published writings and drawing from their biographies, this course will explore the important life work of Malcolm X and Martin Luther King Jr. We intend to upend traditional conversations about political radicalism and ethnic politics by analyzing these spokesmen associated most indelibly with black nationalism and racial integration, respectively.

Area: Humanities
Writing Intensive

This course will read through contemporary biographical treatments of prominent 19th and 20th century African American writers to explore the prominent ideological predispositions as well as the structure of archival sourcing in the creation of life-writing on black subjects. Students will make research trips to the Library of Congress, the University of Delaware, Morgan State University and other local archives for instruction in research methodology and the collection of primary source materials. Student final projects will use primary archival sources to intervene in debates about the interpretation of historical subjects and historical events.

Area: Humanities
Writing Intensive

In this course, we take up Hester Blum’s blunt observation that “the sea is not a metaphor” in order to consider the visions and hopes black writers have associated with the sea, as well as the despair and trauma transatlantic slavery has left “in the wake,” to quote Christina Sharpe.

Area: Humanities
Writing Intensive

This class provides students with an in-depth exploration of the motivations behind, strategies of, and societal changes produced by various instances of collective mobilization across Europe. Some of the main questions we seek to answer throughout this course are: Along what lines of grievance do social movements form? Why do people choose to protest collectively given threats of reprisal? What explains the rise in support for populist outreaches by far-right parties? What are the strengths and limitations of cine-history? This course pairs traditional and avant-garde fiction films and documentaries with essays and technological transformations that shaped Paris in the modern era, treating movies as expressions of change and means by which filmmakers comment on it. Taught in English. $50 lab fee.

Area: Humanities

This course is concerned with the principal developments in European political history since 1945, namely the Cold War and the failure of communism, European integration, democratization, and Europe’s changing demography. The course will conclude with a discussion of populism in contemporary Europe. The class will feature interactive teaching methods, with a high premium being placed on class discussion of set texts, as well as student presentations. The goal of the course is to combine historical and political theory with narrative history to paint a plausible picture of Europe’s current political direction and the durability of its postwar era of relative peace and prosperity.

Area: Humanities

This course uses French film to examine the history of twentieth-century Paris. We will consider how filmmakers interpreted the social, political, and technological transformations that shaped Paris in the modern era, treating movies as expressions of change and means by which filmmakers comment on it. Taught in English. $50 lab fee.

Area: Humanities

Examines changing ideals of masculinity in France after 1960 as they found expression on film, rooting the work of iconic stars and directors in their cultural, political and historical contexts.

Area: Humanities

How do films inform, shape, or fundamentally alter our sense of the past? What are the strengths and limitations of cine-history? This course pairs traditional and avant-garde fiction films and documentaries with essays about history, historiography, memory and the political uses of the past to investigate fast-changing relationships between image and text, film and history. Lab fee: $50 Counts toward 300 or 400-level critical studies requirement.

Area: Humanities
Writing Intensive

This seminar/workshop might also be titled “Writing and Editing for Policy Debate.” Following short lectures and class discussion of fiction and non-fiction models for good writing, students will participate, in real time, in a ‘shadow editorial process’ putting together two issues of the bi-monthly journal, Survival: Global Politics and Strategy. More than half of class time will therefore be organized as editorial meetings where students, under the direction of the instructor (the Editor of Survival), will participate in all aspects of the process: commissioning articles, evaluating submissions, editing accepted copy, writing essays with an eye to publication, and laying out the issue. In addition, each student will meet with the instructor in 4 or 5 half-hour tutorial sessions to go over the student’s written work.

SA.710.783. EU Foreign Policy. 4 Credits.

The course offers both a general introduction and a more in-depth approach to the way in which the European Union (EU) acts in international relations. It is meant to provide a balanced analysis of all the main issues involved: inside as well outside Europe proper and to stimulate the students to address specific themes while giving them also a ‘flavor’ of how policy is actually made in and with Brussels. (Cross listed European Studies/International Relations) (T&H)

SA.710.791. Europe’s Long Peace. 4 Credits.

This course is concerned with the principal developments in European political history since 1945, namely the Cold War and the failure of communism, European integration, democratization, and Europe’s changing demography. The course will conclude with a discussion of populism in contemporary Europe. The class will feature interactive teaching methods, with a high premium being placed on class discussion of set texts, as well as student presentations. The goal of the course is to combine historical and political theory with narrative history to paint a plausible picture of Europe’s current political direction and the durability of its postwar era of relative peace and prosperity.
German Romance Languages Literatures

AS.211.202. Freshman Seminar: A Thousand Years of Jewish Culture. 3 Credits.
This course will introduce students to the history and culture of Ashkenazi Jews through their vernacular, Yiddish, from the settlement of Jews in German-speaking lands in medieval times to the present day. Particular emphasis will be placed on the responses of Yiddish-speaking Jews to the challenges posed by modernity to a traditional society. In addition to studying a wide range of texts—including fiction, poetry, memoir, song, and film—students will learn how to read the Yiddish alphabet, and will prepare a meal of traditional Ashkenazi dishes. No prior knowledge of Yiddish is necessary for this course.
Area: Humanities

AS.211.217. Freshman Seminar: From Rabbis to Revolutionaries: Modern Jewish Identities. 3 Credits.
Many Jews in the modern period abandoned the traditional religious way of life, but continued to identify strongly as Jews, and even those who remained committed to tradition had to adapt. Through the prism of the Yiddish language, the vernacular of Eastern European Jewry, this course will explore different ways in which Jews reacted to historical developments and embraced political and cultural movements of their time, from the founding of modern Yiddish theater in Romania, to the creation of a Jewish autonomous region in the far east of the Soviet Union, to the development of avant-garde poetry in New York. In addition to studying a wide range of texts—including fiction, poetry, memoir, song, and film—students will learn how to read the Yiddish alphabet, and will explore food culture by preparing a meal of Eastern European Jewish dishes. No prior knowledge of Yiddish is necessary for this course.
Area: Humanities

AS.211.265. Panorama of German Thought. 3 Credits.
This course introduces students to major figures and trends in German literature and thought from the sixteenth to the twentieth century. We will pay particular attention to the evolution of German political thought from the Protestant Reformation to the foundation of the German Federal Republic after WWII. How did the Protestant Reformation affect the understanding of the state, rights, civic institutions, and temporal authority in Germany? How did German Enlightenment thinkers conceive of ethics and politics or morality and rights? How do German writers define the nation, community, and the people or das Volk? What is the link between romanticism and nationalism? To what degree is political economy, as developed by Marx, a critical response to romanticism? How did German thinkers conceive of power and force in the wake of World Wars I and II? What are the ties that bind and rend a community in this tradition? We will consider these and related questions in this course through careful readings of selected works.
Area: Humanities
Writing Intensive

AS.211.328. Berlin Between the Wars: Literature, Art, Music, Film. 3 Credits.
Explore the diverse culture of Berlin during the heyday of modernism. During the Weimar Republic, Berlin became a center for theater, visual arts, film, music, and literature that would have an outsized impact on culture throughout the world and the twentieth century. The thinkers, artists, and writers drawn to interwar Berlin produced a body of work that encapsulates many of the issues of the period: the effect of the modern city on society; “the New Woman”; socialist revolutionary politics; the rise of the Nazis; and economic turmoil. While learning about interwar Berlin’s cultural diversity, we will take a special look at works by Jewish writers and artists that engage with the question of ethnic, religious, and national identity in the modern world, specifically in the context of Berlin’s rich Jewish history and the rise of anti-Semitism in the interwar period. All readings will be in translation.
Area: Humanities

AS.211.329. Museums and Identity. 3 Credits.
The museum boom of the last half-century has centered largely around museums dedicated to the culture and history of identity groups, including national, ethnic, religious, and minority groups. In this course we will examine such museums and consider their long history through a comparison of the theory and practice of Jewish museums with other identity museums. We will study the various museological traditions that engage identity, including the collection of art and antiquities, ethnographic exhibitions, history museums, heritage museums, art museums, and other museums of culture. Some of the questions we will ask include: what are museums for and who are they for? how do museums shape identity? and how do the various types of museums relate to one another? Our primary work will be to examine a variety of contemporary examples around the world with visits to local museums including the Jewish Museum of Maryland, the National Museum of African American History and Culture and the National Museum of the American Indian.
Area: Humanities

AS.211.341. Power and Resistance in French Political Thought. 3 Credits.
Even as a strong, divine-right monarchy emerged in France, following the Renaissance wars of religion, rebellious French thinkers never stopped questioning the foundations of power. They focused critically not only on the claims of authority issuing from the top, but also on the submissiveness of the governed and the reach of propaganda. This course examines how power shapes minds and bodies, from absolutism to the Revolution, to democratic laïcité. Readings include works by La Boëtie, Montaigne, Loyseau, Bayle, Rousseau, Saint-Just, Maistre, Tocqueville, Foucault, Lefort, Rancière and the Assemblée Nationale. Readings and discussion in English.
Area: Humanities

AS.211.394. Brazilian Culture & Civilization. 3 Credits.
The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. Section 01: 3 credits in ENGLISH Section 02: 4 credits in Portuguese (instructor’s permission required)
Area: Humanities
Writing Intensive
AS.214.777. Witchcraft and Demonology in Literature and the Arts. 3 Credits.
Who were the witches? Why were they persecuted for hundreds of years? Why were women identified as the witches par excellence? How many witches were put to death between 1400 and 1800? What traits did European witch-mythologies share with other societies? After the witch-hunts ended, how did “The Witch” go from being “monstrous” to being “admirable” and even “sexy”? Answers are found in history and anthropology, but also in theology, literature, folklore, music, and the visual arts, including cinema.
Prerequisite(s): Students who have already taken AS.214.171 cannot take AS.214.477.
Area: Humanities
Writing Intensive

AS.214.479. Dante's Journey through the Afterlife. 3 Credits.
Dante's Divine Comedy presents a complete picture of the medieval world-view in all its aspects: physical (the structure of the cosmos), historical (the major actors from Adam to Dante himself) and moral (a complete system of right and wrong). Dante shows how the Christian religion portrayed itself, other religions, the nature of God, humans, angels and devils, and human society. We will explore these topics both from the viewpoint of Dante's own time, and in terms of its relevance to our own societal and cultural concerns.
Prerequisite(s): AS.214.479
Area: Humanities
Writing Intensive

What is personal memory? This course offers both an in-depth journey through Proust's Recherche and a way of tracing major scientific questions about the formation of memory in connection with autobiography and medical history. The process of human remembering -- with its counterpart, forgetting -- has emerged over the last thirty years as an extraordinarily rich field of investigation as well as of creative endeavors in the arts. Poised between literature and science, this course offers both an in-depth introduction to Proust's ground breaking modern work on human time, A la recherche du temps perdu, and an investigation into a modern history of memory (a history that unfolds in the nineteenth and early twentieth century, and has made a surprising return in our contemporary understanding of remembrance). That Proust's petite madeleine should have turned, in recent years, into the magical token of autobiographical recollection and provided, at the same time, an immensely productive clinical and neuro-scientific model of how memory works serves as our point of departure. That human memory is an experience and not merely a biological function -- its existence depending on language -- will be our running thread. Proust's book, filled with immensely learned and complex descriptions of mnemonic processes, serves as our case-study. Proust's investigations into remembering reveal fascinating aspects of the 19th century advances into the psychology and nosography of memory. These will in turn prompt us to read his work in light of present controversies in scientific research, as for example on the construction of memory, on "body-memory," the interface between cognition and emotion, and the mind/brain debate. As it prompts many questions on the relation between fiction and experience, this journey through major themes of Proust's quest for memory will invite a broader reflection on the relation between literary and philosophical investigations. Requirements: Short oral presentation and final research paper. Taught in English, reading knowledge of French desirable but not required. Most readings are available in English. Required for this course are vol. I, V, VI of In Search of Lost Time in the 2003 Modern Library edition (ISBN 978-0-375-75154 – 1 and 4 and 7). For a copy of the syllabus, with a list of main recommended readings, available in mid-June, please write to e.ender@jhu.edu
Area: Humanities

AS.212.699. Cultures of Criticism from the Classics to Foucault.
From fault-finding to the crossover of aesthetic and political judgment, criticism never loses sight of its medical cognates critical and crisis. This course examines the emergence and the transformations of critical judgment in the arts, culture and politics, from the early days of its collision with French monarchical propaganda, to the critical genealogies of the Enlightenment, to the postrevolutionary critique of history, to Foucault's critique of practices of veridiction. Works by Perrault, Bayle, Diderot, Rousseau, Tocqueville, Cassirer, Koselleck, Derrida, Barthes, Bourdieu, Foucault. Taught in English; most texts available in translation, but knowledge of French recommended.
Area: Humanities

 Forgery is an eternal problem. It is a literary tradition in its own right, with connections to politics, Classics, religion, philosophy, and literary theory. Spurious writings impinge on social and political realities to a degree rarely confronted by criticism. This course offers a reading of the sort traditionally reserved for canonical works of poetry and prose fiction, spotlighting forgery's imaginative vitality and its sinister impact on scholarship. Students will study manuscripts and incunabula drawn from JHU's Bibliotheca Fictiva, the world's premier collection of literary forgeries.
Prerequisite(s): Students cannot have taken AS.214.606.
Area: Humanities
Writing Intensive

AS.213.616. The Aesthetic Discourse of Modernity.
When, in 1985, Jürgen Habermas published his lectures on The Aesthetic Discourse of Modernity, he pursued a double aim. He offered a critique of French Theory while at the same time providing a foundation for a normative category of modernity in the tradition of Hegel. Curiously there is one subject he does not touch on, though it seems necessary for a sufficient understanding of modernity: the realm of art and literature. As it prompts scientific questions about the formation of memory in connection with autobiography and medical history. The process of human remembering -- with its counterpart, forgetting -- has emerged over the last thirty years as an extraordinarily rich field of investigation as well as of creative endeavors in the arts. Poised between literature and science, this course offers both an in-depth introduction to Proust's ground breaking modern work on human time, A la recherche du temps perdu, and an investigation into a modern history of memory (a history that unfolds in the nineteenth and early twentieth century, and has made a surprising return in our contemporary understanding of remembrance). That Proust's petite madeleine should have turned, in recent years, into the magical token of autobiographical recollection and provided, at the same time, an immensely productive clinical and neuro-scientific model of how memory works serves as our point of departure. That human memory is an experience and not merely a biological function -- its existence depending on language -- will be our running thread. Proust's book, filled with immensely learned and complex descriptions of mnemonic processes, serves as our case-study. Proust's investigations into remembering reveal fascinating aspects of the 19th century advances into the psychology and nosography of memory. These will in turn prompt us to read his work in light of present controversies in scientific research, as for example on the construction of memory, on "body-memory," the interface between cognition and emotion, and the mind/brain debate. As it prompts many questions on the relation between fiction and experience, this journey through major themes of Proust's quest for memory will invite a broader reflection on the relation between literary and philosophical investigations. Area: Humanities
AS.214.477. Magic, Marvel, and Monstrosity in the Renaissance. 3 Credits.
Magic, Monstrosity, and Marvels or Wonders call into question what we see and experience: what is reality; what is illusion; what's natural and what's supernatural? What's human and what's more, or less, than human? During the Renaissance, ideas about the nature of reality were bound up with questions and issues very different from those of our time. With the exact sciences still being invented, the nature of the world was much less hard and fast for Renaissance people than it is for the modern educated person. The literary masterpieces of the Italian Renaissance provide vivid illustrations of the early modern sense of wonder. Foremost among these are the theatrical comedies which Italian authors revived in imitation of the ancients, and the romances, especially Ariosto's Orlando furioso (1532) and Tasso's Gerusalemme liberata (1581). These and other works influenced ideas about magical and marvelous phenomena across Europe for centuries to come. Works will be read and discussed in English. Italian majors and graduate students (who should enroll in section 2) will attend a weekly supplemental discussion in Italian and compose their written work in Italian.
Area: Humanities
Writing Intensive

AS.214.479. Dante Visits the Afterlife: The Divine Comedy. 3 Credits.
Dante's Divina commedia is the longest great poem of the Middle Ages; some say the greatest great poem of all time. We will study the Commedia critically to find: (1) What it reveals about the worldview of late-medieval Europe; (2) how it works as poetry; (3) its relation to the intellectual cultures of pagan antiquity and Latin (Catholic) Christianity; (4) its presentation of political and social issues; (5) its influence on intellectual history, in Italy and elsewhere; (6) the challenges it presents to modern readers and translators; (7) what it reveals about Dante's understanding of cosmology, world history and culture. We will read and discuss the Commedia in English, but students will be expected to familiarize themselves with key Italian terms and concepts. Students taking section 02 (for 4 credits) will spend an additional hour working in Italian at a time to be mutually decided upon by students and professor.
Area: Humanities
Writing Intensive

AS.215.290. Latin American Critical Perspectives on Colonialism: From the 'World Upside Down' to the 'Coloniality of Power'. 3 Credits.
This course, taught in English, examines how indigenous and local (postcolonial) intellectuals in Latin America responded to the ideology and practices of Spanish Colonialism in the earliest post-conquest years (1532), continued to battle colonialism during the period of the wars of independence, and finally arrived at the production of an analysis that shows how modernity is but the other face of colonialism. Among key works to be discussed are Guaman Poma's illustrated sixteenth-century chronicles, D.F. Sarramiento's _Civilization and Barbarism_, (1845), and Anibal Quijano's 'Coloniality of Power' (2000).
Writing Intensive

AS.215.309. An Interdisciplinary Introduction to the Study of Latin America. 3 Credits.
The course is an interdisciplinary introduction to the study of Latin America. It brings together archeology, ethno-history, art history, literature and environmental studies.
Area: Humanities
Writing Intensive

AS.215.350. Mexico: A cultural history from the Olmecs to the Mexican revolution of 1910. 3 Credits.
The offers a survey of Mexican culture from the formative years of the Olmecs (2000 b.c.) to the Mexican revolution of 1910. History of ideas, matrix social formations, art and literature are the focus of this historical overview.
Area: Humanities
Writing Intensive

AS.215.406. Novelist Intellectuals. 3 Credits.
What does a novelist's op-ed about economics have to do with her literary writing? In what ways does a fiction writer's essays on the environment inform how we read her novels? What happens when we find the political opinions of a writer objectionable? This undergraduate seminar will consider what the Spanish writer Francisco Ayala termed "novelist intellectuals," that is, literary writers who actively participate in a society's public sphere. Considering writers from Madrid to New York, from London to Buenos Aires, we will ask how one should hold a novelist's fictional and non-fictional writings in the balance and explore ways of reading that allow us to consider the public intellectual side and the aesthetic side of a novelist together.
Area: Humanities

AS.215.413. Cuba y España. 3 Credits.
La frase "más se perdió en Cuba" alude al singular rango de la antigua Provincia de Ultramar en el mapa geopolítico del colonialismo hispánico. Hemos de estudiar la prolongada relación entre España y Cuba, desde 1492 al presente, a través de materiales literarios, crónicas, artes plásticas, música y medios sociales al corriente. Enseñado íntegramente en español.
Prerequisite(s): AS.210.311
Area: Humanities

AS.215.490. Reading Ancient Mexico Today: Amoxtli, Tlacuilos and the Florentine Codex. 3 Credits.
This course offers an in depth study of 'Mexican' writing systems before and after the Spanish Conquest in 1521. Special emphasis is placed on the role of the tlacuilos--nahuatl intellectuals-- in the writing of the Florentine Codex (1584), the largest surviving compendium on pre-conquest Mexico.
Area: Humanities
Writing Intensive

As of today, due to the work of Walter Mignolo, Ossio, Lamana and other scholars in Colonial Studies, the 1000 page letter of Guaman Poma to the King of Spain has become the pre-eminent text written on the question of coloniality of power as theorized by Anibal Quijano. Given that the concept is now central to colonial and modern studies, familiarity with the work of Guaman Poma is essential in the formation of all Latin Americanists and scholars interested in coloniality and imperial studies.
Area: Humanities
Writing Intensive

AS.215.651. The idea of 'Latin America': current debates on the fundamentals of the field.
The course will explore the history of the Idea of Latin America as a discursive and political entity. Students will read the work of Walter Mignolo, Mauricio Tenorio Trillo and Fernando Digiovanni among other theorist and cultural historians.
Area: Humanities
Writing Intensive
History

AS.100.318. The Rise and the Fall of the Modern City: An Environmental History Perspective. 3 Credits.

This course explores how environmental history analyzes the transformations of cities in the West from 1750 to the early 2000s. An emphasis will be placed on historiographical debates and concepts, but also on agency and relations of power. The course also analyzes how the environment is a construct, a production of discourses, representations, and debates.

Area: Humanities, Social and Behavioral Sciences

AS.100.331. Reading through Things: Early Modern Chinese Medicine, Technology, and Art. 3 Credits.

This course introduces the history of late imperial China from the perspective of medicine, technology, and the arts.

Area: Humanities, Social and Behavioral Sciences

Writing Intensive

History of Art

AS.010.235. Art, Medicine, and the Body: Middle Ages to Modernity. 3 Credits.

This course explores seven centuries of fruitful collaboration between physicians and artists, uncovering the shared discourses, diagnostic techniques and therapeutic agendas that united the art of picture-making with the art of healing. Topics include the origin and development of medical illustration; the long, cross-cultural history of the therapeutic artefact; the anatomical investigations of Renaissance artists such as Leonardo and Michelangelo; depictions of bodily pain and disease in the art of Matthias Grünewald and psychosomatic syndromes like melancholy in the work of Albrecht Dürer; the spectacularization of the body in Enlightenment science and the ethics of medical specimen display today – all in order to bring the complex intersections of the history of medicine and the history of art into view.

Area: Humanities

AS.010.325. Arts of the Spanish Empire. 3 Credits.

From the sixteenth through the eighteenth centuries, visual forms and practices linked such far-flung places as Mexico City and Naples, Manila and Lima, Guczo and Antwerp, Quito and Madrid: all cities in the Spanish Empire. This course is conceived as a voyage, moving city by city to explore objects that connected Spain’s vast holdings. We will investigate how the Spanish Crown and the Catholic Church used visual strategies to consolidate political power and install religious faith across the world; and, alternatively, we will consider how local conditions, concerns, and resistance reshaped those efforts. This course surveys a diverse range of artistic production: religious paintings and sculptures; maps used for imperial surveillance; luxury goods crafted from shimmering feathers, ceramics, ivory, and precious metals; urban design and architecture from the ports of Europe to the highland outposts of the Andes; ephemeral cityscapes for civic performances. In examining such materials, students will be introduced to the art historical methods and theoretical concerns used to study a wide diversity of objects within an imperial frame.

Area: Humanities

AS.010.330. Art of the Caliphates: Visual Culture and Competition in the Medieval Islamic World. 3 Credits.

Despite its modern-day association with a fringe extremist movement, the term “caliphate” was traditionally used to describe the Muslim world at large, the political and spiritual ruler of which bore the title of caliph. The original Islamic caliphate was established in the seventh century as a vast empire centered on the Middle East and extending deep into Africa, Asia, and Europe. It soon broke apart into a series of competing powers, each claimed to be the rightful caliphate. This course will examine how these fascinating political developments and conflicts played out in the realm of art and architecture between the seventh and thirteenth centuries. As well as palaces, mosques, and commemorative buildings, the course will look at ceramics and metalwork to textiles and illustrated manuscripts, with many of the artifacts being viewed firsthand in local museum collections. These works will be considered in relation to such themes as patronage, audience, ceremony, and meaning. Particular attention will be paid to how the various caliphates—both in emulation of and competition with one another—used visual culture as a powerful tool to assert their legitimacy.

Area: Humanities

AS.010.425. Patronage and Power: The Art of the Book in the Middle Ages. 3 Credits.

This research seminar surveys the rich history of manuscript painting in the Middle Ages through the lens of patronage. By focusing on elite patrons – i.e. Popes, Clerics, Holy Roman Emperors, Princes, Princesses, and other ruling figures – we will investigate how changes in style from the early Christian period through the fifteenth century reveal the fluid nature of politics and power during this volatile time period. We will visit local collections of manuscripts (e.g. the Walters Art Museum) and make use of the extensive holdings of medieval facsimiles in Special Collections.

Area: Humanities

AS.010.627. Patronage and Power: The Art of the Book in the Middle Ages.

This research seminar surveys the rich history of manuscript painting in the Middle Ages through the lens of patronage. By focusing on elite patrons – i.e. Popes, Clerics, Holy Roman Emperors, Princes, Princesses, and other ruling figures – we will investigate how changes in style from the early Christian period through the fifteenth century reveal the fluid nature of politics and power during this volatile time period. History of Science, Medicine, and Technology

AS.140.105. History of Medicine. 3 Credits.

Course provides an overview of the medical traditions of six ancient cultures; the development of Greek and Islamic traditions in Europe; and the reform and displacement of the Classical traditions during the Scientific Revolution.

Area: Humanities, Social and Behavioral Sciences

AS.140.146. History of Public Health in East Asia. 3 Credits.

This course examines the history of disease, epidemics, and public health responses in East Asia from the 17th-20th centuries. This public health history emphasizes the interactions, connections, and comparisons among China, Japan, Korea, and Taiwan.

Area: Humanities, Social and Behavioral Sciences

Writing Intensive
AS.140.231. Health & Society in Latin America & the Caribbean. 3 Credits.
Healthcare is complex in Latin America and the Caribbean, where many people supplement biomedicine with plant and diet-based remedies, as well as religious and shamanic services. This course will cover the history of health and society in Latin America and the Caribbean from 1750 to the present, covering such topics as: medicine and the Spanish inquisition; disease control and tropical medicine; the medical knowledge of enslaved and indigenous peoples; reproduction and nation-state formation; and healthcare during the Cold War and its aftermath. Throughout, we will also consider the ways in which ideas about race, gender, indigeneity, class, and disability have affected people's access to healthcare. By the end of the course we will understand why leading scholars have referred to Latin America and the Caribbean as a "laboratory" for the production of medical knowledge. We will discover how that knowledge has been influenced by common people as well as professionals, and how it has influenced medical practice around the world. This is a discussion-based seminar course. It does not assume any previous knowledge of the history of medicine or Latin American and Caribbean history.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.314. Experimental Bodies: Histories of Human Subjects Research in the 19th and 20th Centuries. 3 Credits.
This course traces the history of human subjects research as a medical and scientific practice. It will focus on the human subjects themselves, and how their experiences intersect with the histories of race, class, gender, sexuality, and disability.
Area: Humanities, Social and Behavioral Sciences

AS.140.322. Follow the money: Science, technology, and the 'knowledge economy,' c.1800-present. 3 Credits.
This course examines the historical emergence of knowledge-driven economies, paying special attention to the funding, development, and use of science and technology for commercial purposes.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.356. Man vs. Machine: Resistance to New Technology since the Industrial Revolution. 3 Credits.
This course analyzes different episodes of "luddism" in the history of science and technology, from the destruction of textile machinery in the early 1800s up to recent controversies about biotechnology and ICT.
Area: Humanities, Social and Behavioral Sciences

AS.140.381. History of Reproduction. 3 Credits.
This course investigates the history of reproduction in American medicine, science, politics, and culture. It explores changing ideas about reproductive bodies, sexuality, and the family as well as practices of contraception, conception, and childbirth.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.393. Technology and the Making of the Modern World. 3 Credits.
This course critically examines the role of technology in some of the main developments that have shaped the modern world, ranging from industrialization and globalization processes to the rise of new political ideologies and gender patterns. This course is co-taught by an instructor from the Smithsonian Institution and will include a public history research project.
Area: Humanities, Social and Behavioral Sciences

AS.140.441. Metaphor in Science and Medicine. 3 Credits.
Science and medicine are permeated by metaphors. Generated by every domain of human experience, these metaphors embed scientific and medical thought in historically specific times, places, experiences, issues, attitudes and cultures. We will explore the dynamics of metaphorical thinking and examine such specific examples as "The Great Chain of Being," Darwin's "struggle for existence" and "natural selection," the "reflex" from Descartes to Pavlov to cybernetics, body and mind as clock, factory and computer; illness as imbalance and invasion, and the metaphorical associations of tuberculosis and cancer.
Area: Humanities, Social and Behavioral Sciences

AS.140.674. Science and Medicine in Early Modern Atlantic World Culture.
How were changes in scientific and medical ideas reflected in cultural products of the early modern Atlantic world? We will study these ideas as they appeared in literary genres such as poetry, utopias, natural histories and travel narratives. Likewise, we will examine the visual culture of the Atlantic space for clues about changing conceptions about the natural world. Our expedition will encompass Anglophone, French and Hispanic regions, and will pay careful attention to hybrid cultural products that reflect the interaction between indigenous cultures and the (changing) European understanding of the natural world.

Interdepartmental

AS.360.147. Freshmen Seminar: Adam Smith and Karl Marx. 3 Credits.
This course will compare the ideas of Adam Smith, the most famous proponent of free trade and free enterprise, with those of Karl Marx, the greatest critic of capitalism. For freshmen only.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

International Development

SA.400.722. Pol Systems of the Developing World. 4 Credits.
A good health system delivers quality services to all people, when and where they need them. Components of a strong health system include a robust financing mechanism; a well-trained and adequately paid workforce; reliable information on which to base decisions and policies; and well-maintained facilities and logistics to deliver quality medicines and technologies. However, many countries in the developing world have weak health systems, badly in need of strengthening and reform. This course offers a practical introduction to major issues, policies and practices related to health systems and health policy in a developing country context. The course combines two perspectives. First, students will apply principles related to health systems strengthening and reform to develop a framework to strengthen and rebuild health systems in fragile states. Second, students will learn about and apply key insights from economics to understand health behaviors and health care markets, and to inform the design of health policy in low and middle-income countries. Students are expected to be comfortable reading articles that evaluate health system interventions as well as applied economics papers and think through the logic and implications of economic theory (without complicated statistics or math). Substantive preparation and class participation are expected.<a href="http://bit.ly/1bebp5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>
SA.400.807.  Introduction to Public Health for Development Practitioners.  4 Credits.
This course offers a practical introduction to major issues, policies and practices of public health, and examines the role of health in development. The course teaches critical public health skills such as epidemiology, burden of disease studies, rapid assessments and outbreak investigations, enabling students to understand the basic tools of public health and to analyze strengths and weaknesses in public health studies. Furthermore, this course examines major public health topics of concern to development, including HIV/AIDS, malaria, neglected tropical diseases, maternal and child health, water and sanitation, and emerging diseases. This training will enable development practitioners to act on the ground and in development institutions to improve global health. This course is designed as both a stand-alone primer on public health for those working in development, and as a foundation course for more advanced study of global health issues. <a href="http://www.sais-jhu.edu/resources/administrative-offices/how-access-course-syllabi-and-evaluations/" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>

International Political Economy
SA.610.700.  International Political Economy of Emerging Markets.  4 Credits.
This course examines the relationship between politics and international economics in developing countries, with a focus on the emerging market economies. Throughout the course, we critically evaluate different political science theories of foreign economic policymaking in emerging markets. The course begins with an overview of theories of international political economy. The second section of the course focuses on developing countries’ embrace of economic globalization over the past thirty years. We examine different political reasons for why emerging market and developing countries have liberalized foreign trade, removed barriers to foreign investment, and reduced the state’s role in the domestic economy since the 1980s. The final section of the course explores how globalization has impacted emerging market economies, and considers how governments in these countries have dealt with the new challenges that have emerged in this era of economic globalization. <a href="http://bit.ly/1bep5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>

SA.610.702.  Political Economy in the Shadow of Conflict.  4 Credits.
This is a research seminar organized around key ongoing debates in international relations, such as the role of institutions, audience costs, leaders, bargaining, reputation, interdependence, and ideas. The course will emphasize critical engagement of the empirical evidence presented in favor of theoretical arguments, encouraging students to devise rigorous new ways to test their observable implications. Can bargaining theory help us understand the outbreak, as well as the termination of, international conflict? Has growing economic integration among states changed the nature of military conflict? Are certain economic interest groups more prone to support military expansion than others? Do democratic institutions enable states to better signal their resolve to adversaries? By the end of the course, students will be able to recognize, engage, and develop their own taste for theoretical arguments, as well as present the most compelling empirical evidence for or against them. <a href="http://bit.ly/1bep5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>
Prerequisite(s): SA.100.761[C] OR SA.100.998[C]

SA.610.732.  International Political Economy.  4 Credits.
Prerequisite(s): Students may not register for this class if they have already received credit for SA.610.732.

SA.610.735.  Risk in International Politics and Economics.  4 Credits.
The purpose of this course is to help students work through the challenge of understanding risk in international political and economic relations. That challenge is both methodological and substantive. Students will have to tackle ‘how’ we understand and ‘what’ we understand at the same time. Along the way, they will have to consider those things we cannot understand or anticipate with any meaningful degree of precision. They will have to deal with the ‘uncertainty’ that lies beyond the boundaries of ‘risk’. The subject matter is open-ended. Virtually every aspect of politics or economics can be cast in terms of risk and uncertainty, no matter whether we look to the future or reflect upon the past. Therefore, the course builds on a thematically structured, case study approach. Each week introduces a new principle that is useful in understanding risk; each week provides cases that illustrate the usefulness of that new principle. Moreover, as our understanding of risk becomes more sophisticated, the cases become more complex. The ultimate goal is to be able to analyze matters of risk and uncertainty as they manifest around decisions taken by leaders in government or business in the real world. Prerequisite(s): Students may not register for this class if they have already received credit for SA.600.735.

SA.610.752.  Major Ideas in Modern Political Economy.  4 Credits.
Discussion class that provides a historical survey of major writers who have shaped economic and political thought from the late 18th century to the present. Close reading of classic texts from Rousseau, Smith, Ricardo, Coleridge, List, Marx, Lenin, J.S. Mill, Keynes, Schumpeter and Hayek. Addresses cultural context and general world views. Requires frequent short papers. Useful for relating economics and politics and putting economic doctrines in general historical and philosophical context. <a href="http://bit.ly/1bep5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>
Prerequisite(s): Students may not register for this class if they have already received credit for SA.600.752[C]

SA.610.770.  Comparative Political Economy.  4 Credits.
This course is intended to bridge the gap between economics and politics as taught at SAIS. First examines some of the main “currents” in the literature and familiarizes the student with different variants of political economy. Presents an overview of the classical liberal, Marxian/Polanyian and Keynesian understandings of the economy, each of which serves as both a primer to political economy and as an introduction to the main contemporary approaches. Then engages with what many scholars argue is the major approach in comparative political economy: rational choice theory. By contrast, the next section looks beyond the rationalist tradition to the nowadays somewhat neglected historical tradition. Building on the historical tradition, next examines institutionalist approaches, explaining institutional change and stability over time through path dependence and earlier arrangements. Concludes with more social constructivist understandings of political economy, emphasizing the powerful role of economic ideas in the evolution of economic policymaking over time. <a href="http://bit.ly/1bep5s" target="_blank">Click here to see evaluations, syllabi, and faculty bios</a>
Prerequisite(s): Students may not register for this class if they have already received credit for SA.600.770[C]
Islamic Studies
AS.194.201. Jews, Muslims, and Christians in the Medieval World. 3 Credits.
The three most widespread monotheisms have much more in common than is generally portrayed: a common founding figure, a partly shared succession of prophets, closely comparable ethical concerns and religious practices, a history of coexistence and of cultural, religious, social and economic interaction. This course will focus on a number of key texts and historical events that have shaped the relationships between Jews, Muslims, and Christians during the Middle Ages and contributed to their reciprocal construction of the image of the “other.” The geographical center of the course will be the Mediterranean and the Near and Middle East, a true cradle of civilizations, religions, and exchange.
Area: Humanities, Social and Behavioral Sciences

Latin American Studies Program
SA.810.705. Public Opinion as a Driver for Policymakers: Analytical Tools and Illustrative Case Studies. 4 Credits.
A key driver in any democracy, public opinion determines who will govern and which policies will be likely to succeed. Contrary to general beliefs that public opinion is highly ephemeral, both practice and scientific evidence show that public opinion is a stable, measurable, and ultimately predictable phenomenon. To explore the issue both conceptually and in practice, the course will first offer a review and discussion of relevant literature on the subject and then analyze concrete case studies exploring the uses and misuses of public opinion and polling by political and policy stakeholders. Likely case studies will include primarily Latin American examples, such as the 2002 Lula election, but also extra-regional cases, such as the 2008 Obama election and the Arab Spring, among others. The final objective is to develop a critical eye when analyzing public policy and political problems.<a href='http://bit.ly/1beb5s' target='_blank'>Click here to see evaluations, syllabi, and faculty bios</a>

Middle East Studies
SA.860.781. States, Revolutionaries & Terrorism. 4 Credits.
Looks at the evolution of terrorism as a tool of political expression and conquest of power. Surveys doctrines and actions of anarchists, Russian Nihilists, Social Revolutionaries, as well as nationalists and fascist movements. Reviews Leninist and Maoist models of political subversion and their avatars in the national liberation movements and urban guerillas of the 1960s and 1970s. Draws on cases from the Middle East and North Africa, including Iran, Lehi, EOKA, FLN, Fatah, PFLP, ANO and ASALA. <a href='http://bit.ly/1beb5s' target='_blank'>Click here to see evaluations, syllabi, and faculty bios</a>

SA.860.784. Behavioral Sociology of Conflict. 4 Credits.
This course combines approached from social psychology and social history to examine stratification and conflict within and between groups. Challenging the assumption of rationality in human behavior, it explores the role of drives, cognitive biases, culture, religion, beliefs and identity systems in social phenomena. After a theoretical overview, it looks specifically at the evolution of identity systems and the manifestation of identity-based conflict during the period of modernization and globalization, and explains xenophobic responses to the emergence of a global, modern identity. <a href='http://bit.ly/1beb5s' target='_blank'>Click here to see evaluations, syllabi, and faculty bios</a>

Near Eastern Studies
AS.130.119. Ancient Medicine. 3 Credits.
A survey of medicine and medical practice in the ancient Near East and, to a lesser extent, the Aegean world. The abundant sources range from magical spells to surprisingly "scientific" treatises and handbooks. Readings are selected from translations of primary sources in the writings of ancient Egypt, Mesopotamia, Israel, Greece, and Rome. Topics will include the sources of our knowledge; the nature of medical practitioners, medical treatment, and surgery; beliefs about disease and the etiology of illness; concepts of contagion and ritual purity.
Area: Humanities

AS.130.126. Gods and Monsters in Ancient Egypt. 3 Credits.
A basic introduction to Egyptian Religion, with a special focus on the nature of the gods and how humans interact with them. We will devote particular time to the Book of the Dead and to the 'magical' aspects of religion designed for protective purposes.
Area: Humanities

AS.130.129. Freshman Seminar: The Art of War and Peace in Ancient Mesopotamia. 3 Credits.
Ancient Mesopotamia, modern-day Iraq, Syria, and Iran, is the "cradle of civilization." It witnessed new inventions previously unknown to the ancient world: urban cities, writing systems, kingship, and empires. This course examines the close relationship between war and peace and art in ancient Mesopotamia (ancient Sumer, Babylonia, and Assyria) from 3500 to 539 BCE. During the semester students will be introduced to the art, architecture, and archaeology of ancient Mesopotamia. This course is aimed at students without a previous background in art historical or archaeological approaches to Mesopotamia, but more advanced students are welcome.
Area: Humanities

AS.130.206. Distilling the Ancients: An Anthropological Approach to Alcohol in the Ancient World. 3 Credits.
The consumption of alcohol is one of the oldest known human practices. Almost every culture has some type of mind-altering beverage that influences and shapes many facets of society. This course is a cross-cultural examination of the power and significance of alcohol in the ancient world. From the Neolithic to the Classical symposium to the Egyptian festival, the importance of communal drinking—alcohol or otherwise—is a uniting factor across the ancient world. This class will unpack the impact and significance of alcohol across a wide-range of ancient cultures, and examine what the study of alcohol might reveal about ancient societies. This includes alcohol as medicine, its religious and ritual functions, alcohol as a community unifier (and divider) and identity builder, and its practical and economic uses. Students will apply anthropological and archaeological theories to understand why, how, and to what effect humans drink.
Area: Humanities

AS.130.259. Ancient Science. 3 Credits.
A survey of scientific practices and technological innovations in the ancient world, including astronomy, medicine, law, and divination. Special attention will be devoted to the relationship between magic and science during the periods covered.
Area: Humanities, Social and Behavioral Sciences
AS.130.328. Ancient Egypt /Africa. 3 Credits.
Recent excavation and research have shed light on several ancient cultures of the Nile and its tributaries. We will look at the available archaeological and textual (all Egyptian) evidence for these societies and their interactions with Egypt between 3500 and 300 B.C. We will also discuss research aims and methods employed now and in the past in Egypt and the Sudan.
Area: Humanities
Writing Intensive

AS.130.420. Seminar in Research Methods in Near Eastern Studies: Religion and Science. 3 Credits.
This writing intensive seminar examines the relationship between religion and science in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, and through engagement with scholarly literature pertaining to the topic of the course, students will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Humanities
Writing Intensive

Political Science
AS.190.471. The University and Society. 3 Credits.
In the 20th century, American universities became the envy of the world, leading in most categories of scholarly productivity and attracting students from every nation. In recent years, though, American higher education has come to face a number of challenges including rapidly rising costs, administrative bloat, corporatization and moocification. We will examine the problems and promises of American higher education, the political struggles within the university and the place of the university in the larger society. Upper classes and Grad Students only.
Area: Social and Behavioral Sciences

Program in Latin American Studies
AS.361.130. Introduction to Latin American Studies. 3 Credits.
The goal of this course is to provide an overview of Latin America, analyzing political and cultural aspects, chronologically organized. We will begin studying the origins of the multi-ethnic societies, starting with the ancient civilizations and their transformation under colonization. It is important to understand the survival of cultural traits among indigenous peasants today in the countries that were the cradle of ancient civilizations: Mexico, Guatemala and the Andean countries. In the republican era the course will focus on the classical Caribbean dictators in the first half of the 20th century and their reflection in the literature, comparing the historical reality with the magic representation in the work of Garcia Marquez. The course will scrutinize the most important revolutions in the continent: the Mexican, Cuban and Bolivian revolutions and the geopolitics of USA in the Americas. Weekly lectures related to the assigned reading will focus on specific periods, topics and regions. After each lecture, we will review the material, connecting specific details from the readings with the more theoretical aspects provided in my lecture. The course has a website where the PowerPoint presentations will be posted. Students are encouraged to post their questions, comments and suggestions on the web after their readings. Students will be given a study guide for each lecture, which will be the basis for the exams. Our perspective on Latin America will be enhanced by a selection of few films related to the topics.
Area: Humanities, Social and Behavioral Sciences

AS.361.207. Afro-Latin American Biography. 3 Credits.
In this course, we will examine biographical accounts of men and women of African descent in Latin America and in the broader Black Atlantic. These individuals include conquistadors and slaves, saints and sinners, revolutionaries and ordinary people. In their life stories, we will not only examine questions of race, gender, and religiosity that were central to the construction of identity in the early modern Atlantic world, but also the nature of the sources that allow us to tell their stories.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

Program in Museums and Society
AS.389.155. The History of Fake News from The Flood to The Apocalypse. 3 Credits.
“Fake News” is everywhere in both past and present. Explore that history first-hand through JHU’s rare book collection of literary and historical forgeries spanning millennia of human history. Students learn how to examine and investigate rare books.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Crosslisted with Archaeology, History, History of Art, International Studies and Medicine, Science & Humanities.
Area: Humanities, Social and Behavioral Sciences

AS.389.205. Examining Archaeological Objects. 3 Credits.
We examine the Johns Hopkins Archaeological Museum collection to learn the materials and techniques utilized in the ancient world to produce objects in ceramics, stone, metal, glass, faience, bone and ivory.
Area: Humanities

AS.389.230. Queer & Trans Public History. 3 Credits.
This course introduces students to a blend of public history, queer studies and transgender studies. Students learn oral history and archival research methods as they draw on and contribute to the university’s archival, museum, and library collections.
Area: Humanities, Social and Behavioral Sciences

AS.389.275. Interpreting Hopkins as Historic Site. 3 Credits.
This hands-on course explores interpretive strategies for historic sites and culminates in the production of original, research-based, outdoor interpretive exhibits on the Homewood Campus.
Area: Humanities, Social and Behavioral Sciences

AS.389.303. World of Things. 3 Credits.
The course introduces and applies new concepts about materials, and materiality to museum objects. It treats the museum as a site for investigating the relationship between people and things.

AS.389.315. Ancient Color: The Technologies and Meanings of Color in Antiquity. 3 Credits.
What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum.
Area: Humanities, Social and Behavioral Sciences
AS.389.322. Tigers to Teapots: Collecting, Cataloging, and Hoarding in America. 3 Credits.
Course will examine the collecting behavior of Americans. Students will explore how collectors have defined the holdings of the nation's museums, galleries, and libraries and used objects to shape taste and status in the U.S.
Area: Humanities, Social and Behavioral Sciences

AS.389.325. Women of the Book: Female Mystics, Miracles, and Material Culture in Early Modern Europe. 3 Credits.
Students will study and assess JHU's new, unparalleled rare book and manuscript collection about the spiritual lives of women at the crossroads of religious mysticism, miracles, and material culture, 1450-1800.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.389.340. Critical Issues in Art Conservation. 3 Credits.
The course examines recent controversies in the conservation of major global art works and sites, raising questions concerning the basic theoretical assumptions, practical methods and ethical implications of art conservation. Cross-Listed with History of Art and Anthropology
Area: Humanities

In 1857 Baltimore's historic George Peabody Library was born, one of America's first public libraries. This course studies its history, rare book collections, and foundational role in Baltimore's cultural history.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.389.356. Halls of Wonder: Art, Science, and Literature in the Age of the Marvelous, 1500-1800. 3 Credits.
Area: Humanities

AS.389.357. Heaven on Earth: Art, Power, and Wonder in the Vatican from Antiquity to the Enlightenment. 3 Credits.
A material cultural exploration of the Vatican from the founding of St. Peter's basilica in antiquity to the establishment of the Vatican Library and Museums in the Renaissance and Enlightenment.
Area: Humanities
Writing Intensive

AS.389.358. Collecting the Contemporary. 3 Credits.
What does it mean to be a collector? Students will visit private collections of contemporary art in Baltimore, learning from collectors and their objects. This course alternates seminar meetings, focused on theories and practices of collecting, with field trips. Cross-listed with History of Art.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.389.373. Encountering American Art. 4 Credits.
Students investigate the Baltimore Museum of Art's American art collection and its presentation to the public alongside current scholarship on American art to develop strategies for a new permanent collection display that aligns with the museum's commitment to artistic excellence and social equity. M&S Practicum. Co-taught with BMA curator Virginia Anderson.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.389.376. Enslaved at Homewood: Slavery in 19th Century Maryland. 3 Credits.
Students consider the representation of slavery in historic house museums of the late 20th century through the present, and use the university's Homewood Museum as a laboratory for the development, production and mounting of an exhibit about the men, women and children who labored at Homewood in the nineteenth century. Museums and Society Practicum course.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.389.377. Black Artists in American Art Museums: Correcting the Canon. 3 Credits.
Students are invited to examine critically the history of Black artists exhibiting within American museums. With the help of BMA staff, class will develop interpretation for an installation to accompany a major retrospective of artist Jack Whitten that considers the "canon" of art history as a site of ongoing negotiation between taste-makers, artists, dealers, and critics, as well as art institutions that include the market and the museum. Students will take advantage of archives at the BMA, the Library of Congress and Howard University. Students will help select the artworks and themes for the show; research individual participants in the social networks that facilitated the success of some artists over others; and research the biographies of individual artworks - some that have entered the canon and some that should. M&S Practicum. CBL Course.
Cross-listed with Africana Studies.
Area: Humanities, Social and Behavioral Sciences

AS.389.384. Object Encounters at the Baltimore Museum of Art. 3 Credits.
Using the Baltimore Museum of Art as a laboratory, students examine canonical narratives in art museums and iterate new approaches to objects in museums that build equity, interrogate privilege, decolonise, revise and offer alternative stories. Class meets at the museum every other week.
Area: Humanities, Social and Behavioral Sciences

AS.389.386. Islamic Art in the 21st Century Museum. 3 Credits.
What narratives about Islam and Islamic art does the visitor encounter at the museum? Recent re-installations of Islamic art will be studied in the context of current issues, including Islamophobia, attacks on cultural heritage, and hesitation in addressing matters of faith in public institutions. Cross-listed with History of Art and Islamic Studies.
Area: Humanities, Social and Behavioral Sciences

AS.389.410. Sharing Knowledge: Participatory Archives, Collaborative Storytelling, and Social Justice. 3 Credits.
This course introduces students to collaborative humanities projects that encourage democratic participation among publics more broadly conceived than the academy. We investigate indigenous research methods; collaborative oral history and ethnography; interactive theater; and community archives. Final projects draw on the university's archival, museum, and library collections.
Area: Humanities, Social and Behavioral Sciences

AS.389.420. Curatorial Seminar. 4 Credits.
In collaboration with a local museum, conceptualize and develop an exhibition, potentially including but not limited to: checklists, exhibition text, interpretive strategies, and programming. Exhibition theme varies year to year. Concepts, ethics and practicalities of curation are key concerns. Research visits to regional museums and private collections are relevant.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive
SA.660.748. Thucydides & Machiavelli. 4 Credits.
The problem is the imperial democracy or republic, the cases are Athens and Rome, the texts are Thucydides's History of the Peloponnesian War, Polybius's Histories, Tacitus's Agricola, Montesquieu's The Grandeur of the Romans and Their Decline and Machiavelli's Discourses on Livy. Emphasizing close reading and historical analysis, the course examines whether and to what extent these classic works retain their value as analyses of strategic behavior. (This is a cross-listed course offered by the Strategic Studies Program that also can fulfill a requirement for the Global Theory and History Program.)<a href='http://bit.ly/1beb5p5' target='_blank'>Click here to see evaluations, syllabi, and faculty bios</a>

Prerequisite(s): Students may not register for this class if they have already received credit for SA.660.748(C)

Study of Women, Gender, Sexuality

AS.363.201. Introduction to the Study of Women, Gender, and Sexuality. 3 Credits.
This course offers an introduction into the fields of Women's Studies, Gender Studies, and Sexuality Studies. It explores why we need these fields of inquiry, how they have emerged historically, what some of the major and most interesting contributions are and where we might go from here. The course is meant as a preparation for the other WGS core courses.

Area: Humanities, Social and Behavioral Sciences

AS.363.400. Feminist Modernisms. 3 Credits.
Prize Teaching Fellowship seminar. Triangulating feminist psychoanalysis and theories of embodiment and subjectivity with art criticism and case studies of artistic practice (primarily painting), this course comparatively investigates the routes modernism takes after the Second World War and decolonization (1945/1947). We will be interested in specific postcolonial and postwar contexts where modernism in the domain of the visual arts was mounted as a feminist project. Each week will pair readings that establish conceptual frameworks with close analyses of works by specific artists, including those represented by the Library’s Special Collections and the Baltimore Museum of Art. Texts include Freud, Spivak, Butler, Irigaray, Kristeva, and Mahmood.

Area: Humanities

Writing Intensive

History, Bachelor of Arts

History Major Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1584))

The Krieger School classifies history as both a social scientific and humanistic discipline. This accords very well with the wide range of explanatory and interpretive approaches to the past that now prevail in the discipline of history. One of the history program’s goals is to introduce students to these varied approaches. Although the department offers strong preparation for students who seek to specialize in a particular cultural or geographic region, history at Johns Hopkins is primarily issue and topic oriented. It also puts a premium on developing the capacity to reason comparatively and on deepening the student’s understanding of global connections among cultures in the past and in contemporary life.

The department offers undergraduate courses that range from large introductory classes to small, focused seminars that encourage intensive interaction with individual professors and with other students. Beyond the introductory level, most of our courses are writing intensive and
promote in all students critical reading skills and the ability to formulate effective written arguments. Through its core curriculum, the major also cultivates skills specific to the historian, especially research and writing based upon the systematic analysis of primary documents.

The program's overall aim is to deepen the critical habits of mind that arise from the study of time and change. These capacities are the hallmarks of liberal learning, but they are also the foundation for success in post-graduate studies and careers of many kinds, including business, law, and public affairs.

**Major in History**
- Students must earn a 'C-' or higher grade in all courses used to satisfy major requirements, and may not count courses that are graded as satisfactory/unsatisfactory.
- For students who choose to focus on one geographical area (Europe, United States, Latin America, Africa, Asia), two courses must be taken outside the student's area of focus.
- At least 4 of the 8 history electives/upper level courses must be completed with courses taken directly from the JHU History department (AS.100.xxx).

**Major Requirements**

1. Students can progress through the major easily even if they take only one history course during their freshman year.
2. This required research and methods seminar may be taken in the students second year if they are not planning to study abroad.
Honors Program in History (BA)

The history department strongly encourages all eligible history majors to pursue the honors track in history. The track culminates in the senior thesis, a yearlong, "capstone" research project completed under the direct supervision of an individual faculty advisor. Like all capstone projects, the senior thesis is intellectually challenging and its completion almost always brings with it a tremendous sense of accomplishment. It also hones the talented young historian's capacity to sustain a cogent argument based on primary evidence in the long form essay. These skills and the completion of a sustained independent project are also important practical assets when seeking a job or a post-graduate education.

A general cumulative GPA of 3.25 and a cumulative GPA in history of 3.5 are prerequisites for undertaking the senior thesis, and to obtain honors students will normally be expected to complete the thesis with a grade of A- or better. All thesis writers must also enroll in both the AS.100.507 Senior Thesis (fall, 3 credits) and AS.100.508 Senior Honors Seminar (spring, 1 credit) and AS.100.494 Senior Honors Seminar (fall, 1 credit) and AS.100.495 Senior Honors Seminar (spring, 1 credit) - enrollment is by instructor's permission and will be granted only to students who have obtained a commitment from a faculty thesis advisor. This commitment should normally be obtained no later than April 30th of the junior year.

For questions about the honors track in history or finding a thesis advisor, consult your departmental advisor or the current Director of Undergraduate Studies.

History, Bachelor of Arts/Master of Arts Four-Year Program

The B.A.–M.A Program is an accelerated program that allows the undergraduate to complete a BA and an MA in history in four years. It is designed for students who demonstrate exceptional scholarly ability and assumes that the student will complete most other requirements for graduation by the end of the junior year. Minimum prerequisites for admission include a GPA of 3.8 or higher, completion of language requirements through the intermediate level by the end of the junior year, and the securing of a faculty sponsor in the department of history in advance of application. Students seeking admission into the BA-MA program shall submit a formal application to the regular graduate program in history; the application deadline is December 15 of the junior year.

The program of study during the senior year includes 6-7 credits of graduate reading and research seminars or independent study each semester, mastery of the scholarship in the student's area of research concentration as demonstrated by the successful completion of a graduate field examination in that area of concentration; and, in lieu of the senior thesis, the completion of a major scholarly research essay equivalent in quality to those completed by first year graduate students in the regular doctoral program. For questions and further details about the program, contact Megan Zeller, mzeller4@jhu.edu, Graduate Coordinator, Department of History, who can also provide details about application procedures.

History, Minor

History Minor Requirements

The minor in history offers to students majoring in other programs of study an opportunity to pursue a serious interest in history.

- Students must earn a "C-" or higher grade in all courses used to satisfy minor requirements and may not be taken satisfactory/unsatisfactory.
- At least 2 of the 4 electives must be taken directly from the History Department.

Cognate Courses The History Department encourages interdisciplinary work in cognate fields of learning. History minors are therefore strongly advised to take additional courses in any department, including the History Department, that relate to the student's major discipline in a historical way.

### History, Bachelor of Arts/Master of Arts Five-Year Barcelona Program

#### Hopkins Barcelona 5-year BA/MA in World History Program

This program provides a select group of undergraduates the opportunity to pursue an integrated, consecutive 5-year dual-degree BA/MA between JHU and Universitat Pompeu Fabra (UPF) in Barcelona that will lead to the MA in world history from UPF. JHU students will spend either the fall or spring of their junior year at UPF, earning credits toward their UPF MA requirements. They will receive their Hopkins BA at the end of four years, and then pursue the UPF MA degree in their fifth year of study.

Further information is available through the Office of Study Abroad.
History, PhD

Program Requirements

Students are required to have a reading knowledge of those foreign languages that are necessary for the satisfactory completion of their program of graduate study. Students in European history must have a reading knowledge of at least two languages, and students in medieval history must also have a reading knowledge of Latin. Students of Chinese history are expected to have reading knowledge of modern and classical Chinese and in most cases should also have reading knowledge of Japanese and/or a European language. Students in the Latin American area must have a reading knowledge of two of the following, depending upon their particular specialties: French, Spanish, Portuguese, or Dutch. In African history, students must have a reading knowledge of three languages including English and French. Depending upon their fields of specialization, students in African history may have other language needs. Students are expected to pass a written examination in one language within a month after entering the department, and they are required to do so before the end of the first year.

Each student is required to take a seminar under his/her major professor and to participate in at least one departmental seminar each semester.

The student's knowledge of four fields will be tested by written and oral examinations before the end of the second year of graduate study.

The student must write and defend a dissertation that is a major piece of historical research and interpretation based on primary sources and representing a contribution to historical knowledge. Its content, form, and style must be adequate to make it suitable for publication.

Normally, each student is required to perform some supervised teaching or research duties at some point during the graduate program, most often as a teaching fellow during the second and fourth years.

History of Art

http://arthist.jhu.edu/

Supporting a proud tradition of excellence in humanities scholarship and teaching, Johns Hopkins University offers students a diverse range of resources and opportunities for the study of art history. Courses are taught by an international faculty of respected research scholars, covering many aspects of the Classical and European tradition from the ancient world into the modern era, as well as selected aspects of Near Eastern, Asian, Ancient American, trans-Atlantic and contemporary arts. Participating in small classes with opportunities for informal excursions, students integrate their direct experience of works of art with the knowledge and critical perspective gained through historical research, discussion, and debate.

Programs leading to the B.A. and Ph.D. degrees, and a B.A./M.A. program, emphasize the value of investigating works of art in their historical, intellectual, and social contexts, and enable students to deepen their understanding of cultural history through courses in other departments.

Facilities and Opportunities

Located in a metropolitan region of unsurpassed museum collections and research institutions, Johns Hopkins is well situated for the study of art history. The Baltimore Museum of Art, with its rich holdings in modern and contemporary art, African Art, and the history of prints (just to name a few of its strengths), is directly adjacent to the Homewood campus. Downtown, and only a short shuttle ride away, is the renowned Walters Art Museum, which preserves rare collections of ancient and medieval art, Renaissance, Baroque, and 19th-century painting.

Also easily accessible from Baltimore is the National Gallery of Art in Washington, D.C., which houses a world-class collection of European painting, sculpture, and graphic arts from the Renaissance to the present day. Modern art is presented in the permanent collections and exhibitions of the Hirshhorn Museum, Smithsonian American Art Museum (SAAM), and the Phillips Collection. Unique exhibitions of Byzantine and pre-Columbian art are maintained at Dumbarton Oaks Research Library, and collections of Asian, Ancient Near Eastern, and African art are housed in the Freer/Sackler and the Museum of African Art.

Meanwhile, the Sheridan Libraries of Johns Hopkins maintains its own extensive art library on the Homewood Campus, and a Special Collections department which includes, among other treasures, the Fowler Collection of treatises on architecture. Research materials in numerous regional libraries and museums, and in affiliated institutions, including the Library of Congress, are readily accessible to art history students.

Programs

- History of Art, Bachelor of Arts (p. 1904)
- History of Art, Minor (p. 1905)
- History of Art, PhD (p. 1905)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.010.101. Introduction to Art History I. 4 Credits.
A survey of painting, sculpture, and architecture from Egyptian, Greek, Roman, and medieval culture.
Area: Humanities
Writing Intensive

AS.010.102. Introduction to Art History II. 4 Credits.
This introductory course surveys major developments in the arts primarily in Europe and North America from the fourteenth century to the present day, looking in particular at painting, sculpture, printmaking, photography, and, starting in the twentieth century, new media. Topics to be considered include the landmark innovations of Renaissance artists and theorists; the drama of Baroque art; the impact of the Enlightenment on eighteenth-century art; artistic responses to the advent of modernity; and the emergence of abstraction, the avant-garde, and a range of new mediums during the twentieth and twenty-first centuries. Throughout the semester, we will explore how the artistic practices and theories under consideration relate to their specific historical, intellectual, social, political, and geographical contexts, and we will also consider the roles that works of art and artists played in shaping many of those very same contexts.
Area: Humanities
Writing Intensive

AS.010.103. Introduction to the Art of Asia. 3 Credits.
A survey of the art and architecture of Asia, from the ancient world to the present and including the Indian subcontinent, China, Japan, Korea, and Southeast Asia.
Area: Humanities
AS.010.104. Freshman Seminar: Investigating Gender and Sexuality in Mesopotamian Art. 3 Credits.
Specifics of gender and sexuality are not universal norms, but rather are the product of particular cultural formations. Works of art are especially critical in shaping and conveying these particularities. This seminar examines how artistic products expressed and constructed gender identities and notions of sexuality in ancient Mesopotamia from the 4th millennium to the Hellenistic period. As a group, we will explore a variety of case studies, through which students will be introduced to ancient Mesopotamian culture and will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Humanities

AS.010.110. Art of the Islamic World. 4 Credits.
This course is an introduction to the art of the Islamic world, covering a geography that stretches from Spain to India and a chronology that extends from the seventh century into our own time. Within this rich and varied continuum, we will look at a range of art forms—including architecture, painting, sculpture, ceramics, and calligraphy—in relation to such themes as patronage, production, function, and audience. A number of the artworks will be viewed firsthand in local collections. We will also explore the intersection of Islamic art with today's political realities.
Area: Humanities

AS.010.112. Freshman Seminar - Lower, Later, Farther Away: Roman Art Beyond the Center. 3 Credits.
This course will introduce students to the art of the Roman world through art created by and for the Roman lower classes, art created in late antiquity, and art created in the far provinces of the empire. These topics represent a dramatic shift away from the traditional “center” of the study of Roman art (art created for the wealthy and politically privileged citizens of central Italy between the first century BCE and the first century CE), and are leading to new understanding of marginalized groups in the Roman world.
Area: Humanities

AS.010.150. Freshman Seminar: Rembrandt. 3 Credits.
Perhaps no artist has so captivated the art historical imagination as Rembrandt. This course will provide students with an in-depth look at the artist’s life and work, but it will also use Rembrandt as a lens to examine critical themes/topics of artistic production in northern Europe over the course of the seventeenth century. These topics will include: artistic training, studio practice, collecting and the art market, (self-)portraiture, authorship and artistic biography, genre, printmaking, technical mastery and meta-pictoriality, and global expansion/artistic exchange with non-European cultures.

AS.010.203. Abstraction. 3 Credits.
This course will examine the elaboration and dissemination of major iterations of “abstract” art at key junctures throughout the twentieth century, with an emphasis primarily on developments in Europe and the Americas. Why abstraction? What were the formal, social, and philosophical stakes of divergent models and paradigms of abstract practice? And what difference do they make in the history and theory of artistic modernism? Class visits to the BMA and Special Collections.
Area: Humanities

AS.010.204. Italian Art in the Middle Ages. 3 Credits.
This course explores key monuments of medieval art and architecture in Italy from c. 400 until 1350. We will concentrate on historical, functional, and aesthetical aspects that lead to the creation of single monuments and art works. Emphasis is given to the analysis of “sacred space” by means of architecture, painted, and sculptural decoration, as well as ritual performances. Another focus is laid on the emergence on the political dimension of art for the creation of civic identity as well as in the context of the late medieval courts. We raise questions about the importance of materiality and science for the creation of medieval art works.
Area: Humanities

AS.010.205. Art of Mesoamerica. 3 Credits.
This course provides a basis for the study of ancient Americas art and architecture and a broad exposure to the issues relevant to its study. Select visual arts within the primary regions of Mexico and Central America will be emphasized. In conjunction with the Baltimore Museum of Art (BMA) and the JHU Archaeological Museum (JHAM), students will participate in on-site study of the collections. Students who have taken AS.010.105 are not eligible to register. This course duplicates AS.010.105.
Area: Humanities

AS.010.208. Leonardo da Vinci: The Renaissance Workshop in the Formation of Scientific Knowledge. 3 Credits.
How does a notary’s son trained as a painter come to claim expertise in the construction of machines and acquire knowledge of the principles of optics, human anatomy, the flight of birds, the dynamics of air and water? The course will focus critically on the myth of Leonardo’s singularity and explore his achievements with regard to the artisanal culture of his time, as well as the problems of authority in the recognition of artisanal knowledge as scientific discovery.
Area: Humanities

AS.010.209. Art since 1945. 3 Credits.
Critical survey of developments in the visual arts primarily in Europe and the United States from 1945 to the present, ranging from painting and sculpture to performance, photography, and video, with emphasis on the critical concepts and the aesthetic, social, and historical implications of new forms of artistic production and dissemination. Visits to the BMA and Special Collections.
Area: Humanities

AS.010.210. The Art of Colonial Latin America. 3 Credits.
This course offers a broad introduction to the arts of colonial Latin America: students will become familiar with the artistic production in the areas of Latin America invaded and controlled by the Spanish Crown from the time of the conquests in the sixteenth century to independence movements in the early nineteenth century. We will explore a wide range of materials from maps to featherwork, paintings to urban grids, cathedrals to mummy bundles. The course is thematically organized, such that students will not only become familiar with the art of Latin America, but will come to understand critical topics related to the study of early modern colonialism: conquest, race, missionary control, literacy, extraction, and indigenous and imperial systems of governance.
Area: Humanities
AS.010.212. Mirror Mirror: Reflections in Art from Van Eyck to Velázquez. 3 Credits.
Explores the different ways Early Modern painters and printmakers incorporated mirrors and optical reflections into their works for the sake of illusion and metaphor, deception and desire, reflexivity and truth-telling. Connecting sense perception and ethical knowledge, embedded mirror images often made claims about the nature of the self, the powers of art, and the superiority of painting in particular.
Area: Humanities

AS.010.214. Ancient Americas in Motion. 3 Credits.
This course critically examines the visual arts and their makers as portrayed in documentary, historical, and Hollywood films.
Area: Humanities

AS.010.218. Modern Art, 1880-1950. 3 Credits.
Critical survey of developments in the visual arts primarily in Europe and the United States from 1880 to 1950 with emphasis on the critical concepts and the aesthetic, social, and historical implications of new forms of artistic production and dissemination. Visits to the BMA and SpecialCollections.
Area: Humanities

AS.010.222. Freshman Seminar: Representing Roman Power: Sculpture as Political Rhetoric from Republic to Empire. 3 Credits.
Rome created one of the world's most powerful empires that dominated the Mediterranean from the 3rd century BCE into the 4th century CE. As Rome expanded its borders, its cities saw a proliferation of sculptural monuments that produced a visual political rhetoric and expressed imperial ideologies. This class examines the close relationship between Roman sculpture and politics from the Republic through the Severan principate. Through close visual analysis of the ancient materials and critical readings of scholarship, this course will examine the role of sculpture in the formation, reproduction, and attenuation of imperial rule.
Area: Humanities

AS.010.226. Art, Medicine, and the Body: From Leonardo to Body Worlds. 3 Credits.
This course explores five centuries of fruitful collaboration between physicians and artists — those who observe the body in order to heal it, and those who do the same in order to picture it. From medieval medical manuscripts, where the body is portrayed as a microcosm of the created world, to the anatomical forays of Renaissance artists such as Leonardo da Vinci and Albrecht Dürer, from gruesome depictions of bodily pain, disease, and corruption in the art of Matthias Grünewald to the eloquent exposure of the body's interior by anatomists such as Andreas Vesalius; from the spectacularization of the body in Enlightenment science to the rubberized cadavers of Gunther von Hagen's Body Worlds project — these and other topics will bring into focus the complex intersections between the history of medicine and the history of art.
Area: Humanities

AS.010.228. Prophets, Kings, and Demons: The Art of Islamic Book Painting. 3 Credits.
Despite the widespread misconception that Islam forbids images of humans and animals, figural representation played a rich and varied role in the historical arts of the Muslim world, particularly in the form of book painting. This course explores the production and consumption of illustrated Islamic manuscripts and albums, situating the paintings in their wider artistic and social contexts. Extending in scope from the Near East to India and from the medieval to the early modern period, the course takes a thematic approach that will introduce some of the key genres of the tradition — including chronicles, fables, and religious works — and investigate broader questions of style, meaning, viewership, text-image relationships, and cross-cultural borrowing. Students will have the opportunity to look at examples of this art firsthand in local collections.
Area: Humanities

AS.010.232. Art and Architecture of the Global Medieval Mediterranean World. 3 Credits.
This course serves as an introduction to the art and architecture of the Mediterranean region between the early Christian period and the Second Crusade (c. 250-1150). We will analyze the interactions between Western European, Byzantine, and Islamic cultures through the development of religious art and architecture, asking specifically how these interactions were mediated by culturally distinct representational practices. The course will cover the broad Mediterranean region by focusing on specific sites of interaction around the Sea (i.e. Islamic Spain, Norman Sicily, Byzantine North Africa, Venice and the Adriatic Coast, and Crusader Palestine). Select topics will include: the rise of religious image theory and its effect on the visual cultures of the Mediterranean region; the trans-regional movement of artists, crafted objects, and artistic technologies; the history of urbanism and the production of artistic objects in port cities and centers of trade; and the concept of the Mediterranean as "Premodern Globalism." Readings will include both primary and secondary sources, and we will investigate a variety of methods and approaches to the interpretation of art objects.
Area: Humanities

AS.010.233. Asian Art Since 1945. 3 Credits.
This course examines the art and architecture of East, South, and Southeast Asia produced since the mid-twentieth century. We will engage with theoretical, visual, and political developments in the recent art of this region, reading statements by artists and architects, discussing the rising commercial and international profile of contemporary Asian art, and exploring established and emerging art histories of this period. Cross-list with East Asian Studies.
Area: Humanities

AS.010.235. Art, Medicine, and the Body: Middle Ages to Modernity. 3 Credits.
This course explores seven centuries of fruitful collaboration between physicians and artists, uncovering the shared discourses, diagnostic techniques and therapeutic agendas that united the art of picture-making with the art of healing. Topics include the origin and development of medical illustration; the long, cross-cultural history of the therapeutic artefact; the anatomical investigations of Renaissance artists such as Leonardo and Michelangelo; depictions of bodily pain and disease in the art of Matthias Grünewald and psychosomatic syndromes like melancholy in the work of Albrecht Dürer; the spectacularization of the body in Enlightenment science and the ethics of medical specimen display today — all in order to bring the complex intersections of the history of medicine and the history of art into view.
Area: Humanities
AS.010.236. Palaces, Temples and Tombs in Mesopotamia. 3 Credits.
Mesopotamia, the "land between the rivers," is considered the cradle of civilization. Its earliest urban centers appeared by 3500 BCE in the region of modern-day Iraq, Iran, and Syria. Along with urbanism came the emergence of temples and palaces as large-scale elite institutions (along with written records). Their arts manifest some of the earliest complex representations and follow a vibrant course for several millennia. The first empires marshaled large armies and amassed fabulous riches. Complex religious and ritual ideologies were expressed in the art and architecture. And all has been revealed by the archaeologist's spade. This class explores the art and architecture of Mesopotamia (ancient Sumer, Babylonia and Assyria) from 3500 to 330 BCE. Emphasis is placed on the relationship between the arts and ancient society in order to enable students to acquire the skills for accessing and appreciating ancient civilizations.
Area: Humanities

AS.010.237. Freshman Seminar: Art and Medicine in the ancient Mediterranean (600-100 BCE). 3 Credits.
The visual arts played an important role in the foundations of medicine often traced to the ancient Mediterranean. Drawing on a range of objects from representational art to surgical tools and magic spells, this seminar will explore the ways in which the visual arts crafted a different narrative of ancient medicine from that of the texts of the Hippocratic canon. Of particular focus will be the relationship between the doctor Hippocrates and the healing god Asclepius, the representation and subsequent excision of the goddess Hygeia, anatomical votives dedicated in sanctuaries, depictions of medical practices, surgical tools, as well as curse and healing spells. Participation will include visits to local museums and collections.
Area: Humanities

AS.010.251. Medieval Spaces: Site, Image, and Viewer in the Middle Ages. 3 Credits.
This course serves as an introduction to medieval art by analyzing the formal relationships between architecture and images at important cultural sites between the third century and the fourteenth century. The course will focus primarily on how those relationships structured viewers' experiences of the divine and other ideological forces by understanding how works of art functioned for specific audiences in a particular spatial context. Along the way we will encounter a wide array of geographical sites and histories, including early Christian examples in Rome and Byzantium (e.g. the Roman catacombs and Hagia Sophia); monastic settlements in France and Germany during the eighth and ninth centuries (e.g. St. Gall); the interaction of Islamic and Christian visual culture in Spain and North Africa; twelfth century architectural sculpture along the pilgrimage routes; French, German, and Italian Romanesque and Gothic churches; and monumental painting cycles in Italy (e.g. the Arena Chapel in Padua).
Area: Humanities

AS.010.260. By the Book: Illuminated Manuscripts in the Middle Ages. 3 Credits.
This course aims to introduce students to Western medieval book painting from the birth of the codex to the advent of the printed book, between 400 and 1500 C.E. Each week we will study a theme of particular importance for the period. Besides learning about questions central to medieval art and history (artistic practices, patronage, gender, race, and representation of power), we will pay particular attention to the issue of how these manuscripts were read, perceived, and used. To this end, the course will have an interdisciplinary approach to codices. Beside art history, we will mobilize the tools of history, history of religion, manuscript and book studies, anthropology, and psychology. Taking advantage of the rich collections of Johns Hopkins and Baltimore, we will study original manuscripts, facsimiles, and incunabula every week.
Area: Humanities

AS.010.301. Michelangelo: Religion, Sexuality, and the Crisis of Renaissance Art. 3 Credits.
The course will focus on the controversies surrounding the representation of the body in the writings and figurative art of Michelangelo and his contemporaries, the historical circumstances under which the most admired artist in Europe was attacked as a blasphemer and an idolator, and the effect of widespread calls for censorship on his later production. The writings of Michelangelo, Pietro Aretino, Benvenuto Cellini and own writings will be considered with a focus on their staging of an ambivalent and transgressive eroticism.
Area: Humanities

AS.010.307. Diplomats, Dealers, and Diggers: The Birth of Archaeology and the Rise of Collecting from the 19th c. to Today. 3 Credits.
The development of archaeology in the Middle East – its history of explorers, diplomats, missionaries and gentlemen-scholars – profoundly shaped the modern world, from the creation of new museums and the antiquities market to international relations and terrorism.
Area: Humanities

AS.010.309. The Idea of Athens. 3 Credits.
This course will explore the art, architecture, material culture, and textual evidence from the ancient city of Athens, the many cultures and social positions that made up the ancient city, and the idea of the city as something far beyond its reality.
Area: Humanities

AS.010.310. The ‘Long Sixties’ in Europe. 3 Credits.
This seminar examines aspects of advanced artistic production that emerged in France, Italy, the Benelux, and German-speaking countries primarily in the years 1945-1972 as constituent elements of the “Long Sixties,” a period of extraordinary and often rapid social transformation. Among our questions: How was the work of art reimagined and repositioned in the wake of World War II and the horrors of the Holocaust, in the context of reconstruction and an emerging consumer society, and in light of the Cold War, decolonization, and other political tensions and cataclysms? How did artists conceive the claims of artistic tradition in a rapidly expanding field of aesthetic practices and possibilities? What were the relations among advanced artistic practices and the “cultural revolutions” generally taken to have come to a head ca. 1968? Integral to this course is a student-curated exhibition of avant-garde materials at the MSE Library, to open in November 2018.
Area: Humanities
AS.010.315. Art of the Assyrian Empire, 1000-600 BCE. 3 Credits.
From 900 to 609 BCE, the Assyrian Empire dominated the ancient Near Eastern world, stretching from western Iran to the Mediterranean and Egypt. In concert with imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This course provides an integrated picture of the imperial arts of this first world empire, situating it within the broader social and political contexts of the first millennium BCE. In its conquest of foreign lands, this powerful state came in contact with and appropriated a diversity of cultures, such as Phoenicia, Egypt, and Greece, which we will also study.
Area: Humanities

AS.010.316. Venice: Art, Architecture and Ecology from the Late Middle Ages to the Present. 3 Credits.
This course is an investigation into the fashioning of Venetian identity in architecture and the visual arts, with a particular address to the encounter with Byzantine and Islamic traditions and exchanges with other centers of the Italian peninsula.
Area: Humanities

AS.010.319. Medieval Art and Architecture of the Holy Land. 3 Credits.
The course focuses on art and architecture in the political and religious contexts of the Middle East, from the 4th to the 14th c. The three monotheistic religions all claimed specific territories -- in particular the city of Jerusalem -- for cult practices. This situation resulted in military conflicts that had an impact of Jewish, Medieval, Byzantine, and Islamic art in the Holy Land. The political conflicts, which still plague the region today, are rooted in the complex situation of the medieval period. The Roman, Arab, Byzantine, and crusader invasions resulted however in exciting eclectic styles that characterize the art and architecture of the region. We will discuss concepts behind political and religious leadership, as they intersect with the power of the arts.
Area: Humanities

AS.010.320. Art of Colonial Peru. 3 Credits.
Viewed within the dynamic historical context of colonial society, we consider the pictorial, sculptural, and architectural programs that ensued in viceregal Peru (1532-1825). We examine the role of religious orders, art schools, artisan guilds and cofradía, and consider the social and political implications of art patronage.
Area: Humanities

AS.010.325. Arts of the Spanish Empire. 3 Credits.
From the sixteenth through the eighteenth centuries, visual forms and practices linked such far-flung places as Mexico City and Naples, Manila and Lima, Cuzco and Antwerp, Quito and Madrid: all cities in the Spanish Empire. This course is conceived as a voyage, moving city to city to explore objects that connected Spain's vast holdings. We will investigate how the Spanish Crown and the Catholic Church used visual strategies to consolidate political power and instill religious faith across the world; and, alternatively, we will consider how local conditions, concerns, and resistance reshaped those efforts. This course surveys a diverse range of artistic production: religious paintings and sculptures; maps used for imperial surveillance; luxury goods crafted from shimmering feathers, ceramics, ivory, and precious metals; urban design and architecture from the ports of Europe to the highland outposts of the Andes; ephemeral cityscapes for civic performances. In examining such materials, students will be introduced to the art historical methods and theoretical concerns used to study a wide diversity of objects within an imperial frame.
Area: Humanities

AS.010.327. Asia America: Art and Architecture. 3 Credits.
This course examines a set of case studies spanning the last century that will enable us to explore the shifting landscape of Asian transnational art and architecture. Each week will focus on a different artist, group, exhibition, architect, urban space, or site to unpack artists’ and architects’ engagements with the changing landscape of immigration policies, movements to build solidarity with other artists of color, and campaigns for gender and sexual equality. The course will situate these artists within American art, and build an expansive idea of Asia America to include the discussion of artists whose work directly addresses the fluidity of location and the transnational studio practice.
Area: Humanities

AS.010.329. Building an Empire: Architecture of the Ottoman Capitals, c. 1300–1600. 3 Credits.
Centered on modern-day Turkey and encompassing vast territories in Asia, Africa, and Europe, the Ottoman Empire (1299 – 1923) was the longest lived and among the most powerful Islamic states in history, with an artistic tradition to match. This course explores the functional and symbolic role that architecture played during the empire's formative centuries, when three successive capital — Bursa, Edirne, and Istanbul — served to visualize the sultans' growing claims to universal authority. With reference to mosques, palaces, tombs, and other categories of architecture, the course will examine the buildings in their artistic, social, and political contexts. Themes to be addressed include patronage and audience, architectural practice and the building trade, ceremonial and ritual, topography and urban planning, and the relationship of Ottoman architecture to other traditions.
Area: Humanities

AS.010.330. Art of the Caliphates: Visual Culture and Competition in the Medieval Islamic World. 3 Credits.
Despite its modern-day association with a fringe extremist movement, the term “caliphate” was traditionally used to describe the Muslim world at large, the political and spiritual ruler of which bore the title of caliph. The original Islamic caliphate was established in the seventh century as a vast empire centered on the Middle East and extending deep into Africa, Asia, and Europe. It soon broke apart into a series of competing powers, until in the tenth century, three rival dynasties—the Baghdad-based Abbasids, the Spanish Umayyads, and the Fatimids of North Africa—each claimed to be the rightful caliphate. This course will examine how these fascinating political developments and conflicts played out in the realm of art and architecture between the seventh and thirteenth centuries. As well as palaces, mosques, and commemorative buildings, the course will look at media ranging from ceramics and metalwork to textiles and illustrated manuscripts, with many of the artifacts being viewed firsthand in local museum collections. These works will be considered in relation to such themes as patronage, audience, ceremony, and meaning. Particular attention will be paid to the way these various caliphates—both in emulation of and competition with one another—used visual culture as a powerful tool to assert their legitimacy.
Area: Humanities
AS.010.331. The Renaissance Body Exposed: Exhibiting the Nude in European Art 1400-1550. 3 Credits.
Explores the extraordinary currency of the naked human figure in premodern European visual culture, only inadequately accounted for by explanations such as the 'rise of naturalism' or the 'revival of antiquity.' Will also explore curatorial questions arising from an exhibition currently in preparation on the Renaissance nude. Assignment in the form of catalog texts and a 'virtual exhibition.'
Area: Humanities
Writing Intensive

AS.010.332. Jade, Turquoise, Feathers, and Gold: Valued Materials in Aztec Art. 3 Credits.
This seminar (which meets twice weekly) introduces students to the art of the Aztec Empire (1428-1521 CE) through the lens of the production of art from valued materials. The issue of value—how it is constructed, conceptualized, and deployed—provides key insights into the political, religious, economic, and conceptual life of a society. Throughout this course, we will examine these questions by focusing on the major themes of art's social functions, materiality and artistic process, historicity, and cross-cultural exchange. Special emphasis will be placed on in-person examination of objects in local museum collections and the study of writings by indigenous authors.
Area: Humanities

AS.010.333. The Re-Making of Rome: from Michelangelo to Mussolini. 3 Credits.
The transformation of Rome from a medieval backwater into a world center with multiple, overlapping identities: the ruinous symbol of ephemeral glory, the spiritual destination of pilgrims and tourists, the seat of a priest/monarch claiming universal dominion, and, above all, the "theater of the world" where a cultural and ethnic heterogeneity unparalleled in any other European urban center was permanently on display.
Area: Humanities

AS.010.337. Global Amsterdam: The Golden Age of a Small but Mighty Metropolis. 3 Credits.
This course examines the visual and material culture of the Dutch Golden Age as the product of global forces. The young Dutch Republic quickly achieved a global reach in the seventeenth century. And Amsterdam served as its commercial capital, which by 1630 could be counted as one of the most important port cities in the world and home to the Dutch East India Company (VOC), the world's first multinational corporation. Moving an incredible quantity of goods (spices, silks, porcelain, coffee, precious stones, "exotic" arts, and slaves) generated not only the economic riches, but also the cultural touchpoints that would give rise to art produced by the likes of Rembrandt, Vermeer, Hals, and the many exceptional craftsmen that have left us some of the most enduring masterpieces of the seventeenth century. This course situates that art, and the city of Amsterdam itself, within networks that connected it to such far flung places as Japan, Jakarta, Surinam, Curacao, Brazil, and the Indian Subcontinent.
Area: Humanities
Writing Intensive

AS.010.338. Art and the Harem: Women's Spaces, Patronage, and (Self-)Representation in Islamic Empires. 3 Credits.
Long characterized in the Western imagination as exotic realms of fantasy, harems in Islamic tradition served as private domestic quarters for the women of elite households. This course explores the harem—as an institution, a physical space, and a community of women—from various art-historical perspectives, considering such topics as the harem's architecture, the agency of its inhabitants as patrons and collectors, the mediating role of eunuchs in the harem's visual and material culture, and the ability of harem women to make their mark through public artistic commissions. Our case studies will address a range of Islamic geographical and chronological contexts, though we will focus on the empires of the early modern period and, above all, the famous harem of the Ottoman sultans at the Topkapi Palace in Istanbul. In challenging popular misconceptions, the course will also look at the wealth of exoticizing imagery that the harem inspired in Western art, which we will consider through Orientalist paintings at the Walters Art Museum and illustrated rare books at Hopkins itself.
Area: Humanities

AS.010.340. Renaissance Art in the Netherlands: Broederlam to Bosch. 3 Credits.
Explores the major painters working in the Low Countries during the fifteenth century: Melchior Broederlam, the Master of Flémalle, Jan van Eyck, Rogier van der Weyden; Hans Memling, Hugo van der Goes, Hieronymus Bosch, and others.
Area: Humanities

AS.010.360. Medieval Art in Europe: Methodology, Historiography, Theory. 3 Credits.
The course explores the conceptual character of medieval European art from Late Antiquity to the end of the Middle Ages with an emphasis on methodological, historiographical, and theoretical issues. Using selected monuments and objects from a wide geographical range and dating from the 4th to the 14th centuries as case studies, students will also familiarize with the methodological developments of art historical research. The course will focus in particular on the 'anthropological turn' of medieval art history and medieval image theory.
Area: Humanities

AS.010.364. Babylon: Myth and Reality. 3 Credits.
Babylon – the name resonates even today, from the biblical whore of Revelation to sci-fi. It evokes exotic places and time long past. But what do we really know about the ancient city and the civilization that flourished there thousands of years ago? The first part of this course examines the archaeological city of Babylon, located in the modern state of Iraq, and considers its artistic and architectural achievements in the context of Mesopotamian history. The second part of the class explores the ongoing impact of Babylon in the cultural imagination of later periods, from the Classical and biblical authors, to European artists, Hollywood movies, science fiction, and contemporary political movements.
Area: Humanities

AS.010.365. Art of the Ancient Andes. 3 Credits.
The ancient visual arts of Andean South America and their respective cultural contexts form the basis of this course. In conjunction with the Baltimore Museum of Art and the Johns Hopkins Archaeological Museum students will have access to collections for study.
Area: Humanities
AS.010.366. Native American Art. 3 Credits.
The works of Native American artists are examined and discussed in their respective social and historical contexts. Such works include Hopewell stone sculpture, Mimbres pictorial painting, and Tlingit guardian figures. We examine the concept of sacred landscape through analysis of monumental earthworks and effigy mounds, Anasazi architecture, and rock art. In conjunction with the Baltimore Museum of Art (BMA), and Johns Hopkins Special Collections, students will have access to collections for study.
Area: Humanities

AS.010.367. Photography, the Archive, and Memory. 3 Credits.
This seminar will culminate in an exhibition in the library, focused on the photographic works of Dayanita Singh (b. India, 1961) in Hopkins’ collections. Singh’s work delves deeply into her subjects, exploring issues of identity, the body, and sexuality as well as questions related to memory and the archive. She has long presented her photography in the form of the book, and as such we will pursue readings in photography, book arts, and the archive, and bring nineteenth-century illustrated books in our collection into dialogue with Singh’s work. This will be a hands-on seminar: students will develop the framework for the exhibition, write the textual materials (labels, wall text), and decide on the arrangements of objects in the show.

AS.010.371. Materials and Methods in Contemporary Art. 3 Credits.
How and from what do artists make art today? This course will consider some of the staggering array of methods and materials that characterize the contemporary art scene. Among our topics: industrial fabrication, digitalization, ephemerality and technological obsolescence, the revitalization of craft, the increasing visibility of indigenous techniques, and questions of environmental impact and sustainability.

AS.010.382. The Politics of Display in South Asia. 3 Credits.
Through an examination of colonial exhibitions, the rise of national, regional, and archaeological museums, and current practices of display and representation in institutions, we will explore how the image of South Asia has been constructed in the colonial, modern, and contemporary eras. We will engage with the politics of representation, spectacle, and the economies of desire as related to colonialism and the rise of modernity. Readings from postcolonial theory, museum studies, anthropology, history, and art history.
Area: Humanities
Writing Intensive

AS.010.389. The Stone and the Thread. 3 Credits.
Advanced inquiry into imperial Inka architecture and fiber arts.
Area: Humanities
Writing Intensive

AS.010.390. Ancient Americas Object Workshop. 3 Credits.
Analysis of ancient Americas collection held in the Johns Hopkins Archaeological Museum.
Prerequisite(s): AS.010.105 OR AS.010.407 OR AS.010.398 OR AS.010.365 OR AS.010.389 OR AS.010.366 OR AS.010.214 or in consultation with professor prior to registration.
Area: Humanities
Writing Intensive

AS.010.398. Tombs for the Living. 3 Credits.
Centering on the tomb as the unit of analysis, this course examines the cultural and material aspects of death and funerary ritual. Case studies are drawn from North America, Mesoamerica, and the Andes. Collections study in museums.
Area: Humanities

AS.010.405. The Medieval Image and Concepts of Authenticity. 3 Credits.
The course examines the notion of the authentic in conjunction with medieval images, relic veneration, and the practice of law. It investigates the construction, reception, and theoretical grounding of authenticity of reliquaries, icons, and imprints on cloth or seals, and legal documents. These objects elucidate artistic strategies such as cross media references, abstraction, mimesis and bricolage to convey an aura of authenticity. We address other authenticating factors, such as complex ritualized forms of communication. This is a new course for the undergraduate section, existing course is AS.010.644. Will be taught as a hybrid this Fall 2020.
Writing Intensive

AS.010.407. Ancient Americas Metallurgy. 3 Credits.
This course addresses the technology, aesthetics, and social significance of metals. Case studies are drawn from North America, Mesoamerica, and the Andes. Collections study in museums.
Area: Humanities

AS.010.409. Theories and Works of “The Baroque”. 3 Credits.
There is perhaps no more confounding, though also no more persistent, art historical concept than that of “the Baroque.” This course introduces students to foundational histories and critiques of “the Baroque” while exploring works of art that have proved central to these formulations. That is, this course will balance careful reading of historiography with close examination of works of art (both digitally presented and visited in local collections). Students will come away with a layered understanding of the Baroque objects—from relatively small-scale museum works to major architectural and sculptural monuments—and their place within the broader evolution of the history of art. Particular attention will be given to newer global and (post-)colonial approaches to notions of the Baroque, ultra-Baroque, and neo-Baroque.
Area: Humanities
Writing Intensive

AS.010.410. The Epistemology of Photography. 3 Credits.
This seminar will ask how photography produces ways of knowing: how does photography’s reality-effect shape its dissemination and absorption? Is photography’s emergence during the colonial era coincidental or catalytic? How is memory (re)constituted in a photography-saturated world? What kinds of histories does photography encourage and discourage? Is a photograph an object? We will read across disciplines (literature, anthropology, history, history of art, political science, theory) to investigate the epistemology of photography and the photograph.
Area: Humanities
Writing Intensive

AS.010.413. Historical and Conceptual Bases of Art History. 3 Credits.
Critical readings in and of relevance to the intellectual foundations of the modern discipline of art history. Texts by Wölfflin, Riegl, Warburg, Panofsky, Baxandall, Clark, Krauss, Fried, and others.
Area: Humanities
Writing Intensive

AS.010.415. Theories and Works of “The Baroque”. 3 Credits.
There is perhaps no more confounding, though also no more persistent, art historical concept than that of “the Baroque.” This course introduces students to foundational histories and critiques of “the Baroque” while exploring works of art that have proved central to these formulations. That is, this course will balance careful reading of historiography with close examination of works of art (both digitally presented and visited in local collections). Students will come away with a layered understanding of the Baroque objects—from relatively small-scale museum works to major architectural and sculptural monuments—and their place within the broader evolution of the history of art. Particular attention will be given to newer global and (post-)colonial approaches to notions of the Baroque, ultra-Baroque, and neo-Baroque.
Area: Humanities
Writing Intensive
AS.010.415. Interrogating the Material Turn. 3 Credits.
This course considers the turn to centering materials and materiality in the history of art. Since the publication of Michael Baxandall’s Painting and Experience in Fifteenth Century Italy (1972) and in particular since the turn of the millennium, critical engagement with the materiality of art has proliferated. This seminar will tackle renewed investment in materiality within the discipline of art history and draw on perspectives from archaeology, philosophy, anthropology, conservation science, feminist and queer theory, and postcolonial studies, among others. Particular emphasis will be placed on the polycentrism of materiality as a theoretical lens that cuts across seemingly disjoint cultural, social, and political frames and subject positions. While this course focuses on the art of the ancient Mediterranean, students will be encouraged to bring their own subfields to bear on the material turn and to pursue research topics related their individual research goals. Open to interested students from all disciplines.
Area: Humanities

AS.010.416. Medieval Art and Architecture in Southern Italy. 3 Credits.
This seminar discusses the exceptionally high standard and wide range of artistic and architectural creativity in medieval southern Italy. The specific historical situation of Italy’s southern regions and islands—which were exposed to a long sequence of military invasions, subjected to foreign rulers and centrally positioned within the Mediterranean—resulted in a fascinating, often interconnected, artistic and architectural landscape. We will address in particular the multiethnic and multi-religious environment of the region, the specific mobility of artists and patrons, questions of materiality of art works, and the intersection of art and science in the centers of learning (schools, monasteries, and courts). Those issues will be investigated by raising also larger theoretical and historiographic questions.
Area: Humanities
Writing Intensive

AS.010.418. The Icon in East and West. 3 Credits.
The chronologically structured seminar discusses the conception and reception of holy images in the Middle Ages from Late Antiquity until the beginning of the Renaissance. We will investigate their creation during the rise of Christianity and their affinities with Graeco-Roman portraits and cult images. Another focus is dedicated to the theological and political context of icons during the waves of early medieval iconoclasm, in particular in Byzantium. We will address icons made in the Holy Land during the crusades, which are often characterized by merging Frankish and Byzantine styles and motifs with Islamic art. We will discuss the emergence of new icons in Italy, and their pan-European distribution after 1100. Here we will focus on the influence of the papal court and the economic impact of icons in the later Middle Ages in the Italian commune.
Area: Humanities
Writing Intensive

AS.010.419. Passion Image, Passion Cult, Passion Drama: Narrative and Metaphor in the Middle Ages, Renaissance, and Beyond. 3 Credits.
A set of interdisciplinary explorations of the Passion of Christ narrative in Scripture, theology, visionary literature, cultic devotion, the visual and dramatic arts in Europe from the Central Middle Ages to the Reformation, with a special fast-forward to modern cinematic retellings of the Passion story.
Area: Humanities
Writing Intensive

AS.010.421. Creating Sacred Space in the Ancient and Medieval World. 3 Credits.
What makes a space sacred? How is it different from other spaces? This seminar explores the various means—visual, artifactual, architectural, and performative—of creating sacred space in the ancient and medieval worlds of the Near East and Mediterranean. Possible cases for study include early Sumerian temples, state-sponsored Assyrian temples, votive deposits, Greek sanctuaries, sanctuaries and landscape, early medieval Jewish, Christian, and Islamic cult buildings, cave sanctuaries, pilgrimage sites, icons and sacred space.
Area: Humanities
Writing Intensive

AS.010.422. Challenge to Painting: Collage, Montage, Assemblage. 3 Credits.
The invention of Cubist collage is generally regarded as a watershed in twentieth-century art. This seminar will examine key junctures in the rapid proliferation and redefinition of collage strategies primarily in Europe and the United States, including but not limited to Futurist “words in liberty”, Dada and Constructivist photomontage; the Surrealist exploration of desire; Situationist ‘détournement’; and selected varieties of postwar assemblage. Frequent meetings in Special Collections.
Area: Humanities
Writing Intensive

AS.010.423. Modern and Contemporary Art in South Asia. 3 Credits.
How does modernism operate in the colonial context, work with and against the nationalisms of new countries (India, Pakistan, Sri Lanka, Nepal, and Bangladesh), challenge existing norms of the art world and the art market, engage with the difficult and violent upheavals of Partition and sectarian conflict, and allow for experiments and new forms all the while? This course will explore the history of the art of the subcontinent from c. 1880 to the present by critical engagement with the art, artists, and theories at play in the South Asian region.
Area: Humanities
Writing Intensive

AS.010.424. Art and Colonialism: Nineteenth-century India. 3 Credits.
This seminar explores the technologies of colonial power, from small ephemeral watercolor images of religious processions to massive multi-volume photographic projects documenting the “people of India,” and extending to the establishment of new urban and architectural spaces, archaeological museums, and art schools, the circulation of diplomatic art collections, and the commissioning of survey data. We will engage with the anti-colonial movements of resistance and uprising that took place across this century, examining the central participation of modern artists with these political movements, and explore the way this period fundamentally shaped the foundations for the study of South Asian art and archaeology. Readings will include colonial and postcolonial theory, Orientalism, historiography; we will be actively working with materials in the library’s Special Collections.
Area: Humanities
Writing Intensive
AS.010.425. Patronage and Power: The Art of the Book in the Middle Ages. 3 Credits.

This research seminar surveys the rich history of manuscript painting in the Middle Ages through the lens of patronage. By focusing on elite patrons — i.e. Popes, Clerics, Holy Roman Emperors, Princes, Princesses, and other ruling figures — we will investigate how changes in style from the early Christian period through the fifteenth century reveal the fluid nature of politics and power during this volatile time period. We will visit local collections of manuscripts (e.g. the Walters Art Museum) and make use of the extensive holdings of medieval facsimiles in Special Collections.

Area: Humanities

AS.010.431. Obsessed with the Past: the Art and Architecture of Medieval Rome. 3 Credits.

In antiquity, Rome became the capital of an empire, its growing status reflected in its sophisticated urban planning, its architecture, and the arts. While an abundance of studies explores the legacy of this glorious past in the Renaissance, this seminar discusses various ways of the reception of antiquity during the medieval period. We address the practice of using ‘spolia’ in medieval architecture, the appropriation of ancient pagan buildings for the performance of Christian cult practices, the continuation of making (cul)timages and their veneration, the meaning and specific visuality of Latin script (paleography and epigraphy) in later medieval art. We discuss the revival and systematic study of ancient knowledge (f. ex. medicine, astronomy, and the liberal arts), in complex allegorical murals. As we aim to reconstruct the architecture and urban landscape of medieval Rome, this course discusses ideas and concepts behind different forms of rebuilding and picturing the past, as they intersect with the self-referential character of a city that is obsessed with its own history.

Area: Humanities
Writing Intensive

AS.010.433. Hands-On Approaches to European Books and Prints before 1800. 3 Credits.

Baltimore's rich museum and library collections create a dynamic laboratory for students to gain an understanding of early modern European traditions of prints and books. Engraving, etching, woodcut, mezzotint, à la poupée; Rembrandt, Dürer, Aldus Manutius, Plantin-Moretus. This course will introduce students to the basic techniques, concepts, terms, and artists that shaped the production of reproductive works on paper in early modern Europe and their subsequent art historical study. All sessions will be taught out of local collections (BMA, Walters, NGA, Hopkins Special Collections); that is, this is a hands-on class that — while requiring no previous experience — will attend to the nitty-gritty details and methods of studying works in person, giving students the tools, expertise, and confidence to pursue their own research with historical printed materials.

Area: Humanities
Writing Intensive

AS.010.434. Italian Art, Politics, and Religion in the time of Dante, c. 1250-1400. 3 Credits.

This seminar will investigate the interrelationship between art, politics, and religion on the Italian peninsula during the later Middle Ages. We will focus on the major cities as patrons of the arts (visual and poetic), e.g. Florence, Siena, Padua, Milan, Naples, Venice, and Rome, in order to understand how the elite used art to further their political and religious agendas. Select topics include: the rise of the Mendicant orders; the importance of Dante's Divine Comedy on manuscript production; artistic competition among communes; the rise of the individual artist; humanism and the arts.

Area: Humanities

AS.010.440. Power Dressing: The Politics of Costume between the Ottoman Empire and the West. 3 Credits.

In the Ottoman Empire—a vast multiethnic state straddling Africa, Asia, and Europe—how one dressed was a deeply political affair. Ottoman rulers and subjects alike used clothing to express (and sometimes transgress) the hierarchical, religious, and communal distinctions defining their society, much to the fascination of foreigners who visited the empire or sought knowledge of its sartorial traditions in texts and images. This seminar will explore Ottoman dress and dress codes in the context of the empire’s long and complicated relationship with Western powers, focusing on the role that costume played as a charged site of cross-cultural interaction, posturing, and self-assertion from the sixteenth to the nineteenth century. Our case studies will include costume albums—books showing people high and low in their characteristic garb—painted by Ottoman artists for Western buyers; diplomatic robes of honor and their attendant ceremonies; and cultural cross-dressing as manifested in European turquerie portraiture and masquerades. Moving into the modern period, we will consider how nineteenth-centuy dress reforms bridged the gap between Ottoman and Western costume while engendering new modes of Ottoman sartorial self-representation that challenged hardening Orientalist discourses in such venues as mannequin museums and world’s fairs. The seminar will make considerable use of artworks in local collections, including rare books and prints at Hopkins itself.

Area: Humanities
Writing Intensive

AS.010.444. Classics Research Lab: Antioch Recovery Project (ARP). 3 Credits.

Antioch Recovery Project investigates mosaics from the ancient city of Antioch (modern Antakya, Turkey, near the border with Syria) now in the collection of the Baltimore Museum of Art. Excavated by an international team of archaeologists in the 1930s, hundreds of ancient mosaics from the cosmopolitan city were subsequently dispersed to museums across the globe, with twenty-four mosaics entering the collection of the BMA. Phase I will focus on the digital documentation and analysis of the mosaic of Narcissus as a prototype for ongoing research bringing together the fragments of ancient Antioch for contemporary holders. The Greek myth of Narcissus tells the story of a beautiful Theban hunter doomed to love his own reflection and is the origin of the modern psychiatric term "narcissism". Researching the mythology, materials, conservation history, archival material, historiography, and contemporary reception of the Narcissus mosaic and myth offers extensive opportunities to collaborate with scholars across a range of disciplines at JHU, in the Baltimore museum community, and beyond. Investigators will move between the Baltimore Museum of Art, the CRL processing lab in Gilman Hall, and Special Collections. The course will involve some travel to visit other mosaics from Antioch now in collections at Harvard's Dumbarton Oaks in Washington D.C., and the Princeton Art Museum in Princeton, New Jersey.

Area: Humanities

AS.010.470. Power and Politics in Assyrian Art. 3 Credits.

Assyria, centered in northern Iraq, created one of the world’s first great empires that dominated the ancient Near Eastern world from around 900 to 612 BCE. In concert with imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This seminar examines the close relationship between the arts and politics in the Assyrian empire. Some themes that will be explored are: historical narrative, text and image, portable luxury arts and gender, politics and religion. The course will engage in close visual analysis of the ancient materials and readings of critical scholarship.

AS.010.603. Beyond Word & Image.  
The relationship of “word” and “image” has been a central concern of both the history of art and other humanistic disciplines; and semiotics, (post-)structuralism, narrative studies, media studies, and theories of ekphasis and representation have been marshalled to probe how visual and verbal systems work in conjunction, overlap, and conflict. Much less art historical attention has been paid to the visuality of writing itself. Against the backdrop of robust work on the relationship between text and image, this course focuses on text as image: the visuality of text, the imagistic dimensions of writing, Schriftbildunglichkeit. The seminar takes as guiding premise that art historical method might be robustly brought to bear on the visual and material features of texts, both those that appear as part of traditional art historical media (paintings, sculptures, and architectural monuments) and those that have primarily remained within the purview of other humanistic subfields: books, archival documents, writers’ manuscripts, epistolary communication, and inscriptions (both analog and digital). In this course, we will survey a broad range of textual objects, from ancient inscriptions to moveable type to digital texts to “writing” in twenty-first century artists’ books; and we will work together towards assembling an art historical toolkit for excavating the full valences of texts, accounting for the ways they make meaning in linguistic, semiotic, formal, material, visual, and media-specific registers. Though art historical in focus, this course will be essentially interdisciplinary, and students from other subfields are warmly welcomed. There will be ample opportunity for discussing and studying objects in local collections. 
Area: Humanities

AS.010.606. Approaches to Ancient Art.  
The discipline of art history has passed through a number of major methodological and theoretical shifts since its inception (and in particular, over the last thirty years). Foundational disciplinary methods derive principally from the arts of Classical Greece, the Renaissance and contemporary periods. As the discipline embraces an enlarged field of inquiry, particularly drawing upon developments in anthropology, material culture studies, feminism, queer theory, and political theory, additional avenues for understanding the arts of the ancient world are emerging. The seminar focuses on how art historical method and theory – both foundational and emergent – might be profitably applied to the subfields of the ancient Near East and eastern Mediterranean (understood in the broadest sense).  
Area: Humanities Writing Intensive

AS.010.607. The Epistemology of Photography.  
This seminar will ask how photography produces ways of knowing: how does photography’s reality-effect shape its dissemination and absorption? Is photography’s emergence during the colonial era coincidental or catalytic? How is memory (re)constituted in a photography-saturated world? What kinds of histories does photography encourage and discourage? Is a photograph an object? We will read across disciplines (literature, anthropology, history, history of art, political science, theory) to investigate the epistemology of photography and the photograph.

AS.010.608. The Picture as Object.  
The seminar will explore cases of European pre-modern picture-making in various media that solicit tactile as well as sensory engagement, and that call into question the ‘Albertian’ metaphor of pictura as window. Case studies will include mosaics, reliefs, pastiglia, medals, portable paintings, et al.”  
Area: Humanities

AS.010.612. Medieval Art and Architecture in Southern Italy.
This seminar discusses the exceptionally high standard and wide range of artistic and architectural creativity in medieval southern Italy. The specific historical situation of Italy's southern regions and islands—which were exposed to a long sequence of military invasions, subjected to foreign rulers and centrally positioned within the Mediterranean—resulted in a fascinating, often interconnected, artistic and architectural landscape. We will address in particular the multiethnic and multi-religious environment of the region, the specific mobility of artists and patrons, questions of materiality of art works, and the intersection of art and science in the centers of learning (schools, monasteries, and courts). Those issues will be investigated by raising also larger theoretical and historiographic questions.
Area: Humanities

AS.010.613. Renaissance Italy: Questions of Artistic Geography.
The role of place in the art historiography of the Renaissance, with readings in geographical theory. The seminar will also consider the role in the art of Lorenzo Lotto, Gaudenzio Ferrari, Cesare da Sesto, Romanino, Moretto, Pordenone, Titian, and other artists active before the canon-formation enterprise of Giorgio Vasari definitively altered the map of Italian art after 1550.

AS.010.618. Historical and Conceptual Bases of Art History.
Critical readings in and of relevance to the intellectual foundations of the modern discipline of art history. Texts by Wölfflin, Riegl, Warburg, Panofsky, Baxandall, Alpers, Clark, Fried, and others. There will be two papers, no exams.
Area: Humanities
Writing Intensive

AS.010.619. Readings in Modern and Contemporary Asian Art.
Focusing on a range of art practices and movements in South, Southeast, and East Asia from the 20th and 21st centuries. Specific topics may include: performance art and the body, exhibitionary practices, nationalism and transnationalism, the role of the figural, modes of abstraction, art and the authoritarian state, Marxism and art practices, postcolonial politics and visual culture, artists' travels to, from, and within Asia, spirituality and modernism, sexuality and gender. Undergraduates by special permission of the instructor.
Area: Humanities
Writing Intensive

AS.010.620. Re-thinking the Baroque: the Carracci to Poussin.
Area: Humanities

AS.010.621. Topics in Early 20th Century Abstraction.
Critical examination of key works, texts, and topics in early 20th century abstraction, with an emphasis primarily on developments in Europe and the US.
Area: Humanities

AS.010.623. The Icon in East and West.
The chronologically structured seminar discusses the conception and reception of holy images in the Middle Ages from Late Antiquity until the beginning of the Renaissance. We will investigate their creation during the rise of Christianity and their affinities with Graeco-Roman portraits and cult images. Another focus is dedicated to the theological and political context of icons during the waves of early medieval iconoclasm, in particular in Byzantium. We will address icons made in the Holy Land during the crusades, which are often characterized by merging Frankish and Byzantine styles and motifs with Islamic art. We will discuss the emergence of new icons in Italy, and their pan-European distribution after 1100. Here we will focus on the influence of the papal court and the economic impact of icons in the later Middle Ages in the Italian commune.
Writing Intensive

AS.010.624. Art and Colonialism: Nineteenth-century India.
This seminar explores the technologies of colonial power, from small ephemeral watercolor images of religious processions to massive multi-volume photographic projects documenting the “people of India,” and extending to the establishment of new urban and architectural spaces, archaeological museums, and art schools, the circulation of diplomatic art collections, and the commissioning of survey data. We will engage with the anti-colonial movements of resistance and uprising that took place across this century, examining the central participation of modern artists with these political movements, and explore the way this period fundamentally shaped the foundations for the study of South Asian art and archaeology. Readings will include colonial and postcolonial theory, Orientalism, historiography; we will be actively working with materials in the library’s special collections.
Area: Humanities
Writing Intensive

The arts of the Near East, Aegean and Egypt are typically taught separately from one another. However, the Mediterranean Sea has always served as a connector, and the diverse cultures of these areas were in close contact with one another for much of their histories. During the Bronze Age (3000 to 1200 BCE), these interactions were particularly dynamic, resulting in a diversity of arts including wall frescoes, precious jewelry, and elaborate furnishings and weaponry. This course examines the arts of the interactions among Near Easterners, Greeks, Egyptians and others. It focuses special attention on the role of artistic products in intercultural relations, including trade, diplomacy, war and imperialism. Students are not expected to have extensive knowledge of all the areas, although some experience in at least one of them will be helpful. The course will interweave establishing a knowledge base necessary to tackle this topic with broader conceptual concerns and interdisciplinary approaches (art historical, archaeological, anthropological, and historical). There will be a final paper.
Area: Humanities
AS.010.627. Patronage and Power: The Art of the Book in the Middle Ages.

This research seminar surveys the rich history of manuscript painting in the Middle Ages through the lens of patronage. By focusing on elite patrons — i.e. Popes, Clerics, Holy Roman Emperors, Princes, Princesses, and other ruling figures — we will investigate how changes in style from the early Christian period through the fifteenth century reveal the fluid nature of politics and power during this volatile time period. We will visit local collections of manuscripts (e.g. the Walters Art Museum) and make use of the extensive holdings of medieval facsimiles in Special Collections.

Area: Humanities

AS.010.629. Periodization and its Discontents.

This seminar scrutinizes the problem of periodization between the Middle Ages and the Early Modern period (or, the “Renaissance”). Topics include various medieval “Renaissances” (e.g. the Carolingian & 12th century); early modern attitudes toward the Middle Ages; the relationship between arts north and south of the Alps during the late fifteenth century; the persistent use of medieval techniques and materials during the Renaissance; the problem of perspective; Nicholas of Cusa; and, the “International Gothic Style”.

Readings include Panofsky, Belting, Nagel & Wood, Nagel, Campbell, Gombrich, Da Costa Kaufmann, and Kubler.

Area: Humanities

AS.010.631. Performing Power: Ceremonial, Diplomacy, and Gift-Giving in and beyond the Ottoman Empire.

As a major global power straddling three continents, the Ottoman Empire developed a rich and diversified ceremonial culture aimed at impressing local and international audiences alike. This seminar will explore the ways in which works of art and architecture provided settings and apparatus for, and were themselves shaped and enlivened by, the ceremonial acts in which they featured. Covering the period between the sixteenth and nineteenth centuries, we will address a range of case studies—including mosque inaugurations, royal processions, the reception of foreign ambassadors, and the exchange of diplomatic gifts—with regard to their sociopolitical, visual, material, and spatial contexts. A major concern of the seminar will be the question of how Ottoman ceremonies, together with their staging and attendant art forms, were adapted in response to changing conditions and audiences, particularly with the shift from the early modern to the modern period. While our focus will be on the Ottoman Empire, the course will also consider the ceremonial cultures of the various Asian and European polities with which the Ottomans interacted, investigating the points of comparison and contrast that defined these multifarious but connected interregional approaches.

Area: Humanities

AS.010.632. Painting and Subjectivity.

Readings from a range of theoretically and philosophically interesting texts on painting and the visual arts. Among our authors: Cavell, Lacan, Merleau-Ponty, Foucault, Derrida, Nancy, Lyotard.

Area: Humanities

AS.010.633. Theories and Works of “The Baroque”.

There is perhaps no more confounding, though also no more persistent, art historical concept than that of “the Baroque.” This course introduces students to foundational histories and critiques of “the Baroque” while exploring works of art that have proved central to these formulations. That is, this course will balance careful reading of historiography with close examination of works of art (both digitally presented and visited in local collections). Students will come away with a layered understanding of the Baroque objects—from relatively small-scale museum works to major architectural and sculptural monuments—and their place within the broader evolution of the history of art. Particular attention will be given to newer global and (post-)colonial approaches to notions of the Baroque, ultra-Baroque, and neo-Baroque.

Area: Humanities

AS.010.634. Rethinking the Renaissance: Alternatives to ‘Early Modernity’.

‘The Renaissance’ as a periodization under attack, and its persistence; the hermeneutics of the Pre-Modern Image since Panofsky; the critique of Eurocentrism; challenges to and recuperations of iconology, assessing the contributions of semiotics, psycholanalysis and queer theory.

Area: Humanities

AS.010.636. Orientalism and Occidentalism: The Discourse of the Other in the Visual Arts.

This course explores works of art and architecture that reveal or are informed by the long, complex, and often troubled relationship between the West and the Islamic world. Though extending in scope from the early modern period into our own time, the course focuses on the eighteenth and nineteenth centuries, when East-West artistic interactions were arguably at their liveliest and most charged. Topics to be addressed include Ottoman Baroque architecture, Orientalist painting of the nineteenth century, Qajar portraiture and photography, Islamicate architecture at Western world’s fairs, and the recent Danish cartoons of the Prophet Muhammad. Students will be encouraged to consider the differences as well as commonalities between these various modes of cross-cultural representation and engagement, and to think critically about the political, cultural, and artistic conditions that engendered and shaped them.

Area: Humanities

AS.010.637. Ottoman Baroque and Beyond.

The eighteenth century saw the Ottoman capital of Istanbul transformed by the introduction of a brand-new style of architecture that scholars have dubbed the Ottoman Baroque. Informed, as its name suggests, by Western European models, this new manner of building heralded a permanent shift in late Ottoman visual culture that has been reductively discussed as decadent “Westernization.” This seminar will challenge the conventional wisdom and reconsider the Ottoman Baroque as a timely and sophisticated artistic statement by which the empire reaffirmed its global standing in terms that were both locally rooted and internationally resonant. Topics to be addressed include the semiotics of style; the roles and relationships of patrons, artists, and viewers; architecture as a locus of ceremonial and spectacle; and cross-cultural connections and networks. Although focusing on the architecture of eighteenth-century Istanbul, the seminar will extend into other regions and art forms that demonstrate the impact of the Ottoman Baroque, and it will also consider the style’s afterlife in the context of nineteenth-century Ottoman modernity.

Area: Humanities
AS.010.638. Interrogating the Material Turn.
This course considers the turn to centering materials and materiality in the history of art. Since the publication of Michael Baxandall's Painting and Experience in Fifteenth Century Italy (1972) and in particular since the turn of the millennium, critical engagement with the materiality of art has proliferated. This seminar will tackle renewed investment in materiality within the discipline of art history and draw on perspectives from archaeology, philosophy, anthropology, conservation science, feminist and queer theory, and postcolonial studies, among others. Particular emphasis will be placed on the polycentrism of materiality as a theoretical lens that cuts across seemingly disjunct cultural, social, and political frames and subject positions. While this course focuses on the art of the ancient Mediterranean, students will be encouraged to bring their own subfields to bear on the material turn and to pursue research topics related to their individual research goals. Open to interested students from all disciplines.

In antiquity, Rome became the capital of an empire, its growing status reflected in its sophisticated urban planning, its architecture, and the arts. While an abundance of studies explores the revival of this glorious past in the Renaissance, this seminar discusses various ways of the reception of antiquity during the medieval period. We address the practice of using spolia in medieval architecture, the appropriation of ancient pagan buildings for the performance of Christian cult practices, the continuation of making (cult)images and their veneration, the meaning and specific visuality of Latin script (paleography and epigraphy) in later medieval art. We discuss the revival and systematic study of ancient knowledge (f. ex. medicine, astronomy, and the liberal arts), in complex allegorical murals. As we aim to reconstruct the art and architecture of medieval Rome, this course discusses ideas and concepts behind different forms of re-building and picturing the past, as they intersect with the self-referential character of a city that is obsessed with its own history.
Area: Humanities
Writing Intensive

AS.010.640. Challenge to Painting: Collage, Montage, Assemblage.
The invention of Cubist collage is generally regarded as a watershed in twentieth-century art. This seminar will examine key junctures in the rapid proliferation and redefinition of collage strategies primarily in Europe and the United States, including but not limited to Futurist "words in liberty"; Dada and Constructivist photomontage; the Surrealist exploration of desire; Situationist détournement; and selected varieties of postwar assemblage. Frequent meetings in Special Collections.
Area: Humanities
Writing Intensive

Baltimore’s rich museum and library collections create a dynamic laboratory for students to gain an understanding of early modern European traditions of prints and books. Engraving, etching, woodcut, mezzotint, à la poupée; Rembrandt, Dürer, Aldus Manutius, Plantin-Moretus. This course will introduce students to the basic techniques, concepts, terms, and artists that shaped the production of reproductive works on paper in early modern Europe and their subsequent art historical study. All sessions will be taught out of local collections (BMA, Walters, NGA, Hopkins Special Collections); that is, this is a hands-on class that—while requiring no previous experience—will attend to the nitty-gritty details and methods of studying works in person, giving students the tools, expertise, and confidence to pursue their own research with historical printed materials.
Area: Humanities
Writing Intensive

AS.010.642. Matisse and his Century.
Critical examination of key junctures in the work of Henri Matisse and his reception, with visits to Special Collections, the BMA, and other collections along the East Coast. This seminar will curate an exhibition of Matisse’s books from Special Collections.
Area: Humanities

The course examines the notion of the authentic in conjunction with medieval images, relic veneration, and the practice of law. It investigates the construction, reception, and theoretical grounding of authenticity of reliquaries, icons, and imprints on cloth or seals, and legal documents. These objects elucidate artistic strategies such as cross media references, abstraction, mimesis and bricolage to convey an aura of authenticity. We address other authenticating factors, such as complex ritualized forms of communication.

Acknowledging the central role art from around the globe played in the production of the modern, this seminar will engage with the emergent art historical, methodological, and theoretical literature shaping the history of modern art after the global turn. Particular case studies of regional art movements (in e.g. Cuba, Brazil, India, Japan, Iran, Nigeria) alongside discussion of key exhibitions and institutions. A special focus on the theoretical interlocutors for art movements and artists around the world, such as Fanon, Glissant, Bhabha, Chow, Spivak, Freire.
AS.010.646. Art and Architecture at the Eastern Frontier: Medieval Georgia.
This seminar investigates the fascinating landscape of medieval art and architecture of Georgia. Its specific geographic position in the South Caucasus, at the cross roads between the East and West, the Christian and Islamic Worlds, had a profound impact on the art and architecture in the region. Ancient sites show close connections with the Graeco-Roman World on the western border and with the Sassanid Empire in the East. The Christianization of the Kingdom of Kartli in the early fourth century resulted in close ties with the development of early Christian art in Syria, the Holy Land, and Byzantium. While the Christian religion remained an identifying factor during several hundred years of Muslim rule (736 to 1122) during which the city of Tbilisi was the capital of an emirate, Islamic motifs and style became an important factor for art works in medieval Georgia. Art and architecture with a specific Byzantine profile flourished in particular after the reunification of Georgia during the reign of King David the Builder (1073-1125) and Queen Tamar (1184 to 1213). The cathedral and monastery of Gelati and Mzcheta, the murals in the royal monasteries of Vardzia and Khintsvisi, and the countless icons are a testimony to this relationship. We will discuss the specific diverse aesthetics and materiality (stone, enamel and metal works) of Georgian art with the goal to reassess the map of medieval art and architecture that currently does not include the Eastern Frontier. A mandatory c. 10 days field trip to Georgia is planned after classes end in May 2020. Area: Humanities

Writing Intensive

What role does language play in the creation of art, and how can it inform its art historical interpretation? Through a series of case studies drawn from art history, anthropology, and linguistics, this graduate seminar will examine the multifaceted relationships between traditions of verbal and material expression in the indigenous Americas. Key topics will include Mayan decipherment and the interpretation of ancient Maya art; Mesoamerican linguistics and concepts of color; and compositional structure in modern Quechua weaving and storytelling. Through this course, students will critically evaluate language-based analysis as a method for the study of art, while also learning about historical relationships between art and language in the indigenous Americas.
Area: Humanities

AS.010.649. Power Dressing: The Politics of Costume between the Ottoman Empire and the West.
In the Ottoman Empire—a vast multiethnic state straddling Africa, Asia, and Europe—how one dressed was a deeply political affair. Ottoman rulers and subjects alike used clothing to express (and sometimes transgress) the hierarchical, religious, and communal distinctions defining their society, much to the fascination of foreigners who visited the empire or sought knowledge of its sartorial traditions in texts and images. This seminar will explore Ottoman dress and dress codes in the context of the empire's long and complicated relationship with Western powers, focusing on the role that costume played as a charged site of cross-cultural interaction, posturing, and self-assertion from the sixteenth to the nineteenth century. Our case studies will include costume albums—books showing people high and low in their characteristic garb—painted by Ottoman artists for Western buyers; diplomatic robes of honor and their attendant ceremonies; and cultural cross-dressing as manifested in European turquerie portraiture and masquerades. Moving into the modern period, we will consider how nineteenth-century dress reforms bridged the gap between Ottoman and Western costume while engendering new modes of Ottoman sartorial self-representation that challenged hardening Orientalist discourses in such venues as mannequin museums and world's fairs. The seminar will make considerable use of artworks in local collections, including rare books and prints at Hopkins itself.
Area: Humanities

Writing Intensive

AS.010.650. Before and After Trent: the Image and Sacred Space in Rome and Spanish Italy.
The seminar will investigate the question of art and reform in three major centers of the Italian peninsula (Rome, Naples, Milan), with attention to parallel phenomena in other centers of Catholic Europe (Spain and the Spanish Netherlands). We will examine transformations in the practice of pilgrimage and the organization of sacred shrines, tensions between centralization and the persistence of the local, and the initiative of artists and architects in responding to the call for a “reform” of sacred art. ‘

Antioch Recovery Project investigates mosaics from the ancient city of Antioch (modern Antakya, Turkey, near the border with Syria) now in the collection of the Baltimore Museum of Art. Excavated by an international team of archaeologists in the 1930s, hundreds of ancient mosaics from the cosmopolitan city were subsequently dispersed to museums across the globe, with twenty-four mosaics entering the collection of the BMA. Phase I will focus on the digital documentation and analysis of the mosaic of Narcissus as a prototype for ongoing research bringing together the fragments of ancient Antioch for contemporary beholders. The Greek myth of Narcissus tells the story of a beautiful Theban hunter doomed to love his own reflection and is the origin of the modern psychiatric term “narcissism”. Researching the mythology, materials, conservation history, archival material, historiography, and contemporary reception of the Narcissus mosaic and myth offers extensive opportunities to collaborate with scholars across a range of disciplines at JHU, in the Baltimore museum community, and beyond. Investigators will move between the Baltimore Museum of Art, the CRL processing lab in Gilman Hall, and Special Collections. The course will involve some travel to visit other mosaics from Antioch now in collections at Harvard’s Dumbarton Oaks in Washington D.C., and the Princeton Art Museum in Princeton, New Jersey.
Area: Humanities
AS.010.656. The Cut.
This seminar focuses on “the cut”—both as material practice and conceptual trope. Looking specifically at the early modern period, we will attempt to stitch together arts of cutting that have all too often been thought of separately or entirely in isolation—decoupage and inlaid stone, silhouette and turned ivory, repurposed drawing and perfectly hewn precious gem, pared-down panel and paper cut-out. To do so, we will look to expansive modern treatments and theorizations of “the cut” as literal gesture and figurative process, material technique and metaphoric mode. At stake is a reappraisal of creative paradigms that rest upon myths of wholeness, finitude, completion, generation, etc., and that thus undergird the early modern emergence of the very notion of “Art.” This seminar thus asks whether recentering the cut has the potential to position the art object within more expansive fields of material culture and to resituate artistic production within less hegemonic frameworks of creation and creativity. Though focused on the early modern period, students are encouraged to pursue research in their own fields/periods of study.
Writing Intensive

AS.010.659. Passion Image, Passion Cult, Passion Metaphor in the Middle Ages, Renaissance, and Beyond.
A set of interdisciplinary explorations of the Passion of Christ narrative in Scripture, theology, visionary literature, cultic devotion, the visual and dramatic arts in Europe from the Central Middle Ages to the Reformation, with a special fast-forward to modern cinematic retellings of the Passion story.

 Assyria, centered in northern Iraq, created one of the world’s first great empires that dominated the ancient Near Eastern world from around 900 to 612 BCE. In concert with imperial expansion came an explosion of architectural and artistic production including entire cities and their ornamentation. This seminar examines the close relationship between the arts and politics in the Assyrian empire. The course will engage in close visual analysis of the ancient materials and critical readings of scholarship. There will be a final project.
Area: Humanities

AS.010.689. Seeing Sculpture.
This course explores the art of sculpture in all of its historical forms, from the ancient world to contemporary art, and introduces students to the experiential and spatial challenges sculpture poses. Our focus will combine on-site studies of sculpture in local collections with the development of a critical vocabulary with which to write about those objects, one that draws on the rich history of responses to sculpture from the birth of modern art history to the present.
Area: Humanities

AS.010.691. What is a Stifterbild?
Critically examines classic and recent approaches to the study of donor portraits, votive images and gifts, embedded likenesses and ‘crypto-portraits’ of patrons and rulers, with an emphasis on developments in Germany, France, and the Netherlands between 1250 and 1500.
Area: Humanities

AS.010.702. 1525: Prints and Politics in the German Reformation.
Examines the involvement of prints, print culture, and the professional activity of the German painter-printmaker with the patterns of social and religious dissent, propagandizing, and political confrontation that marked the first decade of the Protestant Reformation, with a special focus on the revolutionary year 1525. Seminar includes planned visits to the print collections of the Baltimore Museum of Art and the National Gallery in Washington.
Area: Humanities

AS.010.703. Patterns of Attention in the Visual Arts.
This seminar aims to excavate six distinct modalities of attention and attentiveness in the visual arts from Middle Ages to Modernity (cultural, narrational, speculative, ethical, sexual, and artistic). While emphasizing European developments, close consideration will be given to the role of visual attention in Hindu and Islamic visual cultures, providing the opportunity for cross-cultural comparison. Each case study will consider the historically shifting roles given to vision, cognition, imagination, affect, desire and power-knowledge in the culturally prevalent patterns of attention we study, and explore how specific kinds of pictorial schema or spatial environments served to structure and guide, or deflect and disrupt, the attention of their beholders. Finally, we will ask whether the historical study of attention can suggest analytical models or ethical lessons for the (re)mobilization of attentiveness in our own art-historical methods.
Area: Humanities

AS.010.704. Pieter Bruegel the Elder: New Directions in Scholarship.
Examines major interpretations of the art and career of the great Flemish painter Pieter Bruegel the Elder (1525?-1569), with an emphasis on new approaches and research agendas. In the aftermath of the 450-year Bruegel Anniversary of 2019, with its major exhibitions and comprehensive catalogues, what comes next?
Area: Humanities

This seminar examines Dürer’s project to transform the genres of late medieval devotional art in line with his self-image as a Christian humanist painter. Against the backdrop of new agendas for reform, we consider Dürer’s collaborations with Celtis, Chelidonius, and Pirckheimer; the therapeutic impulse behind his self-portraits, the works dedicated to friends, and his altarpieces; the Meisterstiche; and other works that thematized the Renaissance philosophical ideal, first found in Petrarch, of a life lived self-consciously and in service to others.
Area: Humanities

AS.010.801. Special Rsrch & Problems.

AS.010.802. Spec Research/Problems.

AS.010.803. Individual Work.

AS.010.804. Individual Work.

AS.010.890. Summer Practicum - History of Art.

Cross Listed Courses

Anthropology
AS.070.300. The Global Artwork. 3 Credits.
This course is about art practice in a postcolonial context, where the techniques and pictorial concepts formed by a European history of art are confronted by other traditions of representation, beset by different kinds of political struggles, and posed against the background of religious traditions other than that of Christianity. What problems of history, difference and the self arise in this context, and what forms of art practice emerge to address these problems? In what ways do these forms of art practice draw upon religious traditions, and how do we think about the displacement of religious traditions in modern art? In this course, we will explore these questions by examining the modern art of the Middle East, South Asia, and China, in conjunction with readings from anthropology, art history, comparative literature, philosophy and religious studies.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.070.343. On Seeing: Between Religion and Art. 3 Credits.
This course reflects on what it is to see, by examining how different religious traditions have conceived of seeing, and then considering how seeing is organized by modern forms of art practice. Our inquiry will range across a variety of cases—from devotional practices in Christianity and Hinduism; to concepts of vision in the Islamic tradition; to the critique of images during the Protestant Reformation and the legacy of that critique in modernism; and to the development of new technologies like photography and film—and it will draw on readings from anthropology, art history, critical theory and religious studies.
Area: Humanities, Social and Behavioral Sciences

Classics
AS.040.137. Freshman Seminar: Archaeology at the Crossroads: The Ancient Eastern Mediterranean through Objects in the JHU Archaeological Museum. 3 Credits.
This seminar investigates the Eastern Mediterranean as a space of intense cultural interaction in the late Bronze Age, exploring how people, ideas, and things not only came into contact but deeply influenced one another through maritime trade, art, politics, etc. In addition to class discussion, we will work hands-on with artifacts from the JHU Archaeological Museum, focusing on material from Cyprus.
Area: Humanities
Writing Intensive

AS.040.218. Celebration and Performance in Early Greece. 3 Credits.
Surviving imagery suggests that persons in Minoan and Mycenaean societies engaged in various celebratory performances, including processions, feasts, and ecstatic dance. This course explores archaeological evidence of such celebrations, focusing on sociocultural roles, bodily experience, and interpretive challenges.
Area: Humanities

AS.040.366. The Archaeology of Ancient Cyprus: Investigating a Mediterranean Island World in the JHU Museum. 3 Credits.
This course explores the visual and material worlds of ancient Cyprus from the earliest human evidence through the Iron Age. Course topics will include the island's unique position between the Aegean and Near East and how this has impacted both Cyprus' ancient past and the way in which it has been conceived in the modern world. Class involves regular analysis of artifacts based in the Archaeological Museum.
Area: Humanities

AS.040.373. Propaganda and the Art of Visual Politics during the Roman Empire. 3 Credits.
We will examine visual expressions of propaganda in the city of Rome, considering how emperors used public art to promote their political agendas and their ideological vision of power. Dean's Teaching Fellowship course.
Area: Humanities

AS.040.420. Classics Research Lab: The Symonds Project. 3 Credits.
This course gives participants a unique opportunity to engage directly in empirical research and its interpretation and dissemination. Topics vary. This semester's offering is organized around a project to reconstruct digitally the library of the nineteenth-century writer John Addington Symonds, author of one of the first studies of ancient sexuality. No prerequisites, but potential students should contact instructor for permission to enroll.
Area: Humanities

AS.040.425. Classics Research Lab: Ancient Bodies of Modern Baltimore, The Peabody Cast Collection Project. 3 Credits.
The Peabody Cast Collection (PCC) Classics Research Lab project will revolve around a remarkable collection of plaster casts of classical Greek and Roman sculptures, created ca. 1879 for the Peabody Institute (now part of JHU). Such cast collections were a highly valued cultural resource in Europe and North America during the later 17th to early 20th centuries, produced for major museums, academic institutions and wealthy individuals. Because of the technical process of the cast formation, which is based directly upon the ancient sculptural surface, these collections brought contact with the actual classical artifacts into temporally and spatially distant contexts—including the burgeoning urban center of 19th century Baltimore. The PCC Lab's initial objective is archival and field research of the cast collection—its content, formation, access and usage by the people of Baltimore and its eventual disbanding and distribution. From this, we will aim to virtually reassemble its member objects, charting their biographies and, when extant, their current locations. This in part will be accomplished digitally, in a virtual reconstruction of the original display contexts of the casts within the Peabody Institute based on early hand-written ledgers, logs, and photographs. With this we will contribute a new open-access chapter to the collection's biography.
Area: Humanities

German Romance Languages Literatures
AS.213.616. The Aesthetic Discourse of Modernity.
When, in 1985, Jürgen Habermas published his lectures on The Aesthetic Discourse of Modernity, he pursued a double aim. He offered a critique of French Theory while at the same time providing a foundation for a normative category of modernity in the tradition of Hegel. Curiously there is one subject he does not touch on, though it seems necessary for a sufficient understanding of modernity: the realm of art and literature. This course will develop a critique of Habermas’ normative notion of modernity through re-readings of texts by Nietzsche, Benjamin, Horkheimer/Adorno, Derrida, Bataille and Foucault to elaborate an alternative category of aesthetic modernity. Taught in English. Reading knowledge of German and French is not required, but recommended.
Area: Humanities

History
AS.100.331. Reading through Things: Early Modern Chinese Medicine, Technology, and Art. 3 Credits.
This course introduces the history of late imperial China from the perspective of medicine, technology, and the arts.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

Near Eastern Studies
AS.130.129. Freshman Seminar: The Art of War and Peace in Ancient Mesopotamia. 3 Credits.
Ancient Mesopotamia, modern-day Iraq, Syria, and Iran, is the "cradle of civilization." It witnessed new inventions previously unknown to the ancient world: urban cities, writing systems, kingship, and empires. This course examines the close relationship between war and peace and art in ancient Mesopotamia (ancient Sumer, Babylonia, and Assyria) from 3500 to 539 BCE. During the semester students will be introduced to the art, architecture, and archaeology of ancient Mesopotamia. This course is aimed at students without a previous background in art historical or archaeological approaches to Mesopotamia, but more advanced students are welcome.
Area: Humanities
AS.130.420. Seminar in Research Methods in Near Eastern Studies: Religion and Science. 3 Credits.
This writing intensive seminar examines the relationship between religion and science in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, and through engagement with scholarly literature pertaining to the topic of the course, students will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Humanities
Writing Intensive

Program in Museums and Society
AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Crosslisted with Archaeology, History, History of Art, International Studies and Medicine, Science & Humanities.
Area: Humanities, Social and Behavioral Sciences

AS.389.205. Examining Archaeological Objects. 3 Credits.
We examine the Johns Hopkins Archaeological Museum collection to learn the materials and techniques utilized in the ancient world to produce objects in ceramics, stone, metal, glass, faience, bone and ivory.
Area: Humanities

AS.389.303. World of Things. 3 Credits.
The course introduces and applies new concepts about materials, and materiality to museum objects. It treats the museum as a site for investigating the relationship between people and things.

AS.389.315. Ancient Color. The Technologies and Meanings of Color in Antiquity. 3 Credits.
What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum.
Area: Humanities, Social and Behavioral Sciences

AS.389.322. Tigers to Teapots: Collecting, Cataloging, and Hoarding in America. 3 Credits.
Course will examine the collecting behavior of Americans. Students will explore how collectors have defined the holdings of the nation's museums, galleries, and libraries and used objects to shape taste and status in the U.S.
Area: Humanities, Social and Behavioral Sciences

AS.389.340. Critical Issues in Art Conservation. 3 Credits.
The course examines recent controversies in the conservation of major global art works and sites, raising questions concerning the basic theoretical assumptions, practical methods and ethical implications of art conservation. Cross-Listed with History of Art and Anthropology.
Area: Humanities

AS.389.356. Halls of Wonder. Art, Science, and Literature in the Age of the Marvelous, 1500-1800. 3 Credits.
Area: Humanities

AS.389.358. Collecting the Contemporary. 3 Credits.
What does it mean to be a collector? Students will visit private collections of contemporary art in Baltimore, learning from collectors and their objects. This course alternates seminar meetings, focused on theories and practices of collecting, with field trips. Cross-listed with History of Art.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.389.373. Encountering American Art. 4 Credits.
Students investigate the Baltimore Museum of Art's American art collection and its presentation to the public alongside current scholarship on American art to develop strategies for a new permanent collection display that aligns with the museum's commitment to artistic excellence and social equity. M&S Practicum. Co-taught with BMA curator Virginia Anderson.
Area: Humanities, Social and Behavioral Sciences

AS.389.377. Black Artists in American Art Museums: Correcting the Canon. 3 Credits.
Students are invited to examine critically the history of Black artists exhibiting within American museums. With the help of BMA staff, class will develop interpretation for an installation to accompany a major retrospective of artist Jack Whitten that considers the “canon” of art history as a site of ongoing negotiation between taste-makers, artists, dealers, and critics, as well as art institutions that include the market and the museum. Students will take advantage of archives at the BMA, the Library of Congress and Howard University. Students will help select the artworks and themes for the show; research individual participants in the social networks that facilitated the success of some artists over others; and research the biographies of individual artworks - some that have entered the canon and some that should. M&S Practicum. CBL Course. Cross-listed with Africana Studies.
Area: Humanities, Social and Behavioral Sciences

AS.389.384. Object Encounters at the Baltimore Museum of Art. 3 Credits.
Using the Baltimore Museum of Art as a laboratory, students examine canonical narratives in art museums and iterate new approaches to objects in museums that build equity, interrogate privilege, decolonise, revisualise and offer alternative stories. Class meets at the museum every other week.
Area: Humanities, Social and Behavioral Sciences

AS.389.386. Islamic Art in the 21st Century Museum. 3 Credits.
What narratives about Islam and Islamic art does the visitor encounter at the museum? Recent re-installations of Islamic art will be studied in the context of current issues, including Islamophobia, attacks on cultural heritage, and hesitation in addressing matters of faith in public institutions. Cross-listed with History of Art and Islamic Studies.
Area: Humanities, Social and Behavioral Sciences

AS.389.420. Curatorial Seminar. 4 Credits.
In collaboration with a local museum,conceptualize and develop an exhibition, potentially including but not limited to: checklists, exhibition texts, interpretive strategies, and programming. Exhibition theme varies year to year. Concepts, ethics and practicalities of curation are key concerns. Research visits to regional museums and private collections as relevant.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.389.440. Who Owns Culture?. 3 Credits.
This seminar explores the complicated, often explosive concept of
cultural property, including questions surrounding the ownership,
preservation, and interpretation of artifacts, monuments, heritage sites,
and living traditions. Cross-listed with Anthropology and History of Art.
Area: Humanities, Social and Behavioral Sciences

Study of Women, Gender, Sexuality
AS.363.400. Feminist Modernisms. 3 Credits.
Prize Teaching Fellowship seminar. Triangulating feminist psychoanalysis
and theories of embodiment and subjectivity with art criticism and case
studies of artistic practice (primarily painting), this course comparatively
investigates the routes modernism takes after the Second World War and
decolonization (1945/1947). We will be interested in specific postcolonial
and postwar contexts where modernism in the domain of the visual
arts was mounted as a feminist project. Each week will pair readings
that establish conceptual frameworks with close analyses of works by
specific artists, including those represented by the Library’s Special
Collections and the Baltimore Museum of Art. Texts include Freud,
Spivak, Butler, Irigaray, Kristeva, and Mahmood.
Area: Humanities
Writing Intensive

History of Art, Bachelor of Arts
History of Art Major Requirements
(Also see Requirements for a Bachelor’s Degree. (p. 1584))

Because the department emphasizes the historical, cultural, and social
context of art, art history is an excellent program for undergraduates
interested in a broadly humanistic education as well as for those
preparing for a career in the field. A departmental faculty advisor
assigned to each undergraduate major helps plan individual courses
of study. Undergraduates are encouraged to participate fully in all
departmental activities.

• A grade of C- or higher must be achieved for every course taken as
  part of the major.
• Courses used to satisfy major requirements may not be taken
  satisfactory/unsatisfactory.

Five Advanced-Level Courses (010.2xx-4xx) 2

| One course in ancient art history | 3 |
| One course in medieval art history | 3 |
| One course in renaissance/early modern art history | 3 |
| One course in modern art history | 3 |
| One course in any period | 3 |

Three Additional Courses

| Three elective courses. Only one may be at the 100-level and electives must be in the department (AS.010.xxx) or cross-listed with History of Art. | 9 |

Intermediate Knowledge of a Modern Foreign Language 3

Proficiency is verified by completion of courses through the second 0-14
semester of the intermediate level or higher.

Total Credits 46

1 Course should be taken within one year of declaring, ideally before senior year.
2 At least one must be at the 400 level. Students should consult with their faculty advisor and/or the Director of Undergraduate Studies in choosing their courses, which should relate to at least two geographical and/or cultural contexts.
3 Those planning to continue to graduate school in the History of Art should discuss which language(s) to pursue with their advisor and/or the director of undergraduate studies.

Honors Program in History of Art
For graduation with honors, students must have a cumulative GPA of 3.7 or higher in History of Art and successfully complete an honors thesis.

HONORS THESIS
- The honors thesis comprises a significant expansion and deepening of a paper in a 400-level seminar into a 20-25 page paper, with figures, bibliography, and any appendices constituting additional pages.
- Students pursuing honors must make a formal request to do so in conjunction with a proposed mentor via the Honors Thesis Form.
- While writing the thesis, students enroll in Honors Thesis credits (AS.010.521 Honors Thesis, 3 credits). These credits are in addition to the normal major requirements and do not count as an elective or advanced course.

History of Art, Minor

History of Art Minor Requirements
Students majoring in another department may minor in Art History. Like their counterparts in the Major, students who are minoring in Art History must earn a grade of C- or higher in all courses counted toward the curricular requirements. Courses may not be taken satisfactory/unsatisfactory.

* Courses must be at least 3 credits each.

History of Art, PhD
The graduate program is designed to give students working toward the Ph.D. degree an encompassing knowledge of the history of art and a deep understanding of the theories and methodologies pertaining to art historical research. The program emphasizes collaborative working relationships among students and faculty in seminars. Each advanced doctoral candidate benefits from supervision by two faculty members in his or her field.

The program also fosters a close familiarity with the outstanding art treasures in the Baltimore-Washington area relevant to the student's area of study. In addition to the rich holdings of the Sheridan Libraries of Johns Hopkins University (which include collections of rare books at Garrett Library, Special Collections at Eisenhower Library, and the George Peabody Library downtown) graduate students have access to such research facilities as the Center for Advanced Study in the Visual Arts (National Gallery) and the Dumbarton Oaks Research Library and Collection, both in Washington, D.C.

Admission Requirements

Admission and Financial Aid
Applicants to the Ph.D. program in History of Art should upload and submit all required application materials and supporting documents through the online application. For information about applying to the Ph.D. program in History of Art, please see the department's website (http://arthist.jhu.edu/graduate/admissions/). Applications must be completed by December 15.

To foster close student-faculty relationships and provide for the greatest flexibility in developing each graduate student's individual curriculum, the department strictly limits the number of students it admits each year. Financial support for admitted students is provided in the form of tuition grants, a multi-year fellowship stipend (contingent on continued progress), and health insurance coverage, with further opportunities for advanced research and travel funding available. Students in the program may also apply for grants from the Charles Singleton Center for the Study of Pre-Modern Europe, which supports travel, conference participation, and dissertation research in Europe.

Program Requirements
Students may apply for admission to the Ph.D. program with either a B.A. or M.A. degree from another institution. Acceptance requires the approval of the instructors in the areas chosen by the student as major and minor fields; in the case of transfer students, acceptance may be provisional. Students entering the program must pass reading competency examinations in two languages, as determined by field of study. Although no examinations are required in any additional languages needed for specialized research in particular areas, students are expected to master these as needed, as their studies develop. Students who are not native English speakers must submit TOEFL or IELTS scores with their application.

All students entering the program, regardless of the degree they hold, must complete four full semesters of coursework and pass the required language exams before being approved to take their qualifying exams (also known as the Ph.D. exams). The art history faculty encourages students to take full advantage of offerings in other departments, and students may, if they choose, develop a minor field in another discipline. In consultation with their advisers, students who have completed their coursework, have no outstanding incompletes, and have passed the required language exams prepare for qualifying exams. All qualifying exams, regardless of the fields in which they are taken, are comprised overall of two written exams (one major field and one minor field), followed by an oral defense before the advisers and other department faculty. Exams should take place during the third (3rd) year.

After the successful completion of qualifying exams, it is expected that students will be ready to begin work towards the dissertation by formulating a proposal. Completed proposals may be submitted at any time in the calendar year and not later than three (3) months after successful completion of the qualifying exams.

When the dissertation is complete, the student must successfully defend the dissertation before a Graduate Board Orals committee consisting of three internal (department) readers and two external readers. Although consultation between candidates and their faculty advisers regarding possible exam committee members is appropriate, selection of the committee is the department's responsibility and is not the candidate's responsibility or prerogative.

In addition to their own studies and research, students in the Ph.D. program gain valuable pedagogical experience by serving as Teaching Assistants under a variety of faculty mentors. Students are eligible for assignment as either a Teaching Assistant (TA) or a Research Assistant (RA), at the discretion of the department, in six of the ten semesters during which they receive funding.
Art History Fields

Ancient Art
Long associated with the study of classical archaeology, the department affords students of ancient art the opportunity work with a faculty that includes experts in Greek, Roman and Ancient Near Eastern art. Students also benefit from the close and long-standing relationship with the Departments of Classics and Near Eastern Studies. Facilities of special relevance to students of ancient art include the Johns Hopkins Archaeological Museum, located on campus inside Gilman Hall, and the extraordinary holdings of the Walters Art Museum.

Medieval
Ever since its founding in 1947, the department has given special emphasis to the study of medieval art, and that tradition continues with a new generation of medievalists bringing expertise in Early Christian, Islamic, Byzantine, Mediterranean, and Italian Romanesque art and architecture to the program. Students avail themselves of local expertise through the departments of History, English, and German and Romance Languages and Literatures, and frequently consult with curators at the Walters Art Museum, several of whom participate as adjunct faculty. Hopkins students may take the seminars in Byzantine art offered each year at Dumbarton Oaks, and take advantage of the extensive research library there as well. The extraordinary collections at the Walters Art Museum and at Dumbarton Oaks are especially valuable for students interested in manuscript illumination and the minor arts.

Renaissance / Early Modern
Another signature strength of the History of Art Department is its program in Renaissance and Early Modern Europe, where a broad faculty expertise encompasses the art and culture of Italy, Spain, and the countries of northern Europe from the fourteenth to the seventeenth centuries. Graduate students in these areas participate in the programs of the Charles Singleton Center for the Study of Pre-Modern Europe, which sponsors collaborative research abroad and brings a steady stream of world-class lecturers to Baltimore. Students also benefit from the excellent collections of Italian and northern Renaissance art at the Walters Art Museum, the National Gallery, and the Philadelphia Museum of Art.

Modern
At Hopkins a diverse and challenging curriculum in modern art and criticism is offered by a research faculty of international prominence, supplemented by occasional visiting scholars and museum curators. European art from the 18th to the 21st century, American modernism, and modern art in Asia are all among the department's distinctive strengths. Students oriented toward the study of criticism and aesthetic theory can also broaden their perspective and develop their critical skills by taking courses offered through the Department of Comparative Thought and Literature and the Department of Philosophy. Distinctive collections at the Baltimore Museum of Art and at multiple places in Washington, D.C. (the Hirshhorn Museum, the Smithsonian American Art Museum (SAAM), the Freer|Sackler of the Smithsonian, the Phillips Collection, and others) provide unparalleled resources for students of modern art at all levels.

Non-Western
Relatively new in the department is the expansive field of study encompassing the art and architecture of the Ancient Near East, the Islamic world, early modern and modern South Asia, and the early modern trans-Atlantic world. Research and teaching expertise is concentrated in four faculty appointments affording students the opportunity to develop projects in specific areas of these non-Western fields, which are also well represented by the rich collections of the Walters Art Museum and the Johns Hopkins Archaeological Museum in Baltimore, the Freer|Sackler of the Smithsonian, and other museums in Washington, D.C., and Philadelphia.

History of Science and Technology

http://host.jhu.edu/

The Department of the History of Science and Technology offers an undergraduate program leading to the degree of Bachelor of Arts with a major in science, medicine, and technology, and a graduate program leading to the degree of Doctor of Philosophy.

Undergraduate Programs
The department offers a variety of courses that deal with the history of the conceptual and technical development of the sciences, as well as the cultural and social impact of science and technology on civilization. These courses are open to all undergraduates in the Schools of Arts and Sciences and Engineering. A few of the courses require some background in an appropriate science, but most are accessible to those with no specialized knowledge who want to understand the part science has played in shaping modern culture. Students who have concerns about their technical competence for a given course should consult the professor involved.

Programs
- History of Science and Technology, PhD (p. 1913)
- History of Science, Medicine and Technology, Minor (p. 1913)
- History of Science, Medicine, and Technology, Bachelor of Arts (p. 1914)

Courses

AS.140.105. History of Medicine. 3 Credits.
Course provides an overview of the medical traditions of six ancient cultures; the development of Greek and Islamic traditions in Europe; and the reform and displacement of the Classical traditions during the Scientific Revolution.
Area: Humanities, Social and Behavioral Sciences

AS.140.106. History of Modern Medicine. 3 Credits.
The history of Western medicine from the Enlightenment to the present, with emphasis on ideas, science, practices, practitioners, and institutions, and the relationship of these to the broad social context.
Area: Humanities, Social and Behavioral Sciences

AS.140.108. Freshman Seminar: Culture, Communication & Technology. 3 Credits.
This seminar traces the evolution and impact of oral transmission, writing, print, photography, film, and electric and electronic media of communication from antiquity to the present. Readings, films, discussion.
Area: Humanities, Social and Behavioral Sciences

AS.140.129. Freshman Seminar: Johns Hopkins Medicine. 3 Credits.
Johns Hopkins medicine has set the standards since the late 19th c. Learn how Hopkins reinvented medical education, public health, and hospital care and meet the people behind the famous names.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.140.137. Freshman Seminar: Campus Life, Now and Then. 3 Credits.
What was it that the Hopkins undergraduates of old did all day? Before the AMRs appeared on campus, where did they live? Who played lacrosse or football? Where did they study without the D-Level? What passed for campus social life in those days before women joined the student body? Were fraternity antics all just good clean fun? Any campus pranks achieve truly epic status? Join us for a look at Hopkins history through the eyes of your predecessors. Explore the university archives and work together on an on-line exhibit for Alumni Weekend on campus life through the ages at Johns Hopkins.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.146. History of Public Health in East Asia. 3 Credits.
This course examines the history of disease, epidemics, and public health responses in East Asia from the 17th-20th centuries. This public health history emphasizes the interactions, connections, and comparisons among China, Japan, Korea, and Taiwan.
Area: Humanities, Social and Behavioral Sciences

AS.140.154. Freshman Seminar: Picture This: A Photographic History of Johns Hopkins University. 3 Credits.
Every picture tells a story, if you know how to read it. This freshman seminar will explore the history of Hopkins through images, creating interactive timelines of important themes in the university's history.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.156. Harm City? Public Health in Baltimore, 1797 to the present. 3 Credits.
Explores the history of public health in urban America using Baltimore as example. Examines topics such as include infectious diseases, mental health, sanitation, rodent control, primary care, substance abuse, and STDs using frameworks of racism, classism, poverty and inequality.
Area: Humanities, Social and Behavioral Sciences

AS.140.176. Public Health in East Asia Through Films & Documentaries. 1 Credit.
This course uses contemporary films and documentaries to address issues in public health in East Asia, past & present. Topics covered include medicine in turn-of-the-twentieth century Japan and China, revolutionary medicine, STDS, mental illness, HIV/AIDS in China, industrial pollution, the politics of universal health care insurance, and pandemics in East Asia.
Area: Humanities, Social and Behavioral Sciences

AS.140.177. Freshmen Seminar: Techno-ethics. 3 Credits.
We are all familiar with bio-ethics: dealing with living subjects is an enterprise prone to ethically questionable practices, and we have learned the hard way to raise the ethical questions regarding biomedical projects. But what about technology? Can technology be unethical? Sure, one can design technologies of pain and destruction, or simply ignore regulations and make unsafe products—those technologies would be unquestionably unethical. But what if somebody comes up with new technology with the best intentions in mind? Could those technologies be ethically unsound?
In addition to learning the skills required in college, academia, and professional world, the freshman seminar on Techno-ethics will explore the ethical issues involved in technological designs. Students will learn how to identify groups of people who could be harmed by technologies, how to detect factors that may result in unethical use of technologies, and how to pay attention to social dynamics that could turn even useful technologies into a nightmare.
Area: Humanities, Social and Behavioral Sciences

AS.140.198. Technology and Environment in Japanese Films and Anime. 1 Credit.
In the course of the semester we will watch Japanese films and animation that touch upon topics of technology and environment. The list of screenings includes several blockbusters, classics in film studies, and documentaries. The course is a companion course to 140.398 “Godzilla and Fukushima,” but is also open to anyone interested. Students who do not take 140.398 will be required to write a short review paper by the end of the semester.
Area: Humanities, Social and Behavioral Sciences

AS.140.227. Race, Racism and Medicine. 3 Credits.
How can we think about the interconnections between racism, theories of race and the practice of medicine? Living at a moment when racial disparities in health outcomes in the United States are still very stark, this course will provide a historically grounded approach to thinking about the roles that race and racism have played in healthcare, the production of health disparities as well as the role of medicine in the development of racist thought. While much of this course will focus geographically within the United States, this class will also explore global histories of medicine, encountering questions of race and medicine in Africa, the South Pacific and Asia. In addition to the analysis of primary source documents and historical texts, students will also be introduced to theoretical approaches to the study of race and racism from W.E.B. DuBois, Sylvia Wynter, Frantz Fanon and others.
Writing Intensive
AS.140.231. Health & Society in Latin America & the Caribbean. 3 Credits.
Healthcare is complex in Latin America and the Caribbean, where many people supplement biomedicine with plant and diet-based remedies, as well as religious and shamanic services. This course will cover the history of health and society in Latin America and the Caribbean from 1750 to the present, covering such topics as: medicine and the Spanish inquisition; disease control and tropical medicine; the medical knowledge of enslaved and indigenous peoples; reproduction and nation-state formation; and healthcare during the Cold War and its aftermath. Throughout, we will also consider the ways in which ideas about race, gender, indigeneity, class, and disability have affected people's access to healthcare. By the end of the course we will understand why leading scholars have referred to Latin America and the Caribbean as a "laboratory" for the production of medical knowledge. We will discover how that knowledge has been influenced by common people as well as professionals, and how it has influenced medical practice around the world. This is a discussion-based seminar course. It does not assume any previous knowledge of the history of medicine or Latin American and Caribbean history.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.301. History of Science: Antiquity To Renaissance. 3 Credits.
The first part of a three-part survey of the history of science. This course deals with the origins, practice, ideas, and cultural role of scientific thought in Graeco-Roman, Arabic/Islamic, and Medieval Latin/Christian societies. Interactions across cultures and among science, art, technology, and theology are highlighted.
Area: Humanities, Social and Behavioral Sciences

AS.140.302. Rise Of Modern Science. 3 Credits.
Survey of major scientific developments from the eighteenth-century Age of Enlightenment to the Cold War era of Big Science.
Area: Humanities, Social and Behavioral Sciences

AS.140.305. From the Compass to Androids: History of Science, Technology, and Medicine in Asia. 3 Credits.
The course explores the history and cultural context of science, medicine, and technology in East Asia, from the ancient Chinese science to the latest scientific and technological developments in Japan.
Area: Humanities, Social and Behavioral Sciences

AS.140.306. Science And Religion. 3 Credits.
Science and religion are crucial influences on Western culture. This course examines their interrelations during the past 2000 years, including the Athens-Jerusalem debate, medieval theology, the Galileo affair, evolution, and current issues.
Area: Humanities, Social and Behavioral Sciences

AS.140.311. Ecology, Health, and the Environment. 3 Credits.
Explores diverse problems linking ecological, environmental and public health themes, with focus on Chesapeake region. Students' research projects can be outside Chesapeake region.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.314. Experimental Bodies: Histories of Human Subjects Research in the 19th and 20th Centuries. 3 Credits.
This course traces the history of human subjects research as a medical and scientific practice. It will focus on the human subjects themselves, and how their experiences intersect with the histories of race, class, gender, sexuality, and disability.
Area: Humanities, Social and Behavioral Sciences

AS.140.320. Modernity on Display: Technology and Ideology at World's Fairs. 3 Credits.
Seminar focuses on ideological at World's Fairs over technological modernity with special emphasis upon World War II and the Cold War. Area: Humanities, Social and Behavioral Sciences

AS.140.321. Scientific Revolution. 3 Credits.
How did the Western understanding of nature change between 1500 and 1720? We'll study the period through the works of astronomers and astrologers, naturalists and magi, natural philosophers and experimentalists, doctors and alchemists & many others.
Area: Humanities, Social and Behavioral Sciences

AS.140.322. Follow the Money: Science, technology, and the 'knowledge economy,' c.1800-present. 3 Credits.
This course examines the historical emergence of knowledge-driven economies, paying special attention to the funding, development, and use of science and technology for commercial purposes.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.324. Commercializing Science: Academic Entrepreneurs from Kelvin to Venter. 3 Credits.
From the nineteenth-century physicist William Thomson (Lord Kelvin) to contemporary geneticists such as Walter Gilbert and Craig Venter, academic scientists and engineers across a broad range of disciplines have created their own companies. This course examines the motives behind these entrepreneurial ventures, the strategies employed, and the factors influencing their success.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.327. Science and Utopia. 3 Credits.
Seminar examines the changing role of science in planning the ideal community from the 17th century to the present. Readings include works by Campanella, Bellamy, H.G. Wells, Orwell, B.F. Skinner and Walt Disney.
Area: Humanities, Social and Behavioral Sciences

AS.140.328. Science and Technology in Slave Regimes. 3 Credits.
What does science and technology look like in slave regimes? This seminar explores this question from a trans-national perspective by comparing cases in the Antebellum US, Cuba, Brazil and other countries.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.339. Science & Technology in the Development of Modern Latin America. 3 Credits.
This seminar will survey the development of science and technology in modern Latin America, and explore their dynamics in the context of cultural, political, and economic forces.
Area: Humanities, Social and Behavioral Sciences

AS.140.341. Humanoid Robots in Global History. 3 Credits.
Humanoid machines reflect their creators' ideals of humanity. Comparing examples from societies across the globe we will investigate what factors shaped these ideals, and how they manifested in technological design.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.140.342. *We Came in Peace for All Mankind*: America's Space Program in Historical Context. 3 Credits.

For sixty years space exploration has been a fundamental part of American identity and culture, its imagery and rhetoric invoked everywhere from the Halls of Congress to movie theaters and shopping malls. When, how, and why did spaceflight become central to our nation's sense of self? We will answer this question through a survey of the history of space exploration and, by proxy, of the United States. America's celestial achievements are in every way a reflection of its terrestrial concerns: domestic politics, international relations, capitalism, civil rights, science, and contemporary culture.

Area: Humanities, Social and Behavioral Sciences  
Writing Intensive

AS.140.346. History of Chinese Medicine. 3 Credits.

Students will study the most recent anthropological, philosophical, and historical scholarship on medicine in traditional and modern Chinese society. They will approach the topic from several angles including medical pluralism, the range of healers, domestic and literate medicine, gender, emergence of new disciplines, public health and the history of disease. The course relies on secondary sources and primary sources in English translation. Cross-listed with East Asian Studies.

Area: Humanities, Social and Behavioral Sciences  
Writing Intensive

AS.140.347. History Of Genetics. 3 Credits.

Intellectual and social history of the gene concept, including Mendelism, eugenics, medical genetics, DNA, genomics, and personalized medicine.

Area: Humanities, Social and Behavioral Sciences  
Writing Intensive

AS.140.351. Seminar in the History of Life Sciences. 3 Credits.

Students do research projects with faculty supervision, on topics of their choice in the history of biological or biomedical sciences. Projects are presented to class at end of semester.

Area: Humanities, Social and Behavioral Sciences  
Writing Intensive

AS.140.356. Man vs. Machine: Resistance to New Technology since the Industrial Revolution. 3 Credits.

This course analyzes different episodes of “luddism” in the history of science and technology, from the destruction of textile machinery in the early 1800s up to recent controversies about biotechnology and ICT.

Area: Humanities, Social and Behavioral Sciences

AS.140.364. The City Course: Disciplinary Perspectives on Urban Life and Form. 3 Credits.

This course aims, first, at enlarging our understanding of cities by looking at them from a variety of disciplinary perspectives and, secondly, at examining the distinctive ways of thinking associated with disciplines from engineering, the sciences and medicine to anthropology, sociology, economics, archaeology, history and literature. Baltimore and cities from around the world will provide resource material. Lectures, discussions, term projects.

Area: Humanities, Social and Behavioral Sciences

AS.140.366. The American Illness Experience. 3 Credits.

What does it mean to be ill in America? How has the experience of illness in America changed across time and space, from the early 19th century to the present day, from the home, to the hospital, from the community clinic to the rural frontier? How might illness experience be different for Americans across the race, gender, and sexual orientation spectrums? How do medical providers and other caregivers relate to illness, sickness, suffering, and death? In this class we will approach these, and other questions regarding illness through a variety of methodological lenses, including literature, anthropology, sociology, and history. This course will encourage students to think critically about how trends in the history of medicine such as the rise and fall of American public hospital medicine, the regulation and standardization of medical education, improved and expanded medical technologies, and changing attitudes towards childbirth, death, and dying have impacted patient and provider experiences. Throughout the course, students will also take three field trips—to the Ronald McDonald House of Maryland, Johns Hopkins Hospital, and Gilchrist Hospice—and learn from special guests who have experienced particular illnesses as patients or providers. At least one prior course in History of Medicine is recommended but not required.

Area: Humanities, Social and Behavioral Sciences

AS.140.368. Technological Transformations. 3 Credits.

Course explores the historical development of revolutionary technologies and their transformations of the individual and society. Focus on computing, biotech, consumer goods, warfare, manufacturing, agriculture, imaging, energy, transportation, and sustainability.

Area: Humanities, Social and Behavioral Sciences

AS.140.380. Ladies in the Laboratory: Science and Gender in U.S. History. 3 Credits.

Why has science historically been so dominated by men? Why is this still true for many STEM fields today? We will explore the answers to these questions in this course, as well as look at a broader history of women and gender in science in the United States. Because education continues to be crucial in pushing people into or out of scientific careers, this course will also feature a large focus on K-12, college, and graduate science education.

Area: Humanities, Social and Behavioral Sciences  
Writing Intensive

AS.140.381. History of Reproduction. 3 Credits.

This course investigates the history of reproduction in American medicine, science, politics, and culture. It explores changing ideas about reproductive bodies, sexuality, and the family as well as practices of contraception, conception, and childbirth.

Area: Humanities, Social and Behavioral Sciences  
Writing Intensive
AS.140.388. History of the Earth and Environment. 3 Credits.
The earth we know today is very different from that which scientists debated little more than 100 years ago. While scientists today hold the earth to be roughly 4.5 billion years old, at the turn of the 20th century there was little agreement about the earth's age, and geologists' estimates did not exceed 100 million years. And while today scientists agree that the continents sit atop lithospheric plates that move and interact, giving rise to volcanoes, earthquakes, mountain ranges, and deep ocean trenches, the earth of the 19th-century was one that was slowly cooling and shrinking. In addition to getting older and less static, the earth of the 20th century also yielded up some of its uniqueness, as it ceased to be the only planet under the purview of those fields that would collectively become known as the earth and planetary sciences.
A Cold War program in planetary exploration of the Moon, Mars and Venus extended inquiry into the other rocky bodies of the solar system and placed what was known about the earth into a broader context. Finally, an environmental movement and the discovery of anthropogenic climate change showed the earth to be more vulnerable and susceptible to human activities than previously imagined. These changes not only affected our intellectual understanding of the earth, they also came along with changes in the way we as a society conceptualize the nature of global problems, their causes and their impacts. In this course we will examine our changing view of the earth and the world in the 20th century with a focus on the interrelatedness of science, society, and culture.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.390. Science and Technology in Latin America. 3 Credits.
The course surveys the development of western science and technology in Hispanic America (1492 to the present). We begin studying the hybridization of scientific practices between European and Native American cultures during the early colonial era and end with the transfer of technologies and industrialization of the 20th century. We emphasize the role on science and technology in state formation, the acculturation of foreign ideas in colonial and postcolonial societies, and the role of intellectual elites in modernization programs.
Area: Humanities, Social and Behavioral Sciences

AS.140.391. Individualized Medicine from Antiquity to the Genome Age. 3 Credits.
A seminar for advanced undergraduates. We explore the notion of the individual in medicine over twenty-five centuries, from the Hippocratics to the invention of the case study during the Renaissance to the current JHU medical curriculum. The history of medicine survey, AS.140.105 or AS.140.106, is recommended though not required. Graduate students are welcomed but should expect to do additional work and readings.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.393. Technology and the Making of the Modern World. 3 Credits.
This course critically examines the role of technology in some of the main developments that have shaped the modern world, ranging from industrialization and globalization processes to the rise of new political ideologies and gender patterns. This course is co-taught by an instructor from the Smithsonian Institution and will include a public history research project.
Area: Humanities, Social and Behavioral Sciences

AS.140.394. Heredity, Eugenics, and Society. 3 Credits.
In this course, we will examine the ways in which concepts of the gene, heredity, and innateness have both shaped and been shaped by society over the last two-plus centuries. Topics under discussion may include: eugenics, biological determinism, scientific racism, human breeding programs, genetics and gender, genetics and intelligence, genetic engineering including CRISPR, assisted reproductive technologies, sociogenomics, and polygenic risk scores. Term paper. AS.140.106 recommended.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.395. Prosthetics and Technologies of Disability. 3 Credits.
The purpose of prosthetics seems to be fairly straightforward—to restore function that was lost due to the loss of a body part. According to this logic, the quality of prosthetics is measured in its ability to replicate lost human function and restore individuals with disabilities to normalcy. And indeed, numerous disability technologies enrich the experience of individuals in need of them. At the same time, these very technologies are often perceived as a marker of something abnormal, or, by the nature of their design prove to be an obstacle for mobility and access. Therefore, as much as prosthetics and other technologies of disabilities improve the quality of life, they also led to stigmatization, marginalization, and exclusion. By looking at prosthetics and disability in a variety of historical contexts, we will learn what kind of ideas of ‘normalcy’ they reflect, and how they shape the experience of individuals who use them.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.398. Godzilla and Fukushima: Japanese Environment in History and Films. 3 Credits.
Japan is often described as “nature-loving,” and is considered to be one of world leaders in environmental protection policies. Yet current environmental successes come on the heels of numerous environmental disasters that plagued Japan in the past centuries. Juxtaposing Japanese environmental history and its reflection in popular media, the course will explore the intersection between technology, environment, and culture. Students are encouraged to enroll in AS.140.198, “Technology and Environment in Japanese Films and Anime” (1 credit) to attend movie screenings accompanying the course.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.401. The Knowledge City: from Silicon Valley to Bloomberg’s New York. 3 Credits.
This seminar will explore the increasingly productive relationship between research universities and urban and regional development in the period after World War II to the present. Working with the faculty, participants will be expected to develop a research paper. Discussion, presentations, lectures.
Area: Humanities, Social and Behavioral Sciences

AS.140.411. Senior Research Seminar. 2 Credits.
Area: Humanities, Social and Behavioral Sciences

AS.140.412. Research Seminar. 2 Credits.
Departmental Majors Writing a Senior Thesis Only
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.140.415. Thinking Through Things and Thinking Things Through. 3 Credits.
Combining hands-on experience of using historical instruments with primary sources analysis, the students will reconstruct the ways in which artifacts channeled human perception of their environment.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.417. Earth Stewardship: A History of Environmentalism in the Atomic Age. 3 Credits.
Explores the history of environmentalism and the roots of modern concepts of sustainability, resilience, and Earth Stewardship. Focuses especially on problems emerging after 1945. Students will do research projects, with options for doing traditional expository writing or a creative arts project.
Area: Humanities, Social and Behavioral Sciences

AS.140.423. Science and Science Fiction in Global Perspective. 3 Credits.
What can we learn from science fiction about the history of science and technology? What ideas about science do Sci-Fi novels manifest? Is the relationship between science and science fiction always the same, across different time periods and geographical areas? This course will explore these questions by taking a comparative perspective. Each meeting we will read a Sci-Fi novel from Europe, America, South and East Asia, and discuss it in conjunction with historical writing about relevant scientific developments. Reading Sci-Fi novels from 17th-century Germany, 19th-century England and India, and 20th-century Japan, China, Korea and the US, the students will explore how actual scientific developments were reflected in fiction, and what fictional depictions say about the aspirations and anxieties provoked by new technologies.
Writing Intensive

AS.140.435. Ways of Knowing: New Histories of Science, Medicine, and Technology. 3 Credits.
What does it mean for science to have a history? Comparing newer approaches with classic works, we will explore different strategies for placing science, medicine, and technology in social context.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.441. Metaphor in Science and Medicine. 3 Credits.
Science and medicine are permeated by metaphors. Generated by every domain of human experience, these metaphors embed scientific and medical thought in historically specific times, places, experiences, issues, attitudes and cultures. We will explore the dynamics of metaphorical thinking and examine such specific examples as “The Great Chain of Being,” Darwin’s “struggle for existence” and “natural selection,” the “reflex” from Descartes to Pavlov to cybernetics, body and mind as clock, factory and computer; illness as imbalance and invasion, and the metaphorical associations of tuberculosis and cancer.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.461. Scripta Manent: Manuscript Cultures East and West. 3 Credits.
This seminar looks at manuscripts both as physical objects and as cultural products, through an analysis of their ways of production, material features, and uses in different cultures and contexts. Meetings will be devoted to the codicology, paleography, and philology of manuscripts with a particular focus on the Greek, Latin, Arabic, Hebrew and Judaeo-Arabic traditions. Indian, Chinese and Japanese contexts will complement the focus of the seminar and provide elements of comparison and wider framing. The seminar will also address recently developed digital tools for the study of manuscripts and provide students with a set of skills and tools for approaching and using manuscript material effectively. The seminar will include hands-on sessions, with viewing of original manuscripts from the rich collections of the Sheridan Libraries and the Walters Art Museum.
Area: Humanities, Social and Behavioral Sciences

AS.140.501. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.140.502. Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

The goal of the seminar is to learn a variety of approaches to the historical investigation of science, medicine, and technology. Students will learn to identify, investigate, and analyze different primary sources, and compare the use of different methods and analytic frameworks for their interpretation. At the same time, students will practice general organization, note-taking, and writing techniques essential for successful completion of a research project.

AS.140.609. Technology and Labor.
In recent years historians, anthropologists, and sociologists of technology show increasing interest in questions of human labor. Adding to the literature that explores emergence, production, and use of technology, the new direction seeks to uncover and to analyze human labor that is necessitated by emerging technologies, and that is often concealed by them. The course will cover several classic works but will mainly focus on recent exciting scholarship that explores the relationship between technology and labor.

AS.140.641. Departmental Colloquium.
Reports by staff members, students, and invited speakers.

AS.140.642. Colloquium.
Reports by faculty, students, and invited speakers.

AS.140.661. Scripta Manent: Manuscript Cultures East and West.
This seminar looks at manuscripts both as physical objects and as cultural products, through an analysis of their ways of production, material features, and uses in different cultures and contexts. Meetings will be devoted to the codicology, paleography, and philology of manuscripts with a particular focus on the Greek, Latin, Arabic, Hebrew and Judaeo-Arabic traditions. Indian, Chinese and Japanese contexts will complement the focus of the seminar and provide elements of comparison and wider framing. The seminar will also address recently developed digital tools for the study of manuscripts and provide students with a set of skills and tools for approaching and using manuscript material effectively. The seminar will include hands-on sessions, with viewing of original manuscripts from the rich collections of the Sheridan Libraries and the Walters Art Museum.
AS.140.663. Crossing Boundaries: Studies in Comparative History.
Course takes a comparative look at how scientific ideas, practices, methods, technologies are translated across disciplinary, institutional, and national borders.

AS.140.665. History of Science and Technology in Asia.
Graduate level discussion of major historiography of science and technology in East Asia.

AS.140.666. Technology in Context.
The course will explore topics in the history of technology focusing on a variety of methodologies pertinent to the subject.

AS.140.669. Special Topics in the History of the Physical Sciences.
This seminar will focus upon the history of the physical sciences. Readings, discussion, papers.

AS.140.670. Special Topics in the History of Physics in Higher Education.
This seminar will focus upon the history of the establishment of physics in US higher education 1870-1940. Readings, discussion, papers

AS.140.671. The Cold War in Global Perspective.
This seminar will examine the processes of modernization in colonial and imperial situations from the early modern period through the late twentieth century. It will examine the processes both from the point of view of the metropole and of the local population in the British, Spanish, Portuguese, Japanese, Russian, German, American, Dutch and Belgian colonial and imperial situations, and the Ottoman Empire / Turkey.

AS.140.673. The Modern Synthesis in Historical Perspective.
Research seminar in history of evolutionary biology

AS.140.674. Science and Medicine in Early Modern Atlantic World Culture.
How were changes in scientific and medical ideas reflected in cultural products of the early modern Atlantic world? We will study these ideas as they appeared in literary genres such as poetry, utopias, natural histories and travel narratives. Likewise, we will examine the visual culture of the Atlantic space for clues about changing conceptions about the natural world. Our expedition will encompass Anglophone, French and Hispanic regions, and will pay careful attention to hybrid cultural products that reflect the interaction between indigenous cultures and the (changing) European understanding of the natural world.

Seminar will examine the development of an industrial culture in the early 20th century. Topics will include the role of science in the second Industrial Revolution, culture and industrial spirit, the impact of technology and science on the arts and representations of science and technology in museums and popular culture.

AS.140.676. Environmental Engineering in Historical Perspective.
Restricted to graduate students in History of Science and Technology who are completing fields.

AS.140.678. Catching Up: Responses to Technical Change in the 19th and 20th Centuries.
This research seminar focuses on varieties of paths to modernity by nations in the 19th and 20th centuries as driven by technological change. The approach will be comparative and its reach global. The emphasis will be on preparing a research paper by semester's end.

AS.140.679. Humanoid Robots in Global History.
Graduate section of AS.140.341.

AS.140.705. History of Science: Antiquity To Renaissance.
The first part of a three-part survey of the history of science. This course deals with the concepts, practice, and the cultural roles of scientific thought from classical antiquity to the time of Copernicus. Topics include the pre-Socratics, the systems of Plato and Aristotle and their continuing influence, Islamic science, Latin medieval scholasticism and the universities, and Renaissance hermeticism/natural magic. Interactions across science, art, technology, and theology are highlighted. Lecture meets with AS.140.301

Survey of history of science, 18th-20th c. Students are encouraged to attend lectures for 140.302, but seminar may be taken without attending those lectures.

AS.140.710. Scientific Revolution.
Reading intensive seminar that studies the events and ideas that transformed western science from Medieval natural philosophy to the experimental sciences (1500-1720s). Lecture meets with AS.140.321.

AS.140.802. Directed Readings & Diss.
AS.140.803. Independent Study-Summer.
AS.140.812. Directed Readings & Diss.
AS.140.832. Directed Readings & Diss.
AS.140.836. Directed Readings & Diss.
AS.140.842. Directed Readings & Diss.
AS.140.843. Directed Reading & Dissertation.
AS.140.844. Directed Reading & Dissertation.
AS.140.845. Directed Readings and Dissertation.
AS.140.854. Directed Readings & Diss.
AS.140.863. Directed Reading and Dissertation.
AS.140.864. Directed Readings and Dissertation.
AS.140.874. Directed Readings & Diss.
AS.140.876. Directed Reading & Dissertation.
AS.140.877. Directed Reading & Dissertation.
AS.140.878. Directed Readings and Dissertation.
AS.140.894. Directed Readings & Diss.
AS.140.896. Directed Readings & Diss.

For current faculty and contact information go to http://host.jhu.edu/people/
History of Science and Technology, PhD

The graduate program in the history of science and technology leads to the Ph.D. degree. The object of the Ph.D. program is to provide the rigorous training necessary for a scholarly career in teaching and research; consequently, the focus of the student's activity will be the research seminars of the department. Faculty from the Institute of the History of Medicine in the School of Medicine also participate in the program.

Facilities

The Eisenhower Library and the Welch Medical Library contain about two million volumes, including the special collections of the Institute of the History of Medicine in Baltimore. These research facilities are supplemented by the rare book holdings at Evergreen House, the Pratt Library, and the Peabody Library.

Other important research collections are available to students. In Philadelphia, collections include the Chemical Heritage Foundation, the American Philosophical Society, and the Academy of Natural Sciences. The Hagley Museum and Library's collections in the history of American science and technology are within easy distance of campus, as are the incomparable holdings of the Smithsonian Institution, the Library of Congress, the National Library of Medicine, and other governmental agencies in Washington, D.C.

Financial Aid

The department has several graduate fellowships and teaching assistantships. Students may also be eligible for federal financial support through the National Science Foundation. Information on these and other fellowships can be obtained through the fellowship advisor at the student's college, or from the Fellowship Office of the National Academy of Sciences, National Research Council, Washington, D.C. 20025. In the recent past, doctoral candidates have also won support for their research in the United States and abroad through such sources as the Smithsonian Fellowships, the Fulbright-Hays grants, the Spencer Foundation, and the Deutscher Akademischer Austauschdienst (DAAD) Fellowship.

Admission Requirements

Application deadline is January 15. All official supplemental materials (official transcripts, official GRE scores, and, when applicable, official TOEFL scores) should be sent directly to the Graduate Admissions Office at:

Johns Hopkins University
Full-time Graduate Studies in Arts, Sciences, and Engineering
Graduate Admissions Office
W601 Wyman Park Building
3400 North Charles Street
Baltimore, Maryland 21218 USA

For further information on our faculty and programs, please visit our website at: http://host.jhu.edu.

Program Requirements

Before candidates begin full-time research on their dissertations, they must prepare themselves adequately in the appropriate fields of knowledge, become skilled in the techniques of historical research, and be able to carry out a sustained piece of historical research, and writing.

In the first year of the program students are introduced to the methods and techniques of research and complete a year-long survey course in the history of science or the history of medicine. Students in their second year of study present a research paper to the department. In the second and third years of study, students complete three "fields" or concentrations. One field should be within the Program, one in a historical discipline outside the Program, and the third is negotiable depending on student interests and needs. Our students have also done historical fields with curators or research historians at the Smithsonian Institution. The third field can extend beyond historical subjects and may involve a scientific subject, for example. A field is intended to demonstrate a student's mastery of a specific body of knowledge, both for the student's own scholarly work and as a preparation for teaching. The fields are individually arranged and satisfied. Before being admitted for formal candidacy for the degree, the student must also demonstrate a reading knowledge of two foreign languages. The final requirement for the Ph.D. degree is the completion of a dissertation that is an original contribution to historical knowledge and of a standard suitable for publication.

The History of Science and Technology is by its nature interdisciplinary, and students are encouraged to undertake study in related areas such as history, philosophy, and the natural and medical sciences.

### History of Science, Medicine and Technology, Minor

#### History of Science, Medicine, and Technology Minor Requirements

The department offers a minor which may be combined with other science, social science, or humanities majors. To complete the requirements for the minor, students must have a total of 18 credits in the history of science, medicine, or technology, including at least one survey course. A minimum grade of C- is necessary in all courses applied toward the requirements of the major and requirements may not be taken satisfactory/unsatisfactory. Each course must be at least 3 credits.

#### Additional History of Science, Medicine & Technology Courses

Five history of science, medicine & technology courses at any level 15

Total Credits 18

1 Another course might serve to fulfill the survey course requirement with permission of the director of undergraduate studies.
History of Science, Medicine, and Technology, Bachelor of Arts

History of Science, Medicine, and Technology Major Requirements
(Also see Requirements for a Bachelor's Degree. (p. 1584))

Offered in cooperation with the Institute of the History of Medicine, this major allows students to combine substantive work in science with study of the social and historical context of modern science, medicine, and technology. The aim of the program is to produce graduates who are scientifically literate and technically competent, and who at the same time understand science and medicine not as static, autonomous enterprises but rather as modes of thought that have developed in specific social contexts.

The major is appropriate for any student planning a career in medicine or other areas of the health care industry. It is also flexible enough to serve as a basis for a variety of careers where an informed knowledge of science and technology and their impact on society is important. Such careers include broad areas of business and industry, journalism, teaching, museum work, and specialized areas of law and public policy.

- Sciences: Students are required to have a total of 30 credits in science, engineering, and mathematics courses coded (E, N, or Q), of which at least nine credits must be above the 100-level. Laboratory courses in science count toward this requirement. Calculus I is strongly recommended.
- History of Science, Medicine and Technology: A total of 24 credits of course work in the history of science, medicine and technology are required. These must include at least two survey courses and four additional courses above the 100-level.
- Students in their senior year may take graduate courses with permission.
- A minimum grade of C- is necessary in all courses applied toward the requirements of the major and requirements may not be taken satisfactory/unsatisfactory. Each course must be at least 3 credits.

Honors in the Major
Students who demonstrate excellence in course work are eligible to write an honors thesis (AS.140.411 (http://e-catalog.jhu.edu/search/?P=AS.140.411) Senior Research Seminar and AS.140.412 (http://e-
Interdisciplinary Studies

The undergraduate major in interdisciplinary studies allows students to combine disciplines in Krieger School of Arts and Sciences to develop a major focused on a particular topic or intellectual theme. Therefore, courses proposed for this interdisciplinary major must have coherence and build toward a rich exploration of a clear set of principles or questions.

Programs

- Interdisciplinary Studies, Bachelor of Arts (p. 1915)

Interdisciplinary Studies, Bachelor of Arts

Interdisciplinary Studies Major Requirements

(Also see Requirements for a Bachelor’s Degree (p. 1584).)

Students in the humanities and social sciences who wish to design their own major, or who wish to divide their studies between departments, may create their own program in Interdisciplinary Studies. This interdisciplinary major may straddle several traditional disciplines but must maintain a substantive theme or focus. For example, a student interested in the American Revolutionary period may construct a curriculum including courses from History, English, History of Art, and Sociology. Another may wish to focus on children in poverty, drawing from Anthropology and Economics. Proposals for the interdisciplinary major should be submitted at the end of the sophomore year.

This major requires the support of a faculty advisor and the approval of the Arts and Sciences Curriculum Committee. A student wishing to complete this major must work with a full-time faculty member from the Homewood campus to construct a curricular plan that includes courses representing 45 to 60 credits. These courses can include all related prerequisites and related courses, such as language study. Independent study, research, and internships may be included. Twenty-one credits must be earned at the 300-level or higher. Courses from the School of Engineering are not permitted, except by petition.

The proposal should explain how each of these courses provides insight on the given topic, concept, issue, time period, etc. There is no need to defend the principle of interdisciplinary study, as that is a given, but the student must explain how the courses from two or more departments represent a conceptual whole.

After receiving approval from a sponsoring faculty advisor, the student then works with the Office of Academic Advising to finalize the proposal and to present it to the Curriculum Committee, consisting of faculty and undergraduates, who must approve the proposal by majority vote. After approval, the student continues to work with the faculty advisor and Academic Advising to oversee completion of requirements.

Rules:

- Students pursuing this major must still meet all other requirements for a bachelor’s degree (p. 1584) in the Krieger School of Arts and Sciences.
- All courses for the major must be taken for a letter grade and students must earn a C- or better in courses completing major requirements.
- Students must earn 45-60 credits in the completion of the major.
- At least 21 credits must be completed at the 300-level or higher and may not be counted toward another major or minor.
- Courses offered by the School of Engineering may not be included in major requirements. (Some minor exceptions may be permissible.)

International Studies

http://krieger.jhu.edu/internationalstudies

The International Studies major is an interdisciplinary program drawn from the departments of political science, history, economics, languages, sociology, and anthropology. There are three programs in International Studies: a regular undergraduate major leading to the B.A. degree in four years, and two accelerated programs leading to a B.A. and M.A. degree in five years. One of the accelerated programs is in partnership with the Johns Hopkins School of Advanced International Studies in Washington, D.C. and the other is with political science institute Sciences Po in Paris. The three programs, and all other aspects of the International Studies Program, are described on the International Studies website.

Programs

- International Studies, Bachelor of Arts (p. 1960)
- International Studies Five-Year Accelerated B.A./M.A. Program with Sciences Po (http://e-catalog.jhu.edu/arts-sciences/full-time-residential-programs/degree-programs/international-studies/ba-ma/)
- International Studies Five-Year Accelerated B.A./M.A. Program with the Paul H. Nitze School of Advanced International Studies (SAIS) (http://e-catalog.jhu.edu/arts-sciences/full-time-residential-programs/degree-programs/international-studies/ba-ma-sais/)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.192.150. States, Regimes & Contentious Politics. 3 Credits.

This course introduces students to the study of politics and political life in the world, with a particular focus on the Middle East, Latin America, and Africa. Throughout the course, we will analyze the sources of order and disorder in modern states, addressing a series of questions, such as: why did nation-states form? What makes a state a nation? Why are some states democracies while others are not? How do people organize to fight oppression? Why does conflict sometimes turn violent? What are the causes of ethnic war? Drawing on a mix of classic works and contemporary scholarship, we will discuss the answers that scholars have formulated to address these and other questions, paying special attention to research design and the quality of argumentation.

Area: Social and Behavioral Sciences
Are you planning to do a research project for your independent study class, or preparing for a grant application, or working on a big research project for a research intensive class or graduation thesis, or just wishing to improve your research skills? If so, this course is for you! Through weekly two hour sessions over ten weeks, you will receive systematic training on major research tools, resources and techniques useful for any research project in international studies, political science, and other social science subjects. By the end of the course, you will be able to come up with a viable research topic, and complete a research statement that includes an abstract, problem statement and literature review based on in-depth research utilizing tools and techniques covered in the course. The skills you learn through the course will prepare you for any future research projects and advanced studies.

AS.192.225. Economic Growth and Development in East Asia. 3 Credits.
The course offers an overview of the complexities of East Asia’s development experience from a variety of perspectives, and it is divided into three parts to allow students to develop expertise in one or more countries and/or policy arenas, while also cultivating a broad grasp of the region and the distinct challenges of “East Asia fast-paced, sustained economic growth.” Part I considers the origins of Asian economic development, analyses the common economic variables behind the region’s success, looks at the East Asian financial crisis and its lessons and assesses whether or not East Asian countries have learned them. Part II will focus on the development experiences of individual countries, with an emphasis on the ASEAN economies, NIEs, Japan and China. Part III considers topics of special interest to Asia, including trends toward greater regional economic cooperation, both in the real and financial/monetary sectors, and issues related to poverty, migration, and inclusiveness.

Area: Social and Behavioral Sciences

AS.192.270. International Migration, Diasporas and Development. 3 Credits.
International migration has emerged as one of most politically salient and contentious issues in the politics of advanced democracies. However, while the economic, political, and social impact of large immigrant inflows has prompted much debate and analysis in developed countries, the effects of emigration and diasporas on the source country are poorly understood. This seminar examines the economic and political challenges and opportunities of international migration and diasporas on countries of origin and policy options to address them. The seminar will examine a range of issues. Is the phenomenon of greater import in the current (and future) context than it has historically been and if so, why? How do selection characteristics of international migrants and reasons for leaving affect the country of origin? Why do diasporas differ in the forms of engagement with the country of origin? What explains the massive increases in financial remittances sent by immigrants to their countries of origin and what are their effects? The seminar will also examine non-pecuniary or “social” remittances, which reshape individual preferences and social norms and thereby influence economic, political, and social change. What are the human capital effects of international migration, ranging from the “brain-drain” of limited human capital to “brain-gain” effects arising from diasporic networks? How does the “long-distance” nationalism of diasporas that support more polarizing political parties and groups engaged in conflict affect international security? Finally, we will examine policies in both receiving and sending countries and how they affect outcomes in their countries as well as of migrants themselves. Are international agreements on migration feasible or will rising nationalism ensure that unilateral policies and bilateral arrangements prevail?
Area: Social and Behavioral Sciences

AS.192.280. China Under Revolution and Reform. 3 Credits.
China is an emerging world power with a long history, a rich culture, and complex political structures and processes. As a modern state, the People’s Republic of China (PRC) continues to amaze and confound observers both inside and outside its borders. More than three decades after opening its doors to the outside world, China remains as important as it is misunderstood. This course is de-signed to provide you with a road map to help understand the fascinating world of Chinese politics and the contemporary Chinese state. The course presumes no prior knowledge of China.
Area: Social and Behavioral Sciences

AS.192.310. Program Abroad: Populism in Comparative Perspective. 3 Credits.
International Studies elective offered on the JHU Summer Program Abroad in Bologna. Open to students on the JHU Bologna Summer Program only. Permission required.
Area: Social and Behavioral Sciences
AS.192.315. Politics of India. 3 Credits.
India is the world's largest democracy and its second most populous country. This course introduces core issues in the study of modern Indian politics. The class is organized around the following topics: we trace India's journey to Independence; the consolidation of democracy in the early decades; the relationship between the state and the economy; the state's institutional architecture; how political parties and electoral campaigns operate; the threats posed by corruption, criminality and dynastic politics; the role of caste and religion in shaping politics; the political and economic consequences of economic liberalization; elections; and the recent rise of right-wing hindutva in the country. The focus is on building knowledge and understanding of the Indian case. But we will also consider to what extent India's experience is reflective of more general theories of politics, and how they might change because of what India can teach us. Class sessions will be interactive, with plenty of opportunity for group discussion. The reading list is diverse and draws from political science, sociology, history, and anthropology.
Area: Social and Behavioral Sciences
Writing Intensive

AS.192.320. Colonialism and Foreign intervention in the Middle East and Africa. 3 Credits.
How did colonial rule and post-colonial foreign intervention shape the history and politics of states in the Middle East and Africa? The first part of this course focuses on the colonial period, examining the era of conquest, considering how and whether colonial rule differed from other types of ruling arrangements, and studying how people in colonized territories reacted to conquest and foreign rule. Part Two focuses on post-colonial foreign military interventions. Part Three considers the potential long-term consequences of colonialism and foreign intervention. The course focuses on British, French, and American imperialism. **This course is eligible for credit toward the Islamic Studies minor, but only if students relate their major research paper to Islam and also notify Prof. Lawrence at the beginning of the course of their intention to seek Islamic Studies credit.
Area: Social and Behavioral Sciences
Writing Intensive

AS.192.340. Refugees, Human Rights, and Sovereignty: Focus on Italy. 3 Credits.
Summer course in International Studies offered on the JHU Summer Program in Bologna.
Area: Social and Behavioral Sciences

AS.192.350. Capital and Climate: Italy in the Mirror of World History. 3 Credits.
Summer course offered on the JHU Summer Abroad Program in Bologna, Italy
Area: Social and Behavioral Sciences

AS.192.360. Modern Warfare. 3 Credits.
This course examines modern warfare from the Second World War to the present. It takes a broad historical perspective. Strategic decision-making, the effect of war on societies, technological change, experiences of the soldier, and different concepts of warfare will be examined. Students will be introduced to critical texts and key primary source documents. The course will start with the Second World War. It will then go on to the nuclear revolution, the Korean War, and the early Cold War. From there, the subject matter will turn to examine people's war, focusing on Mao and the Chinese Civil War and then Vietnam. Next, the Arab-Israeli conflicts will be discussed before moving on to the new strategic environment of the post-Cold War world and the long war against "terrorism" in Afghanistan, Iraq, Syria, and elsewhere. Finally, the course will look at recent technological change, clashes, and new players. Throughout, special attention will be paid to the non-Western view and experience of war.
Area: Social and Behavioral Sciences

AS.192.401. Political Violence. 2 Credits.
This class will function predominantly as a discussion seminar that uses the case of the Lebanese Civil War to examine the causes, duration, and dynamics of civil war as well as the debates surrounding foreign intervention and peacebuilding. Themes include: ethnic violence; economic explanations for civil war; civilian targeting; intra-rebellion dynamics; sexual and gender-based violence; election violence; occupation; peacekeeping; and the Responsibility to Protect.
Area: Social and Behavioral Sciences

AS.192.402. Military Organizations in the Middle East and North Africa. 2 Credits.
This course will examine the diverse roles state and non-state military organizations play in MENA politics, economics, and society. Each week will use an organizational case study as a window into core themes such as military involvement in state economies, militia politics, or combatant discipline in war.
Area: Social and Behavioral Sciences

AS.192.403. Qualitative Research. 3 Credits.
This class is designed to introduce students to qualitative methodology. Practically, students will gain first hand experience with qualitative research methods via research design, ethics review, in-depth interviewing, participant observation, and archival/primary source research. They will learn to deploy analytical techniques such as discourse analysis and process tracing. Students will also be asked to consider the merits of qualitative approaches more generally, and discuss the relative advantages of qualitative, experimental, and quantitative approaches. Questions that we will discuss include: What place should qualitative research have in a research design? Can qualitative research test hypotheses, or only generate them? Can qualitative research explain social phenomena, or only interpret them? What are the disadvantages and advantages of qualitative approaches compared to quantitative approaches? For what kinds of research questions are ethnographic techniques best suited? Is replicability possible for ethnographic field research? What criteria of evidence and analytical rigor apply on this terrain?
AS.192.404. Democracy, Autocracy and Economic Development: Korea, Indonesia, and Myanmar. 3 Credits.

East Asia’s "miracle growth" has not gone hand in hand with a decisive move toward democracy. The course explores the reasons why democratization proceeds slowly in East Asia, and seems to be essentially decoupled from the region's fast-paced economic growth. The course is divided into three parts. Part I introduces the specifics of East Asia's economic development strategies as well as key concepts of democracy, authoritarianism and military rule and the tensions between these theories and the East Asian experience. Part II will focus on the economic and political development experiences of Korea, Indonesia and Myanmar in light of what discussed in Part I. Finally, Part III presents lessons emerging from the comparison of Korea's, Indonesia's and Myanmar's economic and political developmental trajectories.

Area: Humanities

AS.192.410. Kissinger Seminar on American Grand Strategy. 3 Credits.

Enrollment is at the discretion of the instructors and space in the course is limited. To apply, email a one-page resume, one-page personal statement on why you want to take the class including how it contributes to your professional interests, and a writing sample of less than ten pages to KissingerCenter@jhu.edu. Applications are due by Monday, October 21, 2019. This course is an initiative of the Henry A. Kissinger Center for Global Affairs at Johns Hopkins SAIS, meant to link SAIS with the undergraduate International Studies major at Homewood. It will expose exceptional undergraduate students to the study of grand strategy and the history of U.S. foreign policy. The bulk of the course will explore critical moments, themes, and people in the history of American grand strategy, from Washington's Farewell Address to the statecraft of Donald Trump. The seminar will be rooted in applied history—the study of the past as a way of better understanding the challenges and opportunities of the present and future. It will also be interdisciplinary, drawing on international relations theory and contemporary policy studies. The seminar will equip students to evaluate and contribute to intense debates about the future of American grand strategy. In addition to regular classroom meetings, the course will feature events at the SAIS campus in Washington, DC, including meetings with current and former policymakers. These sessions will take place on February 10th, March 2th, April 6th, April 27th. Transportation between Homewood campus and SAIS will be provided. These sessions will be followed by a dinner hosted by the Kissinger Center.

Area: Humanities, Social and Behavioral Sciences

AS.192.415. The Battle of Ideas for the World Economy. 3 Credits.

This seminar is intended as a capstone intellectual experience for seniors and advanced juniors majoring in international studies. The course presumes some background in economics, comparative politics, and international relations. This course will hone your analytical and writing skills by exposing you to theoretically advanced forms of political economy argument in a "proposition-opposition" format. The seminar is organized around a series of thematic pairings, covering such political economy themes like free trade vs. protectionism, free market capitalism vs. socialism, democratic erosion vs. autocratic strength, hegemonic stability vs. US abdication of power, or whether the current populist wave has mainly economic or mostly cultural roots. Each segment will deal with a specific topic area. Our discussions will involve in-depth interrogations of the arguments of these 'pro-con' authors.

Area: Social and Behavioral Sciences

Writing Intensive

AS.192.501. Internship- International Studies. 1 Credit.

Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

The International Studies Leadership Seminar builds core leadership skills and introduces students to critical social, political and economic policies in their local and international contexts. The seminar takes place in different countries each year and builds upon global partnerships that exist between the International Studies Program, Johns Hopkins University, and academic institutions worldwide. Global partners include Waseda University, SAIS Europe, and Sciences Po, among others. Students engage in joint projects, panel presentations and other assignments designed to develop skills in critical analysis and public speaking. Seminar may be taken multiple times.

AS.192.591. Research- International Studies. 1 Credit.

Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.192.598. Independent Study. 3 Credits.

Prerequisite(s): Approval Required.

AS.192.599. Independent Study. 3 Credits.

Prerequisite(s): Approval Required.

Cross Listed Courses

Agora Institute

AS.196.300. Getting to Truth: How to Navigate Today's Media Jungle. 3 Credits.

Our democratic system depends on an informed public, but media today are polarized along ideological lines, undercut by economic and technological change and sometimes polluted with bogus stories written for profit or spin. In this course, taught by a veteran journalist, we will discuss the evolution of news, examine the current challenges and opportunities of the present and future. It will also be interdisciplinary, drawing on international relations theory and contemporary policy studies. The seminar will equip students to evaluate and contribute to intense debates about the future of American grand strategy. In addition to regular classroom meetings, the course will feature events at the SAIS campus in Washington, DC, including meetings with current and former policymakers. These sessions will take place on February 10th, March 2th, April 6th, April 27th. Transportation between Homewood campus and SAIS will be provided. These sessions will be followed by a dinner hosted by the Kissinger Center.

Area: Humanities

Writing Intensive

AS.196.364. This is Not Propaganda. 3 Credits.

We live in an era of disinformation' mass persuasion and media manipulation run amok. More information was meant to improve democracy and undermine authoritarian regimes- instead the opposite seems to be happening. This course will take you from Russia to South Asia, Europe to the US, to analyze how our information environment has been transformed, why our old formulae for resisting manipulation are failing, and what needs to be done to create a model where deliberative democracy can flourish.

Area: Social and Behavioral Sciences

Writing Intensive
Anthropology

AS.070.143. Anthropology of Markets. 3 Credits.
Capitalism is built on social and cultural processes. In this course, we explore the culture of capitalism across diverse settings—a fish market in Tokyo, an investment bank in Wall Street, and the organ donation economy in China, among many others. We ask what motivates the makers of markets today, as well as their critics.
Area: Humanities, Social and Behavioral Sciences

AS.070.209. Urban Citizenship in Latin America. 3 Credits.
Latin American cities are among the largest in the world, but also among the most unequal. Significant proportions of the urban populations reside informally on the fringes of metropolitan areas without access to services or amenities, secure tenure, or adequate sanitary conditions. This course will study several ethnographies to examine the intricacies of the notion of ‘urban citizenship’ and how the ‘right to the city’ has been imagined, demanded and struggled for in Latin American cities. Cases will include Sao Paulo in Brazil, El Alto in Bolivia, or Bogota in Colombia.
Area: Humanities, Social and Behavioral Sciences

AS.070.212. Minorities in South Asia. 3 Credits.
This course will introduce first-year students to the anthropology of modern South Asia from the lens of its varied minorities. We will interrogate ideas of nation, community, tradition, and belonging across the region to understand contemporary dilemmas of diversity, heterogeneity, and cultural citizenship.
Area: Humanities, Social and Behavioral Sciences

AS.070.214. Politics and Poetics of Mobility in Africa. 3 Credits.
This course considers a broad survey of contemporary themes in African mobility, displacement, and re-settlement. Drawing on historical, anthropological, and literary texts and film, the course uses mobility as a window into a range of topics that are of scholarly interest in contemporary African studies: from urbanization and labor, to violence, political subjectivity and the changing nature of the state, formal and informal economy, gender and domesticity, and religious movements.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.070.241. African Cities. 3 Credits.
Over the past two decades, African cities have absorbed rapid population increase without accompanying economic growth. Students will review the major challenges of this mode of urbanization and explore the vibrant ways residents have sought to meet them. Following anthropology's commitment to lived experience, we will track these issues through the twists and turns of everyday life, and consider what they may say about urbanity more broadly in the 21st century. Topics include livelihood, the built environment, conflict and membership, and popular culture.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.070.249. Latin American Cities: Public Spaces and Private Lives. 3 Credits.
This course will explore the relationship between public space and forms of political expression as well as the cultural implications of various senses of privacy and domesticity in contemporary Latin American cities. Drawing on recent anthropological and historical texts, we will study the formation of urban public space in the region, as well as its use and representation by different social, political and ethnic groups.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive
AS.070.314. Activism and Assembly, Local and Global Connections. 3 Credits.
This course offers an anthropological perspective on political mobilization and struggles for social change and citizenship rights in several regions of the world. It charts collective action among the urban poor, indigenous peoples, queer rights activists, feminists, environmentalists and grassroots groups in various cultural and political contexts, to examine methodologies, representations, and local and global networks.
Area: Humanities, Social and Behavioral Sciences

AS.070.318. The Atlantic World. 3 Credits.
This seminar explores the formation of the South Atlantic through a reading of historical and ethnographic texts. We examine the making of history and culture as contentious fields of struggle
Area: Humanities, Social and Behavioral Sciences

AS.070.333. Theologies of Political Life. 3 Credits.
This course explores the relationship between modern political forms and theological traditions. Looking at developments both in the West and the postcolonial world, we will examine the multiple ways in which theological traditions have continued to inform how political life is conceived and pursued. In particular, we will focus on the relation between liberalism and the Christian tradition; the turn to messianism in critical theory; the transformation of the shari'a into a legal form; and its imbrication in anti-colonial politics
Area: Humanities, Social and Behavioral Sciences

AS.070.336. Enthnographic Perspectives on Brazil. 3 Credits.
This seminar offers an examination of Brazilian culture and politics through close readings of classic and contemporary ethnography. The course will track how anthropologists have approached the complexities and contradictions of Brazilian society. And, conversely, we investigate how studies in Brazil have prompted challenges to and generated innovations in anthropological thought.
Area: Humanities, Social and Behavioral Sciences

AS.070.359. Korean War. 3 Credits.
This course takes the Korean War as a site to both explore: 1) contemporary historical and political transformations in East Asia and globally and 2) the ways in which violence, catastrophic loss, and separation are woven into everyday life. It will explore the Korean War through film, fiction, historiography, and draw on comparative materials in anthropology.
Area: Humanities, Social and Behavioral Sciences

AS.070.389. Precarity in South Korea through TV and Film:Aesthetics and everyday life. 3 Credits.
This seminar explores how precarity in South Korea gains expression in the medium of TV and film. In particular, this seminar will focus on how the moving image brings the viewer into the texture of everyday life. We will focus on the TV show Misaeng and include films such as Parasite and Burning. TV and film will be paired with readings on the transformations of intimate life in contemporary South Korea and comparative work on precarity.
Area: Humanities, Social and Behavioral Sciences

AS.070.413. Reading Marx. 3 Credits.
This seminar offers a close reading of selected works of Karl Marx, along with supplemental secondary literature. We will explore how the central pillars of Marx's thought—including dialectical materialism, critical political economy, and utopian socialist thought—shape his critical method in interrogating the logic of capital.
Area: Humanities, Social and Behavioral Sciences

AS.070.425. Anthropology of Epidemics. 3 Credits.
In this course we will examine how forms of governance, politics, expert knowledge, and citizen actions are implicated in the emergence and management of epidemics.
Area: Humanities, Social and Behavioral Sciences

AS.070.465. Concepts: How to Read Hindu and Islamic Texts. 3 Credits.
What is the nature of anthropological concepts and what relations do they bear to concepts internal to a society? We invite students to think with key ideas from Hindu and Islamic traditions, asking if anthropological concepts are best seen as abstractions from the particular or as intertwined with ongoing lines of inquiry, say into the nature of the real and continual efforts to test it? Topics in ritual theory, grammar, aesthetics, translation, revelation, luminosity, figuration and the mythological among those to be considered.
Area: Humanities, Social and Behavioral Sciences

AS.070.473. Readings of Foucault. 3 Credits.
We will do a close reading of selected texts of Foucault to track the concepts of power, subjectivity, government, and care of the self.
Area: Humanities, Social and Behavioral Sciences

AS.362.115. Introduction to Police and Prisons. 3 Credits.
This introductory course will examine policing and prisons in the United States and beyond, with a focus on racial inequality. It will consist of three parts. First, we will define key concepts in police and prison studies. Then, we will explore the contemporary state of prisons and policing in the United States and look at debates around the rise of “mass incarceration” and aggressive forms of policing in the final third of the 20th century. Third, we will explore policing and prison in other parts of the globe in the contemporary moment, highlighting similarities and differences from the U.S. case. What can studying the instruments of social control in other societies reveal about our own? Students will develop an understanding of major trends, keywords, and debates in the literature on policing and prisons, with particular reference to race and racism.
Area: Humanities
AS.362.160. Land, Labour and Environmental Rights and Struggles in Contemporary Africa. 3 Credits.

‘Africa rising’ has become an influential, albeit contested, narrative used by institutions like the International Monetary Fund and World Economic Forum to describe the rapid economic growth in 21st century Africa. This rapid ‘economic growth has been accompanied by another type of ‘Africa Rising’ – a mushrooming of social protest and popular uprisings across the continent. The course will introduce important theoretical perspectives, debates, and examples to equip students to critically examine contemporary social dynamics through the interconnected themes of land, labor and environmental rights and struggles that have gripped the African continent. What has given rise to these awakenings? Who are the actors involved in these actions? What are their demands and strategies? What lessons does it hold for social movement theory and development more broadly? The first section focuses on land reclamation movements, the new wave of ‘land grabs’ and responses from below. The second section presents the role of labor movements and its intersection with popular uprisings. The third section considers responses from communities and movements to the ecological destruction and climate change.

Area: Humanities

AS.362.207. Race and public policy in comparative perspective. 3 Credits.

This course will explore the relationship between racial inequality, racial politics, and policy-making in the western world, particularly as it concerns the fight for equality by people of African descent in the US, Canada, Britain, and France. It will cover historical and contemporary struggles over policy, beginning with the African-American civil rights movement, the ensuing War on Poverty and War on Drugs, and followed by contemporary debates over immigration, racial segregation, poverty and racial economic inequality across the four countries. We will take insights from theory and empirical research to study the role that racial constructs and politics play in policy designs, contests over power and resources, electoral representation, public opinion, social movements, and political change. Through case studies of policies aimed at racial inequality (e.g., affirmative action, police reform, urban revitalization), we will examine why and under what circumstances they arise, what form they take, and in what ways they alleviate or reproduce racial inequality. These questions will be considered in light of the broader impact of neo-liberalism on normative ideas about policy, race, and inequality.

Area: Humanities

AS.362.315. Black Against Empire. 3 Credits.

This course will examine the confrontation of Black social movements with imperialism in the twentieth century. How, we will ask, have key Black internationalist thinkers conceptualized and defined diaspora, capitalism, imperialism, war, and the global? What have been the effects of war and repression, as well as economic growth and globalization, on Black internationalism? Readings may include texts by W.E.B. Du Bois, Angela Davis, Frantz Fanon, Claudia Jones, Robin D.G. Kelley, Claude McKay, Huey P. Newton, Walter Rodney, Malcolm X, etc. Students will complete a research paper on a topic of their own choosing related to Black internationalism in the twentieth century.

Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.362.412. Black Political Thought. 3 Credits.

This course examines how modern black political thought emerged through a series of critical engagements with Enlightenment ideas about universalism, progress, the authority of reason, and the foundations of citizenship. Course readings include texts by W. E. B. Du Bois, Angela Davis, James Boggs, Frantz Fanon, bell hooks, and others.

Writing Intensive

AS.362.413. African American Representations in the Western. 3 Credits.

The course will investigate American cinematic representations of African Americans, slavery (and more specifically its absence), the Civil War, and racial formation along the United States’ southwestern frontier in films produced from the 1950s through the contemporary period. The course closely examines American cinematic fantasies of the western frontier, frontier violence and the desire to escape or erase the tensions of race and slavery that have deeply permeated the American cultural consciousness, strongly shaping the production of American masculine ideals. The course will also take decided note of the national shift from liberal “Great Society Programs” of the 1960s to the conservative “neoliberal” social and cultural ideals in the 1980s and 1990s. Our purpose is to consider the organization and reformation of hegemonic power by way of the complex morality play the western film evokes, typically considering the interstitial geographies between blackness and whiteness, civilization and savagery, belonging and alienation, and metropolis and colonial outpost. We will privilege in our discussions the contested frontiers of racial domination. Films include “Buck and the Preacher,” “The Battle of Algiers,” “Sgt. Rutledge,” and “Django Unchained.”

Area: Humanities

Writing Intensive

Comparative Thought and Literature

AS.300.102. Great Minds. 3 Credits.

Introductory survey of foundational texts of modern Western literature and thought. This semester will include works by René Descartes, Max Weber, W. E. B. Du Bois, Virginia Woolf, Ludwig Wittgenstein, Martin Heidegger, Hannah Arendt, Theodor Adorno, Michel Foucault, Cora Diamond, and Stanley Cavell. The course is taught in lectures and seminar discussions led by the course faculty.

Area: Humanities

Writing Intensive

AS.300.237. Freshman Seminar: Tolstoy's War and Peace. 3 Credits.

Leo Tolstoy's monumental novel War and Peace, which the author Henry James called “a loose baggy monster,” is a sui generis work of modern literature that offered a response and challenge to the European Realist novel and founded a Russian national myth. We will read the novel in translation, alongside its adaptations into opera, film, and Broadway musical.

Area: Humanities

Writing Intensive

AS.300.311. Introduction to Intellectual History. 3 Credits.

This course offers a conceptual and historical introduction to Intellectual History. What makes the “history of ideas” different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call “ideas”? In what sense do they have a history? These are examples of the kind of questions addressed in the course.

Area: Humanities
AS.300.313. Maintaining Social Order: Elements of Conservative Political Philosophy and its Critics. 3 Credits.
The seminar will discuss (primarily German) political philosophy of a broadly 'conservative' orientation in relation to three key periods of social and political upheaval: the Reformation, the French Revolution, and the crisis of parliamentary democracy in the Weimar Republic. Readings from these periods of European history will be approached under the common heading of 'conservatism' for their shared preoccupation with how traditional sources of social unity are to be replaced following times of dramatic change and conflict. We will explore why different political crises have always led philosophers to reiterate the fundamental question of what binds political communities together. This preoccupation distinguishes the philosophical currents of conservative thought surveyed in this course from other, more familiar conservatism with purely reactionary agendas that reassert the superiority of a particular religion, culture, or ethnic group, the rule of elites, or the dismantling of the state in favor of free market forces. Each section on conservative thought will conclude with the most relevant critiques from Leftist political opponents. Readings include Hobbes, Burke, de Maistre, Herder, Hegel, Nietzsche, Schmitt, Kant, Marx, Marcuse.
Area: Humanities
Writing Intensive

AS.300.315. Philosophical Conceptions of the Infinite. 3 Credits.
What is the infinite? Can we comprehend it? Can we experience it? In this course we will explore various ways in which philosophers in the western tradition have answered questions such as these. In the first half of the semester, we will examine theoretical treatments of the infinite that inform how we understand the fabric of our world, from the ordinary objects around us to more sublime concepts of God, space, time, and mathematics. In the second half, we will turn to arguments in aesthetics and ethics that reveal an interplay between infinity and finitude occurring before our very eyes. Philosophers we will cover include Descartes, Spinoza, Locke, Kant, Hegel, Russell, Levinas, and Arendt. Throughout, we will ask such fundamental questions as, what is the starting point of philosophy? what is its methodology? what can it achieve in terms of knowledge? and in terms of practice?
Area: Humanities

AS.300.317. The Russian Novel. 3 Credits.
This course introduces students to the nineteenth century Russian novel and considers its lasting impact on world culture. We will read classic masterpieces of the psychological and philosophical novel, and their experimental forerunners. Short lectures on historical and cultural context and on methods of literary analysis will be combined with intensive group discussion. Novels include Anna Karenina, Crime and Punishment, Eugene Onegin, Dead Souls, and Hero of our Time.
Area: Humanities
Writing Intensive

AS.300.324. Cinema of the 1930s: Communist and Capitalist Fantasies. 3 Credits.
Comedy and musical comedy film flourished in the USA during the Great Depression as well as in the USSR during the Stalinist Great Terror. This course will compare films of the era in a variety of genres (musical, epic, Western, drama), examining the intersections between politics and aesthetics as well as the lasting implications of the films themselves in light of theoretical works on film as a medium, ethics and gender.
Area: Humanities

AS.300.331. The Authoritarian Image: Russian Cinema from Stalin to Putin. 3 Credits.
Vladimir Putin's charismatic authority has a deep history in Russian culture. We'll investigate that history through cinema, which Lenin called "the most important of the arts." While Soviet cinema often served as immersive propaganda, directors also found ways to question authority and power. Films to be screened range from Sergei Eisenstein's Ivan the Terrible (1944) to the 2013 documentary Pussy Riot: A Punk Prayer. This course will combine study of Russian and Soviet culture from the end of World War II to the present with study of film history, style, and technique.
Area: Humanities
Writing Intensive

AS.300.334. Transwar Japanese and Japanophone Literatures. 3 Credits.
A survey of Japanese and Japanese-language literatures produced in Japan and its (former)colonies during the "transwar" period, or the several years before and after the end of WWII. This periodization enables us to take into account the shifting boundaries, sovereignties, and identities amid the intensification of Japanese imperialism and in the aftermath of its eventual demise. We aim to pay particular attention to voices marginalized in this political watershed, such as those of Japanese-language writers from colonial Korea and Taiwan, intra-imperial migrants, and radical critics of Japan's "postwar" regime. Underlying our investigation is the question of whether literature can be an agent of justice when politics fails to deliver it. We will introduce secondary readings by Adorno, Arendt, Levinas, Derrida, and Scarry, among others, to help us interrogate this question. All readings are in English.
Area: Humanities

AS.300.342. Imagining Climate Change. 3 Credits.
Climate change poses an existential threat to human civilization. Yet the attention and concern it receives in ordinary life and culture is nowhere near what science tells us is required. What are the causes of this mismatch between crisis and response? What accounts for our collective inability to imagine and grasp this new reality, and how can it be overcome? In pursuit of these questions, we will look at texts from politics, philosophy, literary theory, and religion that frame climate change as a fundamental challenge not only to humanity but to the humanities: the disciplines and modes of thought that we rely on to make sense of the human condition. The second part of the course will examine works of literature and film for examples of how contemporary artists attempt to make the climate crisis visible and intelligible to us.
Area: Humanities

AS.300.343. The Cinema of Revolution. 3 Credits.
This course examines global political revolutions through cinema and the ways in which cinema helped to make political revolutions. Early cinema was intimately intertwined with the Russian revolution, and Russian revolutionary cinema had a profound impact on the ways in which media was used for revolutionary purposes through the 20th century and around the world. Students will be introduced to films from a number of different countries, and the history and context of their production and reception. They will also learn methods of film analysis and produce their own video essay.
Area: Humanities
AS.300.366. Russian Avant-Garde Cinema. 3 Credits.
Russian cinema was born out of the intense artistic experimentation of
the fin-de-siècle avant-garde and developed in a climate of dramatic
political and cultural change in the twenties and thirties. While subject
to draconian censorship in the Soviet period, it nonetheless engaged in
active dialogue with the film industries of Western Europe and America
and had a lasting impact on world cinema. This course examines the
extraordinary flourishing of avant-garde cinema in the Soviet Union in
the 1920s and 30s including films by Eisenstein, Vertov, Pudovkin, and
Dovzhenko, their theoretical writings, and their far-reaching influence on
film and film theory. All readings in English, films subtitled in English.
Area: Humanities
Writing Intensive

AS.300.410. China in Imagination. 3 Credits.
What is China? This question has gained new relevance amid the nation’s
recent rise as a global power. We survey how China was imagined,
represented, and conceptualized in literature, film, and philosophical
writings from mainland China, overseas Chinese communities, East
Asia, and the West from the late nineteenth century to the present.
Through exploring this complex history, we aim to understand China and
the contemporary world in a diversified, historically self-reflective way.
Topics of discussion include, but not limited to, representation, identity,
form, allegory, exile, diaspora, modernism, translation, world history, and
universality. All readings are in English; all films subtitled in English.
Area: Humanities

Earth Planetary Sciences
AS.271.360. Climate Change: Science & Policy. 3 Credits.
Prereq: 270.103 or permission of instructor. This course will investigate
the policy and scientific debate over global warming. It will review the
current state of scientific knowledge about climate change, examine the
potential impacts and implications of climate change, explore our options
for responding to climate change, and discuss the present political
debate over global warming.
Area: Natural Sciences

AS.271.401. Environmental Ethics. 3 Credits.
Environmental Ethics is a philosophical discipline that examines the
moral relationship between humans and the natural environment.
For individuals and societies, it can help structure our experience of
nature, environmental problems, human-environmental relations, and
ecological awareness. Beginning with a comprehensive analysis of
their own values, students will explore complex ethical questions,
philosophical paradigms and real-life case studies through readings,
films and seminar discussions. Traditional ethical theories, including
consequentialism, deontology, and virtue ethics will be examined and
applied. Environmental moral worldviews, ranging from anthropocentric
to ecocentric perspectives, will be critically evaluated. Organized
debates will help students strengthen their ability to deconstruct and
assess ethical arguments and to communicate viewpoints rooted in
ethical principles. Students will apply ethical reasoning skills to an
examination of contemporary environmental issues including, among
others, biodiversity conservation, environmental justice, climate change,
and overpopulation. Students will also develop, defend and apply their
own personal environmental ethical framework. A basic understanding of
modern environmental history and contemporary environmental issues is
required. Prior experience with philosophy and ethics is not required.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.271.402. Water, Energy, and Food. 3 Credits.
The water, energy and food (WEF) nexus is a topic of growing interest
in the research and policy communities. This course will survey WEF
concepts and principles, introduce tools of analysis, and engage
students in case studies of critical WEF issues in the United States and
internationally.

AS.271.403. Environmental Policymaking and Policy Analysis. 3
Credits.
This course provides students with a broad introduction to US
environmental policymaking and policy analysis. Included are a historical
perspective as well as an analysis of future policymaking strategies.
Students examine the political and legal framework, become familiar with
precedent-setting statutes such as NEPA, RCRA, and the Clean Air and
Clean Water Acts, and study models for environmental policy analysis.
Cost benefit studies, the limits of science in policymaking, and the impact
of environmental policies on society are important aspects of this course.
A comparison of national and international policymaking is designed
to provide students with the proper perspective. This course is taught
in conjunction with an identical graduate course. All students will be
expected to perform at a graduate level.
Area: Social and Behavioral Sciences

AS.271.405. Energy and Politics. 3 Credits.
In the 21st century, energy supply and consumption are critical subjects
for international politics, social development, and the future of the
environment. Policies that determine energy supply and consumption
come to being in complex institutional, national, and international
contexts. This course will equip students with the necessary background
to analyze energy policy issues and contribute to them in a meaningful
manner. It also involves examination of wide-ranging debates over the
switch to renewables, the use of unconventional energy sources, and the
environmental consequences of energy choices.
Area: Social and Behavioral Sciences

East Asian Studies
AS.310.106. Introduction to Korean History and Culture. 3 Credits.
This course offers a comprehensive overview of Korean history
and culture from ancient times to the modern era. Through primary,
secondary, and audio-visual sources, students will become familiar not
only with the overall contours of the entirety of Korean history, but also
with its cultural and religious legacy. The course combines lectures and
class discussions.
Area: Humanities

This course aims to inspire students to explore the impacts, meanings,
and explanations of social transformation in contemporary China, via the
lens of documentary photography. The photographic images of selective
topics will include the products of photojournalism and documentary
photography, and several documentary films, by both Chinese and non-
Chinese photographers. While one picture is worth thousand words,
one picture may also provoke countless interpretations. Students are
strongly encouraged to read broadly about different aspects of social
transformations in contemporary China, and to select and curate their
own subjects of photo images. The spirit of comparative study of
documentary photography of China and other parts of world will be
strongly encouraged. Active class participation is imperative. A small
exhibition on the campus will be organized by the Spring semester. The
course is designed for upper division undergraduates. Cross-listed with
Sociology and International Studies (CP).
Area: Social and Behavioral Sciences
AS.310.222. The Religions of Korea. 3 Credits.
This course offers an overview of the religions of Korea, both indigenous and foreign, old and new. Attention will be paid to the history of these religions, their impact on society, as well as their teachings and objectives. Students will engage with various forms of secondary as well as primary sources including scriptures, sermons, and religious tracts.
Area: Humanities

AS.310.230. Chinese Politics and Society. 3 Credits.
This introductory course will familiarize students with the major dynamics of political and social change in contemporary China since 1949. The course will be divided chronologically into four main topics: 1. The contested processes of nation-state making in modern China before 1949; 2. The making of the socialist system during the Mao Years and its dismantling since 1978; 3. The Reform Era transformation to a market economy with Chinese characteristics; 4. The dynamic relationships among the state, market and society since the new millennium. Students will explore how scholars have explained major political and social changes with respect to individual and collective rationalities, specific organizational and institutional arrangements, and specific strategic and cultural mechanisms of Chinese political and social habits.
Area: Humanities, Social and Behavioral Sciences

AS.310.302. China, Human Rights, and U.S. Policy Responses. 3 Credits.
This seminar explores select human rights issues in China (e.g., human rights impacts of the management of COVID-19, the Hong Kong protests, mass detentions/forced labor in Xinjiang province) and the extraterritorial reach of China's human rights challenges. As a practice and policy-oriented course, we will also investigate different responses and actions taken by the U.S. government and Congress, including hearings, legislation, reports, statements, etc. Class assignments include advocacy for Chinese prisoners of conscience (each student will "adopt" one currently detained PoC), and written work that mirrors real-world writing. We'll also have several human rights advocates and experts visit the class to share their experiences and insights. This seminar explores select human rights issues in China (e.g., human rights impacts of the management of COVID-19, the Hong Kong protests, mass detentions/forced labor in Xinjiang province) and the extraterritorial reach of China's human rights challenges. We'll also have several human rights advocates and experts visit the class to share their experiences and insights.
Area: Social and Behavioral Sciences

AS.310.305. Southeast Asia and US Security Strategy. 3 Credits.
This survey course is designed to introduce students to Southeast Asia -- the ten member countries of the Association of Southeast Asian Nations (ASEAN) plus Australia and New Zealand. Southeast Asia is an integral part of the broader region of East Asia and a geographic bridge to the Indian subcontinent (South Asia). Southeast Asia has been one of the great success stories in the saga of modernization and development of post-colonial Afro-Asia over the last six decades. Its resulting economic importance is matched by its strategic significance given the presence of imbedded jihadist networks and the emergence of China as a regional great power and aspirant superpower. Nevertheless, the region has been largely overlooked by senior foreign policy and defense officials in Washington. This course will equip students to fill that void by examining the region from the perspective of national security strategy -- broadly understood in its multiple dimensions. Students will be challenged to formulate some element of a viable U.S. national security strategy for the region.
Area: Social and Behavioral Sciences

AS.310.320. Sociology of Urban China. 3 Credits.
Urban China has gone through two major social transformations since 1949: the embrace of a central planning socialist system between early 1950s and late 70s, and the embrace of neo-liberal market economy in the so-call “socialism with Chinese characteristics” since 1980. While the political regime remains the same over time, many profound changes have occurred in economic life, social life, cultural life, spiritual life and civil life. What really happened in the social transformation of urban China? What would explain those changes? How did people in different walk of life deal with those huge and deep social transformation? To address these concerns, we will exam a list of issues. Topics includes changes in population and demographic characteristics, employment structure and job market, workplace and residential communities, income and wealth distributions, segregation impacts of urban household registration systems, urban consumption patterns, courting cultures and dressing codes, spiritual practices, and social stratifications. In the realm of public policies, we will pay special attentions to the issues of transportation, housing, medical service, public education, social insurance, and environmental protection. We will also study the characteristics of contentious politics and how social conflicts of power, interest, justice, cultural and belief were processed in urban China.
Area: Social and Behavioral Sciences

AS.310.322. Korean History Through Film and Literature. 3 Credits.
In this course, students will engage with select topics in Korean history from premodern and modern times and examine how the past has been represented through various forms of film and literature. This will be combined with readings of academic articles to allow students to gauge the distance between scholarship and cultural expressions of history. Through this, students will be introduced to the highly contested and often polarizing nature of Korean history and the competition surrounding historical memory. Prior coursework in East Asian Studies strongly recommended.
Area: Humanities
Writing Intensive

AS.310.323. The History and Culture of North Korea. 3 Credits.
This is a seminar that investigates the history and culture of North Korea. Course materials include scholarly articles, political tracts, biographies, movies, as well as works of fiction. For the final project, students will write an extended research paper on a topic of their choice.
Area: Humanities, Social and Behavioral Sciences
AS.310.340. Development and Social Change in Rural China. 3 Credits.
This course will survey the major issues of development and social change in rural China since 1950s. These issues will be addressed in chronological order. They include land ownership and land grabbing, organization of rural economic, political, and social life, rural elections and village governance, development strategies, urban-rural relationship in resource allocation, rural modernization strategies in regard to irrigation, clean drinking water, electricity supply, hard paved road, education and rural medical service, women’s rights and family life, rural consumption, and etc. This course will prepare students, both empirically and analytically, to understand what happened in rural China from 1949 to the present, and how we can engage in policy and theoretical discussions based on what we learn.
Area: Humanities, Social and Behavioral Sciences

AS.310.402. Labor Politics in China. 3 Credits.
This course explores the transformation of labor relations in China over the past century. It will cover the origins of the labor movement, the changes brought about by the 1949 Revolution, the industrial battles of the Cultural Revolution, the traumatic restructuring of state-owned enterprises over the past two decades, the rise of private enterprise and export-oriented industry, the conditions faced by migrant workers today, and recent developments in industrial relations and labor conflict. The course is designed for upper division undergraduates and graduate students. Cross-listed with Sociology and International Studies (CP).
Area: Social and Behavioral Sciences
Writing Intensive

AS.310.404. Korea in the World. 3 Credits.
This seminar examines Korea’s interactions with the outside world including Japan, China, and the Americas, as well as Europe and Southeast Asia. We will touch upon a wide range of topics, including political, economic, and military interactions, as well as cultural, intellectual, and religious engagements. The purpose is to identify larger transnational trends and parallels in understanding Korea’s position in the world.
Area: Humanities, Social and Behavioral Sciences

Economics
AS.180.101. Elements of Macroeconomics. 3 Credits.
An introduction to the economic system and economic analysis, with emphasis on total national income and output, employment, the price level and inflation, money, the government budget, the national debt, and interest rates. The role of public policy. Applications of economic analysis to government and personal decisions. Prerequisite: basic facility with graphs and algebra.
Area: Social and Behavioral Sciences

AS.180.102. Elements of Microeconomics. 3 Credits.
An introduction to the economic system and economic analysis with emphasis on demand and supply, relative prices, the allocation of resources, and the distribution of goods and services, theory of consumer behavior, theory of the firm, and competition and monopoly, including the application of microeconomic analysis to contemporary problems.
Area: Social and Behavioral Sciences

AS.180.210. Migrating to Opportunity? Economic Evidence from East Asia, the U.S. and the EU. 3 Credits.
Increased mobility of people across national borders, whether by choice or by force, has become an integral part of the modern world. Using a comparative perspective and an applied economics approach, the course explores the economic and political determinants, and (likely) consequences of migration flows for East Asia, the US and the EU. Lectures, assignments and in class discussions, will be built around the following topics: i) migrants’ self-selection; ii) human capital investment decision-making; iii) remittance decisions and effects; iv) impacts on labor markets of both receiving and sending countries; and v) the economic benefits from immigration. Overall, the course will give students perspective on the why people choose or feel compelled to leave their countries, how receiving countries respond to migrants’ presence, and the key economic policy concerns that are influencing the shaping of immigration policy in East Asia, the US, and the EU.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.214. The Economic Experience of the BRIC Countries. 3 Credits.
In 2001, Jim O’Neill, the Chief Economist at Goldman Sachs, coined the acronym BRIC to identify the four large emerging economies, Brazil, Russia, India and China. These economies have since had an amazing run, and have emerged as the biggest and fastest growing emerging markets. In this course, we look at the economic experiences of the BRIC countries for the past 50 years. We discuss the reasons that have contributed to their exceptional growth rates, with particular emphasis on their transformation into market economies. We also analyze the challenges that these countries continue to face in their development process.
Prerequisite(s): AS.180.101 AND AS.180.102
Area: Social and Behavioral Sciences

AS.180.217. Game Theory in Social Sciences. 3 Credits.
Game Theory is the study of multiple person decision problems in which the well-being of a decision maker depends not only on his own actions but also on those of others. Such problems arise frequently in economics, political science, business, military science and many other areas. In this course, we will learn how to model different social situations as games and how to use solution concepts to understand players’ behavior. We will consider various examples from different fields and will play several games in class. The emphasis of the class is on the conceptual analysis and applications and we will keep the level of mathematical technicalities at the minimum – high school algebra and one term of calculus will be sufficient. Students who took AS.180.117 are not eligible to take AS.180.217.
Prerequisite(s): Students may not have previously taken AS.180.117; AS.180.102 or instructor permission
Area: Social and Behavioral Sciences
AS.180.221. The Informal Economy: Who Wins, Who Loses, and Why We Care About It.  3 Credits.
The informal economy is one of the most complex economic and political phenomena of our time. It exists in rich and poor countries alike, currently employs almost half of the world's workers, about 1.8 billion people, and totals to economic activity of around $10 trillion. If the informal economy were an independent nation, it would be the second-largest economy in the world, after the United States and before China. In today's globalizing environment, are informal economies a poverty trap or an engine of growth? Do they stimulate entrepreneurship and popular empowerment, or promote exploitation? How does an improved understanding of the size and organization of informal economies affect service provision, social policy or taxation? What are the implications of the informal economy for social cohesion and popular politics? The proposed course will address these (as well as other) questions related to the informal economy to offer students an understanding of such complex phenomenon from a variety of perspectives. The course will comprise three parts. Part 1 will explore the complexities of the informal economy, and the effects of informality on policies of inclusive growth. Part 2 will draw on empirical evidence and comparative case studies to examine informal economies in various regions, including Africa, East Asia, North and South America, and Europe, highlighting variations in activities, relations with the state, global integration and economic outcomes. Finally, Part 3 will discuss the ongoing economic policy shift from punitive measures to accepting informality as a virtual space through which citizens flow from job-seeker to compliant entrepreneurs.  
Prerequisite(s): AS.180.101 AND AS.180.102  
Area: Social and Behavioral Sciences  

AS.180.228. Economic Development.  3 Credits.  
A comprehensive survey of economic behavior by households, farms and firms in poor countries and the role of and for governments. Discussions include measurement of income levels, economy-wide equilibrium, sources of growth, agriculture and industry, international trade and investment, savings, population, fertility, education, health, income distribution and public finances. Applies economic theory rigorously to interpret and evaluate the economic experience of poor countries. Diagnostic test on Elements of Economics is required in the second week. Grading based on 3 exams and one paper.  
Prerequisite(s): AS.180.101 AND AS.180.102  
Area: Social and Behavioral Sciences  
Writing Intensive  

AS.180.233. Economics of Transition and Institutional Change.  3 Credits.  
This course will introduce students to the comparative analysis of institutions of existing capitalist systems and to the historical evolution of those institutions. By comparing the economic systems of different nations, we will try to reveal the institutional setups that either contribute or hinder economic performance. We will also examine the process of countries transforming their economies and investigate the factors that determine the differences in reforms' outcomes between countries.  
Prerequisite(s): AS.180.101 AND AS.180.102  
Area: Social and Behavioral Sciences  
Writing Intensive  

AS.180.240. JHU Bologna: History of Banking.  3 Credits.  
Economics course offered on the JHU Summer Program in Bologna. Permission required. Must be taken for a letter grade. Open to students on the JHU/Bologna summer program only.  
Area: Social and Behavioral Sciences  

AS.180.241. International Trade.  3 Credits.  
Theory of comparative advantage and the international division of labor: the determinants and pattern of trade, factor price equalization, factor mobility, gains from trade and distribution of income, and theory and practice or tariffs and other trade restrictions. Recommended Course Background: AS.180.101.  
Prerequisite(s): AS.180.101 AND AS.180.102  
Area: Social and Behavioral Sciences  

AS.180.242. International Monetary Economics.  3 Credits.  
This course presents International Monetary Economics theory and applies it towards gaining an understanding of recent events and current policy issues. The theory presented in this course covers a broad range of topics including exchange rate determination, monetary and fiscal policy in an open economy, balance of payments crisis, the choice of exchange rate, and international debt. The insights provided by these theoretical frameworks will enable us to discuss topics such as the global financial crisis, global financial imbalances, the Chinese exchange rate regime, and proposed changes in the international financial architecture.  
Prerequisite(s): AS.180.101 AND AS.180.102  
Area: Social and Behavioral Sciences  

AS.180.246. Environmental Economics.  3 Credits.  
This course presents a broad overview of the key issues in modern environmental economics with a focus on understanding and solving urban pollution challenges in developed and developing nations. This course explores how cities and nations can achieve the ‘win-win’ of economic growth and reduced urban pollution. Special attention is paid to the incentives of households, firms and governments in reducing the production of pollution. The course examines a number of pollution challenges including: air, water, noise, garbage and the global challenge of climate change.  
Area: Humanities
AS.180.303. Topics in International Macroeconomics and Finance. 3 Credits.
The course will review selected topics in international macroeconomics and finance. The topics for the Fall of 2019 include: financial globalization; international portfolio diversification; capital account liberalization and the choice of the exchange rate regime in emerging markets; the global financial safety net; macroeconomic adjustment in the euro area.
Prerequisite(s): AS.180.101 AND AS.180.102 AND AS.180.302
Area: Social and Behavioral Sciences

AS.180.338. Political Economy and Development. 3 Credits.
Good governance is associated with desirable outcomes across countries and societies: higher life satisfaction, greater income per capita, lower child mortality, longer life expectancy, less disease, etc. But these statistical associations in the data are not sufficient to establish either that good governance truly causes such societal outcomes, or what types of policies produce them. This course asks: What are the determinants of good governance? Is good governance ‘good’ beyond its intrinsic desirability? If so, how? We use a data-driven approach, focusing on quantitative empirical methods and their applications to policy. The goal is to develop skills to be savvy consumers, as well as producers, of policy-relevant evidence related to issues of governance, in rich and poor countries alike. Topics will include: democracy, corruption, conflict, culture, mass media, quotas, and foreign aid.
Prerequisite(s): (AS.180.301 OR AS.180.401) AND AS.180.334
Area: Social and Behavioral Sciences

AS.180.351. Labor Economics. 3 Credits.
The course discusses various issues in labor markets from the perspective of economic theory. We first study the major forces at work that shape labor market behavior; firms’ labor demand and workers’ labor supply. Then we discuss the equilibrium behavior of employment and wages. Using these tools, we also cover various applied topics in labor economics, such as minimum wage regulations, male-female wage differentials, human capital investment, worker mobility, and unemployment.
Prerequisite(s): AS.180.301 OR AS.180.401
Area: Social and Behavioral Sciences

AS.180.355. Economics of Poverty/Inequality. 3 Credits.
This course focuses on the economics of poverty and inequality. It covers the measurement of poverty and inequality, facts and trends over time, the causes of poverty and inequality with a focus on those related to earnings and the labor market, and public policy toward poverty and inequality, covering both taxation and government expenditure and programs. By the nature of the material, the course is fairly statistical and quantitative. Students should have an intermediate understanding of microeconomic concepts. Basic knowledge of regression analysis is also helpful.
Prerequisite(s): AS.180.301
Area: Social and Behavioral Sciences

AS.180.361. Rich Countries, Poor Countries. 3 Credits.
Why are some countries rich while some other countries poor? Why does a country’s income per person generally grow over time? We try to analyze these questions using the theoretical and empirical growth literature. We will study seminal growth models, and also try to explain cross-country income differences in terms of factors like geography, institutions and global integration. Knowledge of regression analysis (including instrumental variables estimation) is required.
Prerequisite(s): AS.180.302 AND (AS.180.334 OR AS.180.434)
Area: Social and Behavioral Sciences

AS.180.389. Social Policy Implications of Behavioral Economics. 3 Credits.
Economists increasingly incorporate insights from psychology into models of rational decision-making. Known as ‘behavioral economics’, this line of research considers how, for example, emotions, rules-of-thumb, biased beliefs and time-inconsistent preferences influence how we make choices. Behavioral economics increasingly pervades policy discussions on topics as diverse as: obesity, the role of media, subprime mortgages and voting patterns. Behavioral models are certainly novel, but do they help us to design superior social policies? With the goal of preparing students to address this question, this course (1) provides a thorough overview of the main contributions of behavioral economics, highlighting departures from more traditional economic models and (2) emphasizes how behavioral economic models might (or might not) improve how we think about social policy.
Prerequisite(s): AS.180.301 OR AS.180.401; AS.180.334 OR AS.180.434 can be taken concurrently.
Area: Social and Behavioral Sciences

AS.180.390. Health Economics & Developing Countries. 3 Credits.
Benefits of good health and its costs. Health demand and supply in poor countries. Welfare economics of Public Health. This is a writing seminar. There are some lectures on how to write a paper and on the substance of the economics of international health but the focus and only assignment is a 40-page paper by each student under the supervision of the instructor.
Prerequisite(s): AS.180.301 or AS.180.401; Students may not take AS.180.390 if they took AS.180.391.
Area: Social and Behavioral Sciences
Writing Intensive

AS.180.391. Economics of China. 3 Credits.
Discussion of the economic experience of Post-War China, primarily emphasizing topics rather than historical narrative: agriculture, industry including corporate governance and public enterprises, international trade, population, migration, education, health, public finances among other topics. This course is writing intensive and the only assignment for the course is a 40-page paper on some aspect of the Chinese economy to be done under the close supervision of the instructor. The course is not primarily a lecture course, although there will be some lectures on how to do a paper and on the substance of the Chinese economic experience.
Prerequisite(s): AS.180.301 OR AS.180.401; Students may not take AS.180.390 if they took AS.180.391.
Writing Intensive

German Romance Languages Literatures

AS.211.202. Freshman Seminar: A Thousand Years of Jewish Culture. 3 Credits.
This course will introduce students to the history and culture of Ashkenazi Jews through their vernacular, Yiddish, from the settlement of Jews in German-speaking lands in medieval times to the present day. Particular emphasis will be placed on the responses of Yiddish-speaking Jews to the challenges posed by modernity to a traditional society. In addition to studying a wide range of texts—including fiction, poetry, memoir, song, and film—students will learn how to read the Yiddish alphabet, and will prepare a meal of traditional Ashkenazi dishes. No prior knowledge of Yiddish is necessary for this course.
Area: Humanities
AS.211.217. Freshman Seminar: From Rabbis to Revolutionaries: Modern Jewish Identities. 3 Credits.
Many Jews in the modern period abandoned the traditional religious way of life, but continued to identify strongly as Jews, and even those who remained committed to tradition had to adapt. Through the prism of the Yiddish language, the vernacular of Eastern European Jewry, this course will explore different ways in which Jews reacted to historical developments and embraced political and cultural movements of their time, from the founding of modern Yiddish theater in Romania, to the creation of a Jewish autonomous region in the far east of the Soviet Union, to the development of avant-garde poetry in New York. In addition to studying a wide range of texts—including fiction, poetry, memoir, song, and film—students will learn how to read the Yiddish alphabet, and will explore food culture by preparing a meal of Eastern European Jewish dishes. No prior knowledge of Yiddish is necessary for this course. Area: Humanities

AS.211.222. Italian Cinema: The classics, the Forgotten and the Emergent. 3 Credits.
This course traces the history of Italian cinema from the silent era to the new millennium, highlighting its main trends and genres, and reflecting on the major transformations modern and contemporary Italian society experienced over the twentieth and twenty-first centuries. We shall examine iconic films such as Vittorio De Sica's Bicycle Thieves, Federico Fellini’s La Dolce Vita, Michelangelo Antonioni’s L’Avventura, and Pier Paolo Pasolini’s Mamma Roma, that received international recognition and influenced other national, cinematic productions. We shall also look at the work of less famous, or independent filmmakers who received less critical attention. While this class takes an historical approach, it also includes a theoretical component and introduces students to the specificity of the cinematic language, examining films in relation to the mise-en-scène, frame composition, camera movements, editing, and sound. This class is taught in English. Area: Humanities

AS.211.224. Made in Italy: Italian style in context. 3 Credits.
Italy and the “Italian style” have become synonym of exquisite taste, class, and elegance thanks to the quality of Italian craftsmanship. This course will explore some of the major factors that contributed to the rise of Italian fashion and Italian industrial design as iconic all around the world. The classes will focus on the main protagonists and art movements that influenced the development of Italian style. We will analyze trends, clothing, and style not only in a historical context, but also through a critical apparatus that will include themes related to gender, culture, power, and politics. The course is taught in English. No knowledge of Italian is required, but those who can read in Italian will have an opportunity to do so. Everyone will learn some Italian words and expressions. Area: Humanities

AS.211.231. Freshman seminar: Planet Amazonia: Culture, History, and the Environment. 3 Credits.
Without Amazonia, global warming could reach levels that threaten life on the planet. Yet, in an era of deforestation and climate change, Amazonia itself might be on the verge of disappearance, with disastrous consequences for the world. This course proposes interdisciplinary perspectives on Amazonia through a range of works drawn from history, anthropology, archeology, environmental studies, literature, and the arts. We'll look at texts by European travelers and missionaries who contributed to the paradoxical image of Amazonia as a “virgin paradise” or a “green hell”; scientific studies and artists’ depictions of the region's flora and fauna; the often-overlooked history of human occupation of the region; and projects to colonize, develop, or conserve the world's largest tropical forest. What importance does Amazonia hold for Latin American and global geopolitics? How do art and literature, including indigenous writings, create, reinforce, or deconstruct clichés about the region? What alternative futures for our planet can Amazonia help us to imagine? Minors in Latin American Studies may count the class toward the Portuguese Language and Brazilian Culture concentration. Area: Humanities

AS.211.235. Panorama of German Thought. 3 Credits.
This course introduces students to major figures and trends in German literature and thought from the sixteenth to the twentieth century. We will pay particular attention to the evolution of German political thought from the Protestant Reformation to the foundation of the German Federal Republic after WWII. How did the Protestant Reformation affect the understanding of the state, rights, civic institutions, and temporal authority in Germany? How did German Enlightenment thinkers conceive of ethics and politics or morality and rights? How do German writers define the nation, community, and the people or das Volk? What is the link between romanticism and nationalism? To what degree is political economy, as developed by Marx, a critical response to romanticism? How did German thinkers conceive of power and force in the wake of World Wars I and II? What are the ties that bind and rend a community in this tradition? We will consider these and related questions in this course through careful readings of selected works. Area: Humanities Writing Intensive

AS.211.316. Brazilian Cinema and Topics in Contemporary Brazilian Society. 3 Credits.
Course is taught in ENGLISH - This course is an introduction to the academic study of cinema as a communicative art and to Brazilian film. The films selected focuses on films from the late 1950s to the present and highlight import episodes and challenges in the advancement of the Brazilian society as well as its cinematic production with a special view to the film aesthetics through analysis from a number of critical perspectives, including class, race, gender as well as ethnicity, nationalism or national identity, colonialism, social changes, and the politics of representation. In this sense, the films and documentaries that we will be watching and studying encompass the period from the rise of New Cinema (Cinema Novo) up to films exploring the most recent trends, including movies launched up to 2016. Students wishing to do the course work in English, for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory / Unsatisfactory basis. Area: Humanities Writing Intensive
AS.211.327. Ecocinema: Framing Italy's Environmental Crises. 3 Credits.

Over the past decade, growing numbers of filmmakers in Italy have addressed ecological crises in their work. This class takes an eco-critical approach to contemporary Italian cinema, examining a body of compelling place-centered stories that deal with local and global issues. Defining the scope of eco-cinema and the ways we can interrogate films as ecological texts, we shall screen earth-centered films that raise consciousness about the consequences of human manipulation of the natural world; the complicity of industry, government, and organized crime in creating environmental crises; and the effects of economic and social malaise. Screenings include iconic films such as Michelangelo Antonioni's Red Desert (1963), more recent, critically acclaimed films such as Matteo Garrone's Gomorrah (2008), Alice Rohrwacher's Happy as Lazzaro (2018), and many others.

Area: Humanities

AS.211.328. Berlin Between the Wars: Literature, Art, Music, Film. 3 Credits.

Explore the diverse culture of Berlin during the heyday of modernism. During the Weimar Republic, Berlin became a center for theater, visual arts, film, music, and literature that would have an outsized impact on culture throughout the world and the twentieth century. The thinkers, artists, and writers drawn to interwar Berlin produced a body of work that encapsulates many of the issues of the period: the effect of the modern city on society; "the New Woman"; socialist revolutionary politics; the rise of the Nazis; and economic turmoil. While learning about interwar Berlin's cultural diversity, we will take a special look at works by Jewish writers and artists that engage with the question of ethnic, religious, and national identity in the modern world, specifically in the context of Berlin's rich Jewish history and the rise of anti-Semitism in the interwar period. All readings will be in translation.

Area: Humanities

AS.211.329. Museums and Identity. 3 Credits.

The museum boom of the last half-century has centered largely around museums dedicated to the culture and history of identity groups, including national, ethnic, religious, and minority groups. In this course we will examine such museums and consider their long history through a comparison of the theory and practice of Jewish museums with other identity museums. We will study the various museological traditions that engage identity, including the collection of art and antiquities, ethnographic exhibitions, history museums, heritage museums, art museums, and other museums of culture. Some of the questions we will ask include: what are museums for and who are they for? how do museums shape identity? and how do the various types of museums relate to one another? Our primary work will be to examine a variety of contemporary examples around the world with visits to local museums including the Jewish Museum of Maryland, the National Museum of African American History and Culture and the National Museum of the American Indian.

Area: Humanities

AS.211.331. Vagabonds and Ramblers: Space & Place in Women's Cinema. 3 Credits.

In recent times in Italy, a new generation of women filmmakers has found its own space in the traditionally male dominated film industry. This “counter cinema” abounds with female city walkers, migrants, vagabonds and other types of urban nomads, whose movement through space signifies a quest for freedom, gestures of protest and rebellion, and a search for place. We start by looking at the work of a pioneer filmmakers such as Elvira Notari, the first woman director in Italy, and then discuss the issue of gender and space in contemporary films by directors Francesca Comencini, Alice Rohrwacher, and Eleonora Danco. To enrich the analysis, we shall also examine films directed by non-Italians who deal with the theme of women's mobility and their centrality/marginality from different socio-geographic contexts. Other directors included will be Agnès Varda (France), Chantal Akerman (Belgium), Haifa al-Mansour (Saudi Arabia), and Xiaolu Guo (China) Readings will include essays by Laura Mulvey, Ann E. Kaplan, Linda Williams, and Patricia White.

Area: Humanities

AS.211.333. Representing the Holocaust. 3 Credits.

How has the Holocaust been represented in literature and film? Are there special challenges posed by genocide to the traditions of visual and literary representation? Where does the Holocaust fit in to the array of concerns that the visual arts and literature express? And where do art and literature fit in to the commemoration of communal tragedy and the working through of individual trauma entailed by thinking about and representing the Holocaust? These questions will guide our consideration of a range of texts — nonfiction, novels, poetry — in Yiddish, German, English, French and other languages (including works by Primo Levi and Isaac Bashevis Singer), as well as films from French documentaries to Hollywood blockbusters (including films by Alain Resnais, Claude Lanzmann, and Steven Spielberg). All readings in English.

Prerequisite(s): Cannot be taken by anyone who previously took AS.213.361

Area: Humanities

AS.211.334. Power and Resistance in French Political Thought. 3 Credits.

Even as a strong, divine-right monarchy emerged in France, following the Renaissance wars of religion, rebellious French thinkers never stopped questioning the foundations of power. They focused critically not only on the claims of authority issuing from the top, but also on the submissiveness of the governed and the reach of propaganda. This course examines how power shapes minds and bodies, from absolutism to the Revolution, to democratic laïcité. Readings include works by La Boétie, Montaigne, Loyseau, Bayle, Rousseau, Saint-Just, Maistre, Tocqueville, Foucault, Lefort, Rancière and the Assemblée Nationale. Readings and discussion in English.

Area: Humanities

AS.213.361. JHU Bologna Program: Food for Thought: Gastronomy, Politics & Identity. 3 Credits.

Italian Culture course offered on the JHU Summer Program in Bologna. Permission required. Must be taken for a letter grade. Open to students admitted to the JHU Summer Program in Bologna only.

Area: Humanities
AS.211.360. Franco-American relations. 3 Credits.
Historical allies, yet rivals in trade; partners in intellectual exchange, yet baffled by each other’s culture: in this course we will examine core elements of the relationship between France & the US through the lens of diplomacy, commerce, language, food, cinema, the arts, friendship, feminism, parenting, ethnicity, health, climate change, and social justice. Students will develop and exercise critical thinking habits while working toward the learning outcome of a deeper cross-cultural understanding of France and the US. In the bigger picture, interactions between the two countries will be considered as a significant model of international relations. Course is taught in English.
Area: Humanities

AS.211.361. Narratives of Dissent in Israeli Society and Culture. 3 Credits.
In this course we will study and analyze the notion of dissent in Israeli society and culture on its various literary and artistic forms. We will examine the emergence and the formation of various political and social protest movements, such as the Israeli Black Panthers, Israeli feminism and the 2011 Social Justice protest. We will discuss at length the history and the nature of dissent in the military and in relation to Israeli wars and will track changes in these relation. Significant portion of the course will be dedicated to the literary, cinematic and artistic aspects of Israeli protest and their influence on Israeli discourse. We will explore the nature and role of specific genres and media such as the Israeli satire, Israeli television, newspaper op-ed and the recent emergence of social media. Students wishing to work in English exclusively for 3 credits should enroll in section one. Students who are fluent in Hebrew and are wishing to attend an additional hour-long Hebrew discussion session per week with Professor Cohen (time TBD in consultation with enrolled students) for 4 credits should enroll in section 2.
Area: Humanities

AS.211.380. Modern Latin American Culture. 3 Credits.
Taught in Spanish. This course will explore the fundamental aspects of Latin America culture from the formation of independent states through the present—in light of the social, political, and economic histories of the region. The course will offer a general survey of history of Latin America, and will discuss texts, movies, songs, pictures, and paintings, in relation to their social, political, and cultural contexts. May not be taken satisfactory/unsatisfactory.
Prerequisite(s): AS.210.312
Area: Humanities

AS.211.394. Brazilian Culture & Civilization. 3 Credits.
The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. Section 01: 3 credits in ENGLISH Section 02: 4 credits in Portuguese (instructor’s permission required)
Area: Humanities
Writing Intensive

AS.211.401. La France Contemporaine. 3 Credits.
Students will explore contemporary French society and culture through a wide variety of media: fiction and non-fiction readings (graphic novels, news periodicals, popular magazines), films, music, art, websites, and podcasts. A diverse range of hands-on activities in addition to guided readings will help students develop cultural awareness as we discuss topics such as education, politics, humor, sports, cuisine, immigration, slang, and national identity, as well as the historical factors that have influenced these facets of French and francophone culture. Recommended Course Background: AS.210.301 or AS.210.302 or permission of instructor.
Prerequisite(s): Students may not have taken AS.211.401.
Area: Humanities

AS.212.331. Paris 1900. 3 Credits.
Held in Paris, the 1900 World’s Fair introduced to the modern world such striking innovations as subways, moving images on giant screens, escalators, colossal electrical shows, and the first painting by Pablo Picasso to be shown on French soil. Focused on key cultural and socio-political events surrounding this momentous turn-of-the-century display of wealth and power, this course examines the paradoxes of a modernizing French nation which even as it promoted individual rights alongside technology and economic growth was headed towards world conflict. Students will perform original research by exploring the rare book collection at JHU as well as the substantial digital archives now documenting the period.
Area: Humanities

AS.212.345. French in Switzerland. 3 Credits.
Nearly 30% of the Swiss are native French speakers. But what do we really know about them, what distinguishes them from French speakers in neighboring France? While the language both speak is identical, their social and cultural practices set them worlds apart: the way they interact socially, engage politically, think imaginatively, engage with nature, cook and even love. This highly interactive course explores the social and cultural practices of the French Swiss and how they came to play a key role in national and international critical and political thought; we will analyze how, in a nation composed of four different language groups and an immigrant population of nearly 20%, the French Swiss contribute to maintaining the country’s highest standard of democratic practices; likewise, from an international perspective, we will study how French Switzerland developed a historic role in providing and enabling peaceful forums for international dialogue and peace talks (UN, WHO, UIT, etc.)
Prerequisite(s): AS.210.301 OR AS.210.302
Area: Humanities

AS.212.353. La France Contemporaine. 3 Credits.
Students will explore contemporary French society and culture through a wide variety of media: fiction and non-fiction readings (graphic novels, news periodicals, popular magazines), films, music, art, websites, and podcasts. A diverse range of hands-on activities in addition to guided readings will help students develop cultural awareness as we discuss topics such as education, politics, humor, sports, cuisine, immigration, slang, and national identity, as well as the historical factors that have influenced these facets of French and francophone culture. Recommended Course Background: AS.210.301 or AS.210.302 or permission of instructor.
Prerequisite(s): Students may not have taken AS.211.401.
Area: Humanities
AS.212.413. For the Record: Jazz Cultures of Modern France. 3 Credits.
Across the 20th century, mainstream and avant-garde French culture was deeply impacted by the presence of African American musicians and performing artists hailing from the jazz tradtition. From the Josephine Baker craze of the 1920s to the second post-war which welcomed the innovations of bebop and sixties-era free improvisation, metropolitan France proved a space where expatriate and exiled African Americans could both perpetuate the tradition and innovate by turns. At the same time, French taste-makers, critics, and musicians eager to adopt new forms and styles debated the extent to which American jazz music in its various strains could be made French. This course in transcultural French studies will feature readings in music criticism, history, and literature, as well as frequent close listening. It will culminate in an international symposium (to be held Nov. 15 and 16; attendance mandatory) uniting noted scholars and legendary jazz musicians. Although some background in French language and basic musical notation is desirable (students are encouraged to engage in original-source research), all core course readings will be provided in English.
Area: Humanities

AS.212.431. Style, Gender and Politics from Marie-Antoinette to the Burjini. 3 Credits.
From effeminate kings, to slutty queens, to post-revolutionary dandies, to the manifest invisibility adopted by some French citizens today, debates on the gendering and styling of political bodies have always been central to power struggles in France. Students will read from sociology, history and literature in order to understand the complex interplay among fashion, gender and political identity. Taught in English, but French minor/major credit possible by completing written work in French and by attending a weekly discussion section conducted in French. Students interested in the 4-credit French option should enroll in section 2. All others should enroll in section 1. Special Notes: This course is meant to be a small class experience. Enrollment limits will be strictly enforced.
Area: Humanities

AS.213.270. Die Erfindung der Moderne. 3 Credits.
Taught in German. An introduction to key conceptions of modernity elaborated in the German-language cultural context. We consider the rise of historical awareness and the question of whether history has a purpose, modernity's difference from ancient and medieval times, secularization and the crisis of meaning, the role of intellectual reflection and subjectivity, the relation between cultural production, political power, and economic processes. Excerpts in the original German from works by Kant, Schiller, Novalis, Hegel, Heine, Marx, Nietzsche, Weber, Benjamin, Heidegger
Prerequisite(s): AS.210.362 or placement exam.
Area: Humanities

AS.213.423. Reflections on Modernity. 3 Credits.
Taught in English. Reflections on Modernity takes up the problems conflicts, and possibilities of modernity in aesthetic, literary, and philosophical texts. Questions about the modern self, our relationship to nature, to urban experience, to history and language, and the role of the artist and writer in reflecting on modern life. Texts include works by such authors as Kant, Nietzsche, Baudelaire, Weber, Rilke, Hofmannsthall, Simmel, Heidegger, Habermas, Foucault.
Area: Humanities

AS.214.321. The Prince and the Demagogue: Machiavelli to House of Cards. 3 Credits.
Niccolò Machiavelli's The Prince is undoubtedly one of the most influential political works in the history of western culture. Read and discussed in many ways, the early-sixteenth-century booklet has been the object of controversial interpretations, which have fueled its myth. Who is Machiavelli's prince? Is he a tyrant, a good ruler, or a demagogue? How does Machiavelli's prince move between ethics, politics, and rhetoric? Often evoked in contemporary political discourse and popular culture, Machiavelli's prince embodies a flexible idea of power that is most difficult to pin down. Moving from a close reading of the text within its original context, this course will consider not only the classical sources that inform The Prince, but also the presence of Machiavelli in today's political culture and fiction. Special attention will be given to the contribution of Italian philosopher Antonio Gramsci, whose interpretation of Machiavelli's thought is one of gateways to the reception of The Prince in the 20th and 21st centuries. The course is taught in English. Italian Majors and Minors should register for section 02.
Area: Humanities
Writing Intensive

AS.214.362. Italian Journeys: Medieval and Early Modern. 3 Credits.
A journey through early modern Italy, from the cultural centers (Florence, Venice, Rome, etc.) to the peripheries, this course will trace the development of the Italian literary identity from a civic and cultural perspective. How do we live our best lives? How do we create a good and just society? These enduring quandaries were fundamental points of consideration for the humanist scholars of early modern Italy. Drawing from the wisdom of their ancient Roman legacy – along with their own striking innovations – they forged a new and glorious cultural tradition. Using literary, philosophical and historiographical sources from antiquity through the early modern period (Cicero, Aristotle, Dante, Petrarch, Boccaccio, Machiavelli, Ariosto, Tasso) we will explore the cultural and civic history of Italy, paying particular attention to themes of community, identity and the ethics of citizenship. The course is taught in English with section 02 available in Italian for Italian Majors and Minors to fulfill their requirements.
Area: Humanities
Writing Intensive

AS.215.290. Latin American Critical Perspectives on Colonialism: From the 'World Upside Down' to the 'Coloniality of Power'. 3 Credits.
This course, taught in English, examines how indigenous and local (postcolonial) intellectuals in Latin America responded to the ideology and practices of Spanish Colonialism in the earliest post-conquest years (1532), continued to battle colonialism during the period of the wars of independence, and finally arrived at the production of an analysis that shows how modernity is but the other face of colonialism. Among key works to be discussed are Guaman Poma's illustrated sixteenth-century chronicles, D.F. Sarmiento's _Civilization and Barbarism_ (1845), and Aníbal Quijano's 'Coloniality of Power' (2000).
Writing Intensive

AS.215.309. An Interdisciplinary Introduction to the Study of Latin America. 3 Credits.
The course is an interdisciplinary introduction to the study of Latin America. It brings together archeology, ethno-history, art history, literature and environmental studies.
Area: Humanities
Writing Intensive
AS.215.350. Mexico: A cultural history from the Olmecs to the Mexican revolution of 1910. 3 Credits.
The offers a survey of Mexican culture from the formative years of the Olmecs (2000 B.C.) to the Mexican revolution of 1910. History of ideas, matrix social formations, art and literature are the focus of this historical overview.
Area: Humanities
Writing Intensive

AS.215.380. Modern Latin American Culture. 3 Credits.
Taught in Spanish. This course will explore the fundamental aspects of Latin America culture from the formation of independent states through the present—in light of the social, political, and economic histories of the region. The course will offer a general survey of history of Latin America, and will discuss texts, movies, songs, pictures, and paintings, in relation to their social, political, and cultural contexts. May not be taken satisfactory/unsatisfactory.
Prerequisite(s): AS.210.312; Students may earn credit for AS.211.380 or AS.215.380, but not both.
Area: Humanities

AS.215.390. Modern Spanish Culture. 3 Credits.
This course will explore the fundamental aspects of Spanish culture from the nineteenth to the twenty-first centuries. The course will offer a general survey of the history of Spain and will discuss texts, movies, songs, pictures, and paintings in relation to their social, political, and cultural contexts. This course will be of particular interest for students planning on spending a semester abroad in Spain—specially for those students going to the JHU Fall Semester in Madrid, at Carlos III University. Taught in Spanish. Recommended Course Background: AS.210.311 or appropriate Webcape score. AS.215.390 was formerly numbered AS.211.390
Prerequisite(s): Students may not have previously completed AS.211.390.
Area: Humanities

AS.215.409. Catalonia and Independence. 3 Credits.
What is the Catalan independence movement? Where did it come from? What, exactly, does it advocate? This seminar will examine the history, politics, and culture of Catalonia in an attempt to understand why the push for independence has grown over the past decade. We will focus especially on the impact of nationalism, ideology, social history, economics, law, and language on the construction of Catalan identity. But we will also compare Catalonia to other regions in the Iberian Peninsula (the Basque Country, Galicia) as well as across Europe (Scotland, Northern Italy) and North America (Québec) in order to better understand how movements for regional autonomy and independence emerge today.
Area: Humanities

AS.215.412. Populism. 3 Credits.
What do Hugo Chávez, Marine Le Pen, and Donald Trump have in common? According to many from across the political spectrum, they are all populists. But what is populism, exactly, and how can it describe such disparate phenomena as left-wing social movements, xenophobic anti-immigrant policies, and economic redistribution? This advanced seminar will examine the history, culture, and political theory of populism. We will pay special attention to the resurgence of populism after the Great Recession and examine a number of cases from Latin America, Europe, and the United States.

AS.215.417. Literature of the Great Recession. 3 Credits.
The Great Recession—sometimes called the financial crisis or the economic crisis of 2008—brought financial markets to a halt and created significant political turmoil across the North Atlantic. But its impact on culture, and literature especially, has often been ignored. This seminar will travel across Europe, from Dublin to Madrid, from London to Reykjavik in order to examine how literature has registered this most recent economic crisis. We will focus on how crisis is narrated and the ways in which literary works have managed to provide a voice for marginalized social, economic, and political demands.
Area: Humanities

AS.215.342. The Holocaust in Israeli Society and Culture. 3 Credits.
This course examines the role of the Holocaust in Israeli society and culture. We will study the emergence of the discourse of the Holocaust in Israel and its development throughout the years. Through focusing on literary, artistic and cinematic responses to the Holocaust, we will analyze the impact of its memory on the nation, its politics and its self-perception.
Area: Humanities
Writing Intensive

AS.215.373. War in Israeli Arts and Culture. 3 Credits.
In this course we will study the various representations of what functions as one of Israel's most unifying and yet dividing forces: war. By analyzing literary and cinematic works as well as visual art and popular culture, we will attempt to understand the role of war in shaping Israeli society, culture and politics. Topics such as commemoration and mourning, heroism, dissent and protest, trauma and memory and the changing image of the soldier will stand at the center of the course.
Area: Humanities
History

AS.100.102. The Medieval World. 3 Credits.
This course will explore selected topics in the political, economic, social, and intellectual history of Western Europe in the period between the fall of the Roman Empire and the thirteenth century. Special emphasis will be given to understanding the ways in which medieval society functioned as a pioneer civilization, compelled to reorganize itself after the almost total collapse of the ancient world, and to the interplay between material and cultural forces in the processes of social organization.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.103. Early Modern Europe & the Wider World. 3 Credits.
This course surveys the history of Europe and its interactions with Africa, the Americas, and Asia during the early modern period (c. 1400-1800). Topics include: the Renaissance, the Reformation, International Relations and Warfare, Colonialism, the Enlightenment, and the Age of Revolutions.
Area: Humanities, Social and Behavioral Sciences

AS.100.104. Modern Europe and the Wider World. 3 Credits.
The Modern European World familiarizes students with key moments, ideas, communities, individuals, and movements which have formed European History since the Revolutionary era.
Area: Humanities, Social and Behavioral Sciences

AS.100.108. Making America: Black Freedom Struggles to 1896. 3 Credits.
From slave revolts on the West African coast to national conventions and civil war, people of African descent have defined freedom and struggle in its role in the making of America.
Area: Humanities, Social and Behavioral Sciences

AS.100.113. Making America: Race, Radicalism, and Reform. 3 Credits.
This course examines race and social movements in America from the Revolution to 1921.
Area: Humanities, Social and Behavioral Sciences

AS.100.115. Modern Latin America. 3 Credits.
From Simón Bolívar to the Mothers of the Plaza de Mayo to the Zapatistas, this course asks what it means to be Latin American through the lenses of state formation, artistic expression, and international relations.
Area: Humanities, Social and Behavioral Sciences

AS.100.117. History of Brazil. 3 Credits.
Area: Humanities

AS.100.122. Introduction to History of Africa (since 1880). 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.123. Introduction to African History: Diversity, Mobility, Innovation. 3 Credits.
An introduction to African history with emphasis on diversity, mobility, and innovation. Considers both early and modern times.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.129. Introduction to Modern Jewish History. 3 Credits.
Jewish history 1750-present in Europe, the Near East, the US, Israel; the challenges of modernity and new forms of Jewish life and conflict from Enlightenment and emancipation, Hasidism, Reform and Orthodox Judaism to capitalism and socialism; empire, nationalism and Zionism; the Holocaust. Extensive attention to US Jewry and State of Israel.
Area: Humanities, Social and Behavioral Sciences

AS.100.154. Modern Mexico from the Alamo to El Chapo. 3 Credits.
In this course we will use popular depictions of Mexico’s heroes and villains, tragedies and triumphs to delve into both the nation’s history and the importance of thinking historically.
Area: Humanities, Social and Behavioral Sciences

AS.100.170. Chinese Cultural Revolution. 3 Credits.
The Cultural Revolution was Mao Zedong’s last attempt to transform Chinese society spiritually and structurally. The events of this period were marked by social upheaval, personal vendettas, violence, massive youth movements, and extreme ideological pressure. This course will explore the Cultural Revolution from a variety of perspectives, focusing on the relationship between events in China from 1966-1976, and their interpretation in China and the West during the Cultural Revolution decade and since. (Previously offered as AS.100.219 and AS.100.236.)
Area: Humanities, Social and Behavioral Sciences

AS.100.180. Themes and Concepts in Jewish History. 3 Credits.
The course will introduce the student to the main themes and debates in Jewish historiography.
Area: Humanities, Social and Behavioral Sciences

AS.100.216. Reformation and Counter Reformation Europe. 3 Credits.
This course explores the series of religious and political conflicts that make up what are known now as the Reformation and Counter-Reformation in Europe.
Area: Humanities, Social and Behavioral Sciences

AS.100.233. History of Modern Germany. 3 Credits.
There is more to Germany than beer, BMWs, and Bayern Munich. We explore politics, culture, economics and society to understand Germany and its role within Europe from the 18th century to the ‘Refugee Crisis’ and immigration today.
Area: Humanities, Social and Behavioral Sciences

AS.100.234. The Making of the Muslim Middle East, 600-1100 A.D.. 3 Credits.
A survey of the major historical transformations of the region we now call the ‘Middle East’ (from late antiquity through the 11th century) in relation to the formation and development of Islam and various Muslim empires.Cross-listed with Near Eastern Studies and the Program in Islamic Studies.
Area: Humanities, Social and Behavioral Sciences

AS.100.241. American Revolution. 3 Credits.
This course provides an intensive introduction to the causes, character, and consequences of the American Revolution, the colonial rebellion that produced the first republic in the Americas, and set in motion an age of democratic revolutions in the Atlantic world. A remarkable epoch in world history, the revolutionary era was of momentous significance.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.100.243. China: Neolithic to Song. 3 Credits.
This class offers a broad overview of changes in China from Neolithic times through the Song Dynasty (roughly from 5000 BCE through the 13th century CE) and will include discussion of art, material culture, and literature as well as politics and society. Close readings of primary sources in discussion sections and extensive use of visual material in lectures will help students gain firsthand perspective on the materials covered. Not open to students who have previously taken AS.100.208. Cross listed with East Asian Studies
Area: Humanities, Social and Behavioral Sciences

AS.100.248. Japan in the World. 3 Credits.
An introduction to Japan's history from 1700 to the present, with emphasis on the influences of an increasing global circulation of ideas, goods, and people in early modern and modern times. Topics include samurai, nation-building, gender, imperialism, World War II, the postwar economy, and contemporary popular culture.
Area: Humanities, Social and Behavioral Sciences

AS.100.252. Invisible Borders: Exchanges and Migrations in the Modern Mediterranean. 3 Credits.
This course explores the patterns of movement formed and transgressed by empire, trade, sex tourism, cultural exchange, war, and nationalism, starting from the nineteenth century to the present-day refugee crisis.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.256. Prostitution in a Global Perspective, 1750-2012. 3 Credits.
This course examines topics such as the ‘medical model’ of prostitution regulation, the rise of international anti-prostitution, and the responses of modern nationalists to sex work in a global context.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.265. The Medieval City. 3 Credits.
This course focuses on the development and growth of medieval cities in western Europe. Students will explore the various functions of cities, uses of urban space, and challenges they faced.
Area: Humanities, Social and Behavioral Sciences

AS.100.268. Jewish and Christian mysticism in the Middle Ages and the Early Modern Period. 3 Credits.
This course will trace the historical development of Jewish and Christian mysticism between the 12th and the 17th centuries.
Area: Humanities, Social and Behavioral Sciences

AS.100.270. Europe since 1945. 3 Credits.
In this class we focus on such topics as the transatlantic alliance, the Cold War divide, the arms race, détente, migration, European integration and the EU from the end of World War II until today. We will discuss academic literature, movies, documentary films, textual and visual primary sources, and more.
Area: Humanities, Social and Behavioral Sciences

AS.100.273. A Comparative History of Jewish and Christian Mysticism. 3 Credits.
This course will trace the historical development of Jewish and Christian mysticism between the 11th and the 19th centuries.
Area: Humanities, Social and Behavioral Sciences

AS.100.282. Race & Power in Modern South Africa. 3 Credits.
Overview of modern South African history, with a focus on the origins of the racial state and the development of black liberation movements.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.283. Making and Unmaking Queer Histories, 1800-Present. 3 Credits.
Making and unmaking queer histories introduces students to some of the major themes and historical developments which shape contemporary understandings of past queer lives and communities in the United States and Western Europe since the nineteenth century.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.292. Radical Spain: Social Movements from the Spanish Empire to the Catalán Crisis. 3 Credits.
This course examines different radical movements such as anarchism, fascism, nationalism and feminism in the context of Spanish history from the nineteenth century to the twenty-first century.
Area: Humanities, Social and Behavioral Sciences

AS.100.303. Old Regime and Revolutionary France. 3 Credits.
Examines the history of France from the reign of Louis XIV to the French Revolution, focusing on early modern society, popular culture, absolutism, the Enlightenment, overseas empire, and the French and Haitian Revolutions.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.305. Peter to Putin: Survey. 3 Credits.
Seminar on modern Russia. No midterm and no final. 6 short weekly journals, two short papers, and two small quizzes.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.308. Introduction to the History of Jewish Mysticism. 3 Credits.
The course will familiarize the student with the history of the main phenomena of Jewish mysticism from the ancient times to the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.310. The French Revolution. 3 Credits.
Political, social and cultural history of one of the great turning-points in European history. Previously offered as AS.100.204.
Area: Humanities, Social and Behavioral Sciences

AS.100.312. The Transatlantic Slave Trade, c. 1450-1850. 3 Credits.
The course explores the origins, organization and abolition of the transatlantic slave trade c. 1450-1850. It delves into the historiographical debates over the impact of the trade on the development of Africa, Europe and the Americas in the early modern period.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.318. The Rise and the Fall of the Modern City: An Environmental History Perspective. 3 Credits.
This course explores how environmental history analyzes the transformations of cities in the West from 1750 to the early 2000s. An emphasis will be placed on historiographical debates and concepts, but also on agency and relations of power. The course also analyze how the environment is a construct, a production of discourses, representations, and debates.
Area: Humanities, Social and Behavioral Sciences

AS.100.320. Writing U.S. Empire. 3 Credits.
Attends to the composition and interpretive problems raised by studying the history of American imperialism, 1880s-1930s.
Writing Intensive
AS.100.329. Russian Imagination in Three Revolutions. 3 Credits.
Russian Literature and the arts in Revolutions of 1905, 1917, and Stalin era to 1941. Req: 6 journals of 350 words, 2 papers 1250, 2 quizzes. No midterm or final.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.330. National Identity in 20th Century China & Japan. 3 Credits.
Using primary sources, including literature and film, we will explore the changing ways in which ideologues, intellectuals, and ordinary citizens defined national identity in 20th century China and Japan.
Area: Humanities, Social and Behavioral Sciences

AS.100.331. Reading through Things: Early Modern Chinese Medicine, Technology, and Art. 3 Credits.
This course introduces the history of late imperial China from the perspective of medicine, technology, and the arts.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.332. Persecution and Toleration in Early Modern Europe. 3 Credits.
Explores hostilities and fears provoked by religious diversity and deviance from orthodoxy in early modern Europe. Outlines theories, practices, and limits of early modern religious tolerance and intolerance.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.346. Soviet-American Cold War. 3 Credits.
The focus will be on Soviet-American interactions, Cold-War Cultures, and the impact on both societies.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.347. Early Modern China. 3 Credits.
The history of China from the 16th to the late 19th centuries.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.348. 20th-Century China. 3 Credits.
A survey of the history of China from the late Qing era to the early People's Republic.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.352. Age Of Pasternak. 3 Credits.
This course concerns Russian literature and the arts, including ballet, from the 1910s to the 1950s. Two short papers, journals, two quizzes, and no midterm or final.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.353. Youth and Youth Movements during 20th Century: Germany, Britain, and the U.S. 3 Credits.
Through texts, music, and films, this course examines the rise of 'youth' as a social and cultural category in a variety of forms, ranging from spontaneous (such as Rock'n'Roll and Techno) to state-organized (Hitler Youth).
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.357. Panic and Liberation: The Politics of Sex in 20th Century Europe. 3 Credits.
This course examines the 20th century history of sexual attitudes, desires, behaviors, identities, communities, and movements in Western Europe (most notably, Germany, France, and the United Kingdom).
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.358. Black Code Studies: Black History and Digital Media. 3 Credits.
This course explores doing histories of people of African descent in an age of digital and social media. The focus will be on African-descended communities in the United States, but content will range across time space. Examples include: West African digital art communities; the use of slave trade databases to write Caribbean history; and the use of social media in social justice organizing from Paris to Baltimore. Students will explore questions of blackness, race, ethnicity, sex and sexuality, violence and justice while creating digital content using platforms like Wordpress, Omeka, Twitter, and Tumblr. Students will be evaluated on their acquisition of African American and Afro-Diasporic history; their knowledge of digital and social media platforms; and their ability to creatively and accurately relate the histories of blackness and black people to their representation and discussion online.
Area: Humanities, Social and Behavioral Sciences

AS.100.359. Gender, Patriarchy, and the English Revolution. 3 Credits.
This course explores the varied experiences of gender and gender roles in seventeenth-century Britain and analyzes how these roles were challenged, changed, and sometimes upended during the English Revolution (1642-1660).
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.360. The Modern British World: Imperial Encounters, Regimes, and Resistance, from the American Revolution to the present. 3 Credits.
The Modern British World introduces some of the major themes and contestations tied to Britain's rise to global dominance and its ultimate decline as an imperial power.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.361. Age of Tolstoy. 3 Credits.
Tolstoy and his era, 1820s to 1910s. Topics include state and politics, empire, the Russian identity, and forms of cultural expression. Students consider 'War and Peace' and other masterworks.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.365. Culture & Society in the High Middle Ages. 3 Credits.
History 100.365 will consist of two lectures a week and one discussion section. Readings focus when possible on primary sources. It will cover the social, economic, political and intellectual development of medieval society, beginning with the rise of feudal society, the development of medieval courtly culture, primarily the creation of epic and romance literature in the various courts of Europe; the creation of universities and the intellectual revival of Europe in the form of scholasticism; the re-emergence of trade and, with it, the rise of a middle class, the political development of royal authority which was tantamount to the creation of the modern national state and finally, the emergence of heresy and new forms of spirituality in the late Middle Ages to combat it, especially with the creation of the Dominican and Franciscan monastic orders.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.100.369. Themes and Concepts in Jewish History. 3 Credits.
The course will introduce the student to the main themes and debates in Jewish historiography from the 19th century to the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.371. Modernity, Catastrophe, and Power in Jewish History: 1881 to the Present. 3 Credits.
Jewish history, politics, and culture across a century of enormous transformations and transformative enorities in Europe, the US, and the Middle East. Topics include: impacts on Jewish life of World War I, the Russian Revolution, and the post-imperial reordering of the Eastern Europe and the Middle East; Zionism and other modes of Jewish contestatory politics; the consolidation of American Jewry; Nazism and the Holocaust in Europe; and development and formation of the State of Israel; the global reordering of Jewish life amid cross-currents of the Cold War, conflict in the Middle East, and success in the US. Substantial attention to recent and contemporary history including the dramatic changes in Israeli society and polity over the past forty years and the ongoing Israeli-Palestinian conflict.
Area: Humanities, Social and Behavioral Sciences

AS.100.337. Crime, Punishment, Felony and Freedom: Law and Society in Pre-Modern England. 3 Credits.
Using legal texts as a window into English society, we will address the changing nature of royal power, trial by jury, treason, felony, and the freedoms enshrined in the Magna Carta.
Area: Humanities, Social and Behavioral Sciences

AS.100.337. Conquest, Conversion, and Language Change in the Middle Ages. 3 Credits.
Examines case-studies of imperial conquests (Islamic, Mongol, reconquista, early colonialism) and attendant changes in religion (Christianization; Islamization) and in language (Arabization; transition from Latin to European vernaculars) across medieval Eurasia.
Area: Humanities, Social and Behavioral Sciences

AS.100.336. The Haitian Revolution in Global Perspective. 3 Credits.
An advanced undergraduate seminar tracing the history of the Haitian Revolution from its origins in the early modern Atlantic world to its global impact and continuing legacies in the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.332. Early Modern African Atlantic. 3 Credits.
This course examines the history of West and Central Africa and its diasporic people and cultures during the early modern period (c. 1400-1750) in disparate parts of the Atlantic world, including Europe, Latin America, the Caribbean, and Anglo-America. Themes include: West and Central African political and religious cultures; trans-Atlantic slavery; African Christianity; and the question of cultural survivals.
Area: Humanities, Social and Behavioral Sciences

AS.100.338. Intoxicated: Commodities & Globalization in the Early Modern World. 3 Credits.
Each week we examine a commodity that defined a new era of global connectivity in the centuries after 1492, including money, medicines, slaves, and fashion.
Area: Humanities, Social and Behavioral Sciences

AS.100.336. The Cold War as Sports History. 3 Credits.
Sport is key to understanding the Cold War. We will investigate how the Cold War has shaped sports, the Olympic movement, the role of athletes and international competitions and how sports relate to race, gender, and class. We will discuss the ways in which sports confirm and consolidate but also challenge and change social structures and opportunities of self-fulfillment and social advancement.
Area: Humanities, Social and Behavioral Sciences

AS.100.337. Everyday Life in the Medieval Middle East. 3 Credits.
Explores the daily lives of non-elites in the medieval Middle East—food; housing; clothes; marriage and divorce; urban festivals—through primary documents (e.g. letters, court records) and artifacts (e.g. clothing).
Pre-requisite for enrollment: Students must have taken one history course.
Area: Humanities, Social and Behavioral Sciences

AS.100.339. History of Law and Social Justice. 3 Credits.
Causes lawing aims to change the status quo. This course examines histories of this approach to social justice, from battles against the slave trade to contemporary campaigns for marriage equality.
Area: Humanities, Social and Behavioral Sciences

AS.100.331. Impeachments and Beyond: Law, Justice, and Politics in Latin America. 3 Credits.
Students taking this course will explore the intersections of the legal and political histories in Latin America, from indigenous legalities to current constitutional thought, corruption scandals, and lawfare.
Pre-requisite(s): Students cannot enroll in this course if they have taken/ passed AS.100.237.
Area: Humanities, Social and Behavioral Sciences

AS.100.334. Brazilian Paradoxes: Slavery, Race, and Inequality in Brazil (from a Portuguese Colony to the World's 8th Largest Economy). 3 Credits.
Place of contrasts, Brazil has a multi-ethnic cultural heritage challenged by social and racial inequalities. Its political life remains chaotic. We will examine these problems through Brazilian history and culture.
Area: Humanities, Social and Behavioral Sciences

AS.100.335. History of Global Development. 3 Credits.
This course explores development as an ideology and a practice. From colonialism to the Cold War to contemporary NGOs, we will interrogate the history of our attempts to improve the world.
Area: Humanities, Social and Behavioral Sciences

AS.100.336. Images of Postwar Japan. 3 Credits.
This seminar explores Japan's changing place in the world in the decades following World War II, with an emphasis on analyzing visual media such as photographs, films, advertisements, and comic books. Topics include relations with the U.S. and other countries in East Asia, particularly the two Koreas; the atomic bombings of Hiroshima and Nagasaki; and the global contexts for an expanding Japanese consumerism in the late 20th century.
Writing Intensive

AS.100.339. Decolonization and Citizenship in Africa, 1945-2015. 3 Credits.
Critically explores issues of decolonization and citizenship in Africa from WWII to the present. Emphasis on political inclusion and exclusion, and violence, fostered by nationalist movements and postcolonial African governments.
Area: Humanities
Writing Intensive
AS.100.403. Law & Custom in Colonial Africa. 3 Credits.
Examines how colonial rule transformed African legal systems, while Africans used European law for political resistance and personal gain. Research project based on colonial South African court records.
Area: Humanities, Social and Behavioral Sciences

AS.100.408. Theorizing the Age of Enormity: Social Theory and the History of the 20th Century. 3 Credits.
We will read and analyze key works of social and critical theory produced in relation to 20th and 21st century problems of state and society, nationalism, empire, totalitarianism, genocide, capitalism, political order, gender, race, sexuality, secularism, religion, environmental catastrophe. Possible readings include Weber, Du Bois, Adorno, Arendt, Foucault, Balibar, Beckamong others.
Area: Humanities, Social and Behavioral Sciences

AS.100.413. London 1580-1830: The History of Britain's capital city. 3 Credits.
Seminar-style class analyzing the social, cultural, gender, religious, economic, and political history of London from Shakespeare's time through revolutions, plague, fire, and commercial, colonial, and industrial expansion.
Area: Humanities, Social and Behavioral Sciences

AS.100.415. The Holocaust in Jewish History and in Global Culture. 3 Credits.
Key works on the history of Nazi Germany's murder of European Jewry during the Second World War; Jewish responses; the recasting of Jewish and global thought in relation to this signal event; genocide and 'ethnic cleansing' since the Holocaust.
Area: Humanities, Social and Behavioral Sciences

AS.100.418. Comparative Slavery: Haiti and Brazil. 3 Credits.
Haiti is born after a powerful slave insurrection (1804). Brazil was the last country to abolish slavery (1888). Why did these slave societies, which shared many common characteristics, have such different histories?
Area: Humanities, Social and Behavioral Sciences

AS.100.421. Sex, Law and Islam. 3 Credits.
ISIS, 'virgins' in paradise, the sexual slavery of Yazidi women.... This course will use anthropological and historical studies to examine the long history of how rules and understandings about sex, sexuality, and gender have mattered in how people think about Islam.
Area: Humanities, Social and Behavioral Sciences

AS.100.422. Society & Social Change in 18th Century China. 3 Credits.
What did Chinese local society look like under the Qing Empire, and how did it change over the early modern era?
Area: Humanities, Social and Behavioral Sciences

AS.100.423. Multiethnic Japan. 3 Credits.
An advanced undergraduate seminar on the intertwined histories of race, ethnicity, and empire in Japan and its former colonies from the early twentieth century to the present.
Area: Humanities, Social and Behavioral Sciences

AS.100.424. Women & Modern Chinese History. 3 Credits.
This course examines the experience of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women's experiences for their own political and social agendas.
Area: Humanities, Social and Behavioral Sciences

AS.100.426. Popular Culture in Early Modern Europe. 3 Credits.
Witchcraft, magic, carnivals, riots, folk tales, gender roles; fertility cults and violence especially in Britain, Germany, France, and Italy.
Area: Humanities, Social and Behavioral Sciences

AS.100.430. Gender and Sexuality in African History. 3 Credits.
An upper-level history reading seminar with a focus on histories of gender and sexuality in colonial and postcolonial Africa.
Area: Humanities, Social and Behavioral Sciences

AS.100.438. The City Victorious: Medieval Cairo. 3 Credits.
What was medieval Cairo like? Students explore urban life in this imperial capital (969-1517), including food and market habits; relations between Jews, Christians, and Muslims; patronage; plague, drought, and famine. Pre-requisite for enrollment: Students must have taken two history courses.
Area: Humanities, Social and Behavioral Sciences

AS.100.441. Migration and the Americas. 3 Credits.
From the Spanish Conquest to contemporary debates in the US, this course looks at the great diversity of migrations that have shaped life in the Americas.
Area: Humanities, Social and Behavioral Sciences

AS.100.442. The Intellectual History of Capitalism, 1900 to present. 3 Credits.
This course examines shifting understandings of the philosophical foundations, political implications, and social effects of the market economy since the early twentieth century.
Area: Humanities, Social and Behavioral Sciences

AS.100.444. Migrants and Refugees in Africa. 3 Credits.
A history of forced and voluntary migration and displacement in Africa, its causes and consequences, with a focus on refugees and labor migrants since 1960.
Area: Humanities, Social and Behavioral Sciences

AS.100.456. Getting Medieval? Public Violence in the Middle Ages. 3 Credits.
Traditional studies and popular culture often consider violence as a hallmark of medieval life and hence, present it as a fundamental difference between a 'brutal and violent' Middle Ages and a 'civilized and humane' (Western) modernity. To evaluate these claims and images, we will examine different forms of violence in medieval societies—European and Middle Eastern—especially (i) martyrdom, (ii) communal violence, and (iii) public punishment. After exploring the specific cultural meanings of these practices, we will re-examine those modern polemics that invoke ‘the medieval’ (often vis-à-vis non-Western traditions and societies).
Area: Humanities, Social and Behavioral Sciences
AS.100.478. Japan from its Peripheries. 3 Credits.
An advanced undergraduate seminar on the history of modern Japan from the perspective of regions and people often considered as belonging to its geographical, cultural, social, and political peripheries.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.482. Historiography of Modern China. 3 Credits.
Reading and discussion of major approaches to Chinese history by Western, Chinese, and Japanese scholars and intellectuals, and of the cultural attitudes and policies they foster.
Area: Humanities, Social and Behavioral Sciences

AS.100.488. The Caribbean World, 1450-1850. 3 Credits.
The Caribbean was the key focal point of overseas European expansion in the early modern world. This course traces developments in the region from the Tainos to Toussaint Louverture.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.497. The Year 1968: Rebels, Revolutions & the Right-Wing Backlash. 3 Credits.
The sixties were a decade of unrest, failed revolutions, and fundamental change across Europe and the US. We will look at how these years changed the world through the lens of national case studies and community engagement.
Area: Humanities, Social and Behavioral Sciences

AS.100.499. Film and Propaganda in Nazi Germany. 3 Credits.
By examining a range of cinematic works—from explicitly ideological pseudo-documentaries to entertainment films—this course will explore the transmission of propaganda into the everyday culture of Nazi Germany.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

History of Science, Medicine, and Technology

AS.140.146. History of Public Health in East Asia. 3 Credits.
This course examines the history of disease, epidemics, and public health responses in East Asia from the 17th-20th centuries. This public health history emphasizes the interactions, connections, and comparisons among China, Japan, Korea, and Taiwan.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.227. Race, Racism and Medicine. 3 Credits.
How can we think about the interconnections between racism, theories of race and the practice of medicine? Living at a moment when racial disparities in health outcomes in the United States are still very stark, this course will provide a historically grounded approach to thinking about the roles that race and racism have played in healthcare, the production of health disparities as well as the role of medicine in the development of racist thought. While much of this course will focus geographically within the United States, this class will also explore global histories of medicine, encountering questions of race and medicine in Africa, the South Pacific and Asia. In addition to the analysis of primary source documents and historical texts, students will also be introduced to theoretical approaches to the study of race and racism from W.E.B. Du Bois, Sylvia Wynter, Frantz Fanon and others.
Writing Intensive

AS.140.231. Health & Society in Latin America & the Caribbean. 3 Credits.
Healthcare is complex in Latin America and the Caribbean, where many people supplement biomedicine with plant and diet-based remedies, as well as religious and shamanic services. This course will cover the history of health and society in Latin America and the Caribbean from 1750 to the present, covering such topics as: medicine and the Spanish inquisition; disease control and tropical medicine; the medical knowledge of enslaved and indigenous peoples; reproduction and nation-state formation; and healthcare during the Cold War and its aftermath. Throughout, we will also consider the ways in which ideas about race, gender, indigeneity, class, and disability have affected people’s access to healthcare. By the end of the course we will understand why leading scholars have referred to Latin America and the Caribbean as a “laboratory” for the production of medical knowledge. We will discover how that knowledge has been influenced by common people as well as professionals, and how it has influenced medical practice around the world. This is a discussion-based seminar course. It does not assume any previous knowledge of the history of medicine or Latin American and Caribbean history.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.328. Science and Technology in Slave Regimes. 3 Credits.
What does science and technology look like in slave regimes? This seminar explores this question from a trans-national perspective by comparing cases in the Antebellum US, Cuba, Brazil and other countries.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.339. Science & Technology in the Development of Modern Latin America. 3 Credits.
This seminar will survey the development of science and technology in modern Latin America, and explore their dynamics in the context of cultural, political, and economic forces.
Area: Humanities, Social and Behavioral Sciences

AS.140.398. Godzilla and Fukushima: Japanese Environment in History and Films. 3 Credits.
Japan is often described as “nature-loving,” and is considered to be one of world leaders in environmental protection policies. Yet current environmental successes come on the heels of numerous environmental disasters that plagued Japan in the past centuries. Juxtaposing Japanese environmental history and its reflection in popular media, the course will explore the intersection between technology, environment, and culture. Students are encouraged to enroll in AS.140.198, “Technology and Environment in Japanese Films and Anime” (1 credit) to attend movie screenings accompanying the course.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.140.423. Science and Science Fiction in Global Perspective. 3 Credits.
What can we learn from science fiction about the history of science and technology? What ideas about science do Sci-Fi novels manifest? Is the relationship between science and science fiction always the same, across different time periods and geographical areas? This course will explore these questions by taking a comparative perspective. Each meeting we will read a Sci-Fi novel from Europe, America, South and East Asia, and discuss it in conjunction with historical writing about relevant scientific developments. Reading Sci-Fi novels from 17th-century Germany, 19th-century England and India, and 20th-century Japan, China, Korea and the US, the students will explore how actual scientific developments were reflected in fiction, and what fictional depictions say about the aspirations and anxieties provoked by new technologies.

Writing Intensive

Islamic Studies
AS.194.105. Islam and its Cultural and Religious Diversity, 600-1600. 3 Credits.
While media often present Islam as a fairly univocal and compact cultural and religious system, news reports about tensions, hostility and at times open conflict within the Islamic world itself are frequent. Unity and internal diversity characterize Islam nowadays and have historical roots that have deeply shaped Islam since its very inception. This course will explore the historical origins of the dynamics of unity and diversity in Islam from the predication of Muhammad and the expansion of the first caliphate, to the formation of the Ottoman, Safavid and Mughal empires. By focusing on the historical events and the cultural production of the first millennium of Islam, this course will offer a thorough historical introduction to its cultural and religious complexity.

Area: Humanities

AS.194.201. Jews, Muslims, and Christians in the Medieval World. 3 Credits.
The three most widespread monotheisms have much more in common than is generally portrayed: a common founding figure, a partly shared succession of prophets, closely comparable ethical concerns and religious practices, a history of coexistence and of cultural, religious, social and economic interaction. This course will focus on a number of key texts and historical events that have shaped the relationships between Jews, Muslims, and Christians during the Middle Ages and contributed to their reciprocal construction of the image of the “other.” The geographical center of the course will be the Mediterranean and the Near and Middle East, a true cradle of civilizations, religions, and exchange.

Area: Humanities, Social and Behavioral Sciences

AS.194.205. Islamic Mysticism: Traditions, Legacies, Politics. 3 Credits.
For over a thousand years, the Sufi tradition has been a dynamic force in Islamic social, political and spiritual life. The tradition offers a treasure trove of devotional literature and music, philosophical treatises, contemplative practices, and institutions of social and political organization. After unpacking the politics of the term “Sufi,” we will trace the historical development of the tradition from the early ascetics in Iraq and Syria to the age of trans-national Sufi orders, with case studies from South Asia, Turkey, and the United States. We will then move into some of the key constructs of the tradition of spiritual growth and character formation: the divine-human relationship, the stages of the spiritual path, contemplative and practical disciplines, ideas of sainthood, discipleship and ethical perfection, and the psychology of love. Throughout the class, we will explore the nature of experiential language and interrogate the tradition through the lens of gender. We will also experience Sufism through ritual and music.

Area: Humanities, Social and Behavioral Sciences

AS.194.210. Race, Gender, Citizenship: Being Muslim in America. 3 Credits.
This course explores how American Muslims navigate and contest complex notions of belonging in the context of national conversations on race, gender, citizenship, and national security. With a focus on specific case studies that range from Black Muslim movements of the early twentieth century to the ongoing War on Terror, the course adds complexity to the public conversation on what it means to be Muslim - and what it means to be American. We will draw on history, ethnography, first-person narratives, films, blogs, documentaries and fiction. As a Community Engaged course, the class will include site visits and learning with and from Muslim communities in Baltimore.

Area: Humanities, Social and Behavioral Sciences

AS.194.220. The Qur'an: Text and Context. 3 Credits.
For 1400 years, the Qur'an has played a central role in Muslim intellectual, spiritual, artistic and ritual life. This course will explore the sacred scripture of Islam through its foundational ideas, history of the text and thematic development, literary style, history and methods of interpretation, and role in Muslim spiritual and ritual life. We will also explore how the Qur'an weaves through literature, music and the visual arts.

Area: Humanities, Social and Behavioral Sciences

AS.194.305. Cultures of Pilgrimage in Islam. 3 Credits.
The hajj pilgrimage to Mecca is one of the pillars of Islam. But Muslims around the world also take part in many other pilgrimages, from the massive annual Shi'a pilgrimage to Karbala to the smaller ziyarat “visits” to Sufi saint shrines, to travel to centers of Islamic learning, to pilgrimage to isolated natural features like mountains, trees, valleys. What are the theologies that propel the act of travel in Islam? How are cities, architectures, economies shaped by these cultures? And how are these traditions affected by the wars and colonial projects that plague many Muslim-majority countries in the contemporary world? Readings in this course will draw from anthropology, philosophy, Islamic interpretive texts (tafsir), and travelogues.

Area: Humanities, Social and Behavioral Sciences

Writing Intensive
Near Eastern Studies

AS.130.170. Diplomacy and Conflict in the Ancient Middle East. 3 Credits.
The Middle East is home to the invention of agriculture, cities, and writing. It is also in the Middle East that we find evidence of humanity's earliest diplomatic activity in, for instance, the actual letters sent by ancient kings to one another, the treaties drawn up after their conflicts, and the inscriptions that commemorate their conquests. In this course, we examine texts such as these to explore questions such as: How do we characterize the international system of the ancient Middle East? Does this system change over the approximately two millennia for which we have documentation? Is it better to approach ancient diplomacy through present-day eyes or in the context of ancient world-views? Is an understanding of diplomacy in the ancient Middle East relevant to our understanding of modern international relations? All texts read in translation.
Area: Humanities

AS.130.216. History of the Jews in Modern Times, from the Middle Ages to 1917. 3 Credits.
A broad survey of the significant political and cultural dynamics of Jewish history in the Medieval, Early-Modern, and Modern Eras.
Area: Humanities

Philosophy

AS.150.205. Introduction to the History of Modern Philosophy. 3 Credits.
An overview of philosophical thought in the seventeenth and eighteenth centuries. We shall focus on fundamental questions in epistemology (knowledge, how we acquire it, its scope and limits), metaphysics (the ultimate nature of reality, the relation of mind and body, free will), and theology (the existence and nature of God, God's relation to the world, whether knowledge of such things is possible); all questions that arose in dramatic ways as a result of the rise of modern science. The principal philosophers to be discussed are Descartes, Locke, Hume and Kant, though we shall also make the acquaintance of Spinoza, Leibniz and Berkeley.
Area: Humanities

AS.150.237. Foundations of Modern Political Philosophy. 3 Credits.
This course is an introduction to modern political philosophy through an intensive study of the classic texts. The focus will be on the nature and limits of political authority under modern social conditions. Authors included are Machiavelli, Hobbes, Locke, Rousseau and Mill.
Area: Humanities

AS.150.240. Intro-Political Philosop. 3 Credits.
Area: Humanities
Writing Intensive

AS.150.355. Philosophy of Law. 3 Credits.
In this course we will examine major issues in the philosophy of law, including the nature of law, the role of the Constitution in legal decisions, and the justification of punishment. No previous knowledge of law or philosophy is required.
Area: Humanities

AS.150.404. The Idea of Power. 3 Credits.
The Idea of Power surveys seminal texts in the history of political thought on the nature, promise, and dangers of political and social power; it also critically engages contemporary texts on race and gender power relations.
Area: Humanities

AS.150.408. The Ethics of Climate Change. 3 Credits.
In this course we consider ethical issues related to climate change and climate change policy. These include issues about how we ought to distribute the burden of mitigation and adaption, what we owe to future generations and to the non-human world, and about our responsibilities as individuals (with respect, for example, to our diets). We briefly consider geoengineering and issues related to the widespread reliance on cost-benefit analyses in climate policy.
Area: Humanities

AS.150.428. Spinoza's Theological Political Treatise. 3 Credits.
The course is an in-depth study of Spinoza's Theological-Political Treatise. Among the topics to be discussed are: Spinoza's Bible criticism, the nature of religion, philosophy and faith, the nature of the ancient Hebrew State, Spinoza's theory of the State, the role of religion in Spinoza's political theory, the freedom to philosophize, the metaphysics of Spinoza's Theological-Political Treatise, and finally, the reception of the TTP.

AS.150.440. The Making of Black Lives Matter. 3 Credits.
This course explores the history of black thought that informs the ethics of the contemporary movement for black lives.
Area: Humanities
Writing Intensive

AS.150.492. Plato's Republic. 3 Credits.
This course will be a close reading of Plato's Republic, with special attention to the parallel of city and soul, the relevance of metaphysics to politics, and the relation of aristocracy, democracy and tyranny.
Area: Humanities

Political Science

AS.190.101. Introduction to American Politics. 3 Credits.
This course examines the ideals and operation of the American political system. It seeks to understand how our institutions and politics work, why they work as they do, and what the consequences are for representative government in the United States. Emphasis is placed on the federal government and its electoral, legislative, and executive structures and processes. As useful and appropriate, attention is also given to the federal courts and to the role of the states. The purpose of the course is to understand and confront the character and problems of modern government in the United States in a highly polarized and plebiscitary era.
Area: Social and Behavioral Sciences

AS.190.102. Introduction To Comparative Politics. 3 Credits.
To understand politics, the sound bites of the modern media take us only so far. In this course, we will take a step back and implement an intellectually rigorous method. Scholars of comparative politics use the method of comparison in order to illuminate important political phenomena of our times. Following this method, we will embark on a scholarly tour of the world and compare the politics of various countries. We will also trace these politics back to their historical sources. We will work from the assumption that there is something to be gained from such comparisons across space and time.
Area: Social and Behavioral Sciences
AS.190.108. Contemporary International Politics. 3 Credits.
An introduction to international politics. Emphasis will be on continuity and change in international politics and the causes of war and peace. The first half of the course will focus on events prior to the end of the Cold War, including the Peloponnesian War, the European balance of power, imperialism, the origins and consequences of WWI and WWII, and the Cold War. The second half will focus on international politics since 1990, including globalization, whether democracies produce peace, the impact of weapons of mass destruction, terrorism, and the prospects for peace in the 21st century. Theories of realism and liberalism will also be considered. This course was previously AS.190.209.
Area: Social and Behavioral Sciences

AS.190.109. Politics of East Asia. 3 Credits.
This course examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. We analyze two enduring themes of classic and contemporary scholarship in comparative politics: development and democracy. The purpose is to introduce students to the various schools of thought within comparative politics as well as to the central debates concerning East Asian politics.
Area: Social and Behavioral Sciences

AS.190.111. Introduction to Global Studies. 3 Credits.
This course surveys scholarly approaches to processes, relations, institutions, and social structures that cross, subvert, or transcend national borders. The course will also introduce students to research tools for global studies. Students who have taken Contemporary International Politics 190.209 or International Politics 190.104 may not register.
Area: Social and Behavioral Sciences

AS.190.180. Introduction to Political Theory. 3 Credits.
This course serves as an introduction to the study of political thought. Political thought critically considers what we think we mean when we talk about ‘the political’, reflections that often lead political theorists to examine not only various kinds of political regimes, institutions, and practices, but also to explore matters of ethics, morality, anthropology, history, and biology. This particular course will focus on classical debates about freedom, equality, authority, and justice that have been revisited and revised by feminist political theorists such as Mary Wollstonecraft, Simone de Beauvoir, Audre Lorde, Catharine MacKinnon, bell hooks, Iris Marion Young, and Wendy Brown.
Area: Social and Behavioral Sciences

AS.190.204. Ancient Political Thought. 3 Credits.
The premise of this course is that a political perspective is tied up with a (meta)physical one, that is to say, with ideas about the nature of Nature and of the status of the human and nonhuman elements within it. How is the universe ordered? Who or what is responsible for it? What place do or should humans occupy within it? How ought we to relate to nonhuman beings and forces? We will read three different responses to such questions and show how they are linked to a particular vision of political life. In the first, the world into which human are born is ordered by gods whose actions often appear inexplicable: Prometheus Bound by Aeschylus, Oedipus the King by Sophocles, and Hippolytus by Euripides will represent this tragic vision of the cosmos. In the second, Plato, in Republic and in Phaedrus, the forces of reason and eros play central and powerful roles. In the third, Augustine of Hippo presents a world designed by a benevolent, omnipotent God who nevertheless has allowed humans a share in their own fate. We end the course with Nietzsche’s Birth of Tragedy, which offers a perspective on these three visions of the world – the tragic, the rational, and the faithful – which will help us evaluate them in the light of contemporary political and ecological concerns.
Area: Humanities, Social and Behavioral Sciences

AS.190.207. The Power of Rhetoric. 3 Credits.
In a time when people claim language ‘has no preference to facts, truths, or realities,’ the power of rhetoric is both vilified and lauded in the strongest possible terms. According to some, rhetoric is responsible for the dismissal of everything from political dissent to science as a species of ‘fake news’. By contrast, others argue public life cannot be repaired without a ‘restoration’ of rhetoric. What are these people talking about? This course will help us figure this out. Students will be introduced to the art of persuasive speech, writing, and visual media so as to be prepared to critically examine and evaluate the claims made for and about the role of language in contemporary politics. Topics will include informal logic, appeals, fallacies, figures and tropes. Among others, we will read texts by Aristotle, Austin, Barthes, Foucault, Freud, Kierkegaard, Nietzsche, and Zizek. In addition to a number of short exercises and writing assignments throughout the semester, there will be a mid-term and a final paper.

AS.190.217. Introduction to International Relations Theory. 3 Credits.
This course is a broad introduction to international relations theory in a format that encompasses lecture and discussion. We will explore mainstream theoretical perspectives and critiques of those perspectives, as well as more recent developments in the field.
Area: Social and Behavioral Sciences

AS.190.220. Global Security Politics. 3 Credits.
Contemporary and emerging technologies of nuclear (weapons, terrorism, energy) outer space (missiles, missile defense, asteroids), biosecurity (bioweapons, pandemics, terrorism) and cyber (war, spying, surveillance) and implications for security, international politics, arms control, and political freedom.
Area: Social and Behavioral Sciences
**AS.190.226. Global Governance. 3 Credits.**
Global problems like poverty, financial instability, human rights abuses, and climate change threaten both international order and human well-being. In the absence of a world state, these problems must be addressed by an increasingly complex, transnational network of organizations and social groups. First, we will aim to understand and explain how global problems are governed through detailed case studies of International Organizations and Non-Governmental Organizations such as the United Nations, World Bank, Intergovernmental Panel on Climate Change, Amnesty International and more. Second, we will critically evaluate the successes and failures of these organizations and explore the possibilities for improving democratic governance at the global level.
Area: Social and Behavioral Sciences

**AS.190.227. U.S. Foreign Policy. 3 Credits.**
This course will provide and analysis of US foreign policy with a focus on the interests, institutions, and ideas underpinning its development. While the course will offer a broader survey, the emphasis will be on important developments during the Cold War, such as the articulation of containment strategies and nuclear deterrence, and the analysis of contemporary foreign policy questions, including the problems of terrorism and failed states. In addition to security issues, attention will also be paid to significant developments in international trade policy.
Area: Social and Behavioral Sciences

**AS.190.245. The Politics of Global Development. 3 Credits.**
Development is often assumed to be an economic issue. In this course we examine the politics of development on a global scale. We begin by looking at the colonial and Cold War histories of development. We then use these histories to contextualise contemporary development issues that directly affect international relations such as aid and debt, humanitarianism, food security, land “grabs”, migration and indigenous rights. The course also seeks to understand the ways in which the issues underlying global development have always connected and continue to connect the peoples and polities of the Global North and Global South.

**AS.190.281. Virtue, Labor, and Power (Classics of Political Thought II). 3 Credits.**
This is not a class in the history of political thought. Instead, it is an opportunity for a selective, circumscribed, but very focused engagement with some of the most powerful and provocative texts in that history. We will read selections from six thinkers (Socrates, Machiavelli, Locke, Marx, Nietzsche, and Foucault), focusing on three themes (Virtue, Labor, and Power). These texts have all profoundly shaped the way we think about politics, and they are texts that resonate with our own political problematics today.
Area: Social and Behavioral Sciences

**AS.190.282. Authority and Liberty. 3 Credits.**
Beginning with Plato, and using Nietzsche’s history of metaphysics as a guide, this course serves as an introduction to Euro-American political thought by analyzing the philosophical foundations of political authority. In addition to works by Plato and Nietzsche, readings will include works by Kant, Mill, Hart, and Foucault.
Area: Social and Behavioral Sciences
Writing Intensive

**AS.190.284. Classics of Political Theory: Political Freedom. 3 Credits.**
This course investigates core questions of what constitutes political freedom, what limits on freedom (if any) should be imposed by authority, and the relationship between freedom, responsibility and political judgment. Spanning texts ancient, modern and contemporary, we shall investigate how power inhabits and invigorates practices of freedom and consent. Among the questions we will consider: Can we always tell the difference between consent and coercion? Are morality and freedom incompatible? Is freedom from the past possible? By wrestling with slavery (freedom’s opposite) we will confront the terrifying possibility that slavery can be both embodied and psychic. If our minds can be held captive by power, can we ever be certain that we are truly free? The political stakes of these problems will be brought to light through a consideration of issues of religion, gender, sexuality, civil liberties, class and race.
Area: Social and Behavioral Sciences

**AS.190.306. Latin American Politics and Society in Comparative and Historical Perspective. 3 Credits.**
The seminar will introduce students to the political and economic trajectories of Latin America as a whole and of individual countries, including Mexico, Brazil, Argentina, and Chile. Special attention will be paid to the long-term trajectory of the political regime (democracy versus dictatorship) and of economic development (variations in GDP per capita). Competing theories, from economic dependence to historical institutionalism, will be examined for their contribution to our understanding of Latin America’s relative economic backwardness and low quality democracies.
Area: Social and Behavioral Sciences
Writing Intensive

**AS.190.307. Race, Politics and Literature. 3 Credits.**

**AS.190.308. Democracy and Dictatorship: Theory and Cases. 3 Credits.**
The course will cover three topics: 1) The conceptualization of political regime, democracy and authoritarianism. We will also consider neighboring concepts of other macro-political structures—government, state, and administration—in order to be able to demarcate what is distinctive about the study of political regimes.2) The characterization of political regimes in most Western and some non-Western countries, in history and today. We will centrally focus on the so called “Waves of Democratization,” but we will also consider stories with less happy outcomes, that is, processes that led to the breakdown of democracies and the installation of repressive dictatorships.3) The explanation(s) of the stability and change of political regimes around the world. Theoretical accounts of regime change come in many flavors—emphasis on economic versus political causes, focus on agents and choices versus structures and constraints, international versus domestic factors, among others. We will consider most of them.
Area: Social and Behavioral Sciences

**AS.190.311. Disposable People: Race, Immigration and Biopolitics. 3 Credits.**
This course will explore theories and practices of race and immigration in order to illuminate the proliferation of populations regarded as disposable in contemporary politics. We will pay special attention to the contestable criteria used to determine eligibility for membership in the human race. We shall also examine how political power influences the relays between citizenship status and those whose lives are worthy of protection, and those who should be allowed to die.
Area: Social and Behavioral Sciences
AS.190.314. Struggles for Democracy: from the French Revolution to the Arab Spring. 3 Credits.
This course is a systematic introduction to theories of regime change, which includes episodes of democratic transitions (gradual or revolutionary) and breakdowns, as well as trajectories of regime stability, like the persistence of various types of authoritarian rule and democratic polities. Two thirds of the course will cover theories, which in comparative politics are mostly inductive constructions from historical experiences. The remaining third will be case studies of exemplary events and processes, for instance, the differentiation of political regimes in post-WWI Europe in terms of liberal, fascist, and social-democratic regimes; the convergence towards democracy in Western Europe and Latin America between 1950 and 1990, and the fragility of democracy in Tropical Africa and the Middle East.
Area: Social and Behavioral Sciences

AS.190.315. Asian American Politics. 3 Credits.
This course examines issues of political identity, political incorporation, and political participation of Asian Americans. Themes include Asian American panethnicity, the struggle for immigration and citizenship, Asian American electoral politics, political activism and resistance since the 1960s, and the impact of Asian Americans on the politics of race and ethnicity in the United States.
Area: Social and Behavioral Sciences Writing Intensive

AS.190.320. Politics Of East Asia. 3 Credits.
Examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. Topics include state-society relations, late development, nationalism, democratization, political culture, social movements, and globalization.
Area: Social and Behavioral Sciences

AS.190.322. Future of American Democracy. 3 Credits.
For the most part, observers of American politics have not considered the possibility that the American democratic regime might be at risk. But the unexpected election of Donald Trump in 2016 and the subsequent course of his presidency have occasioned a great deal of uncertainty and anxiety about whether democracy in the United States is at risk and whether American political institutions can withstand the stresses of contemporary politics. This course will use the Trump era to explore the conditions that seem to threaten the stability of the American regime.
We will begin by exploring the political circumstances that led to Trump’s rise.
We will then examine what we can learn from the experience of other countries about the conditions that make democracy either robust or fragile. Finally, we will consider how a set of contemporary political conditions in the United States — extreme partisan polarization, intense racial antagonism, growing economic inequality, and expanded executive power — contribute to the challenges facing American democracy today and in the future.
Area: Social and Behavioral Sciences Writing Intensive

AS.190.325. Finding Equality in Law and Society. 3 Credits.
In this class, we will ask questions about the relationship between equality, law, and society. We will investigate how people have used law in their movements for greater equality, and ask whether law has served these movements well and how it has worked. We will pay particular attention to movements based on race, gender, and economic class.

AS.190.326. Democracy And Elections. 3 Credits.
An examination of most aspects of democratic elections with the exception of the behavior of voters. Topics include the impact of various electoral systems and administrative reforms on the outcome of elections, standards for evaluations of electoral systems, and the impact of the Arrow problem on normative theories of democratic elections.
Area: Social and Behavioral Sciences

AS.190.327. Politics of Information. 3 Credits.
Considers global and comparative politics of information, information technologies, and the Internet. Examines governance of information (ownership of information, rights to information, privacy) and governance of information technologies (domain names, social media websites, etc.).
Area: Social and Behavioral Sciences

AS.190.329. National Security-Nuclear Age. 3 Credits.
This course examines the impact of weapons of mass destruction on international politics with an emphasis on security issues. The first half of the course focuses on the history of nuclear weapons development during the Cold War and theories of deterrence. The second half of the class considers contemporary issues including terrorism, chemical and biological weapons, ballistic missile defense and proliferation.
Requirements include a midterm, final and a ten page paper.
Area: Social and Behavioral Sciences

AS.190.330. Japanese Politics. 3 Credits.
This course introduces students to the major debates and issues of postwar Japanese politics. Topics include nationalism, electoral politics, civil society, and immigration.
Area: Social and Behavioral Sciences Writing Intensive

AS.190.331. America and the World. 3 Credits.
This course is a survey of the unique position of the United States in world politics. We will cover the broader international relations literature on the dynamics of hegemony, empire, and asymmetrical relationships, from work in the realist tradition to more critical approaches. We will also assess the importance of American domestic institutions in understanding past and contemporary developments.
Area: Social and Behavioral Sciences

AS.190.333. American Constitutional Law. 3 Credits.
This course covers enduring debates about the way the Constitution has structured the U.S. government and about which powers the Constitution assigns to the federal government and to the states. We will examine these debates in the context of American political history and thought by studying the writings of prominent participants, and landmark Supreme Court cases.
Area: Social and Behavioral Sciences

AS.190.334. Constitutional Law. 3 Credits.
Topics include executive and emergency power, racial and gender equality, and selected free speech and religious freedom issues.
Area: Social and Behavioral Sciences

AS.190.335. Imagining Borders. 3 Credits.
What is a border and why do borders matter in global politics. What do borders mean under conditions of globalization? An examination of the politics of borders, transborder flows, and networks within and across borders. The readings which come from political science and other disciplines, will include theoretical and case-specific works.
Area: Social and Behavioral Sciences
AS.190.338. Comparative Political Behavior. 3 Credits.
An introduction to the study of political behavior, emphasizing electoral behavior in democratic countries.
Area: Social and Behavioral Sciences

AS.190.339. American Racial Politics. 3 Credits.
Recommended Course Background: AS.190.214
Area: Social and Behavioral Sciences

AS.190.341. Korean Politics. 3 Credits.
This course introduces students to the historical and institutional foundations of modern South Korean politics. Topics include nationalism, political economic development, civil society, globalization, and ROK-DPRK relations.(CP)
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.343. Research Seminar on Political Parties. 3 Credits.
This seminar has two basic objectives: both theoretical and empirical study of selected topics in the comparative literature on political parties, and the ultimate production of a publishable-quality (or conference-presentable-quality) paper. Topics will include (but not be limited to) the place of parties in political theory and the nature of party systems, party organization, and party behavior in the United States and other countries. Writing Intensive

AS.190.344. Seminar in Anti-Semitism. 3 Credits.
Jews exercise a good deal of power in contemporary America. They are prominent in a number of key industries, play important roles in the political process, and hold many major national offices. For example, though Jews constitute barely two percent of America’s citizens, about one-third of the nation’s wealthiest 400 individuals are Jewish and more than ten percent of the seats in the U.S. Congress are held by Jews. One recent book declared that, “From the Vatican to the Kremlin, from the White House to Capitol Hill, the world’s movers and shakers view American Jewry as a force to be reckoned with.” Of course, Jews have risen to power in many times and places ranging from the medieval Muslim world and early modern Spain through Germany and the Soviet Union in the 20th century. In nearly every prior instance, though, Jewish power proved to be evanescent. No sooner had the Jews become “a force to be reckoned with” than they found themselves banished to the political margins, forced into exile or worse. Though it may rise to a great height, the power of the Jews seems ultimately to rest on a rather insecure foundation. Cross-listed with Jewish Studies. Course is open to juniors and seniors.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.346. Foundations of International Relations Theory. 3 Credits.
This course is a broad conceptual introduction to international relations theory in a format that stresses close reading and critical discussion. We will explore mainstream theoretical perspectives and critiques of those perspectives, as well as more recent developments in the field. By the end of the course, students will have a firm grasp of the core issues and debates in the field. The course is conceptually demanding; interested students should have at least completed an introductory course in political science.

AS.190.348. Business, Finance, and Government in E. Asia. 3 Credits.
Business, Finance, and Government in East Asia explores the dynamics of East Asia's economic growth (and crises) over the last fifty years. We will examine Japan's post-war development strategy, the Asian tiger economies, and China's dramatic rise. Centered on case studies of major corporations, this course examines the interplay between politics and economics in East Asia, and considers the following questions: How have businesses navigated East Asia's complex market environment? In what ways can the state foster economic development? How has the financial system been organized to facilitate investment? What are the long-term prospects for growth in the region?
Area: Social and Behavioral Sciences

AS.190.356. The Social Contract and its Discontents. 3 Credits.
This course focuses on one of the most powerful stories told in the tradition of western political theory: the story of the social contract. This story is about the constitution of legitimate political authority. It is told in many ways and each version makes different assumptions, in particular about human nature, the power of reason, the value of order, and the character of justice. We examine this often-conflicting assumptions and explore how they continue to inform the way we think about the possibilities and problems of politics. Readings include texts by Arendt, Hobbes, Locke, Rousseau, Freud, Pateman, the Federalists, Derrida, and Douglass. Final grades are based on class participation, two exams and two papers.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.366. Free Speech and the Law in Comparative Perspective. 3 Credits.
This class explores the ideas and legal doctrines that define the freedom of speech. We will examine the free speech jurisprudence of the U.S. in comparison to that of other systems, particularly the jurisprudence of the European Court of Human Rights and the Supreme Court of Canada.
Area: Social and Behavioral Sciences

AS.190.373. The Politics of Public Policy. 3 Credits.
This course is an introduction to the political structure and process of making public policy in the United States. Public policymaking is, above all, an arena in which policy professionals try to bring systematic evidence and scientific knowledge to bear to diagnose, understand, and solve social problems. At the same time, policymaking also takes place in a political environment, in which strategic and purposive actors contend for power and seek to advance their own goals and realize their own visions about how the world ought to be changed for the better. The goals that participants in the policymaking process pursue may take a variety of forms: substantive policy outcomes, of course, but also power, political advancement, or material advantage. The actors who populate the process, moreover, may disagree about the goals they seek and making policy — especially in democratic political systems — requires some means of resolving these disagreements. Actors also differ in the resources they have at their disposal to seek their goals — power, money, organization, for example, but also knowledge and expertise. Finally, policymakers cannot do anything they want in pursuit of their goals. They are constrained by the rules and structures that make up the policymaking system. These factors — actors, goals, resources, knowledge, and rules — shape the politics of policymaking and frame the strategic options available to policymakers.
AS.190.379. Nationalism and the Politics of Identity. 3 Credits.
Nationalism ties powerful organizations to political mobilization, territory, and individual loyalty. Yet nationalism is typically studied in isolation from other social formations that depend upon organizational—individual linkages. Alternative types of identity category sometimes depend similarly upon organizations that collect and deploy resources, mobilize individuals, erect boundaries, and promote strong emotional connections among individuals as well as between individuals and institutions. In this class, we study classic and contemporary works on nationalism, drawn from multiple disciplinary and analytic traditions, in the comparative context of alternative forms of identity. The focus of the class will be primarily theoretical, with no regional or temporal limitations.

AS.190.380. The American Welfare State. 3 Credits.
This course analyzes the distinctive US welfare state in historical and comparative perspective. We begin with a survey of the policy context, an historical overview from the poorhouses through the Great Society, and a tour of welfare states across the rich democracies. We then survey developments—and explain the actual workings of policy—across jobs, education, welfare, pensions, and health care. We explore the institutional and political factors behind their divergent trajectories through conservative revival and the age of Trump. Students will write a seminar paper exploring policy development over time in a program or area of their choosing. Enrollment restricted to Social Policy minors only. **Prerequisite(s):** Students may take AS.190.380 or AS.360.380, but not both.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.381. Global Environmental Politics. 3 Credits.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.382. Democracy and Development: Theory and Cases. 3 Credits.
Most wealthy countries are democracies. But not all democracies are wealthy—India, Costa Rica, and Mongolia are prominent examples of poor countries with democratic regimes. The course will examine the relation between economic development and political democratization under three big questions. (a) Under what conditions, and through which mechanisms, does economic development promote democracy? (b) If economic development is not possible in the foreseeable future, how do countries achieve stable democratization? (c) Under what conditions, and through which mechanisms, does democracy foster economic development?
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.384. Urban Politics & Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations. Cross-listed with Africana Studies
Area: Social and Behavioral Sciences

AS.190.385. Urban Politics and Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations. Cross-listed with Africana Studies.
Area: Social and Behavioral Sciences

AS.190.387. Parties and Elections in America. 3 Credits.
Considers how parties and elections structure political conflict, and facilitate (or not) democratic control of government. Topics include campaigns, voting behavior, election administration, money in politics, presidential nomination, and party coalitions.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.394. Comparative Politics of the Middle East and North Africa. 3 Credits.
This course examines the domestic, regional, and transnational politics of the Middle East and North Africa. The class is organized into three units. The first examines major armed conflicts—anti-colonial, intra-state, and inter-state—from 1948 through the 1990s. It uses these historical moments as windows onto key issues in Middle Eastern and North African political issues such as external intervention/occupation, human rights, sectarianism, social movements, and memory politics. Unit Two focuses on policy relevant issues such as democratization, minority populations, religion and politics, and gender. In Unit Three, students will explore the politics of the Arab Uprisings through critical reading and discussion of new (post-2011) scholarship on MENA states, organizations, and populations. Enrollment limited to Political Science and International Studies majors.
Area: Social and Behavioral Sciences

AS.190.396. Capitalism and Ecology. 3 Credits.
Capitalism and Ecology focuses on the relations between capitalism and climate during the era of the Anthropocene. How do capitalist processes of fossil extraction, consumption, production and governance contribute to the pace of climate warming, glacier flows, the ocean conveyor system, species loss and other phenomena? What are the effects and the possible modes of political response? How do the nonhuman, self-organizing processes such as glaciers, oceans and climate change on their own as they also amplify the effects of capitalist emissions? The course combines texts on capitalism and activism with those by geoscientists on how the nonhuman systems work. Books by authors in the fields of political theory, geology, anthropology, economics, philosophy and ethology will be drawn upon. Authors such as Michael Benton, Brian Fagan, Hayek, Naomi Klein, Fred Hirsch, Fred Pearce, van Dooren and Connolly are apt to be read to engage these issues. A previous course in political theory is recommended. The class is organized around student presentations on assigned readings. Two papers, 10-12 pages in length. Extensive class discussion.
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive
The Politics of Good and Evil places a set of classic myths into conversation with recent philosophical and political work on existential questions. The myths include the Book of Job, Genesis (J version), two dramas by Sophocles, a selection from Augustine, and Voltaire’s Candide. Texts by Nietzsche (Thus Spoke Zarathustra), William James, (A Pluralistic Universe) and Connolly are then placed into conversation with both each other and these classic stories. Kohler’s The Sixth Extinction closes the class, encouraging us to think again about the relations between mythic orientations to responsibility, tragic possibility, nature/culture imbrications and the shape of contemporary life during the Anthropocene. Previous work in political theory is recommended. The course is devoted to “elemental theory”, in which diverse existential stories jostle each other and periodically disturb us, challenging us to explore new thoughts in a new world. One class presentation, two 10-12 page papers, and extensive class discussion.

Area: Humanities

This upper-level undergraduate writing intensive course brings together the work of Hannah Arendt and Michel Foucault to focus on their critiques of modernity and their discussions of political change/revolution. Although Arendt and Foucault are often understood as coming from and supporting different political theoretical traditions, the course will also explore ways in which their shared debt to the work of Friedrich Nietzsche illuminates sometimes surprising commonalities and complementary positions. There is no final exam in this course but in addition to reading assignments, students will be required to write three papers.

Area: Humanities

This is an advanced undergraduate seminar that explores how racial stigma functions as a marker of being always already in debt. In view of the legacies of settler-colonialism, imperialism and chattel slavery, how is it that those from whom so much has been taken are nevertheless regarded as perpetually in debt? We shall examine the moral, economic and racialized logics of power through which a range of political subjects come to be regarded as ungrateful “takers” as opposed to “makers,” and owing a debt to society. In so doing, we will investigate how temporality functions as a tool of power by considering how the indebted are made vulnerable to precarity, discipline, and disposability—in effect, forced to live life on borrowed time.

Area: Social and Behavioral Sciences

This seminar will examine the nation’s key executive institutions and aspects of executive governance in the U.S. Students will alternate primary responsibility for week’s readings. Every student will prepare a 10-15 page review and critique of the books for which they are responsible in class.

Area: Social and Behavioral Sciences

This is an undergraduate writing intensive course that addresses the disproportionate impact of environmental destruction on racially stigmatized populations. We shall examine the logics of power whereby the natural world is subjected to exploitation and domination, in tandem with the subordination of racial subjects historically identified as closer to nature. Likewise, we will explore political and theoretical challenges to environmental racism, such as those posed by indigenous communities, decolonial theory, and political movements contesting the intersection of racial inequalities and ecological crises.

Area: Social and Behavioral Sciences

This upper-level undergraduate writing intensive seminar addresses the disinherited experiences of race, such as: criminal (in)justice, environmental racism, and the proliferation of human disposability. Recommended Course Background: One Political Theory course.

Area: Social and Behavioral Sciences

This course examines how time, and not just space, is segregated along racial lines. We shall examine how racial injustices are experienced as impositions on human time, how resistance to racial inequality has often been figured in temporal terms, and what it means to think in untimely ways that challenge how the extended lifespans of racially dominant groups is contingent upon the foreshortened lifetimes of racial others. Readings will bring political theory into contact with contemporary experiences of race, such as: racial (in)justice, environmental racism and the proliferation of human disposability. Recommended Course Background: One Political Theory course.

Area: Social and Behavioral Sciences

This course explores how time, and not just space, is segregated along racial lines. We shall examine how racial injustices are experienced as impositions on human time, how resistance to racial inequality has often been figured in temporal terms, and what it means to think in untimely ways that challenge how the extended lifespans of racially dominant groups is contingent upon the foreshortened lifetimes of racial others. Readings will bring political theory into contact with contemporary experiences of race, such as: racial (in)justice, environmental racism and the proliferation of human disposability. Recommended Course Background: One Political Theory course.

Area: Social and Behavioral Sciences
AS.190.421. Violence: State and Society. 3 Credits.
This course will examine violence that occurs mainly within the territory of nominally sovereign states. We will focus on violence as an object of study in its own right. For the most part, we will look at violence as a dependent variable, though in some instances it will function as an independent variable, a mechanism, or an equilibrium. We will ask why violence starts, how it “works” or fails to work, why it takes place in some locations and not others, why violence take specific forms (e.g., insurgency, terrorism, civilian victimization, etc.), what explains its magnitude (the number of victims), and what explains targeting (the type or identity of victims).
Area: Social and Behavioral Sciences

AS.190.423. Planetary Geopolitics. 3 Credits.
With the tools of geopolitics, course explores political debates over globalization of machine civilization and changes in scope and pace, space and place, and role of nature in human affairs.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.424. Policy Disasters. 3 Credits.
Investigates the causes of large-scale policy disasters, examining the role of ideology, psychology, organization design and political incentives. Examples may be drawn from the Iraq War, Bay of Pigs, Hurricane Katrina, the U.S. Financial crisis, Shuttle Challenger disaster, economic development policy, privatization, and the Great Society. Limited to seniors or with permission of instructor. (CP / AP)
Area: Social and Behavioral Sciences

AS.190.425. The New Deal and American Politics. 3 Credits.
This seminar explores how the New Deal, the fundamental moment in the post-Civil War United States, has structured politics and government across a variety of domains ever since. Topics include presidential leadership, executive power, political parties, labor, race, and the welfare state.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.426. Qualitative Research. 3 Credits.
This class is designed to introduce students to qualitative methodology. Practically, students will gain first-hand experience with qualitative research methods via research design, ethics review, in-depth interviewing, participant observation, and archival/primary source research. They will learn to deploy analytical techniques such as discourse analysis and process tracing. Students will also be asked to consider the merits of qualitative approaches more generally, and discuss the relative advantages of qualitative, experimental, and quantitative approaches. Questions that we will discuss include: What place should qualitative research have in a research design? Can qualitative research test hypotheses, or only generate them? Can qualitative research explain social phenomena, or only interpret them? What are the disadvantages and advantages of qualitative approaches compared to quantitative approaches? For what kinds of research questions are ethnographic techniques best suited? Is replicability possible for ethnographic field research? What criteria of evidence and analytical rigor apply on this terrain?
Area: Social and Behavioral Sciences

AS.190.427. Political Economy of Japan and Korea. 3 Credits.
This upper-level seminar examines some of the major debates and issues of postwar Japanese and South Korean political economy. Topics include nationalism, gender politics, civil society, immigration, and US-Japan-South Korea trilateral relations.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.428. The Politics of Disaster in the Middle East and Beyond. 3 Credits.
This course examines the politics of natural and man-made disasters, including war, forced migration, drought, famine, earthquakes, tsunamis, storms, and epidemics. Focusing on the Middle East, it also presents comparative cases from Africa, South and Southeast Asia, and North America. In doing so, the class will examine the unique ways that different types of disasters interact with governance structures; social and economic inequalities; medical infrastructure; gender; race and ethnicity; and political cleavages. Throughout the course, students will learn basic elements of research design and methods in addition to welcoming experienced disaster response and analysis practitioners to class. Finally, the Politics of Disaster in the Middle East and Beyond addresses some of the philosophical aspects of working in and studying disaster-affected contexts, bringing an ethical sensibility to policy-relevant analysis.

AS.190.429. The Political Bases of the Market Economy. 3 Credits.
Although “the market” is conventionally understood as separate from “politics”, the modern market economy did not arise in a political vacuum. In fact, the very separation between the economy and politics is itself the product of a politically potent set of ideas. This course is an upper-division reading seminar on the origins and evolution of the modern market economy. Readings will include Smith, Marx, Weber, Polanyi, Keynes, Hayek, Friedman, Becker, and Foucault. Recommended course background: Introduction to comparative politics OR any college-level course in social or political theory.
Area: Social and Behavioral Sciences

AS.190.430. Time and Punishment. 3 Credits.
“If you can’t do the time, don’t do the crime.” According to ask.com, this common expression was made popular in the 1970s by the theme song for the television show “Beretta.” Aside from amusing us with the irony that the star of “Beretta” was Robert Blake who was later charged with the murder of Bony Lee Bakely, the expression raises a profound issue: What is the relationship between punishment and time? This course will explore that question. Topics to be discussed include different philosophical understandings and experiences of time, views of mortality and fate, theories of punishment, specific punishments in the U.S. (including sentences of juveniles, life, death, and LWOP), as well as punishments that are not specifically meted out but are known to be the consequences of political, social, and economic circumstance. Students will read texts in criminology, political theory, philosophy, and jurisprudence, as well as a selection of Supreme Court cases, novels, and short stories. This writing intensive course is limited to undergraduates who have taken at least one “Classics of Political Thought” course (190.280, 190.281, 190.282, or 190.283).
Area: Social and Behavioral Sciences

AS.190.431. Global Climate Governance. 3 Credits.
This course will offer an in-depth study of the history and politics of global climate governance. It will examine the central actors, agreements, and policy proposals that shape climate governance.
Area: Social and Behavioral Sciences
AS.190.433. Race and the Politics of Punishment in the US. 3 Credits.
Contact with criminal justice has become a primary way that many Americans see and experience government, particularly those from race-class subjugated communities. Yet, our field has been slow to appreciate the development of the carceral state or to consider its manifold for citizenship. In this advanced undergraduate seminar, we will survey key debates around punishment, state violence, and surveillance, with a particular focus on research that takes institutional development, history and racial orders seriously. Why did the carceral state expand in ‘fits and starts’ and with what consequence for state-building? We explore its (racialized and gendered) relationship to other key systems: foster care, social provision, labor relations and the labor market, and immigration enforcement. A core preoccupation of this course will be to understand the ways in which the criminal justice system ‘makes race’ and how debates about crime and punishment were often debates about black inclusion and equality. How does exposure to criminal justice interventions shape political learning, democratic habits, and racial lifeworlds? In addition to policy, political discourse, and racial politics, we will employ works from a range of fields - history, sociology, law and criminology - and a range of methods (ethnography, historical analysis, quantitative and qualitative). Required books include: Khalil Muhammad’s Condemnation of Blackness: race, Crime, and the Making of Modern Urban America, Elizabeth Hinton’s From the War on Poverty to the War on Crime, David Oshinsky’s Worse than Slavery: Parchman Farm and the Ordeal of Jim Crow Justice, Bruce Western’s Punishment and Inequality in America, and Michael Fortner’s Black Silent Majority. The Rockefeller Drug Laws and the Politics of Punishment.
Writing Intensive

AS.190.434. Does Israel Have a Future?. 3 Credits.
Israel is one of the only countries whose existence is openly challenged. This class will examine the future of Israel focusing on international and domestic threats to its continued existence as a Jewish democracy. Outside threats to be considered include nuclear attack and the growing international movement to delegitimize Israel. Domestic challenges include demographic changes, the role of religion in governance, and doubts as to whether one can be a Jewish state and still be a democracy. Lessons from the destruction of the ancient Israelite kingdoms and from contemporary state deaths will be included. The course will conclude by considering efforts that Israel can undertake to meet the threats it faces.
Area: Social and Behavioral Sciences

AS.190.437. Race and Ethnic Politics in the United States. 3 Credits.
Race has been and continues to be centrally important to American political life and development. In this course, we will engage with the major debates around racial politics in the United States, with a substantial focus on how policies and practices of citizenship, immigration law, social provision, and criminal justice policy shaped and continue to shape racial formation, group-based identities, and group position; debates around the content and meaning of political representation and the responsiveness of the political system to American minority groups; debates about how racial prejudice has shifted and its importance in understanding American political behavior; the prospects for contestation or coalitions among groups; the “struggle with difference” within groups as they deal with the interplay of race and class, citizenship status, and issues that disproportionately affect a subset of their members; and debates about how new groups and issues are reshaping the meaning and practice of race in the United States.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.438. Violence and Politics. 3 Credits.
This seminar will address the role of violence—both domestic and international—in political life. Though most claim to abhor violence, since the advent of recorded history, violence and politics have been intimately related. States practice violence against internal and external foes. Political dissidents engage in violence against states. Competing political forces inflict violence upon one another. Writing in 1924, Winston Churchill declared—and not without reason—that, “The story of the human race is war.” Indeed, violence and the threat of violence are the most potent forces in political life. It is, to be sure, often averted that problems can never truly be solved by the use of force. Violence, the saying goes, is not the answer. This adage certainly appeals to our moral sensibilities. But whether or not violence is the answer presumably depends upon the question being asked. For better or worse, it is violence that usually provides the most definitive answers to three of the major questions of political life—statehood, territoriality and power. Violent struggle, in the form of war, revolution, civil war, terrorism and the like, more than any other immediate factor, determines what states will exist and their relative power, what territories they will occupy, and which groups will and will not exercise power within them. Course is open to juniors and seniors.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.439. Advanced Topics in Global Politics: Learning Through Research. 3 Credits.
Join a research team. In this course, students will explore topics in global politics and methods for the conduct of inquiry in the Johns Hopkins tradition of learning through research. Under the guidance of the professor, students will learn about a topic from existing primary and secondary sources, collect new empirical evidence, analyze the evidence, and contribute to research products. Recommended for students planning to write a thesis. Junior or Senior standing in Political Science or International Studies or permission of instructor.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.440. European Politics in Comparative Perspective. 3 Credits.
Europe has been in a sense the first testing ground for theories of comparative politics, but many outsiders now see Europe as a pacified and somewhat boring place. This course will question conventional wisdom through an examination of European politics in historical and cross-national perspective. We will apply the comparative method to the study of European politics today, and conversely we will ask what Europe tells us more generally about politics. We will see that Europe is still a locus of intense conflict as well as remarkably diverse experimentation. Topics will include: political, legal, and economic governance; the evolution of democracy and fundamental rights, the welfare state, class stratification, immigration and race, the role of religion; European integration and globalization. Recommended background: Introduction to Comparative Politics.
Area: Social and Behavioral Sciences

AS.190.442. Civil Society. 3 Credits.
This course explores classic and contemporary debates on the concept of civil society and critically examines its analytical value in light of recent developments. Topics include the relationship between civil society, the state, and markets, the role of civil society in development and democratization, social capital, and global civil society. This course is open to graduate students from any discipline. Advanced undergraduate students must obtain permission from the instructor and are expected to keep up with graduate students during class discussions.
Writing Intensive
AS.190.443. Politics of Outer Space. 3 Credits.
Intensive examination of the political aspects of human activities in outer space, past, present and future, with focus on militarization, earth-remote sensing, surveillance, navigation, resource exploitation, the Outer Space Treaty, and colonization.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.444. Causes of Peace. 3 Credits.
Since 1945, the great powers have enjoyed their longest period of peace in history. Interstate conflict between lesser powers is also at an all time low. What accounts for this “long peace?” This course will look at various explanations including the spread of democracy, the proliferation of nuclear weapons, globalization, American hegemony, and fundamental changes in attitudes regarding the use of force. Students will present draft versions of their research papers during the last weeks of the course. Co-listed with AS.190.619
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.445. Power and Wealth: Sources, Dynamics and Linkages. 3 Credits.
This seminar explores theoretical approaches to the multiple relations between political power and economic power, including pluralism, Marxism, and historical institutionalism. Major empirical transformations will provide the motivation: the rise of modern states, capitalism and social classes in Early Modern Europe, the creation of highly unequal societies in post-colonial Latin America and Africa, the varieties of Welfare State in the golden age of advanced capitalism (1950-75), and the powerful rebirth of inequality in advanced economies for the last 25 years. Theories of sources and interactions of political and economic power will be coupled with accounts of the effects of power and wealth on macroscopic change, especially democratization and economic development. Open to juniors, seniors, and graduate students.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.451. Geopolitics. 3 Credits.
Intensive exploration of theories of how geography, ecology, and technology shape political orders. Case studies of ancient, early modern, global, and contemporary topics, including European ascent, industrial revolution, tropics and North South divide, climate change, geo-engineering and global commons (oceans, atmosphere and orbital space
Writing Intensive

AS.190.452. Party Politics from the Founding to the Progressives. 3 Credits.
Though the torchlight parade has long since passed, American parties still stand in the shadow of the nineteenth-century Party Period. This course seeks to untangle the ideologies and practices of party politics from the Founding to the Progressive Era. Topics include the rise of mass parties, political violence, the coming of the Republican Party, the party politics of Reconstruction and westward expansion, corruption and the political machine, Populism, and movements for reform. We pay particular attention to comparisons between past and present, and to opportunities taken and foregone.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.455. Comparative Racial Politics. 3 Credits.
This upper-level seminar surveys the major trends and approaches to the comparative study of race in political science and critically examines the link between race and politics. Topics include race and state formation, citizenship and national membership, immigration, racial regimes, and the political economy of race. Recommended background: Courses in comparative politics, political economy, immigration, and racial politics
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.456. Politics of TransHumanism. 3 Credits.
Examination of politics of human biological and cybernetic augmentation, and replacement with focus on stratification, weaponization, collectivization, extinction and regulation.
Writing Intensive

AS.190.471. The University and Society. 3 Credits.
In the 20th century, American universities became the envy of the world, leading in most categories of scholarly productivity and attracting students from every nation. In recent years, though, American higher education has come to face a number of challenges including rapidly rising costs, administrative bloat, corporatization and moocification. We will examine the problems and promises of American higher education, the political struggles within the university and the place of the university in the larger society. Upper classes and Grad Students only.
Area: Social and Behavioral Sciences

AS.190.479. Imag(in)ing Cities. 3 Credits.
Cities exert a substantial degree of control over American life. Throughout the 20th and early years of the 21st Century they have been centers of industry, of social change, of political change. And in part because of their status, scholars have begun to theorize about cities. The purpose of this class is to interrogate these theories through a filmic lens. Students will be exposed to readings and then in the second half of the semester, to films about cities that implicitly and explicitly speak to and about these theories. Some coursework in urban studies preferred, though not necessary.
Area: Social and Behavioral Sciences

AS.190.480. Planetary Interdependence and World Governments. 3 Credits.
Intensive exploration of alternative global political architectures for high levels of security, ecological and internet interdependence
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.481. Conservatism and Crime. 3 Credits.
This course will examine the evolution of conservative thought on crime and criminal justice from the 1960s to the present. We will focus in particular on how the subject of crime illuminates different strains of conservatism, reveals tensions between its values of liberty, authority and anti-statism, and shows the changing approach that conservative intellectuals have had to race.
Area: Social and Behavioral Sciences
Writing Intensive
AS.190.678. Law and Politics.
As a field, Law and Politics has evolved from the study of constitutional law and judicial politics to the political behavior of judges and their associates to the study of law and society, the operation of law and courts “on the ground” in the international arena as well as in the United States, historical institutionalism, and the carceral state. In this graduate course, we will review some of the classic texts in the field, with a focus on the tension between legal institutions and democratic politics. In particular, we will examine how that tension is manifest in the foundations of the American political system and in critical reflection on contemporary practices of American democracy. Students will turn in response papers every week on the reading. In addition, there will be two 10-20 page papers due during the semester. Graduate Students Only. Area: Social and Behavioral Sciences

AS.191.119. Freshman Seminar: By Any Means Necessary? Political Theory of Violence. 3 Credits.
This course explores various theoretical attempts to broaden the meaning of “politics” by examining three spheres of action typically equated with “personal” life: work, family, and consumption. The following questions orient our inquiry: what does the phrase “the personal is political” mean, and what sort of political solutions does it typically endorse? What can we learn about politics by studying family dynamics? Why do Americans work so much, and how does “work ethic” discourse promote punitive social policies? What is the relationship between our everyday acts of consumption and larger political phenomena such as climate change and racialization processes? What can theories of intersectionality tell us about such dynamics?
Area: Social and Behavioral Sciences

AS.191.216. Freshman Seminar: By Any Means Necessary? Political Theories of Violence. 3 Credits.
Questions of violence are as old as questions of politics itself. Are politics and violence essentially the same or is politics fundamentally non-violent? Is violence the only way to achieve political change? Has the state been a force for eliminating violence and securing freedom or has it only created more conflict? Who gets to define what counts as violent, and for what purposes? This course engages such questions through a theoretical lens, often focusing on political actors and activists responding on the ground to these pertinent questions. It asks students to reconsider what they normally think violence, non-violence, and politics are. We will particularly investigate this angle through the lens of race and colonialism—reading such figures as Michel Foucault, Franz Fanon, Mao Zedong, Gandhi, Martin Luther King Jr., Malcolm X, Angela Davis, and Ida B. Wells—as well as focusing on histories of state formation and state violence.
Area: Social and Behavioral Sciences
Writing Intensive

AS.191.217. Freshman Seminar: International Politics from the Global South. 3 Credits.
This course focuses on the interests and preferences of developing countries in international politics. The formal and informal rules of international politics tend to favor the interests and preferences of powerful countries: richer states, with better technologies and superior military capabilities. Sometimes, however, the interests and preferences of great powers do not align with what the rest of the countries want, especially with states in the Global South. We will analyze what developing countries do to restrain the leeway of powerful countries, particularly when their interests and preferences conflict. The course is divided into four main sections: a review of theories about international order and international hierarchies, tools to restrain great powers, review of strategies from countries in Latin America, Africa, and East Asia, and areas of disagreements between the Global North and the Global South.

AS.191.303. Critical Race Theory, Law, and Criminal Justice. 3 Credits.
In this course, students will gain a foundational understanding of critical race theory, including its genesis in legal theory. The course will examine its relationship and importance to social movements, including through key concepts like intersectionality. The course will also use critical race theory to grapple with law, racial segregation, and the criminal justice system in the United States.
Area: Social and Behavioral Sciences
Writing Intensive

AS.191.307. Democracy and Political Psychology: Ideals and Realities of Democratic Citizenship. 3 Credits.
This course confronts the expectations of democratic theory regarding the way citizens should think and behave with findings from political psychology with respect to how they do think and behave. Divergences of the ideals and realities of democratic citizenship often seem quite glaring and discomforting. What are the conclusions we should draw from such mismatches? Should we simply accept them or is there something to be done about them? Alternatively, should democracy be redefined or abdicated altogether? The course will center on the experience of the advanced industrial democracies—the places where one would presume democracy to work best. In addition to addressing substantive questions, the course also aims to equip students with approaches, methods, and techniques they can use in conducting their own empirical research.

AS.191.309. Theory of Conversation. 3 Credits.
What are the purposes of conversation, and how do we navigate these purposes? How do we excuse, justify, and explain ourselves to one another; how do we forgive each other; how do we come to agree with one another? When do we reach the conclusion that we have nothing more to say, and why? In this course, we will approach these and similar questions through the tradition of ordinary language philosophy as represented by Wittgenstein, Austin, and Cavell. We will then apply the method of ordinary language philosophy to conversations found in the plays of Beckett and Shakespeare, as well as the films of Hawks and McCarthy. Students will be expected to write a short paper each week.
Area: Social and Behavioral Sciences
Writing Intensive
AS.191.313. Why We Punish. 3 Credits.
A multidisciplinary exploration of the justifications and problems associated with punishment broadly defined, including prison sentences, personal acts of revenge, and military reprisals. Course texts will include international court cases, philosophical texts, and classic legal thinkers, in addition to fiction and news articles. Particular attention will be paid to when punishment is (or is not) cruel, deserved, or proportionate; when restraint should be shown; and whether it is desirable to abolish it altogether. Case studies will include the practice of solitary confinement, cycles of retaliatory violence in communal conflicts, the death penalty, and International Criminal Court efforts to punish perpetrators of war crimes and crimes against humanity. Writing intensive.

AS.191.315. The Domestic Politics of Israel. 3 Credits.
Israel's politics and history are complex, involving multiple military conflicts, domestic struggles and dynamic international relationships. This course will focus on Israel's domestic politics by tracing the story of the development of its party system and the parties composing it. A parliamentary democracy with a proportional representation electoral system, Israel's party system includes multiple parties who represent the various segments of Israeli society. What are the origins of this party system and the parties within it? What changes have they experienced and what are the factors that influence those changes? Who are the important actors and what might be motivating them? How have these parties influenced the development of Israel's domestic politics? Using both historical and statistical materials, these questions and others will serve as our guide on a journey to a better understanding of Israel's domestic politics, from its inception to the present day.

Area: Social and Behavioral Sciences
Writing Intensive

AS.191.317. No Justice, No Peace: Perspectives from Post-conflict Responses. 3 Credits.
The slogan 'No Justice, No Peace' has been uttered both as a call to arms for social unrest and as a warning that a lack of perceived justice in a society will mean lack of peace. While the demand is made in a variety of contexts ranging from urban protests in response to racial injustices to states in the aftermath of protracted civil strife or state sponsored violence, a discussion of the kind of justice that is demanded with the slogan or the kind of peace that is foreseen is often missing from the public invocations of 'no justice, no peace.' This course aims to examine invocations of "no justice, no peace" and mechanisms employed to respond to its demands. As such, the course readings will explore conceptions of justice and peace envisioned in a variety of post-conflict contexts. Students will be encouraged to evaluate and question the conceptions of justice and peace and the shifts in their meanings overtime through an examination of primary sources such as U.N. resolutions, Security Council Meeting Notes, UNCHR reports, international NGO reports, international tribunal reports in addition to seminal texts on the concepts of justice, peace and reconciliation. Students will be encouraged to articulate the ways in which response mechanisms delivered or failed to deliver the promises of justice, peace and fugitive reconciliation.

Area: Social and Behavioral Sciences

AS.191.335. Arab-Israeli Conflict. 3 Credits.
The course will focus on the origin and development of the Arab-Israeli conflict from its beginnings when Palestine was controlled by the Ottoman Empire, through World War I, The British Mandate over Palestine, and the first Arab-Israeli war (1947-1949). It will then examine the period of the Arab-Israeli wars of 1956, 1967, 1973, and 1982, the Palestinian Intifadas (1987-1993 and 2000-2005); and the development of the Arab-Israeli peace process from its beginnings with the Egyptian-Israeli treaty of 1979, the Oslo I and Oslo II agreements of 1993 and 1995, Israel's peace treaty with Jordan of 1994, the Road Map of 2003; and the periodic peace talks between Israel and Syria. The conflict will be analyzed against the background of great power intervention in the Middle East, the rise of political Islam and the dynamics of Intra-Arab politics, and will consider the impact of the Arab Spring.

Area: Social and Behavioral Sciences

AS.191.344. Belonging to Nature in the Anthropocene. 3 Credits.
This course explores debates in contemporary environmental political thought concerning humanity's relationship to nature in the Anthropocene. The Anthropocene refers to the era in which 'human' activity becomes a force of 'nature'—when the impact of human activity on natural processes manifests itself in the stuff of the Earth. For many of us, these planetary transformations are hardly noticeable in day-to-day life, but they are dramatic: we are living through the Earth's sixth mass extinction. What is our relationship to these transformations? Do we have the power to stop them, or at least to minimize their harmful effects? Course readings and films introduce multiple visions of the human/nature relationship and examine the responses they recommend to these and other questions. The political stakes of these visions are brought to light as we consider: How do visions of the human/nature relationship shape and texture core political concepts like freedom, agency, responsibility, and progress? What do they suggest about the strategies most likely to motivate action amid the uncertainty of the Anthropocene? How do these visions subtly (and not so subtly) relegate some to the realm of 'nature' so that others can be classified as 'human'?

Writing Intensive

AS.191.345. Russian Foreign Policy. 3 Credits.
This course will explore the evolution of Russian Foreign Policy from Czarist times to the present. The main theme will be the question of continuity and change, as the course will seek to determine to what degree current Russian Foreign Policy is rooted in the Czarist(1613-1917) and Soviet(1917-1991) periods, and to what degree it has operated since 1991 on a new basis. The main emphasis of the course will be on Russia's relations with the United States and Europe, China, the Middle East and the countries of the former Soviet Union--especially Ukraine, the Baltic States, Transcaucasia and Central Asia. The course will conclude with an analysis of the Russian reaction to the Arab Spring and its impact both on Russian domestic politics and on Russian foreign policy.

Area: Social and Behavioral Sciences
AS.191.347. The Political Economy of Climate Change. 3 Credits.
Scientists tell us that continued reliance on fossil fuels to drive our economies causes global warming, which in turn poses an existential threat to humanity as we know it. But the major tools of societies to steer a clean energy transition—climate and energy policies—often fail, lack ambition, and vary widely from country to country. This is puzzling: Why is it so difficult to pass meaningful policies even though the stakes are so high? How to explain the varying responses to the same problem? In this course, students study the struggle over energy and climate policies through case studies of large industrialized countries. Besides other things, we will ask why the US failed to install any kind of meaningful climate policy, if and how the problems of the EU’s carbon market can be solved, why China cancelled over 100 coal-fired power plants in 2017, and why cloudy Germany became a solar energy powerhouse.
Writing Intensive

AS.191.354. Congress and Foreign Policy. 3 Credits.
This course is an introduction to the Congressional role in foreign policy. The Constitution grants the President the authority to conduct foreign policy. Yet it also gives Congress a substantial role in the shaping of foreign policy. The distinct roles are not always clear, creating an inherent tension between these two branches of government and efforts on each side to increase their power. This class will address the “rules of the road” in conducting American foreign policy and how they change. The class will go beyond theory to include case studies that show the tension between Congress and the Administration — including the Iran Agreement, Climate Change, the use of sanctions and American policy towards Cuba. The course will include guest lecturers who work in Congress on the various aspects of foreign policy — including appropriations, intelligence, oversight and investigations. We will address the Congressional role in ratification of treaties and in declaring war. The class will consider the different ways that each branch of government approaches human rights, arms sales and sanctions. The class will also address the domestic political aspects of foreign policy — including the role of advocacy groups and special interests and the political use of Congressional investigations. Most of these classes will be in Washington, DC to facilitate guest speakers. Several classes will meet at the US Congress.
Area: Humanities, Social and Behavioral Sciences

AS.191.359. North Korea, Identity, and International Politics. 3 Credits.
This course analyzes the role of identity and foreign policy in contemporary North Korea. We begin with an overview of North Korea’s political economic development and the role of national identity in state formation. We will then use those concepts to explore North Korea’s relations with South Korea, China, and the United States through topics such as regime security, nuclear weapons, human rights, and social change. The course ties together academic literature, journalistic sources, and policy research with in-class activities and writing assignments. It is recommended that students have taken a survey course on International Relations (e.g., Global Security Politics, Contemporary International Politics).
Area: Social and Behavioral Sciences

AS.191.365. U.S Constitutional Law - Civil Liberties. 3 Credits.
The course is designed to introduce students to the study of civil liberties as protected by the Constitution of the United States. The emphasis will be upon those rights incorporated into the Bill of Rights and made applicable to the states through the Fourteenth Amendment. Specifically, the course will examine freedom of speech and freedom of the press – as well as freedom of freedom of thought, belief, and association. In addition, the course will address the right to privacy, the rights of those accused of crimes, and the rights and protections secured under the two clauses of the First Amendment relating to religious liberty – the Establishment Clause and the Free Exercise Clause.
Area: Social and Behavioral Sciences
Writing Intensive

AS.191.389. The Politics of Race and Ethnicity in the Postcolonial Society. 3 Credits.
The postcolonial society offers a unique terrain for the study of comparative racial politics, providing a setting for which racial and ethnic politics often take place between predominately non-white groups. In this course, students will examine contemporary understandings of the concepts of race and ethnicity and how they are deployed politically in the postcolonial society, enabling students to make deeper explications about the relationship between race, ethnicity and national inclusion as global phenomena that are the persistent and widespread legacies of colonialism, nationalism and white supremacy. Specifically, students will become familiar with the processes of colonization and decolonization – as well as postcolonial theories of resistance – that structure group politics today, drawing upon theoretical sources from Africa, Asia and the Caribbean. These theoretical and historical tools will be used to study racial and ethnic politics across a range of postcolonial cases, including Indonesia, Mauritius, Fiji, Trinidad, Colombia and Brazil.
Writing Intensive

AS.191.402. Numbers, Pictures, Politics. 3 Credits.
Aitchison students only.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
AS.191.406. Capitalism: Politics and Political Thought in a Market Economy. 3 Credits.
The United States is a capitalist economy and we live in a capitalist world. This a fact we take for granted and therefore spend little time examining. Capitalism’s proponents attribute our society’s unprecedented wealth and technological advances to this economic system. Some go so far as to claim that modern democracy and social progress are impossible without a capitalist economy. Critics point to growing social inequality and a slew of environmental ills as proof of capitalism’s unsustainability. Some suggest that capitalism is antithetical to true democracy and human flourishing. But what exactly is capitalism? How did it evolve in the USA and how does the form capitalism takes in the United States differ from the forms it takes elsewhere? And, crucially, how is capitalism shaped by – and how does it shape – contemporary politics? And how exactly is this all related to liberalism, conservatism, neoliberalism, libertarianism, socialism, and democratic socialism? This seminar is designed to help students critically approach these questions. Rather than taking simplistic pro-contra approach, this seminar will examine capitalism along four axes: as a political-economic system, a corollary set of structures and institutions, the force behind a specific form of state organization, and the determinant of how society and individuals act and see themselves. To explore these issues, we will focus on a number of contemporary political issues, with a primary geographic focus on the United States, including the following: the debates over the welfare state and socialized healthcare; unions, lobbies, and special interests; the connection between capitalism, culture, and ideology; the effects of a capitalist organization of labor of questions of race, gender, and citizenship; the commodification of the environment and other species; and the process of critique, resistance, and social change in a capitalist system. Throughout, we will discuss the theoretical and empirical arguments put forward by a historically and disciplinarily broad range of thinkers including Karl Marx, Simone Weil, John Locke, Adam Smith, Robert Nozick, Thomas Sewell, Nancy Fraser, David Graeber, Melinda Cooper, Andreas Malm, and Guy Debord, through to Alexandria Ocasio-Cortez and Elon Musk.

Writing Intensive

AS.191.415. Fear and Loathing: Writing About Contemporary American Politics. 3 Credits.
This course is focused on reading, analyzing, and, most importantly, producing writing about the American political experience and contemporary events in American politics. We will use scholarly, print, and new media sources from different sides of the political spectrum, drawing on political and literary theory to inform our discussions. We will then try to do better. Students will write and workshop a variety of pieces of different lengths and styles, spending in-class time on peer critique, presentations, and writing exercises, which they will compile into a writing portfolio. We will discuss and write op-eds, memoirs, long-form book reviews, commentary essays, and satire. Throughout, we will devote considerable class time to critique of students’ writing. Readings will include works by James Baldwin, William F. Buckley, Claudia Rankine, Hunter S. Thompson, Ta-Nehisi Coates, Alexander Chee, Angela Nagle, and Omar el Akkad. We will draw on political commentary from sources ranging from The Washington Post to Jacobin to The Onion, through to Facebook and Twitter. Throughout, we will consider a wide range of topics pertinent to writing about politics, including questions of the make-up of the public sphere and diverse audiences, the use of voice and language, the deployment of facts and rhetoric, the place of fiction and humor in political critique, and the rise of fake news and trolling.

Program in Latin American Studies

AS.361.130. Introduction to Latin American Studies. 3 Credits.
The goal of this course is to provide an overview of Latin America, analyzing political and cultural aspects, chronologically organized. We will begin studying the origins of the multi–ethnic societies, starting with the ancient civilizations and their transformation under colonization. It is important to understand the survival of cultural traits among indigenous peoples today in the countries that were the cradle of ancient civilizations: Mexico, Guatemala and the Andean countries. In the republican era the course will focus on the classical Caribbean dictators in the first half of the 20th century and their reflection in the literature, comparing the historical reality with the magic representation in the work of Garcia Marquez. The course will scrutinize the most important revolutions in the continent: the Mexican, Cuban and Bolivian revolutions and the geopolitics of USA in the Americas. Weekly lectures related to the assigned reading will focus on specific periods, topics and regions. After each lecture, we will review the material, connecting specific details from the readings with the more theoretical aspects provided in my lecture. The course has a website where the PowerPoint presentations will be posted. Students are encouraged to post their questions, comments and suggestions on the web after their readings. Students will be given a study guide for each lecture, which will be the basis for the exams. Our perspective on Latin America will be enhanced by a selection of a few films related to the topics.
Area: Humanities, Social and Behavioral Sciences

AS.361.207. Afro-Latin American Biography. 3 Credits.
In this course, we will examine biographical accounts of men and women of African descent in Latin America and in the broader Black Atlantic. These individuals include conquistadors and slaves, saints and sinners, revolutionaries and ordinary people. In their life stories, we will not only examine questions of race, gender, and religiosity that were central to the republican era the course will focus on the classical Caribbean dictators (Barbados, Martinique, the Virgin of the Assassins), and Juan Gabriel Vázquez (The Sound of Things Falling and The Secret History of Costaguana). We will also delve into the current peace process and disarming of the FARCS and the perils and promises that the absorption of the former combatants and recalcitrant holdovers pose to the skeptical and hopeful citizens and various political factions.
Area: Humanities

AS.361.335. Colombia at War. 3 Credits.
The history of Colombia comes down to a tale of armed conflicts, protracted and renewed civil wars, coups, ethnic cleansing, narco wars, besides the struggles for independence from Spanish colonial rule and extractive capitalist exploitation. We will study the literary, journalistic, and historical record about warring and uncivil Colombia through fiction from Gabriel García Márquez (The General in his Labyrinth and News of a Kidnapping), Fernando Vallejo (The Virgin of the Assassins), and Juan Gabriel Vázquez (The Sound of Things Falling and The Secret History of Costaguana). In this course, we will examine the origins of the multi–ethnic societies, starting with the ancient civilizations and their transformation under colonization. It is important to understand the survival of cultural traits among indigenous women today in the countries that were the cradle of ancient civilizations: Mexico, Guatemala and the Andean countries. In the republican era the course will focus on the classical Caribbean dictators in the first half of the 20th century and their reflection in the literature, comparing the historical reality with the magic representation in the work of Garcia Marquez. The course will scrutinize the most important revolutions in the continent: the Mexican, Cuban and Bolivian revolutions and the geopolitics of USA in the Americas. Weekly lectures related to the assigned reading will focus on specific periods, topics and regions. After each lecture, we will review the material, connecting specific details from the readings with the more theoretical aspects provided in my lecture. The course has a website where the PowerPoint presentations will be posted. Students are encouraged to post their questions, comments and suggestions on the web after their readings. Students will be given a study guide for each lecture, which will be the basis for the exams. Our perspective on Latin America will be enhanced by a selection of a few films related to the topics.

Writing Intensive

AS.361.336. Hugo Chávez, Fidel Castro, and Bolivar’s Venezuela. 3 Credits.
Are the current extreme hard times in Venezuela’s Bolivarian Republic irreversible? Is there a ballpark somewhere for Thomas Jefferson and Simón Bolívar to hold a debate match about democracy, achieved emancipations, republican values and the lure of dictatorship? The course welcomes serious and sharply political dialogue about ideals of democratic republicanism in clash from the rise and apparent fall of Fidelismo and Chavismo in the Caribbean region to the agitations and alliances dictated by Trump’s seizure of American politics.
Area: Humanities, Social and Behavioral Sciences
AS.361.380. Brazil: Cinema, Popular Music, Counterculture and Politics from 1960-1990. 3 Credits.
We believe that understanding the second half of the 20th century is crucial to understand the challenges that Brazil faces in the 21st Century. This course investigates the cultural, intellectual, social, and political history of Brazil from mid-1950s to the 1990s. We begin with an overview of the legacy of Getúlio Vargas (1930-45) and the construction of Brasília (1961), examining the formation of ideas about Brazilian identity, development and modernization of the country. We then examine the dictatorship (1964-1985), its economic and social project, the place of human rights and its impact on Brazilian society, paying attention to how the people responded to an authoritarian regime through a counter revolutionary movement and through culture (Cinema Novo, MPB/ Brazilian popular music, Tropicália) in a fight for democracy. And, finally, we discuss the current issues that the country has dealt with such as of democracy, development, corruption, social mobility, and sporting mega events, for example. The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. The sections will be taught simultaneously. Section 01: 3 credits Section 02: 4 credits (instructor’s permission required)
Area: Humanities, Social and Behavioral Sciences

Program in Museums and Society
AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Crosslisted with Archaeology, History, History of Art, International Studies and Medicine, Science & Humanities.
Area: Humanities, Social and Behavioral Sciences

Sociology
AS.230.143. Global Migration: Refugees, Economic Migrants, and Borders. 3 Credits.
This course introduces students to the different forms, catalysts, and consequences of global migration. Even as the plight of migrants and refugees has elicited the sympathy of millions worldwide, the majority of them still encounter closed borders and draconian immigration regimes on the fringes of more “desirable” destinations in Europe, Australia, and the United States, and many others remain in limbo in their countries of origin or in transit states. Are these border restrictions new? Or are they consistent with states’ long-standing ways of regulating who is and is not worthy of being admitted through their borders? Throughout the course, we will trace the divergent factors that prompt refugees and economic migrants to migrate, juxtaposing these with the responses of states, international treaties, and humanitarian organizations to their movement and arrival in host countries. Using a variety of written and verbal assignments, we will question the fundamental categories of migration: What is an economic migrant? What is a refugee? How are they different or similar? Whose interests do such categories serve, and how have they been used to justify governmental practices of inclusion and exclusion over time?
Area: Social and Behavioral Sciences Writing Intensive

AS.230.147. Introduction to Islam Since 1800. 3 Credits.
This course is an introduction to contemporary Islam and Muslim societies from approximately 1800 to the present. Key themes will include the colonial encounter, state formation and reform, revolution, Islamic revival, and globalization. Reflecting Islam’s status as a world religion, the course will touch on developments around the Muslim-majority world and in the West.
Area: Social and Behavioral Sciences

AS.230.150. Issues in International Development. 3 Credits.
Why do billions of people continue to live in poverty? What obstacles stand in the way of secure and dignified lives for all? Who is most likely to bring about change, what strategies should they follow, and what kinds of institutions should they put in place? This course will introduce the main theoretical perspectives, debates, and themes in the field of international development since the mid-20th century. It has three sections. The first section focuses on debates over the optimal conditions and strategies for generating economic growth and on the relationship between growth, human welfare, and inequality. The second section presents critical assessments of development interventions from various perspectives. The third section considers the role of social movements in shaping development and social change in the 21st century.
Area: Social and Behavioral Sciences

AS.230.175. Chinese Revolutions. 3 Credits.
This course introduces the origins, operation and impacts of five major revolutions in modern China between 1850 and 1950. These include the Taiping Rebellion, the republican revolutions, federalist and southern automatic movements, labor strikes as well as peasant rebellions. It draws on the existing historiography that examines China’s transition from an empire to a republic, impacts of western and Japanese influences to China, as well as the continuity and change of Chinese social organizations. Cross list with International Studies and East Asian Studies. Fulfills IS History requirement.
Area: Social and Behavioral Sciences Writing Intensive

AS.230.213. Social Theory. 3 Credits.
This course will focus on four classical theorists whose ideas have greatly influenced the ways we study society: Karl Marx, Max Weber, Emile Durkheim, and W. E. B. Du Bois. The course is devoted to understanding how each theorist understood the origin, structure, and historical dynamics of modern societies. In addition to comparing their theories, we will use them to analyze current social issues, including those involving social inequality, conflict, cohesion, and change.
Area: Social and Behavioral Sciences Writing Intensive

AS.230.219. Land, Labor and Environmental Movements in Contemporary Africa. 3 Credits.
The course examines the new wave of social protest and popular uprisings in contemporary Africa through the interconnected themes of land, labor, and environmental movements. Attention will be placed on the early 21st century.
Area: Social and Behavioral Sciences
AS.230.221. Global Social Change. 3 Credits.
This course introduces students to issues of global social change, with a particular focus on the challenges of international development and the contemporary globalization process. Specific themes include world income inequality and global poverty, the rise of supranational organizations (e.g., WTO and EU) and their relations with sovereign states, anti-globalization activism, the rise of China and India in the global economy, and the origins as well as consequences of the current global economic crisis, among others. Lectures will be aided by documentary films and other multi-media materials. Special Note: Fulfills Economics requirement for IS GSCD track students only. Formerly offered as AS 230.353. Students who took AS.230.353 cannot take AS.230.221.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.222. Land, Labor, Environmental Rights and Struggles in Contemporary Africa. 3 Credits.
The course examines the new wave of social protest and popular uprisings in contemporary Africa through the interconnected themes of land, labor and environmental struggles. Attention will be placed on the early 21st century.
Area: Social and Behavioral Sciences

AS.230.223. Housing and Homelessness in the United States. 3 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Area: Social and Behavioral Sciences

AS.230.224. Freshman Seminar: Public Opinion and Democracy. 3 Credits.
How does public opinion shape electoral behavior and democratic governance, and how have these relationships evolved as techniques for measuring public opinion have developed since the 1950s? After a consideration of models of effective democratic governance, the course will consider how public opinion is measured and interpreted in the United States by private pollsters, university-based survey researchers, and data journalists. The course will consider competing perspectives on the sources of variation within mass public opinion, such as social class membership, racial and gender identity, religious affiliation, and party identification. Throughout the course, emphasis is placed upon the alternative modes of inquiry and writing that opposing analysts adopt. Students will learn to interpret and write about public opinion patterns from these perspectives.
Area: Social and Behavioral Sciences

AS.230.228. Colonialism in Asia and Its Contested Legacies. 3 Credits.
This course surveys the impacts of colonialism in East and Southeast Asia. Special attention will be paid to the social and economic development in British Singapore and Hong Kong as well as Japanese Korea and Taiwan. Topics include free-trade imperialism, colonial modernity, anticolonial movements, pan-Asianism, and post-war U.S. hegemony.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.233. Inequality and Social Change in Contemporary China. 3 Credits.
This course examines the trajectory of economic development in China since the beginning of market reforms in the late 1970s, with a special focus on social inequality and forms of resistance that have emerged in response to the expansion of the market economy. The first part of the course focuses on understanding the academic debates around China's economic miracle and introduces students to theories about the relationship between market expansion and social resistance. The second part focuses on key thematic topics including the rural/urban divide, rural protest, urban inequality and labor unrest, gender and sexuality in social movements, environmental protests, and the politics of ethnic relations.
Area: Social and Behavioral Sciences

AS.230.238. Beyond the Wall: The Political Economy of the US and Mexico. 3 Credits.
Examining the exchange of culture, people, and commodities between the United States and Mexico since the 19th century, this course asks not just how US practices and policies have shaped Mexican society, but how, in turn, Mexico has shaped the United States. We will examine the social, political, and economic forces that have long pulled these two societies together – and pushed them apart.
Area: Social and Behavioral Sciences

AS.230.244. Race and Ethnicity in American Society. 3 Credits.
Race and ethnicity have played a prominent role in American society and continue to do so, as demonstrated by interracial and interethnic gaps in economic and educational achievement, residence, political power, family structure, crime, and health. Using a sociological framework, we will explore the historical significance of race and its development as a social construction, assess the causes and consequences of intergroup inequalities and explore potential solutions.
Area: Social and Behavioral Sciences

AS.230.265. Research Tools for Global Sociology and Development. 3 Credits.
This course will introduce students to a range of software programs that are critical for conducting social scientific research in the 21st century. Students will develop competency in the use of computer programs for statistical analysis, database management, the creation of maps and timelines, and the presentation of research reports. The course uses examples from ongoing social science faculty research projects at Johns Hopkins on global inequality and international development. Required for GSCD track students. Course previously titled ‘Research Tools and Technologies for the Social Sciences’
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.230.275. Revolution, Reform and Social Inequality in China. 3 Credits.
This course explores various aspects of social inequality in China during the Mao Zedong and the post-Mao reform eras. We will examine inequality within villages, the rural/urban divide, urban inequality, education and health policies, and gender and ethnic inequality. Each of these issue areas will be tackled analytically, but the aim is also to understand what it was/is like to live in China during and after the Mao era. Formerly offered as AS.230.321.
Area: Social and Behavioral Sciences
Writing Intensive
AS.230.304. (Making Space For) Black Thought. 3 Credits.
How do we think about the power relations at work in the scholarship we read and in the important texts we consider essential to our educational experience? This course will critically investigate the role that concepts of race and racism have played in formulating dominant perceptions of who can be the producers of knowledge and what constitutes authoritative knowledge itself. We will consider how and why thinkers and scholarship produced outside of Europe and North America are too often ignored for their scholarly contributions and the dynamics that lead to this situation. We will also explore how and why new and important perspectives emerge from engaging and centering voices from beyond traditional canonical works. With a particular focus on the forms of oppression arising from European Enlightenment approaches to concepts of thought and objectivity, this course will critically engage students with a wide range of thinkers such as GWF Hegel, W.E.B. Du Bois, Angela Davis, Ralph Trouillot, Sadiya Hartman, Walter Rodney, Derek Walcott, Sylvia Wynter and Frantz Fanon. This course will focus largely on thinkers engaging within the Black Atlantic and black diaspora traditions to question how we might consider voices and thought from beyond Eurocentric positions in our own scholarly practice.
Area: Social and Behavioral Sciences
AS.230.306. Plagues, Power, and Social Control. 3 Credits.
While developments in biomedicine and health care have led to the eradication, cure and management of many human health problems, disease, illness and health have also been the focus for aggressive social controls and population management. The technologies and practices of disease control and health management have been foundational to some of the most aggressive structures of oppression in recent history such as the Jewish Ghetto, the Concentration Camp, the South African Township and techniques of segregation. This course seeks to explore how epidemics and disease control are linked to larger questions of power, state craft and international dynamics. This course asks how have outbreaks of infectious disease shaped social and political action? How do societies respond to outbreaks and why? What do epidemic moments tell us about global structures of power and the dynamics of control? Drawing on historical cases including plague during the European Renaissance and before, the HIV/AIDS Pandemic and the West African Ebola Outbreak of 2013-2016, this course will introduce students to the history and practices of disease control as well as important theoretical perspectives by which to understand the sociological and historical effects of disease and the responses to them. Students will engage sociological concepts such as biopolitics, social construction of disease and illness and biosecurity and produce a final research paper examining the outcomes and responses to an epidemic event to show mastery of the topics covered in the course.
Area: Social and Behavioral Sciences
Writing Intensive
AS.230.316. African American Family. 3 Credits.
This course is an examination of sociological theories and studies of African-American families and an overview of the major issues confronting African-American family life. The contemporary conditions of black families are explored, as well as the historical events that have influenced the family patterns we currently observe. Special attention will be given to social policies that have evolved as a result of the prominence of any one perspective at a given point in time.
Area: Social and Behavioral Sciences
AS.230.317. Sociology of Immigration. 3 Credits.
This course surveys sociological theories and research on immigration to the U.S. Theoretical approaches include theories of international migration, economic sociology, immigration, and assimilation. Research topics include the impact of U.S. immigration laws and policies on immigrant inflows and stocks, self-selection of immigrants, the impact of immigration on the native-born population and the U.S. labor market and economy, and the adaptation of the first and second generations.
Area: Social and Behavioral Sciences
Writing Intensive
AS.230.318. State and Society in Modern India. 3 Credits.
This course examines the complex, at times conflicting, relationship that has emerged between Indian seats of power from above and Indian expressions of society from below. Attention will be placed on the period between 1947 to the present.
Area: Social and Behavioral Sciences
Writing Intensive
AS.230.324. Gender and International Development. 3 Credits.
This course employs a comparative perspective to examine the gendered impact of international development experiences and policies. Students will discuss the historical evolution of how the concept of gender has been constructed, conceptualized, and integrated into international development theory and practice. The course will also examine how greater international development. In particular, we will examine structural theories of poverty reduction, individual theories of power and processes of stratification at the household and family level. Specific issue areas will include the globalization, class and work political participation and social movements. Cross-listed with International Studies (CP IR). Fulfills Economics requirement for IS GSCD track students only.
Area: Social and Behavioral Sciences
AS.230.325. Global Social Change and Development Practicum. 3 Credits.
This course provides 'hands on' research experience in the field of global social change and development. The course fulfills the 'research practicum' requirement for Sociology majors and is required for the GSCD track.
Prerequisite(s): AS.230.265 or permission of instructor.
Area: Social and Behavioral Sciences
AS.230.332. Race, Racism & Racial Privilege. 3 Credits.
This course will examine the concepts of race, racism, racial privilege in contemporary America, and the West in general. Examples from other countries will be integrated as well. Historical contexts such as the colonialism, the Civil War and Reconstruction, the Civil Rights movement, and the post Civil Rights era will help to provide an understanding of the social, political, economic, and cultural forces processes that have constructed and shaped the concepts of race and the racialized subject over time.
Area: Social and Behavioral Sciences
Writing Intensive
AS.230.335. Medical Humanitarianism. 3 Credits.
Humanitarian organizations play life-preserving roles in global conflicts, and have front-row views of disasters ranging from the 2010 Haiti earthquake to the 2011 Fukushima tsunami in Japan. Yet even while they provide vital assistance to millions of people in crisis, such organizations are beset by important paradoxes that hinder their capacity to create sustainable interventions. They work to fill long-lasting needs, but are prone to moving quickly from one site to the next in search of the latest emergency. They strive to be apolitical, yet are invariably influenced by the geopolitical agendas of global powers. How do such contradictions arise, and what is their impact upon millions of aid recipients around the world? Drawing on case studies from South Sudan to Haiti, this course addresses these contradictions by exploring how and why medical aid organizations attempt, and sometimes fail, to reconcile short-term goals, such as immediate life-saving, with long-term missions, such as public health programs and conflict resolution initiatives.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.337. Global Crises: Past and Present. 3 Credits.
This course will compare the current global crisis with previous major crises of historical capitalism through a combination of theoretical and historical readings. Throughout, we will ask: What can a study of past crises tell us about the nature and future trajectory of the current global crisis? Special emphasis will be placed on (1) “the late-nineteenth century great depression”, (2) the Great Depression of the 1930s, and (3) the period of crisis and stagflation in the 1970s. We will be particularly concerned to understand the differential social and geopolitical impact of the crises. Which social classes bore the brunt of disruptions in economic activity in each crisis? Which geographical areas or geopolitical groupings lost out (or benefited) from the crisis? How have environmental and ecological challenges resurfaced in each crisis including today?
Area: Social and Behavioral Sciences

AS.230.348. Society in the Anthropocene. 3 Credits.
If the progressive domination of nature has been the overriding ideology of modern societies, extreme weather events and now the Covid-19 pandemic have underscored the tenuousness of that domination. The pandemic has quickly put extreme stress on a variety of social institutions, realizing dystopian scenarios previously imagined by science fiction writers and apocalyptic climate change thinkers. While addressing the unfolding Covid-19 crisis, this course will place it within a broader set of concerns around climate change and what some call the Anthropocene—the era in which human activity has become the dominant influence on the Earth’s climate and environment. We will survey a range of social scientific literature—combined with journalistic and popular sources—on the social origins of ‘natural’ disasters; the ways in which social phenomenon— institutions, ideologies, poverty, inequality, racism, nationalism, anomie and politics—affect and are affected by such disasters; and the different ways in which various social factors— states, investors, social movements and sub-cultures—prepare for the coming crises of the 21st century.
Area: Social and Behavioral Sciences

AS.230.350. Capitalism, Dependency, and Development in Latin America. 3 Credits.
This course examines Latin American insertion into the global capitalist economy from the colonial period to the present. Examining various historical, sociological, and political-economic theories, this course will ask not only how Latin American economies and societies have developed their particular characteristics, but also how theorists within and outside the region have understood Latin American development over time.
Area: Social and Behavioral Sciences

AS.230.351. Capitalism, Development and Resistance in South Korea. 3 Credits.
This course examines the trajectory of capitalist development in South Korea (hereafter, Korea) in the twentieth and the early twenty-first centuries. We will examine debates around the political economy of development in Korea as well as class formation and social and labor protest. This course is designed to help students explore the dynamics of capitalist development and workers' movements in Korea as a case of late development in the global South. The course also draws on theoretical perspectives and methodological tools from comparative and world-historical sociology to better understand the Korean case.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.352. Chinese Diaspora: Networks and Identity. 3 Credits.
This course combines lecture and class discussion. It examines the history and historiography of Chinese overseas migration. Major issues include overseas Chinese as “merchants without empire,” Chinese exclusion acts in the age of mass migration, the “Chinese question” in postcolonial Southeast Asia, as well as the making and unmaking of Chinese identity in the current wave of globalization.
Prerequisite(s): Students may not have completed AS.230.217 previously.
Area: Social and Behavioral Sciences

AS.230.362. Migration & Development. 3 Credits.
This course focuses on the relationship between international migration and development. The course first introduces theories of international migration, immigrant integration, and international development. Building on this foundation, we then examine how immigrants interact with their homeland and how sending country governments tap their diaspora to improve development outcomes. Cross-listed with International Studies (CP, IR). Fulfills Economics requirement for IS GSCD track students only.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.363. Sociology of Dispossession. 3 Credits.
The “grabbing” of land and natural resources has, in recent years, generated widespread political conflict across the world and put dispossession on the agenda of academics and policy-makers. Nevertheless, compared to other social relations of power, land dispossession has not been central to scholarly or public understandings of capitalism, the state, development, or politics. In this class, we will collectively explore the nascent field that we might call the sociology of dispossession. We will examine existing theories of dispossession, and proceed to challenge, reconstruct or supplant those theories as we consider a wide range of historical examples of dispossession from the English Enclosures and colonial plunder to contemporary urban redevelopment and rural land grabs. This is a reading- and writing-intensive seminar.
Area: Social and Behavioral Sciences
Writing Intensive
AS.230.366. Black Social Thought and Social Movements. 3 Credits.
This course will examine the reciprocal relationship between Black social thought and social movements. How have social movements informed thinkers who grapple with questions of freedom and liberation in racially and economically stratified societies, and how have their ideas affected movement tactics? This course will look at 20th century movements and investigate connections between theory and practice through concepts like civil disobedience, internal colonialism, Black feminism, Black internationalism, and others.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.367. Islamic Finance. 3 Credits.
Today, Islamic finance is a global industry comprising nearly $2 trillion in assets, with hubs from Kuala Lumpur to Dubai to London. But half a century ago, nothing called “Islamic finance” existed. So where did Islamic finance come from? Why is it growing so fast? And what does it mean for finance to be Islamic? We discuss the ban on riba in the Quran and hadith, finance in early and medieval Islamic societies, petrodollars and the birth of Islamic banking in the 1970s, the rise of Islamic capital markets since 2000, contemporary shariah-compliant financial structures, and the constitution of piety through financial practice.
Area: Social and Behavioral Sciences

AS.230.369. Sociology in Economic Life. 3 Credits.
This course discusses how geopolitics, technology as well as social differentiation (such as race, class and gender) shape the structure of economic actions. Special attention will be paid to patterns of state-business relationship, labor processes, migrant economy, globalization and international division of labor.
Area: Social and Behavioral Sciences

AS.230.370. Housing and Homelessness in the United States. 3 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Prerequisite(s): Students may not have previously taken AS.230.223.
Area: Social and Behavioral Sciences

AS.230.375. Nations, States, and Boundaries. 3 Credits.
This course explores the historical origins and development of the modern global political order based on sovereign nation-states, the crisis of this order through the twentieth century, as well as the unraveling of this order at the turn of the twenty-first century. We will focus on how dominant political organizations in the changing world order (such as states, political parties, and transnational governing bodies) have been shaped by different social forces (such as classes and ethnic groups) and vice versa. Topics covered include rise and fall of modern nationalism, formation of regional and global governing structures, “civilizational” turn of global politics, waves of separatism and redrawing of nation’s boundaries after the Cold War, politics of immigration and citizenship, among others.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.377. Colonialism and Anti-Colonialism. 3 Credits.
This seminar examines the theories and historiography of colonialism and anti-colonial movements. It focuses on the establishment of the colonial division of labor, comparative colonialism, identity formation, and nationalism as well as anti-colonial movement.
Area: Social and Behavioral Sciences

AS.230.378. Refugees, Human Rights, and Sovereignty. 3 Credits.
What is a refugee? Since World War II, states that have pledged to offer protection to refugees have frequently been drawn instead to the dictates of nationalism and communitarianism, which prioritize concern for their own citizens, rather than to the needs of forced migrants. As a result, even those migrants that have been formally recognized as refugees according to the 1951 UN Refugee Convention have not been assured of protection, and other migrants have been even less assured. In this course, we will locate the reasons for this reality in the legal, political, and historical underpinnings of political asylum. What is the difference between an asylum seeker and a refugee? How has the refugee category been redefined and contested by international bodies since 1951? How are the ambiguities of real-life violence and persecution simplified in asylum adjudication interviews that require clear, factual narratives? What kinds of protections are offered to asylum seekers, whether by UN bodies, NGOs, or host governments, and how have such protections varied geographically and historically? Finally, what protections, if any, are afforded to those migrants who are fleeing not persecution but rather “merely” endemic poverty or climate-induced displacement? The course draws on literature from sociology, history, anthropology, and international refugee law in order to understand the capacity (or lack thereof) of human rights discourses and declarations to contravene state sovereignty in the name of protecting the rightless.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.385. Schooling, Racial Inequality and Public Policy in America. 3 Credits.
After examining alternative explanations for why individuals obtain different amounts and types of educational training, the course focuses on how an individual's family background and race affect his or her trajectory through the educational system. The course covers the specific challenges that have confronted urban schooling in America since the 1960s, including the classic literature on the effects of school and community resources on student achievement as well as the development and later evaluation of school desegregation policies. The course also considers case studies of current policy debates in the US, such as housing segregation and school resegregation, voucher programs for school choice, and the motivation for and consequences of the establishment of state-mandated testing requirements. Throughout the course, emphasis is placed upon the alternative modes of inquiry and writing which opposing scholars, policymakers, and journalists use to address these contentious topics.
Area: Social and Behavioral Sciences
Writing Intensive
AS.230.393. Global Health and Human Rights. 3 Credits.
Is access to healthcare a fundamental human right? If so, then which
global actors are obligated to provide healthcare to whom, and for
how long? How do meanings of health and illness vary across time
and place? And finally, how are human rights principles translated into
frontline practice in order to promote well-being? This course takes a
critical interdisciplinary approach to these questions through a series of
global case studies ranging from humanitarian aid in post-tsunami
Sri Lanka to anti-FGM (female genital mutilation) campaigns in Ghana.
How do international NGOs, UN bodies, and governments collaborate
(or compete) to distribute healthcare in places beset by dire resource
shortages? Do human rights principles carry legal weight across borders,
and if so, could access to healthcare services and essential medicines be
litigated in order to compel governments to provide it? And finally, what
cultural assumptions do human rights discourses carry with them, and
what happens if rights-based approaches are poorly received by recipient
populations? Moving beyond the basic principle of healthcare as a human
right, this course aims to bring this idea’s history and politics into focus
by offering an in-depth exploration of its ethics and implementation.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.395. Contemporary Social Theory. 3 Credits.
This course will examine how major social theorists of the 20th
century advanced upon the “classical” social theories of Marx,
Weber, and Durkheim. As they grappled with the historical events and
social concerns of the 20th century—the Russian revolution and its
degeneration into Stalinism, the failure of communist movements in
the West, the rise and fall of fascism and Nazism, the consolidation of
capitalist democracies and welfare states, the emergence of anti-colonial
movements in the “Third World,” and the persistence of race, gender
and sexuality as forms of domination—social theorists provided novel
answers to classical questions of social theory: 1) what is the structure
of modern society, how does it change, and how is it reproduced? 2)
what is the relation between social structures and ideas, knowledge, and
subjectivity?; and 3) what are the conditions of possibility for human
freedom? Theorists to be covered include Antonio Gramsci, Franz Fanon,
W.E.B. DuBois, Georg Lukacs, Talcott Parsons, Herbert Marcuse, Jurgen
Habermas, Louis Althusser, Pierre Bourdieu, Michel Foucault, Nancy
Fraser, Patricia Hill Collins, Judith Butler, and Henri Lefebvre. In addition
to understanding and comparing the theories, we will try to use them to
understand contemporary societies.
Prerequisite(s): AS.230.213
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.396. Politics and Society. 3 Credits.
This seminar surveys key problems of political sociology including the
rise of the modern state, the origins and nature of liberal democracy,
Sources of authority, the relationship between political and economic
power, the nation-state and nationalism, states and war, ideology and
political contention, collective identity, social movements, and social
revolutions. Fulfills Comparative Politics for International Studies.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.397. The Political Economy of Drugs and Drug Wars. 3 Credits.
In the United States, we spend more than $100 billion annually on
illegal drugs—and the government spends more than $50 billion a year
to combat their sale and use. These statistics raise important and
complicated social questions. This course will examine the production,
sale, use, and control of illegal drugs from a historical and sociological
perspective. We will have three objectives: to understand social
construction of drug use and illegality in the United States and other rich
countries; to uncover the political and economic consequences of drug
trafficking in those countries that produce drugs, particularly in Latin
America; and to examine the political economy of drug control through
the so-called War on Drugs, both domestically and internationally.
Area: Social and Behavioral Sciences

AS.230.405. Neoliberalism. 3 Credits.
Neoliberalism, a political project that seeks to subject all aspects of
social life to free market force, has ascended to orthodoxy in developed
and developing countries alike over the last four decades. This course is
a reading seminar focused on some of the key classic and cutting-
edge original texts that critically examine and debate the origins,
socio-political impacts, and crisis of the neoliberal project. It will cover
such topics as the genealogy of the neoliberal idea, neoliberal state,
informalization of works, neoliberal cities, rise of the one percent, and
global governance. Class will be a mix of lecture and seminar-style
discussions. Requirements include reading memo, class presentation,
and a term paper.
Area: Social and Behavioral Sciences

AS.230.415. Social Problems in Contemporary China. 3 Credits.
In this course we will examine contemporary Chinese society, looking at
economic development, rural transformation, urbanization and migration,
labor relations, changes in class structure and family organization,
health care, environmental problems, governance, and popular protest.
The course is designed for both graduate and undergraduate students.
Undergraduates must have already completed a course about China at
Hopkins. Cross-listed with East Asian Studies.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.435. The China Boom. 3 Credits.
This course addresses the origins, global impacts, and demise of China’s
economic ascendancy as a world economic and political powerhouse at
the turn of the twenty-first century. The course will cover the historical
origins of the China boom and impacts of the boom on global political
economic order. It will also address the social-political imbalances within
China that contribute to the global financial crisis and recent slowdown of
the Chinese economy. Particular topics include late imperial and Maoist
legacies’ relation to contemporary economic growth, stages of China’s
capitalist development, China’s outward investment in the developing
world, formation and limits of US-China economic symbiosis, and China’s
participation in global governance, among others.
Area: Social and Behavioral Sciences
Writing Intensive
AS.230.440. Port Cities and Historical Capitalism in Maritime Asia. 3 Credits.
The goal of the seminar is to examine the prospects and limits of understanding the incorporation of Asia in the capitalist world-system from the prism of oceanic connections. The theoretical thrust of this course is to develop but also to adapt Janet Abu-Lughod emphasis on the connections across port cities and littoral in the Afro-Eurasian continents before the long sixteenth century in her Before European Hegemony. But instead of looking at a port city as its adjacent hinterland polity’s gateway to global trade in the premodern era, the course examines the multifarious coast-hinterland relationships. The readings are organized by a chronological order, which begins with the historical maritime silk road between the third and thirteenth centuries, and will be followed by Asian port cities in the European age of empire and postwar American-led Cold War Structure, as well as the present-day Chinese New Silk Road Diplomacy. Students are expected to select an issue of regional tensions and to analyze its historical root.
Area: Social and Behavioral Sciences

Study of Women, Gender, Sexuality
AS.363.328. Beyond the Global West: Gender/Sexuality, Post-colonialism & Global Capitalism: Feminist Inquiries from Asian Perspectives. 3 Credits.
This course examines gender and sexuality issues in both East and South Asian Societies and situates subject matters in the broader contexts of post-colonialism, state formation, revolution and global capitalism.
Area: Humanities
Writing Intensive

International Studies, Bachelor of Arts

International Studies Major Requirements
(Also see Requirements for a Bachelor’s Degree. (p. 1584))

Students considering a major in International Studies should begin introductory courses required of the major early in their college careers. Choices may include an introductory history course at the 100-level, AS.180.101 Elements of Macroeconomics, AS.180.102 Elements of Microeconomics, the appropriate level of a foreign language, and one of the core political science courses.

The international studies major is comprised of three main components:

- Foreign language study
- Core courses in history, political science, and economics
- A focus area of the student’s choosing

In addition, students must earn a grade of C- or better in all courses applied towards major requirements and courses may not be taken satisfactory/unsatisfactory. Students must also complete at least 5 courses at the 300 level or higher within the history, political science, and/or economics components of the major. This excludes courses used to fulfill the language requirement and focal area.

Foreign Language
Language proficiency through the second semester of the advanced/third-year level is required. If students have proficiency above the advanced/third-year level, they must take either: Option (A), two semesters of an upper level literature or culture course offered by the language departments and taught in the language of proficiency, or Option (B), take two semesters of another language. Waivers indicating advanced level/third-year language proficiency must be documented in the student’s official academic record in order for a student to be eligible to complete Option A or B. To receive these waivers, students must contact the Center for Language Education or the Department of Modern Languages & Literatures to complete a proficiency exam on campus.

Core Courses
Courses fulfilling the specific requirements below are listed on the International Studies website (http://krieger.jhu.edu/internationalstudies/courses/).

- Five courses in history, including one introductory course at the 100-level from the History Department at Johns Hopkins University.
- Four out of the five courses must be Global history (identified by the POS-Tag INST-GLOBAL on the course description in the schedule of classes).
- One Gateway course: AS.070.295 Conflict and Security in a Global World, AS.190.111 Introduction to Global Studies, AS.190.108 Contemporary International Politics
- One course in international relations (POS-Tag INST-IR)
- One course in American politics (POS-Tag INST-AP)
- Two courses in comparative politics (POS-Tag INST-CP)
- One course in political theory (POS-Tag INST-PT)
- Four courses in economics. Two courses must be AS.180.101 Elements of Macroeconomics and AS.180.102 Elements of Microeconomics. One must be an internationally-oriented course identified by the POS-Tag INST-ECON on the course description in the schedule of classes. The final course may be of the students’ choosing from courses offered in the Economics Department at Johns Hopkins University. Both the Elements courses should be completed by the end of the sophomore year.

Focus Area Specialization
Every major in International Studies selects a specialization area, which consists of four semester courses within a coherent field of interest. Specialization fields may be organized in terms of area (e.g., Latin America, East Asia), theme (e.g., security studies, international economics), or language (e.g., Mandarin, Arabic). These courses may not overlap with other requirements of the major.

Double-Major and Major-Minor Programs

Students may pursue one of International Studies' unique double-major or major-minor programs. These are offered in conjunction with affiliated departments and allow students to concentrate their course of study within a specific department or program while simultaneously benefiting from the interdisciplinary training offered by the International Studies major.

Successful completion of an approved double-major or major-minor program will satisfy the International Studies major's focus area requirement.

Senior Thesis and Honors in the Major

International Studies majors also have the opportunity to write a senior research thesis. A senior thesis is an extended original research project written under the supervision of a faculty adviser during the student's senior year. Thesis projects are best suited for students who have an interest in exploring a specific question and/or a field of knowledge beyond their previous course work. Students may complete a senior thesis regardless of GPA; however, those students with a 3.7 GPA (or above) in their International Studies major coursework, who complete a senior thesis, will be eligible for honors in International Studies. Theses completed for any of the major's affiliated departments may be used to earn honors both in that departmental major and in International Studies.

Study Abroad

Studying abroad is especially valuable for International Studies majors. JHU encourages all IS majors to spend one or both semesters of their junior year abroad. International Studies sponsors a number of study programs abroad.
abroad programs designed for IS majors and administers them in collaboration with the Office of Study Abroad.

The Junior Year or Semester Abroad at SAIS Europe, offered through the Bologna, Italy campus of the Paul H. Nitze School of Advanced International Studies (SAIS), allows motivated International Studies majors to spend all or part of their junior year taking graduate level classes. Students who spend their junior year or a semester in Bologna and subsequently apply for graduate studies at SAIS will receive advanced credit at SAIS for part of their work.

A similar exchange program with the French political science institute Sciences Po allows students to spend a semester or a year studying at one of Sciences Po’s seven regional campuses: Paris, Menton, Reims, Poitiers, Le Havre, Nancy, or Dijon. Courses are offered in English as well as French and thus are open to students regardless of their knowledge of French. One of Europe’s most prestigious universities, Sciences Po has a strong international focus and allows students to develop a cross-cultural and transatlantic perspective, while simultaneously offering unique access to the field of international affairs.

Additionally, the Office of Study Abroad offers a wide range of study abroad opportunities across the globe tailored to students’ specific interests.

**BA/MA Programs for International Studies Majors**

The International Studies Program offers two BA/MA options for its undergraduates, one (https://e-catalog.jhu.edu/arts-sciences/full-time-residential-programs/degree-programs/international-studies/ba-ma-sais/) with the Johns Hopkins Paul H. Nitze School of Advanced International Studies (SAIS) in Washington, DC and the other (https://e-catalog.jhu.edu/arts-sciences/full-time-residential-programs/degree-programs/international-studies/ba-ma/) at the renowned French political science institute Sciences Po in Paris. Admission to both programs is restricted to current Johns Hopkins University undergraduate International Studies and Political Science majors and is based on strong academic performance, a high level of maturity, and a demonstrated interest in international affairs. See the program page for more information.

**Courses**

**AS.194.105. Islam and its Cultural and Religious Diversity, 600-1600. 3 Credits.**

While media often present Islam as a fairly univocal and compact cultural and religious system, news reports about tensions, hostility and at times open conflict within the Islamic world itself are frequent. Unity and internal diversity characterize Islam nowadays and have historical roots that have deeply shaped Islam since its very inception. This course will explore the historical origins of the dynamics of unity and diversity in Islam from the predication of Muhammad and the expansion of the first caliphate, to the formation of the Ottoman, Safavid and Mughal empires. By focusing on the historical events and the cultural production of the first millennium of Islam, this course will offer a thorough historical introduction to its cultural and religious complexity.

Area: Humanities

**AS.194.201. Jews, Muslims, and Christians in the Medieval World. 3 Credits.**

The three most widespread monotheisms have much more in common than is generally portrayed: a common founding figure, a partly shared succession of prophets, closely comparable ethical concerns and religious practices, a history of coexistence and of cultural, religious, social and economic interaction. This course will focus on a number of key texts and historical events that have shaped the relationships between Jews, Muslims, and Christians during the Middle Ages and contributed to their reciprocal construction of the image of the “other.” The geographical center of the course will be the Mediterranean and the Near and Middle East, a true cradle of civilizations, religions, and exchange.

Area: Humanities, Social and Behavioral Sciences

**AS.194.205. Islamic Mysticism: Traditions, Legacies, Politics. 3 Credits.**

For over a thousand years, the Sufi tradition has been a dynamic force in Islamic social, political and spiritual life. The tradition offers a treasure trove of devotional literature and music, philosophical treatises, contemplative practices, and institutions of social and political organization. After unpacking the politics of the term “Sufi,” we will trace the historical development of the tradition from the early ascetics in Iraq and Syria to the age of trans-national Sufi orders, with case studies from South Asia, Turkey, and the United States. We will then move into some of the key constructs of the tradition of spiritual growth and character formation: the divine-human relationship, the stages of the spiritual path, contemplative and practical disciplines, ideas of sainthood, discipleship and ethical perfection, and the psychology of love. Throughout the class, we will explore the nature of experiential language and interrogate the tradition through the lens of gender. We will also experience Sufism through ritual and music.

Area: Humanities, Social and Behavioral Sciences

**Islamic Studies**

https://krieger.jhu.edu/islamic/

The minor in Islamic Studies is open to all undergraduates regardless of major. It provides the training to approach Islam — and the world — in a historically and culturally informed way, challenging stereotypes and misconceptions while exploring the diversity and complexity of the world’s second-largest religion.

In addition to the stand-alone minor in Islamic Studies, the program also offers the Global Islam joint track with International Studies. This track allows students to earn both the International Studies major and the Islamic Studies minor. For track information and details, see the Islamic Studies (https://krieger.jhu.edu/islamic/) or International Studies (https://krieger.jhu.edu/internationalstudies/undergraduate/affiliated-major-minor-tracks/) web sites.

**Programs**

- Islamic Studies, Minor (p. 1967)
AS.194.210. Race, Gender, Citizenship: Being Muslim in America. 3 Credits.
This course explores how American Muslims navigate and contest complex notions of belonging in the context of national conversations on race, gender, citizenship, and national security. With a focus on specific case studies that range from Black Muslim movements of the early twentieth century to the ongoing War on Terror, the course adds complexity to the public conversation on what it means to be Muslim - and what it means to be American. We will draw on history, ethnography, first-person narratives, films, blogs, documentaries and fiction. As a Community Engaged course, the class will include site visits and learning with and from Muslim communities in Baltimore.
Area: Humanities, Social and Behavioral Sciences

AS.194.220. The Qur'an: Text and Context. 3 Credits.
For 1400 years, the Qur'an has played a central role in Muslim intellectual, spiritual, artistic and ritual life. This course will explore the sacred scripture of Islam through its foundational ideas, history of the text and thematic development, literary style, history and methods of interpretation, and role in Muslim spiritual and ritual life. We will also explore how the Qur'an weaves through literature, music and the visual arts.
Area: Humanities, Social and Behavioral Sciences

AS.194.305. Cultures of Pilgrimage in Islam. 3 Credits.
The haj pilgrimage to Mecca is one of the pillars of Islam. But Muslims around the world also take part in many other pilgrimages, from the massive annual Shi'a pilgrimage to Karbala to the smaller ziyarat "visits" to Sufi saint shrines, to travel to centers of Islamic learning, to pilgrimage to isolated natural features like mountains, trees, valleys. What are the theologies that propel the act of travel in Islam? How are cities, architectures, economies shaped by these cultures? And how are these traditions affected by the wars and colonial projects that plague many Muslim-majority countries in the contemporary world? Readings in this course will draw from anthropology, philosophy, Islamic interpretive texts (tafsir), and travelogues.
Area: Humanities, Social and Behavioral Sciences

AS.194.401. Themes in Medieval Islamic Thought. 3 Credits.
This seminar examines medieval Muslim thinkers who addressed themes at the intersection of theology, philosophy, science, and ethics: the definition of the nature of God's attributes, His uniqueness, transcendence and omnipotence; human freewill and the limits of human knowledge; the nature of the world; and the relationship among reason, religion, and science. The course will look at how these and other crucial themes were addressed by major medieval philosophers and philosophical schools not only in Islam, but also in Judaism and Christianity, and highlight similarities and differences among the three major monotheistic faiths.
Area: Humanities, Social and Behavioral Sciences

AS.194.502. Independent Study. 3 Credits.
Approval Required
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

Cross Listed Courses

Anthropology
AS.070.267. Culture, Religion and Politics in Iran. 3 Credits.
This is an introductory course for those interested in gaining basic knowledge about contemporary Iran. The focus will be on culture and religion and the ways in which they become interwoven into different kinds of political stakes.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.372. Religion and Media. 3 Credits.
This course examines the ways in which conventional and non-conventional media recreate or transform religious experience in modern life. Increasingly, religion is experienced not only in sacred spaces and as ritual prescriptions, but also through the information that is disseminated through radio, TV, and the Internet, as well as in consumer culture and political speeches. Beginning with this proposition that our ideas about religion are shaped not only by historical and scriptural legacies, but as well as by material practices and other sundry conditions of mediation, of which our present times supply many, we will reexamines how questions of revelation, belief, spirituality, etheerality, and ritual practice are constituted by these irreducible ways, thus complicating the neat separation of religion and secularism, or, for that matter, religion and culture.
Area: Humanities, Social and Behavioral Sciences

AS.070.374. What Does it Mean to be Religious?. 3 Credits.
What do we mean when we say that something or someone is “religious”? We unpack this question in a comparative approach, and pay special attention to the ways in which this term has been applied to the study of Islamic cultures and Muslim experience. Through an exploration of the categories of experience, creativity and the individual, we offer a more capacious way of imagining what it means to be religious.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.423. Anthropology of Poetry and Prayer. 3 Credits.
What kind of activity is prayer? Are we talking to God(s), to our ancestors, to ourselves? What are the differences between choosing our own words and repeating the words of an established prayer? The course will explore these and similar questions with particular attention to the language of prayers across a number of religious traditions.
Area: Humanities, Social and Behavioral Sciences

AS.070.465. Concepts: How to Read Hindu and Islamic Texts. 3 Credits.
What is the nature of anthropological concepts and what relations do they bear to concepts internal to a society? We invite students to think with key ideas from Hindu and Islamic traditions, asking if anthropological concepts are best seen as abstractions from the particular or as intertwined with ongoing lines of inquiry, say into the nature of the real and continual efforts to test it? Topics in ritual theory, grammar, aesthetics, translation, revelation, luminosity, figuration and the mythological among those to be considered.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
Center for Language Education

AS.375.115. First Year Arabic. 5 Credits.
Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study. No Satisfactory/ Unsatisfactory
Prerequisite(s): AS.375.115 or instructor permission

AS.375.116. First Year Arabic II. 5 Credits.
Continuation of AS.375.115. Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study. May not be taken Satisfactory/ Unsatisfactory
Prerequisite(s): AS.375.115 or instructor permission

AS.375.215. Second Year Arabic. 5 Credits.
Designed to bring students up to competency level required for third/fourth year Arabic. Students will consolidate and expand their mastery of the four basic skills acquired in AS.375.115-116. More authentic material—written, audio, and visual—will be used, and culture will be further expanded on as a fifth skill. Recommended Course Background: AS.375.115-116 or equivalent.
Prerequisite(s): AS.375.116 or equivalent
Area: Humanities

AS.375.216. Second Year Arabic II. 5 Credits.
Continuation of AS.375.215. Designed to bring students up to competency level required for third/fourth year Arabic. Students will consolidate and expand their mastery of the four basic skills acquired in AS.375.115-116. More authentic material—written, audio, and visual—will be used, and culture will be further expanded on as a fifth skill. Accelerated students should register for Section 01. Recommended Course Background: AS.375.215 or permission required.
Prerequisite(s): AS.375.215 or instructor permission
Area: Humanities

AS.375.301. Third Year Arabic. 3 Credits.
Designed to enhance students’ ability to read, discuss, and write about various topics covered in traditional and contemporary Arabic texts. Recommended Course Background: AS.375.216 or equivalent.
Prerequisite(s): AS.375.116 or instructor permission
Area: Humanities

AS.375.401. Fourth Year Arabic. 3 Credits.
This is an introductory course to different periods of the Arabic literature. Selections of famous Arabic poetry and short prose works are the substance of the course.
Prerequisite(s): AS.375.302 or equivalent
Area: Humanities

AS.375.402. Fourth Year Arabic II. 3 Credits.
This is an introductory course to different periods of the Arabic literature. Selections of famous Arabic poetry and short prose works are the substance of the course. Continuation of AS.375.401. Recommended Course Background: AS.375.302 or equivalent.
Prerequisite(s): AS.375.401 or equivalent
Area: Humanities

History

AS.100.234. The Making of the Muslim Middle East, 600-1100 A.D.. 3 Credits.
A survey of the major historical transformations of the region we now call the ‘Middle East’ (from late antiquity through the 11th century) in relation to the formation and development of Islam and various Muslim empires. Cross-listed with Near Eastern Studies and the Program in Islamic Studies.
Area: Humanities, Social and Behavioral Sciences

AS.100.362. Children and Childhood in the Middle Ages. 3 Credits.
Seminar on the history of childhood and ideas of childhood around the medieval Mediterranean; themes include child custody; medieval education and punishment; parent-child private letters; child mortality and the arts of bereavement/consolation. Cross-listed with the Program in Islamic Studies and Near Eastern Studies.
Area: Humanities, Social and Behavioral Sciences

AS.100.374. Conquest, Conversion, and Language Change in the Middle Ages. 3 Credits.
Examines case-studies of imperial conquests (Islamic, Mongol, reconquista, early colonialism) and attendant changes in religion (Christianization; Islamization) and in language (Arabization; transition from Latin to European vernaculars) across medieval Eurasia.
Area: Humanities, Social and Behavioral Sciences

AS.100.387. Everyday Life in the Medieval Middle East. 3 Credits.
Explores the daily lives of non-elites in the medieval Middle East—food; housing; clothes; marriage and divorce; urban festivals—through primary documents (e.g. letters, court records) and artifacts (e.g. clothing). Pre-requisite for enrollment: Students must have taken one history course.
Area: Humanities, Social and Behavioral Sciences

AS.100.421. Sex, Law and Islam. 3 Credits.
ISIS, “virgins” in paradise, the sexual slavery of Yazidi women... This course will use anthropological and historical studies to examine the long history of how rules and understandings about sex, sexuality, and gender have mattered in how people think about Islam.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.100.438. The City Victorious: Medieval Cairo. 3 Credits.
What was medieval Cairo like? Students explore urban life in this imperial capital (969-1517), including food and market habits; relations between Jews, Christians, and Muslims; patronage; plague, drought, and famine. Pre-requisite for enrollment: Students must have taken two history courses.
Area: Humanities, Social and Behavioral Sciences

AS.100.456. Getting Medieval? Public Violence in the Middle Ages. 3 Credits.
Traditional studies and popular culture often consider violence as a hallmark of medieval life and hence, present it as a fundamental difference between a ‘brutal and violent’ Middle Ages and a ‘civilized and humane’ (Western) modernity. To evaluate these claims and images, we will examine different forms of violence in medieval societies—European and Middle Eastern—especially (i) martyrdom, (ii) communal violence, and (iii) public punishment. After exploring the specific cultural meanings of these practices, we will re-examine those modern polemics that invoke ‘the medieval’ (often vis-à-vis non-Western traditions and societies).
Area: Humanities, Social and Behavioral Sciences
AS.100.646. Marvels and Wonder in medieval Arabic Culture.
Explores the concept of marvels in different genres of medieval Arabic culture: Qur'anic exegesis; travel literature; ‘ethnography’; cosmography and geography; marvels of the natural world (e.g. hermaphrodites); Muslim views of pre-Islamic ('pagan') monuments.
Area: Humanities, Social and Behavioral Sciences

History of Art

AS.010.103. Introduction to the Art of Asia. 3 Credits.
A survey of the art and architecture of Asia, from the ancient world to the present and including the Indian subcontinent, China, Japan, Korea, and Southeast Asia.
Area: Humanities

AS.010.110. Art of the Islamic World. 4 Credits.
This course is an introduction to the art of the Islamic world, covering a geography that stretches from Spain to India and a chronology that extends from the seventh century into our own time. Within this rich and varied continuum, we will look at a range of art forms—including architecture, painting, sculpture, ceramics, and calligraphy—in relation to such themes as patronage, production, function, and audience. A number of the artworks will be viewed firsthand in local collections. We will also explore the intersection of Islamic art with today's political realities.
Area: Humanities

AS.010.319. Medieval Art and Architecture of the Holy Land. 3 Credits.
The course focuses on art and architecture in the political and religious contexts of the Middle East, from the 4th to the 14th c. The three monotheistic religions all claimed specific territories—in particular the city of Jerusalem—for cult practices. This situation resulted in military conflicts that had an impact of Jewish, Medieval, Byzantine, and Islamic art in the Holy Land. The political conflicts, which still plague the region today, are rooted in the complex situation of the medieval period. The Roman, Arab, Byzantine, and crusader invasions resulted however in exciting eclectic styles that characterize the art and architecture of the region. We will discuss concepts behind political and religious leadership, as they intersect with the power of the arts.
Area: Humanities
Writing Intensive

AS.010.329. Building an Empire: Architecture of the Ottoman Capitals, c. 1300–1600. 3 Credits.
Centered on modern-day Turkey and encompassing vast territories in Asia, Africa, and Europe, the Ottoman Empire (1299 – 1923) was the longest lived and among the most powerful Islamic states in history, with an artistic tradition to match. This course explores the functional and symbolic role that architecture played during the empire's formative centuries, when three successive capital—Bursa, Edirne, and Istanbul—served to visualize the sultans' growing claims to universal authority. With reference to mosques, palaces, tombs, and other categories of architecture, the course will examine the buildings in their artistic, social, and political contexts. Themes to be addressed include patronage and audience, architectural practice and the building trade, ceremonial and ritual, topography and urban planning, and the relationship of Ottoman architecture to other traditions.
Area: Humanities

AS.010.330. Art of the Caliphates: Visual Culture and Competition in the Medieval Islamic World. 3 Credits.
Despite its modern-day association with a fringe extremist movement, the term "caliphate" was traditionally used to describe the Muslim world at large, the political and spiritual ruler of which bore the title of caliph. The original Islamic caliphate was established in the seventh century as a vast empire centered on the Middle East and extending deep into Africa, Asia, and Europe. It soon broke apart into a series of competing powers, until in the tenth century, three rival dynasties—the Baghdad-based Abbasids, the Spanish Umayyads, and the Fatimids of North Africa—each claimed to be the rightful caliphate. This course will examine how these fascinating political developments and conflicts played out in the realm of art and architecture between the seventh and thirteenth centuries. As well as palaces, mosques, and commemorative buildings, the course will look at media ranging from ceramics and metalwork to textiles and illustrated manuscripts, with many of the artifacts being viewed firsthand in local museum collections. These works will be considered in relation to such themes as patronage, audience, ceremony, and meaning. Particular attention will be paid to how the various caliphaties—both in emulation of and competition with one another—used visual culture as a powerful tool to assert their legitimacy.
Area: Humanities

AS.010.338. Art and the Harem: Women's Spaces, Patronage, and (Self-)Representation in Islamic Empires. 3 Credits.
Long characterized in the Western imagination as exotic realms of fantasy, harems in Islamic tradition served as private domestic quarters for the women of elite households. This course explores the harem—as an institution, a physical space, and a community of women—from various art-historical perspectives, considering such topics as the harem's architecture, the agency of its inhabitants as patrons and collectors, the mediating role of eunuchs in the harem's visual and material culture, and the ability of harem women to make their mark through public artistic commissions. Our case studies will address a range of Islamic geographical and chronological contexts, though we will focus on the empires of the early modern period and, above all, the famous harem of the Ottoman sultans at the Topkapi Palace in Istanbul. In challenging popular misconceptions, the course will also look at the wealth of exoticizing imagery that the harem inspired in Western art, which we will consider through Orientalist paintings at the Walters Art Museum and illustrated rare books at Hopkins itself.
Area: Humanities

AS.010.423. Modern and Contemporary Art in South Asia. 3 Credits.
How does modernism operate in the colonial context, work with and against the nationalisms of new countries (India, Pakistan, Sri Lanka, Nepal, and Bangladesh), challenge existing norms of the art world and the art market, engage with the difficult and violent upheavals of Partition and sectarian conflict, and allow for experimentation and new forms all the while? This course will explore the history of the art of the subcontinent from c. 1880 to the present by critical engagement with the art, artists, and theories at play in the South Asian region.
Area: Humanities
Writing Intensive
AS.010.440. Power Dressing: The Politics of Costume between the Ottoman Empire and the West. 3 Credits.
In the Ottoman Empire—a vast multiethnic state straddling Africa, Asia, and Europe—how one dressed was a deeply political affair. Ottoman rulers and subjects alike used clothing to express (and sometimes transgress) the hierarchical, religious, and communal distinctions defining their society, much to the fascination of foreigners who visited the empire or sought knowledge of its sartorial traditions in texts and images. This seminar will explore Ottoman dress and dress codes in the context of the empire’s long and complicated relationship with Western powers, focusing on the role that costume played as a charged site of cross-cultural interaction, posturing, and self-assertion from the sixteenth to the nineteenth century. Our case studies will include costume albums—books showing people high and low in their characteristic garb—painted by Ottoman artists for Western buyers; diplomatic robes of honor and their attendant ceremonies; and cultural cross-dressing as manifested in European turquerie portraiture and masquerades. Moving into the modern period, we will consider how nineteenth-century dress reforms bridged the gap between Ottoman and Western costume while engendering new modes of Ottoman sartorial self-representation that challenged hardening Orientalist discourses in such venues as mannequin museums and world’s fairs. The seminar will make considerable use of artworks in local collections, including rare books and prints at Hopkins itself.
Area: Humanities
Writing Intensive

AS.010.631. Performing Power: Ceremonial, Diplomacy, and Gift-Giving in and beyond the Ottoman Empire.
As a major global power straddling three continents, the Ottoman Empire developed a rich and diversified ceremonial culture aimed at impressing local and international audiences alike. This seminar will explore the ways in which works of art and architecture provided settings and apparatus for, and were themselves shaped and enlivened by, the ceremonial acts in which they featured. Covering the period between the sixteenth and nineteenth centuries, we will address a range of case studies—including mosque inaugurations, royal processions, the reception of foreign ambassadors, and the exchange of diplomatic gifts—with regard to their sociopolitical, visual, material, and spatial contexts. A major concern of the seminar will be the question of how Ottoman ceremonies, together with their staging and attendant art forms, were adapted in response to changing conditions and audiences, particularly with the shift from the early modern to the modern period. While our focus will be on the Ottoman Empire, the course will also consider the ceremonial cultures of the various Asian and European polities with which the Ottomans interacted, investigating the points of comparison and contrast that defined these multifarious but connected interregional approaches.
Area: Humanities

AS.010.636. Orientalism and Occidentalism: The Discourse of the Other in the Visual Arts.
This course explores works of art and architecture that reveal or are informed by the long, complex, and often troubled relationship between the West and the Islamic world. Though extending in scope from the early modern period into our own time, the course focuses on the eighteenth and nineteenth centuries, when East-West artistic interactions were arguably at their liveliest and most charged. Topics to be addressed include Ottoman Baroque architecture, Orientalist painting of the nineteenth century, Qajar portraiture and photography, Islamicate architecture at Western world’s fairs, and the recent Danish cartoons of the Prophet Muhammad. Students will be encouraged to consider the differences as well as commonalities between these various modes of cross-cultural representation and engagement, and to think critically about the political, cultural, and artistic conditions that engendered and shaped them.
Area: Humanities

AS.010.637. Ottoman Baroque and Beyond.
The eighteenth century saw the Ottoman capital of Istanbul transformed by the introduction of a brand-new style of architecture that scholars have dubbed the Ottoman Baroque. Informed, as its name suggests, by Western European models, this new manner of building heralded a permanent shift in late Ottoman visual culture that has been reductively discussed as decadent “Westernization.” This seminar will challenge the conventional wisdom and reconsider the Ottoman Baroque as a timely and sophisticated artistic statement by which the empire reaffirmed its global standing in terms that were both locally rooted and internationally resonant. Topics to be addressed include the semiotics of style; the roles and relationships of patrons, artists, and viewers; architecture as a locus of ceremonial and spectacle; and cross-cultural connections and networks. Although focusing on the architecture of eighteenth-century Istanbul, the seminar will extend into other regions and art forms that demonstrate the impact of the Ottoman Baroque, and it will also consider the style’s afterlife in the context of nineteenth-century Ottoman modernity.
Area: Humanities

History of Science, Medicine, and Technology

AS.140.301. History of Science: Antiquity To Renaissance. 3 Credits.
The first part of a three-part survey of the history of science. This course deals with the origins, practice, ideas, and cultural role of scientific thought in Graeco-Roman, Arabic/Islamic, and Medieval Latin/Christian societies. Interactions across cultures and among science, art, technology, and theology are highlighted.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.140.461. Scripta Manent: Manuscript Cultures East and West. 3 Credits.
This seminar looks at manuscripts both as physical objects and as cultural products, through an analysis of their ways of production, material features, and uses in different cultures and contexts. Meetings will be devoted to the codicology, paleography, and philology of manuscripts with a particular focus on the Greek, Latin, Arabic, Hebrew and Judeo-Arabic traditions. Indian, Chinese and Japanese contexts will complement the focus of the seminar and provide elements of comparison and wider framing. The seminar will also address recently developed digital tools for the study of manuscripts and provide students with a set of skills and tools for approaching and using manuscript material effectively. The seminar will include hands-on sessions, with viewing of original manuscripts from the rich collections of the Sheridan Libraries and the Walters Art Museum.
Area: Humanities, Social and Behavioral Sciences

International Studies
AS.192.320. Colonialism and Foreign intervention in the Middle East and Africa. 3 Credits.
How did colonial rule and post-colonial foreign intervention shape the history and politics of states in the Middle East and Africa? The first part of this course focuses on the colonial period, examining the era of conquest, considering how and whether colonial rule differed from other types of ruling arrangements, and studying how people in colonized territories reacted to conquest and foreign rule. Part Two focuses on post-colonial foreign military interventions. Part Three considers the potential long-term consequences of colonialism and foreign intervention. The course focuses on British, French, and American imperialism. **This course is eligible for credit toward the Islamic Studies minor, but only if students relate their major research paper to Islam and also notify Prof. Lawrence at the beginning of the course of their intention to seek Islamic Studies credit.
Area: Social and Behavioral Sciences
Writing Intensive

Near Eastern Studies
AS.130.364. Archaeology of Arabia. 3 Credits.
This course examines the archaeology of the Arabian Peninsula from the earliest Paleolithic in the region (c. 1.5 million years ago) through the first few centuries of the Islamic era (c. 1000 AD). We will review basic geology and environmental conditions, examine the development of animal herding and crop cultivating lifeways, and scrutinize the rise of ancient South Arabian complex societies and civilizations. Co-listed with AS.131.664.
Area: Humanities

AS.130.368. Nomads, Tyrants and Kings: Water in the Ancient Near East. 3 Credits.
This course explores economic and social histories of water in the ancient Near East. It examines water’s diverse roles in ancient Mesopotamian, Egyptian, Levantine and South Arabian agriculture, politics, ritual and religion, including water’s interconnected significance in Judaism, Christianity, and Islam. Taught jointly with AS.131.615.
Area: Humanities

Political Science
AS.190.394. Comparative Politics of the Middle East and North Africa. 3 Credits.
This course examines the domestic, regional, and transnational politics of the Middle East and North Africa. The class is organized into three units. The first examines major armed conflicts—anti-colonial, intra-state, and inter-state—from 1948 through the 1990s. It uses these historical moments as windows onto key issues in Middle Eastern and North African political issues such as external intervention/occupation, human rights, sectarianism, social movements, and memory politics. Unit Two focuses on policy relevant issues such as democratization, minority populations, religion and politics, and gender. In Unit Three, students will explore the politics of the Arab Uprisings through critical reading and discussion of new (post-2011) scholarship on MENA states, organizations, and populations. Enrollment limited to Political Science and International Studies majors.
Area: Social and Behavioral Sciences

Sociology
AS.230.147. Introduction to Islam Since 1800. 3 Credits.
This course is an introduction to contemporary Islam and Muslim societies from approximately 1800 to the present. Key themes will include the colonial encounter, state formation and reform, revolution, Islamic revival, and globalization. Reflecting Islam’s status as a world religion, the course will touch on developments around the Muslim-majority world and in the West.
Area: Social and Behavioral Sciences

AS.230.367. Islamic Finance. 3 Credits.
Today, Islamic finance is a global industry comprising nearly $2 trillion in assets, with hubs from Kuala Lumpur to Dubai to London. But half a century ago, nothing called “Islamic finance” existed. So where did Islamic finance come from? Why is it growing so fast? And what does it mean for finance to be Islamic? We discuss the ban onriba in the Quran and hadith, finance in early and medieval Islamic societies, petrodollars and the birth of Islamic banking in the 1970s, the rise of Islamic capital markets since 2000, contemporary shariah-compliant financial structures, and the constitution of piety through financial practice.
Area: Social and Behavioral Sciences

Study of Women, Gender, Sexuality
AS.363.329. Gender and Sexuality Beyond the Global West: Gender and Sexuality in Contemporary Art in North Africa and the Middle East. 3 Credits.
This course aims to explore how gender and sexuality is situated in contemporary artistic practices in the geographical Middle East, through concepts of religion, war, revolution, resistance, nation-state, post-colonialism, and neoliberalism, especially as written and observed firsthand by artists, curators and scholars from the Middle East and North Africa region and their diasporas. Every week, under an overarching topic, notions of gender and sexuality will be questioned through works of selected artists across the region, as well as texts that provide the historical, theoretical, sociological and political background.
Area: Humanities
Writing Intensive

Islamic Studies, Minor

Islamic Studies Minor Requirements
The minor in Islamic Studies is open to all undergraduates regardless of major. It provides the training to approach Islam - and the world - in a historically and culturally informed way, challenging stereotypes...
and misconceptions while exploring the diversity and complexity of the world’s second-largest religion.

All courses must be taken for letter grades and receive a grade of C- or higher. To count toward the minor, courses must, as a general rule, be worth three credits or more. Exceptions require the approval of the Director of Undergraduate Studies for the Program in Islamic Studies.

Jewish Studies Minor

Jewish Studies Minor Requirements

The Jewish Studies minor requires a minimum of six courses (amounting to at least 18 credits) selected from those approved by the Advisory Committee of the Jewish Studies Program. The courses must be from at least two departments, and at least three must be upper-level courses (300-level or above). All courses applied towards the minor must be taken for a letter grade and a grade of C- or better must be earned. In addition, only two courses with any single professor can be counted towards the minor.

The requirements for a minor in Jewish studies are as follows:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Four Islamic studies elective courses at any level</td>
<td>12</td>
<td></td>
</tr>
<tr>
<td>Two Islamic studies elective courses at the 300-400 level</td>
<td>6</td>
<td></td>
</tr>
<tr>
<td>Total Credits</td>
<td></td>
<td>18</td>
</tr>
</tbody>
</table>

1. To complete the minor, students must complete both six courses and earn 18 credits. This is true even though some language courses count for more than three credits per semester (e.g., 4.5 credits).
2. A maximum of two of these courses may be language courses at any level from the following list of languages: Arabic (which is offered at Homewood), Persian (which is offered at the School of Advanced International Studies [SAIS] in Washington, DC), Bahasa Indonesia (also offered at SAIS), Bahasa Malaysia, Bengali, Hausa, Punjabi, Turkish, and Urdu. Additional languages may be approved by the Director of Undergraduate Studies.

Mathematics

http://www.mathematics.jhu.edu/

Mathematics is a way of defining and solving problems by combining logic with insight, and by finding patterns and structure. At a most basic level, we use the abstract concept of “number” to understand what we observe, and we develop the method of “counting”; at a higher level, we use the language of “calculus” to understand motion, and we develop the methods of differentiation and integration. But mathematics is more than just computations with numbers and derivatives. Math is a way of thinking—an art that describes the abstract structure of logic, reason, and the scientific method.

The Undergraduate program in the Department of Mathematics is intended both for students interested in preparing for graduate study and research in pure mathematics, and for students interested in using mathematics to pose and solve problems in the sciences, engineering, social sciences, or other areas. Undergraduate mathematics majors and minors will study:

- The foundations of analysis, which begins with the study of functions and their derivatives and integrals
- The fundamentals of advanced algebra, which is based on axiomatic systems involving operations of addition and multiplication in general settings
- Additional subjects such as geometry, probability, and topology
- Applications of mathematics to science and/or engineering.

The graduate program is designed primarily to prepare students for research and teaching in mathematics. It is naturally centered around the research areas of the faculty, which include algebraic geometry, algebraic number theory, data-intensive computation, geometric analysis, harmonic analysis, mathematical physics, partial differential equations, stochastic partial differential equations, and topology. The program can be supplemented in applied directions by courses in theoretical physics, computer science, mechanics, probability, and statistics offered in other departments of the Krieger School of Arts and Sciences and in
the Department of Applied Mathematics and Statistics in the Whiting School of Engineering.

Facilities

The Mathematics Department resides in Krieger Hall on the Keyser Quad of the Homewood Campus. Adjacent to Krieger Hall, The University's Milton S. Eisenhower Library has an unusually extensive collection of mathematics literature, including all the major research journals, almost all of which are also accessible electronically. The stacks are open to students. The department also has a useful reference library, the Philip Hartman Library. Graduate students share departmental offices, and study space can also be reserved in the university library. Graduate students may access the department's Linux and Windows servers, as well as computers in graduate student offices. The department also hosts numerous research seminars, special lectures, and conferences throughout the academic year.

Programs

The Department of Mathematics offers Bachelor's, Master's, and Doctoral degrees across a variety of programs. Undergraduates can elect to pursue a major or minor in Mathematics; the major has an Honors designation available, as well as a four-year BA/MA program. Graduate students can pursue doctoral work in the department. We do not have a terminal Master's program at this time.

- Mathematics, Bachelor of Arts (p. 1978)
- Mathematics, Minor (p. 1981)
- Mathematics, Bachelor of Arts/Master of Arts (p. 1981)
- Mathematics, PhD (p. 1981)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.110.105. Precalculus. 4 Credits.
This course starts from scratch and provides students with all the background necessary for the study of calculus. It includes a review of algebra, trigonometry, exponential and logarithmic functions, coordinates and graphs. Each of these tools will be introduced in its cultural and historical context. The concept of the rate of change of a function will be introduced.
Area: Quantitative and Mathematical Sciences

AS.110.106. Calculus I (Biology and Social Sciences). 4 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, functions of several variables, linear systems, applications for systems of linear differential equations, probability distributions. Many applications to the biological and social sciences will be discussed.
Area: Quantitative and Mathematical Sciences

AS.110.107. Calculus II (For Biological and Social Science). 4 Credits.
Differential and integral Calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, functions of several variables, linear systems, applications for systems of linear differential equations, probability distributions. Applications to the biological and social sciences will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Area: Quantitative and Mathematical Sciences

AS.110.108. Calculus I (Physical Sciences & Engineering). 4 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, polar coordinates, parametric equations, Taylor’s theorem and applications, infinite sequences and series. Some applications to the physical sciences and engineering will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Area: Quantitative and Mathematical Sciences

AS.110.109. Calculus II (For Physical Sciences and Engineering). 4 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, polar coordinates, parametric equations, Taylor’s theorem and applications, infinite sequences and series. Some applications to the physical sciences and engineering will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Area: Quantitative and Mathematical Sciences

AS.110.113. Honors Single Variable Calculus. 4 Credits.
This is an honors alternative to the Calculus sequences AS.110.106-AS.110.107 or AS.110.108-AS.110.109 and meets the general requirement for both Calculus I and Calculus II (although the credit hours count for only one course). It is a more theoretical treatment of one variable differential and integral calculus and is based on our modern understanding of the real number system as explained by Cantor, Dedekind, and Weierstrass. Students who want to know the ‘why’s and how’s’ of Calculus will find this course rewarding. Previous background in Calculus is not assumed. Students will learn differential Calculus (derivatives, differentiation, chain rule, optimization, related rates, etc.), the theory of integration, the fundamental theorem(s) of Calculus, applications of integration, and Taylor series. Students should have a strong ability to learn mathematics quickly and on a higher level than that of the regular Calculus sequences.
Area: Quantitative and Mathematical Sciences

AS.110.201. Linear Algebra. 4 Credits.
Prerequisite(s): Grade of C- or better in AS.110.107 OR AS.110.109 OR AS.110.113 OR AS.110.202 OR AS.110.302, or a 5 on the AP BC exam.
Area: Quantitative and Mathematical Sciences

AS.110.202. Calculus III. 4 Credits.
Calculus of functions of more than one variable: partial derivatives, and applications; multiple integrals, line and surface integrals; Green's Theorem, Stokes' Theorem, and Gauss' Divergence Theorem.
Prerequisite(s): Grade of C- or better in AS.110.107 OR AS.110.109 OR AS.110.113 OR AS.110.201 OR AS.110.212 OR AS.110.302, or a 5 or better on the AP BC exam.
Area: Quantitative and Mathematical Sciences

AS.110.211. Honors Multivariable Calculus. 4 Credits.
This course includes the material in AS.110.202 with some additional applications and theory. Recommended for mathematically able students majoring in physical science, engineering, or especially mathematics. AS.110.211-AS.110.212 used to be an integrated yearlong course, but now the two are independent courses and can be taken in either order.
Prerequisite(s): Grade of C- or better in (AS.110.201 or AS.110.212)
Area: Quantitative and Mathematical Sciences
AS.110.212. Honors Linear Algebra. 4 Credits.
This course includes the material in AS.110.201 with additional applications and theory, and is recommended only for mathematically able students majoring in physical science, engineering, or mathematics who are interested in a proof-based version of linear algebra. This course can serve as an Introduction to Proofs (IP) course. Prerequisites: Grade of B+ or better in 110.107 or 110.109 or 110.113, or a 5 on the AP BC exam. Area: Quantitative and Mathematical Sciences. 
Prerequisite(s): Grade of B+ or better in AS.110.107 or AS.110.109 or AS.110.113 or AS.110.202, or AS.110.302, or a 5 on the AP BC exam. Area: Quantitative and Mathematical Sciences.

AS.110.225. Problem Solving Lab. 2 Credits.
This course is an introduction to mathematical reason and formalism in the context of mathematical problem solving, such as induction, invariants, inequalities and generating functions. This course does not satisfy any major requirement, and may be taken more than once for credit. It is primarily used as training for the William Lowell Putnam Mathematics Competition. Area: Quantitative and Mathematical Sciences. 

Area: Quantitative and Mathematical Sciences

AS.110.301. Introduction to Proofs. 4 Credits.
This course will provide a practical introduction to mathematical proofs with the aim of developing fluency in the language of mathematics, which itself is often described as "the language of the universe." Along with a library of proof techniques, we shall tour propositional logic, set theory, cardinal arithmetic, and metric topology and explore "proof relevant" mathematics by interacting with a computer proof assistant. This course on the construction of mathematical proof will conclude with a deconstruction of mathematical proof, interrogating the extent to which proof serves as a means to discover universal truths and assessing the mechanisms by which the mathematical community achieves consensus regarding whether a claimed result has been proven. Area: Quantitative and Mathematical Sciences.

Area: Quantitative and Mathematical Sciences

AS.110.302. Differential Equations and Applications. 4 Credits.
This is a course in ordinary differential equations (ODEs), equations involving an unknown function of one independent variable and some of its derivatives, and is primarily a course in the study of the structure of and techniques for solving ODEs as mathematical models. Specific topics include first and second ODEs of various types, systems of linear differential equations, autonomous systems, and the qualitative and quantitative analysis of nonlinear systems of first-order ODEs. Laplace transforms, series solutions and the basics of numerical solutions are included as extra topics. Prerequisites: Grade of C- or better in 110.107 or 110.109 or 110.113, or a 5 on the AP BC exam. Area: Quantitative and Mathematical Sciences.

Area: Quantitative and Mathematical Sciences

AS.110.304. Elementary Number Theory. 4 Credits.
The student is provided with many historical examples of topics, each of which serves as an illustration of and provides a background for many years of current research in number theory. Primes and prime factorization, congruences, Euler's function, quadratic reciprocity, primitive roots, solutions to polynomial congruences (Chevalley's theorem), Diophantine equations including the Pythagorean and Pell equations, Gaussian integers, Dirichlet's theorem on primes. Prerequisite(s): Grade of C- or better in (AS.110.201 OR AS.110.211) Area: Quantitative and Mathematical Sciences

AS.110.311. Methods of Complex Analysis. 4 Credits.
This course is an introduction to the theory of functions of one complex variable. Its emphasis is on techniques and applications, and it serves as a basis for more advanced courses. Functions of a complex variable and their derivatives; power series and Laurent expansions; Cauchy integral theorem and formula; calculus of residues and contour integrals; harmonic functions. Prerequisite(s): Grade of C- or better in (AS.110.202 or AS.110.211) Area: Quantitative and Mathematical Sciences

AS.110.328. Non-Euclidean Geometry. 4 Credits.
For 2,000 years, Euclidean geometry was the geometry. In the 19th century, new, equally consistent but very different geometries were discovered. This course will delve into these geometries on an elementary but mathematically rigorous level. Area: Quantitative and Mathematical Sciences

AS.110.375. Introduction to Mathematical Cryptography. 4 Credits.
An introduction to Mathematical Cryptography is an introduction to modern cryptography with an emphasis on the mathematics behind the theory of public key cryptosystems and digital signature schemes. The course develops the mathematical tools needed for the construction and security analysis of diverse cryptosystems. Other topics central to mathematical cryptography covered are: classical cryptographic constructions, such as Diffie-Hellmann key exchange, discrete logarithm-based cryptosystems, the RSA cryptosystem, and digital signatures. Fundamental mathematical tools for cryptography studied include: primality testing, factorization algorithms, probability theory, information theory, and collision algorithms. A survey of important recent cryptographic innovations, such as elliptic curves, elliptic curve and pairing-based cryptography are included as well. This course is an ideal introduction for mathematics and computer science students to the mathematical foundations of modern cryptography. Area: Quantitative and Mathematical Sciences

AS.110.401. Introduction to Abstract Algebra. 4 Credits.
An introduction to the basic notions of modern abstract algebra and can serve as an Introduction to Proofs (IP) course. This course is an introduction to group theory, with an emphasis on concrete examples, and especially on geometric symmetry groups. The course will introduce basic notions (groups, subgroups, homomorphisms, quotients) and prove foundational results (Lagrange's theorem, Cauchy's theorem, orbit-counting techniques, the classification of finite abelian groups). Examples to be discussed include permutation groups, dihedral groups, matrix groups, and finite rotation groups, culminating in the classification of the wallpaper groups. Prerequisites: Grade of C- or better in 110.201 or 110.212 Area: Quantitative and Mathematical Sciences.

Area: Quantitative and Mathematical Sciences

AS.110.405. Real Analysis I. 4 Credits.
This course is designed to give a firm grounding in the basic tools of analysis. It is recommended as preparation (but may not be a prerequisite) for other advanced analysis courses and may be taken as an Introduction to Proofs (IP) course. Topics include the formal properties of real and complex number systems, topology of metric spaces, limits, continuity, infinite sequences and series, differentiation, Riemann-Stieltjes integration. Prerequisites: Grade of C- or better in 110.201 or 110.212 and 110.202 or 110.211 Prerequisite(s): Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211) Area: Quantitative and Mathematical Sciences
AS.110.406. Real Analysis II. 4 Credits.
This course continues AS.110.405 with an emphasis on the fundamental
notions of modern analysis. Sequences and series of functions,
Fourier series, equicontinuity and the Arzela-Ascoli theorem, the Stone-
Weierstrass theorem, functions of several variables, the inverse and
implicit function theorems, introduction to the Lebesgue integral.
Area: Quantitative and Mathematical Sciences

AS.110.407. Honors Complex Analysis. 4 Credits.
AS.110.407. Honors Complex Analysis. 4.00 Credits. This course is an
introduction to the theory of functions of one complex variable
for honors students. Its emphasis is on techniques and applications,
and can serve as an Introduction to Proofs (IP) course. Topics will
include functions of a complex variable and their derivatives; power
series and Laurent expansions; Cauchy integral theorem and formula;
calculus of residues and contour integrals; harmonic functions, as well as
applications to number theory and harmonic analysis. Area: Quantitative
and Mathematical Sciences. This is not an Introduction to Proofs course
(IP) and may not be taken as a first proof-based mathematics course
except at the discretion of the instructor. This course satisfies a core
requirement of the mathematics major as a second analysis course, and
is a core requirement for honors in the major.
Prerequisite(s): AS.110.405 OR AS.110.415
Area: Quantitative and Mathematical Sciences

AS.110.411. Honors Algebra I. 4 Credits.
An introduction to the basic notions of modern algebra for students
with some prior acquaintance with abstract mathematics. Elements
of group theory: groups, subgroups, normal subgroups, quotients,
homomorphisms. Generators and relations, free groups, products,
abelian groups, finite groups. Groups acting on sets, the Sylow theorems.
Definition and examples of rings and ideals.
Prerequisite(s): Grade of C- or better in AS.110.201 OR AS.110.212
OR AS.110.113 OR AS.110.405 OR AS.110.415 OR AS.110.407 OR
AS.110.413 OR AS.110.421
Area: Quantitative and Mathematical Sciences

AS.110.412. Honors Algebra II. 4 Credits.
This is a continuation of 110.411 Honors Algebra I. Topics studies
include principal ideal domains, structure of finitely generated modules
over them. Introduction to field theory. Linear algebra over a field. Field
extensions, constructible polygons, non-triseatabilaty. Splitting field of a
polynomial, algebraic closure of a field. Galois theory: correspondence
between subgroups and subfields. Solvability of polynomial equations by
radicals. Prerequisites: Grade of C- or better in 110.201 or 110.212.Area: Quantitative and Mathematical Sciences.
Prerequisite(s): C- or better in AS.110.411
Area: Quantitative and Mathematical Sciences

AS.110.413. Introduction To Topology. 4 Credits.
Topological spaces, connectedness, compactness, quotient spaces,
metric spaces, function spaces. An introduction to algebraic topology:
covering spaces, the fundamental group, and other topics as time
permits.
Prerequisite(s): Grade of C- or better in (AS.110.202 OR AS.110.211)
Area: Quantitative and Mathematical Sciences

AS.110.415. Honors Analysis I. 4 Credits.
This highly theoretical sequence in analysis is reserved for the most able
students. The sequence covers the real number system, metric spaces,
basic functional analysis, the Lebesgue integral, and other topics.
Area: Quantitative and Mathematical Sciences

AS.110.416. Honors Analysis II. 4 Credits.
Lebesgue integration and differentiation. Elementary Hilbert and Banach
space theory. Baire category theorem. Continuation of AS.110.415,
introduction to real analysis.
Prerequisite(s): Grade of C- or better in AS.110.415
Area: Quantitative and Mathematical Sciences

AS.110.417. Partial Differential Equations. 4 Credits.
Characteristics. classification of second order equations, well-posed
problems. separation of variables and expansions of solutions. The
wave equation: Cauchy problem, Poisson's solution, energy inequalities,
domains of influence and dependence. Laplace's equation: Poisson's
formula, maximum principles, Green's functions, potential theory Dirichlet
and Neumann problems, eigenvalue problems. The heat equation:
fundamental solutions, maximum principles. Recommended Course
Background: AS.110.405 or AS.110.415
Area: Quantitative and Mathematical Sciences

AS.110.421. Dynamical Systems. 4 Credits.
This is a course in the modern theory of Dynamical Systems. Topic
include both discrete (iterated maps) and continuous (differential
equations) dynamical systems and focuses on the qualitative structure
of the system in developing properties of solutions. Topics include
contractions, interval and planar maps, linear and nonlinear ODE systems
including bifurcation theory, recurrence, transitivity and mixing, phase
volume preservation as well as chaos theory, fractional dimension and
topological entropy. May be taken as an Introduction to Proofs (IP)
course. Prerequisites: Grade of C- or better in 110.201 or 110.212 OR
110.202 or 110.211 and 110.302 Area: Quantitative and Mathematical Sciences
Prerequisite(s): Grade of C- or better in (AS.110.201 OR AS.110.212) AND
(AS.110.202 or AS.110.211) AND 110.302
Area: Quantitative and Mathematical Sciences

AS.110.422. Representation Theory. 4 Credits.
This course will focus on the basic theory of representations of finite
groups in characteristic zero: Schur's Lemma, Mashcke's Theorem and
complete reducibility, character tables and orthogonality, direct sums
tensor products. The main examples we will try to understand are
the representation theory of the symmetric group and the general linear
group over a finite field. If time permits, the theory of Brauer characters
and modular representations will be introduced.
Prerequisite(s): Grade of C- or better in (AS.110.201 OR AS.110.212) AND
(AS.110.401 OR AS.110.411)
Area: Quantitative and Mathematical Sciences

AS.110.433. Introduction to Harmonic Analysis and Its Applications. 4
Credits.
The course is an introduction to methods in harmonic analysis, in
particular Fourier series, Fourier integrals, and wavelets. These methods
will be introduced rigorously, together with their motivations and
applications to the analysis of basic partial differential equations and
integral kernels, signal processing, inverse problems, and statistical/
machine learning.
Prerequisite(s): (AS.110.201 OR AS.110.212 OR EN.550.291 OR
EN.553.291) AND (AS.110.202 OR AS.110.211) AND (AS.110.405 OR
AS.110.415)
Area: Quantitative and Mathematical Sciences
AS.110.435. Introduction to Algebraic Geometry. 4 Credits.
Algebraic geometry studies zeros of polynomials in several variables and is based on the use of abstract algebraic techniques, mainly from commutative algebra, for solving geometric problems about these sets of zeros. The fundamental objects of study are algebraic varieties which are the geometric manifestations of solutions of systems of polynomial equations. Algebraic geometry occupies a central place in modern mathematics and has multiple conceptual connections with diverse fields such as complex analysis, topology and number theory. This course aims to provide to an undergraduate student majoring in algebraic geometry by providing the needed abstract knowledge also complemented by several examples and applications. 
Area: Quantitative and Mathematical Sciences

AS.110.439. Introduction To Differential Geometry. 4 Credits.
Theory of curves and surfaces in Euclidean space: Frenet equations, fundamental forms, curvatures of a surface; theorems of Gauss and Mainardi-Codazzi, curves on a surface; introduction to tensor analysis and Riemannian geometry; theorem egregium; elementary global theorems.
Prerequisite(s): Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211)
Area: Quantitative and Mathematical Sciences

AS.110.441. Calculus on Manifolds. 4 Credits.
This course provides the tools for classical three-dimensional physics and mechanics. This course extends these techniques to the general locally Euclidean spaces (manifolds) needed for an understanding of such things as Maxwell’s equations or optimization in higher dimensional contexts, e.g., in economics. The course will cover the theory of differential forms and integration. Specific topics include Maxwell’s equations in terms of 4D Lorentz geometry, vector (in particular, tangent) bundles, an introduction to de Rham theory, and Sard’s theorem on the density of regular values of smooth functions. The course is intended to be useful to mathematics students interested in analysis, differential geometry, and topology, as well as to students in physics and economics.
Area: Quantitative and Mathematical Sciences

AS.110.443. Fourier Analysis. 4 Credits.
Prerequisite(s): Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211)
Area: Quantitative and Mathematical Sciences

AS.110.445. Mathematical and Computational Foundations of Data Science. 4 Credits.
We will cover several topics in the mathematical and computational foundations of Data Science. The emphasis is on fundamental mathematical ideas (basic functional analysis, reproducing kernel Hilbert spaces, concentration inequalities, uniform central limit theorems), basic statistical modeling techniques (e.g. linear regression, parametric and non-parametric methods), basic machine learning techniques for unsupervised (e.g. clustering, manifold learning), supervised (classification, regression), and semi-supervised learning, and corresponding computational aspects (linear algebra, basic linear and nonlinear optimization to attack the problems above). Applications will include statistical signal processing, imaging, inverse problems, graph processing, and problems at the intersection of statistics/machine learning and physical/dynamical systems (e.g. model reduction for stochastic dynamical systems).
Area: Quantitative and Mathematical Sciences

AS.110.446. Introduction to Statistical Learning, Data Analysis and Signal Processing. 4 Credits.
Introduction to high dimensional data sets: key problems in statistical and machine learning. Geometric aspects. Principal component analysis, linear dimension reduction, random projections. Concentration phenomena: examples and basic inequalities. Metric spaces and embeddings thereof. Kernel methods. Nonlinear dimension reduction, manifold models. Regression. Vector spaces of functions, linear operators, projections. Orthonormal bases; Fourier and wavelet bases, and their use in signal processing and time series analysis. Basic approximation theory. Linear models, least squares. Bias and variance tradeoffs, regularization. Sparsity and compressed sensing. Multiscale methods. Graphs and networks. Random walks on graphs, diffusions, page rank. Block models. Spectral clustering, classification, semi-supervised learning. Algorithmic and computational aspects of the above will be consistently in focus, as will be computational experiments on synthetic and real data. Linear algebra will be used throughout the course, as will multivariable calculus and basic probability (discrete random variables). Basic experience in programming in C or MATLAB or R or Octave. 7Recommended Course Background: More than basic programming experience in Matlab or R; some more advanced probability (e.g. continuous random variables), some signal processing (e.g. Fourier transforms, discrete and continuous). Co-listed with EN.553.416
Prerequisite(s): Grade of C- or better in (AS.110.201 OR AS.110.212)
Area: Quantitative and Mathematical Sciences

AS.110.503. Undergraduate Research in Mathematics. 1 - 4 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.110.586. Independent Study. 0 - 4 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.110.587. DRP Independent Study. 1 Credit.
Directed Reading Program (DRP) Independent Study.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Area: Quantitative and Mathematical Sciences

AS.110.595. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.110.599. Independent Study. 0 - 3 Credits.
Area: Quantitative and Mathematical Sciences

AS.110.601. Algebra.
An introductory graduate course on fundamental topics in algebra to provide the student with the foundations for number theory, algebraic geometry, and other advanced courses. Topics include group theory, commutative algebra, Noetherian rings, local rings, modules, rudiments of category theory, homological algebra, field theory, Galois theory, and non-commutative algebras.
Area: Quantitative and Mathematical Sciences

AS.110.602. Algebra.
An introductory graduate course on fundamental topics in algebra to provide the student with the foundations for Number Theory, Algebraic Geometry, and other advanced courses. Topics include group theory, commutative algebra, Noetherian rings, local rings, modules, and rudiments of category theory, homological algebra, field theory, Galois theory, and non-commutative algebras. Recommended Course Background: AS.110.401-AS.110.402
Area: Quantitative and Mathematical Sciences

AS.110.605. Real Variables.
Measure and integration on abstract and locally compact spaces (extension of measures, decompositions of measures, product measures, the Lebesgue integral, differentiation, Lp-spaces); introduction to functional analysis; integration on groups; Fourier transforms.
Area: Quantitative and Mathematical Sciences

AS.110.607. Complex Variables.
Analytic functions of one complex variable. Topics include Mittag-Leffler Theorem, Weierstrass factorization theorem, elliptic functions, Riemann-Roch theorem, Picard theorem, and Nevanlinna theory. Recommended Course Background: AS.110.311, AS.110.405

AS.110.608. Riemann Surfaces.
Abstract Riemann surfaces. Examples: algebraic curves, elliptic curves and functions on them. Holomorphic and meromorphic functions and differential forms, divisors and the Mittag-Leffler problem. The analytic genus. Bezout's theorem and applications. Introduction to sheaf theory, with applications to constructing linear series of meromorphic functions. Serre duality, the existence of meromorphic functions on Riemann surfaces, the equality of the topological and analytic genera, the equivalence of algebraic curves and compact Riemann surfaces, the Riemann-Roch theorem. Period matrices and the Abel-Jacobi mapping. Jacobian inversion, the Torelli theorem. Uniformization (time permitting).

AS.110.615. Algebraic Topology.
Polyhedra, simplicial and singular homology theory, Lefschetz fixed-point theorem, cohomology and products, homological algebra, Künneth and universal coefficient theorems, Poincaré and Alexander duality theorems.

AS.110.616. Algebraic Topology.
Polyhedra, simplicial and singular homology theory, Lefschetz fixed-point theorem, cohomology and products, homological algebra, Künneth and universal coefficient theorems, Poincaré&ecute; and Alexander duality theorems.
Area: Quantitative and Mathematical Sciences

AS.110.617. Number Theory.
Topics in advanced algebra and number theory, including local fields and adeles, Iwasawa-Tate theory of zeta functions and connections with Hecke's treatment, semisimple algebras over local and number fields, adele geometry.
Area: Quantitative and Mathematical Sciences

AS.110.618. Number Theory.
Topics in advanced algebra and number theory, including local fields and adeles, Iwasawa-Tate theory of zeta functions and connections with Hecke's treatment, semisimple algebras over local and number fields, adele geometry.

Lie groups and Lie algebras, classification of complex semi-simple Lie algebras, compact forms, representations and Weyl formulas, symmetric Riemannian spaces.
Area: Quantitative and Mathematical Sciences

AS.110.631. Partial Differential Equations I.
An introductory graduate course in partial differential equations. Classical topics include first order equations and characteristics, the Cauchy-Kowalewski theorem, Laplace's equations, heat equation, wave equation, fundamental solutions, weak solutions, Sobolev spaces, maximum principles. Prerequisite(s): Grade of C- or better in AS.110.605

AS.110.632. Partial Differential Equations II.
An introductory graduate course in partial differential equations. Classical topics include first order equations and characteristics, the Cauchy-Kowalewski theorem, Laplace's equation, heat equation, wave equation, fundamental solutions, weak solutions, Sobolev spaces, maximum principles. The second term focuses on special topics such as second order elliptic theory.

AS.110.633. Harmonic Analysis.
Fourier multipliers, oscillatory integrals, restriction theorems, Fourier integral operators, pseudodifferential operators, eigenfunctions. Undergrads need instructor's permission.
Area: Quantitative and Mathematical Sciences

AS.110.635. Microlocal Analysis.
Microlocal analysis is the geometric study of singularities of solutions of partial differential equations. The course will begin by introducing the geometric theory of (Schwartz) distributions: Fourier transform and Sobolev spaces, pseudo-differential operators, wave front set of a distribution, elliptic operators, Lagrangean distributions, oscillatory integrals, method of stationary phase, Fourier integral operators. The second semester will develop the theory and apply it to special topics such as asymptotics of eigenvalues/eigenfunctions of the Laplace operator on a Riemann manifold, linear and non-linear wave equation asymptotics of quantum systems, Bochner-Riesz means, maximal theorems.

AS.110.637. Functional Analysis.

AS.110.643. Algebraic Geometry.
Affine varieties and commutative algebra. Hilbert's theorems about polynomials in several variables with their connections to geometry. General varieties and projective geometry. Dimension theory and smooth varieties. Sheaf theory and cohomology. Applications of sheaves to geometry; e.g., the Riemann-Roch theorem. Other topics may include Jacobian varieties, resolution of singularities, geometry on surfaces, connections with complex analytic geometry and topology, schemes.
AS.110.644. Algebraic Geometry.
Affine varieties and commutative algebra. Hilbert’s theorems about polynomials in several variables with their connections to geometry. General varieties and projective geometry. Dimension theory and smooth varieties. Sheaf theory and cohomology. Applications of sheaves to geometry; e.g., the Riemann-Roch Theorem. Other topics may include Jacobian varieties, resolution of singularities, geometry on surfaces, schemes, connections with complex analytic geometry and topology.
Area: Quantitative and Mathematical Sciences

AS.110.645. Riemannian Geometry.
Differential manifolds, vector fields, flows, Frobenius’ theorem. Differential forms, deRham’s theorem, vector bundles, connections, curvature, Chern classes, Cartan structure equations. Riemannian manifolds, Bianchi identities, geodesics, exponential maps. Geometry of submanifolds, hypersurfaces in Euclidean space. Other topics as time permits, e.g., harmonic forms and Hodge theorem, Jacobi equation, variation of arc length and area, Chern-Gauss-Bonnet theorems.

AS.110.646. Riemannian Geometry.
The goal is to give a self-contained course on mean curvature flow, starting with the basic linear heat equation in Euclidean space and – hopefully – getting to topics of current research. Mean curvature flow is a geometric heat equation that shares many properties with Ricci flow, harmonic map heat flow, Yang-Mills flow and the Navier-Stokes equations. Recommended Course Background: AS.110.605 and an undergraduate course in differential geometry; AS.110.645 and AS.110.631

AS.110.675. High-Dimensional Approximation, Probability, and Statistical Learning.
The course covers fundamental mathematical ideas for certain approximation and statistical learning problems in high dimensions. We start with basic approximation theory in low-dimensions, in particular linear and nonlinear approximation by Fourier and wavelets in classical smoothness spaces, and discuss applications in imaging, inverse problems and PDE’s. We then introduce notions of complexity of function spaces, which will be important in statistical learning. We then move to basic problems in statistical learning, such as regression and density estimation. The interplay between randomness and approximation theory is introduced, as well as fundamental tools such as concentration inequalities, basic random matrix theory, and various estimators are constructed in detail, in particular multi scale estimators. At all times we consider the geometric aspects and interpretations, and will discuss concentration of measure phenomena, embedding of metric spaces, optimal transportation distances, and their applications to problems in machine learning such as manifold learning and dictionary learning for signal processing.
Area: Quantitative and Mathematical Sciences

AS.110.711. Topics in Topos Theory.
Reading course to discuss Topics in Topos Theory

AS.110.712. Topics in Mathematical Physics.

AS.110.722. Topics in Homotopy Theory.
The course will focus on recent developments in homotopy theory, such as Galois theory for \( E_n \) (\( n \geq 2 \)) ring-spectra, and on connections with number theory; in particular, work of Bhatt, Hesselholt, Lurie, Scholze and others on topological Hochschild homology and its applications to geometry over the \( p \)-adic complex numbers.
Area: Quantitative and Mathematical Sciences

AS.110.724. Topics in Arithmetic Geometry.
Topics around the subject of Arithmetic Geometry will be covered in this course.
Area: Quantitative and Mathematical Sciences

AS.110.725. Topics in Analysis.
The topics covered will involve the theory of calculus of Functors applied to Geometric problems like Embedding theory. Other related areas will be covered depending on the interest of the audience.
Area: Quantitative and Mathematical Sciences

AS.110.727. Topics in Algebraic Topology.

AS.110.728. Topics in Algebraic Topology.

AS.110.731. Topics in Geometric Analysis.

AS.110.733. Topics In Alg Num Theory.

AS.110.735. Topics In Hodge Theory.

AS.110.737. Topics Algebraic Geometry.

AS.110.738. Topics Algebraic Geometry.
Introduction to toric varieties. This class is a general introduction to toric varieties. Toric varieties are special kinds of algebraic varieties which can be described by lattices and convex sets. They provide a rich source of concrete examples in complex geometry or mathematical physics. If time permits, we discuss in the end the stability of toric embeddings. Students should know basic notions of algebraic geometry (schemes, sheaves, linear systems), as covered in AS.110.643.
Area: Quantitative and Mathematical Sciences

AS.110.741. Topics in Partial Differential Equations.

AS.110.742. Topics In Partial Differential Equations.
In this course we will be discussing some dispersive evolution equations, primarily the nonlinear Schrodinger equation. Topics will include well-posedness theory, conservation laws, and scattering. The course will be accessible to students who have not taken graduate partial differential equations or functional analysis.

AS.110.745. Introduction to Curvature Flows.

AS.110.749. Topics in Differential Geometry.
In this class, we will study Aaron Naber and Jeff Cheeger’s recent result on proving codimension four conjecture. We plan to talk about some early results of the structure on manifolds with lower Ricci bound by Cheeger and Colding. We will prove quantitative splitting theorem, volume convergence theorem, and the result that almost volume cone implies almost metric cone. Then we will discuss regularity of Einstein manifolds and the codimension four conjecture.
Area: Quantitative and Mathematical Sciences

AS.110.750. Topics in Representation Theory.
Area: Quantitative and Mathematical Sciences

AS.110.755. Topics in Algebra.
This will be a course in commutative algebra. Topics may include: Noetherian rings and modules, the Nullstellensatz, Hilbert basis theorem, localization, integrality, Noether normalization, primary decomposition, DVRs, Dedekind domains, dimension theory, smoothness and regularity, and homological methods.
Area: Quantitative and Mathematical Sciences
AS.110.757. **Topics in Stochastic Dynamical Systems.**
The course will present an introduction to stochastic dynamical systems and some applications in model reduction and data assimilation. The main focus will be on stability and ergodicity of stochastic dynamical systems, including stochastic differential equations driven by white and fractional noise, and their numerical approximations. We will then discuss model reduction, focusing on Mori-Zwanzig formalism and approximation of the generalized Langevin equation, and methods on the parametric inference of related stochastic systems. Data assimilation and stochastic control will also be briefly introduced.
Area: Quantitative and Mathematical Sciences

AS.110.790. **Seminar in Complex Geometry.**
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.
Area: Quantitative and Mathematical Sciences

AS.110.791. **Seminar in Analysis and Partial Differential Equations.**
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.
Area: Quantitative and Mathematical Sciences

AS.110.793. **Seminar in Topology.**
For graduate students only. Presentations of current research papers by faculty, graduate students and invited guest speakers.
Area: Quantitative and Mathematical Sciences

AS.110.794. **Seminar in Category Theory.**
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.
Area: Quantitative and Mathematical Sciences

AS.110.795. **Data Science Seminar.**
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.
Area: Quantitative and Mathematical Sciences

AS.110.798. **Seminar in Number Theory.**
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.

AS.110.799. **Seminar in Algebraic Geometry.**
For graduate students only. Presentations of current research papers by faculty, graduate students and invited guest speakers.

AS.110.800. **Independent Study-Graduates.**
Area: Quantitative and Mathematical Sciences

AS.110.801. **Thesis Research.**

**Cross Listed Courses**

**Applied Mathematics Statistics**

EN.553.738. **High-Dimensional Approximation, Probability, and Statistical Learning. 3 Credits.**
The course covers fundamental mathematical ideas for certain approximation and statistical learning problems in high dimensions. We start with basic approximation theory in low-dimensions, in particular linear and nonlinear approximation by Fourier and wavelets in classical smoothness spaces, and discuss applications in imaging, inverse problems and PDE's. We then introduce notions of complexity of function spaces, which will be important in statistical learning. We then move to basic problems in statistical learning, such as regression and density estimation. The interplay between randomness and approximation theory is introduced, as well as fundamental tools such as concentration inequalities, basic random matrix theory, and various estimators are constructed in detail, in particular multi scale estimators. At all times we consider the geometric aspects and interpretations, and will discuss concentration of measure phenomena, embedding of metric spaces, optimal transportation distances, and their applications to problems in machine learning such as manifold learning and dictionary learning for signal processing.

**Applied and Computational Mathematics**

EN.625.603. **Statistical Methods and Data Analysis. 3 Credits.**
This course introduces statistical methods that are widely used in modern applications. A balance is struck between the presentation of the mathematical foundations of concepts in probability and statistics and their appropriate use in a variety of practical contexts. Foundational topics of probability, such as probability rules, related inequalities, random variables, probability distributions, moments, and jointly distributed random variables, are followed by foundations of statistical inference, including estimation approaches and properties, hypothesis testing, and model building. Data analysis ranging from descriptive statistics to the implementation of common procedures for estimation, hypothesis testing, and model building is the focus after the foundational methodology has been covered. Software, for example R-Studio, will be leveraged to illustrate concepts through simulation and to serve as a platform for data analysis. Course prerequisite(s): Multivariate calculus.

EN.625.616. **Optimization in Finance. 3 Credits.**
Optimization models play an increasingly important role in financial decisions. This course introduces the student to financial optimization models and methods. We will specifically discuss linear, integer, quadratic, and general nonlinear programming. If time permits, we will also cover dynamic and stochastic programming. The main theoretical features of these optimization methods will be studied as well as a variety of algorithms used in practice. Prerequisite(s): Multivariate calculus and linear algebra. Course Note(s): Due to overlap in subject matter in EN.625.615 and EN.625.616, students may not receive credit towards the MS or post-master's certificate for both EN.625.615 and EN.625.616.
EN.625.633. Monte Carlo Methods. 3 Credits.
This course is an introduction to fundamental tools in designing, conducting, and interpreting Monte Carlo simulations. Emphasis is on generic principles that are widely applicable in simulation, as opposed to detailed discussion of specific applications and/or software packages. At the completion of this course, it is expected that students will have the insight and understanding to critically evaluate or use many state-of-the-art methods in simulation. Topics covered include random number generation, simulation of Brownian motion and stochastic differential equations, output analysis for Monte Carlo simulations, variance reduction, Markov chain Monte Carlo, simulation-based estimation for dynamical (statespace) models, and, time permitting, sensitivity analysis and simulation-based optimization. Course Note(s): This course serves as a complement to the 700-level course EN.625.744 Modeling, Simulation, and Monte Carlo. EN.625.633 Monte Carlo Methods and EN.625.744 emphasize different topics, and EN.625.744 is taught at a slightly more advanced level. EN.625.633 includes topics not covered in EN.625.744 such as simulation of Brownian motion and stochastic differential equations, general output analysis for Monte Carlo simulations, and general variance reduction. EN.625.744 includes greater emphasis on generic modeling issues (bias-variance tradeoff, etc.), simulation-based optimization of real-world processes, and optimal input selection.
Prerequisite(s): Linear algebra and a graduate-level statistics course such as EN.625.603 Statistical Methods and Data Analysis.

EN.625.641. Mathematics of Finance. 3 Credits.
This course offers a rigorous treatment of the subject of investment as a scientific discipline. Mathematics is employed as the main tool to convey the principles of investment science and their use to make investment calculations for good decision making. Topics covered in the course include the basic theory of interest and its applications to fixed-income securities, cash flow analysis and capital budgeting, mean-variance portfolio theory and the associated capital asset pricing model, utility function theory and risk analysis, derivative securities and basic option theory, and portfolio evaluation.
Prerequisite(s): Multivariate calculus and a course in probability and statistics (such as EN.625.603 Statistical Methods and Data Analysis).

EN.625.642. Mathematics of Risk, Options, and Financial Derivatives. 3 Credits.
The concept of options stems from the inherent human desire and need to reduce risks. This course starts with a rigorous mathematical treatment of options pricing, and related areas by developing a powerful mathematical tool known as Ito calculus. We introduce and use the well-known field of stochastic differential equations to develop various techniques as needed, as well as discuss the theory of martingales. The mathematics will be applied to the arbitrage pricing of financial derivatives, which is the main topic of the course. We treat the Black-Scholes theory in detail and use it to understand how to price various options and other quantitative financial instruments. Topics covered in the course include options strategies, binomial pricing, Weiner processes and Ito’s lemma, the Black-Scholes-Merton Model, futures options and Black’s Model, option Greeks, numerical procedures for pricing options, the volatility smile, the value at risk, exotic options, martingales and risk measures. Course Note(s): This class is distinguished from EN.625.641 Mathematics of Finance: Investment Science (formerly 625.439) and EN.625.714 Introductory Stochastic Differential Equations with Applications, as follows: EN.625.641 Mathematics of Finance: Investment Science gives a broader and more general treatment of financial mathematics, and EN.625.714 Introductory Stochastic Differential Equations with Applications provides a deeper (more advanced) mathematical understanding of stochastic differential equations, with applications in both finance and non-finance areas.
Prerequisite(s): Multivariate calculus, linear algebra and matrix theory (e.g., EN.625.609 Matrix Theory), and a graduate-level course in probability and statistics (such as EN.625.603 Statistical Methods and Data Analysis).

EN.625.695. Time Series Analysis. 3 Credits.
This course will be a rigorous and extensive introduction to modern methods of time series analysis and dynamic modeling. Topics to be covered include elementary time series models, trend and seasonality, stationary processes, Hilbert space techniques, the spectral distribution function, autoregressive/ integrated/moving average (ARIMA) processes, fitting ARIMA models, forecasting, spectral analysis, the periodogram, spectral estimation techniques, multivariate time series, linear systems and optimal control, state-space models, and Kalman filtering and prediction. Additional topics may be covered if time permits. Some applications will be provided to illustrate the usefulness of the techniques. Course Note(s): This course is also offered in the Department of Applied Mathematics and Statistics (Homewood campus) as EN.553.639.
Prerequisite(s): Graduate course in probability and statistics (such as EN.625.603 Statistical Methods and Data Analysis) and familiarity with matrix theory and linear algebra.

EN.625.714. Introductory Stochastic Differential Equations with Applications. 3 Credits.
The goal of this course is to give basic knowledge of stochastic differential equations useful for scientific and engineering modeling, guided by some problems in applications. The course treats basic theory of stochastic differential equations, including weak and strong approximation, efficient numerical methods and error estimates, the relation between stochastic differential equations and partial differential equations, Monte Carlo simulations with applications in financial mathematics, population growth models, parameter estimation, and filtering and optimal control problems. Prerequisite(s): Multivariate calculus and a graduate course in probability and statistics, as well as exposure to ordinary differential equations.
Civil Engineering
EN.560.601. Applied Math for Engineers. 3 Credits.
This course presents a broad survey of the basic mathematical methods used in the solution of ordinary and partial differential equations: linear algebra, power series, Fourier series, separation of variables, integral transforms.
Area: Engineering, Quantitative and Mathematical Sciences

Computer Science
EN.601.442. Modern Cryptography. 3 Credits.
Modern Cryptography includes seemingly paradoxical notions such as communicating privately without a shared secret, proving things without leaking knowledge, and computing on encrypted data. In this challenging but rewarding course we will start from the basics of private and public key cryptography and go all the way up to advanced notions such as zero-knowledge proofs, functional encryption and program obfuscation. The class will focus on rigorous proofs and require mathematical maturity. [Analysis] Required course background: EN.601.231 or EN.600.271 OR EN.600.471) AND (EN.550.310 OR EN.553.310 OR EN.553.311 OR EN.550.331 OR EN.550.420 OR EN.553.420); Students may receive credit for only one of EN.600.442, EN.601.442, EN.601.642.
Area: Engineering, Quantitative and Mathematical Sciences

EN.601.642. Modern Cryptography. 3 Credits.
Same material as 601.442, for graduate students. Modern Cryptography includes seemingly paradoxical notions such as communicating privately without a shared secret, proving things without leaking knowledge, and computing on encrypted data. In this challenging but rewarding course we will start from the basics of private and public key cryptography and go all the way up to advanced notions such as zero-knowledge proofs, functional encryption and program obfuscation. The class will focus on rigorous proofs and require mathematical maturity. [Analysis] Required course background: EN.601.231 or EN.601.631. 
Prerequisite(s): Students may receive credit for only one of EN.600.442, EN.601.442, EN.601.642.
Area: Engineering, Quantitative and Mathematical Sciences

Financial Mathematics
EN.555.642. Investment Science. 3 Credits.
This is the key introductory course for the financial mathematics program and introduces the major topics of investment finance. The investment universe, its context of markets, and the flow of global capital are introduced. Details of equities, interest, bonds, commodities, forwards, futures, and derivatives are introduced to varying degree. The concepts of deterministic cash flow stream, valuation, term structure theories, risk, and single- and multi-period random cash flows are presented. Here the neoclassical theory of finance is introduced including the topics of efficient markets, the risk-return twins leading to the mean variance Capital Asset Pricing Model (CAPM), the efficient frontier, the intertemporal models, and Arbitrage Pricing Theory (APT). Some introductory models of asset dynamics (including the binomial model), basic options theory, and elements of hedging are also included in this course. Course Note(s): This course is the same as EN.553.642 offered by through the full-time Applied Mathematics & Statistics department for the residence Master of Science in Engineering in Financial Mathematics.

EN.555.644. Introduction to Financial Derivatives. 3 Credits.
This is the first of a two-course sequence devoted to the mathematical modeling of securities and the markets in which they are created and exchanged. The basic cash, hybrid, and derivative instruments are reviewed and set in a rigorous mathematical context. This includes equities, bonds, options, forwards, futures, and swaps, as well as their dealer, over-the-counter, and exchange environment. Models of the term structure of interest rates, spot rates and, the forward rate curve are treated; derived from cash instruments (e.g., bonds and interest rates like LIBOR) as well as from derivatives (such as Eurodollar futures and swaps). Principles of static, discrete, continuous and dynamic probabilistic models for derivative analysis (including the Weiner process, Ito's Lemma, and an introduction to risk-neutral valuation) are applied to develop the binomial tree approach to option valuation, the Black-ScholesMerton differential equation, and the Black-Scholes formulas for option pricing. Course Note(s): This course is the same as EN.553.644 offered by through the full-time Applied Mathematics & Statistics department for the residence Master of Science in Engineering in Financial Mathematics.

EN.555.645. Interest Rate and Credit Derivatives. 3 Credits.
This is the second of a two-course sequence devoted to the mathematical modeling of securities and the markets in which they are created and exchanged. Focus turns to interest rate derivatives and the credit markets. The martingale approach to risk-neutral valuation is covered, followed by interest rate derivatives and models of the short rate process (including Heath, Jarrow & Morton and the Libor Market Model); analysis of bonds with embedded options and other interest rate derivatives (e.g., caps, floors, swaptions). Credit risk and credit derivatives, including copula models of time to default, credit default swaps, and a brief introduction to collateralized debt obligations will be covered. A major component of this course is computational methods. This includes data and time series analysis (e.g., estimation of volatilities), developing binomial and trinomial lattices and derivative analysis schemes, and numerical approaches to solving the partial differential equations of derivatives. Course Note(s): This course is the same as EN.553.645 offered through the full-time Applied Mathematics & Statistics department for the residence Master of Science in Engineering in Financial Mathematics.
Prerequisite(s): EN.555.644 Introduction to Financial Derivatives
EN.555.646. Financial Risk Management and Measurement. 3 Credits.
This course applies advanced mathematical techniques to the measurement, analysis, and management of risk. The focus is on financial risk. Sources of risk for financial instruments (e.g., market risk, interest rate risk, credit risk) are analyzed; models for these risk factors are studied and the limitation, shortcomings, and compensatory techniques are addressed. Throughout the course, the environment for risk is considered, be it regulatory or social (e.g., Basel capital accord). A major component of the course are the Value at Risk (VaR) and Conditional VaR measures for market risk in trading operations, including approaches for calculating and aggregating VaR, testing VaR, VaR-driven capital for market risk, and limitations of the VaR-based approach. Asset Liability Management (ALM), where liquidity risk as well as market risk can affect the balance sheet, is analyzed. Here, models for interest rate, spread, and volatility risks are applied to quantify this exposure. Another major component of the course is credit risk. Sources of credit risk, how measured risk is used to manage exposure, credit derivatives, techniques for measuring default exposure for a single facility (including discriminant analysis and Merton-based simulation), portfolio risk aggregation approaches (including covariance, actuarial, Merton-based simulation, macro-economic default model, and the macro-economic cashflow model - for structured and project finance). Finally, there is a brief introduction to concepts and tools that remain valid for large and extreme price moves, including the theory of copulas and their empirical testing and calibration. Course Note(s): This course is the same as EN.553.646 offered through the full-time Applied Mathematics & Statistics department for the residence Master of Science in Engineering in Financial Mathematics.
EN.555.647. Quantitative Portfolio Theory & Performance Analysis. 3 Credits.
This course focuses on modern quantitative portfolio theory, models, and analysis. Topics include intertemporal approaches to modeling and optimizing asset selection and asset allocation; benchmarks (indexes) and performance assessment (including Sharpe, Treynor, and Jenson ratios) and performance attribution; immunization theorems; alpha-beta separation in management, performance measurement, and attribution; Replicating Benchmark Index (RBI) strategies using cash securities/derivatives; Liability-Driven Investment (LDI); and the taxonomy and techniques of strategies for traditional management (Passive, Quasi-Passive [Indexing] Semi-Active [Immunization & Dedicated] Active [Scenario, Relative Value, Total Return and Optimization]). In addition, risk management and hedging techniques are also addressed. Course Note(s): This course is the same as EN.553.647 offered through the full-time Applied Mathematics & Statistics department for the residence Master of Science in Engineering in Financial Mathematics.
EN.555.648. Financial Engineering and Structured Products. 3 Credits.
This course focuses on structured securities and the structuring of aggregates of financial instruments into engineered solutions of problems in capital finance. Topics include the fundamentals of creating asset-backed and structured securities—including mortgage-backed securities (MBS), stripped securities, collateralized mortgage obligations (CMOs), and other asset-backed collateralized debt obligations (CDOs)—structuring and allocating cash-flows as well as enhancing credit; equity hybrids and convertible instruments; asset swaps, credit derivatives, and total return swaps; assessment of structure-risk interest rate-risk and credit-risk as well as strategies for hedging these exposures; managing portfolios of structured securities; and relative value analysis (including OAS and scenario analysis). Course Note(s): This course is the same as EN.553.648 offered through the full-time Applied Mathematics & Statistics department for the residence Master of Science in Engineering in Financial Mathematics.
Mathematics
AS.110.433. Introduction to Harmonic Analysis and Its Applications. 4 Credits.
The course is an introduction to methods in harmonic analysis, in particular Fourier series, Fourier integrals, and wavelets. These methods will be introduced rigorously, together with their motivations and applications to the analysis of basic partial differential equations and integral kernels, signal processing, inverse problems, and statistical/machine learning. Prerequisite(s): (AS.110.201 OR AS.110.212 OR EN.550.291 OR EN.553.291) AND (AS.110.202 OR AS.110.211) AND (AS.110.405 OR AS.110.415) Area: Quantitative and Mathematical Sciences
AS.110.445. Mathematical and Computational Foundations of Data Science. 4 Credits.
We will cover several topics in the mathematical and computational foundations of Data Science. The emphasis is on fundamental mathematical ideas (basic functional analysis, reproducing kernel Hilbert spaces, concentration inequalities, uniform central limit theorems), basic statistical modeling techniques (e.g. linear regression, parametric and non-parametric methods), basic machine learning techniques for unsupervised (e.g. clustering, manifold learning), supervised (classification, regression), and semi-supervised learning, and corresponding computational aspects (linear algebra, basic linear and nonlinear optimization to attack the problems above). Applications will include statistical signal processing, imaging, inverse problems, graph processing, and problems at the intersection of statistics/machine learning and physical/dynamical systems (e.g. model reduction for stochastic dynamical systems). Area: Quantitative and Mathematical Sciences
AS.110.795. Data Science Seminar.
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only. Area: Quantitative and Mathematical Sciences
For current faculty and contact information go to http://www.mathematics.jhu.edu/people/
Mathematics, Bachelor of Arts
Math Course Placement and Sequencing for All Homewood Students
There are three different versions of single variable calculus offered by the Mathematics Department, including 2 versions of semester courses in Calculus I and II, roughly equivalent to Calculus AB and BC in the College Board’s Advanced Placement (AP) system, and a single semester honors version encompassing both Calculus I and II. Students should select their first course in mathematics at JHU based on their intended areas of study, prior experience and training in mathematics, and the results of an advisory Placement Exam offered to incoming freshmen. Students intending to major in mathematics, the natural sciences, or engineering, or who are interested in studying mathematics beyond a year of single variable calculus are strongly encouraged to begin with the AS.110.108 Calculus I (Physical Sciences & Engineering) - AS.110.109 Calculus II (For Physical Sciences and Engineering) sequence or AS.110.113 Honors Single Variable Calculus. Students majoring in other subjects, or who do not intend to continue taking mathematics courses beyond a year of calculus, may wish to take the sequence AS.110.106 Calculus I (Biology and Social Sciences) - AS.110.107 Calculus II (For Biological and Social Science). This latter sequence relates the methods of calculus to the biological and social sciences. A one-semester pre-
calculus course (AS.110.105 Precalculus) is a pre-calculus course offered for students who would benefit from additional preparation in the basic tools (algebra, trigonometry and the properties of functions) used in calculus.

Entering students may receive course credit for Calculus I or Calculus I and II on the basis of the performance level on either the (AP) or International Baccalaureate (IB) exams (p. 1600). All students, regardless of completion of advanced placement exams previously, must take a departmental placement exam to determine their appropriate first course in mathematics. Additional placement information can be found here (http://mathematics.jhu.edu/undergraduate/placement-exams/).

After completing a full year of calculus, the courses AS.110.201 Linear Algebra, AS.110.202 Calculus III, or AS.110.302 Differential Equations and Applications may be taken in any order. The department offers honors courses of the former 2; AS.110.212 Honors Linear Algebra and AS.110.211 Honors Multivariable Calculus.

**Mathematics Major Requirements**

(Also see Requirements for a Bachelor’s Degree (p. 1584).)

The undergraduate program in the Department of Mathematics is intended both for students interested in preparing for graduate study and research in pure mathematics, and for students interested in using mathematics to pose and solve problems in the sciences, engineering, social sciences, or other areas. Undergraduate mathematics majors will study:

- The foundations of analysis, which begins with the study of functions and their derivatives and integrals
- The fundamentals of advanced algebra, which is based on axiomatic systems involving operations of addition and multiplication in general settings
- Additional subjects such as geometry, probability, and topology
- Applications of mathematics to science and/or engineering.

A candidate for the Bachelor of Arts Degree in Mathematics is required to have completed the major requirements listed below. All courses used to meet these requirements must be completed with a grade of C- or better and may not be taken satisfactory/unsatisfactory (S/U) grading scheme.

One 300-level or higher math course | 4
Two courses in any one of the approved applications of mathematics or other courses approved by the Director of Undergraduate Studies. | 8

**Total Credits** | **44**

1. Honors Single Variable is a single 4 credit course that will count toward the major or minor in mathematics as both Calculus I and Calculus II.
2. Majors are encouraged but not required to take honors variant.
3. AS.110.413 Introduction To Topology cannot be used for more than one requirement.
4. See table below for some examples of approved application courses. All other choices must be approved by the Director of Undergraduate Studies, and must be upper-level, quantitative in nature, and both from the same department or program.

Honors Program in Mathematics
As a general guideline, departmental honors are awarded to recipients of the B.A. degree who have completed the following with a combined GPA of at least 3.6 out of 4.0:

- AS.110.415 Honors Analysis I and AS.110.416 Honors Analysis II,
- AS.110.411 Honors Algebra I, and AS.110.412 Honors Algebra II,
- AS.110.411 Honors Algebra I, or AS.110.412 Honors Algebra II, and AS.110.407 Honors Complex Analysis
- and one more course at the 400-level or above with a combined grade point average of at least 3.6/4.0.

J.J. Sylvester Prize
The J.J. Sylvester Prize in Mathematics, which carries a cash award, is given each year to the one of two top-performing graduating seniors majoring in mathematics for outstanding achievement.

Undergraduate Teaching Assistantships
The department awards many upper-level undergraduates the opportunity to act as recitation instructors to our freshman courses. This award enables a student to practice the art of teaching and communicating mathematics in an environment where they are hired as a formal instructor to aid the professor of a regular curriculum course as a Teaching Assistant (TA). Undergraduate TAs are fully mentored and monitored, and the position provides a valuable credential and experience.

Undergraduate Learning Goals
At the time of graduation, math majors should:

- Have a good working knowledge of the language of mathematics as embodied in the basic constructs of mathematics in the fundamental areas of algebra, analysis, and geometry
- Be able to analyze the logical structure of a scientific or mathematical problem and to develop a meaningful approach to a solution
- Be able to read, understand, and construct a well-formed proof
- Develop the mathematical maturity and skills necessary to extend their knowledge through self-study and independent research
- Be able to apply mathematical methods to solve research problems arising outside of mathematics
- Be able to formulate precise mathematical statements and questions
- Be able to effectively and successfully communicate mathematics in both oral and written form to a broad mathematical and lay audience.
Mathematics, Minor

Mathematics Minor Requirements

Students with a major in another department may be awarded a minor in mathematics upon completion of a set of core required courses and elective courses. All courses used to meet the mathematics minor requirements must be completed with a grade of C- or better and may not be taken using the S/U grading scheme. One course in the Applied Mathematics and Statistics Department (at the 300-level or above) may be substituted for one of the elective courses for the minor. No other course substitutions are allowed.

Mathematics, Bachelor of Arts/ Master of Arts

By applying some courses simultaneously toward the requirements for the Bachelor of Arts degree and a Master of Arts degree, an advanced student can qualify for both degrees during the four years of undergraduate study. Admission to the BA/MA Program is by the standard graduate application form, completed and submitted no later than April 30 of the undergraduate student’s junior year of study. With the application, the applicant must supply an official copy of the current transcript and a statement of purpose. The GRE exams are not required, and the graduate application fee is waived. In addition, the applicant must have one member of the faculty of the Department of Mathematics submit a letter of recommendation.

And while the application process for the BA/MA program is not competitive, it is contingent on the following:

- A current GPA of at least a 3.0/4.0 in the 400-level mathematics courses taken while resident at the university, and
- at the time of application, a student must be a candidate for the honors designation in the undergraduate degree.

Note that the BA/MA must be completed within the four years that the student is an undergraduate, and that graduate student financial support is not available for BA/MA candidates.

All interested students must contact the academic program coordinator (course@math.jhu.edu) prior to applying.

Mathematics, PhD

Graduate

The goal of our PhD program is to train graduate students to become research mathematicians. Each year, an average of five students complete their theses and go on to exciting careers (https://mathematics.jhu.edu/graduate/placement/) in mathematics both inside and outside of academia.

Faculty research interests (https://mathematics.jhu.edu/people/) in the Johns Hopkins University Department of Mathematics are concentrated in several areas of pure mathematics, including analysis and geometric analysis, algebraic geometry and number theory, differential geometry, algebraic topology, category theory, and mathematical physics. The department also has an active group in data science, in collaboration with the Applied Math Department (https://engineering.jhu.edu/ams/).

The Department values diversity among its members, is committed to building a diverse intellectual community, and strongly encourages applications from all interested parties.

A brief overview of our graduate program is below. For more detailed information, please see the links at the right.

Program Overview

All students admitted to the PhD program receive full tuition fellowships and teaching assistantships. Teaching assistant salaries for the 2019-2020 academic year are $30,000, and exceptional applicants are also considered for supplementary fellowships. Students making satisfactory progress can expect to be supported for six years.

PhD candidates take two or three courses per semester over the first several years of the program. These are a mix of required and intermediate-level graduate courses, independent studies, and special topics classes offered by our faculty.

By the beginning of their second year, students are asked to demonstrate competency in algebra and in analysis by passing written qualifying exams in these two broad areas. Students are then expected to choose an advisor, who will supervise their dissertation and also administer an oral qualifying exam to be taken in the second or third year. More specifics about all these requirements are described on the requirements page (https://mathematics.jhu.edu/graduate/requirements/).

All graduate students are invited to attend weekly research seminars in a variety of topic areas (https://mathematics.jhu.edu/events/) as well as regular department teas and a weekly wine and cheese gathering attended by many junior and senior members of the department. A graduate student lunch seminar series provides an opportunity for our students to practice their presentation skills to a general audience.

PhD students will gain teaching experience as a teaching assistant for undergraduate courses. Most of our students lead two TA sections per week, under the supervision of both the faculty member teaching the course and the director of undergraduate studies. Students wanting more classroom experience (or extra pay) can teach their own sections of summer courses. First-year students are given a reduced TA workload in the spring semester, in preparation for the qualifying exams.
In addition to their stipend, each student is awarded an annual travel allowance to enable them to attend conferences for which limited funding is available or visit researchers at other institutions.

**Financial Aid**

Students admitted to the Ph.D. program receive teaching assistantships and full tuition fellowships. Exceptional applicants become candidates for one of the university’s George E. Owen Fellowships.

**William Kelso Morrill Award**

The William Kelso Morrill Award for excellence in the teaching of mathematics is awarded every spring to the graduate student who best exemplifies the traits of Kelso Morrill: a love of mathematics, a love of teaching, and a concern for students.

**Excellence in Teaching Awards**

Three awards are given each year to a junior faculty member and graduate student teaching assistants who have demonstrated exceptional ability and commitment to undergraduate education.

**Admission Requirements**

Admission to the PhD program is based on primarily on academic records, letters of recommendation, and a personal statement. The Department of Mathematics values diversity among its members, is committed to building a diverse intellectual community, and strongly encourages applications from all interested parties.

Via the online application (http://grad.jhu.edu/apply/), applicants should submit:

- A Statement of Purpose
- An optional Personal Statement
- Transcripts from all institutions attended
- Three letters of recommendation
- Official GRE scores for both the general and the subject test
- Official TOEFL scores (if English is not your first language)

The required Statement of Purpose discusses your academic interests, objectives, and preparation. The optional Personal Statement describes your personal background, and helps us create a more holistic understanding of you as an applicant. If you wish you may also discuss your personal background in the Statement of Purpose (e.g. if you have already written a single essay addressing both topics), instead of submitting separate statements.

Application fee waivers are available based on financial need and/or participation in certain programs (http://grad.jhu.edu/apply/application-process/#1464027869971-8cbbde29-b882).

Many frequently asked questions about the graduate admission process are answered here (https://mathematics.jhu.edu/graduate/admissions/prospective-graduate-student-faq/).

No application materials should be mailed to the department. All application materials are processed by the Graduate Admissions Office (http://grad.jhu.edu/apply/).

**Undergraduate Background**

The following is an example of what the math department would consider a good background for a student coming out of a four-year undergraduate program at a college or university in the U.S. (assuming a semester system):

- Calculus in one variable (two semesters, or AP credits)
- Multivariable Calculus (one semester)
- Linear Algebra (one semester)
- Complex analysis (one semester)
- Real analysis (two semesters)
- Abstract algebra (two semesters)
- Point-set topology (one semester)

Many admitted students have taken upper-level undergraduate mathematics courses or graduate courses. Nevertheless, the department does admit very promising students whose preparation falls a little short of the above model. In such cases, we strongly recommend that the student start to close the gap over the summer, before arriving for the start of the fall semester.

**Financial Support**

Students admitted to the PhD program receive full tuition fellowships and teaching assistantships. Teaching assistant salaries for the 2019–2020 academic year are $30,000. Students making satisfactory progress can expect to be supported for six years. Exceptional applicants are considered for supplementary fellowships of $6,000 each year for three years.

Students from underrepresented groups may be eligible for other university-wide supplemental fellowships. Summer teaching is available for students seeking extra income.

**Additional Information for International Students**

Student Visa Information: The Office of International Services at Homewood (http://ois.jhu.edu/) will assist admitted international students in obtaining a student visa.

English Proficiency: Johns Hopkins University requires students to have adequate English proficiency for their course of study. Students must be able to read, speak, and write English fluently upon their arrival at the university. Applicants whose native language is not English must submit proof of their proficiency in English before they can be offered admission and before a visa certificate can be issued. Proficiency can be demonstrated by submitting results from either the Test of English as a Foreign Language (TOEFL) (http://www.toefl.org/) or the IELTS (https://www.ielts.org/en-us/). Johns Hopkins prefers a minimum score of 100 on the TOEFL or a Band Score of 7 on the IELTS. Results should be sent to Johns Hopkins directly by TOEFL or IELTS. Applicants taking the IELTS must additionally upload a copy of their score through the application system. However, do not send the student copy or a photocopy of the TOEFL.

**Program Requirements**

**Course Requirements**

Mathematics PhD candidates must show satisfactory work in Algebra (110.601-602), Real Variables (110.605), Complex Variables (110.607), and one additional non-seminar mathematics graduate course in their first year. The first-year algebra and analysis requirement can be satisfied by passing the corresponding written qualifying exam in September of the first year; these students must complete at least two courses each semester. In addition, PhD candidates must take Algebraic Topology (110.615) and Riemannian Geometry (110.645) by their second year. Students having sufficient background can substitute an advanced
Candidates must show satisfactory work in at least two mathematics graduate courses each semester of their second year, and if they have not passed their oral qualifying exam, in the first semester of their third year.

Qualifying Exams
Candidates must pass written qualifying exams by the beginning of their second year in Analysis (Real & Complex) and in Algebra. Exams are scheduled for September and May of each academic year, and the dates are announced well in advance.

Oral Exam
Candidates must pass an oral qualifying examination in the student’s chosen area of research by April 10 of the third year. The topics of the exam are chosen in consultation with the faculty member who has agreed (provisionally) to be the student’s thesis adviser, who will also be involved in administering the exam.

PhD Dissertation
Candidates must produce a written dissertation based upon independent and original research. After completion of the thesis research, the student will defend the dissertation by means of the Graduate Board Oral exam. The exam must be held at least three weeks before the Graduate Board deadline the candidate wishes to meet.

Our PhD program does not have a foreign language requirement.

Medicine, Science, and the Humanities
http://krieger.jhu.edu/msh

This is an interdisciplinary, humanities-based major using a cultural and historical context to explore scientific inquiry and the roots of medicine. The medicine, science, and the humanities major is ideal for students who plan to pursue careers in the health professions as well as those interested in issues of importance to science and medicine, and students who plan to pursue graduate work in a range of humanities, social science, or professional disciplines.

MSH Major Goals and Objectives

Goal
Medicine, science, and humanities majors will develop an interdisciplinary understanding of the cultural and historical roots of scientific inquiry and medicine, with the ability to apply these precepts to contemporary life.

Objectives
MSH majors will:

- Gain an introductory awareness of theory, interpretation, and methods in a specific humanistic topic related to science and medicine
- Acquire and develop skills of interpretation and analysis in a specific humanities discipline by focusing on primary and secondary sources such as literature, imagery, film, artifacts, and commentary
- Acquire fundamental skills of writing and oral presentation, emphasizing clear and logical exposition to enhance student readiness for subsequent graduate school, professional school, or the workforce
- Acquire knowledge and experience in the natural sciences
- Understand the advantages of multiculturalism through intermediate mastery of a language beyond English.

Courses

AS.145.101. Death and Dying in Art, Literature, and Philosophy: Introduction to Medical Humanities. 3 Credits.
In this course, four essential aspects of the theme of death and dying will be examined: Death and Medicine; Emotional Responses to Death; Burying and Commemorating the Dead; and Conceptions of Death. Specific topics relating to each of these aspects that will be covered include illness and causes of death; prevention of death; suicide; death and grief; burial practices; mourning the dead; public commemoration of the dead; life after death; and death and rebirth. Students will explore these topics from a historical-anthropological perspective with Paul Delnero, a specialist in the history and culture of the ancient Near East (Near Eastern Studies); from a literary perspective, by reading and writing poetry relating to these subjects with the acclaimed poet James Arthur (Writing Seminars); and from a musical perspective, through direct encounters with the music and creative process of the award-winning composer, Michael Hersch (Peabody).
Area: Humanities
Writing Intensive
AS.145.102. The Cosmic Imagination: How Literature Changes Our Understanding of the Universe. 3 Credits.
Since time immemorial humankind has looked to the skies for clues as to our origins, our destiny, and the nature of existence itself. In some ways, one of the hallmarks of western science has been a story of viewing the cosmos in ever-greater clarity and detail. Yet the very nature of the universe—its massive size, the distance and obscurity of its farthest reaches—requires the active intervention of our imaginations to picture it, no matter how powerful the technologies we use. In this course we will look at how western cultures from the middle ages to the present have deployed the literary and philosophical imagination to try to grasp the ungraspable, and how those attempts in some cases helped prepare intellectuals and scientists to make very real advances in understanding the universe.
Prerequisite(s): Students may not take and receive credit for AS.145.102 and AS.211.102.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.145.103. Men, Women, and Melancholy: Premodern Physiologies of Madness. 3 Credits.
Definitions of madness change over time. From Antiquity through the Early Modern period, Melancholia was the predominant form of mental illness, thought to be caused by an imbalance in the bodily humors, resulting in an excess of black bile. The disturbed physiology adversely affected the imagination, which, with memory and intellect, was one of the three functions of the soul. Only gradually did imagination come to be identified with deliberate creativity: from about 1400 to 1800, there were two stereotypical victims of melancholia: male intellectuals and female witches. The disruption of society by witch-hunting was even more radical than the rise of the ‘man of genius.’ At stake were definitions of psychology (‘science of the soul’) and reality (whether witches and demons interacted ‘in the body’ or only ‘in the imagination’). Readings from Plato to Freud.
Area: Humanities Writing Intensive

AS.145.104. Science, Medicine, Media. 3 Credits.
Much of our understanding of science and medicine is filtered through what we casually refer to as “the media”: newspapers, magazines, television shows, films, and electronic social media. But the scientific world relies on its own media to produce and circulate knowledge: from scientific journals and conferences, to agar plates and petri dishes, cloud chambers and electrophoresis gels. Medical technologies from the stethoscope to the echocardiogram likewise mediate the perception of the body in health and disease, and increasingly our own understanding and perception of our bodies and our health is mediated via screens, scans, images — without which we cannot “imagine” our selves anymore. Students will learn several tools to critically assess the technologies that mediate our knowledge of our own bodies and the broader world.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.145.105. Freshman Seminar. 3 Credits.
Freshman Seminar Course. Topics will vary semesterrly. See class search for information for the current term.
Area: Humanities Writing Intensive

AS.145.110. Exploring Medical Careers. 1 Credit.
Many people are unaware of the diversity of medical and health careers. This program introduces scientific knowledge and promotes awareness of a variety of medical and health careers, for example, multiple specialties of physicians, physician assistant, nurse careers, professional therapists (physical, occupational, respiratory, radiation), clinical nutritionist, pharmacist, genetic counselor, medical laboratory scientist, veterinarian, clinical trial professionals, clinical social worker, and public health related careers. Taught by diverse healthcare professionals currently working at Johns Hopkins Hospital System, students will gain meaningful scientific knowledge and practical career knowledge by participating in lectures, labs, hands-on/simulation activities, interviews, and workshops.
Area: Natural Sciences

AS.145.117. Freshman Seminar: Heart Matters. 3 Credits.
To the human imagination, the heart is more than a muscle and thumping pump keeping us alive. From the Renaissance to the present, writers have helped us make sense of our bodies, in health and in illness or pain. Our aim will be to trace the historical, cultural and subjective meanings our minds have given to this “sublime engine.” Our materials will involve a constellation of attentive readings of a literature involving poems, modern fiction as well as recent scientific prose.
Area: Humanities Writing Intensive

AS.145.201. Clues: Unreasoning the Medical Mystery. 3 Credits.
Pioneering authors of detective fiction, including Edgar Allen Poe, Arthur Conan Doyle, and Pauline Hopkins, often used medical doctors and themes in their mystery plots. It’s no coincidence that medicine and crime fiction share a vocabulary of clues, evidence, and diagnosis. The mystery genre was integrally tied to the rise of scientific medicine as a respected profession. Indeed, classic detective stories are practically propaganda for the scientific method, showing readers how the powerful tools of observation and inference can solve any problem. Over the course of the 20th century, not only doctors, but also psychologists, social scientists and historians adopted the authoritative stance of the detective in constructing or reconstructing facts. However, as we study Sherlock Holmes and his modern proteges, such as TV doctor Gregory House, we will analyze how ‘medical mystery’ narratives can limit our thinking about problems and solutions in medicine. We will consider post-modern detective stories that offer alternatives to the ‘Holmsian’ model for understanding the complex clinical realities of today.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.145.215. Representations of Pain and Suffering in Contemporary Culture. 3 Credits.
What does it mean to experience pain or encounter the suffering of another person in our post-truth era? This course explores the changing representation of pain and suffering in contemporary film, fiction, creative non-fiction, science and technology. Through analyses and close-readings of a variety of primary and secondary sources, we will consider the different ways twentieth- and twenty-first-century historical, cultural, and media representations have mediated pain and suffering. Such investigations allow us to understand the workings of pain in the present.
Area: Humanities Writing Intensive
AS.145.217. Neurofictions: History and Literature of the Mind Sciences. 3 Credits.
Neuroscience has a long way to go from mapping neural connections to a precise account of memory, emotion, and consciousness. But the limits of science have never stopped us from imagining its possible futures. Engaging two centuries of debate in the mind sciences and in western culture at large, this course looks at historical attempts to explain and control human consciousness. By placing each period’s scientific texts in dialog with contemporaneous science fiction – from Edgar Allan Poe to Ursula K. Le Guin – we discover how theories about the brain can shape society while at the same time responding to social contexts.
Area: Humanities

AS.145.301. Naturalizing the Human Body in Early Modern France: the Confrontation of Literature, Science and Politics. 3 Credits.
Literature in early modern Europe was essential to the naturalizing of the human body, a partner in the reshaping of the cultures and disciplines around it. This course looks at several shifts within major literary works of the 17th and 18th centuries, a time of great intellectual upheaval, a moment when the interpenetration of the literary, scientific and political cultures was such that “art for art’s sake” would have been considered irresponsible. The primary goals of the course are to allow students to understand the intrinsic literary value of the texts, but equally to show how that literary activity, both of writing and of reading, was the vehicle for the elaboration of the modern mind set. We will focus on three cases: vision, the body’s “economy” and Body of the State, and the “scandal” of smallpox vaccination. Texts will include, for example, extracts from: Newton’s Opticks, Cyrano de Bergerac’s The States and Empires of the Sun, Montesquieu’s Persian Letters and Spirit of the Laws, Voltaire’s English Letters, Rousseau’s The New Eloise, Laclos’ Dangerous Liaisons, Guillotine’s text inventing the guillotine. For more information, please see the full course description at http://www.wilda.org/Courses/CourseVault/Undergrad/Naturalizing/Description.html. This course and texts will be in English, but readings will also be available in French.
Area: Humanities, Social and Behavioral Sciences

Cross Listed Courses
Classics
AS.040.109. Freshman Seminar: The Greeks and Their Emotions. 3 Credits.
This seminar is meant as an introduction to the study of ancient emotions, with a particular emphasis on how the ancient Greeks conceptualized, portrayed and lived their emotions through linguistic, literary and artistic expression. After an analysis of how the ancient Greek emotional experience differs from our own, we shall focus on the phenomenon of emotion as deeply rooted in the physical body, and in light of this we will contemplate (and question) its universality. You will also learn how to research and write a paper. Texts will be read in translation. No knowledge of ancient Greek required.
Area: Humanities

AS.145.510. Medicine, Science & the Humanities Independent Research. 1 - 3 Credits.
This course is for students in the Medicine, Science & the Humanities doing independent research. Course can be taken up to 3 credits with approval from the director.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Area: Humanities, Social and Behavioral Sciences

AS.145.511. Medicine, Science & the Humanities Independent Research. 1 - 3 Credits.
This class is for the MSH majors completing their research project.
Instructor approval required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Area: Humanities, Social and Behavioral Sciences

AS.145.512. Medicine, Science and the Humanities Independent Research. 1 - 3 Credits.
This course is for students in the Medicine, Science & the Humanities doing independent research. Course can be taken up to 3 credits with approval from the director.

Area: Humanities, Social and Behavioral Sciences

AS.145.401. In Search of the Human: Ways of Remembering. 3 Credits.
Studying narrative as a way of understanding the complex emotions associated with illness and the lifecycle has long been recognized as an important part of clinical training. This course focuses on autobiographical memory as a particularly important part of forming a personal narrative. These memories can offer foundations on which to build an approach to life and its challenges, and they can also be constraining. The course readings will illustrate how authors of fiction and scientists have grappled with the task of remembering and studied the configurations of autobiographical recollection.
Area: Humanities, Social and Behavioral Sciences

AS.145.502. Medicine, Science & the Humanities Internship. 3 Credits.
An internship in Medicine, Science & the Humanities approved by the director of the program.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Area: Humanities, Social and Behavioral Sciences

AS.145.510. Medicine, Science & the Humanities Independent Research. 1 - 3 Credits.

AS.040.241. The Greeks and Their Emotions. 3 Credits.
This seminar is meant as an introduction to the study of ancient emotions, with a particular emphasis on how the Greeks of the Archaic, Classical and Hellenistic periods conceptualized, portrayed and lived their emotions through linguistic, literary and artistic expression. After an analysis of how the ancient Greek terminology for the emotions differs from our own, we shall focus on the phenomenon of emotion as deeply rooted in the physical body, and in light of this we will contemplate (and question) its universality. Texts will be read in translation. No knowledge of ancient Greek required.

Writing Intensive

Comparative Thought and Literature
AS.300.139. Introduction to Intellectual History. 3 Credits.
This course offers a conceptual and historical introduction to Intellectual History. What makes the “history of ideas” different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call “ideas”? In what sense do they have a history? These are examples of the kind of questions addressed in the course.
Area: Humanities

AS.300.325. American Madness – History of the Treatment of the Mentally Ill. 3 Credits.
As mental illnesses became a social issue during the 18th century, community institutions were created in order to handle the needs of individuals with such illnesses collectively. This course will investigate the history of these institutions in the USA from the seemingly quiet, secluded, and peaceful private asylums in country settings, at the beginning of the 19th century, through the notorious crowded public, so-called “psychopathic hospitals” in mid-20th century, to the crisis-services, short-term acute psychiatric units, and out-patient services that followed the “death of the asylum” at the end of the 20th century. The history of the institutional care of the mentally ill in America is also the story of American psychiatry changing attitudes towards these individuals. Reading will include selections from 200 years of writings of asylum superintendents, psychiatrists, patients, and historians of psychiatry such as Foucault, Goffman, Grob, Scull, Lunbeck, Micale, and Mora.
Area: Humanities

AS.300.334. Love and its maladies. 3 Credits.
Much of what we know about love and desire we owe to fiction’s ability to evoke these experiences. Consider for example that the publication, in Germany, of The Sorrows of Young Werther inspired young men across Europe to dress and behave just like this lover. Just as nowadays film and television represent, as well as mold our conceptions of love, love-stories from the eighteenth-century onwards have given shape to gendered subjectivities in ways that still matter now. As, intriguingly, illness is a recurrent theme in many modern love stories, we will be prompted to decipher signs and symptoms in the bodies of mind of our protagonists. Why is it that in Western cultures, passion is tightly interwoven with a landscape of pain, suffering, and disease? In studying texts that represent major aspects of a romantic sensibility, we are indeed invited to trace the steps of a history of the body increasingly defined by gender and by medical knowledge. The readings for this class (all available in English) include: Austen, Persuasion; Balzac, The Unknown Masterpiece; Barthes, Lover’s Discourse; Goethe; The Sorrows of Young Werther; Mann, Death in Venice; Winterson, Written on the Body.
Area: Humanities

AS.300.342. Imagining Climate Change. 3 Credits.
Climate change poses an existential threat to human civilization. Yet the attention and concern it receives in ordinary life and culture is nowhere near what science tells us is required. What are the causes of this mismatch between crisis and response? What accounts for our collective inability to imagine and grasp this new reality, and how can it be overcome? In pursuit of these questions, we will look at texts from politics, philosophy, literary theory, and religion that frame climate change as a fundamental challenge not only to humanity but to the humanities: the disciplines and modes of thought that we rely on to make sense of the human condition. The second part of the course will examine works of literature and film for examples of how contemporary artists attempt to make the climate crisis visible and intelligible to us.
Area: Humanities

AS.300.402. What is a Person? Humans, Corporations, Robots, Trees. 3 Credits.
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course investigates recent debates about being a person in literature and law. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Although our explorations will be focused on these questions, the genre of materials examined will be wide-ranging (including legal essays, philosophy, contemporary novels, and film). Texts will include novels by William Gibson and Lydia Millet, essays by John Dewey and Daniel Dennett, and films such as Ex Machina and Her.
Area: Humanities

AS.300.439. Stories of hysteria. 3 Credits.
Many are the stories that recount episodes of hysteria, and we owe them not only to medicine. To the modern observer, they are a puzzle, involving strange beliefs about wandering wombs, demonic possession, and female virtue (or lack thereof). Closer to our time, contemporary media, as well as accounts in the social and clinical sciences have evoked cases of “mass hysteria” in America and across the globe. Marriage, it was thought for a long time, might be the best cure, which might be the reason case-studies of this illness can be as intriguing and troubling as novels. Against a backdrop of medical and historical materials, we will examine a selection of stories, from the 17th century onward, that evoke aspects of hysteria. They serve as our case-studies and as prompts to study an illness born at the convergence of histories and myths, of medical science, and of cultural and gender assumptions. Among the notions we will explore: The birth of psychoanalysis, trauma and PTSD, the concept of repression, the visual aspects of an illness and its spread in the arts, including cinema.
Area: Humanities

AS.300.618. What is a Person? Humans, Corporations, Robots, Trees.. 3 Credits.
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course investigates recent debates about being a person in literature and law. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Although our explorations will be focused on these questions, the genre of materials examined will be wide-ranging (including legal essays, philosophy, contemporary novels, and film). English

AS.060.108. Time Travel. 3 Credits.
Why is time travel such a consistent and perplexing theme in literature and film over the last 150 years? Why is modernity so concerned with peering backwards or forwards? This course will examine the history of time-travel fiction, from its beginning in utopian fiction through its box-office dominance in the 1980s, and into today. Writers will likely include Mark Twain, Edward Bellamy, Harold Steele Mackay, Ray Bradbury, Robert Heinlein, and Philip K. Dick. Movies will include *The Terminator*, *Back to the Future*, and *Primer*.
Area: Humanities  Writing Intensive

German Romance Languages Literatures

AS.210.313. Medical Spanish. 3 Credits.
Medical Spanish is a comprehensive examination of vocabulary and grammar for students who either work or intend to work in medicine and health-related fields in Spanish-speaking environments. The student will be able to participate in conversations on topics such as contrasting health systems, body structures and disorders and conditions, consulting your doctor, physical and mental health, first-aid, hospitalization and surgery on completion of this course. In completing the course's final project students will apply, synthesize, and reflect on what has been learned in the class by creating a professional dossier individualized to their professional interests. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session.
Prerequisite(s): AS.210.311 OR AS.210.312 or appropriate Spanish placement exam score.
Area: Humanities

AS.211.137. Freshman Seminar: Borges and Scientific Knowledge. 3 Credits.
A survey of the stories and essays of the great Argentine writer Jorge Luis Borges focusing on the theory of knowledge he developed over his long career. Special attention will be paid to the implications his ideas have for the mathematical and physical sciences, in particular cosmology.
Area: Humanities

AS.211.247. Freshman Seminar: Tortured Body, Tortured Soul: Pain in Early Modern Europe. 3 Credits.
This Freshman seminar provides an interdisciplinary exploration of pain and the body in pre-modern Europe. Using classical and early modern sources of philosophy, anthropology and medicine, students will analyze the ways in which cultural perceptions shape our responses to suffering.
Area: Humanities

AS.211.259. Introduction to Medical and Mental Health Interpreting. 3 Credits.
This course is a broad introduction to the fields of medical and mental health interpreting. Modules will include: (1) Three-way communication: managing role expectations and interpersonal dynamics; (2) Basic interpreting skills and techniques in a healthcare setting; (3) Ethical principles, dilemmas, and confidentiality; (4) Elements of medical interpreting; (5) Elements of mental health interpreting; (6) Trauma-informed interpreting: serving the refugee population. The course is taught in English, and has no foreign language pre-requisites.
Area: Humanities

AS.211.477. Witchcraft and Demonology in Literature and the Arts. 3 Credits.
Who were the witches? Why were they persecuted for hundreds of years? Why were women identified as the witches par excellence? How many witches were put to death between 1400 and 1800? What traits did European witch-mythologies share with other societies? After the witch-hunts ended, how did “The Witch” go from being “monstrous” to being “admirable” and even “sexy”? Answers are found in history and anthropology, but also in theology, literature, folklore, music, and the visual arts, including cinema.
Prerequisite(s): Students who have already taken AS.214.171 cannot take AS.211.477.
Area: Humanities  Writing Intensive

AS.212.696. Literature Confronts Science: Zola.
Zola worked with the theories of heredity of his time in the Rougon-Macquart novels. But he also attempted to use his understanding of biology and thermodynamics to reform the theory of the novel in general. This course will examine these two different effects of science on literature and try to see what leads an author to undertake such a project. For a more extended description, please see http://www.wilda.org/Courses/CourseVault/Grad/Zola/Syllabus.html. Advanced undergraduates with sufficient background may register for this course with permission of the instructor.
Area: Humanities

AS.214.477. Magic, Marvel, and Monstrosity in the Renaissance. 3 Credits.
Magic, Monstrosity, and Marvels or Wonders call into question what we see and experience: what is reality, what is illusion; what’s natural and what’s supernatural? What’s human and what’s more, or less, than human? During the Renaissance, ideas about the nature of reality were bound up with questions and issues very different from those of our time. With the exact sciences still being invented, the nature of the world was much less hard and fast for Renaissance people than it is for the modern educated person. The literary masterpieces of the Italian Renaissance provide vivid illustrations of the early modern sense of wonder. Foremost among these are the theatrical comedies which Italian authors revived in imitation of the ancients, and the romances, especially Ariosto’s Orlando furioso (1532) and Tasso’s Gerusalemme liberata (1581). These and other works influenced ideas about magical and marvelous phenomena across Europe for centuries to come. Works will be read and discussed in English. Italian majors and graduate students (who should enroll in section 2) will attend a weekly supplemental discussion in Italian and compose their written work in Italian.
Area: Humanities  Writing Intensive

History

AS.100.249. From Darwin to Babar: Animals and Humans in Historical Perspective. 3 Credits.
This course explores perspectives on the animal/human boundary from the eighteenth century through today. Topics will include biological classification, mosquito-borne diseases, animal rights movements, evolutionary theory, colonialism, Naziism, and conservation.
Area: Humanities, Social and Behavioral Sciences

AS.100.291. Medicine in an Age of Empires, 1500-1800. 3 Credits.
How did medicine emerge as a distinctive body of knowledge and a profession in the early modern period? The answers lie in the histories of disease, empire, and global commerce.
Area: Humanities, Social and Behavioral Sciences
AS.100.331. Reading through Things: Early Modern Chinese Medicine, Technology, and Art. 3 Credits.
This course introduces the history of late imperial China from the perspective of medicine, technology, and the arts.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

History of Art
AS.010.208. Leonardo da Vinci: The Renaissance Workshop in the Formation of Scientific Knowledge. 3 Credits.
How does a notary's son trained as a painter come to claim expertise in the construction of machines and acquire knowledge of the principles of optics, human anatomy, the flight of birds, the dynamics of air and water? The course will focus critically on the myth of Leonardo's singularity and explore his achievements with regard to the artisanal culture of his time, as well as the problems of authority in the recognition of artisanal knowledge as scientific discovery.
Area: Humanities

AS.010.212. Mirror Mirror: Reflections in Art from Van Eyck to Velázquez. 3 Credits.
Explores the different ways Early Modern painters and printmakers incorporated mirrors and optical reflections into their works for the sake of illusion and metaphor, deception and desire, reflexivity and truth-telling. Connecting sense perception and ethical knowledge, embedded mirror images often made claims about the nature of the self, the powers of art, and the superiority of painting in particular.
Area: Humanities

AS.010.235. Art, Medicine, and the Body: Middle Ages to Modernity. 3 Credits.
This course explores seven centuries of fruitful collaboration between physicians and artists, uncovering the shared discourses, diagnostic techniques and therapeutic agendas that united the art of picture-making with the art of healing. Topics include the origin and development of medical illustration; the long, cross-cultural history of the therapeutic artefact; the anatomical investigations of Renaissance artists such as Leonardo and Michelangelo; depictions of bodily pain and disease in the art of Matthias Grünewald and psychosomatic syndromes like melancholy in the work of Albrecht Dürer; the spectacularization of the body in Enlightenment science and the ethics of medical specimen display today – all in order to bring the complex intersections of the history of medicine and the history of art into view.
Area: Humanities

History of Science, Medicine, and Technology
AS.140.105. History of Medicine. 3 Credits.
Course provides an overview of the medical traditions of six ancient cultures: the development of Greek and Islamic traditions in Europe; and the reform and displacement of the Classical traditions during the Scientific Revolution.
Area: Humanities, Social and Behavioral Sciences

AS.140.146. History of Public Health in East Asia. 3 Credits.
This course examines the history of disease, epidemics, and public health responses in East Asia from the 17th-20th centuries. This public health history emphasizes the interactions, connections, and comparisons among China, Japan, Korea, and Taiwan.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.176. Public Health in East Asia Through Films & Documentaries. 1 Credit.
This course uses contemporary films and documentaries to address issues in public health in East Asia, past & present. Topics covered include medicine in turn-of-the-twentieth century Japan and China, revolutionary medicine, STDs, mental illness, HIV/AIDS in China, industrial pollution, the politics of universal health care insurance, and pandemics in East Asia.
Area: Humanities, Social and Behavioral Sciences

AS.140.302. Rise Of Modern Science. 3 Credits.
Survey of major scientific developments from the eighteenth-century Age of Enlightenment to the Cold War era of Big Science.
Area: Humanities, Social and Behavioral Sciences

AS.140.314. Experimental Bodies: Histories of Human Subjects Research in the 19th and 20th Centuries. 3 Credits.
This course traces the history of human subjects research as a medical and scientific practice. It will focus on the human subjects themselves, and how their experiences intersect with the histories of race, class, gender, sexuality, and disability.
Area: Humanities, Social and Behavioral Sciences

AS.140.321. Scientific Revolution. 3 Credits.
How did the Western understanding of nature change between 1500 and 1720? We'll study the period through the works of astronomers and astrologers, naturalists and magi, natural philosophers and experimentalists, doctors and alchemists & many others.
Area: Humanities, Social and Behavioral Sciences

AS.140.346. History of Chinese Medicine. 3 Credits.
Students will study the most recent anthropological, philosophical, and historical scholarship on medicine in traditional and modern Chinese society. They will approach the topic from several angles including medical pluralism, the range of healers, domestic and literate medicine, gender, emergence of new disciplines, public health and the history of disease. The course relies on secondary sources and primary sources in English translation.Cross-listed with East Asian Studies.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.390. Science and Technology in Latin America. 3 Credits.
The course surveys the development of western science and technology in Hispanic America(1492 to the present). We begin studying the hybridization of scientific practices between European and Native American cultures during the early colonial era and end with the transfer of technologies and industrialization of the 20th century. We emphasize the role on scienceand technology in state formation, the acculturation of foreign ideas in colonial and postcolonial societies, and the role of intellectual elites in modernization programs.
Area: Humanities, Social and Behavioral Sciences

AS.140.391. Individualized Medicine from Antiquity to the Genome Age. 3 Credits.
A seminar for advanced undergraduates. We explore the notion of the individual in medicine over twenty-five centuries, from the Hippocratics to the invention of the case study during the Renaissance to the current JHU medical curriculum. The history of medicine survey. AS.140.105 or AS.140.106, is recommended though not required. Graduate students are welcomed but should expect to do additional work and readings.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.140.398. Godzila and Fukushima: Japanese Environment in History and Films. 3 Credits.
Japan is often described as “nature-loving” and is considered to be one of world leaders in environmental protection policies. Yet current environmental successes come on the heels of numerous environmental disasters that plagued Japan in the past centuries. Juxtaposing Japanese environmental history and its reflection in popular media, the course will explore the intersection between technology, environment, and culture. Students are encouraged to enroll in AS.140.198, "Technology and Environment in Japanese Films and Anime" (1 credit) to attend movie screenings accompanying the course.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.140.411. Senior Research Seminar. 2 Credits.
Area: Humanities, Social and Behavioral Sciences

AS.140.435. Ways of Knowing: New Histories of Science, Medicine, and Technology. 3 Credits.
What does it mean for science to have a history? Comparing newer approaches with classic works, we will explore different strategies for placing science, medicine, and technology in social context.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

Near Eastern Studies
AS.130.259. Ancient Science. 3 Credits.
A survey of scientific practices and technological innovations in the ancient world, including astronomy, medicine, law, and divination. Special attention will be devoted to the relationship between magic and science during the periods covered.
Area: Humanities, Social and Behavioral Sciences

AS.130.420. Seminar in Research Methods in Near Eastern Studies: Religion and Science. 3 Credits.
This writing intensive seminar examines the relationship between religion and science in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, and through engagement with scholarly literature pertaining to the topic of the course, students will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Humanities Writing Intensive

Philosophy
AS.150.136. Philosophy & Science: An Introduction to Both. 3 Credits.
Philosophers and scientists raise important questions about the nature of the physical world, the mental world, the relationship between them, and the right methods to use in their investigations of these worlds. The answers they present are very different. Scientists are usually empiricists, and want to answer questions by experiment and observation. Philosophers don’t want to do this, but defend their views a priori. Why? Can both be right? Readings will present philosophical and scientific views about the world and our knowledge of it. They will include selections from major historical and contemporary figures in philosophy and science. The course has no prerequisites in philosophy or science.
Area: Humanities, Natural Sciences

AS.150.219. Introduction to Bioethics. 3 Credits.
Introduction to a wide range of moral issues arising in the biomedical fields, e.g. physician-assisted suicide, human cloning, abortion, surrogacy, and human subjects research. Cross listed with Public Health Studies.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.150.245. Philosophy of Mind. 3 Credits.
Our minds are often thought to be exhaustively and intimately known to us. Despite this philosophers deeply disagree about the natures of the mental states and events which make up our minds. And there is equally little agreement as to what makes such states and events count as mental in the first place. This course will investigate the nature of different aspects of mind and their interrelations. Students will explore debates and puzzles about the nature of perception, memory, imagination, dreaming, pain and bodily sensation, emotion, action, volition and those states commonly classed as propositional attitudes: knowledge, belief, desire and intention. This will put us in a position to ask what if anything unifies such phenomena as mental.
Area: Humanities

AS.150.474. Justice and Health. 3 Credits.
Course will consider the bearing of theories of justice on health care. Topics will include national health insurance, rationing and cost containment, and what justice requires of researchers in developing countries.
Area: Humanities

AS.150.476. Philosophy and Cognitive Science. 3 Credits.
This year’s topic is perception. Questions will include: In what ways might perceptual states be like and unlike pictures? Does what we believe affect what we perceive? Is linguistic comprehension a kind of perception?
Area: Humanities, Social and Behavioral Sciences

Program in Museums and Society
AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Crosslisted with Archaeology, History, History of Art, International Studies and Medicine, Science & Humanities.
Area: Humanities, Social and Behavioral Sciences

Sociology
AS.230.341. Sociology of Health and Illness. 3 Credits.
This course introduces students to core concepts that define the sociological approach to health, illness and health care. Topics include: health disparities, social context of health and illness, and the Sociology of Medicine.
Area: Social and Behavioral Sciences

Writing Seminars
AS.220.206. Writing about Science I: Daily News Journalism. 3 Credits.
This course is designed to teach students the skills of daily news reporting, with a focus on covering science news. Students will learn how to turn scientific discoveries into lively and engaging prose for the general public, interview sources, and pitch stories to news organizations. The skills taught are applicable to all areas of journalism, not just science journalism.
Area: Humanities Writing Intensive
AS.220.317. Writing about Science II: Feature Writing Journalism. 3 Credits.
This course is designed to teach students the skills of long-form narrative journalism, with a focus on covering science news. Skills taught will include how to compose scenes, create three-dimensional characters, create narrative tension, and conduct on-site reporting. Class speakers will include award-winning science journalists from New York to DC, who will share the secrets of their craft. The primary writing assignment will be a 3,000-word feature piece that is pitched, reported, and workshoped throughout the course of the class. 'Writing About Science I’ is recommended as a prerequisite for this course. If you have not taken this, please contact instructor (dgrimm5@jhu.edu) to enroll.
Area: Humanities
Writing Intensive

AS.220.424. Science as Narrative. 3 Credits.
Class reads the writings of scientists to explore what their words would have meant to them and their readers. Discussion will focus on the shifting scientific/cultural context throughout history. Authors include Aristotle, Copernicus, Galileo, Descartes, Newton, Darwin, Freud, Einstein, Heisenberg, Bohr, Crick and Watson.
Area: Humanities
Writing Intensive

**Medicine, Science, and the Humanities, Bachelor of Arts**

**Medicine, Science, and the Humanities Requirements**
(Also see Requirements for a Bachelor’s Degree. (p. 1584))

**Introductory Level**
- An introduction to the medical humanities course (usually AS.145.101 Death and Dying in Art, Literature, and Philosophy: Introduction to Medical Humanities)
- One course focusing on classic scientific and medical texts
  - Examples: History of Medicine, History of Modern Medicine, Introduction to Bioethics, or Great Books at Hopkins II: The Sciences
  - Other courses may apply with approval from the director of undergraduate studies

**Required Core Humanities Courses**
- At least 4 courses totaling at least 12 credits in one, pre-approved humanities department
- 6 credits must be at the 300-level or higher
- Approved humanities departments: Anthropology, Classics, English, Modern Languages and Literatures, History, History of Art, History of Science and Technology, Comparative Thought and Literature, Near Eastern Studies, Philosophy, and the Writing Seminars

**Foreign Language**
- Through the intermediate level (second year at the college-level)

**Additional Courses in the Sciences and the Humanities**
- At least 6 courses totaling 18 credits in sciences and humanities; at least 2 of these courses must be in the humanities and at least 2 must be science courses. Of the 6 courses, 4 must be at the 200-level or higher.

---

Third Year

First Semester
Humanities elective in one pre-approved department at the 300-400 level

Credits 3

Second Semester
Humanities elective in one pre-approved department at the 300-400 level

Credits 3

Fourth Year
First Semester
200+ level Humanities elective with POS-Tag MSCH-HUM

Credits 3

Second Semester
200+ level Humanities elective with POS-Tag MSCH-HUM

Credits 3

Total Credits 50

1 Examples of current choices include: AS.150.219 Introduction to Bioethics, AS.140.105 History of Medicine, and AS.140.106 History of Modern Medicine

Honors in the Major
Honors will be offered as an option to juniors with a minimum GPA of 3.50 in major requirements. Honors projects will be a one-semester endeavor, typically aiming toward an original thesis paper (or equivalent scholarly or creative work) approximately 20-25 pages in length, whose topic is closely related to the student's humanities core area. Thesis projects may be supervised by a faculty member in the student's core area, or by another faculty member with expertise relevant to the topic. In either case the supervisory/mentoring role will be by arrangement between the student, MSH advisors, and the faculty member being solicited. All topics and supervisors are to be approved by the Director of Undergraduate Studies. Juniors interested in the pursing honors option must apply with the Director of Undergraduate Studies before Fall of the senior year. The application requires development of an approved research proposal with an accompanying mentorship plan.

While writing the thesis, students may enroll in the Independent Research course (AS.145.511 Medicine, Science & the Humanities Independent Research, 1-3 credits). These credits are taken in addition to the 12 credits of the normal major requirements and do not count as an elective or advanced course.

Additional Course Information

Study Abroad
Courses taken abroad count toward the major only if approved by the director of undergraduate studies in consultation with your adviser. This should be arranged prior to travel.

Thinking About Pre-Med?
Johns Hopkins offers an undergraduate pre-med program, but it is not a major. It is an advising track program through the Office of Pre-Professional Advising (http://web.jhu.edu/prepro/). Any Johns Hopkins undergraduate student pursuing any major may also pursue the pre-med advising track.

The pre-professional advisers work with the students, providing them with academic advising, assistance in selecting the proper courses, and help with the medical school application process. Please note that the MSH major does not fulfill all of the requirements for a pre-med course of study. Speak with your adviser for more information.

Military Science

The JHU Army Reserve Officers' Training Corps (ROTC) was among the first to be established by Congress in 1916 and is routinely ranked at the top of the Nation’s 273 programs. Nearly 3,000 Hopkins students have received Army officer commissions through the program, with over 40 attaining the rank of general officer. Students can enter the program with as little as two years remaining as an undergraduate or may complete the requirements while pursuing a graduate degree. Upon graduation, Hopkins students are commissioned as a second lieutenant in the U.S. Army. Some are selected to attend a funded law school or several medical programs, while others serve in the Active Army, Reserves or National Guard. The Leadership and Management class specializes in leader development and is an excellent course for students aspiring to become leaders on campus and beyond. Additional information on military science or ROTC can be obtained at our building (behind the athletic center), by asking a current cadet, and by calling 1-800-JHU-ROTC or 410-516-7474. You can also visit the JHU ROTC website at http://jhurotc.com/page.php?page=home to find further contact information.

Scholarship and Financial Assistance

To apply for an ROTC scholarship go to http://www.goarmy.com/rotc/scholarships.html. Scholarship opportunities are regularly improved and incentives are added. Applications for scholarships by qualified students are awarded throughout the semester. A non-scholarship program is also available. For health profession and nursing students, ROTC can offer numerous opportunities to achieve specialized education, additional postgraduate scholarships and accession/graduation bonuses.

Curriculum

The curriculum normally consists of a two-year Basic Course (freshmen / sophomores) and a two-year Advanced Course (juniors / seniors). Some modification to this curriculum is common, as with graduate or transfer students. Completing the 30-day Basic Camp at Fort Knox, KY, is equivalent to the Basic Course. Successful graduates of Basic Camp are normally offered ROTC scholarships and an opportunity to enroll in the Advanced Course. Junior-ROTC experience, prior military service and military academy attendance may also qualify for Basic Course completion.

All Advanced Course students are cadets and have a contractual agreement with the Army. These students attend the Advanced Camp at Fort Knox, KY, between the 300- and 400-level courses. This is a core requirement to commission in the Army and cannot be waived.

Army ROTC strives to develop values-based graduates who offer expert leadership to the campus, the community and the Army. As such, we offer and encourage cadets to participate in: paid leadership and technical internships; cultural and language immersion programs; a number of Army military school opportunities in: Europe, South America, the Republic of Korea, Alaska, Hawaii, and across the continental United States.

Extracurricular activities may also include: community assistance, Red Cross blood drives, tutoring for at-risk children, and volunteering at the Veterans Administration. Cadets may apply for additional military training
such as skydiving, helicopter rappelling, mountaineering, and cold weather training. New and challenging opportunities routinely become available.

**Air Force ROTC**

While not part of the Military Science program at JHU, Hopkins students are able to participate in an Air Force ROTC program with an agreement with the University of Maryland. For more information, visit their website [https://www.afrotc.com/](https://www.afrotc.com/).

**Courses**

**AS.374.101. Introduction to the Army. 2 Credits.**

The MSL I course produces a Cadet who accepts the Army as a values-based organization and embraces the scholar-athlete-warrior ethos; who is familiar with individual roles and responsibilities in support of team efforts and problem solving processes in military and non-military situations; who demonstrates oral and written communication skills, understands resilience, and demonstrates a commitment to learning.

MSL101 introduces Cadets to the Army and the Profession of Arms. Students will examine the Army Profession and what it means to be a professional in the U.S. Army. The overall focus is on developing basic knowledge and comprehension of the Army Leadership Requirements Model while gaining a big picture understanding of the Reserve Officers’ Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Cadets also learn how resiliency and fitness supports their development as an Army Leader. As you become further acquainted with MSL101, you will learn the structure of the ROTC Basic Course program consisting of MSL101, 102, 201, 202, Fall and Spring Leadership Labs, and Basic Camp. The focus is on developing basic knowledge and comprehension of Army leadership dimensions, attributes and core leader competencies while gaining an understanding of the ROTC program, its purpose in the Army, and its advantages for the student. Military Science courses require department permission and are restricted to active or inquiring ROTC members.

**AS.374.102. Foundations of Agile and Adaptive Leadership. 2 Credits.**

The MSL I course produces a Cadet who accepts the Army as a values-based organization and embraces the scholar-athlete-warrior ethos; who is familiar with individual roles and responsibilities in support of team efforts and problem solving processes in military and non-military situations; who demonstrates oral and written communication skills, understands resilience, and demonstrates a commitment to learning.

MSL102 introduces Cadets to the Army and the Profession of Arms. Students will examine the Army Profession and what it means to be a professional in the U.S. Army. The overall focus is on developing basic knowledge and comprehension of the Army Leadership Requirements Model while gaining a big picture understanding of the Reserve Officers’ Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Cadets also learn how resiliency and fitness supports their development as an Army Leader. As you become further acquainted with MSL102, you will learn the structure of the ROTC Basic Course program consisting of MSL101, 102, 201, 202, Fall and Spring Leadership Labs, and Basic Camp. The focus is on developing basic knowledge and comprehension of Army leadership dimensions, attributes and core leader competencies while gaining an understanding of the ROTC program, its purpose in the Army, and its advantages for the student.

**AS.374.110. Basic Leadership Laboratory, ROTC 101. 1 Credit.**

These introductory courses in a laboratory environment are designed to expose students to practical experiences, challenges and individual learning opportunities in a small group. Students learn the fundamentals of an organization and apply principles of leadership and management at the foundation level. Students develop military courtesy, organizational discipline, communication and basic leadership and management skills. Ultimately, students understand how to facilitate and lead a small group of four to five people as an integral part of a larger organization of 75-100 people through situational training opportunities in a variety of conditions. As a leadership practicum, students have the opportunity to serve in leadership positions and receive tactical and technical training. In addition to learning to lead groups of five to 100 people, students will also be exposed to training on first aid, operating Army equipment, Army activities such as rappelling and drill and ceremony. These laboratories are required for enrolled ROTC participants who desire to be considered for a commission in the Army. Corequisite: AS.374.101-AS.374.102. Military Science courses require department permission and are restricted to active or inquiring ROTC members.

Corequisite(s): AS.374.101 OR AS.374.102

**AS.374.120. Basic Leadership Laboratory II. 1 Credit.**

Students learn and apply team echelon leadership at an entry level. They continue development of military courtesy, discipline, communication and basic Soldier skills. Ultimately, students understand how to operate in and lead 4-5 persons through a program of training opportunities in a variety of conditions. Freshmen only.

**AS.374.201. Leadership and Decision Making. 2 Credits.**

The MSL II course produces a cadet grounded in foundational leadership doctrine and skills by following and leading small units to achieve assigned missions; who applies critical thinking and problem solving using Troop Leading Procedures (TLP); who comprehends the value of diversity and understands the officer's role in leading change; understands the fundamentals of the Army as a profession. MSL201 adds depth to the Cadets understanding of the Adaptability Army Learning Area. The outcomes are demonstrated through Critical and Creative Thinking and the ability to apply Troop Leading Procedures (TLP) to apply Innovative Solutions to Problems. The Army Profession is also stressed through leadership forums and a leadership self-assessment. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during Leadership LABs team building exercises, and Field Training Exercises. Military Science courses require department permission and are restricted to active or inquiring ROTC members.

**AS.374.202. Army Doctrine and Team Development. 2 Credits.**

MSL 202 focuses on Army doctrine and team development. The course begins the journey to understand and demonstrate competencies as they relate to Army doctrine. Army Values, Teamwork, and Warrior Ethos and their relationship to the Law of Land Warfare and philosophy of military service are also stressed. The ability to lead and follow is also covered through Team Building exercises in small units up to squad level. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during Leadership LABs (team building exercises, LTXs, VBS exercises). Includes a 1-Hour lab per week taught by MS III Cadets. The Army Reserve Officer Training Course (ROTC) Basic Course is an academically rigorous 2-year college program comprised of four semester courses of instruction, Leadership Labs (two sets, Fall/Spring), and the Cadet Basic Camp conducted at Fort Knox, KY.
Writing Intensive

Advanced Camp, which you will attend in the summer at Fort Knox, KY. Successful completion of this course will help prepare you for the SROTC Advanced Camp, which you will attend in the summer at Fort Knox, KY. Corequisite: AS.374.301. Military Science courses require department permission and are restricted to active or inquiring ROTC members.

Corequisite(s): AS.374.201

AS.374.220. Advanced Team Leadership. 1 Credit.

Students perform duties of and develop their leadership, as team leaders during a variety of induced training opportunities. Continued emphasis is placed on troop-leading-procedures and simple problem solving. Students lead physical fitness training and mentor subordinates in military, academic and extra-curricular activities. Successful completion of advanced team leadership allows students to progress into ROTC Advanced Courses. Sophomores only.

AS.374.301. Training Management and the Warfighting Functions. 2 Credits.

MSL301 Training Management and the Warfighting Functions, is an academically challenging course where you will study, practice, and apply the fundamentals of Army Leadership, Officership, Army Values and Ethics, Personal Development, and small unit tactics at the platoon level. At the conclusion of this course, you will be capable of planning, coordinating, navigating, motivating and leading a squad and platoon in the execution of a mission during a classroom PE, a Leadership Lab, or during a Field Training Exercise (FTX). You will be required to write peer evaluations and receive feedback on your abilities as a leader and how to improve those leader skills that can further develop you into a successful officer. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, and practical exercises, a mid-term exam, and a final exam. You will receive systematic and specific feedback on your leader attributes, values, and core leader competencies from your instructor, other ROTC cadre, and MSL IV Cadets who will evaluate you using the Cadet Officer Evaluation System (COER). Successful completion of this course will help prepare you for the SROTC Advanced Camp, which you will attend in the summer at Fort Knox, KY. Corequisite: AS.374.301. Military Science courses require department permission and are restricted to active or inquiring ROTC members.

Corequisite(s): AS.374.301

AS.374.302. Applied Leadership in Small Unit Operations. 2 Credits.

MSL302 Applied Leadership in Small Unit Operations, is an academically challenging course where you will study, practice, and apply the fundamentals of Army Leadership, Army Values and Ethics, Personal Development, and small unit tactics at the platoon level. At the conclusion of this course, you will be capable of planning, coordinating, navigating, motivating and leading a squad and platoon in the execution of a mission during a classroom PE, a Leadership Lab, or during a Field Training Exercise (FTX). You will be required to write peer evaluations and receive feedback on your abilities as a leader and how to improve those leader skills that can further develop you into a successful officer. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, and practical exercises, a mid-term exam, and a final exam. You will receive systematic and specific feedback on your leader attributes, values, and core leader competencies from your instructor, other ROTC cadre, and MSL IV Cadets who will evaluate you using the Cadet Officer Evaluation Report (COER). Successful completion of this course will help prepare you for the SROTC Advanced Camp, which you will attend in the summer at Fort Knox, KY. Writing Intensive.

AS.374.307. Leadership in Military History. 2 Credits.

This course provides students with a historical perspective to decisions made by American military leaders: battlefield complexity, resource limitations, and teamwork deficiencies. Students cover major military engagements from the colonial period through the current operating environment. Students examine how leaders motivated their men, devised battle strategies, implemented rules of engagement, and managed supplies, transportation, and logistics for their troops. Requires permission of the Director of Military Science. Registration restricted to contracted ROTC cadets only. Writing Intensive.

AS.374.310. Basic Tactical Leadership Laboratory. 1 Credit.

In Leadership Laboratory, students are given the opportunity to apply what they have learned in the classroom, in a tactical or field environment. Students learn and demonstrate the fundamentals of leadership by planning, coordinating, navigating, motivating, and leading squads in the execution of both garrison and tactical missions. Successful completing of this course will help prepare you for the SROTC Advanced Camp, which you will attend in the summer at Fort Knox, KY. Corequisite: AS.374.301. Military Science courses require department permission and are restricted to active or inquiring ROTC members.

Corequisite(s): AS.374.301

AS.374.320. Advanced Tactical Leadership. 1 Credit.

Students further develop their leadership skills by directing and coordinating the efforts of 9-60 personnel on offensive, defensive and civil-support tactical-tasks. Develop written plans for garrison and field environments while supervising its execution. Ultimately, prepares students to excel at the four-week National Leadership Development and Assessment Course at Fort Knox, KY. Permission required. Juniors only.

AS.374.401. The Army Officer. 2 Credits.

MSL401 Focuses on development of the Army Officer. It is an academically challenging course were you will develop knowledge, skills, and abilities to plan, resource, and assess training at the small unit level. You will also learn about Army programs that support counseling subordinates and evaluating performance, values and ethics, career planning, and legal responsibilities. At the conclusion of this course, you will be familiar with how to plan, prepare, execute, and continuously assess the conduct of training at the company or field grade officer level. Includes a lab per week overseeing MSL III lesson facilitation and supervised by ROTC Cadre. Military Science courses require department permission and are restricted to active or inquiring ROTC members.
AS.374.402. Company Grade Leadership. 2 Credits.
This is an academically challenging course where you will study, practice, develop, and apply critical thinking skills pertaining to Army leadership, officer skills, Army Values and ethics, personal development, and small unit tactics at platoon level. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, practical exercises, mid-term exam, and a Capstone Exercise in place of the final exam. For the Capstone Exercise, you will be required to complete an Oral Practicum that will be evaluated on your knowledge of the 20 Army Warfighting Challenges (AWFC) covered throughout MSL401 and 402 coursework. In addition, you could be assessed on leadership abilities during classroom PE, Leadership Labs, or during a Field Training Exercise (FTX). You will receive systematic and specific feedback on your leader attributes, values, and core leader competencies from your cadre, PMS and other MSL IV Cadets who will evaluate you using the Cadet Officer Evaluation Report (COER). You will be required to write peer evaluations and receive feedback on your abilities as a leader and how to improve those leader skills. At the conclusion of this course, you will be able to plan, coordinate, navigate, motivate and lead a platoon in future operational environments. Successful completion of this course will assist in preparing you for your BOLC B course and is a mandatory requirement for commissioning.

AS.374.410. Advanced Planning & Decision Making I. 1 Credit.
Students develop a semester-long progression of programmed training activates that support completion of the unit’s Mission Essential Task List. The laboratory builds from fall to spring semester as students master advanced problem solving, resource synchronization and executive decision making. Students evaluate, mentor and develop subordinate leaders as part of the Leadership Development Program and FM 6-22, Army Leadership. The course serves as the final evaluation and determination on a student’s ability to lead Soldier’s as a Second Lieutenant in the US Army. Co-requisite: AS.374.401-AS.374.402. Recommended Course Background: AS.374.301-AS.374.302, AS.374.310-AS.374.320 and Basic Course. Military Science courses require department permission and are restricted to active or inquiring ROTC members.
Corequisite(s): AS.374.401 OR AS.374.402

AS.374.420. Advanced Organizational Planning. 1 Credit.
Students develop a semester-long progression of training activates that support completion of the unit’s Mission Essential Task List. The laboratory builds on the first semester’s achievements through advanced problem solving, resource synchronization and executive decision making. Students evaluate and develop subordinate leaders as part of the Leadership Development Program and FM 6-22, Army Leadership. The course serves as the final evaluation and determination on a student’s ability to lead Soldier’s as a Second Lieutenant in the US Army. Permission required. Seniors only.

AS.374.501. Independent Study. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms. Writing Intensive

AS.374.512. Internship - Military Science. 0 - 3 Credits.
Students will select a topic relevant to the study of military leadership and will complete a project based on current military doctrine and the contemporary operating environment of current military operations. Permission required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms. Writing Intensive

Modern Languages and Literatures
https://krieger.jhu.edu/modern-languages-literatures/

The Department of Modern Languages and Literatures offers graduate and undergraduate courses in the languages, literatures, and cultures of France, Germany, Italy, Portugal, Latin America, and Spain. The language program includes a wide range of courses from introductory through conversation and composition to civilization. The literature program treats all periods of literature from both historical and critical-theoretical perspectives. These courses emphasize the close reading of texts and modern theories of literary criticism, particularly those based on contemporary philosophy, psychoanalysis, anthropology, and linguistics. In addition, an active program of visiting professors and lecturers complements the core program offered by the faculty-in-residence.

Facilities
The Milton S. Eisenhower Library has collections that provide an ample basis for advanced research in modern languages and literatures. With the Peabody Library of The Johns Hopkins University in Baltimore and the Library of Congress and other libraries in nearby Washington, a variety of excellent research resources are available to students and faculty.

Undergraduate Programs
A major in the department prepares students for teaching language at the elementary level or for graduate work leading to advanced degrees in French, German, Italian, Latin American, Portuguese, or Spanish studies, or in comparative literature. It also provides excellent background for work in fields such as philosophy, history, international affairs, business, law, or medicine. Opportunities are available to study abroad. Students are encouraged to take advantage of these opportunities.

Requirements for the B.A.
Also see Requirements for a Bachelor’s Degree (p. 1584).

Currently, the B.A. degree is offered in French, German, Italian, Romance Languages, or Spanish. A candidate for the B.A. degree in the Department of Modern Languages and Literatures should have a good command of the spoken language of his or her specialization, and a general familiarity with the literature written in that language. Each major requires a minimum of 24 hours (or eight courses) beyond the first two years of language instruction; please see specific details for each individual major below. The department also recommends that majors take courses in other literatures, history, philosophy, and anthropology.

The student who has had four years of German or a Romance language in high school or two years of German or a Romance language in college normally begins the major with Conversation and Composition (provided they have results commensurate with that level on the placement
test) and (where offered) the undergraduate survey of literature. It is recommended that any student majoring in German or a Romance language spend at least one semester of junior year taking university courses in the country of study. Study abroad credit transfer is arranged by the student in consultation with the director of undergraduate studies and/or the relevant undergraduate language program director, and the Office of Study Abroad. In the senior year, a major may be permitted to take courses in the department at the graduate level.

A minor in German or one of the Romance languages is available to undergraduate students in any major. Like the various majors, the minors allow students to develop competence in German or a Romance language while receiving grounding in the culture and literature of that language. Five or six courses in the department beyond the first two years of language study are required for each minor option (see below for details).

Programs

• French, Bachelor of Arts (p. 2036)
• French, Minor (p. 2037)
• German and Romance Languages and Literatures, PhD (p. 2037)
• German Bachelor of Arts/Master of Arts (p. 2038)
• German, Bachelor of Arts (p. 2038)
• German, Minor (p. 2039)
• Italian, Bachelor of Arts (p. 2040)
• Italian, Minor (p. 2041)
• Romance Languages, Bachelor of Arts (p. 2041)
• Spanish, Bachelor of Arts (p. 2043)
• Spanish for the Professions, Minor (p. 2044)
• Spanish Language and Hispanic Cultures, Minor (p. 2044)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.210.101. French Elements I. 4 Credits.
Provides a multi-faceted approach to teaching language and culture to the novice French student. The first semester emphasizes listening and speaking, while laying the foundation in grammar structures, reading, and writing. This course is designed for true beginners. Students with any previous background must take the placement test (http://www.advising.jhu.edu/placement_french.php) and receive below 30. Must complete both semesters successfully in order to receive credit. May not be taken on a Satisfactory/Unsatisfactory basis.

AS.210.102. French Elements II. 4 Credits.
The second semester of this intensive course for beginners provides students with the tools to read a play (Antigone by Jean Anouilh), to polish a written autobiography, and to develop their oral skills. A variety of cultural materials help students acquire grammatical structures and expand their vocabulary. May not be taken on a Satisfactory/Unsatisfactory basis. Pre-requisites: AS.210.101 or AS.210.103. New students must take the placement exam (http://www.advising.jhu.edu/placement_french.php) and contact the instructor: cguille1@jhu.edu.

AS.210.103. Learner Managed French Elements I. 3 Credits.
This beginner course is specifically designed for students who have had some exposure to French. They must take the mandatory placement test: http://www.advising.jhu.edu/placement_french.php, and receive between 30 and 49. They will cover the first semester of French Elements at a pace suited for "false beginners" with major online components to supplement class instruction. Must complete the year with 210.102 to obtain credit. May not be taken on a Satisfactory/Unsatisfactory basis.

AS.210.111. Spanish Elements I. 4 Credits.
This is an introductory Spanish language course. On completion of this course, the students will have acquired the basic communication and grammatical skills necessary for speaking, writing, listening and reading in Spanish. Students will demonstrate these skills through their performance in class, by completing several online assignments, and by taking part in three group presentations in addition to two comprehensive exams which focus on the following thematic topics: Greetings, University Life, Family and Leisure. Students will also be introduced to the culture, history and geography of various Spanish and Latin American countries. The content covered in Spanish Elements I is the foundation for all consecutive Spanish courses. A placement exam is required to ensure the appropriate level. Students wishing to retain credits for Spanish Elements I must complete Spanish Elements II with a passing grade. Your enrollment in Spanish Elements I will not be considered for approval until you have emailed the Spanish Language Director.

AS.210.112. Spanish Elements II. 4 Credits.
This introductory Spanish language course is a continuation of the content covered in Spanish Elements I. On completion of this course, the students will have further developed the communication and grammatical skills necessary for speaking, writing, listening and reading in Spanish. Students will demonstrate these skills through their performance in class, by completing several online assignments, and by taking part in three group presentations in addition to two comprehensive exams which focus on the following thematic topics: Food, Sports, Shopping, Travel, and Health. Students will also be introduced to the culture, history and geography of various Spanish and Latin American countries. The content covered in Spanish Elements II prepares the students for Intermediate Spanish. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after 4th class session. Prerequisite: AS.210.111 or appropriate placement exam score. Prerequisite(s): AS.210.111 or Spanish placement exam score.

AS.210.150. Program Abroad: Preliminary Portuguese. 3 Credits.
Summer Abroad Program. First semester college-level Portuguese. Students will develop basic listening, speaking, reading and writing skills. Some cultural readings are included. This course is intended for program participants with little or no prior Portuguese language instruction. Open to Brazil Program applications only. Course must be taken for a letter grade. Writing Intensive

AS.210.151. Italian Elements I. 4 Credits.
This is a four-credit course, and Italian Elements II (AS.210.152) must be completed in the Spring to receive credit. The aim of the course is to provide students with basic listening, reading, writing, speaking and interactional skills in the language. All classes are conducted in Italian; oral participation is strongly encouraged from the beginning. Students wishing to retain credits for Italian Elements I must complete Italian Elements II with a passing grade. No Satisfactory/Unsatisfactory option.
AS.210.152. Italian Elements II. 4 Credits.
Course helps students develop basic listening, reading, writing, speaking, and interactional skills in Italian. The content of the course is highly communicative, and students are constantly presented with real-life, task-based activities. Course adopts a continuous assessment system (no mid-term and no final). May not be taken Satisfactory/ Unsatisfactory. No previous knowledge of Italian is required.
Prerequisite(s): AS.210.151 or Placement Exam Part I.

AS.210.161. German Elements I. 4 Credits.
Four skills introduction to German language and culture. Develops proficiency in speaking, writing, reading, and listening skills through the use of basic texts, multi-media, and communicative language activities. Online tools required. May not be taken on a Satisfactory/Unsatisfactory basis. Tuesday section is a mandatory hour; choose your section based on the MW time. Conflicts with Tuesday hour can be resolved after start of semester. Language Program Director: Deborah Mifflin. Students wishing to retain credits for German Elements I must complete German Elements II with a passing grade.

AS.210.162. German Elements II. 4 Credits.
Continuation to the introduction to the German language and a development of reading, speaking, writing & listening through the use of basic texts and communicative activities. The culture of the German-language countries is also incorporated into the curriculum. May not be taken on a Satisfactory/Unsatisfactory basis. Tuesday hour is mandatory. May not be taken for S/U.
Prerequisite(s): AS.210.161 or appropriate score on placement exam.

AS.210.163. Elementary Yiddish I. 3 Credits.
Year-long course. Includes the four language skills, reading, writing, listening, and speaking, and introduces students to Yiddish culture through text, song, and film. Emphasis is placed both on the acquisition of Yiddish as a tool for the study of Yiddish literature and Ashkenazic history and culture, and on the active use of the language in oral and written communication. This class will be using In Eynem, the brand new Yiddish language program from the Yiddish Book Center. Both semesters must be taken with a passing grade to receive credit. Cannot be taken Satisfactory/Unsatisfactory.

AS.210.164. Elementary Yiddish II. 3 Credits.
Year-long course that includes the four language skills—reading, writing, listening, and speaking—and introduces students to Yiddish culture through text, song, and film. Emphasis is placed both on the acquisition of Yiddish as a tool for the study of Yiddish literature and Ashkenazic history and culture, and on the active use of the language in oral and written communication. Both semesters must be taken with a passing grade to receive credit. Recommended Course Background: AS.210.163 or instructor permission.

AS.210.171. Accelerated Italian Elements I for Advanced Spanish Speakers. 4 Credits.
Course draws on the many similarities between Spanish and Italian to help students develop basic listening, reading, writing, speaking, and interactional skills in Italian in an accelerated fashion. The content of the course is highly communicative, and students are constantly presented with real-life, task-based activities. Course is taught in Spanish and Italian. Students completing both semesters with a grade of A- or higher will be able to place into Advanced Italian I (AS.210.351)
Area: Humanities

AS.210.172. Accelerated Italian Elements II for Advanced Spanish Speakers. 4 Credits.
Course draws on the many similarities between Spanish and Italian to help students develop basic listening, reading, writing, speaking, and interactional skills in Italian in an accelerated fashion. The content of the course is highly communicative, and students are constantly presented with real-life, task-based activities. Course is taught in Spanish and Italian. Students successfully completing the course with a grade of A- or higher will be allowed to place into Advanced Italian I (AS210.351)
Prerequisite(s): AS.210.171 with a grade of A- or higher.
Area: Humanities

AS.210.177. Portuguese Elements I. 3 Credits.
This one-year course introduces students to the basic skills in reading, writing, and speaking the language. Emphasis is placed on oral communication with extensive training in written and listening skills. Class participation is encouraged from the very beginning. All classes are conducted in Portuguese. Students must complete both semesters with passing grades to receive credit. May not be taken on a Satisfactory/Unsatisfactory basis. No previous knowledge of Portuguese is required.

AS.210.178. Portuguese Elements II. 4 Credits.
This course expands students' knowledge of the basic language skills: reading, writing, listening, speaking. It uses a multifaceted approach to immerse students in the cultures of Brazil, Portugal, and Portuguese-speaking Africa. The focus of the course is on oral communication with, however, extensive training in grammar. The course is conducted entirely in Portuguese. Lab work required. Students must complete both semesters with passing grades to receive credit.
Prerequisite(s): AS.210.177 or equivalent score on placement test or instructor approval.

AS.210.201. Intermediate French I. 3 Credits.
This course develops skills in speaking, listening comprehension, reading, and writing. Systematic review of language structures with strong focus on oral communication and acquisition of vocabulary; extensive practice in writing and speaking; readings and films from French-speaking countries. Recommended Course Background: AS.210.102 or AS.210.104 or score between 65 and 89 on Placement test I.
Prerequisite(s): Students may take AS.210.201 or AS.210.203, but not both.
Area: Humanities

Focus on oral communication: develops skills in oral and written expression, listening comprehension, and reading, with extensive study of films and readings from French-speaking countries. Online component via Blackboard. Continuation of AS.210.201. Recommended course background: AS.210.201 or AS.210.203.
Area: Humanities
AS.210.211. Intermediate Spanish I. 3 Credits.
Intermediate Spanish I is a comprehensive study of Spanish designed for students who have attained an advanced elementary level in the language. The course is organized around a thematic approach to topics relevant to contemporary Hispanic culture. Students will practice the four language skills in the classroom through guided grammatical and creative conversational activities and through the completion of three comprehensive exams. Outside of class, students will complete extensive online assignments and write three major compositions (as part of the three exams). In addition, students will broaden their knowledge of Hispanic culture by viewing a Spanish-language film and by reading several literary selections. Successful completion of Intermediate Spanish I will prepare students for the next level of Spanish (Intermediate Spanish II). There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after the third class session.
Prerequisite(s): AS.210.112 or appropriate Spanish placement exam score.
Area: Humanities

AS.210.212. Intermediate Spanish II. 3 Credits.
Intermediate Spanish II is a comprehensive study of Spanish designed for students who have attained a mid-intermediate level in the language or who have completed Spanish 212. The course is organized around a thematic approach to topics relevant to contemporary Hispanic culture. Students will practice the four language skills in the classroom through guided grammatical and creative conversational activities and through the completion of three comprehensive exams. Outside of class, students will complete extensive online assignments and write three major compositions (as part of the three exams). In addition, students will broaden their knowledge of Hispanic culture by viewing a Spanish-language film and by reading several literary selections. Successful completion of Intermediate Spanish II will prepare students for the next level of Spanish (Advanced Spanish I). There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after September 13th.
Prerequisite(s): AS.210.211 or appropriate Spanish placement exam score.
Area: Humanities

AS.210.250. Program Abroad: Objective Portuguese - Level II. 3 Credits.
Summer Abroad Program. Third semester college-level Portuguese. Students develop basic listening, speaking, reading and writing skills. Cultural readings included. The class is designed to further develop and strengthen the language skills acquired in Portuguese 210.177 & 210.178. Open to Brazil Program applications only. Course must be taken for a letter grade.
Writing Intensive

AS.210.251. Intermediate Italian I. 3 Credits.
Taught in Italian. Course continues building on the four essential skills for communication presented in Intermediate Italian I (listening, speaking, reading, writing) on topics of increasing complexity. Course adopts a continuous assessment system. May not be taken Satisfactory/Unsatisfactory.
Prerequisite(s): AS.210.152 or placement exam.
Area: Humanities

AS.210.252. Intermediate Italian II. 3 Credits.
Taught in Italian. Course continues building on the four essential skills for communication presented in Intermediate Italian I (listening, speaking, reading, writing) on topics of increasing complexity. Course adopts a continuous assessment system. May not be taken Satisfactory/Unsatisfactory.
Prerequisite(s): AS.210.251 or appropriate placement exam scores (Parts I & II).
Area: Humanities

AS.210.261. Intermediate German I. 3 Credits.
Taught in German. This course continues the same four-skills approach (speaking, writing, reading, and listening) from the first-year sequence, introducing and practicing more advanced topics and structures. Expansion and extension through topical readings and discussion and multi-media materials. Online tools required. Language Program Director: Deborah Mifflin
Prerequisite(s): AS.210.162 or placement by exam.
Area: Humanities

AS.210.262. Intermediate German II. 3 Credits.
Taught in German. This course is designed to continue the four skills (reading, writing, speaking and listening) approach to learning German. Readings and discussions are topically based and include fairy tales, poems, art and film, as well as readings on contemporary themes such as Germany’s green movement. Students will also review and deepen their understanding of the grammatical concepts of German. May not be taken for S/U.
Prerequisite(s): AS.210.261 or placement by exam.
Area: Humanities

AS.210.263. Intermediate Yiddish I. 3 Credits.
For students who have completed one year of Yiddish language study or equivalent, this course will provide the opportunity to broaden and deepen their knowledge of Yiddish culture while continuing to improve their skills in reading, writing, listening and speaking Yiddish. Alongside textbook-based language work, students will read, listen to and interact with a variety of texts, for example literature, journalism and oral history.
Area: Humanities

AS.210.264. Intermediate Yiddish II. 3 Credits.
Continuation of Intermediate Yiddish I: this course will focus on the Yiddish language as a key to understanding the culture of Yiddish-speaking Jews. Topics in Yiddish literature, cultural history and contemporary culture will be explored through written and aural texts, and these primary sources will be used as a springboard for work on all the language skills: reading, writing, listening, and speaking.
Area: Humanities

AS.210.265. Individualized Yiddish Practicum. 3 Credits.
This course will allow students at any stage of Yiddish language acquisition to hone their skills in reading, writing, listening and speaking. The program will be individualized for each student according to his or her needs while at the same time providing joint activities in which all can participate.
Area: Humanities
AS.210.266. German Conversation. 1.5 Credits.
This course is designed for intermediate and above students who wish to improve their conversational and oral presentational language skills. The syllabus aims to provide useful, relevant language and necessary discourse structures to hold conversations and presentations on varied topics of an everyday, as well as academic nature. Students will practice German to build confidence, develop fluency, and improve pronunciation and accuracy. Short texts, audio and films will provide the basis for discussion. Students' fields of study and interests will be incorporated into the syllabus and tasks will be matched to the ability level of the students enrolled. Recommended Course Background: AS.210.262 or two years of college German or equivalent. May be taken concurrently with other courses in German. May be taken Pass/Fail. Not for major or minor credit.

AS.210.269. Intermediate Yiddish Texts I. 3 Credits.
For students who have completed at least one year of Yiddish language study, this course will provide the opportunity to broaden and deepen their knowledge of Yiddish culture while continuing to improve their skills in reading, writing, listening and speaking Yiddish. Alongside textbook-based language work, students will read, listen to and interact with a variety of texts, for example literature, journalism and oral history. Prerequisite: AS.210.164 or equivalent, or permission of instructor. Area: Humanities

AS.210.275. Fast Portuguese for Spanish Speakers and speakers of other Romance Languages I. 4 Credits.
NO PREVIOUS KNOWLEDGE OF PORTUGUESE IS REQUIRED. This fast-paced one-semester course covers all content for Portuguese Elementary I and II. Upon the successful completion of this course with a grade of C or higher, students may enroll in 210.277 Portuguese Intermediate. This course is designed as an accelerated introductory course for speakers with a sound knowledge of Spanish OR other romance languages. The course will cover introductory aspects of Portuguese grammar and present relevant points of the cultures of the Portuguese speaking countries. All classes are conducted in Portuguese. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory / Unsatisfactory basis. Prerequisite: AS.210.177 or equivalent score on placement test. Area: Humanities

AS.210.277. Intermediate Portuguese I. 3 Credits.
More advanced training in the skills of the language with emphasis on vocabulary building, ease and fluency in the language through the use of a multifaceted approach. Materials used immerse students in the cultures of Brazil, Portugal, and Portuguese-speaking Africa, and reflect the mix of cultures at work in the contemporary Lusophone world. All classes are conducted in Portuguese. Lab is required. May not be taken on a Satisfactory/Unsatisfactory basis. Prereq: AS.210.177, or placement test. Prerequisite(s): AS.210.178 or equivalent score on placement test or instructor approval. Area: Humanities

AS.210.288. Portuguese: Conversation through Film & Music. 3 Credits.
Improve your Portuguese conversational and speaking skills through colorful Brazilian media. This course is designed for highly motivated undergraduate and graduate students who want to SPEAK Portuguese. Conversation sessions provide intensive work on communication skills through discussion on issues raised in films, news media & music. Grammar will be reviewed as needed outside of class with tutors or TA, freeing class time for more communicative activities. May not be taken on a Satisfactory / Unsatisfactory basis. Prereq: one semester of Portuguese (AS.210.177), two semesters of Spanish or Placement test. Area: Humanities

AS.210.290. Accelerated Portuguese. 4 Credits.
NO PREVIOUS KNOWLEDGE OF PORTUGUESE IS REQUIRED. This accelerated one-semester course covers all content for Elementary Portuguese. Upon the successful completion of this course with a grade of C or higher, students may enroll in 210.277 Intermediate Portuguese. Encourages rapid acquisition by intensive exposure to the language through immersion activities, videos and culture. The course will cover relevant aspects of the Portuguese language grammar. Students will be encouraged to use the language through communicative activities, listening and writing activities. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory/Unsatisfactory basis. Prerequisite: AS.210.177, or placement test. Area: Humanities

AS.210.301. Advanced French for Writing. 3 Credits.
Students in AS.210.301 will focus primarily on written expression, learning to 'decipher' classic and contemporary French texts, in order to expand their vocabulary and communicate their ideas in writing with clarity and accuracy. (A primary focus on oral expression is provided in AS.210.302; the two advanced-level courses may be taken in either order or simultaneously.) Prerequisite: AS.210.178 or equivalent or permission. Area: Humanities Writing Intensive

AS.210.302. Advanced French for Speaking. 3 Credits.
Students in AS.210.302 will focus primarily on oral expression through individual and group work on contemporary media (music, film, current events) in order to expand their vocabulary and become fluent in conversation across social-cultural contexts. (A primary focus on written expression is provided in 210.301; the two advanced-level courses may be taken in either order or simultaneously.) Area: Humanities

AS.210.306. Medical French. 3 Credits.
This interactive course is designed to provide students with specific linguistic tools used in medical and public health fields, as well as a comprehensive understanding of health care systems in the French and francophone world. Through a wide range of media (newspaper articles, scenes from TV series, excerpts of historical and literary texts) and group discussions, we will focus on topics such as physical and mental health, consultation and diagnosis, hospitalization, specialized fields (epidemiology, neurology, psychiatry, etc.) and deontology. Prerequisite(s): AS.210.201 OR AS.210.202 or equivalent or permission. Area: Humanities
AS.210.309. The Sounds of French. 3 Credits.
This course introduces students to the sound system of French: its development over centuries, its standardized Parisian form versus regional and international dialects and accents, and the popularity of ‘word games’ (abbreviations, acronyms, and verlan). The course will include extensive practice in perceiving, articulating, and transcribing sounds, words, and intonation groups through viewing film clips, listening to songs, and completing in-class lab assignments. Recorded speech samples obtained at the beginning, middle, and end of the semester will allow students to track their progress in moving toward more native pronunciation and intonation. Recommended Course Background: AS.210.202 or equivalent
Area: Humanities

AS.210.311. Advanced Spanish I. 3 Credits.
This course is a comprehensive study of the Spanish language focused on the continuing development of students’ communicative abilities and their knowledge of Hispanic cultures. Students will expand their use of basic structures of Spanish with a special emphasis on more difficult grammatical and vocabulary aspects, and further improve both their oral and written skills. Students will sharpen their critical thinking skills and listening abilities utilizing movies and written texts. This course combines an extensive use of an online component with class participation and three exams. Upon successful completion of this course, students will have acquired extended complex language tools that facilitate proficiency in Spanish and its use in various professional contexts. There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after the third class session.
Prerequisite(s): AS.210.212 OR AS.210.213 or appropriate Spanish placement exam score.
Area: Humanities

AS.210.312. Advanced Spanish II. 3 Credits.
This course is thorough review of the Spanish language focused on the development of students’ communicative abilities and their knowledge of Hispanic cultures. Students will both expand their knowledge of the basic structures of Spanish, with special emphasis on more difficult grammatical and vocabulary aspects, and further improve on oral and written skills. Students will increase their critical thinking skills and listening abilities utilizing movies and written texts. This course combines an extensive use of an online component, class participation and three exams. Upon successful completion of this course, students will have acquired more complex language tools to become proficient in Spanish and its use in various professional contexts. There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after the third class session.
Prerequisite(s): AS.210.311 or appropriate Spanish placement exam score.
Area: Humanities

AS.210.313. Medical Spanish. 3 Credits.
Medical Spanish is a comprehensive examination of vocabulary and grammar for students who either work or intend to work in medicine and health-related fields in Spanish-speaking environments. The student will be able to participate in conversations on topics such as contrasting health systems, body structures, disorders and conditions, consulting your doctor, physical and mental health, first-aid, hospitalization and surgery on completion of this course. In completing the course’s final project students will apply, synthesize, and reflect on what has been learned in the class by creating a professional dossier individualized to their professional interests. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session.
Prerequisite(s): AS.210.311 OR AS.210.312 or appropriate Spanish placement exam score.
Area: Humanities

AS.210.314. Spanish for International Commerce. 3 Credits.
Spanish for international business is an overview of business topics in an international Spanish-speaking context with an emphasis on deep review of grammar and vocabulary acquisition. On completion of this course the student will have developed the ability to read and critically discuss business and government relations in Latin America and will have examine entrepreneurship, finance, marketing, business ethics, human resources and commerce in the Spanish speaking world. In completing the course’s final project students will apply, synthesize, and reflect on what has been covered in the class by creating a professional dossier individualized to their own professional interests. Concepts learned in this course will be directly applicable to careers linked to international relations and will apply to various careers in business. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session. Language Program Director: Loreto Sanchez-Serrano
Prerequisite(s): AS.210.311 or or appropriate Spanish placement exam score.
Area: Humanities

AS.210.315. Spanish for International Relations. 3 Credits.
Spanish for international relations is an advanced examination of grammar and an analysis of international relations’ topics in Spanish. By completion of this course the student will have developed the ability to read, critically discuss and demonstrate mastery of political and socio-economic issues in Spanish-speaking environments. Potential topics include a survey of the professions in international relations, NGOs in Latin America, intellectual property, cultural diplomacy, remesas, regional coalitions and treaties, and the environment. Class presentations and final projects will allow students to apply, synthesize, and reflect on what has been learned in the class by participating in a global simulation that will include a written exercise individualized to their professional interests. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the 4th class session.
Prerequisite(s): AS.210.311 or or appropriate webcape score
Area: Humanities
AS.210.316. **Advanced Spanish Conversation. 3 Credits.**

Conversational Spanish surveys high-interest themes, discusses short films by contemporary Hispanic filmmakers and offers a thorough review of grammar. The student will be able to participate in conversations on topics such as personality traits, social media, political power, art and lifestyles on completion of this course. Conversational skills mastered during the course apply to all careers interconnected by Spanish. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session.

**Prerequisite(s):** AS.210.311 or appropriate Spanish placement exam score.

Area: Humanities

AS.210.317. **Adv Spanish Composition. 3 Credits.**

This third-year course is a hands-on and process-oriented introduction to discussion and compositional analysis. On completion of this course, students will have improved their Spanish writing skills in various types of compositions they might be expected to write in academic settings and in real-life formats such as film reviews, letters to the editor, cover letters, etc. The course also focuses on refinement of grammar and vocabulary use. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after September 13th.

**Prerequisite(s):** AS.210.312 or appropriate Spanish placement exam score.

Area: Humanities

Writing Intensive

AS.210.318. **Spanish for Engineering. 3 Credits.**

Spanish for engineering is a comprehensive examination of vocabulary and grammar for students who either work or intend to work in the engineering field to develop their communicative strategies in the field of engineering. On completion of this course, students will be able to participate in conversations on topics such as applications of biomedical engineering in the diagnosis and treatment of different medical conditions, efficient use of energy and materials, design and construction of public works, development of electrical systems and development of solutions to environmental problems. In completing the course’s final project students will apply, synthesize, and reflect on what has been learned in the class by creating a professional dossier individualized to their professional interests. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third-class session.

**Prerequisite(s):** AS.210.311

Area: Humanities

AS.210.319. **Program Abroad: Objective Portuguese - Level III. 3 Credits.**

Summer Abroad Program. Fifth semester college-level Portuguese. Students further improve conversation and comprehension proficiency. Develop reading and writing skills through literary analysis and grammar review. The class is designed to further develop and strengthen the language skills acquired in Portuguese 210.277 & 210.278. Open to Brazil Program applications only. Course must be taken for a letter grade.

Writing Intensive

AS.210.351. **Advanced Italian I. 3 Credits.**

Course presents a systematic introduction to a variety of complex cultural and historical topics related to present-day Italy, emphasizing intercultural comparisons and interdisciplinary, and encouraging a personal exploration of such topics. Course adopts a continuous assessment system (no mid-term and no final), and is conducted entirely in Italian. Year course; must complete both semesters for credit. No Satisfactory/Unsatisfactory option. Language Program Director: Alessandro Zannirato

**Prerequisite(s):** AS.210.252 or placement exam

Area: Humanities

Writing Intensive

AS.210.352. **Advanced Italian II. 3 Credits.**

Course presents a systematic introduction to a variety of complex cultural and historical topics related to present-day Italy, emphasizing intercultural comparisons, interdisciplinary, and encouraging a personal exploration of such topics. Course adopts a continuous assessment system (no mid-term and no final).

**Prerequisite(s):** AS.210.351 or appropriate placement exam scores (Parts I, II and III).

Area: Humanities

Writing Intensive

AS.210.361. **Advanced German I: Cultural Topics of the Modern German-speaking World. 3 Credits.**

Taught in German. Required for Major & Minor. Topically, this course focuses on defining moments in cultural history in German speaking countries in the 2nd half of the 20th century. Films, texts and other media provide a basis for discussing events in post-war Germany from 1945 to 1989. A review and expansion of advanced grammatical concepts and vocabulary underlie the course. Focus on improving expression in writing and speaking. Language Program Director: Deborah Mifflin

**Prerequisite(s):** AS.210.361 or equivalent score on placement test.

Area: Humanities

Writing Intensive

AS.210.362. **Advanced German II: Contemporary Issues in the German Speaking World. 3 Credits.**

Taught in German. Topically, this course focuses on contemporary issues such as national identity, multiculturalism and the lingering social consequences of major 20th century historical events. Readings include literary and journalistic texts, as well as radio broadcasts, internet sites, music and film. Students read a full-length novel. Emphasis is placed on improving mastery of German grammar, development of self-editing skills and practice in spoken German for academic use. Introduction/Review of advanced grammar.

**Prerequisite(s):** AS.210.361 or equivalent score on placement test.

Area: Humanities

Writing Intensive

AS.210.363. **Business German. 3 Credits.**

Taught in German. Course is designed to familiarize students with the vocabulary and standards for doing business in Germany. Taking a cultural approach, students read texts and engage in discussion that elucidate the works of business, commerce & industry in Germany, the world’s third largest economy. Emphasis is placed on vocabulary expansion and writing as it relates to business.

Area: Humanities
AS.210.365. German for Science and Engineering. 3 Credits.
Taught in German. This course is designed to provide language training in German tailored to students of science & engineering. Germany has long been a world leader in engineering, most notably in chemical and mechanical engineering. Over the past decades, Germany also has taken a lead in environmental sciences and information technology. In addition, Germany is now becoming an increasingly attractive place to pursue degrees in the technical fields. This course will provide practice and expansion in all language skill areas: analysis of texts, hands-on-activities, preparation of presentations, and discussion of topics. Specific areas of interest to the course members will be taken into consideration for the selection of materials. [Does not replace 210.362 as prerequisite for upper level courses or as major requirement.]
Prerequisite(s): AS.210.262 OR AS.210.361 OR AS.210.362 or equivalent or placement exam.
Area: Humanities

AS.210.371. From the yidish gas to the Yiddish Farm: Yiddish Identity and Yiddish Community. 3 Credits.
In premodern Ashkenaz, the vernacular Yiddish was an important factor maintaining a distinct Jewish communal identity. With the advent of modernity, and the abandoning of Yiddish by some Jews as their daily language, the choice to speak Yiddish and to use it as a vehicle of modern cultural production became a distinct strand in the web of new Jewish identities. In this course, students will develop a sociolinguistic understanding both of the place of Yiddish in premodern Jewish society, and ways in which the language was — and is — seen as essential to living a Jewish life in the modern world. Since this is an advanced language course, readings, discussion and written work will be in Yiddish. Grammar will be reviewed as necessary, according to the needs of the students.
Area: Humanities, Social and Behavioral Sciences

AS.210.375. Avant-garde movements: The MODERNISM in Portuguese speaking countries. 3 Credits.
This course surveys the avant-garde movements in Portuguese speaking countries, giving special attention to Portugal and Brazil. In the first half of the past century, Brazilian and Portuguese writers started a movement that later was considered as a revolution in the literary world. Analysis and discussion of the movement, on both sides of the Atlantic, will offer the opportunity to contemplate authors including, but not limited to Fernando Pessoa, Almada Negreiros, Sá-Carneiro, Branquinho da Fonseca, Gaspar Simões, Casais Monteiro, José Régio, and on the Brazilian side Mario de Andrade, Oswald de Andrade, Manuel Bandeira, Menotti del Picchia, and much later, Graciliano Ramos, Rachel de Queiroz, José Lins do Rego and obviously Jorge Amado. It explores the impact the Lusophone Modernism had in other avant-garde movements. Readings in Portuguese; the class is taught in Portuguese. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory / Unsatisfactory basis. Prereq: Advanced Portuguese and Literature I (AS.210.391) or Placement test.

AS.210.391. Advanced Portuguese Language & Literature I. 3 Credits.
This third-year course focuses on reading, writing, and oral expression. Students will read two complete works by major Brazilian, Portuguese, and/or Afro-Portuguese writers each semester, followed by intense writing and oral discussion on the topics covered. Grammar will be reviewed as necessary. All classes are conducted in Portuguese. Prereq: 210.278, placement test or instructor approval.
Prerequisite(s): AS.210.278 or equivalent score on placement test or instructor approval.
Area: Humanities
Writing Intensive

AS.210.392. Advanced Portuguese: Language and Literature II. 3 Credits.
This course focuses on reading, writing, and oral expression. Under the supervision of the instructor, students will read several works by major Brazilian, Portuguese, and/or Afro-Portuguese writers, followed by intensive writing and oral discussion on the topics covered. Grammar will be reviewed as necessary. The course is conducted entirely in Portuguese. No satisfactory/unsatisfactory. Pre-requisites: 210.391 or placement test.
Prerequisite(s): AS.210.391 or equivalent score on placement test or instructor approval.
Area: Humanities
Writing Intensive

AS.210.394. Portuguese for the professions. 3 Credits.
Portuguese for the professions is a comprehensive examination of vocabulary and grammar for students who either work or intend to work in a Portuguese speaking environment. It focuses on the development of advanced communication skills according to students’ individualized professional interests through conversations, readings, discussions, writings and media. The course also highlights cultural nuances of the professional Portuguese-speaking world. Grammar will be reviewed as needed in class, but most of it will be done outside of class with tutors or a TA, freeing class time for more communicative activities. There is no final exam. May not be taken on a Satisfactory / Unsatisfactory basis. Prereq: one semester of Portuguese (AS.210.177). Two semesters of Spanish or Placement test.
Area: Humanities

AS.210.409. Le monde francophone. 3 Credits.
This course examines both sociolinguistic and cultural aspects of the French-speaking world and the relationship between la francophonie and France itself. We focus on five regions—Sub-Saharan Africa (Cameroon and Senegal), Northern Africa (Morocco and Algeria), the Caribbean (Martinique and Haiti), North America (Quebec), and Europe (Belgium)—and consider language features unique to those regional varieties, the status of French as opposed to other indigenous languages and creoles, the demographics of their speakers, and the representation of their culture in media (particularly in short stories, poetry, song, and film). A semester-long research project on one of these main areas will allow students to combine their study of the French-speaking world with other disciplines of interest to them.
Area: Humanities
**AS.210.411. Translation for the Professions. 3 Credits.**
Spanish Translation for the Professions surveys the field of contemporary translation theory and provides practice of translation from English to Spanish. Translation exercises may include comparing and contrasting texts of literature, medicine, health, law, technology, politics, and journalism. Students will identify and differentiate terminology specific to these various fields and will focus on practicing correct uses of the grammatical structures relevant to the translation of both English and Spanish. In the course’s final projects students will apply, synthesize, and reflect on what has been learned in the class by completing a translation exercise individualized to their professional interests. Strategies of communication mastered in this course will help students of Spanish throughout their careers, in that achievement of the course objectives will help students discern, translate, and evaluate the usefulness of translations in different professional settings. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session.
**Prerequisite(s):** AS.210.313 OR AS.210.314 OR AS.210.315 OR AS.210.318 OR AS.210.319

**Area:** Humanities

**Writing Intensive**

**AS.210.412. Community Based Learning - Spanish Language Practicum. 3 Credits.**
This fourth-year course involves a specially designed project related to the student’s minor concentration. On completion of this course, the student will be able to use the Spanish language in real world contexts. The student-designed project may be related to each student’s current employment context or developed in agencies or organizations that complement student’s research and experimental background while contributing to the improvement of his/her language proficiency. There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after first week of class.
**Prerequisite(s):** AS.210.411

**Area:** Humanities

**Writing Intensive**

**AS.210.413. Curso de Perfeccionamiento. 3 Credits.**
This forth-year course is an in-depth examination of the Spanish grammar, including a wider range of idiomatic expressions and usages than students might have previously encountered. On completion of this course, students will be able to achieve the ACTFL Advanced-Mid to high level in oral and written expression as well as in reading and listening skills. The course will also help to prepare students for the DELE Intermediate or Superior levels, offered by the Instituto Cervantes. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the 4th class session.
**Prerequisite(s):** (AS.210.312 OR AS.210.317) AND (AS.210.313 OR AS.210.314 OR AS.210.315)

**Area:** Humanities

**Writing Intensive**

**AS.210.417. Eloquent French. 3 Credits.**
This highly interactive, writing intensive course places emphasis on: 1) providing students with linguistic tools that will help them reach a high level of written proficiency (advanced lexical, stylistic and idiomatic expressions, linking words used to develop and enrich complex sentences, stylistic and grammatical differences between French and English) 2) enhancing students’ analytical skills by introducing them to the French method of Explication de textes 3) teaching students to develop an academic style of writing by studying the different components of the dissertation française (introduction, problématique, argumentation, conclusion, utilisation de sources) 4) teaching students to develop their own style of writing. To that effect, we will study excerpts of French literary texts that deal with themes likely to enhance their own creative writing (lieux imaginaires, mémoire et autobiographie, création d’un personnage de roman, for example).

**Area:** Humanities

**Writing Intensive**

**AS.210.450. Program Abroad: Objective Portuguese - Level IV. 3 Credits.**
Summer Abroad Program. Emphasis on the development of communication skills: the ability to comprehend both written and spoken texts, admit o speak, read, and write in Portuguese with native-live proficiency. Open to Brazil Program applications only. Course must be taken for a letter grade.

**Writing Intensive**

**AS.210.451. Corso di Perfezionamento. 0 - 3 Credits.**
This task-based course is designed to prepare students to acquire Effective Operational Proficiency in Italian (C1 level of the Common European Framework). By the end of the course, successful students will be able to 1) understand a wide range of demanding, longer texts, and recognize implicit meaning, 2) produce clear, well-constructed, detailed texts on complex subjects 3) express themselves fluently and spontaneously without much obvious searching for expressions, and 4) use language flexibly and effectively for social, academic, and professional purposes. Extensive independent work required. Course adopts a continuous assessment system (no mid-term and no final), and is conducted entirely in Italian. No Satisfactory/Unsatisfactory option. Recommended Course Background: AS.210.352 with a grade of B+ or higher, or appropriate placement exam score and interview with Language Program Director.
**Prerequisite(s):** AS.210.352 with a grade of B+ or higher, or appropriate placement exam score and interview with Language Program Director.

**Writing Intensive**

**AS.210.501. French Independent Study/Language. 3 Credits.**
**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

**AS.210.502. French Indep Stdy-Lang. 0 - 3 Credits.**
**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.210.531. Independent study of Spanish. 3 - 4 Credits.
This course is geared towards the student's independent completion of requirements for courses in Spanish. You may complete 210.111-112 Spanish Elements, 210.211-212 Intermediate Spanish or 210.311 Advanced Spanish through this independent study. Students are responsible for completing all work assigned for his/her individual level. Please see individual course description for more information. Independent study of Spanish is taught online.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Writing Intensive

AS.210.541. Italian Independent Study-Language. 0 - 3 Credits.

AS.210.551. Portuguese Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.210.561. German Independent Study - Language. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.210.592. French Independent Study-Summer. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.210.596. German Internship - Summer. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Area: Humanities

AS.210.661. Reading and Translating German for Academic Purposes.
Taught in English. Graduate students only. This is the first semester of a year-long course designed for graduate students in other fields who wish to gain a reading knowledge of the German language. Seniors who intend to do graduate study in other disciplines are also welcome, with permission from instructor. Instruction includes an introduction to German vocabulary and grammatical structures as well as discussion of relevant translation practices. The goal of the course is for students to gain confidence in reading a variety of texts, including those in their own fields of study. No knowledge of German is assumed. Seniors by permission.
Area: Humanities

AS.210.662. Reading & Translating German for Academic Purposes II.
Taught in English. Seniors by permission & Graduate students only. This course is designed for graduate students in other departments who wish to gain reading knowledge of the German language and translation practice from German to English. This course is a continuation of the Fall semester. Focus on advanced grammatical structures and vocabulary. For certification or credit.
Prerequisite(s): AS.210.661 or permission of instructor.
Area: Humanities

AS.211.102. The Cosmic Imagination: How Literature Changes Our Understanding of the Universe. 3 Credits.
Since time immemorial humankind has looked to the skies for clues as to our origins, our destiny, and the nature of existence itself. In some ways, one of the hallmarks of western science has been a story of viewing the cosmos in ever-greater clarity and detail. Yet the very nature of the universe—its massive size, the distance and obscurity of its farthest reaches—requires the active intervention of our imaginations to picture it, no matter how powerful the technologies we use. In this course we will look at how western cultures from the middle ages to the present have deployed the literary and philosophical imagination to try to grasp the ungraspable, and how those attempts in some cases helped prepare intellectuals and scientists to make very real advances in understanding the universe.
Prerequisite(s): Students may not take and receive credit for AS.145.102 and AS.211.102.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.211.117. Freshman Seminar: Writing as Resistance: Jewish Responses to Catastrophe. 3 Credits.
Jewish writers during and after the Holocaust, who took up their pen as a means of resistance and memorialization, stand in a long line of Jewish writers who responded to expulsions, persecutions and pogroms throughout Jewish history. This course will examine the themes, tropes and archetypes of Jewish responses to catastrophe from the destruction of the First Temple in Jerusalem to the Holocaust.
Area: Humanities

AS.211.137. Freshman Seminar: Borges and Scientific Knowledge. 3 Credits.
A survey of the stories and essays of the great Argentine writer Jorge Luis Borges focusing on the theory of knowledge he developed over his long career. Special attention will be paid to the implications his ideas have for the mathematical and physical sciences, in particular cosmology.
Area: Humanities

AS.211.202. Freshman Seminar: A Thousand Years of Jewish Culture. 3 Credits.
This course will introduce students to the history and culture of Ashkenazi Jews through their vernacular, Yiddish, from the settlement of Jews in German-speaking lands in medieval times to the present day. Particular emphasis will be placed on the responses of Yiddish-speaking Jews to the challenges posed by modernity to a traditional society. In addition to studying a wide range of texts—including fiction, poetry, memoir, song, and film—students will learn how to read the Yiddish alphabet, and will prepare a meal of traditional Ashkenazi dishes. No prior knowledge of Yiddish is necessary for this course.
Area: Humanities

AS.211.203. Propaganda: From Blut und Boden to Post-Fact. 3 Credits.
This course taught by Writing Seminars professor Wayne Biddle and Media Studies professor Bernadette Wegenstein covers the 20th-century history of propaganda with special focus on its visual techniques, on censorship, and how media serve as sites of both control and resistance to power. We will pay particular attention to the influence of misinformation abetted by the new media revolution, and both the rise of the political rhetoric of "fake news" and the massive dissemination of actual fake news since the 2016 election. Students will write papers pegged to current issues and events using the critical framework developed in class. Cap 30 students. Reader: Jason Stanley: How Propaganda Works, Princeton University Press, 2015.
Writing Intensive
AS.211.217. Freshman Seminar: From Rabbis to Revolutionaries: Modern Jewish Identities. 3 Credits.
Many Jews in the modern period abandoned the traditional religious way of life, but continued to identify strongly as Jews, and even those who remained committed to tradition had to adapt. Through the prism of the Yiddish language, the vernacular of Eastern European Jewry, this course will explore different ways in which Jews reacted to historical developments and embraced political and cultural movements of their time, from the founding of modern Yiddish theater in Romania, to the creation of a Jewish autonomous region in the far east of the Soviet Union, to the development of avant-garde poetry in New York. In addition to studying a wide range of texts—including fiction, poetry, memoir, song, and film—students will learn how to read the Yiddish alphabet, and will explore food culture by preparing a meal of Eastern European Jewish dishes. No prior knowledge of Yiddish is necessary for this course.
Area: Humanities

AS.211.222. Italian Cinema: The classics, the Forgotten and the Emergent. 3 Credits.
This course traces the history of Italian cinema from the silent era to the new millennium, highlighting its main trends and genres, and reflecting on the major transformations modern and contemporary Italian society experienced over the twentieth and twentieth-first centuries. We shall examine iconic films such as Vittorio De Sica's Bicycle Thieves, Federico Fellini's La Dolce Vita, Michelangelo Antonioni's L'Avventura, and Pier Paolo Pasolini's Mamma Roma, that received international recognition and influenced other national, cinematic productions. We shall also look at the work of less famous, or independent filmmakers who received less critical attention. While this class takes an historical approach, it also includes a theoretical component and introduces students to the specificity of the cinematic language, examining films in relation to the mise-en-scène, frame composition, camera movements, editing, and sound. This class is taught in English.
Area: Humanities

AS.211.224. Made in Italy: Italian style in context. 3 Credits.
Italy and the "Italian style" have become synonym of exquisite taste, class, and elegance thanks to the quality of Italian craftsmanship. This course will explore some of the major factors that contributed to the rise of Italian fashion and Italian industrial design as iconic all around the world. The classes will focus on the main protagonists and art movements that influenced the development of Italian style. We will analyze trends, clothing, and style not only in a historical context, but also through a critical apparatus that will include themes related to gender, culture, power, and politics. The course is taught in English. No knowledge of Italian is required, but those who can read in Italian will have an opportunity to do so. Everyone will learn some Italian words and expressions.
Area: Humanities

AS.211.231. Freshman seminar: Planet Amazonia: Culture, History, and the Environment. 3 Credits.
Without Amazonia, global warming could reach levels that threaten life on the planet. Yet, in an era of deforestation and climate change, Amazonia itself might be on the verge of disappearance, with disastrous consequences for the world. This course proposes interdisciplinary perspectives on Amazonia through a range of works drawn from history, anthropology, archeology, environmental studies, literature, and the arts. We'll look at texts by European travelers and missionaries who contributed to the paradoxical image of Amazonia as a "virgin paradise" or a "green hell"; scientific studies and artists' depictions of the region's flora and fauna; the often-overlooked history of human occupation of the region; and projects to colonize, develop, or conserve the world's largest tropical forest. What importance does Amazonia hold for Latin American and global geopolitics? How do art and literature, including indigenous writings, create, reinforce, or deconstruct clichés about the region? What alternative futures for our planet can Amazonia help us to imagine? Minors in Latin American Studies may count the class toward the Portuguese Language and Brazilian Culture concentration.
Area: Humanities

AS.211.240. Italian Culture and Civilization I. 3 Credits.
This class aims to introduce students to some major traits of Italian culture. This analysis explores topics that span from Art History, Fashion, including Film, to Food Culture, Pop Culture, and Politics. This first module will focus mostly on its aesthetic traditions, and their impact outside national boundaries. The course will be taught mostly in English with the opportunity to be introduced to elements of Italian language. No knowledge of Italian is required. This three-credit course counts toward the major and Minor in Italian, and the International Studies Global Italy concentration.
Area: Humanities

AS.211.247. Freshman Seminar: Tortured Body, Tortured Soul: Pain in Early Modern Europe. 3 Credits.
This Freshman seminar provides an interdisciplinary exploration of pain and the body in pre-modern Europe. Using classical and early modern sources of philosophy, literature, anthropology and medicine, students will analyze the ways in which cultural perceptions shape our responses to suffering.
Area: Humanities

AS.211.259. Introduction to Medical and Mental Health Interpreting. 3 Credits.
This course is a broad introduction to the fields of medical and mental health interpreting. Modules will include: (1) Three-way communication: managing role expectations and interpersonal dynamics; (2) Basic interpreting skills and techniques in a healthcare setting; (3) Ethical principles, dilemmas, and confidentiality; (4) Elements of medical interpreting; (5) Elements of mental health interpreting; (6) Trauma-informed interpreting: serving the refugee population. The course is taught in English, and has no foreign language pre-requisites.
Area: Humanities
AS.211.265. Panorama of German Thought. 3 Credits.
This course introduces students to major figures and trends in German literature and thought from the sixteenth to the twentieth century. We will pay particular attention to the evolution of German political thought from the Protestant Reformation to the foundation of the German Federal Republic after WWII. How did the Protestant Reformation affect the understanding of the state, rights, civic institutions, and temporal authority in Germany? How did German Enlightenment thinkers conceive of ethics and politics or morality and rights? How do German writers define the nation, community, and the people or das Volk? What is the link between romanticism and nationalism? What degree is political economy, as developed by Marx, a critical response to romanticism? How did German thinkers conceive of power and force in the wake of World Wars I and II? What are the ties that bind and rend a community in this tradition? We will consider these and related questions in this course through careful readings of selected works.
Area: Humanities
Writing Intensive

AS.211.278. Freshman seminar: Eataly: An Exploration of Italian Food Cultures. 3 Credits.
Italian cuisine is often recognized as one of the finest in the world. This Freshman Seminar will offer an exploration of Italian food cultures past and present. Discussion topics will include the Slow Food Movement, the tension between local and global, food and social justice, and the representation of food in literature, film, and other media. The course is taught in English. No knowledge of Italian is required, and everyone will learn some Italian words and expressions.
Area: Humanities

AS.211.294. Freshman Seminar: Soccer in Brazil: opium of the masses. 3 Credits.
The course is taught IN ENGLISH. Futebol offers a unique perspective on politics, race and citizenship in Brazil. This course seeks to understand Brazilian culture through the historic national pastime of futebol. In addition to the main textbooks chosen for the class, by reading a variety of texts from newspapers, academic journals, fiction and film, students will be able to find their own approach to understanding the phenomenon of futebol within the social and political traditions of Brazil. No knowledge of Portuguese is required, but those who can read in Portuguese will have an opportunity to do so. Everyone will learn some Portuguese words and expressions. This class may count toward the Minor in Portuguese.
Area: Humanities

AS.211.311. Introduction to Romance Linguistics. 3 Credits.
If the modern Romance languages all evolved from Latin, why do they differ in so many important ways? What drives language change in the first place? In what areas do the modern Romance languages, and languages in general, differ the most? Why should this be the case? We approach these questions not only from a linguistic perspective (analyzing Romance sound systems, vocabulary, morphosyntax, and semantics), but from a cognitive-psychological and a socio-political perspective as well. As part of a semester-long research project both in and outside the classroom, students will create linguistic questionnaires, use them to conduct native speaker interviews, analyze the data obtained, and present their findings as part of an end-of-semester colloquium.
Prerequisite(s): AS.210.202 OR AS.210.252 OR AS.210.212
Area: Humanities

AS.211.316. Brazilian Cinema and Topics in Contemporary Brazilian Society. 3 Credits.
Course is taught in ENGLISH - This course is an introduction to the academic study of cinema as a communicative art and to Brazilian film. The films selected focuses on films from the late 1950s to the present and highlight import episodes and challenges in the advancement of the Brazilian society as well as its cinematic production with a special view to the film aesthetics through analysis from a number of critical perspectives, including class, race, gender as well as ethnicity, nationalism or national identity, colonialism, social changes, and the politics of representation. In this sense, the films and documentaries that we will be watching and studying encompass the period from the rise of New Cinema (Cinema Novo) up to films exploring the most recent trends, including movies launched up to 2016. Students wishing to do the course work in English, for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory / Unsatisfactory basis.
Area: Humanities
Writing Intensive

AS.211.325. Representing Otherness in Literature and Film. 3 Credits.
The term ‘Otherness’ is known to be rooted in the Self-Other opposition as it emerged in German Idealism, adopted by psychoanalysis and transformed to Post-Colonial and Feminist theories. This theoretical framework will allow us to explore the role of the Other in literature and cinema. Students will become familiar with the historical development of the notion of the “stranger” through reading and analyzing various contemporary works of prose, poetry and cinema. We will analyze the ways in which these works depict Otherness and will investigate questions regarding their social, political and philosophical framework as well as the literary and cinematographic devices they employ. The course will have a comparative nature with the aim of learning more about the differences between the literary and cinematic representations.
Area: Humanities

AS.211.326. We Conduct - Documentary Production Internship. 3 Credits.
To apply for this practicum, you should send an email of motivation to professor Wegenstein at bern@jhu.edu. During this internship will accompany Bernadette Wegenstein (director), Shana Hagan (cinematographer), and Judy Karp (sound recordist) on the documentary Vérité set, as they document the history of women orchestral conductors. The film profiles the conductors’ incredible dedication, devotion, mentorship, and love for music itself, and highlights the camaraderie and mentorship between generations of female conductors and musicians. Most importantly, it shows their power in pursuing a field not historically welcoming to women, breaking down barriers of gender and race. This documentary feature presents women from different walks of life, including Sylvia Caduff, Marin Alsop, Alexandra Arrieche, Lina Gonzalez, 16-year old aspiring conductors Sumaya Elkashif and Maya Johnson, and members of the Baltimore OrchKids afterschool music program for children. The intertwining stories of these women and children, each accompanied by the music they embody, will culminate to reveal their astounding accomplishments as they conduct — the music, and the worlds around them. Filming will take place mainly at the Peabody Conservatory. Some field-trips will be optional (including to foreign destinations). Please note that this class will be held as a practicum, and some of the dates and times will be flexibly adapted to the needs of the artists’ residency. If you have a very full calendar in the Spring it is best advised not to take this class.
Area: Humanities
AS.211.327. Ecocinema: Framing Italy's Environmental Crises. 3 Credits.
Over the past decade, growing numbers of filmmakers in Italy have addressed ecological crises in their work. This class takes an eco-critical approach to contemporary Italian cinema, examining a body of compelling place-centered stories that deal with local and global issues. Defining the scope of eco-cinema and the ways we can interrogate films as ecological texts, we shall screen earth-centered films that raise consciousness about the consequences of human manipulation of the natural world; the complicity of industry, government, and organized crime in creating environmental crises; and the effects of economic and social malaise. Screenings include iconic films such as Michelangelo Antonioni's Red Desert (1963), more recent, critically acclaimed films such as Matteo Garrone's Gomorrah (2008), Alice Rohrwacher's Happy as Lazzaro (2018), and many others.
Area: Humanities

AS.211.328. Berlin Between the Wars: Literature, Art, Music, Film. 3 Credits.
Explore the diverse culture of Berlin during the heyday of modernism. During the Weimar Republic, Berlin became a center for theater, visual arts, film, music, and literature that would have an outsized impact on culture throughout the world and the twentieth century. The thinkers, artists, and writers drawn to interwar Berlin produced a body of work that encapsulates many of the issues of the period: the effect of the modern city on society; “the New Woman”; socialist revolutionary politics; the rise of the Nazis; and economic turmoil. While learning about interwar Berlin's cultural diversity, we will take a special look at works by Jewish writers and artists that engage with the question of ethnic, religious, and national identity in the modern world, specifically in the context of Berlin's rich Jewish history and the rise of anti-Semitism in the interwar period. All readings will be in translation.
Area: Humanities

AS.211.329. Museums and Identity. 3 Credits.
The museum boom of the last half-century has centered largely around museums dedicated to the culture and history of identity groups, including national, ethnic, religious, and minority groups. In this course we will examine such museums and consider their long history through a comparison of the theory and practice of Jewish museums with other identity museums. We will study the various museological traditions that engage identity, including the collection of art and antiquities, ethnographic exhibitions, history museums, heritage museums, art museums, and other museums of culture. Some of the questions we will ask include: what are museums for and who are they for? how do museums shape identity? and how do the various types of museums relate to one another? Our primary work will be to examine a variety of contemporary examples around the world with visits to local museums including the Jewish Museum of Maryland, the National Museum of African American History and Culture and the National Museum of the American Indian.
Area: Humanities

AS.211.330. Curating Media Artists in Residence at JHU. 3 Credits.
The students will be closely involved with JHU's Center for Advanced Media Studies (CAMS directed by Bernadette Wegenstein), and the Baltimore Museum of Art (curator Kristen Hileman) in preparing the BMA Black Box exhibit of Mary and Patrick Kelley's new film, We Are Ghosts, set in a submarine: the film tells the story of life as experienced by the sailors in a U.S. submarine at the end of the second world war. Artist Mary Reid Kelley focuses on "minor aspects of life" in the submarine during non-combat — such as boredom, claustrophobia, and the effects of heavy drinking on the sailors. Included is also a restaging of Harry Truman's announcement of the bombing of Hiroshima — told from the sailors' point of view. While this new work will be on display in the BMA's Black Box, Kelley's 2016 film This is Offal (set in a morgue) will be showing at the museum. This film is centered around a dialogue between the ghost of a deceased woman, the victim of a suicide, and her animated organs. Students will also be traveling to Woodstock, NY on a field trip with professor Wegenstein for a studio visit with the artists at the beginning of the semester. Mary Reid Kelley is an artist who makes arresting, playful, and erudite videos that explore the condition of men and women throughout history. Drawing on literary and historical material, the videos involve intensive research and critical reassessments of standard historical narratives. Mary Reid Kelley is involved in every aspect of the videos' creation—from writing the scripts (typically in highly structured poetic verse), to designing the sets, props, and costumes, to performing the leading roles—and all of the videos are produced by her and her partner, Patrick Kelley, at their private studio. Kelley is known for her feminist videos that recall the theater of the absurd and German Expressionist cinema. Please note that this class will be held as a practicum, and some of the dates and times will be flexibly adapted to the needs of the artists’ residency. If you have a very full calendar in the Spring it is best advised not to take this class.
Area: Humanities

AS.211.331. Vagabonds and Ramblers: Space & Place in Women's Cinema. 3 Credits.
In recent times in Italy, a new generation of women filmmakers has found its own space in the traditionally male dominated film industry. This “counter cinema” abounds with female city walkers, migrants, vagabonds and other types of urban nomads, whose movement through space signifies a quest for freedom, gestures of protest and rebellion, and a search for place. We start by looking at the work of a pioneer filmmaker such as Elvira Notari, the first woman director in Italy, and then discuss the issue of gender and space in contemporary films by directors Francesca Comencini, Alice Rohrwacher, and Eleonora Danco. To enrich the analysis, we shall also examine films directed by non-Italians who deal with the theme of women's mobility and their centrality/marginality from different socio-geographic contexts. Other directors included will be Agnès Varda (France), Chantal Akerman (Belgium), Haifa al-Mansour (Saudi Arabia), and Xiaolu Guo (China) Readings will include essays by Laura Mulvey, Ann E. Kaplan, Linda Williams, and Patricia White.
Area: Humanities

AS.211.332. Heidegger's Being and Time and the Examined Life. 3 Credits.
This course will explore Heidegger's Being and Time with attention to such central concepts as Dasein's unique relation to Being, worldliness, care, authentic and inauthentic existence, attunement, understanding, projection, and being unto death. The first eight weeks will be devoted to a thorough reading of Being and Time and selected critical texts. The last five will consider works of art that expand our understanding of Heidegger’s magnum opus.
Area: Humanities
AS.211.333. Representing the Holocaust. 3 Credits.
How has the Holocaust been represented in literature and film? Are there special challenges posed by genocide to the traditions of visual and literary representation? Where does the Holocaust fit in to the array of concerns that the visual arts and literature express? And where do art and literature fit in to the commemoration of communal tragedy and the working through of individual trauma entailed by thinking about and representing the Holocaust? These questions will guide our consideration of a range of texts — nonfiction, novels, poetry — in Yiddish, German, English, French and other languages (including works by Primo Levi and Isaac Bashevis Singer), as well as films from French documentaries to Hollywood blockbusters (including films by Alain Resnais, Claude Lanzmann, and Steven Spielberg). All readings in English.
Prerequisite(s): Cannot be taken by anyone who previously took AS.211.361
Area: Humanities

AS.211.336. We Conduct Documentary Production Practicum II. 3 Credits.
During this internship will accompany Bernadette Wegenstein (director), Shana Hagan (cinematographer), and Judy Karp (sound recordist) on the documentary Vérité set, as they document the history of women orchestral conductors. The film profiles the conductors’ incredible dedication, devotion, mentorship, and love for music itself, and highlights the camaraderie and mentorship between generations of female conductors and musicians. Most importantly, it shows their power in pursuing a field not historically welcoming to women, breaking down barriers of gender and race. This documentary feature presents women from different walks of life, including Sylvia Caduff, Marin Alsop, Alexandra Arrieche, Lina Gonzalez, 16-year old aspiring conductors Sumaya Elkashif and Maya Johnson, and members of the Baltimore OrchKids afterschool music program for children. The intertwining stories of these women and children, each accompanied by the music they embody, will culminate to reveal their astounding accomplishments as they conduct — the music, and the worlds around them. Filming will take place mainly at the Peabody Conservatory. Some field-trips will be optional (including to foreign destinations). Please note that this class will be held as a practicum, and some of the dates and times will be flexibly adapted to the needs of the artists’ residency. If you have a very full calendar in the Fall it is best advised not to take this class. To apply for this practicum, you should send an email of motivation to professor Wegenstein at berna@jhu.edu.
Prerequisite(s): AS.211.326 or Permission from the Instructor
Area: Humanities

AS.211.337. Wandering Jews? Jewish Migration in Film and Literature. 3 Credits.
Migration in all its forms has played a major role in shaping Jewish identity throughout history. From the Biblical exodus from Egypt through the beginnings of the diaspora under the Romans to the massive European Jewish immigration to America in the late 19th and early 20th centuries to the founding of the state of Israel, the migrations of Jews have also had a major place in Jewish literature. Going all the way back to the Bible, but focusing on the 20th century, this course will explore the ways in which literature and film represent the experience of migration, whether negative (compelled by expulsion or violence); positive (lured by economic or social opportunity); or somewhere in-between. We will examine poetry, plays, prose and film in Yiddish, German, Hebrew, and English (all in translation) on aspects of Jewish migration including the social and political factors motivating migration from the countryside to the shtetl (town) to the city and from Central and Eastern Europe to the Americas, Palestine, and Israel. Issues under discussion will include: adaptation and assimilation; minority rights; what is the relationship of old and new or major and minor languages and literatures; what is the place of tradition and heritage in a diasporic context? We will also consider the resonances between contemporary debates on migration and historical examples of these issues as they are reflected in literature and film.
Area: Humanities
Writing Intensive

AS.211.339. Matchmaker, Matchmaker! Jewish Lovers in Literature and Film. 3 Credits.
By examining romantic relationships — some happy, some tragic — in Jewish literature and film, this course will trace the trajectory of modern Jewish history from the Eastern European backwater to the bustling American metropolis. At the same time, there will be ample opportunity to discuss universal questions surrounding love, loss and longing.
Area: Humanities

AS.211.341. Power and Resistance in French Political Thought. 3 Credits.
Even as a strong, divine-right monarchy emerged in France, following the Renaissance wars of religion, rebellious French thinkers never stopped questioning the foundations of power. They focused critically not only on the claims of authority issuing from the top, but also on the submissiveness of the governed and the reach of propaganda. This course examines how power shapes minds and bodies, from absolutism to the Revolution, to democratic laïcité. Readings include works by La Boétie, Montaigne, Loyseau, Bayle, Rousseau, Saint-Just, Maistre, Tocqueville, Foucault, Lefort, Rancière and the Assemblée Nationale. Readings and discussion in English.
Area: Humanities

AS.211.342. Emerging Latin American Cinema. 3 Credits.
This survey of emerging cinema in Latin America focuses on thematic clusters such as gender identity, violence against women, the struggle for indigenous rights and recognition of their history, the politics of ecological crises, and the plight of youth who don’t see a viable future. We will focus on films from Brazil, Mexico, Argentina, and Colombia, among other cultures.
Area: Humanities
AS.211.347. Monsters, Ghosts, and Golems. 3 Credits.
Modern Jewish literature and film is full of monsters, ghosts, golems, dybbuks, and other occult creatures. We will study the rich religious and folkloric traditions that these works draw on in order to better understand why Yiddish, German, Hebrew, and English literature from the 19th century to the present and why film from its beginnings are so full of the occult and the supernatural. We will pay special attention to the ways that monsters, spirits, and the like were deployed in modernist literature and film, in order to ask and answer major questions about modernity: what are the social and aesthetic consequences of technology and automation? what aspects of human nature are revealed by new insights into the psyche? All readings in English.

Area: Humanities

AS.211.348. Holocaust Consciousness — An Intercultural and Interdisciplinary Approach Through Media Studies and Psychology. 3 Credits.
This course approaches Holocaust consciousness in the U.S. and Europe within a psychological and media-theoretical frame-work. It is also part of a larger research project between the Center for Advanced Media Studies at JHU and the Sigmund Freud University in Vienna. During the semester students will be tele-conferencing during five to six class sessions with students in the same course held at the Sigmund Freud University and taught by Professors Nora Ruck and Markus Brunner. Together we will examine Holocaust consciousness in the U.S. and Europe, and such phenomena as trauma, inter-generational transmission, and projection of the trauma of the victims' and/or the perpetrators'. As primary materials we will be using war memoirs and documentary films (from the films of the "Bilderverbot" to today's family ethnographies). Students will be teamed in small, inter-cultural groups to address both U.S. and a European perspectives on these materials. An excursion to the U.S. Holocaust Memorial Museum in Washington D.C. will also be part of the course.
Area: Humanities

Writing Intensive

AS.211.349. JHU Bologna Program: Food for Thought: Gastronomy, Politics & Identity. 3 Credits.
Italian Culture course offered on the JHU Summer Program in Bologna. Permission required. Must be taken for a letter grade. Open to students admitted to the JHU Summer Program in Bologna only.
Area: Humanities

AS.211.354. The Art, Craft, and Science of Translation. 3 Credits.
This course is an introduction to the growing field of Translation Studies. Broadly speaking, the translation process involves three major phases: (1) ‘understanding’ what someone else has written; (2) exploring the linguistic/cultural tools available (or not) in another language to convey the original meaning; and (3) taking responsibility for one’s translation choices. What does it mean to ‘understand’ a text? Is it ever possible to find an ‘equivalent’ in another language? Can the translation process ever be objective, and what role, if any, does the translator’s voice play? What practical tools are available to facilitate the translation process? Drawing from interdisciplinary theories and approaches to translation, this course will attempt to reflect on these questions, and provide an opportunity for some hands-on translation practice. Language pre-requisite: Completion of Advanced French I (AS210.301), Advanced Italian I (AS210.351), Advanced Spanish I (AS210.311), or instructor permission.
Prerequisite(s): AS.210.301 OR AS.210.351 OR AS.210.311 OR Instructor Permission
Area: Humanities

AS.211.355. Short Forms in German Literature. 3 Credits.
Taught in English. Before Twitter, there were the diverse short forms that evolved in the accelerating world of modernity to capture fleeting experiences, fragmentary perceptions, and flash-like insights: epigrams, aphorisms, fragments, feuilletons, parables, thought images, and mini-essays. The course offers an alternative history of German modernity by surveying masters of short forms from the 17th century to the present, such as Angelus Silesius, Lichtenberg, Novalis, Fr. Schlegel, Schopenhauer, Nietzsche, Kafka, Roth, Walser, Kracauer, Benjamin, Adorno, Blumenberg, and Kluge. Readings will be made available both in English translation and in the original German.
Area: Humanities

AS.211.360. Franco-American relations. 3 Credits.
Historical allies, yet rivals in trade; partners in intellectual exchange, yet baffled by each other’s culture: in this course we will examine core elements of the relationship between France & the US through the lens of diplomacy, commerce, language, food, cinema, the arts, friendship, feminism, parenting, ethnicity, health, climate change, and social justice. Students will develop and exercise critical thinking habits while working toward the learning outcome of a deeper cross-cultural understanding of France and the US. In the bigger picture, interactions between the two countries will be considered as a significant model of international relations. Course is taught in English.
Area: Humanities

AS.211.361. Narratives of Dissent in Israeli Society and Culture. 3 Credits.
In this course we will study and analyze the notion of dissent in Israeli society and culture on its various literary and artistic forms. We will examine the emergence and the formation of various political and social protest movements, such as the Israeli Black Panthers, Israeli feminism and the 2011 Social Justice protest. We will discuss at length the history and the nature of dissent in the military and in relation to Israeli wars and will track changes in these relation. Significant portion of the course will be dedicated to the literary, cinematic and artistic aspects of Israeli protest and their influence on Israeli discourse. We will explore the nature and role of specific genres and media such as the Israeli satire, Israeli television, newspaper op-ed and the recent emergence of social media. Students wishing to work in English exclusively for 3 credits should enroll in section one. Students who are fluent in Hebrew and are wishing to attend an additional hour-long Hebrew discussion session per week with Professor Cohen (time TBD in consultation with enrolled students) for 4 credits should enroll in section 2.
Area: Humanities

AS.211.362. Critical Knowledges: Black, Feminist, Postcolonial, Queer and Other. 3 Credits.
Is it clear what “knowledge” means? Does it have the same meaning historically, across different academic disciplines and in daily life? Rather than posing questions about the nature of knowledge explored in the branch of philosophy known as epistemology, this course will propose a minimalized critical inquiry into the matter of knowledge/s. Through works by Black, feminist, queer, and postcolonial theorists such as Patricia Hill Collins, Eve Kosofsky Sedgwick and Donna Haraway, we will address alternative epistemologies that operate with “partial” or “unfinished” models. Understanding knowledge as unfinished rather than universal enables consequential dialogue to take place: no longer focused on judgments, thought remains open to the ideas of others.
Area: Humanities

Writing Intensive
AS.211.364. Drama Queens: Opera, Gender, and the Poetics of Excess. 3 Credits.

What is a drama queen? According to the Oxford English Dictionary, a drama queen is "a person who is prone to exaggeratedly dramatic behaviour" and "a person who thrives on being the centre of attention." While drama queens exist among us, the world of opera is certainly one of their ideal environments. Echoing back to their tragic fates, the powerful voices of Dido, Medea, Violetta, and Tosca never ceased to affect their emphatic public. In fact, excess and overreactions are two main features of the operatic experience both on stage and in the audience. By focusing on the ways in which operatic characters are brought to life, the course explores the social, political, and gender dynamics that inform the melodramatic imagination. Students will have the opportunity to attend live HD broadcasts of Verdi's La Traviata and Tchaikovsky's Eugene Onegin from the Metropolitan Opera. No musical skills required.

Area: Humanities

Writing Intensive

AS.211.366. Cuisine and Culture in Latin American Film. 3 Credits.

This course is a comprehensive study of presentations of food in Latin American Film. Cuisines are cultural symbols that bind together people in ritual and into a community. The goal of this class is to interpret how food habits function beyond providing calories and sustenance. Films from Latin America will be used as an entrée to discussing topics of food as medicine, family/community, and gender and as links to the history of Latin America. Students will have the opportunity to attend live HD broadcasts of Verdi's La Traviata and Tchaikovsky's Eugene Onegin from the Metropolitan Opera. No musical skills required.

Area: Humanities

Writing Intensive

AS.211.368. Program Abroad: Italies: Politics, Culture, and Society. 3 Credits.

Course in Italian culture offered on the JHU summer program in Bologna. Open to students on the JHU Bologna Summer Program only. Permission required.

Area: Humanities

AS.211.369. We Conduct: Editing a Documentary. 3 Credits.

This course will provide a hands-on opportunity to work with film director and professor of media studies Bernadette Wegenstein in the editing process of We Conduct, a documentary about the magic of orchestral conducting and the changing face of those who are called to this vocation. The film follows famed conductor Marin Alsop as she breaks new ground in her already distinguished career. The film was shot predominantly in Baltimore, but also in New York, São Paulo, Vienna, Lucerne, and London, with Shana Hagan (Los Angeles) as Director of Photography, additional cinematography by Judith Benedikt (Vienna), and John Benam (Baltimore). During the semester we will be looking at the various narratives in their rough format, and see the film take shape from treatment to full-fledged documentary narrative. Editor Victor Livingston based in Los Angeles will come to work with the class twice during the semester.

Area: Humanities

AS.211.374. Gendered Voices. 3 Credits.

The course will explore the notion of 'voice' in order to show how poetry, literature, philosophy, and music have been dealing with it throughout the ages. In particular, by focusing on classical figures such as the Sirens, Circe and Echo, as well as by considering the seminal discussions of the 'voice' in Plato and Aristotle, the course will address the gendered nature of the voice as a tool to seduce and manipulate the human mind. More specifically, the course will discuss the ways in which male, female, queer, gendered and un-gendered voices embody different functions. Course materials include classical, medieval and early modern sources as well as later rewritings of myths concerned with the voice by authors such as Jules Verne, Karen Blixen, Giuseppe Tomasi di Lampedusa, and Italo Calvino. A selection of theoretical works (e.g. Cavarero, Silverman, Dollar, Butler) will also be discussed. The course is taught in English and all materials will be available in English translation; Italian majors and minors should enroll in section 2.

Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.211.380. Modern Latin American Culture. 3 Credits.

Taught in Spanish. This course will explore the fundamental aspects of Latin America culture from the formation of independent states through the present—in light of the social, political, and economic histories of the region. The course will offer a general survey of history of Latin America, and will discuss texts, movies, songs, pictures, and paintings, in relation to their social, political, and cultural contexts. May not be taken satisfactory/unsatisfactory.

Prerequisite(s): AS.210.312

Area: Humanities

AS.211.390. Modern Spanish Culture. 3 Credits.

This course will explore the fundamental aspects of Spanish culture from the nineteenth to the twenty-first centuries. The course will offer a general survey of the history of Spain and will discuss texts, movies, songs, pictures, and paintings in relation to their social, political, and cultural contexts. This course will be of particular interest for students planning on spending a semester abroad in Spain—especially for those students going to the JHU Fall Semester in Madrid, at Carlos III University. Taught in Spanish. Recommended Course Background: AS.210.311 or appropriate Webcast score. NOTE: THIS COURSE IS NOW AS.215.390 as of 3/27/17

Prerequisite(s): AS.210.312

Area: Humanities

AS.211.394. Brazilian Culture & Civilization. 3 Credits.

The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. Section 01: 3 credits in ENGLISHSection 02: 4 credits in Portuguese (instructor’s permission required)

Writing Intensive
AS.211.397. Program Abroad: Brazilian Culture & Civilization. 3 Credits.
Summer Abroad Program. Intensive language and culture program offered in Rio de Janeiro, Brazil. The Culture and Civilization course strengthens students’ language skills while deepening their understanding of Brazilian history and culture. Pre-req: 1 semester of Portuguese or 1 year of Spanish. Open to Brazil Program applications only. Course must be taken for a letter grade.
Area: Humanities
Writing Intensive

AS.211.400. Topics in Romance Literatures. 3 Credits.
This course provides an introduction to Romance Literatures from their origins to the present day. Topics and texts discussed vary year-to-year (e.g. the idea of progress in modern Europe; literature and war; poetry and music in medieval and Renaissance Europe). Special attention will be given to how Romance literatures and cultures have evolved in dialogue with each other throughout the centuries. The main language of teaching and discussion will be English, but students will be encouraged to read the materials in the original language compatibly with their skills. The course is a requirement for the Romance Languages and Literatures major
Area: Humanities
Writing Intensive

AS.211.401. La France Contemporaine. 3 Credits.
Students will explore contemporary French society and culture through a wide variety of media: fiction and non-fiction readings (graphic novels, news periodicals, popular magazines), films, music, art, websites, and podcasts. A diverse range of hands-on activities in addition to guided readings will help students develop cultural awareness as we discuss topics such as education, politics, humor, sports, cuisine, immigration, slang, and national identity, as well as the historical factors that have influenced these facets of French and francophone culture. Recommended Course Background: AS.210.301 or AS.210.302 or permission of instructor.
Area: Humanities
Writing Intensive

AS.211.415. Thomas Mann’s ‘The Magic Mountain’. 3 Credits.
Taught in English. Stranded for seven years in an Alpine sanatorium, a young engineer is granted a highly unusual education, one that is at turns hilarious and stirring. He gains initiation into the mysteries of life, death, and love, and finds himself caught in the middle of dazzling arguments animated by the ideological conflicts of a continent on the brink of world war. A unique blend of comic portrayal, essayistic reflection, and ironic narration allows Mann to develop an absorbing panorama and an acute diagnosis of cultural crisis, making his novel from 1924 a key work of modernism. We will discuss the novel against the backdrop of the cultural currents and political developments to which it responds.
Area: Humanities

AS.211.421. Almodóvar Measure for Measure. 3 Credits.
A select few films from Spain’s renowned director and top cultural mule. Focus on inter species identities, cyborg antics, mythmaking through the altering of memories and remade of Hollywood studio and post-studio celebrities in the spectrum of perversion.
Area: Humanities

AS.211.445. Rogues, Tricksters, and Saints: Boccaccio’s Decameron. 3 Credits.
Boccaccio’s Decameron (1352), a collection of 100 short stories, ranges from the bawdy through the cynical to the romantic and even fantastic. It has inspired numerous writers, artists, musicians and film-makers. We will read Boccaccio’s masterpiece on its own terms and in relation to the development of story-telling, from gossipy “news” (novelle) to artistic short story, theatrical adaptation, literary fairy-tale, and the fantastic. The Decameron will be compared with its forerunners in saints’ lives, bawdy fabliaux, and moral exempla, and with its literary, theatrical, and cinematic imitators in Italy and Europe. Italian graduate students and undergraduate majors will attend an extra weekly meeting conducted in Italian.
Prerequisite(s): Students may not have taken AS.214.445.
Area: Humanities
Writing Intensive

AS.211.477. Witchcraft and Demonology in Literature and the Arts. 3 Credits.
Who were the witches? Why were they persecuted for hundreds of years? Why were women identified as the witches par excellence? How many witches were put to death between 1400 and 1800? What traits did European witch-mythologies share with other societies? After the witch-hunts ended, how did “The Witch” go from being “monstrous” to being “admirable” and even “sexy”? Answers are found in history and anthropology, but also in theology, literature, folklore, music, and the visual arts, including cinema.
Prerequisite(s): Students who have already taken AS.214.171 cannot take AS.211.477.
Area: Humanities
Writing Intensive

AS.211.479. Dante’s Journey through the Afterlife. 3 Credits.
Dante’s Divine Comedy presents a complete picture of the medieval world-view in all its aspects: physical (the structure of the cosmos), historical (the major actors from Adam to Dante himself) and moral (a complete system of right and wrong). Dante shows how the Christian religion portrayed itself, other religions, the nature of God, humans, angels and devils, and human society. We will explore these topics both from the viewpoint of Dante’s own time, and in terms of its relevance to our own societal and cultural concerns.
Prerequisite(s): AS.214.479
Area: Humanities
Writing Intensive

AS.211.480. Religious Themes in Film and Literature. 3 Credits.
This course would be of interest to anyone who would like to learn about the intersection of religion and modern culture. At the center of the course will stand a close study of the representation of religious themes and their role in modern literature and cinema. The works which we will deal with are not considered religious and yet they include religious themes as part of their narrative, images, language or symbolic meaning. We will trace in various works from various countries and genre, themes such as: divine justice, providence, creation, revelation, the apocalypse, prophecy, sacrifice and religious devotion. We will also study the ways in which Biblical and New Testament stories and figures are represented in these works. The course will have a comparative nature with the aim of learning more about the differences between the literary and cinematic representations.
Area: Humanities

AS.211.500. Independent Study-Portuguese Culture. 0 - 3 Credits.

AS.211.501. Independent Study-French Culture. 0 - 3 Credits.
AS.211.566. Independent Study - CAMS/undergraduate. 1 - 3 Credits. requires permission of instructor Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Area: Humanities

Forgery is an eternal problem. It is a literary tradition in its own right, with connections to politics, Classics, religion, philosophy, and literary theory. Spurious writings impinge on social and political realities to a degree rarely confronted by criticism. This course offers a reading of the sort traditionally reserved for canonical works of poetry and prose fiction, spotlighting forgery's imaginative vitality and its sinister impact on scholarship. Students will study manuscripts and incunabula drawn from JHU's Bibliotheca Fictiva, the world's premier collection of literary forgeries.
Prerequisite(s): Students cannot have taken AS.214.606.
Area: Humanities Writing Intensive

AS.211.623. Reading Modern Hebrew Literature.
"And Jesus was a Jew with ear-locks and prayer shawl" claimed Uri Zvi Greenberg, the ultra-nationalist giant of modern Jewish poetry. A flesh-and-blood Jew, a demon, a spoiled student, an idol, a suffering brother, a (failed) Messiah, a nationalist rebel, a Greek god in a Jewish garb – these images of Jesus accompanied Jewish thought and literature for almost two thousand years. This course will study these images through a close reading of major Jewish texts from the Talmud to modern times.
Area: Humanities

AS.211.640. The Literature of Existence.
This seminar will explore some key expressions of what could loosely be called existentialist writing from the early twentieth century to the present day, to the end of coming to terms with an emerging "new politics of existence." While there will be some emphasis on Spanish language materials, including writings by José Ortega Y Gasset, Miguel de Unamuno, María Zambrano, and Jorge Luis Borges, we will also be reading important works by Martin Heidegger, Jean-Paul Sartre, Simone de Beauvoir, Albert Camus, and Martin Hägglund.
Area: Humanities Writing Intensive

AS.211.641. Women Filmmakers from the Margins.
Filmmaking remains an overwhelmingly male-dominated profession, but women are making significant inroads, and in so doing are leaving their distinctive mark on the medium. In this seminar we will examine the films of a group of women auteurs (those who write and direct their own films) who have endeavored to speak from the margins—be they social, geographical, or sexual—and whose work has challenged mainstream cinematic norms. The filmmakers whose work we will analyze may include Jane Campion, Australia; Aurora Guerrero, Mexico-USA; Claudia Llosa, Peru; Mira Nair, India-USA; Marialy Rivas, Chile; So Yong Kim, Korea.
Area: Humanities Writing Intensive

This interdisciplinary graduate seminar examines the work of women writers, directors, and photographers in modern and contemporary Italy. We shall explore the question of female authorship and themes such as female subjectivity and mobility, women's participation in, or exclusion from, history. We shall read foundational texts such as Elsa Morante's La storia (1974), Anna Maria Ortese's collection of short stories Il mare non bagna Napoli (1953), and more contemporary novels such as Giolanda Sapienza's L'arte della gioia, and Elena Ferrante's L'amore molesto (1995). In the second part of the semester, we will study the work of female directors from different generations, from pioneer Elvira Notari, to mid-century Cecilia Mangini, and contemporary Alice Rohrwacher, as well as the work of photographers such as Carla Cerati and Letizia Battaglia.
Area: Humanities

AS.211.666. Graduate practicum: Mapping the Scholarly Landscape I (Research Skills).
From online resources to core printed reference works, this course acquaints students with the range of scholarly apparatus in the field of literary and cultural studies, with attention to issues of access, retrieval, and research. The course, which is required for all first-year graduate students in GRLL, will be conducted in six (6) two-hour sessions.
Area: Humanities

AS.211.667. Graduate practicum: Mapping the Scholarly Landscape II (Tools for Professional development).
Spring Semester (coordinated by GRLL faculty with the participation of advanced grad students)1. Preparing a syllabus, marketing your classes (DTF, Summer, Intersession) [with the participation of successful DTF/Intersession instructors]Options for online teaching2. Writing a conference paper abstract; conference presentations 3. Organizing a conference/symposium [led by advanced grad students]4. How to get published (what, when, where)5. Academic review writing6. Options for fellowships/grants/career development
Area: Humanities

AS.211.707. Film and Philosophy: The Surrealist Cinema of Alejandro Jodorowsky.
The films of Chilean cult director Alejandro Jodorowsky have confounded, infuriated, and intrigued critics and audiences alike throughout his 50-plus-year career. In this seminar we will examine the expanse of his cinematic production in order to delve into fundamental philosophical questions of representation, violence, and the relation between visual imagery and poetry.
Area: Humanities Writing Intensive

AS.211.711. Adapting Myths for the Screen.
In this course we will look at examples of adaptations of sacred narratives for the screen from Pasolini's adaptations of the gospels to Disney's adaptations of Grimm, and the recent boom of 21st century fairy-tale films; we will be reading Jack Zipes' The Enchanted Screen, and Fairy-tale Films Beyond Disney, ed. Jack Zipes, and Sacred Narratives: Readings in the Theory of Myth, ed. Alan Dundes, among others.
Area: Humanities Writing Intensive
**AS.211.713. The Culture of Algorithms.**
This course proposes a study of the culture of algorithms for students of the literate space. True (deep) literacy is the ability to interpret a text or an object in its cultural, historical, conceptual, material or political contexts. With the evolution of digital cultures, literate practices have changed to incorporate the emerging cultural paradigms born out of the encounter of algorithms and computability with social practices embedded in the earlier literate traditions. Indeed, modern computation environments invite a new algorithmic hermeneutics grounded in both literate and scientific traditions. We will consider, among others, texts such as Bernard Chazelle’s inaugural lesson at the Collège de France, “L’algorithmique et les sciences”; Leibniz on ordered problem solving; Condorcet on “social arithmetic”; Norbert Wiener, God and Golem, Inc.; Herbert Simon, “Bounded Rationality…”; Alan Turing, ‘Computing Machinery and Intelligence’; Steven Wolfram: Computation and the Future of the Human Condition; Leslie Valiant, Probably, Approximately Correct; Ed Finn, What Algorithms Want. Imagination in the Age of Computing; Daniel Cardon, À Quoi rêvent les algorithmes?; and of course Donald Knuth’s classics, Literate Programming and “Computing Science and its Relation to Mathematics”. Various modern novels also attempt to engage with the algorithmic, and these can form a counterpoint to the more technical or philosophical texts. For more information and a provisional syllabus, please go to http://www.wilda.org/Courses/CourseVault/Grad/Algorithms/Syllabus.html. This course will be taught in English. A few (short) texts are in French, so the ability to read French will be useful although not required.

**Area: Humanities**

**AS.211.714. Ariadne’s Threads: Metamorphosing Mythologies.**
Abandoned by Theseus, Ariadne lamenting on the shore of Naxos embodies one of the most powerful tropes in literature and the arts. The fate of the heroine who helped Theseus out of the labyrinth became herself a thread (indeed, an inexhaustible series of threads) running across the ages and populating the imagination of poets, painters, composers. After exploring in detail the classical sources that canonized Ariadne’s myth (Catullus, Carmina, 64; Ovid, Heroides, 10) as well as references to the myth found in other classical authors (Homer, Hesiod, Pausanias, Plutarch, Propertius), we will turn to the reception of Ariadne in literature and music (Ariosto, Rinuccini-Monteverdi, Haydn, Nietzsche, Strauss-Von Hofmannsthal). The analysis of the various case studies will focus on the rhetorical and poetical devices used by poets and composers to reenact the vocal features of Ariadne’s lament.

**Area: Humanities**

**AS.211.727. Humanity in Question.**
Although it is often assumed that any inquiry into the human inevitably leads to pernicious forms of anthropocentrism, current debates about the Anthropocene suggest that we avoid such reflection at our own peril. Drawing on philosophy, biology, and sociology, Helmuth Plessner’s Levels of Organic Life and the Human: An Introduction to Philosophical Anthropology (1928) offers a powerful account of humans’ ‘excentric positionality’, whose key ideas Plessner would further flesh out in his Political Anthropology (1931). Plessner’s 1928 book was overshadowed, however, by the near-simultaneous appearance of Being and Time and Heidegger’s imperious dismissals of philosophical anthropology. Disturbed by Heidegger’s blindspot and its political consequences, during the World War II Hans Jonas, one of Heidegger’s most original students, began to outline a conception of organic life as “an experiment with mounting stakes,” with the highest stakes reached in human freedom. That conception, fully elaborated in The Phenomenon of Life: Toward a Philosophical Biology (1966), would serve as the basis for Jonas’s influential theory of bioethical and ecological responsibility. Now that Plessner’s key works are finally available in English translation, a joint examination of his, Heidegger’s, and Jonas’s conceptions is in order. We will ask what these three thinkers have to tell us about our current situation.

**Area: Humanities**

**AS.211.732. The Literature of Speculative Genres: Science Fiction, Bandes dessinées, MMOGs, Mangas…**
The francophone and anglophone worlds have longstanding distinct if complementary traditions for staging the primordial literary gesture, the imagining of the “What if”. This course will confront the two cultures in early works like Cyrano de Bergerac’s Histoire comique des états et empires du soleil, C. N. Ledoux’s utopian workers’ paradise, or Jules Verne’s novels. It will then address the modern literate spaces in which the two traditions cross-fertilize each other— for example the French reception of Philip K Dick’s oeuvre, Korogodski’s Pink Noise-A Posthuman Tale, Catherine Dufour’s Le Goût de l’immortalité, cyberpunk, mangas co-authored by francophone artists and writers, the “9e art” of the high graphic novels, especially the Cités obscures of Schuiten and Peeters, or hybrid French/anglophone MMOG communities like Ubisoft’s Assassin’s Creed. The materials will be in French or English, so the ability to understand French is necessary, with class discussion in English. Undergraduates are welcome with permission of the instructor, and this course may count for the French major or minor.

**Area: Humanities**

**AS.211.748. Media Theory in the Age of Big Data.**
This seminar will explore some key themes in contemporary media theory in an age when five tech giants have succeeded in infiltrating the daily lives of global citizens to an unprecedented degree in history. We will study the impact of this saturation on socioeconomic inequality as well as the implications of an almost total loss of privacy. Among the strategies of resistance to the capacity for surveillance these companies have developed we will focus in particular on current examples of feminist media art and voices from the global and cultural periphery as well as tendencies in these practices to emphasize a return to interpersonal connections and the embodied here and now. As case studies we may include #metoo, slo-film movements from Southern Bahia in Brazil, and the financing and distribution of art films by mega media companies like Netflix.

**Area: Humanities**
AS.211.753. The Renaissance Comic Romance.
In the fifteenth and sixteenth centuries, Italian and French humanists transformed the medieval adventure stories of Charlemagne's and Arthur's knights. The course concentrates on Luigi Pulci's earthy, bourgeois Morgante, Teofilo Folengo's Macaronic (Latin/Italian dialect) Baldus, and Rabelais's encyclopedic Gargantua and Pantagruel, combining close analysis of their linguistic and narrative fabric with examples of their influence on later comic narrative masterpieces.
Area: Humanities
Writing Intensive

AS.211.754. Modernist Primitivism.
This course will explore the aesthetics and politics of primitivism in European modernity, focusing on the visual arts and literature in German and Yiddish, but looking at the wider European context, including France and Russia. We will begin with the backgrounds of primitivism in Romanticism, looking especially at its ethnographic and colonial sources. We will then focus on the presence of anthropological and ethnographic discourses within various registers of modernist thought, literature, and visual culture, with special attention to visual and literary primitivism. Our central concerns will include: the attempt to create a modernist aesthetics grounded in ethnography; the primitivist critique of modernity; the place of primitivism in the historical avant-garde; the development of the notion of "culture" in modernity; and the aesthetics of modern ethnic and national identity. Key thinkers, artists, and writers to be considered include Herder; Gauguin; Picasso; Wilhelm Worringer; Carl Einstein; Hannah Höch; and Emil Nolde.
Area: Humanities

Criticism in the 21st century has tended to relegate psychoanalysis to a dustbin of fads that proliferated at the end of the prior century but that today are of interest only to balkanized cliques of devotees. Bucking this trend, this seminar will examine the intellectual history and abiding influence of psychoanalysis’s key critical concept: the unconscious. Basing our discussions on in-depth readings from key thinkers in the analytic tradition such as Freud, Lacan, and Klein, as well as the post-analytic philosophical tradition, including Zizek, Butler, Laclau and Mouffe, Deleuze and Guattari, and Jameson, we will work to distill an analytic tradition such as Freud, Lacan, and Klein, as well as the post-analytic philosophical tradition, including Zizek, Butler, Laclau and Mouffe, Deleuze and Guattari, and Jameson, we will work to distill an

AS.212.229. French New Wave. 3 Credits.
An exploration of the major films and directors of the French New Wave that is also designed to help students consolidate their skills in the analysis of film. The course will examine the origins of the French New Wave, looking at the directors as critics and as passionate film fans, along with the institutional and historical context of the films. It will also ask how the French New Wave changed the process of filmmaking, and transformed the way we think about the director—inspiring more vocations in filmmaking than any other movement in cinema history. Conducted in English.
Area: Humanities

AS.212.301. Impossible Freedoms: Speed, Stillness, and Experience. 3 Credits.
An examination of French literary depictions of ways in which speed and human locomotion influence the experience of place and time. What happens when life speeds up so much that the world goes by faster than we are able to process it? Would slowing down allow for a different type of spatio-temporal experience? Authors include Victor Hugo, George Sand, Émile Zola, Ernest Hemingway, and André Gide among others. Students wishing to take the class for French major or minor credit should enroll in section 2.
Area: Humanities
Writing Intensive

AS.212.308. The Battle of the Sacré Coeur in Fin-de-Siècle Paris. 3 Credits.
This interactive course analyzes the stakes underlying the construction of Paris’ controversial Sacré-Cœur Basilica in Montmartre. In the light of heated 19th-century debates on moral authority that opposed religious believers and partisans of a secular state inspired by a scientific ethos, we will consider how the advocates of both sides use specific rhetorical techniques in the public domain (newspaper articles, caricatures, speeches) and artistic devices (paintings, literary writings) to convince their audience of the validity of their claims. In other words, it is all about propaganda. The course will open out onto contemporary debates that show similar ethical conflicts. Recommended Course Background:
AS.210.301 or AS.210.302.
Area: Humanities

AS.212.315. Literature, Flight, Action. 3 Credits.
Flight is often conceived as a means of avoiding danger. It can also be seen fundamentally as a refusal of social and sexual categories and as resistance to the present order. By examining modern and contemporary literary works in French by authors on the margins from Rimbaud to Danziger, we will see how 'la fuite' allows for the invention of oneself as well as for the construction of worlds by innovative formal means. Course materials in French; taught in French.
Area: Humanities

AS.212.318. Women in French Literature of the 17th and 18th Centuries. 3 Credits.
This course will examine the changes in the relationship of women to literature in France before the French Revolution from several points of view: (1) What were the social and intellectual contexts of gender distinctions? (2) How did men writing about women differ from women writing about women? (3) How were these questions affected by the changing norms of literary productions? Texts by Mme. de Sévigné, Molière, Mme. de Lafayette, Prévost, Diderot, Rousseau, Laclos, and Beaumarchais.
Area: Humanities
Writing Intensive
AS.212.331. Paris 1900. 3 Credits.
Held in Paris, the 1900 World’s Fair introduced to the modern world such striking innovations as subways, moving images on giant screens, escalators, colossal electrical shows, and the first painting by Pablo Picasso to be shown on French soil. Focused on key cultural and socio-political events surrounding this momentous turn-of-the-century display of wealth and power, this course examines the paradoxes of a modernizing French nation which even as it promoted individual rights alongside technology and economic growth was headed towards world conflict. Students will perform original research by exploring the rare book collection at JHU as well as the substantial digital archives now documenting the period.
Area: Humanities

AS.212.333. Introduction à la littérature française. 3 Credits.
Introduction à la Littérature française I (212.333) and II (212.334) propose reading and discussion of texts of various genres from the Middle Ages to the 21st century. This sequence is intended as an introduction to the methods, questions, and techniques of textual analysis through intensive reading, discussion, and production of written texts. Introduction à la littérature française I covers some of the greatest classics of French literature and thought from the Middle Ages to the Revolution. The two semesters may be taken in either order. This sequence is a pre-requisite to all further French and francophone literature courses. Students may co-register with an upper-level course during their second semester. Recommended Course Background: AS.210.301-AS.210.302 or at least one semester of AS.210.301-AS.210.302 with a grade of A and written permission of the instructor. This course is taught in French
Prerequisite(s): AS.210.301 OR AS.210.302
Area: Humanities
Writing Intensive

AS.212.334. Introduction à la littérature française II. 3 Credits.
Readings and discussion of texts of various genres covering the time period from the Revolution to the 20th century. This sequence is a pre-requisite to all further literature courses. Students may co-register with an upper-level course during their second semester.
Prerequisite(s): AS.210.301 OR AS.210.302 or at least one semester of AS.210.301 or AS.210.302 with a grade of A and written permission of the instructor.
Area: Humanities
Writing Intensive

AS.212.340. Topics in French Cinema: Immigration, identité, différence culturelle. 3 Credits.
An exploration of immigration, identity, and cultural differences through the lens of recent French and Francophone films. Focus on discussion and analyses of film sequences in class and on oral presentations. Students will have the opportunity to progress in vocabulary and oral analyses of film sequences in class and on oral presentations. Additional assignments will involve vocabulary and grammar study. Recommended Background: completion of AS.210.301 or equivalent score on placement test
Area: Humanities

AS.212.342. Topics in French Cinema: Le crime dans le cinéma. 3 Credits.
Focus on French crime films, thrillers, and films noirs. Films studied will include movies by Jean-Pierre Melville, Dassin, Godard, Chabrol; French responses to US genre movies and to Hitchcock, and contemporary versions of the crime film in France (Jacques Audiard, Michael Haneke).
Strong focus on discussion and analyses of film sequences in class and on oral presentations. Additional assignments will involve vocabulary and grammar study. Recommended Background: 210.301 or 210.302 or equivalent score on placement test
Area: Humanities

AS.212.344. Topics in French Cinema: Amour, Sexualité, Mariage. 3 Credits.
What is the nature of desire? Where does it come from, and what determines and conditions it? What do we fall in love with when we fall in love? An exploration of a series of films that ask essential questions about the psychological, political, and social stakes of human love, desire and sexuality, and about the institution of marriage. Focus on discussion and analyses of film sequences in class and on oral presentations.
Students will have the opportunity to progress in vocabulary and oral expression. Films studied include works of Truffaut, Godard, Bunuel, Kechiche, Haneke, Breillat and Audiard. Requirements for this course: completion of 210.301, 201.302, or equivalent score on Placement test.
Area: Humanities

AS.212.345. French in Switzerland. 3 Credits.
Nearly 30% of the Swiss are native French speakers. But what do we really know about them, what distinguishes them from French speakers in neighboring France? While the language both speak is identical, their social and cultural practices set them worlds apart: the way they interact socially, engage politically, think imaginatively, engage with nature, cook and even love. This highly interactive course explores the social and cultural practices of the French Swiss and how they came to play a key role in national and international critical and political thought; we will analyze how, in a nation composed of four different language groups and an immigrant population of nearly 20%, the French Swiss contribute to maintaining the country’s highest standard of democratic practices; likewise, from an international perspective, we will study how French Switzerland developed a historic role in providing and enabling peaceful forums for international dialogue and peace talks (UN, WHO, Uff, etc.)
Prerequisite(s): AS.210.301 OR AS.210.302
Area: Humanities

AS.212.353. La France Contemporaine. 3 Credits.
Students will explore contemporary French society and culture through a wide variety of media: fiction and non-fiction readings (graphic novels, news periodicals, popular magazines), films, music, art, websites, and podcasts. A diverse range of hands-on activities in addition to guided readings will help students develop cultural awareness as we discuss topics such as education, politics, humor, sports, cuisine, immigration, slang, and national identity, as well as the historical factors that have influenced these facets of French and francophone culture.
Recommended Course Background: AS.210.301 or AS.210.302 or permission of instructor.
Prerequisite(s): Students may not have taken AS.211.401.
Area: Humanities
AS.212.363. The French Education System: Culture, Class, Race, and Religion in School. 3 Credits.
This course is an overview of the French education system and questions of race, religion, social class, and culture as they relate to public schools. We will study a variety of art forms including film, music, and literature to analyze the relationship between art, public discourse, and education policy. Students wishing to take the class for French major or minor credit should enroll in section 2.
Area: Humanities

AS.212.402. The Count of Monte Cristo and its Avatars. 3 Credits.
Alexandre Dumas’s Le Comte de Monte Cristo (1844-46) is widely regarded as one of the most popular novels of all time and as one of the best adventure novels ever written. Perhaps no other masterpiece of French literature has been subjected around the world to such countless film adaptations, including animation, television series, and serials. This course aims to study and contextualize the reasons behind this sustained transnational and transcultural interest. Close reading and analysis of Dumas’ novel will provide a good point of departure to explore problems that cut across nineteenth-century French society: politics, social class, revolution, family, love and desire, revenge, justice, science, and religion. Course conducted in French; most films in English or with English subtitles.
Area: Humanities

AS.212.431. Style, Gender and Politics from Marie-Antoinette to the Burqini. 3 Credits.
From effeminate kings, to slutty queens, to post-revolutionary dandies, to the manifest invisibility adopted by some French citizens today, debates on the gendering and styling of political bodies have always been central to power struggles in France. Students will read from sociology, history and literature in order to understand the complex interplay among fashion, gender and political identity. Taught in English, but French minor/major credit possible by completing written work in French and by attending a weekly discussion section conducted in French. Recommended Course Background: AS.212.429
Area: Humanities

AS.212.432. The Dreyfus Affair: Lying for Truth. 3 Credits.
In 1894 French military captain Alfred Dreyfus was found guilty of a crime of treason he did not commit. The true reasons for his arrest are still under debate today: was this a sheer act of antisemitism? Why did the army create false proof against a man they knew was innocent? What was the role of the press in propagating the Affair? This course proposes to approach the Dreyfus Affair in all its complex forms, while encouraging students to carry out original and innovative research based on a wide range of resources (caricatures and articles in the press, pamphlets, paintings, films, music, photographs, court transcripts, government archives, private letters, and hopefully more).
Area: Humanities

AS.212.333-334. The Enlightenment: Montesquieu, Rousseau, Beaumarchais, Condorcet, Robespierre, Mme de Stael and the revolutionary theater. Recommended Course Background: AS.212.333-334
Area: Humanities

AS.212.335. The French Revolution in relation to the literature and political thought of the Enlightenment: Montesquieu, Rousseau, Beaumarchais, Condorcet, Robespierre, Mme de Stael and the revolutionary theater. Recommended Course Background: AS.212.333 or AS.212.334.
Area: Humanities

AS.212.336. The French Revolution. 3 Credits.
AS.212.337. The French Culture Industry: Cinema, TV, Music. 3 Credits.
AS.212.338. French Literature in the Modern Era. 3 Credits.
AS.212.339. The French Education System: Culture, Class, Race, and Religion in School. 3 Credits.
Area: Humanities

AS.212.340. French Honors Thesis. 3 Credits.
An in-depth and closely supervised initiation to research and thinking, oral and written expression, which leads to the composition of a senior thesis in French. Recommended Course Background: AS.212.429
Area: Humanities

AS.212.423. Reason and Revolution. 3 Credits.
The French Revolution in relation to the literature and political thought of the Enlightenment: Montesquieu, Rousseau, Beaumarchais, Condorcet, Robespierre, Mme de Stael and the revolutionary theater. Recommended Course Background: AS.212.333 or AS.212.334.
Area: Humanities

AS.212.429. Honors Thesis Prep. 1 Credit.
This course will meet three times during the Fall semester to enable all French majors to prepare their thesis subject, thesis bibliography, and abstract prior to the writing of the Senior Thesis (AS.212.430) in the Spring semester of their senior year. This course is required of all French majors and must be taken during the Fall semester of their senior year. Schedule TBA upon consultation with the class list, as there are only three group meetings. The rest of the meetings are in individual appointments with the DUS or another chosen French professor. Prerequisite(s): AS.212.333-334 and either prior enrollment or concurrent enrollment in AS.210.417 Eloquent French.

AS.212.430. French Honors Thesis. 3 Credits.
Area: Humanities

Area: Humanities

AS.212.432. The Dreyfus Affair: Lying for Truth. 3 Credits.
Area: Humanities

AS.212.433. Reason and Revolution. 3 Credits.
The French Revolution in relation to the literature and political thought of the Enlightenment: Montesquieu, Rousseau, Beaumarchais, Condorcet, Robespierre, Mme de Stael and the revolutionary theater. Recommended Course Background: AS.212.333 or AS.212.334.
Area: Humanities

AS.212.429. Honors Thesis Prep. 1 Credit.
This course will meet three times during the Fall semester to enable all French majors to prepare their thesis subject, thesis bibliography, and abstract prior to the writing of the Senior Thesis (AS.212.430) in the Spring semester of their senior year. This course is required of all French majors and must be taken during the Fall semester of their senior year. Schedule TBA upon consultation with the class list, as there are only three group meetings. The rest of the meetings are in individual appointments with the DUS or another chosen French professor. Prerequisite(s): AS.212.333-334 and either prior enrollment or concurrent enrollment in AS.210.417 Eloquent French.
AS.212.436. Cultures of Love. 3 Credits.
From the time of its invention, as a kind of counterfeit religion, in the Hispanic-Arabic world, love has been an unsettling, paradoxical, transgressive phenomenon: mystical, adulterous, con game, parlor game, poison, illness. Taking a literary, sociological and anthropological approach, this course will try to grasp some of the challenges posed by love's protean discourse: from the fin'amor born in women-ruled Medieval courts, to the language of 17th-century women mystics, to libertinage, to the cold intimacies of today's emotional capitalism. Taught in French.
Prerequisite(s): AS.210.301
Area: Humanities
Writing Intensive

AS.212.437. Diderot and the French Enlightenment. 3 Credits.
Denis Diderot's early work was dominated by his work on the natural sciences and the Encyclopédie. In later years, his literature addressed the social applications of knowledge: economic, anthropological, political, and moral issues structured his aesthetic concerns. As an author in continual conversation with his contemporaries and who was instrumental in the creation of an engaged intellectual community, his fiction, philosophical texts and critical works serve as the ideal lens to bring into focus the peculiarities of the French Enlightenment. Among the texts to be considered will be articles from the Encyclopédie, the Supplément au voyage de Bougainville, Le Rêve de d'Alembert, the Salon de 1767, Le Neveu de Rameau, extracts from his Essai sur les règles de Claude et de Nérón... This class will be taught in French. Recommended Course Background - AS.212.333
Area: Humanities
Writing Intensive

AS.212.442. Souvenirs de la France occupée 1940-1944 [Memories of Occupied France, 1940-1944]. 3 Credits.
How have writers and filmmakers active in France since World War II shaped the collective memory of German occupation, deportation, and liberation, both forging and contesting myths of the French nation through the wartime experience of resistance and collaboration? In what ways do distinct modes of written and audiovisual expression (fiction, testimony, documentary) conjoin with individual or group perspectives to color our understanding of France's "dark years"? See full description here: http://grll.jhu.edu/french/undergraduate/courses/
Area: Humanities

AS.212.445. French romanticism across the arts. 3 Credits.
This course is designed to introduce you to a glamorous moment in French culture and the arts, namely the first half of the nineteenth-century. This was a time when talent and ingenuity, and a desire to mend the wounds left by war and terror created an aesthetic movement that brought its own form of revolution. What was it like then to be in Paris in the theater, at the ballet, in literary salons, at concerts, at the opera? How did such "cultural productions" shape the imagination and nourish the creative endeavors of many artists and writers? As there was no camera to document this moment, we'll need to rely on writers to describe or, even better, evoke a universe of new aesthetic experiences that richly shaped the nineteenth-century literary world. What were these new visions and personal dreams? Why the exoticism? What was it like to live in a time that made it possible to carry your heart on your sleeve without ridicule? Literary writings will be our archive, as we explore such cultural offerings as romantic ballet, the stage (both as opera and theater), collaborations between musicians and writers, and translations of major romantic themes across the arts. With the help of texts and visual as well as musical examples, we will try to imagine what it means to declare yourself "un romantique." Modern film excerpts and productions of romantic art will help us see the lasting effects of this period of cultural effervescence. Among the authors and creators whose work we will study are Victor Hugo, Nerval, Gautier, Baudelaire, Chopin and George Sand, Berlioz., Taglioni, as well as Shakespeare in French. Recommended Course Background: AS.212.302 and either AS.212.333 or AS.212.334
Area: Humanities

AS.212.449. France, terre des migrations [French Histories of Migration]. 3 Credits.
Comme le Canada ou les Etats-Unis, la France est une grande terre d'immigration qui depuis le 19e siècle a accueilli sur son sol des populations du monde entier. En examinant témoignages, textes de fiction et films documentaires, nous suivrons les expériences contrastées de diverses vagues de migrants chassés par la faim, le chômage ou les persécutions. Quels mécanismes ont favorisé ou freiné l'intégration économique, sociale et civique de ces migrants qui ont rejoint la République française? Que veut dire "être immigré" aujourd'hui?
Prerequisite(s): AS.211.401
Area: Humanities

AS.212.452. The Character Function. 3 Credits.
What do we really mean when we talk about a 'character' in a discursive work? What are the structuring, esthetic and heuristic functions of such forms of agency? How has the concept of the character evolved from the early modern period to the present day? A sampling of the cases to be considered: Descartes, Racine, Marivaux, Diderot, Rousseau, Napoleon, Michelet, Zola, avatars and 'digital angels'. This course will be taught in French. Recommended Course Background - AS.212.333
Area: Humanities
AS.212.454. French Theater: Reading and Practice. 3 Credits.
Reading modern theater in French can be exciting: a battle waged with words instead of swords, a battle of wit and of style. The literature of the nineteenth century was marked by major literary battles opposing young Romantic writers against an old school of Academicians. This battle was fought largely in and through the theatre. In this course the classroom space itself becomes a stage in which to reenact or rehearse some of these battles, through careful readings of texts and by exploring all possible literary contexts. Participants will read together a number of plays as well as take part in collaborative learning and creative activities. Readings to include texts by Césaire, Dumas, Hugo, Marivaux, Musset, Scribe, Sartre, and Vigny. Readings and discussion in French.
Area: Humanities
Prerequisite(s): AS.212.596.

AS.212.470. Censorship in Language and Practice. From the Ancien Regime to Democracy. 3 Credits.
An exploration of the boundaries of acceptability when speaking about religion, government, sexuality and gender. Students will learn about the political, theological and legal basis of blasphemy and punishable behavior, and how they have changed from the time of divine-right monarchy to contemporary laicité. Selected readings ranging from the clandestine culture of free-thinkers and rakes in the 17th century, to the trials and causes célèbres of the Enlightenment, to modern-day democratic polemics.
Prerequisite(s): AS.210.302
Area: Humanities

AS.212.471. Jules Verne. 3 Credits.
An overview of the corpus of the author of the 'Voyages extraordinaires'. The patron saint of steampunk authors explored through his novels the transformation of the modern world resulting from the explosion of technological advances in the industrial age, yet he was also an astute and erudite historical thinker, an amateur anthropologist whose work reflected many of the prejudices and challenges of his colonizing contemporaries. A dabbler in the new human sciences and their role in the development of cultural models, he provides a unique entryway into the fin-de-siècle French mind set. This class will be taught in French. For more information, see http://www.wilda.org/Courses/CourseVault/Undergrad/Verne/Syllabus.htmlRecommended Prerequisites AS.212.333 or AS.212.334
Area: Humanities
Writing Intensive

Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &t; Online Forms.

AS.212.596. Independent Study - Spanish. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &t; Online Forms.

AS.212.598. Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &t; Online Forms.

AS.212.651. Romantisme et Indigénisme.
Le romantisme littéraire, en tout temps et en tout lieu, est contagieux. Ce qui a fait la force pérenne du romantisme français au XIXe siècle, c’est sa capacité de susciter de nouveaux modèles en France et de miroiter son élan esthétique au-delà des frontières nationales. Ce séminaire abordera principalement la question du romantisme français et la manière dont ses prologèmes ont été appropriées par une ancienne culture coloniale.
Area: Humanities
Writing Intensive

Literary critics from René Girard to Jacques Rancière assert that French literature of the 19th century— itself arguably the century of the novel— is fundamentally romantic. What does that mean? Is the French novel intrinsically romantic? Our discussion could well start with Girard’s Vérité romanesque et mensonge romantique, which presents a new conception of the novel in correlation with human philosophy, and concludes that the “roman romanesque” is not “romantique,” because romanesque adhered to the truthfulness of its subject while the romantic scenario is linked to its deceit. However, the real theoretical focal point is not the position of contemporary critics on romantic and non-romantic narrative scenarios, but the following characterization from 1903 of the “roman romanesque” by Academician Émile Faguet (1847-1916): “Ce n’est point du tout le roman à aventures extraordinaires et tumultueuses. Celui-là, je l’appellerais plutôt le roman mélodramatique. J’entends par roman romanesque celui qui, très délibérément, s’attache à nous présenter des caractères exceptionnels qui ne cessent pas d’être vrais.” The course will introduce the socio-cultural complexity of novelistic forms and techniques of the literary movement familiarly known among the critics as “le romanesque français” from the Restoration to the early Third Republic. Readings by Balzac, Constant, Dumas, Flaubert, Hugo, Sand, Stael, and Stendhal. Taught in French.

AS.212.684. Fabrique de la banlieue parisienne [The Making of the Paris Suburbs].
Parler de “la banlieue parisienne”, qu’est-ce à dire? Et si ce singulier induisait en erreur? Selon les époques, la banlieue fut tour à tour verte, grise, rouge ou néon vif. Apprêhendée à la croisée des discours sur l’urbain et des productions culturelles, elle est le lieu de conflits idéologiques entre le capital et le salariat, entre “le Français” et “l’étranger”, entre progressisme et nostalgie, entre droit et non-droit. La dialectique qui se tisse entre représentations artistiques (romans, photographies, films), pratiques sociales (arts de faire, modes d’habitation et de déplacement) et représentations idéales (urbanisme, architecture) formera l’objet de ce parcours critique embrassant un siècle de banlieue parisienne. Textes de Céline, Simenon, Queneau, Fallot, Rochefort, Daeninckx, Charéf, Djaidani; films de Duvisier, Dhéry, Godard, Rohmer, Cabrera, Ly. *Open to undergraduate French majors with permission of instructor.
Area: Humanities

AS.212.692. Research Methods.
Texts have lives. From handwritten manuscript to digital format, the various incarnations of the literary text have implications for literary scholarship. This course examines the many lives of a literary text and the issues of access, retrieval, and research. From online resources to the core printed reference works, this course acquaints graduate students with the range of scholarly apparatus in the field of literary studies.
AS.212.696. Literature Confronts Science: Zola.
Zola worked with the theories of heredity of his time in the Rougon-Macquart novels. He also attempted to use his understanding of biology and thermodynamics to reform the theory of the novel in general. This course will examine these two different effects of science on literature and try to see what leads an author to undertake such a project. For a more extended description, please see http://www.wilda.org/Courses/CourseVault/Grad/Zola/Syllabus.html. Advanced undergraduates with sufficient background may register for this course with permission of the instructor.

AS.212.699. Cultures of Criticism from the Classics to Foucault.
From fault-finding to the crossover of aesthetic and political judgment, criticism never loses sight of its medical cognates critical and crisis. This course examines the emergence and the transformations of critical judgment in the arts, culture, and politics, from the early days of its collision with French monarchical propaganda, to the critical genealogies of the Enlightenment, to the postrevolutionary critique of history, to Foucault's critique of practices of veridiction. Works by Perrault, Bayle, Diderot, Rousseau, Tocqueville, Cassirer, Koselleck, Derrida, Barthes, Bourdieu, Foucault. Taught in English; most texts available in translation, but knowledge of French recommended.

Area: Humanities

AS.212.705. Fictions d'espace: géopoétique du roman de langue française.
En quoi consiste et par quels moyens se construit l'espace dans les fictions littéraires ? Quelles fonctions y jouent les toponymes, les descriptions de lieux ou les trajectoires des personnages ? Quels contrats l'écrivain peut-il passer avec son lectorat à l'égard du statut des espaces traversés et décrits, qu'ils se fondent sur le « réel » ou qu'ils soient fabriqués de toutes pièces ? Seront abordées dans cette introduction à la géopoétique narrative des œuvres de Balzac, Maupassant, Giono, Gracq, Duras, Chamoiseau, Sony et Echenoz entre autres.
Area: Humanities

Writing Intensive

AS.212.707. French Documentary Filmmaking.
Overview of the history of French documentary filmmaking featuring works by Cavalier, Depardon, Epstein, Malle, Marker, Painlevé, Philibert, Resnais, Rouch, Simon, Varda, and Vautier. Emphasis will be placed on the rhetorical functions of editing and on the relation forged among filmmakers, their subjects, and the public. Extensive weekly viewing is required.
Area: Humanities

Writing Intensive

AS.212.725. Poe's French Legacies.
Edgar Allan Poe was considered a vulgar hack by many of his fellow Americans, but in 19th-century France, he was touted as a misunderstood poetic genius, the original _poète maudit_. Through the translations of Charles Baudelaire, who found in Poe a kindred spirit in the “goût de l’infini,” French intellectuals came to know the American writer as a fount of aesthetic wisdom, diabolical sensibility, and mystic mastery. In this course, we will study Baudelaire’s poetry as well as the many literary and artistic movements in France that were directly inspired by Poe’s uncanny mix of the macabre and the methodical: Symbolist poetry (Valéry, Mallarmé), the Scientific Fantastic (Maupassant, Villiers de l’Isle-Adam), fin-de-siècle Decadence (Huysmans, Odilon Redon), science fiction (Jules Verne), the detective novel (Emile Gaboriau), and 20th-century Surrealism (Breton, Max Ernst).
Area: Humanities

AS.212.726. Approches géopoétiques: théâtre, poésie, roman.
Chaque genre littéraire développe un rapport particulier à l’espace, tout autant qu’au temps. Au théâtre, l’espace est à la fois abstrait, dans la mesure où le texte théâtral fait subir au monde une réduction à l’extrême, et concret, en ce que la mise-en-scène actualise un ensemble de possibles devant le public. Dans le domaine de la poésie, l’espace fait l’objet d’évocations diverses et changeantes ; il peut être intensément présent ou être renvoyé à l’arrière-plan au profit de la seule voix, siège de la ‘conscience’ poétique. Le récit de fiction, lui, fort de sa visée mimétique, semble engendrer un imaginaire spatial plus marqué, que celui-ci se crée à partir de topoï communément admis ou qu’il intègre des précisions géographiques ou architecturales, comme le veut l’esthétique réaliste. Le but de ce séminaire sera de confronter ces trois imaginaires de l’espace en littérature, afin d’en arriver à une meilleure compréhension des ressources propres aux textes littéraires et de leur possible théorisation. Ouvrages et articles critiques d’UBersfeld, Collot, Westphal, Moretti, Bouvet et Camus; œuvres d’expression française, à lire en extenso ou sous forme d’extraits, de Corneille à Koltès, de Lamartine à Glissant, de Voltaire à Volodine...
Area: Humanities

Writing Intensive

AS.212.720. Le Livre Antillais: Culture/Écriture.
On s’arrête trop souvent pour souligner l’inexistence d’une véritable sphère du livre lorsqu’on aborde la littérature haitienne, mais assez rarement pour s’interroger sur la place de cet objet dans la fiction. Il semble que la représentation du Livre et ses avatars sont partout dans les œuvres des écrivains antillais depuis le 19esiècle. Car lire et écrire jouent un rôle non négligeable dans la représentation culturelle, esthétique et politique qu’ils se font de leur société qui subit une quelconque tyrannie. Ce séminaire sera consacré essentiellement à la question du livre dans un contexte antillais. Aussi s’interrogera-t-on sur la personne de l’auteur antillais, sa présence dans l’œuvre fictionnelle, sa conception féチ化isée du livre et de l’écriture au travers de l’esthétique, du social et du politique, en prenant pour exemples quelques romans de Marie Chauvet, René Depestre, Frankétiene, Fernand Hibbert, Dany Laferrière, Émile Ollivier, René Philoctète.
Area: Humanities

Writing Intensive
What is personal memory? This course offers both an in-depth journey through Proust’s Recherche and a way of tracing major scientific questions about the formation of memory in connection with autobiography and medical history. The process of human remembering – with its counterpart, forgetting – has emerged over the last thirty years as an extraordinarily rich field of investigation as well as of creative endeavors in the arts. Poised between literature and science, this course offers both an in-depth introduction to Proust’s ground breaking modern work on human time, A la recherche du temps perdu, and an investigation into a modern history of memory (a history that unfolds in the nineteenth and early twentieth century, and has made a surprising return in our contemporary understanding of remembrance). That Proust’s petite madeleine should have turned, in recent years, into the magical token of autobiographical recollection and provided, at the same time, an immensely productive clinical and neuro-scientific model of how memory works serves as our point of departure. That human memory is an experience and not merely a biological function – its existence depending on language – will be our running thread. Proust’s book, filled with immensely learned and complex descriptions of mnemonic processes, serves as our case-study. Proust’s investigations into remembering reveal fascinating aspects of the 19th century advances into the psychology and nosography of memory. These will in turn prompt us to read his work in light of present controversies in scientific research, as for example on the construction of memory, on “body-memory,” the interface between cognition and emotion, and the mind/brain debate. As it prompts many questions on the relation between fiction and experience, this journey through major themes of Proust’s quest for memory will invite a broader reflection on the relation between literary and philosophical investigations.

Requirements: Short oral presentation and final research paper. Taught in English, reading knowledge of French desirable but not required. Most readings are available in English. Required for this course are vol. I, V, VI of In Search of Lost Time in the 2003 Modern Library edition (ISBN 978-0-375-75154 – 1 and 4 and 7). For a copy of the syllabus, with a list of main recommended readings, available in mid-June, please write to e.ender@jhu.edu.

Area: Humanities

Throughout his life Rousseau presented himself by turns as the citizen of a Republic, a stateless outcast, the resident of a vanishing homeland of the heart, and the focal point of an international conspiracy. He invented new foundations for political communities that could never be implemented or were severely misunderstood during the revolutionary Terror. The families he portrayed were both patriarchal and defiantly anti-normative. He affirmed his desire to belong and insisted on his irreducible difference; he extolled friendship and engineered breakups. Through readings of Rousseau’s major political, autobiographical and fictional works we shall examine how and why communities, personal identity and citizenship are alternately built and destroyed. Course open to undergraduates.

From exoticist features of the 1920s and 1930s and political works of the 1960s, to family sagas and personal essays looking back on a conflicted past from the standpoint of the new century, Algeria has featured prominently in the French cinematographic imaginary. The independent North African nation has likewise produced compelling narratives that address the colonial legacy, the armed struggle for independence and its aftermath. Addressing from both sides of the Mediterranean an entangled political and cultural history, this course places in critical context conflicting screen representations as well as the institutions, individuals, and publics associated with them. The course will be taught in English, however most course materials will be in French. Undergraduates may take with permission of the instructor and completion of AS.212.333 and AS.212.334. Graduate students need not have completed the prerequisite courses.

Area: Humanities

AS.212.768. Norms and Forms of Academic Communication.
How to write a book review, an article, a conference paper; how to choose the appropriate journal for publication.

Area: Humanities

AS.212.778. Les écrivures contemporaines aux confins des genres [Contemporary French Writing Beyond the Genres.

Area: Humanities

AS.212.785. The Enlightenment and its Critics.
Are imperialism, universalism, soulless rationalism, reckless exploitation of nature, and social engineering the legacy of a so-called “Enlightenment project,” as many have argued in the wake of World War II? This course explores some core aspects of that critique, from Rousseau to Foucault, while testing them against examples of the plurality of discursive practices that we call Enlightenment. Readings and discussion in French. Course open to undergraduates with the instructor’s permission.

Area: Humanities

Writing Intensive

AS.212.801. French Independent Study.

AS.212.802. French Dissertation Research.

AS.213.205. Outsiders, outlaws, outcasts. 3 Credits.
Introduction to the close reading of German-language literature in the original. We read and discuss literary works in which experiences of crisis give rise to novel forms of selfhood. Authors may include Tieck, Kleist, Büchner, Droste-Hülshoff, Heine, Keller, Storm, Kafka, and others. We will ask how narrative form can represent breakdowns in established ways of sense-making. Attention will be paid to writers’ divergent responses to the challenges of modernity. Readings, discussion, and writing assignments in German.

Area: Humanities
AS.213.251. Freshman Seminar: Friedrich Nietzsche. 3 Credits.
Nietzsche's writings continue to inform contemporary thinking about morality, psychology, art, culture, and politics. He started out as a daring scholar of Greek antiquity, went on first to advocate and then to repudiate a grand project of cultural renewal, and eventually transformed his authorial persona into the site of an unprecedented theoretical experiment in which the most cherished ideals of Western culture were turned against themselves. In discussing his works we will focus on such themes as the struggle to affirm life in the face of the challenge of nihilism, modernity, cultural decadence, selfhood and individualism, the status of nature, and the effort to overcome metaphysical thinking. Close attention will be paid to the strategies of writing through which Nietzsche negotiates the conflict between intellectual integrity and aesthetic appeal, truth and illusion.
Area: Humanities

AS.213.270. Die Erfindung der Moderne. 3 Credits.
Taught in German. An introduction to key conceptions of modernity elaborated in the German-language cultural context. We consider the rise of historical awareness and the question of whether history has a purpose, modernity's difference from ancient and medieval times, secularization and the crisis of meaning, the role of intellectual reflection and subjectivity, the relation between cultural production, political power, and economic processes. Excerpts in the original German from works by Kant, Schiller, Novalis, Hegel, Heine, Marx, Nietzsche, Weber, Benjamin, Heidegger
Prerequisite(s): AS.210.362 or placement exam.
Area: Humanities

AS.213.271. Trust: Literature and Philosophy. 3 Credits.
Fake news, policing crises, political polarization, and the like challenge us to reevaluate the notion of trust. The course takes up this challenge with the help of both literary and philosophical texts that shall assist us in posing, and trying to answer, questions such as the following:
What or whom should we trust (ourselves, others, neither)? Is it possible and sometimes even preferable not to trust? Or should we cultivate trust in society? If so, how? Authors may include ETA Hoffmann, Hegel, Nietzsche, and others.
Area: Humanities
Writing Intensive

AS.213.303. Mini-Term: Feminist and Queer Theory: Past and Present. 2 Credits.
This course familiarizes participants with central texts in contemporary feminist and queer theory. We will read, discuss and engage with selections by Judith Butler, Gayatri Spivak, Jack Halberstam, Maria Lugones and Claudia Rankine. Many of these theorists, directly or indirectly, refer to philosophic concepts such as those addressed by the German Jewish thinker Walter Benjamin. We will therefore also examine a few philosophic echoes of these contemporary feminist and queer voices in 20th century German philosophy.
Area: Humanities

AS.213.304. German Aesthetic Thought. 3 Credits.
Central to modernity is the idea that certain perceptual experiences are worth having for their own sake, even if they do not directly serve any moral, political or cognitive aims. Aesthetics emerged in the eighteenth century as a theory of such experiences, and among them especially of the beautiful and the sublime. It soon became increasingly concerned with questions regarding the significance of art as a privileged realm of human production and experience. In the German-language intellectual lineage that begins with Kant, aesthetics moved from the margins of theoretical attention to its very center, where it could engage with some of the most pressing dilemmas of modernity. We read excerpts from relevant theoretical texts (Kant, Schiller, the early Romantics, Hegel) as well as texts that perform model cases of aesthetic reflection in relation to concrete works of art (Lessing, Kierkegaard, Nietzsche, Benjamin, Adorno).
Area: Humanities

AS.213.308. Schweigen in der Familie. 3 Credits.
We will study the psychic afterlives of involvements in WW1, National Socialism and the state security service of the GDR. In particular, we will focus on (auto-)biographical and documentary-film examinations of perpetrators in the family. Within the family, these stories are often shrouded in silence but nevertheless handed down across generations in powerful, less-than-explicit, and often distorted ways. Drawing on philosophy and psychoanalysis, we will discuss how the need for silence meets the need to hear and to talk. Recommended Course Background: AS.210.362.
Area: Humanities

This course provides students with an introduction to thought foundational to Critical Theory. We will explore major concepts such as reason, genealogy, and freedom. Students can expect to gain familiarity with works that have proven immensely influential in modern Europe and beyond, but will also be expected to consider ways in which such thinking has relevance for today’s world. The readings, though provided in English, are primarily from the German-language tradition. Participation in discussions and a short paper dealing directly with ideas from at least one unit will be required.
Area: Humanities

AS.213.321. Bodies and Pleasures. 3 Credits.
Taught in English. This course traces a literary history of sexuality from the Middle Ages to contemporary women’s writing. We will analyze how sexual pleasure changed over time. In particular, we will discuss what role literature plays in the reproduction and transformation of bodily pleasures. The course explores how the pleasures of bodies are imagined in and through literature, but also whether words are bodies that give pleasure and perhaps even have their own pleasures. Authors discussed will include Boccaccio, Cleland, Rousseau, Schlegel, Kleist, Hoffmann, Novalis, Arnim, Büchner, Freud, Rilke, Kafka, Rich, Foucault, Kristeva, Cixous, Giddens, and Winterson.
Area: Humanities
AS.213.324. What is Jewish Culture?. 3 Credits.
We talk about Jewish literature, music, and art—but can a book, or a song, or a painting be Jewish? We will examine the premises of this question and the many answers that have been formulated in response to it focusing on modern European (and some American) culture. Jewishness as it relates to human identity has been conceived of as related to religion, ethnicity, race, nation, language, geography, and politics. But these keywords have also been used to engage with the question of the Jewish identity not of a person, but of a cultural product. To understand the implications of calling, say, a book Jewish, we will examine the history of the concept of culture and its emergence in the context of the formation of modern Jewish identity. We will examine theoretical and literary texts originally written in German, Yiddish, Hebrew, and English, as well as painting, photography, film, and architecture from Europe, Israel and the Americas. We will aim to arrive at an understanding of the ways that the idea of culture intersects with the formation of Jewish identity in modernity. All readings will be in English.
Area: Humanities

AS.213.328. German Literary Modernism. 3 Credits.
Taught in English. German Literary Modernism focuses on modernist works of literature between 1900-1930, considering central modernist authors against the backdrop of dramatic changes and events in European culture and society, including urbanization, technological change, the First World War, and social and artistic movements. Students will engage literary works—by such authors as Kafka, Rilke, Hofmannsthal and Thomas Mann—that express a sense of crisis about modern life, or provoke questions about the nature of reality, the human self, the reliability of perception, and the possibilities of language and art. Students have the option of an additional hour of German discussion and doing all the assignments in German for German-language credit (3+1) towards the major or minor. Students interested in that option should register for section 2.
Area: Humanities

AS.213.334. Kafka. 3 Credits.
Franz Kafka is one of the most important — and one of the most challenging — writers of the twentieth century. This course will investigate why both are true. We will analyze a wide range of his works and learn “how to read Kafka. We will become familiar with his characteristic subjects: law, family, power, institutions, modernity. We will also attempt to become familiar with his characteristic forms and styles and attempt, in the process, to find out what makes Kafka “kafkaesque.” We will also consider his impact on art, literature, film, and thought from his time to the present. All readings in English. German majors/minors should enroll in section 02.
Area: Humanities

AS.213.340. Flucht und Migration: Literarische Erkundungen. 3 Credits.
We will study how contemporary German literature reflects the experiences of migrants and refugees. Jenny Erpenbeck’s novel Gehen, ging, gegangen (2017) and Sasha Marianna Salzmann’s novel Außer sich (2018) will serve as our main examples, complemented with shorter texts and other material on the historical and political contexts.

AS.213.346. Uncanny Realism. 3 Credits.
Dominant in the second half of the 19th century, realism was a literary movement whose representatives devoted close attention to the quotidian particulars of a social world caught up in the transformations of modernity. Its German-language variants were often intensely local, portraying regional forms of life (in Westphalia, the Austrian and Swiss countryside, Friaia, Berlin and Brandenburg) with a richness of detail approaching that of ethnographic descriptions. Far from confining themselves to giving literal-minded inventories of observable facts, these authors portrayed social worlds haunted by intangible powers: ghosts, historical memories, and vestiges of religious experience in an increasingly secular world. We will explore this duality of local and spectral features in the works of Droste-Hülshoff, Stifter, Keller, Storm, and Fontane.
Prerequisite(s): AS.210.362 or equivalent
Area: Humanities

AS.213.350. Wie wir begehren. 3 Credits.
Taught in German. Human desire and sexuality proves of vital concern in German-speaking countries: from the invention by German sexologists of much of the terminology still in use today to the so-called sexual revolution in the late sixties to new perspectives on the topic today. We will study film, fiction and non-fiction. Recommended Background: AS.210.362
Area: Humanities

AS.213.354. Introduction to German Poetry. 3 Credits.
This class will introduce students to German poetry from the eighteenth to the twentieth century. We will read selected poems by Goethe, Eichendorff, Mörike, George, Hofmannsthal, Rilke, Trakl, Celan, and Bachmann. In addition we will read several theoretical reflections on poetry by literary critics and philosophers which examine the lyric form and the curious world that poetry constructs. Readings and discussion in German.
Area: Humanities

AS.213.359. Kleist. 3 Credits.
Heinrich von Kleist was one of the most intriguing literary figures of the early nineteenth century in Germany. Neither Classicist nor Romanticist, he developed a unique style that combines such different elements as complex rhythmicality, drastic imagery, and philosophical precision. His novellas, plays, and nonfiction prose explore questions of gender, colonialism, the tragic, and of innocence and double dealing. Among the texts we will read together are 'The Betrothal in St. Domingo' (Kleist's literary response to the Haitian revolution), 'Penthesilea' (the play about lovers who can find each other only in war ends in a splatter scene), and 'Marquise of O' (the story of a woman whose father rejects her because she finds herself pregnant, and yet she has no memory of the sexual intercourse that must have led to her current situation). Language of Instruction: German
Area: Humanities

AS.213.373. Sex und Macht. 3 Credits.
We will discuss postwar and contemporary literature and films that grapple with the effect of unequal power structures on sexual relations.
Taught in German.
Area: Humanities
AS.213.374. Existentialism in Literature and Philosophy. 3 Credits.
This course explores the themes of existentialism, including the meaning of existence, the nature of the self, authenticity and inauthenticity, the inescapability of death, the experience of time, anxiety, freedom and responsibility to others, in literary and philosophical works. It will be examined why these philosophical ideas often seem to demand literary expression, or bear a close relation to literary works. Readings may include writings by Kierkegaard, Nietzsche, Dostoevsky, Heidegger, Rilke, Kafka, Simmel, Jaspers, Buber, Sartre, de Beauvoir, and Camus.
Area: Humanities
Writing Intensive

AS.213.378. Seeing the World by Foot. 3 Credits.
TAUGHT IN GERMAN. Few traditions have placed more emphasis than German literature on the importance of walking for finding one's way on earth and in the cosmos. From Schiller and Novalis to Thomas Bernhard and Werner Herzog, walking has been conceived not only as a journey outwards but also inwards into uncharted terrain of memory, the unconscious, and the imagination. In this course we will read short texts on wandering by Schiller, Chamisso, Goethe, Novalis, Tieck, Stifter, Walser, Bernhard, Herzog and Sebald with an eye toward the relationships that walking establishes between past and present, reality and imagination, time and space and inner and outer experience.
Prerequisite(s): AS.210.361 AND AS.210.362
Area: Humanities

AS.213.380. Ghost Stories, Haunted House and Other Occult Phenomena. 3 Credits.
From the eighteenth century to the modern period, German authors have been obsessed with uncanny phenomena that blur the line between the natural world and the supernatural world of ghosts, spirits, and magic. We will explore the encounter with otherworldly phenomena in this course with a special emphasis on the status of literature as a play of semblance or collection of shadows. Why have ghost stories been so persistent in the modern era when science and reason are said to dominate our understanding of the world? Is the occult the dark side of science? What kind of knowledge does literature yield? What can literature tell us about what is random, obscure, or inexplicable?
Area: Humanities

AS.213.383. Jewish Travel Literature. 3 Credits.
Exile; Diaspora; Wandering; Refugee; Immigrant—these are all keywords that have been closely associated with Jews and the Jewish experience. What binds them all is movement, whether individual or communal, voluntary or involuntary. This course will examine the connection between movement and Jewish culture and history through the various forms of Jewish travel writing. In looking at depictions of travel both fictional and historical from the Middle Ages to the 20th century we will revisit and interrogate many of these keywords to understand the ways they have been deployed to understand Jewish identity in literature and beyond. A central point of consideration will be the role of travel in shaping conceptions of Jewish identity as well as Jewish literature in the modern period. We will examine novels, short stories, reportage, and travelogues describing real and imagined journeys from and to Asia, the Middle East, Europe, and America. All readings will be in English translation, primarily from sources in Yiddish, Hebrew, and German.
Area: Humanities

AS.213.389. Fictional Autobiographies and Autobiographical Fiction. 3 Credits.
This course will examine fictional works that pose as memoirs or autobiographies, which is not a genre unique to the twentieth century but which rose to prominence in the modern period as a result of historical developments. We will consider the aesthetic presuppositions that gave rise to the novel and culminated in the great realist narratives of the nineteenth century that claimed to do nothing less than represent real life situations. Novels such as Robert Walser's Jakob von Gunten, Thomas Mann's Felix Krull, Bernhard's Auslöschung, Beckett's Malone Dies, and Coetzee's Waiting for the Barbarians call these assumptions into question by focusing on the inner life of a hero who lives only in writing and writes to live. Fictional autobiographies provide a fertile ground for reconsidering such issues as what it means to tell a story and whether life takes the form of a story, which have gone unaddressed in narrative theory.
Area: Humanities

AS.213.407. Museums and Identity. 3 Credits.
This course will explore the phenomenon of the "identity" museum through case studies involving Jewish and Holocaust museums around the world. The museum boom of the last half-century has centered in large part around museums dedicated to the culture and history of particular minority groups; recent notable (and relatively local) examples include the brand new National Museum of African American History and Culture in Washington and the National Museum of American Jewish History in Philadelphia. Our understanding of the contemporary theory and practice of such museums will be based on an examination of the history of the various museological traditions that engage Jewish identity from the 19th century to the present, including the collection and display of art and antiquities, ethnographic exhibitions, history museums, and Holocaust museums. We will deal with two primary museological phenomena: first, the introduction of the "primitive other" into European modernity via ethnographic museums; second, the museological commemoration and representation of trauma, specifically of the Holocaust. We will explore these topics through historical documents, theoretical readings, and case studies including visits to nearby museums. All readings in English.
Area: Humanities

AS.213.423. Reflections on Modernity. 3 Credits.
Taught in English. Reflections on Modernity takes up the problems conflicts, and possibilities of modernity in aesthetic, literary, and philosophical texts. Questions about the modern self, our relationship to nature, to urban experience, to history and language, and the role of the artist and writer in reflecting on modern life. Texts include works by such authors as Kant, Nietzsche, Baudelaire, Weber, Rilke, Hofmannsthal, Simmel, Heidegger, Habermas, Foucault.
Area: Humanities

AS.213.433. Fictional Autobiographies and Autobiographical Fiction. 3 Credits.
This course will examine fictional works that pose as memoirs or autobiographies, which is not a genre unique to the twentieth century but which rose to prominence in the modern period as a result of historical developments. We will consider the aesthetic presuppositions that gave rise to the novel and culminated in the great realist narratives of the nineteenth century that claimed to do nothing less than represent real life situations. Novels such as Robert Walser's Jakob von Gunten, Thomas Mann's Felix Krull, Bernhard's Auslöschung, Beckett's Malone Dies, and Coetzee's Waiting for the Barbarians call these assumptions into question by focusing on the inner life of a hero who lives only in writing and writes to live. Fictional autobiographies provide a fertile ground for reconsidering such issues as what it means to tell a story and whether life takes the form of a story, which have gone unaddressed in narrative theory.
Area: Humanities

AS.213.446. Nature and Ecology in German Literature and Thought. 3 Credits.
Nature and Ecology in German Literature and Thought considers the understanding and representation of the natural world in literary works and aesthetic theory from the 18th to the 20th centuries. We will consider such topics as poetic reverence for nature, anthropocentric representations of nature in literature, the thematization of landscape, the representation of animal life, the distinction between the human and animal as explored by literary writers, and ecologically-oriented critique of human consciousness. Readings may include works by such writers and thinkers as Goethe, Kant, Hölderlin, Nietzsche, Heidegger, Rilke, and Kafka, and more recent works of literary ecocriticism.
Area: Humanities
be the shifting relation between aesthetic delight and the will to truth in Nietzsche's final settling of scores with Wagner. A recurrent theme will encounter with whom Nietzsche continued to view as the most important he dedicated his energies during his early alliance with Wagner–the his beginnings, and the grand project of national renewal to which the characteristically German turn to Greek antiquity that defined German form of cultural crisis that confronted the young Nietzsche, cannot be adequately understood without attention paid to the peculiarly nihilism, that is, to make a life of writing worth living by turning it into simply expositions of ideas. Rather, they testify to an effort to overcome The first premise of this seminar is that Nietzsche's works are not knowledge of German and French is not required, but recommended. AS.213.618. The Aesthetic Discourse of Modernity. When, in 1985, Jürgen Habermas published his lectures on The Aesthetic Discourse of Modernity, he pursued a double aim. He offered a critique of French Theory while at the same time providing a foundation for a normative category of modernity in the tradition of Hegel. Curiously there is one subject he does not touch on, though it seems necessary for a sufficient understanding of modernity: the realm of art and literature. This course will develop a critique of Habermas’ normative notion of modernity through re-readings of texts by Nietzsche, Benjamin, Horkheimer/Adorno, Derrida, Bataille and Foucault to elaborate an alternative category of aesthetic modernity. Taught in English. Reading knowledge of German and French is not required, but recommended. Area: Humanities AS.213.618. Nietzsche. The first premise of this seminar is that Nietzsche’s works are not simply expositions of ideas. Rather, they testify to an effort to overcome nihilism, that is, to make a life of writing worth living by turning it into an enthralling experiment in which basic tenets of Western culture are pitted against themselves. Our second premise is that this project cannot be adequately understood without attention paid to the peculiarly German form of cultural crisis that confronted the young Nietzsche, the characteristically German turn to Greek antiquity that defined his beginnings, and the grand project of national renewal to which he dedicated his energies during his early alliance with Wagner—the encounter with whom Nietzsche continued to view as the most important event of his life even after he repudiated Wagner. The selection of works we discuss will therefore be bookended on one end by The Birth of Tragedy and a few other early writings, and on the other end by Nietzsche’s final settling of scores with Wagner. A recurrent theme will be the shifting relation between aesthetic delight and the will to truth in Nietzsche’s writings. Area: Humanities AS.213.636. Hölderlin and His Readers. Hölderlin’s works develop vast intellectual constructions in a poetic language of striking rhythmical power, while remaining anxiously concerned with the conditions of lyric utterance. Although his work responded to the literary and philosophically currents as well as the revolutionary politics and Philhellenism of his time, it proved untimely. Yet the same severe features that alienated contemporaries would lead such 20th-century poets as George, Rilke, and Celan to celebrate and emulate Hölderlin. We will examine how Hölderlin’s early contributions to post-Kantian idealism paved the way for his poetic project, as well as his odes and elegies, and some of the poeological writings. The late hymns will be discussed in detail against the backdrop of Hölderlin’s engagement with ancient tragedy and his Empedocles project. Since Hölderlin’s works have elicited literary criticism of the highest order as well as influential reflections on the aims and challenges of literary interpretation, our readings of Hölderlin will proceed in dialogue with such critical responses. Area: Humanities Writing Intensive AS.213.639. On the Difficulty of Saying I. This course takes as its point of departure the position that language carries within it the traces of something that exceeds the cognitive grasp of the subject and to this extent undoes any claim to knowledge the subject might make. This position has been central to twentieth and twenty-first century thought from psychoanalysis and poststructuralism to media theory and new materialism. This course will not take issue with this position. It will examine instead how this position evolved from the Idealism of Fichte to the eerily inhuman, if not mechanical, talking figures in texts by Novalis (“Monolog”), Poe (“Maelzel’s Chess Player”), Hoffmann (“Die Automate”), Büchner (Leonce und Lena), and Kafka (“Ein Bericht für eine Akademie”). We will explore the literature of the personal and impersonal in romantic and modernist texts in order to ask what moves and motivates works in which the first-person narrator would seem to be nothing more than a fiction—a staged phenomenon or a mechanical device. Area: Humanities AS.213.643. Franz Kafka in Philosophical and Literary Perspective. This course is devoted to close study of the writings of Franz Kafka from both philosophical and literary perspectives. Readings will include Kafka’s short prose works and novels along with philosophical and literary critical interpretations thereof. Readings may include commentaries by Walter Benjamin, Theodor Adorno, Hannah Arendt, Albert Camus, Giles Deleuze, and Giorgio Agamben. Primary texts for students from the German section will be in original; any other students may read Kafka in translation. AS.213.656. Thinking of the Environment. Few concepts are more anthropocentric than the environment. Although the term is usually invoked to describe what is other than the human being, it places the human at the center of the universe by defining nature as the world surrounding him. This course will examine several literary and philosophical texts from Novalis to Celan that approach nature as a sphere alien to thought, which can never be known except through the rhetorical device of prosopopoeia, which gives face to what is inhuman. Readings to include works by Novalis, Schlegel, Tieck, Stifter, Rilke, and Celan. Area: Humanities
AS.213.664. Dirt.
Near the outset of Büchner’s “Lenz,” the protagonist seeks to impress himself into the earth, “[E]r dehnte sich aus und lag über der Erde, er wühlte sich in das All hinein, es war eine Lust, die ihm wehe tat.” This course will examine the desire to merge with the surface of the earth and to become a planetary body, at once utterly material and utterly ethereal. The earth’s crust will emerge as the interface between cosmic forces and human existence, the atmosphere and the pedosphere. We will consider how history, biography, and geological time intersect in dirt, or what William Bryant Logan has recently called the “ecstatic skin of the earth,” in texts by Goethe, Alexander von Humboldt, Novalis, Nietzsche, Büchner, Walser, Rilke, Kafka, and Sebald.
Area: Humanities

AS.213.670. Theories of the Human in German Modernity.
Fifty years ago Michel Foucault advanced the influential argument that modern thought founedered on the circular undertaking to ground the possibility of human knowledge in actual knowledge of the human being. We survey various conceptions of the human developed in German modernity with a view to Foucault’s diagnosis. Against the background of pre-modern and early modern conceptions of the human, we focus on the tradition of anthropological thinking inaugurated by Herder, including spin-offs of German idealism in the writings of the later Schelling, Schopenhauer, and Marx. We consider the rivalry between twentieth-century philosophical anthropology (Plessner) and Heideggerian fundamental ontology, Hans Jonas’ phenomenology of the human, as well as recent disputes regarding the significance of the human standpoint.
Area: Humanities

AS.213.677. Impossible Intimacy.
Reading Ingeborg Bachmann and Elfriede Jelinek, we will analyze the condition of heterosexuality after fascism. “Fascism lies at the root of the relationship between a man and a woman,” Bachmann argues. And Jelinek continues to uncover structures of sexism, sadism and submission in the German language.
Area: Humanities
Writing Intensive

AS.213.679. Haitian Revolution: German Responses.
We will explore how contemporary German thinkers and writers reacted to the Haitian Revolution, what their interests were, and how later generations of writers responded to earlier reactions, perhaps tried to do better and used the historical material for their own purposes. Possible authors: Hegel, Humboldt, Kleist, Zschokke, Seghers, Müller, Fichte, Buch, Özirî and others.
Area: Humanities

AS.213.687. Imagination in Philosophy and Literary Theory.
Imagination in Philosophy and Literary Theory is devoted to studying theories of imagination in the history of philosophy and literary theory, from the ancient Greeks to the present day. We will study philosophical conceptions of the role of imagination in memory, cognition, perception, and creativity, and assess traditional philosophical oppositions between imagination and reason, the imaginary and the real. Readings may include selections from Aristotle, Kant, Coleridge, Nietzsche, Husserl, Heidegger, Merleau-Ponty, Sartre, Dufrenne, Stevens, Iser, Ricoeur, Ryle, Wittgenstein, and Nussbaum.
Area: Humanities

AS.213.701. The Frankfurt School.
Founded in the interwar years, the Frankfurt School gave rise to an array of reflections on modernity, emancipation, and ideology that have continued to inform critical theory and are now eliciting renewed interest. In this seminar we focus on various models developed by Frankfurt School theorists for approaching cultural phenomena. Following a brief review of Hegelian and Marxian legacies at work in the Frankfurt School, we consider relevant works by Walter Benjamin, Siegfried Kracauer, Max Horkheimer, and Theodor W. Adorno.

AS.213.705. Hegel’s Phenomenology of Spirit.
We will study key passages of The Phenomenology of Spirit from a queer-feminist perspective and engage with some of the feminist scholarship on Hegel.
Area: Humanities

This course takes as its point of departure Klopstock’s efforts to model German poetry after music—“the harmony of the spheres”—which served as the impetus for Goethe’s and Schiller’s poetry and Hölderlin’s late hymns. We will examine his experiments with verse form and his notion of interiority as the backdrop for Herder’s theory of the Volkslied as a popular genre that joins word and music and expresses the soul of a nation. Music and poetry will emerge on the one hand as the glue that binds a community and on the other as a disruptive force that isolates its members. Its significance as a figure if not vehicle for transcendence will return again and again in works as varied as Achim von Arnim and Brentano’s Des Knaben Wunderhorn, Kleist’s “Heilige Cäcilie,” Hölderlin’s poetological writings, Schopenhauer’s Die Welt als Wille und Vorstellung, and Nietzsche’s Geburt der Tragödie among other texts.
Area: Humanities

The course will focus on the aesthetics and discourse of “New Objectivity” in Weimar German literature. The ideals of sobriety and coldness called for a direct and unadorned view of the routines of modern work and love and found proponents not only among writers of the avant-garde but also, and with less fanfare, among authors who worked in popular genres like adventure novels. In this course, we will investigate how the desire for objectivity responded to a cultural crisis in the aftermath of World War I and how it guided the choice of genres (biography, reportage, non-fiction, modernist novel) as well as encouraged factographic styles of writing. Authors to be discussed include Egon Erwin Kisch, Joseph Roth, Siegfried Kracauer, Ilja Ehrenburg, B. Traven, Irmgard Keun, Gabriele Tergit, and Marieluise Fleißer. Class discussion will be in English or German depending students’ preferences. Reading will be in German.
Area: Humanities

AS.213.757. Rilke.
The concept of the “Weltinnenraum” has long dominated Rilke scholarship as a result of its two-fold sense as both the Innenraum der Welt and the Weltraum des Inneren. In this it captures the seeming autonomy of the world of things, characteristic of the New Poems, as well as the exploration of the cosmic dimensions the self, characteristic of the late work. This course will concentrate on the Duino Elegies and Sonnets to Orpheus with emphasis on the transformation of both world (or nature) and consciousness into song. In addition to Rilke’s poetry, we will also read texts by Husserl, Heidegger, and Merleau-Ponty. Taught in English.
Area: Humanities
AS.213.761. Literary Aesthetics.
This course explores literature in the context of the aesthetic tradition in philosophy. Themes include literature as mimesis, or the representation of reality, its relation to truth, untruth, and possibility. Literature as the revealing of being, literary imagination, the distinctiveness of literary language and expression, the role of the literary author. Readings may include background selections from Plato and Aristotle, but the course will focus on philosophical interest in literature since the late 18th century, and may include Kant, Hölderlin, Nietzsche, Heidegger, Sartre, Blanchot, Bachelard, among other readings. Course will be taught by the Kurrelmeyer Chair in German. Taught in English.
Area: Humanities

AS.213.763. Contemporary Theater: Gender/Violence.
The course explores 21st-century German theater in its diverse aesthetic and textual forms. Due to comparatively generous funding, German non-commercial theater has over the last decades been able to develop, adapt, and maintain a great variety of at one point “experimental” artistic styles, including frequently stark depiction of gender and violence. We will focus on the ways in which the productions take up, amplify, displace, disrupt, and/or reinforce cultural codes and images of gender and violence both in their symbolic and physical dimension. Topics include the “directors’ theater,” political theater, “pop-theater,” “discourse-theater,” “new documentary theater,” “post-migratory theater,” postcolonial theater and live art. The readings may include Nobel laureate Elfriede Jelinek, Dea Loher, René Pollesch, Milo Rau, Falk Richter, Sasha Marianna Salzmann and various works of shared authorship such as She She Pop, Rimini Protokoll, Gintersdorfer/Klaßen, and Yael Ronen. The Tuesday sessions will be used for the joint viewing of production recordings. Taught in English. Course material in German. No sessions after March 27th.
Area: Humanities

AS.213.800. Independent Study-German.
AS.213.811. Advanced Reading in German Literature.
Students will read works in German from a variety of authors. Sessions with faculty will be arranged on an individual basis, as needed.
Area: Humanities

AS.213.813. German Qualifying Paper Preparation.
AS.214.176. Freshman Seminar: Warrior Women from Ancient Times to Game of Thrones. 3 Credits.
Dean’s Teaching Fellowship This course will trace the origins of the warrior woman from ancient times through today’s pop culture and reflect on the multiplicity of its social, cultural, and political ramifications.
Area: Humanities

AS.214.321. The Prince and the Demagogue: Machiavelli to House of Cards. 3 Credits.
Niccolò Machiavelli’s The Prince is undoubtedly one of the most influential political works in the history of western culture. Read and discussed in many ways, the early-sixteenth-century booklet has been the object of controversial interpretations, which have fueled its myth. Who is Machiavelli’s prince? Is he a tyrant, a good ruler, or a demagogue? How does Machiavelli’s prince move between ethics, politics, and rhetoric? Often evoked in contemporary political discourse and popular culture, Machiavelli’s prince embodies a flexible idea of power that is most difficult to pin down. Moving from a close reading of the text within its original context, this course will consider not only the classical sources that inform The Prince, but also the presence of Machiavelli in today’s political culture and fiction. Special attention will be given to the contribution of Italian philosopher Antonio Gramsci, whose interpretation of Machiavelli’s thought is one of gateways to the reception of The Prince in the 20th and 21st centuries. The course is taught in English. Italian Majors and Minors should register for section 02.
Area: Humanities
Writing Intensive

AS.214.362. Italian Journeys: Medieval and Early Modern. 3 Credits.
A journey through early modern Italy, from the cultural centers (Florence, Venice, Rome, etc.) to the peripheries, this course will trace the development of the Italian literary identity from a civic and cultural perspective. How do we live our best lives? How do we create a good and just society? These enduring quandaries were fundamental points of consideration for the humanist scholars of early modern Italy. Drawing from the wisdom of their ancient Roman legacy – along with their own striking innovations – they forged a new and glorious cultural tradition. Using literary, philosophical and historiographical sources from antiquity through the early modern period (Cicero, Aristotle, Dante, Petrarch, Boccaccio, Machiavelli, Ariosto, Tasso) we will explore the cultural and civic history of Italy, paying particular attention to themes of community, identity and the ethics of citizenship. The course is taught in English with section 02 available in Italian for Italian Majors and Minors to fulfill their requirements.
Area: Humanities
Writing Intensive

AS.214.363. Italian Journeys: Modern and Contemporary Literature. 3 Credits.
Marvels, Monsters, Misfits, Brutes: Peripheries of the Human in Italian Literature.Where does the human end and the non-human—or in-human—begin? Who—or what—inhabits the peripheries of the human? And what conditions beget those peripheries in the first place? This course will examine how Italian thinkers and creatives have grappled with these questions over the past 150 years, a period during which Italy and its citizens have witnessed both great growth and great turbulence. The first half of the course, “Marvels & Monsters,” will focus on works that challenge the division between humans and the (super)natural world through fantastic creatures and landscapes. The second half, “Misfits & Brutes,” will turn to the question of social peripheries: that is, how literature has given voice to the marginalized and dehumanized in Italy. We will explore topics like Fascism, the Holocaust, the Southern Question, the mafia, Italian environmentalism, Italian feminism, and Mediterranean immigration. Primary texts include poems, novels, plays, films, songs, and music videos; authors include Leopardi, Verga, Pirandello, Morante, Fellini, Calvino, Levi, Sorrentino, and Scego. Students wishing to do coursework in Italian for major/minor credit should register for AS.214.363.02.
Area: Humanities
Writing Intensive
AS.214.477. Magic, Marvel, and Monstrosity in the Renaissance. 3 Credits.
Magic, Monstrosity, and Marvels or Wonders call into question what we see and experience: what is reality, what is illusion; what’s natural and what’s supernatural? What’s human and what’s more, or less, than human? During the Renaissance, ideas about the nature of reality were bound up with questions and issues very different from those of our time. With the exact sciences still being invented, the nature of the world was much less hard and fast for Renaissance people than it is for the modern educated person. The literary masterpieces of the Italian Renaissance provide vivid illustrations of the early modern sense of wonder. Foremost among these are the theatrical comedies which Italian authors revived in imitation of the ancients, and the romances, especially Ariosto’s Orlando furoso (1532) and Tasso’s Gerusalemme liberata (1581). These and other works influenced ideas about magical and marvelous phenomena across Europe for centuries to come. Works will be read and discussed in English. Italian majors and graduate students (who should enroll in section 2) will attend a weekly supplemental discussion in Italian and compose their written work in Italian.

Area: Humanities
Writing Intensive

AS.214.479. Dante Visits the Afterlife: The Divine Comedy. 3 Credits.
Dante’s Divina commedia is the longest great poem of the Middle Ages; some say the greatest poem of all time. We will study the Commedia critically to find: (1) what it reveals about the worldview of late-medieval Europe; (2) how it works as poetry; (3) its relation to the intellectual cultures of pagan antiquity and Latin (Catholic) Christianity; (4) its presentation of political and social issues; (5) its influence on intellectual history, in Italy and elsewhere; (6) the challenges it presents to modern readers and translators; (7) what it reveals about Dante’s understanding of cosmology, world history and culture. We will read and discuss the Commedia in English, but students will be expected to familiarize themselves with key Italian terms and concepts. Students taking section 02 (for 4 credits) will spend an additional hour working in Italian at a time to be mutually decided upon by students and professor.

Area: Humanities
Writing Intensive

AS.214.561. Italian Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service. Registration &gt; Online Forms.

AS.214.562. Italian Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service. Registration &gt; Online Forms.

AS.214.640. Film Theory.
The seminar deals with film theory in its history and its current trends. We will examine structuralist, post-structuralist, feminist, Marxist, psycho-analytic and other theoretical approaches to understanding and interpreting the cinematic medium. We will look at several different genres of contemporary films from Italy, France, Spain, and Latin American Film, from auteur-films to independent documentary collectives, animation films to blockbusters. We will invite at least one film theorist and one filmmaker to class during the semester.

Area: Humanities

In the last decade in Italy, filmmakers and writers have been expressing, with increasing urgency, strong concerns about the environment while also attempting to raise awareness about the consequences of human manipulation of the natural world, the complicity of industry, government, and organized crime in illegal disposal of toxic waste, and the effects of economic and social malaise. This graduate seminar examines from an eco-critical perspective, a variety of literary texts and films, produced in Italy from the sixties to the present day. While reading foundational texts from environmental literary studies and the growing field of eco-cinema studies, we will examine short stories and novels by Italo Calvino (Smog, A Plunge into Real Estate and Marcovaldo) and Carlo Cassola’s The Nuclear Trilogy (1978-1982), as well as films by Pier Paolo Pasolini, Michelangelo Antonioni and Francesco Rosi. In the second part of the seminar we shall focus on contemporary novels, documentary and feature films that more explicitly deal with environmental degradation. Critical and theoretical readings will include Marco Armiero and Marcus Hall’s Nature and History in Modern Italy, Rob Nixon’s Slow Violence and Environmentalism of Poor, Serenella Iovino’s Ecocriticism and Italy, and Scott Macdonald’s “Toward and Eco-cinema,” among others.

Area: Humanities

AS.214.666. Primo Levi Today: Seventy Years After the First Publication of If This Is a Man (Survivor in Auschwitz).
How have genocides been represented by people with different backgrounds and sexual identifications? How do written testimonies challenge or reinforce the hegemonic accounts of wars and genocides? How is the relationship between the “personal” and the “public/national” theorized in literary texts dealing with wars and other forms of political violence? What concepts or frameworks (Queer; Postcolonial; Community Studies) offer new approaches to the analysis of testimonial statements on collective traumatic events? This course aims at exploring these questions, using Primo Levi’s work as an anchoring point. Readings and discussions will be in Italian. COURSE IS OPEN TO UPPER LEVEL UNDERGRADUATES

Area: Humanities
Writing Intensive

AS.214.685. Donne e scrittura tra ‘500 e ’600.
While women’s contributions to Italian Renaissance literature have long been acknowledged, their creative output continued well into the 17th century. This course focuses on some of the protagonists of this extraordinary season, from Lucrezia Marinella and Arcangela Tarabotti to Elena Lucrezia Cornaro Piscopia, who in 1678 became the first woman in the world to receive a university degree. Taught in Italian

Area: Humanities
AS.214.689. Flânerie and Female Authorship in Contemporary Italian Cinema.
This course examines the prolific production of Italian women filmmakers inscribing their work into a national cinematic tradition. The most prominent visual leitmotif in films by directors such as Marina Spada, Francesca Comencini, Alice Rohrwacher and others, is that of the wandering woman contemplating the cityscape. What does the act of walking signify in these works? How do these filmmakers embrace and transform Italy's cinematic tradition? After highlighting the figure of the city-walker in post-war classics by Roberto Rossellini and Vittorio De Sica, we shall discuss from a gender perspective films such as Fellini’s Nights of Cabiria, Pasolini’s Mamma Roma, and Antonioni’s La Notte, which feature female city-walkers who stroll throughout urban peripheries created during the country’s rush toward modernity. Then, we shall analyze the work of women directors who recurrently employ the narrative strategy of flânerie to construct female narratives of displacement and liminality. We shall question how and to what extent this contemporary cinematic production is indebted to the masters of neorealism and the auteurs from the sixties. Critical and theoretical readings will include essays by Michel de Certeau, Siegfried Kracauer, Janet Wolff, Elizabeth Wilson, Anne Friedberg, Giuliana Bruno, and others.
Area: Humanities 
Writing Intensive

The metaphor of the theatre of the world is a long-lasting one: from antiquity to our own days through the Middle Ages, the Renaissance, and the Baroque, the idea of the world as a stage has been the core of both dramatic writings and discourses on drama. By considering the metaphor and its meanings in a broad chronological perspective, the seminar aims to identify key moments in its evolution. In particular, it will focus on the ways in which – within the production of early modern morality plays – the metaphor of the theatrum mundi regained its literal meaning by being represented on stage. Along with a selection of allegorical plays and relevant visual materials, we will consider theoretical sources including classical and Christian authors, neo-platonic writings and medieval exegesis, Renaissance thinkers such as Pico della Mirandola and modern philosophers such as Walter Benjamin.
Area: Humanities 
Writing Intensive

This course explores the history and evolution of documentary filmmaking in Italy through the study of non-fictional works dealing with different social, political, and personal matters from the post-war period to the last decade. We shall screen the works of Vittorio De Seta, Ernesto De Martino, Alberto Grifi, Cecilia Mangini, Annabella Miscoiglio, as well as the works of iconic directors such as Michelangelo Antonioni, Luchino Visconti, Pier Paolo Pasolini, and Ermanno Olmi, considering their fiction and non-fiction films in dialectal relationship to one another. Moreover, this course devotes particular attention to late, contemporary female production (e.g. Alina Marazzi, Costanza Quattriglio, and Eleonora Danco) that, through the use of found footage and hybrid modes, blurs the boundaries between fiction and non-fiction, the real and the surreal. Critical and theoretical readings include Marco Bertozzi’s Storia del documentario italiano, Bill Nichols’ Representing Reality, and others.
Area: Humanities

AS.214.711. Dissolving Margins: Space and Female Subjectivity in the Work of Elena Ferrante.
Elena Ferrante is Italy’s most acclaimed contemporary novelist, although her true identity remains unknown. Having been translated into multiple languages and published in 39 countries, with over a million copies sold in the United States alone, her ‘Neapolitan Quartet’ triggered what has been called “Ferrante Fever.” This course investigates the reasons behind this global, literary phenomenon while exploring themes such as female subjectivity and the interplay with space and society, the question of female authorship, women’s participation in, or exclusion from, history, and the internal violence of a rapidly changing society. We shall read Ferrante’s entire oeuvre: Troubling Love (1999) The Days of the Abandonment (2002), and The Lost Daughter (2006), the Neapolitan Quartet (2012-2014), as well the collection of letters and essays Frantumaglia. (2016). Theoretical readings will include essays by Julia Kristeva, Luce Irigaray, Steve Pile, and others.
Area: Humanities

AS.214.748. Giambattista Vico and the Old Science.
Giambattista Vico’s Principi di scienza nuova (1725, 1730, 1744) was intended to found an “ideal” and “eternal” model of human development. Vico emphasizes the importance of both philology and philosophy to his project, and attempts to break the mold of thinking about the history of humanity by exposing the preconceptions and misconceptions that arose from attempts to square “sacred history” with “profane” or non-Judaic-Christian history, creating a philosophy (or even a science) of mythology. 
Area: Humanities
Writing Intensive

AS.214.753. Tasso the Madman.
In late sixteenth-century Europe, Tasso’s name was a synonym for madness. The Elizzbethan stage hosted a play on ‘Tasso’s Melancholy’; Montaigne belatedly recalled observing the ‘mad poet’ in prison. Biographers and dramatists spread the myth into the nineteenth century, but Tasso’s dialogues and letters tell a more complex and nuanced story of suffering and struggle, life and work.
Area: Humanities
Writing Intensive

AS.214.757. Tasso, Poet of Doubt.
A reading of Tasso’s Gerusalemme liberata along with relevant poetic, literary-theoretical, philosophical, and theological texts.
Area: Humanities
Writing Intensive

AS.214.861. Italian Independent Study.

AS.214.862. Italian Dissertation Research.

AS.214.863. Italian Proposal Preparation.

AS.215.231. Introduction to Literature in Spanish. 3 Credits.
The main objective of this course is to examine and discuss specific authors and topics in literature in Spanish from the Middle Ages to the 20th century. The course is designed to cover a selection of Hispanic texts from Spain and Latin America. Literary genres to be studied will include narratives, poetry, and drama. The bulk of each class session will be dedicated to the discussion of the assigned readings. This course is taught in Spanish. This course is required for the major in Spanish.
Area: Humanities
AS.215.290. Latin American Critical Perspectives on Colonialism: From the 'World Upside Down' to the 'Coloniality of Power'. 3 Credits.
This course, taught in English, examines how indigenous and local (postcolonial) intellectuals in Latin America responded to the ideology and practices of Spanish Colonialism in the earliest post-conquest years (1532), continued to battle colonialism during the period of the wars of independence, and finally arrived at the production of an analysis that shows how modernity is but the other face of colonialism. Among key works to be discussed are Guaman Poma’s illustrated sixteenth-century chronicles, D.F. Sarramientos’s ‘Civilization and Barbarism’ (1845), and Anibal Quijano’s ‘Coloniality of Power’ (2000).
Area: Humanities
Writing Intensive

AS.215.307. Cervantes: Don Quixote and The Exemplary Novels. 3 Credits.
In this course we will read the most important narrative works of Miguel de Cervantes, Don Quixote and the Exemplary Novels, works that are widely understood to have changed western literature. We will read both works in the English translation by renowned translator Edith Grossman, who will also visit Hopkins during the semester. Those who wish to receive credit toward the Spanish major will read the books in the original and attend a separate section conducted in Spanish. Those students should enroll in section 2 of the course.
Area: Humanities
Writing Intensive

AS.215.309. An Interdisciplinary Introduction to the Study of Latin America. 3 Credits.
The course is an interdisciplinary introduction to the study of Latin America. It brings together archeology, ethno-history, art history, literature and environmental studies.
Area: Humanities
Writing Intensive

AS.215.312. The Great Latin American novel according to Carlos Fuentes. 3 Credits.
An investigation into the historical development of the great Latin American novel according to Carlos Fuentes new book on the subject. Course includes reading novels by machado de Assis, Garcia Marquez, Carlos Fuentes, Vargas Llosa, Cortazar and Piglia.
Area: Humanities

AS.215.336. Don Quijote. 3 Credits.
A close reading and discussion primarily in Spanish of Cervantes’ masterpiece, with concentration on its major themes and contributions to the formation of the modern novel. We will use A. Murillo’s edition of the novel, Editorial Castalia.
Prerequisite(s): AS.210.311 AND AS.210.312
Area: Humanities

AS.215.350. Mexico: A cultural history from the Olmecs to the Mexican revolution of 1910. 3 Credits.
The offers a survey of Mexican culture from the formative years of the Olmecs (2000 b.c.) to the Mexican revolution of 1910. History of ideas, matrix social formations, art and literature are the focus of this historical overview.
Area: Humanities
Writing Intensive

AS.215.361. A multidisciplinary Introduction to the Study of Latin America. 3 Credits.
The course brings together knowledges drawn from the fields of geography, history, anthropology, literature and art in order to provide access to the complexity of 'Latin America'. Students may opt do the reading in the original Spanish or Portuguese and also write in either language.
Area: Humanities
Writing Intensive

AS.215.380. Modern Latin American Culture. 3 Credits.
Taught in Spanish. This course will explore the fundamental aspects of Latin American culture from the formation of independent states through the present—in light of the social, political, and economic histories of the region. The course will offer a general survey of history of Latin-America, and will discuss texts, movies, songs, pictures, and paintings, in relation to their social, political, and cultural contexts. May not be taken satisfactory/unsatisfactory.
Prerequisite(s): AS.210.312; Students may earn credit for AS.211.380 or AS.215.380, but not both.
Area: Humanities

AS.215.390. Modern Spanish Culture. 3 Credits.
This course will explore the fundamental aspects of Spanish culture from the nineteenth to the twenty-first centuries. The course will offer a general survey of the history of Spain and will discuss texts, movies, songs, pictures, and paintings in relation to their social, political, and cultural contexts. This course will be of particular interest for students planning on spending a semester abroad in Spain—specially for those students going to the JHU Fall Semester in Madrid, at Carlos III University. Taught in Spanish. Recommended Course Background: AS.210.311 or appropriate Webcape score. AS.215.390 was formerly numbered AS.211.390
Prerequisite(s): Students may not have previously completed AS.211.390.
Area: Humanities

AS.215.402. Senior Seminar: Literaturas y culturas del Cono Sur: Argentina, Uruguay y Chile. 3 Credits.
Focus on twentieth and twenty-first century literary authors, filmmakers, and various other media.
Prerequisite(s): AS.210.311
Area: Humanities

AS.215.403. Cine en Común. 3 Credits.
Eleven commercial films in Spanish closely examined through screenings, class discussion, and short papers. Besides basic film appreciation, the course intents to develop a common critical vocabulary between Spanish and English to discuss movies in plain language and in terms relevant to social issues.
Prerequisite(s): AS.210.312
Area: Humanities
AS.215.404. Cuba Between Heresy and Revolution. 3 Credits.
We will examine the Stalinist and Leninist refashioned doctrines of Fidel Castro and Ernesto Che Guevara; Cuba’s Devil’s Pact with Obama; the decline to near breakdown of Cuba-Venezuela Alba dual nation Chavismo; and the startling implications that all of it poses to the rise of sham populism in America. We will press hard into the fabric of Cuba’s battered daily lives, mostly in greater Havana, but also in Miami. Among others, the work of filmmaker Fernando Pérez, the fiction of Leonardo Padura, and Mariel exodus artists will inform our discussions. Our shared hypothesis: that post-revolutionary national sovereignty, coupled with Cuban exile irredentism, may have engendered the island’s dual nation status, tied to Miami’s so-called Cuban enclave. As a result, a theologico-political confessional crisis continues into infinity in terms of plural and bipolar heresies supported by US electoral mapping and lobbying, and in some minds having Cuba become the Fifty-First US state.
Area: Humanities

AS.215.406. Novelist Intellectuals. 3 Credits.
What does a novelist’s op-ed about economics have to do with her literary writing? In what ways does a fiction writer’s essays on the environment inform how we read her novels? What happens when we find the political opinions of a writer objectionable? This undergraduate seminar will consider what the Spanish writer Francisco Ayala termed “novelist intellectuals,” that is, literary writers who actively participate in a society’s public sphere. Considering writers from Madrid to New York, from London to Buenos Aires, we will ask how one should hold a novelist’s fictional and non-fictional writings in the balance and explore ways of reading that allow us to consider the public intellectual side and the aesthetic side of a novelist together.
Area: Humanities

AS.215.409. Catalonia and Independence. 3 Credits.
What is the Catalan independence movement? Where did it come from? What, exactly, does it advocate? This seminar will examine the history, politics, and culture of Catalonia in an attempt to understand why the push for independence has grown over the past decade. We will focus especially on the impact of nationalism, ideology, social history, economics, law, and language on the construction of Catalan identity. But we will also compare Catalonia to other regions in the Iberian Peninsula (the Basque Country, Galicia) as well as across Europe (Scotland, Northern Italy) and North America (Québec) in order to better understand how movements for regional autonomy and independence emerge today. Taught in English.
Area: Humanities

AS.215.412. Populism. 3 Credits.
What do Hugo Chávez, Marine Le Pen, and Donald Trump have in common? According to many from across the political spectrum, they are all populists. But what is populism, exactly, and how can it describe such disparate phenomena as left-wing social movements, xenophobic anti-immigrant policies, and economic redistribution? This advanced seminar will examine the history, culture, and political theory of populism. We will pay special attention to the resurgence of populism after the Great Recession and examine a number of cases from Latin America, Europe, and the United States.

AS.215.413. Cuba y España. 3 Credits.
La frase “más se perdió en Cuba” alude al singular rango de la antigua Provincia de Ultramar en el mapa geopolítico del colonialismo hispánico. Hemos de estudiar la prolongada relación entre España y Cuba, desde 1492 al presente, a través de materiales literarios, crónicas, artes plásticas, música y medios sociales al corriente. Enseñado íntegramente en español.
Prerequisite(s): AS.210.311
Area: Humanities

AS.215.417. Literature of the Great Recession. 3 Credits.
The Great Recession—sometimes called the financial crisis or the economic crisis of 2008—brought financial markets to a halt and created significant political turmoil across the North Atlantic. But its impact on culture, and literature especially, has often been ignored. This seminar will travel across Europe, from Dublin to Madrid, from London to Reykjavík in order to examine how literature has registered this most recent economic crisis. We will focus on how crisis is narrated and the ways in which literary works have managed to provide a voice for marginalized social, economic, and political demands.
Area: Humanities

AS.215.460. Modern Mexico and the Culture of Death. 3 Credits.
Drawing from sources in popular culture, literature, folk religion, and the media, we will explore the myths and daily practices of death-related representations of Mexico’s survival against enemies, from within the state apparatus, and the insertion into it of drug traffickers, on both sides of the so-called Crystal Frontier with the US.
Area: Humanities

AS.215.463. Borges: His Fiction and Critical Essays. 3 Credits.
This course will deal with close readings of Borges ficciones and critical essays in order to determine how his thinking on the problem of writing and thinking is fictionalized in his stories.
Area: Humanities
Writing Intensive

AS.215.464. Senior Seminar: El Caribe como problema. 3 Credits.
Recommended for Spanish majors and anyone fluent in the language. The course explores through diverse media the Hispanic and Afro-Descendant Caribbean/Antillean societies, from the early Spanish conquest to the current crises in Caribbean Venezuela, Colombia, Mexico, and Florida. Taught in Spanish.
Prerequisite(s): AS.210.311 OR AS.210.312 or equivalent test score.
Area: Humanities

AS.215.465. Wild Surrealism: Lorca, Dalí, Buñuel. 3 Credits.
Spanish surrealism emerged unevenly. Some writers and artists sought out the surrealist label while others rejected or ignored it altogether. Some attempted to adhere to André Breton’s “Surrealist Manifesto” while others went decidedly against its principles. Yet surrealism, in one way or another, took over the Spanish artistic scene during the 1920s and 30s. Today, it is associated with Federico García Lorca, Salvador Dalí, and Luis Buñuel. Friends, roommates, and even lovers, Lorca, Dalí, and Buñuel came to define surrealism’s acceptance, rejection, and indifference in Spain. This seminar will examine the moment of Spanish surrealism through these three figures. The course will include the study of film, art, drama, poetry, and nonfiction. Taught in Spanish. Recommended Course Background: AS.215.390 or AS.215.231
Area: Humanities
AS.215.477. La Habana Miami: One World and Two Cities. 3 Credits.
Havana and Miami make up the oldest US enclave city linked to a foreign one under US embargo access. We will study a unique counterpoint Hispanic Exiled culture which considers itself protected by American Exceptionalism
Area: Humanities

AS.215.489. Poetry in Latin America: A multilingual survey from 1200 to the present. 3 Credits.
The course focuses on a presentation of the multiple traditions of poetry writing that make up the Latin American tradition from the Mexico poets at about 1200 to current writers in Latin America. Original poetry in Nahuatl, Maya-Quiche, Spanish and Portuguese will be read alongside translations into English. Attention will be paid to translation theory.
Area: Humanities
Writing Intensive

AS.215.490. Reading Ancient Mexico Today: Amoxtli, Tlacuilos and the Florentine Codex. 3 Credits.
This course offers an in depth study of 'Mexican' writing systems before and after the Spanish Conquest in 1521. Special emphasis is placed on the role of the tlacuilos—nahuatl intellectuals—in the writing of the Florentine Codex (1584), the largest surviving compendium on pre-conquest Mexico.
Area: Humanities
Writing Intensive

AS.215.525. Spanish Independent Study. 1-3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.215.526. Spanish Independent Study. 0-3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.215.527. Spanish Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.215.603. Napoleon's Haitian Cosmos from Boukman to Bolivar.
Area: Humanities

AS.215.604. To Die in Mexico.
The seminar adopts and translates recent ideological revisions of Mexico's alternate modernities; impacted by postcolonial, subaltern, and decolonial theories of Latin American exceptionality. The plural character of these combined exceptions and exemptions and refusals to reincorporate Mexicanness into modernizing Occidentalism will be foregrounded in two historical moments: modernismo-to-modernism, in convulsed Mexico (1900-1927) and criollista Nueva España "Baroque" hybridized and myth-invested ethics of nationhood (1604/1690):
- Bernardo de Balbuena's Grandezza Mexicana (1604)/Carlos Sigüenza y Góngora's Infortunios de Alonso Ramírez (1690). These materials will be framed in Europe's modernist, re-mythologized "Waste Land" (T.S. Eliot), as 'brought home' to America in Hart Crane's The Bridge (a poem largely conceived and reborn in Cuba's Isla de Pinos).
- (Fluent reading knowledge of Spanish)
Area: Humanities

A voice in Piglia's Artificial Respiration claims that Argentina did not have an eighteenth century or the Eighteenth Century. Besides Piglia's palimpsest novel, we'll study a handful of texts by Borges. Passages from Leopoldo Marechal's Adan Buenosayres, and Derrida's The Beast and the Sovereign Volume Two, in reference to Heidegger's The Fundamental Concepts of Metaphysics and Defoe's Robinson Crusoe. Taught in English.
Area: Humanities

In this seminar we will examine the ways in which Jorge Luis Borges's narratives intersect with lines of inquiry pursued by Martin Heidegger and Jacques Derrida around perception, knowledge, language, time, and space.
Area: Humanities
Writing Intensive

As of today, due to the work of Walter Mignolo, Ossio, Lamana and other scholars in Colonial Studies, the 1000 page letter of Guaman Poma to the King of Spain has become the pre-eminent text written on the question of coloniality of power as theorized by Anibal Quijano. Given that the concept is now central to colonial and modern studies, familiarity with the work of Guaman Poma is essential in the formation of all Latin Americanists and scholars interested in coloniality and imperial studies.
Area: Humanities
Writing Intensive

AS.215.642. Readings in Contemporary Literary Criticism and Theory.
This course is a graduate level survey of contemporary trends in literary theory and criticism. Readings will span all aspects of literary and cultural scholarship and may include such topics as: new materialism, new formalism, affect theory, Marxism, literary history, and comparative literature.
Area: Humanities

AS.215.651. The idea of 'Latin America': current debates on the fundamentals of the field.
The course will explore the history of the Idea of Latin America as a discursive and political entity. Students will read the work of Walter Mignolo, Mauricio Tenorio Trillo and Fernando Digiovanni among other theorists and cultural historians.
Area: Humanities
Writing Intensive
AS.215.667. Cities in Motion, Worlds Adrift.
We will explore the comparative phenomenology of the city in historical reference to literary, cinematic, and TV serial values. Modalities of segregation and divisiveness will dominate our inquiry. Undergrads by request and with approval of instructor.
Area: Humanities

How should one study contemporary literature and culture? Is “the contemporary” a period in and of itself? Does it require a distinct conceptual approach? This graduate seminar will examine various approaches that have emerged since Michel Foucault called his genealogies a “history of the present.” We will pay special attention to contemporary literature and culture’s most distinguishing feature today: crisis. Considering theories of crisis and “the contemporary” together, the course will explore how living in a time of overlapping crises—economic, political, social, cultural, environmental, and others—affects the way we interpret the world.
Area: Humanities

AS.215.735. The Boom Revisited. Visions by Carlos Fuentes, Garcia Marquez, Diane Goodrich and the MLA.
Now that Carlos Fuentes has written his history of the Latin American novel, that a biography of Garcia Marquez is out and several retrospective studies on the making and impact of the ‘boom’ are circulating, it is time to reconsider the boom as a force in the making of the cannon and a paradigm for narrative interpretation. Besides three long critical studies and the MLA’s ‘how to teach the boom,’ the seminar will consider in detail three key novels: La muerte de Artemio Cruz, Cien anos de soledad, and La casa verde.
Area: Humanities
Writing Intensive

The course engages close readings of Borges critical essays and some of his fiction in order to establish the points of interpellation that Postmodern theory takes from or shares with Borges’s meditation on the problem of writing.

AS.215.748. Public Humanities Writing Workshop.
Humanists possess a reservoir of scholarly abilities that prime them for contributing to debates well beyond the academy. This semester-long workshop will introduce graduate students to the basics of writing for such broad audience. Each session will be organized around particular topics in public humanities writing, including the pitching, writing, editing, and publishing processes of newspapers, magazines, and online outlets. We will also consider the forms of writing that most allow scholars to draw from their academic training and research: reviews, personal essays, op-eds, interviews, and profiles. Throughout the course we will see how the interdisciplinarity, comparativism, and multilingualism of fields from across the humanities can be helpful for reaching wide audiences. Beyond the nuts and bolts of getting started in so-called “public” writing, this course aspires to teach graduate students how to combine quality writing with academic knowledge, scholarly analysis with a general intellectual readership—and, ultimately, make academic knowledge a public good. Taught in English.
Area: Humanities

AS.215.778. Topics in Baroque and Neobaroque Literature.
This seminar we will look at theories and source texts comprising the cultural production known as the Baroque and Neobaroque, categories that extend to and include some twentieth-century and contemporary aesthetic practices. Although the focus of the seminar will be largely literary and theoretical, we will look at some examples of visual culture as well. Students will prepare several presentations and a final research paper. Presentations in the second portion of the course should be prepared in reference to a primary corpus you intend to write your final paper on.
Area: Humanities
Writing Intensive

AS.215.826. Spanish Independent Study.

AS.216.300. Contemporary Israeli Poetry. 3 Credits.
This course examines the works of major Israeli poets such as Yehuda Amichai, Nathan Zach, Dalila Rabikovitch, Erez Biton, Roni Somek, Dan Pagis, Yona Wollach, Yair Horwitz, Maya Bejerano, and Yitzhak Laor. Against the background of the poetry of these famous poets we will study recent developments and trends in Israeli poetry, including less known figures such as Mois Benarroch, Shva Salhoov and Almog Behar. Through close reading of the poems, the course will trace the unique style and aesthetic of each poet, and will aim at presenting a wide picture of contemporary Hebrew poetry.
Area: Humanities

AS.216.342. The Holocaust in Israeli Society and Culture. 3 Credits.
This course examines the role of the Holocaust in Israeli society and culture. We will study the emergence of the discourse of the Holocaust in Israel and its development throughout the years. Through focusing on literary, artistic and cinematic responses to the Holocaust, we will analyze the impact of its memory on the nation, its politics and its self-perception.
Area: Humanities
Writing Intensive

AS.216.373. War in Israeli Arts and Culture. 3 Credits.
In this course we will study the various representations of what functions as one of Israel’s most unifying and yet dividing forces: war. By analyzing literary and cinematic works as well as visual art and popular culture we will attempt to understand the role of war in shaping Israeli society, culture and politics. Topics such as commemoration and mourning, heroism, dissent and protest, trauma and memory and the changing image of the soldier will stand at the center of the course.
Area: Humanities

AS.216.398. Zionism: Literature, Film, Thought. 3 Credits.
This course studies the relations between modern Hebrew and Israeli culture and Zionism. Based on a close reading of both literary and non-literary Zionist texts, we will explore the thematic, social and political aspects of the Zionist movement. The course focuses on primary sources and its main goal is to familiarize students with the various ways in which Zionism was formed and understood. In the last part of the semester we will investigate the different meanings of Post-Zionism through contemporary literary and non-literary texts as well as recent Israeli films.
Area: Humanities
AS.216.444. **The Apocalypse in Literature and Film.** 3 Credits.

“Everything which we loved is lost! We are in a desert” – this emotional assertion was the reaction to Kazimir Malevich’s 1915 painting The Black Square, as the artist himself recalled it. This sentiment of fearing, warning and even witnessing the end of the world as we know it, will stand at the center of the course. We will study the literary and cinematic representations of this apocalyptic notion and investigate its theoretical, theological, physiological and aesthetic aspects. We will seek to trace the narrative dynamics as well as literary and cinematic means of apocalyptic representations in works from various periods, languages, cultures and religions. Among the issues to be discussed: what is the apocalypse, biblical apocalypse, dystopia and nostalgia, trauma and post trauma, war and the apocalypse, the Holocaust as the end of civilization, the atomic bomb, realism and anti-realism, political changes and the apocalypse in popular culture.

Area: Humanities
Writing Intensive

AS.216.500. **Independent Study.** 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.216.643. **Realism and Anti-Realism in Modern Hebrew Literature.**
This seminar seeks to trace the narrative dynamics and literary means of modern Hebrew Literature through a close examination of the tension between its realistic and anti-realistic trends. It begins with theoretical questions regarding the definition of realism as a literary genre. After this introductory section, the seminar is divided to three different periods in modern Hebrew literature, each is analyzed within the framework of its relation to realism. The first period is the turn of the 20th century and its first decades, reading works by writers such as Yosef Haim Brenner, Shmuel Yosef Agnon and Devora Baron. In the second period we study the post Israeli statehood period through reading works by A.B. Yehoshua, Amos Oz, Amalia Khanana Carmon and Yehoshua Knaz. The third part of the course deals with prose-fiction that is considered post-modernistic and includes writers such as David Grossman, Orly Castel-Bloom Yoel Hofmann, and Ronit Matalon.

Area: Humanities
Writing Intensive

AS.216.707. **Modern Hebrew Women’s Prose-Fiction.**
In this graduate seminar we will read and discuss modern Hebrew women’s prose-fiction and novels in the Hebrew original. We will study the historical background in which they emerged and their various literary means of expressing a feminine voice. We will read works by writers such as Amalia Kahanna-Carmon, Savyon Liebrecht, Ronit Matalon, Orly Castel-Bloom, Michal Govrin, Yehudith Hendel, Nurit Zarchi, Ester Peled and Maya Arad. Recommended Course Background: Knowledge of Hebrew
Area: Natural Sciences
Writing Intensive

AS.216.800. **Independent Study.**

Cross Listed Courses

Center for Language Education

AS.384.115. **First Year Hebrew.** 4 Credits.
Designed to provide reading and writing mastery, to provide a foundation in Hebrew grammar and to provide basic conversational skills. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students’ schedules.

AS.384.116. **First Year Hebrew II.** 3 Credits.
Designed to provide reading and writing mastery, to provide a foundation in Hebrew grammar and to provide basic conversational skills. Cross-listed with Jewish Studies.
Prerequisite(s): AS.384.115

AS.384.215. **Second Year Hebrew.** 3.5 Credits.
Designed to enrich vocabulary and provide intensive grammatical review, and enhance fluency in reading, writing and comprehension. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students’ schedules.
Prerequisite(s): AS.384.116 or equivalent
Area: Humanities

AS.384.216. **Second Year Hebrew II.** 3 Credits.
Designed to enrich vocabulary and provide intensive grammatical review, and enhance fluency in reading, writing and comprehension. Recommended Course Background: AS.384.215 or permission required.
Prerequisite(s): AS.384.215
Area: Humanities

AS.384.315. **Third Year Hebrew.** 4 Credits.
Designed to maximize comprehension and the spoken language through literary and newspaper excerpts providing the student with the language of an educated Israeli. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students’ schedules.
Prerequisite(s): AS.384.216 or equivalent
Area: Humanities

AS.384.316. **Third Year Hebrew II.** 3 Credits.
Designed to: maximize comprehension and the spoken language through literary and newspaper excerpts providing the student with the language of an educated Israeli. Recommended Course Background: AS.384.315 or permission required. Cross-listed with Jewish Studies.
Prerequisite(s): AS.384.315 or instructor permission
Area: Humanities
Imagining Climate Change. 3 Credits.
Climate change poses an existential threat to human civilization. Yet the attention and concern it receives in ordinary life and culture is nowhere near what science tells us is required. What are the causes of this mismatch between crisis and response? What accounts for our collective inability to imagine and grasp this new reality, and how can it be overcome? In pursuit of these questions, we will look at texts from politics, philosophy, literary theory, and religion that frame climate change as a fundamental challenge not only to humanity but to the humanities: the disciplines and modes of thought that we rely on to make sense of the human condition. The second part of the course will examine works of literature and film for examples of how contemporary artists attempt to make the climate crisis visible and intelligible to us.
Area: Humanities

Languages of Modernist Fiction: Freshman Seminar. 3 Credits.
Does literature represent reality or create it? Is language just a tool we use to communicate, or is it shaped by our culture, or indeed, is our culture—and even our own experiences—shaped by our language? Modernist writers at the turn of the 20th century grappled with these questions, concerned that literature and in fact language itself was ill-equipped to face the changes occurring at the beginning of a new era of modernity. From symbolist and sound poetry to innovations in stream of consciousness narration and non-syntactic fragmentation, the literature of the time reflected a receding faith in the ability for ordinary spoken language to communicate feeling, meaning, and the authentic self. The task of modernism in turn became the reinvention of a new literary language that could either capture this condition of crisis or seek to overcome it. This course will investigate the various responses and solutions to the crisis of language in Anglo-American and European modernist fiction. Authors to be studied: Virginia Woolf, Andrei Bely, Franz Kafka, Jean Toomer, Filippo Marinetti, André Platonov, Mikhail Bakhtin, Yuri Olesha, et al. All readings will be in English.
Area: Humanities
Writing Intensive

The Tragic Tradition. 3 Credits.
This course offers a broad survey of tragic drama in the Western tradition, from its origins in ancient Greece to the twentieth century. In weekly lectures and discussion sections, we will study the specific literary features and historical contexts of a range of different works, and trace the continuities and transformations that shape them into a unified tradition. Key questions and themes throughout the semester will include what counts as tragic, the tragedy of social and political conflict, the bearing of tragedy on the meaning and value of life, the antagonistic relation between world and humans, the promises and dangers of tragedy for contemporary culture. Authors to be studied: Sophocles, Euripides, Seneca, Shakespeare, Racine, Goethe, Ibsen, Strindberg, Chekov, Brecht, Pirandello, and Beckett.
Area: Humanities
Writing Intensive

Categories of Traditional and Modern Narratives. 3 Credits.
This course will reflect on certain key moments in the development of Latinate and Italian Renaissance humanism and will also include reading and discussion of certain recent landmark contributions to the history of the modern humanities.
Area: Humanities

Comparative Thought and Literature

Writing Intensive

Is storytelling part of human nature? Do myths and legends have a universal structure? As a bridge between experience and language, narratives inform the way we understand history, gender, politics, emotion, cognition and much more. This course will explore how narratives are composed, how they are experienced, and eventually, how they evolve throughout history. We will be reading a diverse selection of ancient and modern texts, including selections from Plato and Aristotle, the Odyssey, the Hebrew Bible, as well as 19th- and 20th-century authors such as the Brothers Grimm, Gustave Flaubert, James Joyce and Virginia Woolf. The second part of the course focuses on philosophical and critical approaches to narrative in arts and media, concluding with the evolving concept of narrative in the digital age. Theoretical readings include selections from Karl Marx, Roland Barthes, Jacques Derrida and Judith Butler. All readings will be in English.
Area: Humanities
Writing Intensive
AS.300.349. Capitalism and Tragedy: from the 18th Century to Climate Change. 3 Credits.
In contemporary discussions of climate change, it is an increasingly prevalent view that capitalism will lead to the destruction of civilization as we know it. The notion that capitalism is hostile to what makes human life worth living, however, is one that stretches back at least to the early eighteenth century. In this class, we will examine key moments in the history of this idea in works of literature, philosophy, and politics, from the birth of bourgeois tragedy in the 1720s, through topics such as imperialism and economic exploitation, to the prospects of our ecological future today. Authors to be studied: George Lillo, Balzac, Dickens, Marx and Engels, Ibsen, Weber, Brecht, Arthur Miller, Steinbeck, Pope Francis, and contemporary fiction, politics and philosophy on climate change.
Area: Humanities

AS.300.389. Freud's Cases - Source of Psychoanalytic Knowledge. 3 Credits.
Even though major scientific discoveries have been made from the intensive study of singular cases, modern science is mostly quantitative in its approach. In this course we will follow psychoanalysis' use of clinical practice as the primary context for the generation of knowledge. We will use two notions from the philosophy of science: "exemplars" (Kuhn) and "personal knowledge" (Polanyi), as we read Freud's cases in which he combines theoretical consideration and detailed investment in the singularity of the person. In his accounts of the "hysteria" of Dora, the "phobia" of Little Hans, the "obsession" of the Rat Man, the "infantile neurosis" of the Wolf Man and Schreber's "paranoia," Freud not only generated theoretical and technical knowledge but also constituted the "single case study" genre of investigation, as the primary source of psychoanalytic knowledge. Readings will include: Freud, Foucault, Polanyi, Kuhn, Hacking, and Forrester. Cross-listed with Film and Media Studies
Area: Humanities

AS.300.608. The Physics and Metaphysics of Handwriting.
When word processing machines that can be held in the palm of a hand, why use pen and paper? Handwriting -- and its juxtaposition against digital forms of communication -- offers a unique approach to studying human interactions and the ways in which meaning, truth, intimacy, and agency are shaped by our changing technologies. At a time of exponential growth in machine writing, a study of this older form of communication enables a comparative approach that, perhaps surprisingly, opens up what are contemporary political questions. Centered on a few case-studies involving works by Sand, Chopin, Manet, Giacometti, Mallarmé, and Proust, this course takes a backward glance at a culture of written expression at a great remove from our word processing world and yet explicitly vested in an aesthetics of free expression. This modern graphological culture saw in the tracings of the hand, the uniquely personal marks of an intertwining of mind, body, and of subjectivity. Merleau-Ponty and recent word on embodiment will provide us with critical tools for our investigations into the "physics" of this activity, as will the methods of textual criticism and the new domain of creativity studies. The "metaphysics" of handwriting call, meanwhile, for a return to Heidegger, to Derrida and other major contemporary theorists of writing. They will help us see how hand and digital writing emerge as fundamentally different modes of human expression -- philosophically and politically. Knowledge of French is not required for this course. Undergraduates accepted with the permission of the professor.
Area: Humanities

History

AS.100.292. Radical Spain: Social Movements from the Spanish Empire to the Catalan Crisis. 3 Credits.
This course examines different radical movements such as anarchism, fascism, nationalism and feminism in the context of Spanish history from the nineteenth century to the twenty-first century.
Area: Humanities, Social and Behavioral Sciences

AS.100.377. The Age of Reason on the Silver Screen: Cinematic Representations of the Enlightenment. 3 Credits.
This course will discuss the problem of historical representation on the basis of an analysis of movies depicting the Age of the Enlightenment.
Area: Humanities, Social and Behavioral Sciences

AS.100.602. The French Revolution.
Introduces graduate students to the rich historiography of the French Revolution. Topics include: revolutionary origins, political culture and radicalization, citizenship, violence, family & gender, the search for stability after the Terror, global revolution, Napoleon's Brumaire coup.
Area: Humanities, Social and Behavioral Sciences

History of Art

AS.010.204. Italian Art in the Middle Ages. 3 Credits.
This course explores key monuments of medieval art and architecture in Italy from c. 400 until 1350. We will concentrate on historical, functional, and aesthetical aspects that lead to the creation of single monuments and art works. Emphasis is given to the analysis of "sacred space" by means of architecture, painted, and sculptural decoration, as well as ritual performances. Another focus is laid on the emergence on the political dimension of art for the creation of civic identity as well as in the context of the late medieval courts. We raise questions about the importance of materiality and science for the creation of medieval art works.
Area: Humanities
Writing Intensive

AS.010.301. Michelangelo: Religion, Sexuality, and the Crisis of Renaissance Art. 3 Credits.
The course will focus on the controversies surrounding the representation of the body in the writings and figurative art of Michelangelo and his contemporaries, the historical circumstances under which the most admired artist in Europe was attacked as a blasphemer and an idolator, and the effect of widespread calls for censorship on his later production. The writings of Michelangelo, Pietro Aretino, Benvenuto Cellini and own writings will be considered with a focus on their staging of an ambivalent and transgressive eroticism.
Area: Humanities

AS.010.418. The Icon in East and West. 3 Credits.
The chronologically structured seminar discusses the conception and reception of holy images in the Middle Ages from Late Antiquity until the beginning of the Renaissance. We will investigate their creation during the rise of Christianity and their affinities with Graeco-Roman portraits and cult images. Another focus is dedicated to the theological and political context of icons during the waves of early medieval iconoclasm, in particular in Byzantium. We will address icons made in the Holy Land during the crusades, which are often characterized by merging Frankish and Byzantine styles and motifs with Islamic art. We will discuss the emergence of new icons in Italy, and their pan-European distribution after 1100. Here we will focus on the influence of the papal court and the economic impact of icons in the later Middle Ages in the Italian commune.
Area: Humanities
Writing Intensive
AS.010.434. Italian Art, Politics, and Religion in the time of Dante, c. 1250-1400. 3 Credits.
This seminar will investigate the interrelationship between art, politics, and religion on the Italian peninsula during the later Middle Ages. We will focus on the major cities as patrons of the arts (visual and poetic), e.g. Florence, Siena, Padua, Milan, Naples, Venice, and Rome, in order to understand how the elite used art to further their political and religious agendas. Select topics include: the rise of the Mendicant orders; the importance of Dante’s Divine Comedy on manuscript production; artistic competition among communes; the rise of the individual artist; humanism and the arts.
Area: Humanities

History of Science, Medicine, and Technology
AS.140.674. Science and Medicine in Early Modern Atlantic World Culture.
How were changes in scientific and medical ideas reflected in cultural products of the early modern Atlantic world? We will study these ideas as they appeared in literary genres such as poetry, utopias, natural histories and travel narratives. Likewise, we will examine the visual culture of the Atlantic space for clues about changing conceptions about the natural world. Our expedition will encompass Anglophone, French and Hispanic regions, and will pay careful attention to hybrid cultural products that reflect the interaction between indigenous cultures and the (changing) European understanding of the natural world.

Interdepartmental
AS.360.133. Freshman Seminar: Great Books at Hopkins. 3 Credits.
Students attend lectures by an interdepartmental group of Hopkins faculty and meet for discussion in smaller seminar groups; each of these seminars is led by one of the course faculty. In lectures, panels, multimedia presentations, and curatorial sessions among the University’s rare book holdings, we will explore some of the greatest works of the literary and philosophical traditions in Europe and the Americas. Close reading and intensive writing instruction are hallmarks of this course; authors for Fall 2021 include Homer, Plato, Dante, John Donne, George Herbert, Christina Rosetti, Mary Shelley, Friederick Nietzsche, Isaac Bashevis Singer, Frederick Douglass.
Area: Humanities
Writing Intensive

Medicine, Science and the Humanities
AS.145.101. Death and Dying in Art, Literature, and Philosophy: Introduction to Medical Humanities. 3 Credits.
In this course, four essential aspects of the theme of death and dying will be examined: Death and Medicine; Emotional Responses to Death; Burying and Commemorating the Dead; and Conceptions of Death. Specific topics relating to each of these aspects that will be covered include illness and causes of death; prevention of death; suicide; death and grief; burial practices; mourning the dead; public commemoration of the dead; life after death; and death and rebirth. Students will explore these topics from a historical-anthropological perspective with Paul Delnero, a specialist in the history and culture of the ancient Near East (Near Eastern Studies); from a literary perspective, by reading and writing poetry relating to these subjects with the acclaimed poet James Arthur (Writing Seminars); and from a musical perspective, through direct encounters with the music and creative process of the award-winning composer, Michael Hersch (Peabody).
Area: Humanities
Writing Intensive

Music
AS.376.305. Operatic Technologies. 3 Credits.
Operatic Technologies offers an introduction to opera via a series of case studies about the materials used to produce it. With a particular focus on the Italian case, we will trace issues such as how auditoriums have historically been illuminated; orchestras directed; machines used to create and sustain illusion and operas simulcast. Students will leave this course with a clear sense of how the look and feel of the operatic experience has changed over time; how technological practices established in the past continue to determine productions now, and how the cinema can be considered an extension of opera. Our course includes a visit to the cinema to see a Metropolitan Opera simulcast. Ability to read music is not required.
Area: Humanities
Writing Intensive

Philosophy
AS.150.400. Simone de Beauvoir. 3 Credits.
Seminar on Beauvoir’s moral philosophy, covering the major works of the 1940s. Readings will include selections from The Blood of Others, Pyrrhus and Cineas, All Men are Mortal, The Ethics of Ambiguity, and The Second Sex. Open to graduate students and advanced undergraduates. (Beginning undergraduates should contact Professor Kosch.) No prerequisites.
Area: Humanities
Writing Intensive

Political Science
AS.191.344. Belonging to Nature in the Anthropocene. 3 Credits.
This course explores debates in contemporary environmental political thought concerning humanity’s relationship to nature in the Anthropocene. The Anthropocene refers to the era in which ‘human’ activity becomes a force of ‘nature’—when the impact of human activity on natural processes manifests itself in the stuff of the Earth. For many of us, these planetary transformations are hardly noticeable in day-to-day life, but they are dramatic: we are living through the Earth’s sixth mass extinction. What is our relationship to these transformations? Do we have the power to stop them, or at least to minimize their harmful effects? Course readings and films introduce multiple visions of the human/nature relationship and examine the responses they recommend to these and other questions. The political stakes of these visions are brought to light as we consider: How do visions of the human/nature relationship shape and texture core political concepts like freedom, agency, responsibility, and progress? What do they suggest about the strategies most likely to motivate action amid the uncertainty of the Anthropocene? How do these visions subtly (and not so subtly) relegate some to the realm of ‘nature’ so that others can be classified as ‘human’?
Writing Intensive
Program in Latin American Studies
AS.361.130. Introduction to Latin American Studies. 3 Credits.
The goal of this course is to provide an overview of Latin America, analyzing political and cultural aspects, chronologically organized. We will begin studying the origins of the multi-ethnic societies, starting with the ancient civilizations and their transformation under colonization. It is important to understand the survivial of cultural traits among indigenous peasants today in the countries that were the cradle of ancient civilizations: Mexico, Guatemala and the Andean countries. In the republican era the course will focus on the classical Caribbean dictators in the first half of the 20th century and their reflection in the literature, comparing the historical reality with the magic representation in the work of Garcia Marquez. The course will scrutinize the most important revolutions in the continent: the Mexican, Cuban and Bolivian revolutions and the geopolitics of USA in the Americas. Weekly lectures related to the assigned reading will focus on specific periods, topics and regions. After each lecture, we will review the material, connecting specific details from the readings with the more theoretical aspects provided in my lecture. The course has a website where the PowerPoint presentations will be posted. Students are encouraged to post their questions, comments and suggestions on the web after their readings. Students will be given a study guide for each lecture, which will be the basis for the exams. Our perspective on Latin America will be enhanced by a selection of few films related to the topics.
Area: Humanities, Social and Behavioral Sciences

AS.361.336. Hugo Chávez, Fidel Castro, and Bolivar’s Venezuela. 3 Credits.
Are the current extreme hard times in Venezuela’s Bolivarian Republic irreversible? Is there a ballpark somewhere for Thomas Jefferson and Simón Bolívar to hold a debate match about democracy, achieved emancipations, republican values and the lure of dictatorship? The course welcomes serious and sharply political dialogue about ideals of democratic republicanism in clash from the rise and apparent fall of Fidelismo and Chavismo in the Caribbean region to the agitations and alliances dictated by Trump’s seizure of American politics.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

Program in Museums and Society
AS.389.155. The History of Fake News from The Flood to The Apocalypse. 3 Credits.
“Fake News” is everywhere in both past and present. Explore that history first-hand through JHU’s rare book collection of literary and historical forgeries spanning millennia of human history. Students learn how to examine and investigate rare books. Students are encouraged to post their questions, comments and suggestions on the web after their readings. This course will give a study guide for each course, which will be the basis for the exams. Our perspective on Latin America will be enhanced by a selection of few films related to the topics.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.389.325. Women of the Book: Female Mystics, Miracles, and Material Culture in Early Modern Europe. 3 Credits.
Students will study and assess JHU’s new, unparalleled rare book and manuscript collection about the spiritual lives of women at the crossroads of religious mysticism, miracles, and material culture, 1450-1800.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

In 1857 Baltimore’s historic George Peabody Library was born, one of America’s first public libraries. This course studies its history, rare book collections, and foundational role in Baltimore’s cultural history. Students are encouraged to post their questions, comments and suggestions on the web after their readings. This course will give a study guide for each course, which will be the basis for the exams. Our perspective on Latin America will be enhanced by a selection of few films related to the topics.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.389.356. Halls of Wonder: Art, Science, and Literature in the Age of the Marvelous, 1500-1800. 3 Credits.
Area: Humanities

AS.389.357. Heaven on Earth: Art, Power, and Wonder in the Vatican from Antiquity to the Enlightenment. 3 Credits.
A material cultural exploration of the Vatican from the founding of St. Peter’s basilica in antiquity to the establishment of the Vatican Library and Museums in the Renaissance and Enlightenment.
Area: Humanities
Writing Intensive

Study of Women, Gender, Sexuality
AS.363.341. The Making of Modern Gender. 3 Credits.
Gender as we know it is not timeless. Today, gender roles and the assumption that there are only two genders are contested and debated. With the binary gender system thus perhaps nearing its end, we might wonder if it had a beginning. In fact, the idea that there are two sexes and that they not only assume different roles in society but also exhibit different character traits, has emerged historically around 1800. Early German Romanticism played a seminal role in the making of modern gender and sexuality. For the first time, woman was considered not a lesser version of man, but a different being with a value of her own. The idea of gender complementation emerged, and this idea, in turn, put more pressure than ever on heterosexuality. In this course, we will trace the history of anatomy and explore the role of literature and the other arts in the making and unmaking of gender.

French, Bachelor of Arts

French Major Requirements
(Also see Requirements for a Bachelor’s Degree. (p. 1584))
The program stress the importance of students meeting each semester with their appointed faculty advisor to ensure a coherent and adequate course of study and students with previous exposure to French must take a web-based language placement test to determine the appropriate course level in which to enroll when selecting their first French language course. Of the ten courses required for the French major, only one may be a course taught in English (indicated under either the 211 and 212 prefixes with a GRLL-ENGL POS-Tag. Six of the ten courses must be completed through the French Program at JHU on the Homewood campus. The program encourages students to study abroad and students should be sure to follow all required procedures for the approval of study abroad coursework. All major requirements must be completed with a grade of C or better and may not be taken satisfactory/unsatisfactory.

German and Romance Languages and Literatures, PhD

In addition to general university requirements for the Ph.D., the following regulations apply to graduate students in the Department of German and Romance Languages and Literatures:

To be accepted into the Ph.D. program, students must demonstrate by an exceptionally strong academic record that they are capable of advanced study in literature. They will choose French, German, Italian, Latin American, or Spanish literature as the major field of interest. The student will normally take two to three years of graduate courses and devote the fourth year to study and research in the country on which the student’s study concentrates. The well-prepared student can expect to receive the Ph.D. after five years of study. The graduate program in Modern Languages and Literatures emphasizes work in three complementary areas: literary history, close textual analysis (including explication de texte), and theory of interpretation. By way of preparing students in a variety of critical schools, the faculty and the visiting professors offer training in the different disciplines pertaining to critical theory, including philosophy, theory of language, psychoanalytic theory, intellectual history, and cultural anthropology.

In addition to the major language, the Ph.D. candidate must demonstrate proficiency in one or two other languages besides English, depending on the specialization. (See below for further information.)

Honors in French

Qualified majors may earn Honors in French by meeting the minimal GPA requirement (3.7 in all French classes) and completing four credits capstone thesis. This includes the 1-credit "Thesis Prep" and the 3-credit "Senior Thesis." Note that these courses, usually taken in the Senior year, are in addition to the 10 required three-credit courses.
A dissertation proposal, presented to the faculty and students in their section, is required before official admittance to candidacy for the Ph.D. for French, Italian and Spanish graduate students.

**French**
For students who choose to specialize in an early modern period (medieval, Renaissance, or 17th century), proficiency in Latin is required by the end of the third semester. Students may also choose a minor field: another Romance literature, modern criticism, comparative literature, medieval studies, or some other field connected with the student’s major field.

**German**
In addition to fulfilling the general university requirements for advanced degrees, candidates for the M.A. must demonstrate fluency in spoken German, be able to write German reasonably well, have a good knowledge of the history of German language and literature, be familiar with the general cultural background, and have read extensively in German literature, particularly in the periods after 1700. During their first two years at Hopkins, candidates for the M.A. degree must pass two topical examinations. After the M.A., two major qualifying papers are required under the supervision of two advisors, chosen by the candidate, before work on the dissertation can be undertaken.

**Italian**
In addition to the major language, the student must demonstrate proficiency in two other foreign languages. The student must take a minimum of five semesters of graduate courses. After this period, normally in the third year, the student will take examinations which, if completed successfully, will lead to candidacy for the Ph.D.

**Spanish**
In addition to the major language, the student must demonstrate proficiency in two other foreign languages. The student must take a minimum of four semesters of graduate courses. After this period, normally in the third year, the student will take four field examinations which, if completed successfully, will lead to candidacy for the Ph.D.

**Graduate Study Abroad**
The Department encourages and expects graduates student to do research abroad during their program of study. In the French section, an exchange program with the École Normale Superieure offers the opportunity for graduate students to study in Paris, where they are encouraged to participate to research programs at ENS, EHESS, and other Universities; an exchange program with University Paris-Diderot-Paris 7 offers the opportunity for graduate or post-graduate students in French to study and teach in Paris; and the University of Geneva offers a fellowship each year for a grad student in the French section. Ph.D. students in the French section are also encouraged to apply for the Chateaubriand scholarship offered by the Embassy of France. Exchange programs with the FU Berlin (Friedrich Schlegel Graduate School of Literary Studies), the University of Hamburg, and the Humboldt University, offer the opportunity for graduate students in the German section to study in Germany. In addition, the German section offers Max Kade travel grants for research in a German-speaking country. Italian graduate students can take advantage of a wealth of formal and informal contacts with Italian scholars, archives, and institutes. Spanish students may elect to make their fourth year a non-teaching year. After presenting a research proposal to their advisor, with the approval of that advisor and the head of section, they may elect to go abroad for a semester or the entire academic year in order to conduct research essential to their dissertation.

**Financial Aid**
The department has a number of fellowships for graduate students. Awards include university fellowships, which carry stipends and teaching fellowships currently set at $28,500 per academic year for teaching one section of an undergraduate language course each semester, in addition to remission of tuition fees. All graduate students are expected to do four years of apprentice teaching of elementary and intermediate level undergraduate courses as part of their professional preparation. The amount of classroom teaching required is usually three to four hours a week. Students are admitted for five years, fully funded, subject to annual review to assure satisfactory progress. In addition, stipends (equivalent to that year’s teaching fellowship) are available for study abroad during the third or fourth year.

Fourth- and fifth-year graduate students may also compete for Dean’s Teaching Fellowships, which provide opportunities for the design and teaching of undergraduate courses in literature, cultural studies, or intellectual history.

Graduate students conducting research in Italian studies compete each year for two Charles S. Singleton Travel Grants for study in Italy. This program is administered by the department and is open to graduate students from other departments.

**Admission Requirements**

**Application Procedures**
Prospective graduate students may visit the departmental website at https://krieger.jhu.edu/modern-languages-literatures/ for further information on programs and faculty. All questions regarding the programs offered by the department should be emailed to mll@jhu.edu (grll@jhu.edu). Prospective students are encouraged to apply online through the secure Graduate Admissions website (https://app.applyyourself.com/?id=jhu-grad).

**German Bachelor of Arts/Master of Arts**
The department offers highly qualified students the option to complete a combined degree in five years. To receive the B.A./M.A. degree, the student must complete advanced courses in German literature and pass the departmental written and oral master’s examinations. Students interested in this option should make an appointment with the Director of Undergraduate Studies no later than the spring of their junior year to discuss the options available to them.

**German, Bachelor of Arts**

**German Major Requirements**
(Also see Requirements for a Bachelor’s Degree. (p. 1584))

Students are encouraged to declare their intent to major in German in their sophomore year and to make an advising appointment with the Director of Undergraduate Studies to discuss their academic plans, including options for a study abroad semester or year.

**German Bachelor of Arts/Master of Arts**
Majors must complete a minimum of nine courses (at least 3 credits each) in German beyond AS.210.262 Intermediate German II.

Majors are required to complete the Advanced German sequence (AS.210.361 Advanced German I: Cultural Topics of the Modern German-speaking World and AS.210.362 Advanced German II: Contemporary Issues in the German Speaking World, which counts for 6 credits (2 courses) and is a prerequisite for upper level 213.xxx seminars taught in German. Of the remaining seven courses, majors choose courses designated as 210.3xx (German language); 211.xxx (with POS-TAG GRLL-GERM) and 213.xxx. No more than 6 credit hours of translation courses may be used to fulfill major requirements and five of the nine courses for the major must be taken at Hopkins. All major requirements must be completed with a grade of C- or better and may not be taken satisfactory/unsatisfactory.

The department strongly advises its majors to gain a knowledge of a second foreign language.

<tr>
<td><strong>Total Credits</strong></td>
<td></td>
<td><strong>27</strong></td>
</tr>
</tbody>
</table>

1 Courses designated as 210.3xx (German language); 211.xxx (with POS-TAG GRLL-GERM) and 213.xxx apply towards the additional 21 credits.

### Sample Program of Study

The following 4-year plan presents a sample guideline for students starting with no prior knowledge in German. Beyond the completion of the Advanced German sequence, the selection of courses suggested below is just a suggestion; students are free to choose other courses and vary the sequence as long as they complete the total number of credit hours and do not exceed the maximum number of credits for courses taught in English. Students with prior knowledge in German must take the departmental placement exam before registering for a German course. The major must be taken at Hopkins. All major requirements must be completed with a grade of C- or better and may not be taken satisfactory/unsatisfactory.

### German Minor Requirements

Students are encouraged to declare their intent to minor in German in their sophomore year and to make an advising appointment with the Director of Undergraduate Studies to discuss their academic plans, including options for a study abroad semester or year.

Students must complete a minimum of 6 courses (with each course counting for at least 3 credits) in German beyond Elementary German (AS.210.161 German Elements I) and Intermediate German (AS.210.261 Intermediate German I and AS.210.262 Intermediate German II).

Minors are required to complete the Advanced German sequence (AS.210.361 Advanced German I: Cultural Topics of the Modern German-speaking World and AS.210.362 Advanced German II: Contemporary Issues in the German Speaking World, which counts for 6 credits (2 courses) and is a prerequisite for upper-level 213.xxx seminars taught in German. Students with previous proficiency exempting them from taking Advanced German I or II are required to take a course(s) from the 213.2xx-213.4xx series to reach the required 6 courses. Of the remaining
four courses, minors choose courses designated as 210.3xx; 211.xxx (with approval) and 213.xxx. No more than three (3) credits of translation courses may be used to fulfill minor requirements. All minor requirements must be completed with a grade of C- or better and may not be taken satisfactory/unsatisfactory.

### Italian, Bachelor of Arts

#### Italian Major Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1584))

The major requires completion of language courses through Advanced Italian I and II (AS.210.351 Advanced Italian I-AS.210.352 Advanced Italian II), two courses (6 credits) from the 'Italian Journeys' series, including 'Medieval and Early Modern' (AS.214.362 Italian Journeys: Medieval and Early Modern) and 'Modern and Contemporary' (AS.214.363 Italian Journeys: Modern and Contemporary Literature), and four elective courses (or the equivalent of 12 credits) from the Italian Culture series (AS.211.200-AS.211.499) and the Italian Literature series (AS.214.200-214.499). It may also include one course in Italian film/history/art history (if approved by the DUS) and one independent study in the senior year (taken after completing an Italian Literature series course). At least two of the four elective courses (or the equivalent of 6 credits) must be conducted in Italian. Five of the eight courses for the major must be taken at JHU. All major requirements must be completed with a grade of C- or better and may not be taken satisfactory/unsatisfactory.

Total Credits 24

1 Please note that the Italian program offers 1-credit courses in Italian culture (211.xxx) taught in English that can be freely combined as long as the total number of credits taken satisfies the general requirements.

---

### Sample Program of Study

The plan is conceived as a guideline for students starting with no previous skills in Italian language. The sequence of language courses is strongly recommended in order to complete all the requirements for the major by senior year. It is conceivable, though, to postpone Italian Elements to sophomore year.

Total Credits 38

### Honors in Italian

Students have the opportunity to earn honors in the major by successfully completing an honors senior essay. Italian majors who select this option may enroll, during either fall or spring semester of their senior year, in a for-credit independent study dedicated to the preparation of the honors senior essay.
Italian, Minor

Italian Minor Requirements

Language courses through Intermediate Italian I and II (AS.210.251 Intermediate Italian I-AS.210.252 Intermediate Italian II) or equivalent placement as well as Advanced Italian I and II (AS.210.351 Advanced Italian I-AS.210.352 Advanced Italian II). One course (3 credits) from the ’Italian Journeys’ series, including ’Medieval and Early Modern’ (AS.214.362 Italian Journeys: Medieval and Early Modern) or ’Modern and Contemporary’ (AS.214.363 Italian Journeys: Modern and Contemporary Literature) Three additional courses (or the equivalent of 9 credits) from the Italian Culture series (AS.211.200-499 with POS-Tag GRLL-ITAL) and the Italian Literature series (AS.214.200-499).

One independent study is acceptable toward the course requirements, provided it is taken after completing a course from the Italian Literature series. At least two of the three courses (or the equivalent of 6 credits) must be conducted in Italian. All minor requirements must be completed with a grade of C- or better and may not be taken satisfactory/unsatisfactory.

### Dual Language Options

Students must complete the requirements listed below for two languages (French, Italian, or Spanish). They must also take the 3-credit, capstone course AS.211.400 Topics in Romance Literatures

#### French

<table>

Romance Languages, Bachelor of Arts

Romance Languages Major Requirements

(Also see Requirements for a Bachelor’s Degree. (p. 1584))

The Department offers a Romance Languages major in two different configurations: a dual-language option, where the student specializes in two Romance languages, and a three-language option, where the student specializes in three Romance languages. Students interested in pursuing a Romance Languages major should get in touch with the Directors of Undergraduate Studies for each language. Students majoring in Romance Languages will be assigned an advisor for each relevant language, including a primary advisor in their main field of specialization. Six of the twelve courses must be taken at JHU.

All major requirements must be completed with a grade of C- or better and may not be taken satisfactory/unsatisfactory.

### Required of All Romance Languages Majors

<table>

Spanish Major Requirements

(Also see Requirements for a Bachelor’s Degree. (p. 1584))

The Spanish Major consists of 9 courses. All students must take the Spanish language placement exam before registering for a Spanish course. Speakers with prior language proficiency should consult with the Spanish major advisor about the waiver of language courses.

Note, however, that a waived language course may not be used to substitute for one of the nine required courses of the major. All major requirements must be completed with a grade of C or better and may not be taken satisfactory/unsatisfactory. Students may include a focus on Spanish for the professions in their Spanish major - see footnotes below. One course taught in English may be counted towards the major requirements. Of the nine courses for the major, five must the taken on the Homewood JHU campus.

The program strongly recommends that Spanish majors study abroad, either for a semester in the Hopkins in Madrid program or for a summer or winter intersession term in our programs in Salamanca (Spain) and Coronado (Costa Rica). The Hopkins in Madrid Program, which is for advanced language students, allows students to complete a significant number of major requirements while abroad. Hopkins is also affiliated with a number of other study abroad programs. Students wishing to understand how transfer courses taken elsewhere apply towards the major should contact Loreto Sánchez- Serrano.

Museums and Society

http://krieger.jhu.edu/museums/

The Program in Museums and Society is concerned with the institutions that shape knowledge and understanding through the collection, preservation, interpretation, and/or presentation of art, material culture, heritage, or natural and scientific specimens. It focuses on the role of museums (broadly defined) and their collections in societies past and present, including their historical, cultural, intellectual, and political significance.

A minor in Museums and Society complements study in a range of fields, including but not limited to anthropology, archaeology, history, history of art, and history of science and technology. Many courses include visits to or focused work in local and regional institutions, including on-campus collections (Archaeological Museum, Homewood Museum, Evergreen Museum and Library, and the Sheridan Libraries).

Whether they are researching a historical artifact or debating the obligations of public institutions, students in the program are challenged to approach their discipline from a new angle. While some may choose to pursue a museum career, the program has the larger goal of encouraging critical, careful thinking about some of the most influential cultural institutions of our day.

Programs

- Museums and Society, Minor (p. 2050)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.389.155. The History of Fake News from The Flood to The Apocalypse. 3 Credits.

“Fake News” is everywhere in both past and present. Explore that history first-hand through JHU’s rare book collection of literary and historical forgeries spanning millennia of human history. Students learn how to examine and investigate rare books.

Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.

This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Crosslisted with Archaeology, History, History of Art, International Studies and Medicine, Science & Humanities.

Area: Humanities, Social and Behavioral Sciences

AS.389.202. Introduction to the Museum: Issues and Ideas. 3 Credits.

Museums face practical, political and ethical challenges, including economic difficulties, debates over interpretation of culture and pressure to demonstrate social value. This course considers how museums are answering these challenges. Extra time is to allow for field trip travel - most days class runs 1:30-3:50

Area: Humanities, Social and Behavioral Sciences

AS.389.205. Examining Archaeological Objects. 3 Credits.

We examine the Johns Hopkins Archaeological Museum collection to learn the materials and techniques utilized in the ancient world to produce objects in ceramics, stone, metal, glass, faience, bone and ivory.

Area: Humanities
This course introduces students to a blend of public history, queer studies, and transgender studies. Students learn oral history and archival research methods as they draw on and contribute to the university's archival, museum, and library collections.

Area: Humanities, Social and Behavioral Sciences

AS.389.240. Archaeological Museum Practicum: Collections Management. 3 Credits.

Students will learn current procedures for surveying, cataloguing, documenting and rehousing collections using objects from the Archaeological Museum. This is a hands-on practicum course working closely with museum staff.

Area: Humanities, Social and Behavioral Sciences

AS.389.242. Museum Education: From Contested Knowledge to Reflective Narrative. 3 Credits.

This practicum course critically considers current art and history museum education practices and explores social justice discourses through museum visits, visitor studies, and museum learning strategies.

Area: Humanities, Social and Behavioral Sciences

AS.389.250. Conservation of Material Culture: Art, Artifacts and Heritage Sites. 3 Credits.

This course will introduce students to the field of art conservation through the study of paintings, paper, books, objects, contemporary sculpture and historic preservation. Topics covered will include: methods of manufacture, agents of deterioration, preservation initiatives, conservation treatment and ethics, and conservation science. Cross-listed with History of Art. Class usually meets at 1:30 - 3:50 PM, except for days with field trips.

Area: Humanities

AS.389.275. Interpreting Hopkins as Historic Site. 3 Credits.

This hands-on course explores interpretive strategies for historic sites and culminates in the production of original, research-based, outdoor interpretive exhibits on the Homewood Campus.

Area: Humanities, Social and Behavioral Sciences

AS.389.303. World of Things. 3 Credits.

The course introduces and applies new concepts about materials, and materiality to museum objects. It treats the museum as a site for investigating the relationship between people and things.

AS.389.311. From Treasure House to Production House: Exploring New Roles for the Museum in the 21st Century. 3 Credits.

Students work with the Director of the Peale Center for Baltimore History and Architecture as it reinvents itself as a museum for the twenty-first century. Involves working with community story-tellers in residence. Extra time is to allow for field trip travel - most days class runs 1:30-3:50.

Area: Humanities, Social and Behavioral Sciences

AS.389.315. Ancient Color: The Technologies and Meanings of Color in Antiquity. 3 Credits.

What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum.

Area: Humanities, Social and Behavioral Sciences

AS.389.322. Tigers to Teapots: Collecting, Cataloging, and Hoarding in America. 3 Credits.

Course will examine the collecting behavior of Americans. Students will explore how collectors have defined the holdings of the nation's museums, galleries, and libraries and used objects to shape taste and status in the U.S.

Area: Humanities, Social and Behavioral Sciences

AS.389.325. Women of the Book: Female Mystics, Miracles, and Material Culture in Early Modern Europe. 3 Credits.

Students will study and assess JHU's new, unparalleled rare book and manuscript collection about the spiritual lives of women at the crossroads of religious mysticism, miracles, and material culture, 1450-1800.

Area: Humanities, Social and Behavioral Sciences

AS.389.329. Author/Canon/Archive. 3 Credits.

Why are some literary works from the past reprinted, anthologized, and considered worthy of study, but not others? Why are some works “lost” and some “rediscovered,” while others simply fall out of favor? Focusing on nineteenth- and early twentieth-century American literary culture, we will use rare books and archival materials from JHU collections to examine Edgar Allan Poe, Walt Whitman, Emily Dickinson, Stephen Crane, Charles Chesnutt, and Zora Neale Hurston, along with a few authors you’ve never heard of, in terms of the relationship between authorship, stewardship, and status.

Area: Humanities, Social and Behavioral Sciences

AS.389.336. Heritage at Work. 3 Credits.

Working with the Catoctin Furnace historic site, students will gain hands-on experience connecting archaeology with interpretive exhibitions, public outreach, and community engagement. Several field trips to Catoctin required. M&S practicum course.

Area: Humanities, Social and Behavioral Sciences

AS.389.340. Critical Issues in Art Conservation. 3 Credits.

The course examines recent controversies in the conservation of major global art works and sites, raising questions concerning the basic theoretical assumptions, practical methods and ethical implications of art conservation. Cross-Listed with History of Art and Anthropology

Area: Humanities

AS.389.343. Edgar Allan Poe and His Afterlives. 3 Credits.

We will investigate the creative development and iconic afterlife of a canonical American author, Edgar Allan Poe, as a case-study in literary legacy and cultural heritage. What is the lifespan of a literary work, and how do works “stay alive” for later generations? Students will examine rare Poe materials and create a digital exhibition of Poe archives.

Area: Humanities, Social and Behavioral Sciences

AS.389.346. Scribbling Women in the Literary Archive. 3 Credits.

Students examine select texts and archival materials related to Emily Dickinson, Frances Ellen Watkins Harper, Edith Wharton, Ida B. Wells, Charlotte Perkins Gilman, Sui Sin Far, Alice Duer Miller, and Zora Neale Hurston. Students interrogate how these writers navigated the constraints of gender, as informed by race and class, in the decades before and after the 19th Amendment and consider literary collecting in relation to gendered cultural politics.

Area: Humanities, Social and Behavioral Sciences

AS.389.349. Art, Museums and the Law. 3 Credits.

This course will introduce and examine the legal systems that structure and guide museums’ management of collections and relationships with artists, employees, the public, the state, and the international community.

Area: Humanities
In 1857 Baltimore's historic George Peabody Library was born, one of America's first public libraries. This course studies its history, rare book collections, and foundational role in Baltimore's cultural history. 
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.389.356. Halls of Wonder: Art, Science, and Literature in the Age of the Marvelous, 1500-1800. 3 Credits.
Area: Humanities

AS.389.357. Heaven on Earth: Art, Power, and Wonder in the Vatican from Antiquity to the Enlightenment. 3 Credits.
A material cultural exploration of the Vatican from the founding of St. Peter's basilica in antiquity to the establishment of the Vatican Library and Museums in the Renaissance and Enlightenment. 
Area: Humanities

AS.389.358. Collecting the Contemporary. 3 Credits.
What does it mean to be a collector? Students will visit private collections of contemporary art in Baltimore, learning from collectors and their objects. This course alternates seminar meetings, focused on theories and practices of collecting, with field trips. Cross-listed with History of Art.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.389.359. Modernist Networks in the Archive. 3 Credits.
This class examines three American writers who built important and enduring networks, Ezra Pound, Gertrude Stein, and Langston Hughes. We will investigate the artefactual traces of their networks through recently acquired special collections materials and digital representations, in order to address questions about aesthetics and style, politics and power, race and gender, and what is and is not present in the literary archive. 
Area: Humanities

AS.389.374. Museum Lab: Creating Participatory Spaces at the Baltimore Museum of Industry. 3 Credits.
Where are visitor voices and perspectives in museums? Using contemporary scholarship, philosophical frameworks, and practical approaches, we tackle this question for an interactive exhibition at the Baltimore Museum of Industry. Approximately half of the class meetings will take place off campus at the museum. Transportation provided. Class usually meets 1:30-3:50. M&S practicum course; CBL course.
Area: Humanities, Social and Behavioral Sciences

AS.389.375. Museums and Social Responsibility. 3 Credits.
Do museums have a social responsibility? What roles should they play in their communities? Should they be agents of social change or social justice? This course explores the ways in which museums engage with local communities. Students work in partnership with a specific museum to develop an original and fundable proposal that attends to its social responsibility. Field trips and guest speakers will be a key feature of this course. M&S practicum course. CBL course. Cross-listed with Sociology.responsibility. Field trips and guest speakers will be a keynote feature of this course. M&S practicum course. CBL course.Cross-listed with Sociology. 
Area: Humanities

AS.389.376. Enslaved at Homewood: Slavery in 19th Century Maryland. 3 Credits.
Students consider the representation of slavery in historic house museums of the late 20th century through the present, and use the university's Homewood Museum as a laboratory for the development, production and mounting of an exhibit about the men, women and children who labored at Homewood in the nineteenth century. Museums and Society Practicum course.
Area: Humanities, Social and Behavioral Sciences

AS.389.377. Black Artists in American Art Museums: Correcting the Canon. 3 Credits.
Students are invited to examine critically the history of Black artists exhibiting within American museums. With the help of BMA staff, class will develop interpretation for an installation to accompany a major retrospective of artist Jack Whitten that considers the "canon" of art history as a site of ongoing negotiation between taste-makers, artists, dealers, and critics, as well as art institutions that include the market and the museum. Students will take advantage of archives at the BMA, the Library of Congress and Howard University. Students will help select the artworks and themes for the show; research individual participants in the social networks that facilitated the success of some artists over others; and research the biographies of individual artworks - some that have entered the canon and some that should.
Area: Humanities, Social and Behavioral Sciences

AS.389.378. Collections Remix. 3 Credits.
The course invites students to mine the archival, literary and cultural collections of the university for materials that reflect African-American experiences and stage campus interventions based on their findings. 
Area: Humanities, Social and Behavioral Sciences
AS.389.379. Interpreting Historic Sites for the 21st Century. 3 Credits.
Students go behind the scenes at JHU's own Evergreen Museum and Library to investigate how historic sites design spaces for learning, community engagement, leisure, as well as for exhibitions and special events. Students consider the history of Evergreen and its inhabitants and create concepts for how to engage communities in that history and story. Multiple class meetings take place at the Evergreen Museum.
Area: Humanities, Social and Behavioral Sciences

AS.389.384. Object Encounters at the Baltimore Museum of Art. 3 Credits.
Using the Baltimore Museum of Art as a laboratory, students examine canonical narratives in art museums and iterate new approaches to objects in museums that build equity, interrogate privilege, decolonise, revisualise and offer alternative stories. Class meets at the museum every other week.
Area: Humanities, Social and Behavioral Sciences

AS.389.386. Islamic Art in the 21st Century Museum. 3 Credits.
What narratives about Islam and Islamic art does the visitor encounter at the museum? Recent re-installations of Islamic art will be studied in the context of current issues, including Islamophobia, attacks on cultural heritage, and hesitation in addressing matters of faith in public institutions. Cross-listed with History of Art and Islamic Studies.
Area: Humanities, Social and Behavioral Sciences

AS.389.410. Sharing Knowledge: Participatory Archives, Collaborative Storytelling, and Social Justice. 3 Credits.
This course introduces students to collaborative humanities projects that encourage democratic participation among publics more broadly conceived than the academy. We investigate indigenous research methods; collaborative oral history and ethnography; interactive theater; and community archives. Final projects draw on the university's archival, museum, and library collections.
Area: Humanities, Social and Behavioral Sciences

AS.389.420. Curatorial Seminar. 4 Credits.
In collaboration with a local museum, conceptualize and develop an exhibition, potentially including but not limited to: checklists, exhibition texts, interpretive strategies, and programming. Exhibition theme varies year to year. Concepts, ethics and practicalities of curation are key concerns. Research visits to regional museums and private collections as relevant.
Area: Humanities, Social and Behavioral Sciences

Cross Listed Courses

Anthropology
AS.070.379. Social Ecology Studio. 3 Credits.
This course will grapple with the social and cultural dimensions of contemporary ecological problems through a local, project-based approach. Coursework will be organized on a studio basis in partnership with a local environmental organization, Friends of Stony Run. Continuing a collaborative project initiated in the fall of 2019, we will work together to develop interpretive materials for the Stony Run stream and urban watershed adjoining our campus.
Area: Humanities, Social and Behavioral Sciences

AS.389.379. Interpreting Historic Sites for the 21st Century. 3 Credits.
The Capstone allows students to develop and carry out their own hands-on research project in a museum, collection, archive, or other living resource. Final projects must involve some form of public presentation (exhibition, lecture, poster, web-based, etc.) and a work of self-reflection (journal, brief paper, blog, or other). Projects must be approved and overseen by a supervising faculty member and approved by the Program's Director, in keeping with the University's Independent Work Policy. Instructor permission required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.389.522. Capstone in Museum and Society. 1 - 3 Credits.
The Capstone allows students to develop and carry out their own hands-on research project in a museum, collection, archive, or other living resource. Final projects must involve some form of public presentation (exhibition, poster, web-based, etc.) and a work of self-reflection (journal, brief paper, blog, or other). Projects must be approved and overseen by a supervising faculty member and approved by the Program's Director, in keeping with the University's Independent Work Policy.

AS.389.599. Museum & Society Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

Center for Africana Studies

AS.362.110. Colonial Encounters: Artistic Responses. 3 Credits.
This course disrupts conventional ways of seeing, reading, and examining artistic texts. When we read a novel or study a work of art, especially that produced by white people, we tend to treat it as representative of the nation, talk about its aesthetic genius, or discuss it as reflecting its social/historical moment. Black artistic production, on the other hand, is most often treated as "protest," as that which simply responds to a national narrative. But what would happen if we treated the experience of black people and other people of color as universal? What would happen if we treated colonialism as the dominant social and intellectual problem of our age?
Area: Humanities, Social and Behavioral Sciences
Museums and Society

Classics
AS.040.137. Freshman Seminar: Archaeology at the Crossroads: The Ancient Eastern Mediterranean through Objects in the JHU Archaeological Museum. 3 Credits.

This seminar investigates the Eastern Mediterranean as a space of intense cultural interaction in the Late Bronze Age, exploring how people, ideas, and things not only came into contact but deeply influenced one another through maritime trade, art, politics, etc. In addition to class discussion, we will work hands-on with artifacts from the JHU Archaeological Museum, focusing on material from Cyprus.

Area: Humanities
Writing Intensive

English

Students interested in black print culture will engage in intensive archival research, both collaborative and individual, using the Sheridan Library’s Rare Book and Manuscript collections. Texts include poems, printed lectures, pamphlets, novels, periodicals, ephemera, correspondence, etc., alongside relevant critical and theoretical reading.

Area: Humanities
Writing Intensive

German Romance Languages Literatures
AS.211.329. Museums and Identity. 3 Credits.

The museum boom of the last half-century has centered largely around museums dedicated to the culture and history of identity groups, including national, ethnic, religious, and minority groups. In this course we will examine such museums and consider their long history through a comparison of the theory and practice of Jewish museums with other identity museums. We will study the various museological traditions that engage identity, including the collection of art and antiquities, ethnographic exhibitions, history museums, heritage museums, art museums, and other museums of culture. Some of the questions we will ask include: what are museums for and who are they for? how do museums shape identity? and how do the various types of museums relate to one another? Our primary work will be to examine a variety of contemporary examples around the world with visits to local museums including the Jewish Museum of Maryland, the National Museum of African American History and Culture and the National Museum of the American Indian.

Area: Humanities

AS.211.330. Curating Media Artists in Residence at JHU. 3 Credits.

The students will be closely involved with JHU’s Center for Advanced Media Studies (CAMS directed by Bernadette Wegenstein), and the Baltimore Museum of Art (curator Kristen Hileman) in preparing the BMA Black Box exhibit of Mary and Patrick Kelley’s new film, We Are Ghosts, set in a submarine: the film tells the story of life as experienced by the sailors in a U.S. submarine at the end of the second world war. Artist Mary Reid Kelley focuses on “minor aspects of life” in the submarine during non-combat — such as boredom, claustrophobia, and the effects of heavy drinking on the sailors. Included is also a restaging of Harry Truman’s announcement of the bombing of Hiroshima — told from the sailors’ point of view. While this new work will be on display in the BMA’s Black Box, Kelley’s 2016 film This is Offal (set in a morgue) will be showing at the museum. This film is centered around a dialogue between the ghost of a deceased woman, the victim of a suicide, and her animated organs. Students will also be traveling to Woodstock, NY on a field trip with professor Wegenstein for a studio visit with the artists at the beginning of the semester. Mary Reid Kelley is an artist who makes arresting, playful, and erudite videos that explore the condition of men and women throughout history. Drawing on literary and historical material, the videos involve intensive research and critical reassessments of standard historical narratives. Mary Reid Kelley is involved in every aspect of the videos’ creation—from writing the scripts (typically in highly structured poetic verse), to designing the sets, props, and costumes, to performing the leading roles—and all of the videos are produced by her and her partner, Patrick Kelley, at their private studio. Kelley is known for her feminist videos that recall the theater of the absurd and German Expressionist cinema. Please note that this class will be held as a practicum, and some of the dates and times will be flexibly adapted to the needs of the artists’ residency. If you have a very full calendar in the Spring it is best advised not to take this class.

Area: Humanities

AS.213.407. Museums and Identity. 3 Credits.

This course will explore the phenomenon of the “identity” museum through case studies involving Jewish and Holocaust museums around the world. The museum boom of the last half-century has centered in large part around museums dedicated to the culture and history of particular minority groups; recent notable (and relatively local) examples include the brand new National Museum of African American History and Culture in Washington and the National Museum of American Jewish History in Philadelphia. Our understanding of the contemporary theory and practice of such museums will be based on an examination of the history of the various museological traditions that engage Jewish identity from the 19th century to the present, including the collection and display of art and antiquities, ethnographic exhibitions, history museums, and Holocaust museums. We will deal with two primary museological phenomena: first, the introduction of the “primitive other” into European modernity via ethnographic museums; second, the museological commemoration and representation of trauma, specifically of the Holocaust. We will explore these topics through historical documents, theoretical readings, and case studies including visits to nearby museums. All readings in English.

Area: Humanities

History
AS.100.140. Freshman Seminar: Displacement: A History of U.S. Cities from Urban Renewal to Gentrification. 3 Credits.

“Displacement” explores historical conflicts over urban planning, clearance, and redevelopment. Students will conduct archival research and contribute to an online exhibit that develops the histories of displaced Baltimore neighborhoods.

Area: Humanities, Social and Behavioral Sciences
History of Art

AS.010.307. Diplomats, Dealers, and Diggers: The Birth of Archaeology and the Rise of Collecting from the 19th c. to Today. 3 Credits.

The development of archaeology in the Middle East – its history of explorers, diplomats, missionaries and gentlemen-scholars – profoundly shaped the modern world, from the creation of new museums and the antiquities market to international relations and terrorism.

Area: Humanities

AS.010.310. The ‘Long Sixties’ in Europe. 3 Credits.

This seminar examines aspects of advanced artistic production that emerged in France, Italy, the Benelux, and German-speaking countries primarily in the years 1945-1972 as constituent elements of the “Long Sixties,” a period of extraordinary and often rapid social transformation. Among our questions: How was the work of art reimagined and repositioned in the wake of World War II and the horrors of the Holocaust, in the context of reconstruction and an emerging consumer society, and in light of the Cold War, decolonization, and other political tensions and cataclysms? How did artists conceive the claims of artistic tradition in a rapidly expanding field of aesthetic practices and possibilities? What were the relations among advanced artistic practices and the “cultural revolutions” generally taken to have come to a head ca. 1968? Integral to this course is a student-curated exhibition of avant-garde materials at the MSE Library, to open in November 2018.

Area: Humanities

AS.010.331. The Renaissance Body Exposed: Exhibiting the Nude in European Art 1400-1550. 3 Credits.

Explores the extraordinary currency of the naked human figure in pre-modern European visual culture, only inadequately accounted for by explanations such as the ‘rise of naturalism’ or the ‘revival of antiquity’ Will also explore curatorial questions arising from an exhibition currently in preparation on the Renaissance nude. Assignment in the form of catalog texts and a ‘virtual exhibition.’

Area: Humanities Writing Intensive

AS.010.382. The Politics of Display in South Asia. 3 Credits.

Through an examination of colonial exhibitions, the rise of national, regional, and archaeological museums, and current practices of display and representation in institutions, we will explore how the image of South Asia has been constructed in the colonial, modern, and contemporary eras. We will engage with the politics of representation, spectacle, and the economies of desire as related to colonialism and the rise of modernity. Readings from postcolonial theory, museum studies, anthropology, history, and art history.

Area: Humanities Writing Intensive

AS.010.424. Art and Colonialism: Nineteenth-century India. 3 Credits.

This seminar explores the technologies of colonial power, from small ephemeral watercolor images of religious processions to massive multi-volume photographic projects documenting the “people of India,” and extending to the establishment of new urban and architectural spaces, archaeological museums, and art schools, the circulation of diplomatic art collections, and the commissioning of survey data. We will engage with the anti-colonial movements of resistance and uprising that took place across this century, examining the central participation of modern artists with these political movements, and explore the way this period fundamentally shaped the foundations for the study of South Asian art and archaeology. Readings will include colonial and postcolonial theory, Orientalism, historiography; we will be actively working with materials in the library’s Special Collections.

Area: Humanities Writing Intensive

AS.010.444. Classics Research Lab: Antioch Recovery Project (ARP). 3 Credits.

Antioch Recovery Project investigates mosaics from the ancient city of Antioch (modern Antakya, Turkey, near the border with Syria) now in the collection of the Baltimore Museum of Art. Excavated by an international team of archaeologists in the 1930s, hundreds of ancient mosaics from the cosmopolitan city were subsequently dispersed to museums across the globe, with twenty-four mosaics entering the collection of the BMA. Phase I will focus on the digital documentation and analysis of the mosaic of Narcissus as a prototype for ongoing research bringing together the fragments of ancient Antioch for contemporary beholders. The Greek myth of Narcissus tells the story of a beautiful Theban hunter doomed to love his own reflection and is the origin of the modern psychiatric term “narcissism.” Researching the mythology, materials, conservation history, archival material, historiography, and contemporary reception of the Narcissus mosaic and myth offers extensive opportunities to collaborate with scholars across a range of disciplines at JHU, in the Baltimore museum community, and beyond. Investigators will move between the Baltimore Museum of Art, the CRL processing lab in Gilman Hall, and Special Collections. The course will involve some travel to visit other mosaics from Antioch now in collections at Harvard’s Dumbarton Oaks in Washington D.C., and the Princeton Art Museum in Princeton, New Jersey.

Area: Humanities

History of Science, Medicine, and Technology

AS.140.320. Modernity on Display: Technology and Ideology at World’s Fairs. 3 Credits.

Seminar focuses on ideological at World’s Fairs over technological modernity with special emphasis upon World War II and the Cold War.

Area: Humanities, Social and Behavioral Sciences

AS.140.415. Thinking Through Things and Thinking Things Through. 3 Credits.

Combining hands-on experience of using historical instruments with primary sources analysis, the students will reconstruct the ways in which artifacts channeled human perception of their environment.

Area: Humanities, Social and Behavioral Sciences

Writing Intensive
Museums and Society, Minor

Museums and Society Minor Requirements

Course requirements for the minor in Museums and Society are designed to introduce students to a broad set of historical, theoretical, and practical museum issues and to give them the opportunity to explore museums first-hand. Prospective minors should consult with the Director of Undergraduate Studies for guidance in designing a program of study.

- A minimum of six different courses (amounting to at least 18 credits) selected from those approved by the program.

Near Eastern Studies

AS.130.149. 'Egyptomania': A Consumer's Guide to Ancient Egypt. 3 Credits.

Chances are you've heard of Cleopatra and the curse of King Tut's tomb. You may have even met a mummy or two, whether in the flesh or on the silver screen. Even today, 5,000 years after the dawn of Egyptian civilization—and half-way around the globe—the land of the pharaohs continues to fascinate the Western world. But, how is it that ancient Egypt came to be so deeply entrenched in Western culture? This course considers the history of Western interaction with ancient Egypt and examines the consequences of laying claim to a culture that is not one's own. We will approach our study through the lens of consumption, both material and cultural, situating these phenomena within their historical and contemporary contexts. By engaging with both primary and secondary sources, we will consider the power relations embedded in Egyptian archaeology and the writing of history as well as the ethics of collecting and displaying ancient Egyptian material culture. We will also investigate the popularization of ancient Egypt known as “Egyptomania,” focusing on the commoditization of ancient Egyptian culture in Western media and merchandising. By the end of the class, students will be able to engage with the complex, yet fundamental, question of who owns culture and what is at stake when we uncritically consume an image of the past.

Area: Humanities

AS.130.334. Egyptian Funerary Arts in the Archaeological Museum. 3 Credits.

This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum’s website and present their results for inclusion in the museum cataloguing project.

Area: Humanities

AS.133.706. Egyptian Funerary Arts in the Archaeological Museum. 3 Credits.

This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum’s website and present their results for inclusion in the museum cataloguing project.

Additional Details
Introduction to the Museum sequence: Ideally, students should take at least one introductory course before enrolling in more focused courses, but this is not required.

Departmental Distribution: In keeping with the interdisciplinary nature of the program, students are encouraged to explore various fields and must complete courses in at least two different primary disciplines beyond Museums and Society. Primary disciplines are defined either as the home department for the course (identified by the course’s three-digit prefix), as the first cross-listing beyond Museums and Society, or as the home discipline of the instructor. Students should seek guidance from the program to ensure they are fulfilling this requirement, and should note that Independent Study and Capstone credits cannot be applied to it.

Practicum Work: Practicum credits can be earned only from courses designated as Museums and Society ‘practicum’ in the course description [POS-Tag: PMUS-PRAC].

Independent Study and Capstone: Students have two options for pursuing independent work for credit in Museums and Society. The Independent Study typically takes a more traditional academic approach to research and presentation; the Capstone encourages research that is engaged with collections and results in an alternative, often public project. Students interested in these options should consult the university’s independent work policy and follow the guidelines outlined under Independent Research (http://krieger.jhu.edu/museums-society/academics/independent-research/). Approval for credit will not be given until a project has been officially approved by an appropriate mentor, in full and frequent consultation with the Program in Museums and Society. No more than 3 credits of independent work can be applied to the minor.

Internships: Internships are valuable opportunities to expand horizons, learn in the field, and investigate real-world applications of academic work. The Program in Museums and Society highly encourages students to explore internship options and works with the Career Center to identify opportunities to do so. However, while the program sponsors interns for academic credit when needed by the host institution, such credit cannot be used to satisfy minor requirements. Students interested in receiving credit for independent work should consider the Independent Study and Capstone options instead.

Other Information: No course other than the Independent Study or Capstone may be counted toward the minor more than once (up to a maximum of 3 credits).

Music
http://www.krieger.jhu.edu/music (http://www.krieger.jhu.edu/music/)

The Peabody Institute of The Johns Hopkins University is an internationally acclaimed music conservatory. The Peabody campus, located at historic Mount Vernon Place, is on the university shuttle bus route between Homewood campus and the medical institutions in East Baltimore. Faculty of the Peabody Institute offer classes on the Homewood campus that are open to all undergraduates.

Qualified Hopkins undergraduates may, for no extra charge, register for classes in music history, music theory, music education, recording techniques, and computer music offered on the Peabody campus. There are also limited opportunities to take private lessons and participate in ensembles.

Concerts
Homewood students are welcome to attend Peabody’s many concerts and are entitled to one complimentary ticket per concert, excluding opera and dance productions. Multiple performances of the same program do not count as separate concerts. Students can order tickets or e-tickets through University Tickets, accessible through the Peabody website (http://www.peabody.jhu.edu/). To pick up will-call tickets, students need to show their Hopkins ID at the Peabody Box Office, Monday through Friday, 10 a.m. to 4 p.m., or during the hour before the concert. The Box Office is in the lower level of the Grand Arcade in the Conservatory building; call (667) 208-6620.

Private Lessons
Private lessons are available to students at varying levels of accomplishment on a musical instrument or by voice.

- Half-hour or hour lessons are offered for credit in the Peabody Conservatory for the intermediate to advanced musician.
- Non-credit lessons are available in the Peabody Preparatory, space permitting.

The annual registration fee will be waived for all JHU students. School of Arts and Sciences and Engineering students are eligible to receive a cross-registration discount of 25 percent for Preparatory private lessons by obtaining a cross-registration form from their division each semester. There is a lesson fee for KSAS and WSE undergraduate students for lessons at the Conservatory and students may check with the Registrar’s Office for the current fee.

Students wishing to take advantage of this opportunity should consult the Peabody Conservatory and/or Preparatory catalogs for more information.

Auditions for lesson assignments at the intermediate or advanced level take place at the beginning of each term. Please see the following website for annual and semesterly updates regarding audition dates, repertoire, and fees: https://krieger.jhu.edu/music/music-lessons/.

Students may sign up for Mattin Center instrumental practice facilities by bringing their Jcard to the office of Student Leadership & Involvement, also located in the Mattin Center.

Ensemble Membership
Membership in the Hopkins Symphony Orchestra, the Johns Hopkins University Band, and the Hopkins Glee Club, all of which rehearse and perform on the Homewood campus, is open to all university students. Membership in the Hopkins Symphony Orchestra is by audition on a space-available basis. Seating is limited, especially in the winds. Contact the HSO Office in Shriver Hall at 410-516-6542 for audition information, which can also be found online at http://www.jhu.edu/jhso/about/audition_info.html (http://www.jhu.edu/jhso/).
Participation in the Peabody-Hopkins Chorus and Peabody Singers is open to all university students upon completion of a satisfactory audition. Please contact Ensemble Coordinator, 667-208-6628 (email TBA), if you wish to schedule an audition or would like additional information.

Advanced instrumentalists who wish to be considered for membership in Peabody’s large instrumental ensembles—the Peabody Symphony Orchestra, Peabody Concert Orchestra, Peabody Wind Ensemble, Peabody Chamber Ensemble (contemporary music), Peabody Improvisation and Multimedia Ensemble, and Peabody Jazz Orchestra—are welcome to take part in the placement audition process which takes place each fall during the week prior to Peabody’s registration process. In order to be given an audition slot, instrumentalists must be taking private minor lessons with a Peabody instructor, and that instructor must inform the Peabody Ensemble Office that they’ve evaluated the player’s ability to be on par with that of the student’s peers at Peabody. Occasional exceptions to this policy have been made for players of instruments which are uncommon or currently under-represented at Peabody. Due to the fact that each of the instrumental ensembles can accommodate only a certain number of players of each instrument, placement into these ensembles is made on a space-available basis, with priority given to Peabody instrumental majors for whom participation in large ensembles is a degree requirement.

Please direct any questions regarding participation in Peabody's large ensemble program to Ensemble Coordinator, 667-208-6628 (email TBA).

Programs

- Music, Minor (p. 2056)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

**AS.376.111. Rudiments of Music Theory and Musicianship.** 3 Credits. This course introduces written and aural music fundamentals including notation, scales, intervals, chords, rhythm, meter and sight-singing. Students will compose melodies and short pieces and complete listening projects. Course does not count towards the completion of the minor.

**AS.376.123. Freshman Seminar: Composer Biographies in Film.** 3 Credits. This freshman seminar focuses on the lives of Mozart, Beethoven, Schumann, and Chopin and the depictions of their lives in film during the 20th century. The course provides both an introduction to film analysis and music history biography.

Area: Humanities

**AS.376.166. Star Trek Music- The Franchise Frontier.** 3 Credits. Music defines the Star Trek experience. Through their continued reuse and repetition, Star Trek’s many musical themes go beyond their original audiovisual frameworks to operate as learned musical-cultural texts. As Star Trek has expanded its content into a myriad of installments and media platforms, this musical symbolism has proved vital in articulating both these differences and “sameness.” This online, asynchronous course uses Star Trek’s music as a tool to investigate musical branding and the creation of meaning in the media we consume every day. Through close viewings—and listenings—of film, television episodes, video games, computer games, commercials, and other media, we will explore the meaning(s) these media construct and acquire as they are re-used and re-purposed in audiovisual contexts. Your work will include studying media clips, television episodes, and some feature-length films; short readings in which we interact with both current and classic scholarly literature; regular discussion posts and responses to our content; a weekly reflection journal of short posts; and a final paper/project on a Star Trek music topic of your choice (1500 words). In so doing, we will hone your analytical skills by learning to critically evaluate filmic media and craft arguments about the roles of music/sound in film.

Area: Humanities

**AS.376.190. Learn Music by Writing It.** 3 Credits. This course uses composition and song-writing projects to introduce music fundamentals to students with little or no musical background. Topics will include rhythm and meter, pitch and intervals, scales, chords, and harmony, and how to read and write music in both traditional and popular presentations. We will cover standard classical music notation (score, Roman numerals, traditional theory terminology) as well as popular (lead-sheet notation and performance conventions). This course has no prerequisite.

Area: Humanities

**AS.376.211. Music Theory I.** 3 Credits. Introduction to basic principles of tonal music through listening, analysis and music making. Students study melody, harmony, voice leading, figured bass and dissonance treatment, and will also undertake short composition projects. Must have taken the qualifying examination or AS.376.111. Recommended to be taken concurrently with AS.376.221.

Area: Humanities

**AS.376.212. Music Theory II.** 3 Credits. This course continues the aural and written work of the previous course, but focuses on chromatic harmony while continuing the study of melody, counterpoint, and figured bass. Prerequisite: Music Theory I.

**Prerequisite(s):** AS.376.211

Area: Humanities

**AS.376.214. Music Theory III - Formal Analysis.** 3 Credits. An examination of the musical forms of the Common Practice Period and the logic of their structures. Forms studied will include variation, binary, rounded binary, ternary, rondo, sonata-allegro, and sonata-rondo. Recommended Course Background: AS.376.212

**AS.376.215. Theory III - 20th Century.** 3 Credits. This course teaches compositional approaches to and analytical techniques for twentieth-century music, including modes, synthetic and exotic scales, set theory, serial theory, and geometric proportionality.

**Prerequisite(s):** AS.376.212

**AS.376.216. Theory III - Counterpoint.** 3 Credits. A study of contrapuntal music, emphasizing composition in both the sixteenth- and eighteenth-century styles as epitomized by Palestrina and Bach.
**AS.376.217. Music Theory III - Song. 3 Credits.**

An examination of text-setting and song-writing in a variety of eras and styles. Topics will include art song, lied, jazz standards, and pop tunes.

**AS.376.221. Musicianship I. 2 Credits.**

An introduction to basic musicianship skills. The course is divided into performance skills (sight singing, rhythm reading, basic piano, and improvisation) and aural skills (recognition of pitch, chords, rhythms, melodies, and other musical structures). Topics include major and minor keys and simple time signatures. Emphasis is placed on developing effective practice techniques. Pre-requisite: AS.376.111 (Rudiments of Music Theory and Musicianship) or placement exam.

**AS.376.222. Musicianship II. 2 Credits.**

A continuation of the skills developed Musicianship I. The course is divided into performance skills (sight singing, rhythm reading, basic piano, and improvisation) and aural skills (recognition of pitch, chords, rhythms, melodies, and other musical structures). Topics include minor keys, chromatic melody and harmony, compound time signatures, and syncopation. As in Musicianship I, emphasis is placed on developing effective practice techniques. Pre-requisite: AS.376.221 (Musicianship I) or placement exam.

**AS.376.231. Western Classical Music. 3 Credits.**

This course is an introduction to the rich tradition of Western 'Classical' music. We will examine this music from a variety of perspectives, including: 1) its historical, intellectual, and cultural background; 2) the biographical background of its composers; 3) its stylistic context; and 4) analysis of the music itself. We will approach these perspectives through a variety of activities, such as lectures, readings, writing, exams and in-class discussion.

Area: Humanities

**AS.376.242. Introduction to Popular Music. 3 Credits.**

A survey of the stylistic features and social contexts of American popular music since the 1950s.

Area: Humanities

**AS.376.244. Electronic Music Production. 3 Credits.**

Students will be introduced to electronic music production techniques and software, and how both can be used to produce a wide range of genre specific results. Skills such as beat matching, intricate use of quantization, virtual instrument editing, automation, sampling, mixing, mastering, effect usage and use of plugins will be explored.

**AS.376.245. Introduction to Sound, Audio, and Recording Arts. 3 Credits.**

In this course we will undertake a comprehensive survey of sound, audio and the related technology. While covering sound recording from an historical perspective, we'll touch on related material in physics, music, psychology and acoustics. In lab exercises and assignments, students will have the opportunity to learn in a hands-on environment as practical applications of the lecture material are explored. Assignments will include critical listening, in addition to basic recording, editing and mixing of audio. The course will culminate in a comprehensive final project.

Area: Humanities

**AS.376.250. Introduction to Computer Music. 3 Credits.**

Introduction to Computer Music is an opportunity for people with no specialized training in music to explore electronic art music as a long-standing, if obscure, body of art, then to participate in creative work in the style. Participants will gain a heuristic understanding of forms of musical composition that operate outside the conventions of regular rhythm and harmony as they record and manipulate sound to sculpt it into original musical works. The lecture portion combines an historical overview of electronic music, rudiments of acoustics and musical perception, and instruction in compositional techniques and in using computers as creative musical tools. The laboratory portion, given at the Digital Media Center, serves as a workshop for creative exploration and for the completion of assigned creative projects including original works of digital sound art.

Area: Humanities

**AS.376.252. Jazz History. 3 Credits.**

Survey, investigation, and study of Jazz music and how it shaped American history from it's origins to current times.

Area: Humanities

**AS.376.258. Jazz Improvisation and Theory. 3 Credits.**

The primary focus of this performance/theory course is designed to help students acquire and develop basic language for improvisation in a collaborative environment. Throughout the semester, the course will develop these skills through songs drawn from standard jazz repertoire, examining improvised solos by master musicians, and understanding the application of fundamental theory concepts in performance situations. Enrolled students should be comfortable with theory rudiments such as note reading, scales, and intervals. No textbook is required, but students should have access to an instrument (singers are welcome).

Area: Humanities

**AS.376.259. Theory of 20th Century Popular Song. 3 Credits.**

This class will explore the way harmonic concepts codified in the western classical tradition over the last few centuries are represented and expanded upon in 20th and 21st century popular music. We will examine a number of harmonic techniques using a wide array of genres, ranging from jazz to Broadway to rock to pop to R&B/soul to hip-hop. This course will focus on listening, analysis, and composition techniques.

Area: Humanities

**AS.376.303. Musical Theater from Aristophanes to Leonard Bernstein. 3 Credits.**

This course examines the birth of musical theatre from Greek tragedy through the liturgical and secular plays of the middle ages and Renaissance, to the classical and romantic singspiels, operettas, and zarzuelas of the modern era, by such figures as Aristophanes, Adam de la Halle, Hildegard of Bingen, Angelo Poliziano, Juan del Encina, Wolfgang Amadeus Mozart, Gilbert and Sullivan, Ernesto Lecuona, Igor Stravinsky, and Kurt Weill. These will serve as a backdrop for a closer examination of the musicals of Jerome Kern, Cole Porter, George Gershwin, Irving Berlin, Richard Rodgers, Harold Arlen, Frank Loesser, Leonard Bernstein and others. In addition to studying and placing the works of these Broadway giants into a social, political, and economic context, we will study and perform from representative musicals and attend a performance at the Lyric Theatre. Student will be expected to write a capstone project.

Area: Humanities

Writing Intensive
AS.376.304. Voice and Contest: Historical Approaches to Singing Competitions. 3 Credits.
This course examines voice contests across time. While contests such as American Idol have received widespread attention, these competitions must be understood in terms of a much broader trend towards the proliferation of music prizes, both within and outside the so-called classical music tradition. Our course examines the deep history of the current obsession with voice contests, with examples drawn from the medieval period to the current day.
Area: Humanities, Social and Behavioral Sciences

AS.376.305. Operatic Technologies. 3 Credits.
Operatic Technologies offers an introduction to opera via a series of case studies about the materials used to produce it. With a particular focus on the Italian case, we will trace issues such as how auditoriums have historically been illuminated; orchestras directed; machines used to create and sustain illusion and operas simulcast. Students will leave this course with a clear sense of how the look and feel of the operatic experience has changed over time; how technological practices established in the past continue to determine productions now, and how the cinema can be considered an extension of opera. Our course includes a visit to the cinema to see a Metropolitan Opera simulcast. Ability to read music is not required.
Area: Humanities Writing Intensive

AS.376.330. History of Opera. 3 Credits.
A basic course in the origin and development of opera and its dissemination throughout the Western world.
Area: Humanities

AS.376.332. Arranging for vocal ensembles. 3 Credits.
Students will learn how to arrange pre-existing melodies or songs for various vocal ensembles. Music theory I as a prerequisite recommended but not required.
Area: Humanities

AS.376.333. World Music & Cultures. 3 Credits.
A study of world musics and cultural contexts.
Area: Humanities

AS.376.336. Beethoven and the Transformation of Musical Style. 3 Credits.
A survey course focusing on the life and music of Ludwig van Beethoven, whose compositions transformed and revolutionized music of the 19th century. Students will become acquainted with Beethoven’s major works, including piano sonatas, string quartets, and symphonies. No previous musical background is necessary. NOTE: The year 2020 marks the 250th anniversary of Beethoven’s birth.
Area: Humanities

AS.376.342. Caribbean Music. 3 Credits.
This course will explore several genres of traditional and popular music from the Caribbean, including Trinidad and Tobago, Jamaica, Haiti, Cuba, the Dominican Republic, and Puerto Rico. We will examine the social, political, and economic issues that have shaped these musics, with migration, colonization, race, and tourism especially informing our studies. Students will read about a variety of musical experiences and listen to representative examples of each music genre in order to think critically about music, culture, and performance in Caribbean contexts.
Area: Humanities

AS.376.344. Powerful Women in Opera. 3 Credits.
Many opera scholars have noted that opera abuses its female characters. Many operatic heroines die, whether from violent acts or chronic diseases. However, women in opera also wield great power through their voices as ambitious queens, cunning servants, magical beings, and femmes fatales. In this course we will examine how these female characters operate through explorations of the operas’ historical context, their texts and scores, and modern performance practice. Spanning from the 17th to 21st centuries, the repertoire studied in this class will provide an introduction to opera history. At the same time, we will delve deeply into different ways to do close analyses of opera through the lens of gender, reading the work of such thinkers as Carolyn Abbate, Naomi Andre, Adriana Caverero, Catherine Clément, and Wayne Koestenbaum.
Area: Humanities

AS.376.348. The Symphonic Century. 3 Credits.
The symphony occupies a prominent place within the history of Western classical music in the “long” nineteenth century. At once a canvas for daring innovations in style and form and a genre strongly allied with notions of “tradition,” the nineteenth-century symphony brings together a complex set of issues that illuminate the broader history of music and musical culture of the past 200 years. This course introduces the iconic works of the symphonic tradition, with a focus on music of Haydn, Mozart, Beethoven, Schubert, Berlioz, Schumann, Mendelssohn, Brahms, Bruckner, and Mahler. As we aim to discover what made this music so remarkable in its time and why so many people still care about it today, we will consider each symphony both as a timeless work of art and as a particular moment in cultural history. Close attention will be given to the techniques of musical listening, and our work will be deeply rooted within the historical, philosophical, and political contexts of the time. There are no pre-requisites for the course apart from a willingness to open one’s ears and to engage creatively and critically with some of the most extraordinary music ever written.
Area: Humanities

AS.376.371. Introduction to Music Cognition. 3 Credits.
What underlies our aesthetic response to music? How and why are we able to identify certain sounds as music? To what extent are music and natural language similar? What is it about music that evokes such powerful emotions such as happiness and sadness? What is unique to musical creativity? Examining such questions from cognitive science, neuroscience, psychology, and philosophical perspectives, this course explores relevant research and theory in the emerging domain of music perception and cognition. Students will complete a final research paper on the topic of their choice that integrates the course material.
Area: Natural Sciences, Social and Behavioral Sciences

AS.376.372. Topics in Music Cognition. 3 Credits.
This course explores the similarities and differences between music and language, the effects of musical training on cognitive development, and the expressive power of music, with an introduction to music and its role in film. We will read relevant research and theory on these topics from cognitive science, neuroscience, psychology, musicology, and philosophical perspectives.
Area: Natural Sciences, Social and Behavioral Sciences

AS.376.404. History of Musical Instruments. 3 Credits.
The history, technology, and performance of Western European musical instruments, their precursors, and their non-Western counterparts, addressed by experts and explored on visits to historic collections. Recommended prerequisite: AS.376.231 ‘Western Classical Music’.
Area: Humanities Writing Intensive
Writing Intensive Area: Humanities
inform the melodramatic imagination. Students will have the opportunity life, the course explores the social, political, and gender dynamics that excess and overreactions are two main voices of Dido, Medea, Violetta, and Tosca never ceased to affect their ideal environments. Echoing back to their tragic fates, the powerful “beauty” and “a person who thrives on being the centre of attention.” What is a drama queen? According to the Oxford English Dictionary, a drama queen is “a person who is prone to exaggeratedly dramatic behaviour” and “a person who thrives on being the centre of attention.” While drama queens exist among us, the world of opera is certainly one of their ideal environments. Echoing back to their tragic fates, the powerful voices of Dido, Medea, Violetta, and Tosca never ceased to affect their empathetic public. In fact, excess and overreactions are two main features of the operatic experience both on stage and in the audience. By focusing on the ways in which operatic characters are brought to life, the course explores the social, political, and gender dynamics that inform the melodramatic imagination. Students will have the opportunity to attend live HD broadcasts of Verdi’s La Traviata and Tchaikovsky’s Eugene Onegin from the Metropolitan Opera. No musical skills required.

Cross Listed Courses

German Romance Languages Literatures

AS.211.364. Drama Queens: Opera, Gender, and the Poetics of Excess. 3 Credits.

What is a drama queen? According to the Oxford English Dictionary, a drama queen is “a person who is prone to exaggeratedly dramatic behaviour” and “a person who thrives on being the centre of attention.” While drama queens exist among us, the world of opera is certainly one of their ideal environments. Echoing back to their tragic fates, the powerful voices of Dido, Medea, Violetta, and Tosca never ceased to affect their empathetic public. In fact, excess and overreactions are two main features of the operatic experience both on stage and in the audience. By focusing on the ways in which operatic characters are brought to life, the course explores the social, political, and gender dynamics that inform the melodramatic imagination. Students will have the opportunity to attend live HD broadcasts of Verdi’s La Traviata and Tchaikovsky’s Eugene Onegin from the Metropolitan Opera. No musical skills required.

AS.376.407. Music and Evolution. 3 Credits.

This course will examine the bio-cultural evolution of music in light of recent interdisciplinary research on the social bases of human cognitive evolution, and explore its implications for current debates in musicology, ethno- musicology, psychology of music, and human cognitive evolution.

AS.376.428. Mozart Operas. 3 Credits.

Wolfgang Amadeus Mozart wrote his first opera in 1767 at the age of 11. By the time of his death at age 35, he had written 22 full-length operas. Many of these operas are still performed today in opera houses around the world. In this course, we will discuss the enduring popularity of these works. We will discover how these operas were created, delving into the many important collaborations Mozart had with singers, librettists, impresarios, and patrons. We will analyze the words and music of the operas and how they combine to create three-dimensional characters for which his operas are known, such as the melancholy but determined Countess in The Marriage of Figaro, or the cowardly but loyal Papageno in The Magic Flute. Cultural norms have shifted dramatically between Mozart’s time and ours, and we will examine how Mozart’s operas have been received from their premieres through to today. We will think about how the operas have been translated, adapted, and circulated to different audiences in different eras and locations. Finally, we will reflect on our position as modern audience members, watching recent productions of the operas which reinterpret the works in alternative settings or times and studying the ways in which opera companies promote Mozart’s works.

AS.211.374. Gendered Voices. 3 Credits.

The course will explore the notion of ‘voice’ in order to show how poetry, literature, philosophy, and music have been dealing with it throughout the ages. In particular, by focusing on classical figures such as the Sirens, Circe and Echo, as well as by considering the seminal discussions of the ‘voice’ in Plato and Aristotle, the course will address the gendered nature of the voice as a tool to seduce and manipulate the human mind. More specifically, the course will discuss the ways in which male, female, queer, gendered and un-gendered voices embody different functions. Course materials include classical, medieval and early modern sources as well as later rewritings of myths concerned with the voice by authors such as Jules Verne, Karen Blixen, Giuseppe Tomasi di Lampedusa, and Italo Calvino. A selection of theoretical works (e.g. Cavarero, Silverman, Dollar, Butler) will also be discussed. The course is taught in English and all materials will be available in English translation; Italian majors and minors should enroll in section 2.

AS.211.400. Topics in Romance Literatures. 3 Credits.

This course provides an introduction to Romance Literatures from their origins to the present day. Topics and texts discussed vary year-to-year (e.g. the idea of progress in modern Europe; literature and war; poetry and music in medieval and Renaissance Europe). Special attention will be given to how Romance literatures and cultures have evolved in dialogue with each other throughout the centuries. The main language of teaching and discussion will be English, but students will be encouraged to read the materials in the original language compatibly with their skills. The course is a requirement for the Romance Languages and Literatures major.

This course takes as its point of departure Klopotock’s efforts to model German poetry after music—“the harmony of the spheres”—which served as the impetus for Goethe’s and Schiller’s poetry and Hölderlin’s later hymns. We will examine his experiments with verse form and his notion of interiority as the backdrop for Herder’s theory of the Volkslied as a popular genre that joins word and music and expresses the soul of a nation. Music and poetry will emerge on the one hand as the glue that binds a community and on the other as a disruptive force that isolates its members. Its significance as a figure if not vehicle for transcendence will return again and again in works as varied as Achim von Arnim and Brentano’s Des Knaben Wunderhorn, Kleist’s “Heilige Cäcilie,” Hölderlin’s poetological writings, Schopenhauer’s Die Welt als Wille und Vorstellung, and Nietzsche’s Geburt der Tragödie among other texts.

AS.100.257. From Voice to Parchment: Media and Communication before the Printing Press, 800-1440. 3 Credits.

Epic traditions, call to Crusade, public curses, music of the troubadours: this course examines oral tradition and music—the ‘viral media’ of pre-modern Europe—while tracing the impact of new recording technologies: early musical notation, manuscripts, and book production.

History

Area: Humanities, Social and Behavioral Sciences
**Music, Minor**

**Music Minor Requirements**

http://krieger.jhu.edu/music/minor-requirements/

The School of Arts and Sciences offers a music minor to students majoring in other fields. The minor is intended for students who have some training and background in music and wish to pursue their interest in a systematic way without getting their degree in the field. It consists of a selection of music courses, including music history, music theory, ensembles, and/or lessons at Peabody. Students must earn a grade of C- or better in all courses applied towards the minor and courses can not be taken satisfactory/unsatisfactory without a formal appeal in writing and approvals by the program director and vice dean of undergraduate education.

1 Two semesters of lessons or ensembles with the approval of minor advisor.

**Applied Music Experience**

Since the study of music should always take place in the context of practical music making, students completing the minor in music must participate in an applied music experience for at least two semesters. Students must select an applied music experience in consultation with their advisor, who will approve the applied music experience. These experiences are not required to be for academic credit. Most students will select either private instrument lessons at Peabody or participation in an ensemble at Peabody or on the Homewood campus.

Please consult the Krieger Music Minor pages for updates regarding audition dates and fees for credit lessons via Peabody Conservatory and non-credit lessons via Peabody Preparatory.

https://krieger.jhu.edu/music/music-lessons/

**Natural Sciences Area Major**

The Natural Sciences Area major allows students to combine appropriate upper-level courses in two different areas of natural science. Students may bridge biology and chemistry, chemistry and physics, or some other combination as long as the curriculum forms a coherent whole. The major prepares students for careers in medicine, dentistry, or veterinary science, if the introductory courses chosen by the student include those prescribed for admission to these professional schools.

Students selecting the Natural Sciences Area major can also go on to graduate study in natural science, though they may have to take some remedial work in graduate school, if their undergraduate program does not include courses usually required by a traditional major in a particular subject.

them.

no knowledge of foreign languages and any interested student may take part of the curriculum. However, many undergraduate courses require through their own records, and language study is therefore an important and art. The department approaches Near Eastern civilizations primarily in literatures (including the Hebrew Bible), and Near Eastern Archaeology and art. The department approaches Near Eastern civilizations primarily through their own records, and language study is therefore an important part of the curriculum. However, many undergraduate courses require no knowledge of foreign languages and any interested student may take them.

The Department of Near Eastern Studies offers programs in four main areas: Egyptology, Assyriology, Northwest Semitic languages and literatures (including the Hebrew Bible), and Near Eastern Archaeology and art. The department approaches Near Eastern civilizations primarily through their own records, and language study is therefore an important part of the curriculum. However, many undergraduate courses require no knowledge of foreign languages and any interested student may take them.

Facilities
The university’s Milton S. Eisenhower Library contains an outstanding collection of books and journals in the branches of Near Eastern studies pursued by the department. The Johns Hopkins Archaeological Museum has a collection of Near Eastern antiquities, including excellent study collections of Egyptian artifacts and Palestinian pottery. The Baltimore-Washington area is especially rich in library and museum facilities. Of special interest to students of the Near East are the Walters Art Museum, the Smithsonian Institution, and the Library of Congress.

Programs

- Near Eastern Studies, Bachelor of Arts (p. 2070)
- Near Eastern Studies, Minor (p. 2071)
- Near Eastern Studies, PhD (p. 2071)

Courses

AS.130.101. Ancient Near Eastern Civilizations. 3 Credits.
Review of important issues in ancient Near Eastern history and culture from the Neolithic era to the Persian period. Included will be an examination of the Neolithic agricultural revolution, the emergence of cities, states and writing, and formation of empires. Cultures such as Sumer and Akkad, Egypt, the Hittites, Israelites, Assyrians, Babylonians, and Persians will be discussed. Area: Humanities

AS.130.103. Writing Intensive
Area: Humanities

AS.130.104. Sex, Drugs, and Rock & Roll in Ancient Egypt. 3 Credits.
This seminar explores the social roles of sexuality, alcohol, other drugs, music, fragrance, and sensuality in secular and religious areas of Egyptian life, largely but not exclusively during the New Kingdom, ca. 1500 to 1000 B.C. The ancient attitudes towards these elements will be explored through the ancient textual sources in translation and the artistic representations. Area: Humanities

AS.130.106. Writing Intensive
Area: Humanities

AS.130.111. Freshman Seminar: Cleopatra’s Egypt. 3 Credits.
Egypt in the time of Cleopatra was a fascinating mix of peoples and cultures. Jews, Greeks, and other ethnic groups lived in this unique landscape along with the native Egyptians. In this class we will consider the rich civilization and complex history of Egypt during the reign of this legendary Queen. Area: Humanities

AS.130.105. Freshman Seminar: Sex, Drugs, and Rock & Roll in Ancient Egypt. 3 Credits.

AS.130.107. Freshman Seminar: Ancient Empires. 3 Credits.
Freshman Only A case-study approach to the political, social, and cultural history of one of the ancient Near Eastern states commonly described as an “empire,” such as the Akkadian Empire, the Neo-Assyrian Empire, the Neo-Babylonian Empire, or the Achaemenid (Persian) Empire. Individual classes mix a discussion of theoretical issues relevant to the study of ancient empires with close attention to primary sources. Area: Humanities

AS.171.103. General Physics for Physical Science Majors (AL) 4 Credits.

AS.171.107. General Physics for Physical Sciences Majors (AL) 4 Credits.

AS.173.111. General Physics Laboratory I 1 Credit.

AS.173.112. General Physics Laboratory II 1 Credit.

Science Electives
Natural science or quantitative credits at any level 1 20 Credits.
At least five courses of upper level natural science electives at the 300- or 400-level in at most 2 departments 2 15 Credits.

Humanities and Social Science Electives 3
Humanities or social science credits at any level 4 12 Credits.
At least four courses of humanities or social science electives at the 300- or 400-level in at most 2 departments 12 Credits.

Total Credits 85 Credits.

Minimum GPA Standards
Students must maintain an overall grade point average of 2.0 in their major. Satisfactory/unsatisfactory graded courses may not count towards major requirements.

Double Major Restrictions
Students majoring in other natural sciences major may not double major with the Natural Sciences Area Major.

Near Eastern Studies

http://neareast.jhu.edu/

The Department of Near Eastern Studies offers programs in four main areas: Egyptology, Assyriology, Northwest Semitic languages and literatures (including the Hebrew Bible), and Near Eastern Archaeology and art. The department approaches Near Eastern civilizations primarily through their own records, and language study is therefore an important part of the curriculum. However, many undergraduate courses require no knowledge of foreign languages and any interested student may take them.
AS.130.119. Ancient Medicine. 3 Credits.
A survey of medicine and medical practice in the ancient Near East and, to a lesser extent, the Aegean world. The abundant sources range from magical spells to surprisingly "scientific" treatises and handbooks. Readings are selected from translations of primary sources in the writings of ancient Egypt, Mesopotamia, Israel, Greece, and Rome. Topics will include the sources of our knowledge, the nature of medical practitioners, medical treatment, and surgery; beliefs about disease and the etiology of illness; concepts of contagion and ritual purity.
Area: Humanities

AS.130.123. Myths and Monsters in Mesopotamia. 3 Credits.
This course is an introduction to the religion of ancient Mesopotamia (3000-500 BC) through its myths and legends. We will approach Mesopotamian religion through both the textual and archaeological record. Although the focus will be on the myths and legends of Mesopotamia, we will also discuss rituals, magic, and household religion. By the end of the course, students should be familiar with the chief deities of the Mesopotamian pantheon, important texts pertaining to these deities, and the material culture of Mesopotamian religion.
Area: Humanities

AS.130.124. Texts, Tablets, and Tweets: The Sociolinguistics of Writing. 3 Credits.
This course examines the evolution of writing and the relationship between speech and writing in ancient and modern societies. We will examine the ways in which orthography, scripts, and the visual components inherent to written language (e.g., scripts, fonts, emoticons, diacritics etc.) are used to create and/or project certain social identities in these written spaces. A primary aim of this course is to generate discussion regarding the ways in which writing in all of its forms—at the institutional, group, and individual level, in official documents, in emails, texts, tweets, and graffiti, using standardized and non-standard orthographies, in both regulated and unregulated spaces—can be a social and often political act of identity. The writing assignments for the course will encourage you to consider the ways in which writing can be harnessed to express social identities. You will work as a group to develop your own writing system and present it to the class. This will hone your creative and critical thinking skills and give you practice collaborating on a project. You will also research and conduct an original analysis on a corpus of writing.
Area: Humanities

AS.130.126. Gods and Monsters in Ancient Egypt. 3 Credits.
A basic introduction to Egyptian Religion, with a special focus on the nature of the gods and how humans interact with them. We will devote particular time to the Book of the Dead and to the 'magical' aspects of religion designed for protective purposes.
Area: Humanities

AS.130.127. A Good Scribe & Learned Man: Wisdom & Knowledge in Ancient Egypt. 3 Credits.
Already in Antiquity, the Egyptians had a reputation for wisdom and 'secret' knowledge. But what was the reality behind this reputation? Who was a 'wise man' or 'wise woman' in Egypt? How did they organize and teach scientific ideas and concepts? How did they compose, maintain, and transmit the 'books' containing their canon of knowledge? From the abundant ethical, scientific, literary, magical, and religious writings of the Egyptians we will attempt to understand what wisdom and knowledge meant to the Ancient Egyptians.
Area: Humanities
Writing Intensive

AS.130.129. Freshman Seminar: The Art of War and Peace in Ancient Mesopotamia. 3 Credits.
Ancient Mesopotamia, modern-day Iraq, Syria, and Iran, is the "cradle of civilization." It witnessed new inventions previously unknown to the ancient world: urban cities, writing systems, kingship, and empires. This course examines the close relationship between war and peace and art in ancient Mesopotamia (ancient Sumer, Babylonia, and Assyria) from 3500 to 539 BCE. During the semester students will be introduced to the art, architecture, and archaeology of ancient Mesopotamia. This course is aimed at students without a previous background in art historical or archaeological approaches to Mesopotamia, but more advanced students are welcome.
Area: Humanities

AS.130.131. It's Alive! Statues in Ancient Egypt. 3 Credits.
Statues in ancient Egypt were extremely powerful images. Following the appropriate rituals, a statue could eat, breath, smell, and see. Wealthy men and women, including the king and his high officials, commissioned statues of themselves to erect in temples and their tombs. This allowed them to benefit from offerings set in front of the statues and essentially live forever. Throughout their history, the Egyptians also carved statues of prisoners, servants, and deities. In this class, we will explore a variety of statues from throughout ancient Egyptian history. How did the Egyptians use statues, and why did they create these objects? Do the answers to these questions vary for different types of statues? In considering this, we will discuss manufacturing techniques, materials, subject matter, style, and the relationship between text and image. However, we will also examine other topics that may at first seem to be less obviously related, including mummies and the process of mumification, religion and magic in ancient Egypt, temples and tombs, and funerary beliefs. In order for students to directly analyze statues, we will take advantage of Baltimore's museums and visit collections of Egyptian art throughout the semester.
Area: Humanities

AS.130.133. From Hebrews to Jews: The Development of Jewish Identity in the Ancient World. 3 Credits.
What happened to the ten lost tribes of Israel? Was Abraham Jewish? How far back can Jewish ethnicity be traced using genetic research? These questions and more will be topics of discussion as we explore the development of Jewish identity, beginning with the first evidence of a people called "Israel" in the 13th century BCE and ending with the destruction of the Second Temple in 70 CE. The class will start with a discussion of different types of identity, including ethnic, religious, and cultural identities, as well as how identity can vary between members of the same community. We will also consider how ancient peoples can be studied using textual and archaeological sources. Then we will take a loosely diachronic approach to the development of Jewish identity, from the elusive origins of the Israelites to their existence as a monarchical state under rulers such as King David; from their forced displacement under the Assyrian empire to the Diaspora caused by the Romans. Using primary and secondary source materials, we will assess the key developments in group identity that took place at these times and the factors which influenced them.
Area: Humanities

AS.130.135. Pyramids, Temples and Tombs. 3 Credits.
Introduction to the monuments and culture of Egypt from 3500 B.C. to 100 A.D. From the pyramids at Giza to Hellenistic Alexandria, this course surveys in slide illustrated lectures the remains of one of the world's greatest early cultures.
Area: Humanities
Writing Intensive
AS.130.138. Jerusalem: The Holy City. 3 Credits.
This course will survey the cultural history of Jerusalem over three millennia, primarily as the symbolic focus of three faiths: Judaism, Christianity, and Islam. The course content will focus on the transformation of sacred space as reflected by literary and archaeological evidence by examining the artifacts, architectural monuments, and iconography in relation to written sources. The creation of mythic Jerusalem through event and experience will be examined. Course requirements will focus on the development of advanced writing skills and critical thinking.
Area: Humanities

AS.130.139. Stargazing and Reading the Future: Science and Magic in Ancient Egypt. 3 Credits.
Is astrology science? Is ancient medicine magic? What is the logic of divination? I invite you to explore the answers with me by traveling back in time to ancient Egypt, a place where knowledge from the ancient Mediterranean world once converged. We will start by bridging the difference between science and magic and establishing the importance of contextualization in cross-culture studies. The topics range from the birth of astronomy, the language and logic of dream books to gynecological texts’ connections with love magic.
Area: Humanities

AS.130.140. Hebrew Bible / Old Testament. 3 Credits.
The Bible is arguably the most read and yet most misinterpreted book of all time, one of the most influential and yet most misapplied work of literature. The Hebrew Bible (Old Testament) is Scripture to Jews and Christians yet also a rich collection of literature w/ numerous literary genres that has been highly influential on secular Western culture. At its core, it is our most important literary source that (when wed with archaeology) helps us to understand the people and culture of Iron Age Israel and Judah. This is an introductory course surveying of the books of the Hebrew Bible (Old Testament) giving primary attention to the religious ideas they contain and the ancient contexts in which they were composed. Topics include: The Academic Study of Religion, Ancient Creation Accounts, Ancestral Religion, The Exodus and Moses, Covenant, Tribalism and Monarchy, The Ideology of Kingship, Prophecy, Priestly Sources, Psalms, Wisdom Literature, and Apocalyptic Thought.
Area: Humanities

AS.130.141. What My Soul Said To Me. 3 Credits.
"What My Soul Said to Me" will be focused on looking at the mortuary culture in Middle Kingdom Egypt through various types of evidence. By looking at the funerary culture of this age, students will learn about the funerary culture of Egypt during this period and will also become more familiar with the Middle Kingdom period in general. More importantly, students will be encouraged to think about larger topics involved in archaeological and historical studies, while using Middle Kingdom period Egypt as a setting to focus those discussions. This course is aimed at students without a previous background in archaeology or Egyptology, but more advanced students are welcome.
Area: Humanities

AS.130.142. Freshman Seminar: The Development of Useful Things: A Comparative Approach to the Study of Technology and Economy in the Ancient World. 3 Credits.
This archaeology course will provide an overview of technological developments in the ancient world (from the Neolithic period to the beginning of the first millennium CE) and will explore their effects on the organization of economies and societies. Each week we will discuss a technological innovation and assess its impact on the societies that introduced it. This course will focus primarily on developments and case studies from the ancient Near Eastern and eastern Africa. We will depart from this trajectory to engage in relevant comparisons with developments occurring in other areas of the ancient world. Throughout the course, social aspects of technologies will be explored alongside economic aspects. In addition to focusing on the development of technologies as ‘objects’ (stone tools, pottery, metals, etc.), we will study non-material technologies, that arose as solutions to practical problems and have altered the world in important ways (agriculture, animal domestication, writing, etc.). This course approaches past technologies from a number of different perspectives: (1) by learning about particular anthropological and archaeological case studies, (2) by engaging with scholarship focusing on major theoretical and philosophical themes, (3) by engaging with ethnographic research, both in the form of articles and in the form of documentaries, and (4) by means of thought experiments and debates. This course will benefit humanities, social science, and science-oriented students who have an interest in understanding the inner-workings of two important aspects of human societies: technology and economy.
Area: Humanities

AS.130.143. ‘Egyptomania’: A Consumer’s Guide to Ancient Egypt. 3 Credits.
Chances are you’ve heard of Cleopatra and the curse of King Tut’s tomb. You may have even met a mummy or two, whether in the flesh or on the silver screen. Even today, 5,000 years after the dawn of Egyptian civilization—and half-way around the globe—the land of the pharaohs continues to fascinate the Western world. But, how is it that ancient Egypt came to be so deeply entrenched in Western culture? This course considers the history of Western interaction with ancient Egypt and examines the consequences of laying claim to a culture that is not one’s own. We will approach our study through the lens of consumption, both material and cultural, situating these phenomena within their historical and contemporary contexts. By engaging with both primary and secondary sources, we will consider the power relations embedded in Egyptian archaeology and the writing of history as well as the ethics of collecting and displaying ancient Egyptian material culture. We will also investigate the popularization of ancient Egypt known as “Egyptomania,” focusing on the commoditization of ancient Egyptian culture in Western media and merchandise. By the end of the class, students will be able to engage with the complex, yet fundamental, question of who owns culture and what is at stake when we uncritically consume an image of the past.
Area: Humanities
AS.130.170. Diplomacy and Conflict in the Ancient Middle East. 3 Credits.
The Middle East is home to the invention of agriculture, cities, and writing. It is also in the Middle East that we find evidence of humanity's earliest diplomatic activity in, for instance, the actual letters sent by ancient kings to one another, the treaties drawn up after their conflicts, and the inscriptions that commemorate their conquests. In this course, we examine texts such as these to explore questions such as: How do we characterize the international system of the ancient Middle East? Does this system change over the approximately two millennia for which we have documentation? Is it better to approach ancient diplomacy through present-day eyes or in the context of ancient world-views? Is an understanding of diplomacy in the ancient Middle East relevant to our understanding of modern international relations? All texts read in translation.
Area: Humanities

AS.130.174. Scientists and Soothsayers: The Pursuit of Knowledge in Ancient Egypt. 3 Credits.
The ancient world viewed Egypt as a repository of wisdom and learning, and even today, Egypt possesses in the modern consciousness a reputation for secret knowledge. From within Egypt, a diverse corpus of texts meant to record and transmit knowledge have survived and attest to Egyptian "scholarship." This course will focus on what kinds of knowledge belonged to this written tradition (3000 BCE to 300 CE) and how those texts reflected broader social and cultural norms. This course will also consider, where relevant, the relationship between the intellectual traditions of Egypt and other societies of the ancient world, particularly Greece and Mesopotamia. Strong correlations between the Egyptian material and modern intellectual and scientific traditions, such as mathematics, astronomy, and medicine exist; but magic, divination, and religion were often treated in the same systematic, critical manner by the Egyptians. Thus the course will challenge modern understandings of science, and modern dichotomies such as rational versus irrational. After a brief introduction to Egypt, the first few weeks will concern who created these texts, who had access to them, and their physical and intellectual milieu. Then, each week will cover a particular area of knowledge, its primary sources, social and multicultural context, and its relationship to the theoretical themes of the course.
Area: Humanities

AS.130.177. World Prehistory: An Anthropological Perspective. 3 Credits.
How and why did our nomadic hunting and gathering ancestors become farmers? What led agricultural societies to build cities, develop writing, religious institutions, wage war, and trade for exotic goods? This course surveys prehistory and ancient history from the origins of human culture to the emergence civilization. Although prehistory and ancient history yield evidence of tremendous cultural diversity this course emphasizes common elements of past human experience, culture, and culture change. These include the origins of modern humans and their adjustment to a variety of post-ice age environments, shifts from hunting and gathering to agricultural lifeways, and the initial development of the world's earliest cities and civilizations.
Area: Humanities, Social and Behavioral Sciences

AS.130.202. Ancient Mythology. 3 Credits.
This course explores the mythology of the ancient Near East from the invention of writing in Sumer in 3000 B.C. until the conquest of Alexander the Great near the end of the first millennium B.C. Mythological texts from Mesopotamia, Egypt, Anatolia, the Levant, and the Bible will be read from a comparative perspective. Special attention is paid to the origin and development of the epic, culminating in the great Epic of Gilgamesh, but considerable time is also given to the vast mythological and historical literature, and such diverse genres as love poetry, proverbs, humorous dialogues, Omens, and legal and medical texts. All readings are in English translation.
Area: Humanities

AS.130.203. Archaeology of Africa: From Human Origins to the Emergence of Civilizations. 3 Credits.
This course examines Africa's ancient past from the emergence of biologically modern humans, ancient hunter-gatherers, the earliest animal herding and farming populations, to cities and civilizations. While Egypt plays an undeniably central role in world history, this course concentrates in particular on ancient geographies other than Egypt.
Area: Humanities

AS.130.205. Tutankhamun and His Time. 3 Credits.
The reign of Tutankhamun ended a period of fascinating upheaval in ancient Egypt, when a king attempted to stamp out the traditional gods and introduce monotheism. He changed the art of Egypt radically and built a new city from which to rule. This course covers the second half of the 14th century B.C., including the time of the heretic king Akhenaten, his wife Nefertiti, and his possible son Tutankhamun who ruled over all Egypt as a boy. So many questions still exist about this time and so many surprising ideas have been put forward to explain them. We will pursue as many as we can. Illustrated lectures will combine with group and individual presentations by students, supplemented with videos and online discussions with scholars who study this time period.
Area: Humanities

AS.130.206. Distilling the Ancients: An Anthropological Approach to Alcohol in the Ancient World. 3 Credits.
The consumption of alcohol is one of the oldest known human practices. Almost every culture has some type of mind-altering beverage that influences and shapes many facets of society. This course is a cross-cultural examination of the power and significance of alcohol in the ancient world. From the Neolithic to the Classical symposium to the Egyptian festival, the importance of communal drinking—alcohol or otherwise—is a uniting factor across the ancient world. This class will unpack the impact and significance of alcohol across a wide-range of ancient cultures, and examine what the study of alcohol might reveal about ancient societies. This includes alcohol as medicine, its religious and ritual functions, alcohol as a community unifier (and divider) and identity builder, and its practical and economic uses. Students will apply anthropological and archaeological theories to understand why, how, and to what effect humans drink.
Area: Humanities
AS.130.214. The Origins of Civilization: A Cross-Cultural Perspective. 3 Credits.
One of the most significant transformations in human history was the “urban revolution” in which cities, writing, and social classes formed for the first time. In this course, we compare five areas where this development occurred: China, Mesopotamia, the Indus Valley, Egypt, and Mesoamerica (Mexico/Guatemala/Honduras/Belize). In each region, we review the physical setting, the archaeological and textual evidence, and the theories advanced to explain the rise (and eventual collapse) of these complex societies.
Area: Humanities, Social and Behavioral Sciences

AS.130.216. History of the Jews in Modern Times, from the Middle Ages to 1917. 3 Credits.
A broad survey of the significant political and cultural dynamics of Jewish history in the Medieval, Early-Modern, and Modern Eras.
Area: Humanities

AS.130.218. Language and Society. 3 Credits.
We all use language every day—not just to communicate information, but to communicate who we are. How does this work? What do our language choices tell others about us? This course will consider some of the ways in which language and society are entangled—both the ways that different social categories are encoded in language, and the ways that groups of people use language to define themselves. Along the way, the course will address questions of dialect, diglossia, multilingualism, style, language planning, politeness, language and gender, language and power, and more. This course is designed for students without a background in linguistics. During the semester students will learn the basic research methods used by sociolinguists, then complete a project on a topic of their choosing.
Area: Humanities

AS.130.244. The Archaeology of Animals: An Introduction to Zooarchaeology. 3 Credits.
This course is intended to introduce students to the discipline of zooarchaeology, the study of animal remains from archaeological sites. Humans have long depended on their animal counterparts not only for nutritional value, but for their economic, symbolic, and social value, making the study of animals in the human past deeply revealing of the entangled worlds that humans and animals lived in together. In service of this investigation, zooarchaeology, or the study of animal remains from archaeological sites, has developed interdisciplinary techniques in order to address archaeological questions. Zooarchaeology has the ability to provide insight into ancient human behavior around the world including economic strategies, dietary practices, religious observances, ecological interactions, and more. The course will introduce students to the basics of archaeological investigation and the identification of faunal osteological remains on archaeological sites, as well as some of the basic tools and techniques used to derive meaningful conclusions from primary data. Students will be introduced to the principles of comparative anatomy and the major elements of mammalian, avian, and fish skeletons. Students will also be taught to recognize significant markers for taphonomy, sex, butchery, age, and pathology and how this information is used to generate archaeological knowledge. Supplementary readings that help illustrate the application of these techniques to archaeological interpretation will be provided and discussed in class.
Area: Humanities

AS.130.259. Ancient Science. 3 Credits.
A survey of scientific practices and technological innovations in the ancient world, including astronomy, medicine, law, and divination. Special attention will be devoted to the relationship between magic and science during the periods covered.
Area: Humanities, Social and Behavioral Sciences

AS.130.300. History of Ancient Mesopotamia. 3 Credits.
A survey of the history of Sumer, Babylonia, and Assyria.
Area: Humanities

AS.130.301. History of Ancient Syria-Palestine. 3 Credits.
A survey of the history of Ancient Syria and Canaan, including Ancient Israel.
Area: Humanities

AS.130.302. History: Ancient Syria-Palestine II. 3 Credits.
A survey of the history of Ancient Syria and Canaan, including ancient Israel. Taught with AS.134.661. Cross-listed with Jewish Studies.
Area: Humanities

AS.130.323. Cleopatra's Egypt: Ptolemaic-Roman Egypt. 3 Credits.
This lecture course is a survey of the history, society, and culture of Graeco-Roman Egypt. We will concentrate on Ptolemaic Egypt (ca. 332-30 B.C.), but will also devote some time to Roman Egypt, especially to the subjects of the decline of paganism and spread of Christianity in Egypt.
Area: Humanities

AS.130.328. Ancient Egypt /Africa. 3 Credits.
Recent excavation and research have shed light on several ancient cultures of the Nile and its tributaries. We will look at the available archaeological and textual (all Egyptian) evidence for these societies and their interactions with Egypt between 3500 and 300 B.C. We will also discuss research aims and methods employed now and in the past in Egypt and the Sudan.
Area: Humanities
Writing Intensive

AS.130.330. The Garden of Eden. 3 Credits.
References to the story of the Garden of Eden can be found in every significant issue of our time, from sex to politics, from race to the environment. The course will examine the story itself as well as how it's been interpreted, leading up to today. Enthusiastic participation required.
Area: Humanities

AS.130.334. Egyptian Funerary Arts in the Archaeological Museum. 3 Credits.
This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum’s website and present their results for inclusion in the museum cataloguing project.
Area: Humanities
AS.130.341. Traditionalism vs. Orthodoxy in the Modern Era: The Case of Judaism. 3 Credits.

During the Modern Era in European history, the Traditionalist Jewish civilization of Europe that had evolved over many centuries went into deep crisis. The new political, social, and intellectual realities which characterized Modernity seriously challenged, overwhelmed, and indeed threatened to destroy the Jewish Traditionalist culture and society. In response, different Traditionalist thinkers and communities evolved a number of strategies for surviving in a modern environment, strategies that unexpectedly transformed Traditionalism into something different, which came to be called Orthodox Judaism. This course explores this process of transformation, which has had an important impact on Jewish life in the modern and post-modern eras. Cross-listed with Jewish Studies.

Area: Humanities

AS.130.343. Dead Sea Scrolls-English. 3 Credits.

A survey of the manuscripts found at Qumran and other sites near the Dead Sea.

Area: Humanities

AS.130.346. Introduction to the History of Rabbinic Literature. 3 Credits.

Broadly surveying classic rabbinic literature, including the Talmud and its commentaries, the legal codes and the response, this seminar explores the immanent as well as the external factors that shaped the development of this literature, the seminal role of this literature in Jewish self-definition and self-perception, and the role of this literature in pre-modern and modern Jewish culture.

Area: Humanities

AS.130.348. Religious Law Wrestles With Change: The Case of Judaism. 3 Credits.

Description: 'How does a religious system which defines its ancient laws as God-given and unchangeable apply them to radically different and changing social, political and intellectual situations? This course explores the literature of 'Questions and Answers'[She'elot u-Teshuvot], the Jewish legal responsa which have struggled to match Jewish religious law to modern life for fifteen centuries. A sweeping survey of Jewish history as revealed by one of its most impenetrable yet fascinating sources. Cross-listed with Jewish Studies.

Area: Humanities

AS.130.353. Space Archaeology: An Introduction to Satellite Remote Sensing, GIS and GPS. 3 Credits.

This course introduces technologies archaeologists use to map ancient landscapes. These include Geographic Information Systems (GIS) mapping software, advanced Global Positioning System (GPS) receivers, and various types of satellite imagery. Taught together with AS.131.653.

Area: Natural Sciences, Social and Behavioral Sciences

AS.130.354. Archaeological Method and Theory. 3 Credits.

Climate change, population growth, war - what questions do archaeologists ask about the ancient past, how do they collect relevant evidence, and how do they arrive at satisfying answers to their questions? This course will review major theoretical currents in archaeology including evolutionary, cultural-historical, processual and post-processual approaches and discuss the future of archaeology as a scientific and humanistic discipline. Basic techniques for analyzing major categories of artifacts such as lithics, ceramics, archeobotanical, and zooarchaeological materials will also be introduced.

Area: Humanities, Social and Behavioral Sciences

AS.130.357. Geographic Information Systems in Archaeology. 3 Credits.

Applications of GIS in archaeology have recently expanded dramatically and GIS has now become an indispensable tool for archaeological research worldwide. This course will introduce the major applications of Geographic Information Systems (GIS) in archaeology. These include the history of GIS in archaeology, air photography and satellite imagery, predictive modeling, hydrological modeling, viewsheds, and least-cost routes. It will grapple with theoretical issues manifest in archaeological GIS including conflicts between environment and social understandings of the past, and will foster discussion of issues that affect outcomes of analyses including spatial scale and boundary delineation choices that can dramatically influence results. Students will learn the basics of ESRI’s ArcGIS software. Taught with AS.131.657.

Area: Humanities, Natural Sciences

AS.130.364. Archaeology of Arabia. 3 Credits.

This course examines the archaeology of the Arabian Peninsula from the earliest Paleolithic in the region (c. 1.5 million years ago) through the first few centuries of the Islamic era (c. 1000 AD). We will review basic geology and environmental conditions, examine the development of animal herding and crop cultivating lifeways, and scrutinize the rise of ancient South Arabian complex societies and civilizations. Co-listed with AS.131.664.

Area: Humanities

AS.130.366. Nomads, Tyrants and Kings: Water in the Ancient Near East. 3 Credits.

This course explores economic and social histories of water in the ancient Near East. It examines water’s diverse roles in ancient Mesopotamian, Egyptian, Levantine and South Arabian agriculture, politics, ritual and religion, including water’s interconnected significance in Judaism, Christianity, and Islam. Taught jointly with AS.131.615.

Area: Humanities

AS.130.373. Prophets and Prophecy in the Bible. 3 Credits.

From thundering voices of social justice to apocalyptic visionaries, biblical prophets have been revered by Jews, Christians and Muslims for thousands of years. They have inspired civic leaders such as Martin Luther King Jr. yet also provided fodder for modern charlatans promising a utopian future. Yet who were these individuals (orators? politicians? diviners? poets?) and what was the full range of their message as set against the Realpolitik world of ancient Israel, Iraq, Egypt, Syria and Jordan?

Area: Humanities

AS.130.376. Ancient Magic and Ritual. 3 Credits.

This course will introduce students to the vast body of rituals that were practiced and performed in antiquity, with a particular emphasis on rituals from ancient Mesopotamia, Egypt, and the Hebrew Bible. In addition to examining rituals from a comparative perspective, anthropological and sociological studies of ritual will be read and discussed to shed light on the social, cultural, and political significance of ritual in the ancient world and beyond.

Area: Humanities
AS.130.378. Geoarchaeology: Applications of Earth Science to Archaeology. 3 Credits.
Geoarchaeology is a multidisciplinary subfield that applies the tools and techniques of earth science to understand ancient humans and their interactions with environments. This course examines basic topics and concepts, including archaeological site formation, paleoenvironmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar.
Area: Natural Sciences, Social and Behavioral Sciences

AS.130.379. The Development of Useful Things: Technology and Economy in the Ancient World. 3 Credits.
This course provides an overview of technological developments in the ancient world, by foregrounding the development of objects (stone tools, pottery, metals) and of non-material technologies (agriculture, animal domestication, writing).
Area: Humanities

AS.130.381. Elementary Akkadian. 3 Credits.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language. Co-listed with AS.132.600
Area: Humanities

AS.130.382. History of Mesopotamia II. 3 Credits.
A survey of the history of Sumer, Babylonia, and Assyria.
Area: Humanities

AS.130.383. Elementary Akkadian II. 3 Credits.
An introduction to the paleography, grammar, and lexicon of the Akkadian language, and the reading of simpler texts in that language. Continues AS.130.381
Area: Humanities

AS.130.384. Old Kingdom Art. 3 Credits.
This course will explore the artistic expression of Egyptian culture from the 3rd through the 6th Dynasties, ca. 2700-2100 B.C. Tombs, temples, statuary, and two-dimensional wall decoration provide a large visual vocabulary of Egyptian concepts. This class will look at these elements, separately and in combination in order to consider the intentions behind the art and evaluate the degree to which religious and ideological symbolism, known from later Egyptian art, should be understood in the early pyramid-building era.
Area: Humanities

AS.130.387. The Poetics of Biblical Prose and Verse. 3 Credits.
An exploration of how ancient Israelite techniques of literary textual and inter-textual patterning contributes to cohesion and meaning in biblical prose and verse. Attention will be given to the distinguishing characteristics of Hebrew verse in relation to prose, and to a range of different kinds of prose in Israelite literature. These poetics will be exemplified in close readings of selected texts from the Hebrew Bible in English.
Area: Humanities

AS.130.388. Elementary Sumerian. 3 Credits.
An introduction to the paleography, grammar and lexicon of the Sumerian language, and the reading of simpler texts in that language.
Area: Humanities

AS.130.389. Elementary Sumerian II. 3 Credits.
An introduction to the paleography, grammar and lexicon of the Sumerian language and the reading of simpler texts in that language.
Area: Humanities

AS.130.395. Being in Ancient Egypt: Ethnicity, Sexuality, and Gender. 3 Credits.
What was it like to live in ancient Egypt? At first this question may seem deceptively straightforward. But with further thought, its complexity becomes clear. Who are we concerned with? How the king lived? A poor farmer? His wife or children? A foreign immigrant? Moreover, what is our evidence for life in Egypt? Do all of the sources support similar interpretations? This course will begin to tackle these questions by considering the experiences of different people in ancient Egypt.
Area: Humanities

AS.130.400. Introduction To Middle Egyptian. 3 Credits.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2055-1650 B.C.). In the second semester, literary texts and royal inscriptions will be read. Course meets with AS.133.600.
Area: Humanities
