AS.130.401. Introduction To Middle Egyptian. 3 Credits.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2011-1700 B.C.). Co-listed with AS.133.601.
Prerequisite(s): AS.130.400 or equivalent.
Area: Humanities

AS.130.420. Seminar in Research Methods in Near Eastern Studies: Religion and Science. 3 Credits.
This writing intensive seminar examines the relationship between religion and science in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, and through engagement with scholarly literature pertaining to the topic of the course, students will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Humanities

Writing Intensive

AS.130.440. Elementary Biblical Hebrew. 3 Credits.
Introduction to the grammar, vocabulary, and writing system of biblical Hebrew.
Area: Humanities

AS.130.441. Elementary Biblical Hebrew. 3 Credits.
Survey of grammar and reading of simple texts. (Credit given only on completion of AS.130.440 and AS.130.441). May not be taken on a satisfactory/unsatisfactory basis.
Area: Humanities

AS.130.442. Readings - Hebrew Prose. 3 Credits.
Reading of biblical Hebrew prose, especially from the Pentateuch, Joshua, Judges, Samuel, and Kings. Cross-listed with Jewish Studies.
Area: Humanities

AS.130.443. Reading Of Hebrew Prose. 3 Credits.
Reading of Biblical Hebrew prose, especially from the Pentateuch, Joshua, Judges, Samuel, and Kings.
Area: Humanities

AS.130.446. Readings - Hebrew Narrative and Poetry. 3 Credits.
Intermediate readings in a variety of narratives with some exposure to poetic text.
Area: Humanities
AS.130.447. Readings - Hebrew Narrative and Poetry. 3 Credits.
Intermediate readings in a variety of narratives with some exposure to poetic text. A continuation of AS.130.446.
Area: Humanities

AS.130.501. Readings & Research. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.130.504. Independent Study. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.130.505. Independent Study-Archaeology Fieldwork. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.130.506. Independent Study-Archaeology Fieldwork. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.130.510. Archaeology Major Honors Thesis I. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Writing Intensive

AS.130.511. Archaeology Major Honors Thesis II. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Writing Intensive

AS.130.590. Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.131.600. Seminar Near Eastern History: Egypt.
Seminar in Near Eastern History: Mesopotamia

A three-year history cycle required of all graduate students and forming the core of our graduate program. One year each will be devoted to Egyptian history, Mesopotamian history, and Syro-Palestinian history.

AS.131.613. Archaeology of Africa: From Human Origins to the Emergence of Civilizations.
This course examines Africa’s ancient past from the emergence of biologically modern humans, ancient hunter-gatherers, the earliest animal herding and farming populations, to cities and civilizations. While Egypt plays an undeniably central role in world history, this course concentrates in particular on ancient geographies other than Egypt.
Area: Humanities

Topic varies but can include the archaeology of Mesopotamia, Syria, or Palestine, or thematic discussions (e.g., on ideology, state collapse, etc.).

AS.131.635. Seminar: Near East Archaeology.
Topic varies but can include the archaeology of Mesopotamia, Syria, or Palestine, or thematic discussions (e.g., on ideology, state collapse, etc.).
Area: Humanities

AS.131.653. Space Archaeology: An Introduction to Satellite Remote Sensing, GIS and GPS.
This course introduces technologies archaeologists use to map ancient landscapes. These include Geographic Information Systems (GIS) mapping software, advanced Global Positioning System (GPS) receivers, and various types of satellite imagery. Taught together with AS.130.353.
Area: Natural Sciences, Social and Behavioral Sciences

Climate change, population growth, war - what questions do archaeologists ask about the ancient past, how do they collect relevant evidence, and how do they arrive at satisfying answers to their questions? This course will review major theoretical currents in archaeology including evolutionary, cultural-historical, processual and post-processing approaches and discuss the future of archaeology as a scientific and humanistic discipline. Basic techniques for analyzing major categories of artifacts such as lithics, ceramics, archaeobotanical, and zooarchaeological materials will also be introduced.
Area: Humanities, Social and Behavioral Sciences

Applications of GIS in archaeology have recently expanded dramatically and GIS has now become an indispensable tool for archaeological research worldwide. This course will introduce the major applications of Geographic Information Systems (GIS) in archaeology. These include the history of GIS in archaeology, air photography and satellite imagery, predictive modeling, hydrological modeling, viewsheds, and least-cost routes. It will grapple with theoretical issues manifest in archaeological GIS including conflicts between environment and social understandings of the ancient past, and will foster discussion of issues that affect outcomes of analyses including spatial scale and boundary delineation choices that can dramatically influence results. Students will learn the basics of ESRI's ArcGIS software. Taught with AS.130.357.
Area: Humanities, Natural Sciences

AS.131.664. Archaeology of Arabia.
This course examines the archaeology of the Arabian Peninsula from the earliest Paleolithic in the region (c. 1.5 million years ago) through the first few centuries of the Islamic era (c. 1000 AD). We will review basic geology and environmental conditions, examine the development of animal herding and crop cultivating lifeways, and scrutinize the rise of ancient South Arabian complex societies and civilizations. Co-listed with AS.130.364.

AS.131.678. Geoaarchaeology: Applications of Earth Science to Archaeology.
Geoaarchaeology is a multidisciplinary subfield that applies the tools and techniques of earth science to understand ancient humans and their interactions with environments. This course examines basic topics and concepts, including archaeological site formation, paleo-environmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar.
Area: Natural Sciences, Social and Behavioral Sciences

AS.131.800. Readings & Research.

AS.131.801. Readings And Research.
Area: Humanities

AS.131.848. Dissertation Research.

AS.132.600. Elementary Akkadian.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language.

AS.132.601. Elementary Akkadian II.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language. Undergraduates admitted to this course earn 4.5 credits per semester.
Area: Humanities

In this course a selection of intermediate level Akkadian texts from different genres and period will be read, analyzed and discussed. To build on skills learned in Introduction to Akkadian, specific emphasis will be placed on understanding more advanced grammatical forms and learning how to critically use research tools like the Chicago Assyrian Dictionary and von Soden’s Akkadisches Handwörterbuch.

In this course a selection of intermediate level Akkadian texts from different genres and period will be read, analyzed and discussed. To build on skills learned in Introduction to Akkadian, specific emphasis will be placed on understanding more advanced grammatical forms and learning how to critically use research tools like the Chicago Assyrian Dictionary and von Soden’s Akkadisches Handwörterbuch.
Area: Humanities

This course introduces students to letters written in the Akkadian language from a variety of historical periods. Recommended course background: AS.132.600 and AS.132.601.
Area: Humanities

This writing intensive seminar examines the relationship between religion and science in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, and through engagement with scholarly literature pertaining to the topic of the course, students will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Humanities
Writing Intensive

AS.132.612. Advanced Akkadian.
Students read texts in the original Akkadian cuneiform with attention to their philological, archaeological, historical, and literary features. The seminar topic varies from semester to semester but usually consists either of texts of various genres from a single period (e.g., Neo-Assyrian) or texts of various period from a single genre (e.g., letters).
Area: Humanities

Students will read a variety of Akkadian texts commonly described as literary in the original cuneiform.

AS.132.644. Treaties And Diplomacy.
Reading treaties and related materials in Akkadian.

AS.132.700. Elementary Sumerian.
An introduction to the paleography, grammar and lexicon of the Sumerian language, and the reading of simpler texts in that language.
Area: Humanities

AS.132.701. Elementary Sumerian II.
Area: Humanities

AS.132.710. Advanced Sumerian.
We will read Letter Collection B and related materials in the original cuneiform.

AS.132.711. Advanced Sumerian.
In this course a selection of Sumerian texts from different periods and genres will be read and discussed from a linguistic, philological, historical, and literary perspective.

AS.132.800. Mesopotamian Seminar.
Research and discussion on topics of current interest.

AS.132.801. Mesopotamian Seminar.
Research and discussion on topics of current interest.
Area: Humanities

AS.133.450. Seminar in Egyptian Art and Archaeology: Approaching Egyptian Art. 3 Credits.
A seminar-based course requiring that students have had at least one prior course in Egyptian art or archaeology. The course will consider the wide variety of ways that people analyze Egyptian art -- currently and over the last hundred twenty-five years. Art historical, anthropological, semiological, and various other approaches will be evaluated during the term. We will focus on reading authors discussing examples chosen from three millennia of art production. Recommended Course Background: At least one prior course in Egyptian art or archaeology.
Area: Humanities

AS.133.600. Introduction To Middle Egyptian.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2135-2000 B.C.). In the second semester, literary texts and royal inscriptions will be read.

AS.133.601. Introduction To Middle Egyptian (Hieroglyphs).
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2110-1700 B.C.). Co-listed with AS.130.401
Prerequisite(s): AS.133.600 or equivalent.
Area: Humanities

AS.133.610. Middle Egyptian Texts.
In this course we read a variety of Middle Egyptian hieroglyphic compositions and documents. Knowledge of Middle Egyptian Required.

AS.133.611. Middle Egyptian Texts.
In this course we read a variety of Middle Egyptian hieroglyphic compositions and documents. Knowledge of Middle Egyptian Required.
Area: Humanities

AS.133.615. Representation and Identity in Ancient Egypt.
Using artistic, archaeological, and textual data, this course will apply recent anthropological and archaeological theories for understanding identity to ancient Egypt. In order to successfully approach such a broad concept, which could easily encompass many other topics, we will focus specifically on three different types of identity: ethnic (and cultural), gender, and sexual. Throughout the semester, we will explore how scholars identify past identities and the issues associated with this process. We will also consider the ways in which these identities were fluid, socially or culturally restricted, and self-defined.
Area: Humanities

AS.133.620. Hieratic.

AS.133.630. Old Egyptian.

AS.133.631. Old Egyptian.

AS.133.640. Late Egyptian.
AS.133.641. Late Egyptian Texts. 3 Credits.
An introduction to the grammar and texts of Late Egyptian.
Area: Humanities

AS.133.646. Demotic Texts. 3 Credits.
Area: Humanities

AS.133.647. Demotic Texts. 3 Credits.
Area: Humanities

AS.133.648. Intro To Coptic. 3 Credits.
In this class we will read Coptic texts of various genres.

AS.133.706. Egyptian Funerary Arts in the Archaeological Museum. 3 Credits.
This course will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum's website and present their results for inclusion in the museum cataloguing project.

AS.133.750. Seminar in Egyptian Art and Archaeology: The Amarna Period. 3 Credits.
This course will look at the period from the end of the reign of Amenhotep III through that of Horemheb, ca. 1350 to 1300 B.C. Social, religious, and political aspects of the period will be the focus with an emphasis on understanding how radical changes to societal structure, the economy, and foreign policy may have been and what the evidence for this is.

AS.133.751. Seminar in Egyptian Technology: Theban Tombs. 3 Credits.
This course will explore the artistic expression of Egyptian culture from the 3rd through the 6th Dynasties, ca. 2700-2100 B.C. Tombs, temples, statuary, and two-dimensional wall decoration provide a large visual vocabulary of Egyptian concepts. This class will look at these elements, separately and in combination in order to consider the intentions behind the art and evaluate the degree to which religious and ideological symbolism, known from later Egyptian art, should be understood in the early pyramid-building era.

AS.134.101. GOD 101: The Early History of God - Origin, Character, Practice. 3 Credits.
In a world of big ideas, there is none larger than that of God. Divinity is an ever-present topic for both religious devotees and hard core secularists—for anyone who embraces the humanities or ponders what makes us human. Humans are, for better and worse, homo-religiosus (humans who practice religion) as much as homo-sapiens. But what do we know of God historically? How do we go about reconstructing divinity from ancient texts and archaeology? How do we best walk back in time to understand ancient Middle Eastern cultures that gave birth to notions of the divine that have come down to today's Judaism, Christianity and Islam? This course looks synthetically at the vast topic of God—exploring questions of historical origin, how God was characterized in literature (mythic warrior, king, parent, judge, holy, compassionate) and how God was represented in iconography, both materially and abstractly. Secondly, how did belief intersect with practice? Using the indow of divinity, this course will peer into the varieties of religion experience, exploring the royal use of religion for power, prestige and control balanced against the intimacy of family and household religion. It will explore priestly prerogatives and cultic status, prophetic challenges to injustice, and the pondering of theodicy by poetic sages.
Area: Humanities

AS.134.400. Northwest Semitic Epigraphy. 3 Credits.
This course will provide an introduction to West Semitic dialects as reflected in inscriptions from the first millennium BCE. We will survey the grammar (phonology, morphology, syntax, and lexicon) of epigraphic Hebrew, Phoenician, and known Transjordanian languages (Moabite, Ammonite, Edomite). We will also discuss the methodological challenges inherent to the study of script evolution, scribalism, and the reconstruction of NWS languages through the study of inscriptions. This course will also introduce students to scholarship outside of the field of NWS and Hebrew Bible on literacy, the study of visual grammar, and the socio-semiotic approach to the study of writing.
Area: Humanities

AS.134.408. The Book of Ezekiel. 3 Credits.
A rapid reading course aimed at increasing proficiency in reading the Hebrew text of the book of Ezekiel. Various aspects of translation and interpretation will be studied (e.g., grammar, textual criticism, Philology) including literary, historical, and theological questions.
Area: Humanities

AS.134.450. Seminar in Hebrew: Archaic Biblical Poetry. 3 Credits.
Translation and analysis of selected texts in Biblical Hebrew giving attention to advanced features of grammar and syntax. Topic: 'Archaic Biblical Poetry'.
Area: Humanities

AS.134.604. The Book Of Job. 3 Credits.
Reading the Hebrew text of the book of Job with attention to philology, textual criticism, and various aspects of interpretation.
Area: Humanities

AS.134.605. Seminar in Hebrew: Second Isaiah. 3 Credits.
Translation, textual, philological, prosodic, literary and thematic analysis of Isaiah 40-55, with focus on how Hebrew verse as distinct from prose is constructed.
Area: Humanities

AS.134.606. The Deuteronomistic History and the Construction of Israelite Identity. 3 Credits.
The Deuteronomistic History is one of the most enduring and influential theories in modern biblical scholarship. Though this theory has been criticized in recent years and no longer enjoys unanimous support, it still serves as a baseline for many scholars in the field. Whether one chooses to accept or reject this theory, discussion of its history and merits raises essential questions concerning the formation of the Hebrew Bible. This includes ancient conceptions of authorship and editing practices, the development of Israelite religious ideology, and the dating of many biblical texts. This course introduces the student to the basic history of the Deuteronomistic History as a scholarly construct, while at the same time engaging in the primary Hebrew texts. Students will read and translate biblical Hebrew for the first half of the class. During the second half of class, students will discuss and evaluate the applicability of each approach to passages in particular and the Deuteronomistic History as a whole. Special focus will be on recent criticism and defense in order to explore its continued viability.
Area: Humanities
AS.134.607. Texts, Tablets, and Tweets: The Sociolinguistics of Writing.
This course examines the evolution of writing and the relationship between speech and writing in ancient and modern societies. We will examine the ways in which orthography, scripts, and the visual components inherent to written language (e.g., scripts, fonts, emoticons, diacritics etc.) are used to create and/or project certain social identities in these new written spaces. A primary aim of this course is to generate discussion regarding the ways in which writing in all of its forms—at the institutional, group, and individual level, in official documents, in emails, texts, tweets, and graffiti, using standardized and non-standard orthographies, in both regulated and unregulated spaces—can be a social and often political act of identity. The writing assignments for the course will encourage you to consider the ways in which writing can be harnessed to express social identities. You will work as a group to develop your own writing system and present it to the class. This will hone your creative and critical thinking skills and give you practice collaborating on a project. You will also research and conduct an original analysis on a corpus of writing.
Area: Humanities

A rapid reading course aimed at increasing proficiency in reading the Hebrew text of the book of Ezekiel. Various aspects of translation and interpretation will be studied (e.g., grammar, textual criticism, Philology) including literary, historical, and theological questions. Cross-listed with Jewish Studies.

AS.134.610. Historical Hebrew Grammar.
Phonology and morphology of Biblical Hebrew.

AS.134.612. Qumran Aramaic.
Readings in the Aramaic texts from Qumran, such as the Prayer of Nabonidus, the Genesis Apocryphon, Targum of Job, and the Enochic literature. Basic ability to read Aramaic is necessary.
Area: Humanities

AS.134.621. Textual Criticism.
An introduction to the ancient witnesses of the biblical text and the principles of textual criticism.

AS.134.623. Pentateuch.
This course surveys the linguistic and literary structure of the Pentateuch. A second and equally important focus will be the history of scholarship and its broader impact on the study of the history and religion of ancient Israel and Judah.
Area: Humanities

AS.134.650. Seminar in Hebrew: Book of Jeremiah I.
Translation and analysis of selected texts in Biblical Hebrew giving attention to advanced features of grammar and syntax. Topic: ‘Book of Jeremiah I’.

AS.134.652. Seminar in Ancient Israelite Religion.
Topics include history of scholarship, methodology, representations of deity, the aniconic tradition, solar Yahwism, sacred space, blood rituals, passover, royal cult, family religion, divination, prophecy, incantations, etc.

AS.134.656. Comparative Semitics.
Comparative and historical analysis of the Semitic languages in their Afro-Asiatic context.

AS.134.660. History of Ancient Syria/Palestine.
A survey of the history of Ancient Syria and Canaan, including Ancient Israel.

AS.134.661. History: Ancient Syria-Palestine II.
A survey of the history of Ancient Syria and Cannan, including Ancient Israel.
Area: Humanities

AS.134.720. Ugaritic I.
A year-long course studying Ugaritic language and literature. The first semester will focus on grammar and translating a representative selection of mythological texts. The second semester will concentrate on ritual texts. The course will also be epigraphic in nature using both conventional and digital techniques.

AS.134.721. Ugaritic II.
A continuation of AS.134.720 with emphasis on the mythological and ritual texts from Ugarit. A digital epigraphy lab will also form part of the course.
Area: Humanities

AS.134.744. Survey Of Aramaic Texts.
Area: Humanities

An advanced course in Aramaic devoted to the study of Old Aramaic inscriptions. We will be translating and analyzing a selection of texts from Northern Syria (e.g. Bar-Rakib; Hadad; Kuttamuwa, Nerab, Panamuwa, Sefire, Zakkur), Southern Syria (e.g. Bar-Hadad/Meqart Stela, Hazael, Tel Dan) and Northern Mesopotamia (e.g. Tell Fakhariyah). Students will be expected to vocalize such texts as a study in historical and comparative linguistics and to clarify their understanding of the morphology and syntax.
Area: Humanities

Cross Listed Courses

Archaeology
AS.136.101. Introduction To Archaeology. 3 Credits.
An introduction to archaeology and to archaeological method and theory, exploring how archaeologists excavate, analyze, and interpret ancient remains in order to reconstruct how ancient societies functioned. Specific examples from a variety of archaeological projects in different parts of the world will be used to illustrate techniques and principles discussed.
Area: Humanities, Social and Behavioral Sciences

Classics
AS.040.137. Freshman Seminar: Archaeology at the Crossroads: The Ancient Eastern Mediterranean through Objects in the JHU Archaeological Museum. 3 Credits.
This seminar investigates the Eastern Mediterranean as a space of intense cultural interaction in the Late Bronze Age, exploring how people, ideas, and things not only came into contact but deeply influenced one another through maritime trade, art, politics, etc. In addition to class discussion, we will work hands-on with artifacts from the JHU Archaeological Museum, focusing on material from Cyprus.
Area: Humanities
Writing Intensive

AS.040.366. The Archaeology of Ancient Cyprus: Investigating a Mediterranean Island World in the JHU Museum. 3 Credits.
This course explores the visual and material worlds of ancient Cyprus from the earliest human evidence through the Iron Age. Course topics will include the island’s unique position between the Aegean and Near East and how this has impacted both Cyprus’ ancient past and the way in which it has been conceived in the modern world. Class involves regular analysis of artifacts based in the Archaeological Museum.
Area: Humanities
Earth Planetary Sciences
AS.270.205. Introduction to Geographic Information Systems and Geospatial Analysis. 3 Credits.
The course provides a broad introduction to the principles and practice of Geographic Information Systems (GIS) and related tools of Geospatial Analysis. Topics will include history of GIS, GIS data structures, data acquisition and merging, database management, spatial analysis, and GIS applications. In addition, students will get hands-on experience working with GIS software.
Area: Humanities, Social and Behavioral Sciences

AS.100.362. Children and Childhood in the Middle Ages. 3 Credits.
Seminar on the history of childhood and ideas of childhood around the medieval Mediterranean; themes include child custody; medieval education and punishment; parent-child private letters; childhood mortality and the arts of bereavement/consolation. Cross-listed with the Program in Islamic Studies.
Area: Humanities, Social and Behavioral Sciences

AS.100.374. Conquest, Conversion, and Language Change in the Middle Ages. 3 Credits.
Examines case-studies of imperial conquests (Islamic, Mongol, reconquista, early colonialism) and attendant changes in religion (Christianization; Islamization) and in language (Arabization; transition from Latin to European vernaculars) across medieval Eurasia.
Area: Humanities, Social and Behavioral Sciences

AS.100.615. States, Scribes, and Archives: Medieval Arabic Documentary Cultures.
A historical survey of the bureaucratic practices of medieval Islamic states (in comparative perspective); includes close readings of primary official documents, e.g. petitions, edicts, fiscal receipts, and administrative reports.
Area: Humanities, Social and Behavioral Sciences

AS.100.646. Marvels and Wonder in medieval Arabic Culture.
Explores the concept of marvels in different genres of medieval Arabic culture: Qur’anic exegesis; travel literature; ‘ethnography’; cosmography and geography; marvels of the natural world (e.g. hermaphrodites); Muslim views of pre-Islamic ('pagan') monuments.
Area: Humanities, Social and Behavioral Sciences

History of Art
AS.010.104. Freshman Seminar: Investigating Gender and Sexuality in Mesopotamian Art. 3 Credits.
Specifics of gender and sexuality are not universal norms, but rather are the product of particular cultural formations. Works of art are especially critical in shaping and conveying these particularities. This seminar examines how artistic products expressed and constructed gender identities and notions of sexuality in ancient Mesopotamia from the 4th millennium to the Hellenistic period. As a group, we will explore a variety of case studies, through which students will be introduced to ancient Mesopotamian culture and will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Humanities

AS.010.112. Freshman Seminar - Lower, Later, Farther Away: Roman Art Beyond the Center. 3 Credits.
This course will introduce students to the art of the Roman world through art created by and for the Roman lower classes, art created in late antiquity, and art created in the far provinces of the empire. These topics represent a dramatic shift away from the traditional “center” of the study of Roman art (art created for the wealthy and politically privileged citizens of central Italy between the first century BCE and the first century CE), and are leading to new understanding of marginalized groups in the Roman world.
Area: Humanities

AS.010.205. Art of Mesoamerica. 3 Credits.
This course provides a basis for the study of ancient Americas art and architecture and a broad exposure to the issues relevant to its study. Select visual arts within the primary regions of Mexico and Central America will be emphasized. In conjunction with the Baltimore Museum of Art (BMA) and the JHU Archaeological Museum (JHAM), students will participate in on-site study of the collections. Students who have taken AS.010.105 are not eligible to register. This course duplicates AS.010.105.
Area: Humanities

AS.010.236. Palaces, Temples and Tombs in Mesopotamia. 3 Credits.
Mesopotamia, the “land between the rivers,” is considered the cradle of civilization. Its earliest urban centers appeared by 3500 BCE in the region of modern-day Iraq, Iran, and Syria. Along with urbanism came the emergence of temples and palaces as large-scale elite institutions (along with written records). Their arts manifest some of the earliest complex representations and follow a vibrant course for several millennia. The first empires marshaled large armies and amassed fabulous riches. Complex religious and ritual ideologies were expressed in the art and architecture. And all has been revealed by the archaeologist’s spade. This class explores the art and architecture of Mesopotamia (ancient Sumer, Babylonia and Assyria) from 3500 to 330 BCE. Emphasis is placed on the relationship between the arts and ancient society in order to enable students to acquire the skills for accessing and appreciating ancient civilizations.
Area: Humanities

AS.010.307. Diplomats, Dealers, and Diggers: The Birth of Archaeology and the Rise of Collecting from the 19th c. to Today. 3 Credits.
The development of archaeology in the Middle East – its history of explorers, diplomats, missionaries and gentlemen-scholars – profoundly shaped the modern world, from the creation of new museums and the antiquities market to international relations and terrorism.
Area: Humanities

AS.010.315. Art of the Assyrian Empire, 1000-600 BCE. 3 Credits.
From 900 to 609 BCE, the Assyrian Empire dominated the ancient Near Eastern world, stretching from western Iran to the Mediterranean and Egypt. In concert with imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This course provides an integrated picture of the imperial arts of this first world empire, situating it within the broader social and political contexts of the first millennium BCE. In its conquest of foreign lands, this powerful state came in contact with and appropriated a diversity of cultures, such as Phoenicia, Egypt, and Greece, which we will also study.
Area: Humanities

Area: Humanities
AS.010.319. Medieval Art and Architecture of the Holy Land. 3 Credits.
The course focuses on art and architecture in the political and religious contexts of the Middle East, from the 4th to the 14th c. The three monotheistic religions all claimed specific territories – in particular the city of Jerusalem – for cult practices. This situation resulted in military conflicts that had an impact of Jewish, Medieval, Byzantine, and Islamic art in the Holy Land. The political conflicts, which still plague the region today, are rooted in the complex situation of the medieval period. The Roman, Arab, Byzantine, and crusader invasions resulted however in exciting eclectic styles that characterize the art and architecture of the region. We will discuss concepts behind political and religious leadership, as they intersect with the power of the arts.
Area: Humanities
Writing Intensive

AS.010.364. Babylon: Myth and Reality. 3 Credits.
Babylon – the name resonates even today, from the biblical whore of Revelation to sci-fi. It evokes exotic places and time long past. But what do we really know about the ancient city and the civilization that flourished there thousands of years ago? The first part of this course examines the archaeological city of Babylon, located in the modern state of Iraq, and considers its artistic and architectural achievements in the context of Mesopotamian history. The second part of the class explores the ongoing impact of Babylon in the cultural imagination of later periods, from the Classical and biblical authors, to European artists, Hollywood movies, science fiction, and contemporary political movements.
Area: Humanities

AS.010.389. The Stone and the Thread. 3 Credits.
Advanced inquiry into imperial Inka architecture and fiber arts.
Area: Humanities
Writing Intensive

AS.010.398. Tombs for the Living. 3 Credits.
Centering on the tomb as the unit of analysis, this course examines the cultural and material aspects of death and funerary ritual. Case studies are drawn from North America, Mesoamerica, and the Andes. Collections study in museums.
Area: Humanities

AS.010.421. Creating Sacred Space in the Ancient and Medieval World. 3 Credits.
What makes a space sacred? How is it different from other spaces? This seminar explores the various means - visual, artifactual, architectural, and performative - of creating sacred space in the ancient and medieval worlds of the Near East and Mediterranean. Possible cases for study include early Sumerian temples, state-sponsored Assyrian temples, votive deposits, Greek sanctuaries, sanctuaries and landscape, early medieval Jewish, Christian, and Islamic cult buildings, cave sanctuaries, pilgrim sites, icons and sacred space.
Area: Humanities
Writing Intensive

AS.010.444. Classics Research Lab: Antioch Recovery Project (ARP). 3 Credits.
Antioch Recovery Project investigates mosaics from the ancient city of Antioch (modern Antakya, Turkey, near the border with Syria) now in the collection of the Baltimore Museum of Art. Excavated by an international team of archaeologists in the 1930s, hundreds of ancient mosaics from the cosmopolitan city were subsequently dispersed to museums across the globe, with twenty-four mosaics entering the collection of the BMA. Phase I will focus on the digital documentation and analysis of the mosaic of Narcissus as a prototype for ongoing research bringing together the fragments of ancient Antioch for contemporary beholders. The Greek myth of Narcissus tells the story of a beautiful Thesan hunter doomed to love his own reflection and is the origin of the modern psychiatric term “narcissism”. Researching the mythology, materials, conservation history, archival material, historiography, and contemporary reception of the Narcissus mosaic and myth offers extensive opportunities to collaborate with scholars across a range of disciplines at JHU, in the Baltimore museum community, and beyond. Investigators will move between the Baltimore Museum of Art, the CRL processing lab in Gilman Hall, and Special Collections. The course will involve some travel to visit other mosaics from Antioch now in collections at Harvard's Dumbarton Oaks in Washington D.C., and the Princeton Art Museum in Princeton, New Jersey.
Area: Humanities

AS.010.470. Power and Politics in Assyrian Art. 3 Credits.
Assyria, centered in northern Iraq, created one of the world's first great empires that dominated the ancient Near Eastern world from around 900 to 612 BCE. In concert with imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This seminar examines the close relationship between the arts and politics in the Assyrian empire. Some themes that will be explored are: historical narrative, text and image, portable luxury arts and gender, politics and religion. The course will engage in close visual analysis of the ancient materials and readings of critical scholarship.
Area: Humanities
Writing Intensive

The arts of the Near East, Aegean and Egypt are typically taught separately from one another. However, the Mediterranean Sea has always served as a connector, and the diverse cultures of these areas were in close contact with one another for much of their histories. During the Bronze Age (3000 to 1200 BCE), these interactions were particularly dynamic, resulting in a diversity of arts including wall frescoes, precious jewelry, and elaborate furnishings and weaponry. This course examines the arts of the interactions among Near Easterners, Greeks, Egyptians and others. It focuses special attention on the role of artistic products in intercultural relations, including trade, diplomacy, war and imperialism. Students are not expected to have extensive knowledge of all the areas, although some experience in at least one of them will be helpful. The course will interweave establishing a knowledge base necessary to tackle this topic with broader conceptual concerns and interdisciplinary approaches (art historical, archaeological, anthropological, and historical). There will be a final paper.
Area: Humanities
AS.010.646. Art and Architecture at the Eastern Frontier: Medieval Georgia.
This seminar investigates the fascinating landscape of medieval art and architecture of Georgia. Its specific geographic position in the South Caucasus, at the cross roads between the East and West, the Christian and Islamic Worlds, had a profound impact on the art and architecture in the region. Ancient sites show close connections with the Graeco-Roman World on the western border and with the Sassanid Empire in the East. The Christianization of the Kingdom of Kartli in the early fourth century resulted in close ties with the development of early Christian art in Syria, the Holy Land, and Byzantium. While the Christian religion remained an identifying factor during several hundred years of Muslim rule (736 to 1122) during which the city of Tbilisi was the capital of an emirate, Islamic motifs and style became an important factor for art works in medieval Georgia. Art and architecture with a specific Byzantine profile flourished in particular after the reunification of Georgia during the reign of King David the Builder (1073-1125) and Queen Tamar (1184 to 1213). The cathedral and monastery of Gelati and Mzcheta, the murals in the royal monasteries of Vardzia and Khintsvisi, and the countless icons are a testimony to this relationship. We will discuss the specific diverse aesthetics and materiality (stone, enamel and metal works) of Georgian art with the goal to reassess the map of medieval art and architecture that currently does not include the Eastern Frontier. A mandatory c. 10 days field trip to Georgia is planned after classes end in May 2020. Area: Humanities Writing Intensive

Assyria, centered in northern Iraq, created one of the world’s first great empires that dominated the ancient Near Eastern world from around 900 to 612 BCE. In concert with imperial expansion came an explosion of architectural and artistic production including entire cities and their ornamentation. This seminar examines the close relationship between the arts and politics in the Assyrian empire. The course will engage in close visual analysis of the ancient materials and critical readings of scholarship. There will be a final project. Area: Humanities

Medicine, Science and the Humanities
AS.145.101. Death and Dying in Art, Literature, and Philosophy: Introduction to Medical Humanities. 3 Credits.
In this course, four essential aspects of the theme of death and dying will be examined: Death and Medicine; Emotional Responses to Death; Burying and Commemorating the Dead; and Conceptions of Death. Specific topics relating to each of these aspects that will be covered include illness and causes of death; prevention of death; suicide; death and grief; burial practices; mourning the dead; public commemoration of the dead; life after death; and death and rebirth. Students will explore these topics from a historical-anthropological perspective with Paul Delnero, a specialist in the history and culture of the ancient Near East (Near Eastern Studies); from a literary perspective, by reading and writing poetry relating to these subjects with the acclaimed poet James Arthur (Writing Seminars); and from a musical perspective, through direct encounters with the music and creative process of the award-winning composer, Michael Hersch (Peabody). Area: Humanities Writing Intensive

Program in Museums and Society
AS.389.205. Examining Archaeological Objects. 3 Credits.
We examine the Johns Hopkins Archaeological Museum collection to learn the materials and techniques utilized in the ancient world to produce objects in ceramics, stone, metal, glass, faience, bone and ivory. Area: Humanities

AS.389.315. Ancient Color: The Technologies and Meanings of Color in Antiquity. 3 Credits.
What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum. Area: Humanities, Social and Behavioral Sciences

For current faculty and contact information go to http://neareast.jhu.edu/people/

Near Eastern Studies, Bachelor of Arts

Near Eastern Studies Major Requirements
(Also see Requirements for a Bachelor’s Degree (p. 1584).)
The ancient Near East is where history begins. It is where the first crops were sown, the first towns built, and where writing was first invented. The origins of Western culture are to be found in its great civilizations, from the three great monotheistic religions—Christianity, Islam, and Judaism—to everyday aspects of our life that we take for granted, such as the alphabet and marking time by hours and minutes. The Near Eastern studies major can be the focal point of a broad liberal arts education, as well as a basis for graduate study. An undergraduate major can specialize in one of the four main areas of specialization of the department - Egyptology, Assyriology, Northwest Semitic languages and literatures (including the Hebrew Bible), and Near Eastern Archaeology and Art - or in the civilizations of the ancient Near East in general.

Students must earn a "C" or higher grade in all courses used to satisfy major requirements and courses may not be taken satisfactory/unsatisfactory.

Honors

Those seniors wishing to be considered for departmental honors may choose to write a senior thesis. A student must maintain a 3.5 GPA in the major (through the junior year) to be eligible for departmental honors. It is advisable for such students to contact a faculty member to supervise the thesis during the spring semester of their junior year. The student should then register for two semesters of independent study in the senior year.

Near Eastern Studies, Minor

Near Eastern Studies Minor Requirements

To minor in Near Eastern Studies, a student must complete six courses (18 credits) from among the department’s offerings. One of these courses must be from among the Department’s regularly offered introductory courses to the ancient Near East: AS.130.101 Ancient Near Eastern Civilizations; AS.130.126 Gods and Monsters in Ancient Egypt; AS.130.135 Pyramids, Temples and Tombs; AS.130.170 Diplomacy and Conflict in the Ancient Middle East. The remaining five courses are selected, in consultation with the director of undergraduate studies in Near Eastern Studies, to meet the needs and interests of the student. Minors may wish to survey all of the different fields covered by the department or to focus on a single ancient language, culture, or methodology in more depth.

Students must earn a "C-" or higher grade in all courses used to satisfy minor requirements and courses may not be taken satisfactory/unsatisfactory. All courses must be at least 3 credits.

Near Eastern Studies, PhD

The graduate program, the oldest of its kind in the nation, is designed to train professional scholars and teachers in four main areas: Egyptology, Assyriology, Northwest Semitic languages and literatures (including Hebrew Bible), and Near Eastern archaeology and art. The courses may be modified in particular years to suit the needs of students currently in residence. Reading and private study under the direction of the faculty are considered as important as work in class. The seminars allow small groups of students and faculty to engage in close study of special problems. As the program is intended to lead to the Ph.D., students are admitted as candidates for the M.A. only in unusual cases.
Financial Aid

The department awards most students admitted to the Ph.D. program who are in need of financial aid a basic annual fellowship covering full tuition and a full stipend for living expenses for up to five years. For some of this period, the department’s support may take the form of a teaching assistantship. In addition, the period of support may be extended by the various competitive awards available to advanced students within the university. When appropriate, the department will award travel stipends for graduate students to participate in archaeological excavations in the Near East or visit collections in this country and abroad.

For further information on graduate study in Near Eastern Studies, visit the departmental website at http://neareast.jhu.edu/.

Program Requirements

Students working full time toward the Ph.D. may expect to do three to four years of course work, after which comprehensive examinations must be written before work on the dissertation begins. The examinations cover a student’s major and minor fields of concentration. After passing these examinations, the student, in consultation with the faculty, prepares a dissertation proposal for faculty consideration and then proceeds to write the dissertation.

An ability to read scholarly French and German is necessary, and an examination in one of these must be passed within the first semester of residence at Hopkins. The examination in the other may be delayed not more than one year. Some command of Greek and Latin is necessary to pursue biblical studies.

Neuroscience

http://krieger.jhu.edu/neuroscience (http://krieger.jhu.edu/neuroscience/)

Neuroscience is the study of the nervous system and how it functions. Neuroscientists study the nervous system from all levels, ranging from molecules interacting with cell membranes to brain systems subserving cognitive functions such as language. Dramatic progress has been made at all levels, and the field continues to grow. On the Homewood campus, researchers studying the nervous system are in the departments of Biology, Biomedical Engineering, Biophysics, Cognitive Science, and Psychological and Brain Sciences and in the Krieger Mind/Brain Institute. Their presence provides the opportunity for an innovative, interdepartmental program which offers a broad overview of the neuroscience field, as well as more advanced training in one of four focus areas.

Cellular and Molecular Neuroscience (CM) focuses on the mechanisms by which information flows within and between cells in the nervous system, and the mechanisms through which the cellular structure of the nervous system develops and is maintained. Topics include the molecular basis of membrane permeability, action potentials, sensory transduction, synaptic transmission, neuronal modulation, mechanisms of drug action, and the molecular basis of genetic disorders of the nervous system.

Cognitive Neuroscience (CG) focuses on how cognitive functions, such as vision or language, are implemented by the brain. Drawing upon a variety of techniques for probing the working brain at cognitive and neural levels, including functional neuroimaging, analysis of cognitive impairments in brain-damaged patients, and electrophysiological techniques, research in cognitive neuroscience seeks to relate mental representations and computations to brain mechanisms and processes.

Computational Neuroscience (CP) focuses on applying mathematical tools and theories to investigate brain function. This discipline incorporates a diverse set of approaches from mathematics, physics, engineering, and computer science, to understand how the nervous system processes information. Such principles are used to answer questions across a variety of domains of neuroscience: cellular/ molecular, systems and circuits, behavioral and cognitive.

Systems Neuroscience (ST) seeks to relate brain structure and functioning to behaviors and related physiological processes. Research in this area explores the description and analysis of neural circuits. This includes identifying the brain nuclei and interconnections making up a circuit, identifying and investigating the implicated neurotransmitters, and characterizing the intrinsic and extrinsic factors that modulate the development and adult functioning of the circuit. Topics as diverse as learning and memory, communication, sensory systems, and motivated behaviors (e.g., reproduction, feeding, and aggression) are explored from this perspective.

Neuroscience Program Committee

The Neuroscience Program Committee coordinates course offerings, oversees the program’s interdepartmental courses, reviews and updates the administration of the program, makes decisions about admission to the B.S./M.S. program, approves proposed research programs and mentors for students in the B.S./M.S. mentored research program, and evaluates the final reports and presentations from the research year.

Programs

- Neuroscience, Bachelor of Science (p. 2080)
- Neuroscience, Bachelor of Science/Master of Science (p. 2082)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.080.250. Neuroscience Laboratory. 3 Credits.
This course will give students the ‘hands-on‘ experience of the interdisciplinary nature of neuroscience. Students will use anatomical and neuro-physiological techniques to understand the basic underlying principles of neuroscience.
Prerequisite(s): ( AS.080.305 AND AS.080.306 ) OR AS.200.141 Area: Natural Sciences

AS.080.260. Bridging the gap between Biology and Statistics. 1 Credit.
This course is designed to support the lectures and assignments in Probability and Statistics in Life Sciences, EN.553.211. This one-hour a week course is led by a behavioral biology professor with extensive expertise in statistics and mathematics. The primary goal of this course is to increase success and understanding of EN.553.211 by bridging the gap between theoretical statistics and biological thinking. In addition, when possible, examples and direct applications in neuroscience and behavioral biology will be presented to provide a context for EN.553.211 materials.
Corequisite(s): Students must also enroll in EN.553.211.
AS.080.301. Behavioral Assessment of Animal Models of Cognition and Neuropsychiatric Disorders. 3 Credits.
What does a rat exploring it’s environment tell us about memory? How can a mouse help us better understand schizophrenia? This course will focus on procedures that are routinely used to study behavior in animal models of cognition and neuropsychiatric disorders. Topics will include motor function, emotional and motivational states, disorders such as dementia and schizophrenia, among others. Throughout the course, we will read and discuss original research articles to illustrate and compare some of the measures and results from the various procedures.
Prerequisite(s): Students may not have taken AS.200.302;AS.200.141 OR (AS.080.305 and AS.080.306), OR by instructor permission.
Area: Social and Behavioral Sciences

AS.080.303. Structure of the Nervous System. 3 Credits.
This course takes a structural biological approach to studying the nervous system. In using a systems approach it provides students of cellular-molecular and computational neuroscience with a thorough introduction to functional, microscopic and submicroscopic organization of the brain, spinal cord and peripheral nervous system.
Prerequisite(s): AS.080.305 AND AS.080.306
Area: Natural Sciences

AS.080.304. Neuroscience Learning and Memory. 3 Credits.
This course is an advanced survey of the scientific study of learning and memory. Different perspectives will be used to review the science of learning and memory including the cellular-molecular basis of synaptic plasticity, the functional circuitry involved in learning and memory and memory systems in the brain. The course is designed to provide a deep understanding of the issues and current debates in learning and memory research and focuses specifically on animal models of memory and memory impairment. This is an interactive lecture course with a strong emphasis on student participation.
Prerequisite(s): AS.200.141 OR (AS.080.305 AND AS.080.306 ) OR (AS.020.312 AND AS.020.306 ) or instructor permission.
Area: Natural Sciences

AS.080.305. Neuroscience: Cellular and Systems I. 3 Credits.
(Formerly Nervous Systems I) Neuroscience: Cellular and Systems I is a fully integrated, two-semester course that surveys the cellular and molecular biology of neurons as well as the structure and function of the nervous system. Students must register for Neuroscience: Cellular and Systems II offered in the second term. Course open to JHU undergraduates only.
Prerequisite(s): AS.080.203 OR AS.050.203 OR AS.200.141 OR AS.080.105 OR AS.050.105 or instructor permission.
Area: Natural Sciences

AS.080.306. Neuroscience: Cellular and Systems II. 3 Credits.
(Formerly Nervous Systems II) Neuroscience: Cellular and Systems II uses the functional organization of the somatosensory system as a means to examine mechanisms of neural development. Generation and maturation of neurons, guidance of axons, formation of synapses and the regressive events that shape the adult nervous system will be examined. At the same time we will explore the structure and function of brain regions that allow us to feel pain and temperature, detect vibration, recognize shape and perceive where we are in space. Finally, the single-neuron events that lead to adaptive changes in function will be explored in the context of central nervous system control of movement and of higher order functions of speech and memory. Students who do not register for Neuroscience: Cellular and Systems I offered during the first term should not register for this class.
Prerequisite(s): AS.080.305
Area: Natural Sciences

AS.080.308. Neuroeconomics. 3 Credits.
Every day decisions often require us to weigh the costs and benefits of engaging in a particular course of action in order to obtain some expected outcome. Unfortunately, we often lack the information necessary to obtain our desired goal with complete certainty. Economists have long been interested in understanding human decision-making under these circumstances. In parallel, neuroscientists have made great strides at describing the underlying neural basis of simple decision-making. However, despite much progress in both fields, our understanding of how the brain makes decisions is incomplete. In order to strengthen and further research in both fields, the interdisciplinary field of Neuroeconomics arose. This course will survey the field of Neuroeconomics focusing on theoretical concepts developed by economists and the role these theories are playing in guiding current experimental neuroscience.
Prerequisite(s): AS.080.306 OR AS.200.141 OR AS.020.312
Area: Natural Sciences

AS.080.310. Synaptic Function and Plasticity. 3 Credits.
The function of the nervous system is based on synaptic transmission between neurons. Synapses are not static structures, but dynamically change with experience. Experience-dependent synaptic plasticity not only allows proper development of the nervous system in tune with the environment, but also is the basis for learning and memory. This course will cover the structure and function of synapses, and how they are altered by experience to encode information.
Prerequisite(s): (AS.020.305 AND AS.020.306) OR (AS.080.305 AND AS.080.306)
Area: Natural Sciences

AS.080.316. Prefrontal Cortex- Computational Models and Neurophysiology. 3 Credits.
The course will cover the function of the prefrontal cortex. We will discuss various computational models of prefrontal function and neurobiological evidence for these models. The class will consist of lectures, student presentations, and discussions.
Prerequisite(s): AS.080.305 AND AS.080.306 or Instructor Permission.
Area: Natural Sciences

AS.080.320. The Auditory System. 3 Credits.
This course will cover the neuroanatomy and neurophysiology of the human auditory system from the ear to the brain. Behavioral, electrophysiological, and neuroimaging methods for assessing peripheral and central auditory function will be discussed. Acquired and developmental disorders of auditory function will be reviewed using clinical case studies.
Prerequisite(s): AS.080.305 OR AS.080.203 OR AS.050.203 OR AS.200.141 OR AS.020.312 or instructor permission.
Area: Natural Sciences

AS.080.321. Computational Neuroscience. 3 Credits.
This course is designed to give students an overview of computational neuroscience. The topics discussed will cover many exciting domains of the field including neural coding, decision-making, learning, attention and connectomics. Lectures will be complemented with hands on experience working with computational models using Matlab and/or other programming language. The overarching goal of the course is to increase overall literacy in the field of computational neuroscience and to gain an appreciation of the interplay between experimental and theoretical neuroscience.
Prerequisite(s): AS.080.306 OR AS.200.141. Familiarity with programming in Matlab will be helpful but not necessary.
Area: Natural Sciences
AS.080.322. Cellular and Molecular Biology of Sensation. 3 Credits.
Leading scientists in sensory biology from the Johns Hopkins community will present the most current knowledge in the cellular and molecular biology of sensation. A lecture and a student presentation of an exemplar manuscript will be presented each week on a different topic of sensory systems.
Area: Natural Sciences

AS.080.326. Neurobiology and Diseases of the Peripheral Nervous System. 3 Credits.
This course will cover neurobiology and disorders of the peripheral nervous system (PNS). A particular emphasis will be on cellular interactions within the PNS and with target tissues. For example, the two principal components of the peripheral nerves—axons and Schwann cells—have intimate and continuous cellular communications that are critical for physiological function of the PNS. The course will teach how these cellular interactions are developed, maintained throughout life, and are impacted by injury and diseases.
Prerequisite(s): AS.080.305 AND AS.080.306
Area: Natural Sciences

AS.080.328. Behavioral Neuroscience Lab. 3 Credits.
Class designed to give students first-hand knowledge of the behavioral procedures and techniques used to study behavior in the field of neuroscience. Students will gain hands-on experience by carrying out some of the behavioral tasks used to assess animals under specific behavioral domains, discuss why certain aspects (i.e. genotype, environment conditions, group size, etc.) are important factors to consider when designing, planning, and carrying out such experiments, and learn the relevance of behavioral research in translational medicine.
Prerequisite(s): AS.200.141 OR AS.200.302 OR AS.080.301 OR (AS.080.305 AND AS.080.306) or permission by instructor.
Area: Natural Sciences

AS.080.332. Unraveling Circuits in Systems Neuroscience—Emerging Techniques. 3 Credits.
Rapid technological development in neuroscience provides researchers with new tools and strategies to ask important questions about the neural basis of behavior. In this course, we will examine some of these emerging techniques, along with a sampling of the questions they have allowed scientists to answer. We will consider the conceptual insights that arise from answering these questions, as well as investigate the fundamental science behind the cutting-edge techniques that allow us to understand brain function in health and disease.
Prerequisite(s): AS.080.305 AND AS.080.306 or Instructor Approval
Area: Natural Sciences

AS.080.334. Brain-Body Interactions in Health and Disease. 3 Credits.
Both classical and recent primary research papers that deal with cross signaling of other major organs with the nervous system, particularly the central nervous system, will be discussed. Students will be exposed to emerging literature on how peptides, signaling molecules, and hormones effect the nervous system function both in health and in diseases.
Prerequisite(s): AS.080.305 AND AS.080.306
Area: Natural Sciences

AS.080.345. Great Discoveries in Neuroscience. 3 Credits.
This course examines the historical and intellectual context of selected, key advances in neuroscience, how they were made and the impact they had on an understanding of the nervous system. Particular attention will be paid to advances in cellular and molecular neuroscience. Among the topics covered will be the discovery of monoamine neurotransmitters and of endocannabinoids, the role of neurotrophins in neural development, and prion-based diseases of the brain.
Prerequisite(s): AS.080.306
Area: Natural Sciences

AS.080.355. Computational Principles of Biological Vision. 3 Credits.
Even though we take it for granted, vision is a superpower. It is so central to how most of us interact with the world, and so effortless, that we are unaware of the astronomically complex computations that underlie it. There are no computer vision programs that can match the performance of the human visual system in understanding the real, physical, 3D world. On the biological side, vision is the most thoroughly studied sensory system. As such, vision is a rich target for computational understanding of the brain. Vision is the topic that both of us actively study, and remain passionately excited about. In this course, we present our up-to-the-minute synthesis of what we consider to be the most important insights into how vision, especially object vision, works, at the level of biological information processing. We believe the result is a coherent, mechanistic account of how the brain transforms images into visual understanding. We know of no textbook that provides a comparable viewpoint. In addition to presenting this visual information processing framework, we hope to teach you how to critically evaluate current research papers within that framework. To this end, we will be incorporating discussions of current research papers into our lectures and assignments. The course will feature a series of weekly lectures (delivered as videos) and a weekly assignment. The weekly assignment will be an essay, and will make up the largest portion of your grade. The remainder of your grade will come from one larger final essay. We will offer 2 weekly, voluntary Zoom meetings to discuss any questions about the material that might have come up.
Prerequisite(s): AS.080.306
Area: Natural Sciences

AS.080.360. Diseases & Disorders of the Nervous System. 3 Credits.
Prerequisite(s): ( EN.580.421 AND EN.580.422) OR ( AS.020.305 AND AS.020.306 ) OR AS.080.306 or instructor permission.
Area: Natural Sciences

AS.080.362. Neurobiology of Hearing. 3 Credits.
The course focuses on sound processing, including current research topics in Auditory Neuroscience, including synaptic physiology, neural circuitry, acoustics, physiology, and behavior. Course taught in Salamanca. This course fulfills upper-level Neuroscience electives. Course must be taken for a grade.
Area: Natural Sciences
Writing Intensive
AS.080.366. Neuroscience of Pain. 3 Credits.
This course is a systems-oriented course focusing on the basic neural processing of pain signals in both the spinal cord and the brain. Class lectures will cover the anatomical and molecular basis for the transmission and perception of pain signals, basic concepts such as allodynia, hyperalgesia, peripheral and central sensitization, remodeling, the pathophysiology of chronic pain disorders and the cognitive and emotional aspects of pain. We will also discuss the regulation of pain signals by descending systems, and current practices and new advances in the treatment of pain.
Prerequisite(s): AS.080.305 OR AS.080.306 OR AS.020.312 or permission of instructor.
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive

AS.080.370. The Cerebellum: Is it just for motor control?. 3 Credits.
The cerebellum is traditionally thought to be involved in movement and motor control, and observations of patients with cerebellar damage do-in fact show motor deficits. However, since the proliferation of functional MRI, cerebellar activations have been observed in a surprising number of brain activation studies that were designed to investigate the neural correlates of cognitive function. Over the past 2 decades, an increasing number of investigators have tried to characterize the role of the cerebellum in cognitive function. Through lectures and reading discussions this course will survey cerebellar circuitry, neuroimaging and neuromodulatory methods for investigating the cerebellum, and traditional and non-traditional functions of the cerebellum, including cerebellar involvement in cognitive functions such as language, working memory, and executive control.
Prerequisite(s): (AS.080.306 AND AS.080.203) OR AS.050.203
Area: Natural Sciences, Social and Behavioral Sciences

AS.080.400. Research Practicum: Language Disorders-Community Based Learning. 2 Credits.
This course provides the opportunity to learn about adult aphasias; language disorders which are one of the most common consequence of stroke. You will receive training in Supportive Communication Techniques and work as a communication partner with an individual with aphasia for two hours per week. Three class meetings for orientation and reading assignments will be held on campus; training and practicum will be conducted at a local aphasia support center. Transportation required. A valid driver’s license for zip car use. This is a two (2) credit practicum.
Area: Natural Sciences, Social and Behavioral Sciences

AS.080.411. Advanced Seminar: Neuroscience I. 3 Credits.
For students in the first semester of the BS/MS Program. Instructor permission required.
Area: Natural Sciences

AS.080.412. Advanced Seminar: Neuroscience II. 3 Credits.
For students in the 2nd semester of the BS/MS Program.
Area: Natural Sciences

AS.080.413. Advanced Seminar: Neuroscience III. 3 Credits.
For students in the 3rd semester of the BA/MS Program.
Area: Natural Sciences

AS.080.500. Scientific Communication: Neuroscience. 0.5 Credits.
Scientific communication is crucial to advancing science. The Scientific Communication section is taken concurrently with Neuroscience Research and consists of a two hour research orientation session held at the beginning of the semester and a two hour exit session held at the end of the semester. Students must sign up for Scientific Communication prior to signing up for NS Research until they complete their 6 credits of research. See Neuroscience Research website for more details.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
Corequisite(s): AS.080.531 OR AS.080.541 OR AS.080.551 OR AS.080.561
AS.080.511. Independent Study. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
AS.080.531. Research Neuroscience-Freshmen. 1 - 3 Credits.
Students must register for AS.080.500 (Scientific Communication) until you have reached credits of required neuroscience research.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
Corequisite(s): AS.080.500
AS.080.541. Research Neuroscience – Neuroscience Majors. 1 - 3 Credits.
Students must register for AS.080.500 (Scientific Communication) until you have reached 6 credits of required neuroscience research.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
Corequisite(s): AS.080.500
AS.080.550. Neuroscience BS/MS Summer Research - Seniors.
This summer research course is only for Neuroscience BS/MS students that are seniors in the program over the summer.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
AS.080.572. Direct Readings/Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
AS.080.582. Neuroscience: Internship. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
AS.080.601. Neuroeconomics - Graduate Level.
Every day decisions often require us to weigh the costs and benefits of engaging in a particular course of action in order to obtain some expected outcome. Unfortunately, we often lack the information necessary to obtain our desired goal with complete certainty. Economists have long been interested in understanding human decision-making under these circumstances. In parallel, neuroscientists have made great strides at describing the underlying neural basis of simple decision-making. However, despite much progress in both fields, our understanding of how the brain makes decisions is incomplete. In order to strengthen and further research in both fields, the interdisciplinary field of Neuroeconomics arose. This course will survey the field of Neuroeconomics focusing on theoretical concepts developed by economists and the role these theories are playing in guiding current experimental neuroscience. Only graduate students can register for this course. Instructor signature is required.

This experiential learning experience provides the opportunity to learn and interact with children recovering from brain, spinal, and musculoskeletal injuries. Students will travel to the Kennedy Krieger Institute to volunteer in the Child Life Department where they will participate in a variety of therapeutic activities including playing with the children and helping them achieve goals on Saturdays (days/times TBA). Students will gain valuable clinical experience while learning patient empathy. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Transportation will be provided by the JHMI shuttle. No credit - S/U Grading Only

In this experiential learning experience, students will work with children who have a variety of neurological disabilities, including autism, cerebral palsy and Down syndrome through exercise and recreational activities. We partner with the KEEN (Kids Enjoy Exercise Now), a nonprofit organization. Student “coaches” will receive a profile for the KEEN athlete that they will pair up with during a session. Students will receive initial training and then select 4 sessions to attend. Sessions are held on the first and third Sunday of each month during the semester at KEEN centers in Maryland. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Transportation will be via student carpools using Zipcars, personal vehicles or Hop Vans. No credit - S/U Grading Only

AS.080.614. Experiential Learning: STEM in the Classroom.
STEM subjects are particularly important in today’s society and getting students interested in these areas early is crucial. Working with Making Neuroscience Fun (MNF), a community outreach program, which brings age-appropriate interactive presentations about the brain and nervous system to Baltimore city and county elementary school students, our students share their love of the sciences with young children. The elementary school students learn about the nervous system and our students learn valuable communication skills. Hopkins students will receive initial training prior to participating and will select and present 6, 45-minute presentations. In order to participate, students must be available either 7am-11am or 11am-3pm at least one day per week, Monday-Friday. Students MUST attend a mandatory orientation, a mandatory training and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Students will also be given the opportunity to work with the faculty to develop new materials for the program. Presentations will take place at Baltimore city and county elementary schools. Transportation to the schools will be via student carpools using Zipcars or personal vehicles. No credit - S/U Grading Only

AS.080.616. Experiential Learning: Working with Children in the Clinic.
This experiential learning experience provides students the opportunity to learn, play and interact with children receiving treatment in over 20 different specialties including dermatology, endocrine, GI, immunology, urology, plastics and hematology. Students will volunteer in outpatient clinics at the Johns Hopkins Children’s Center where they will encourage, provide developmentally supportive play for children and participate in a variety of activities including art projects, coloring, board games, and reading. Students will gain valuable clinical experience and be exposed to a wide range of children with a variety of diseases/illnesses. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students will sign up for 5 shifts on a first-come, first-serve basis after the mandatory orientation. Shifts are Mondays 1pm-3pm, Tuesdays 10am-12pm, Wednesdays 1pm-3pm, Thursdays 10am-12pm and Fridays 10am-12pm throughout the semester. Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Volunteer shifts will take place at outpatient clinics in the Rubenstein Child Health Building. Transportation will be provided by the JHMI shuttle. No credit - S/U Grading Only

This experiential learning opportunity provides a hands-on experience, working side-by-side with elderly individuals at the Keswick Multi-care Center and the Roland Park Place. Students will have a chance to interact with residents that have both short-term and long-term cognitive and physical impairments. The residents typically live on the premises but may also be participating in a daytime care only program. Students will interact with the residents in various enriching ways in order to develop a better understanding of how our mind and body ages with time. Students will gain hands-on experience working with residents with dementia, Alzheimer’s and other cognitive impairments that effect the body and the brain. 4 students per semester. Students MUST attend a mandatory orientation and a mandatory exit session to be held onsite (Day/Time TBD). Students are required to provide a written description of their experiences and to discuss their experiences at the exit session. Time Commitment: 2-3 hours a week for the entire semester. Must provide medical immunization records to include: flu shot and PPD (tuberculosis). Transportation will be provided by the JHMI shuttle. No credit - S/U Grading Only
AS.080.620. Theoretical Neuroscience.
Topics of theoretical neuroscience and computational neuroscience will be discussed based on the original literature. Students are expected to actively participate in the discussion and also to present selected material to the class.

AS.080.630. Bodian Seminar Series.
The Bodian Seminar is an interdisciplinary colloquium for discussion of current research into the neural basis of mental processes. Leading researchers, generally from outside the University, are invited to give lectures. About 12 lectures are scheduled per semester (see http://www.mb.jhu.edu/seminars.asp). Speakers, titles of lectures, and dates are announced to participants per e-mail (contact Debby Kelly, 410 516-8640). The announcements also include links to one or two recent publications of the speaker. Undergraduate students who register for this course are asked to study a publication by the speaker, as provided with the announcement, and to prepare a question for each speaker together with a brief discussion of the possible answers. Permission required for undergraduate students.

Graduate students and Seniors with instructor permission. The Bodian Seminar is an interdisciplinary colloquium for discussion of current research into the neural basis of mental processes. Leading researchers, generally from outside the University, are invited to give lectures. About 12 lectures are scheduled per semester (see http://www.mb.jhu.edu/seminars.asp). Speakers, titles of lectures, and dates are announced to participants per e-mail (contact Debby Kelly, 410 516-8640). The announcements also include links to one or two recent publications of the speaker. Undergraduate students who register for this course are asked to study these papers and to prepare a question for each speaker together with a brief discussion of the possible answers. Question and discussion have to be in writing and turned in the day before the lecture. Undergraduates must e-mail the instructor for permission (von.der.heydt@jhu.edu) prior to registering for the course.

AS.080.660. Commencement Project.
This course is for BA/MS students that have completed their year of research and are now working on their final thesis. In this course, students devote their semester to preparing their final thesis documentation and move forward with their Master’s Thesis Defense which is the last piece to the program. This course is for BA/MS student only and students should only register for this course in their last semester in the program.

AS.080.849. Teaching Practicum.
Permission required. Graduate students only.

AS.080.850. Mentored Research: Neuroscience I.
For students in the BA/MS Program first semester. Permission required.

Writing Intensive

AS.080.852. Mentored Research: Neuroscience II.
Permission Required. For students in the BA/MS Program.

AS.080.854. Mentored Research: Neuroscience III.
For students in the BA/MS Program Permission required.

ME.440.300. Research Practicum in Neuroscience.
Provides an opportunity for students to actively conduct research in Neuroscience.

ME.440.301. Research in Neuroscience (Undergraduate).
Provides an opportunity for undergraduate students to actively conduct research in Neuroscience.

For Medical Students only. Specialized Topics in Neuroscience.
Refer to Medical Student Electives Book located at https://www.hopkinsmedicine.org/som/students/academics/electives.html.

ME.440.705. Cellular and Molecular Basis of Neural Development II: Regulation of Neural Connectivity.
This is a seminar and reading course devoted to the discussion of the cellular and molecular processes underlying neuronal development.

An advanced seminar and reading course devoted to the molecular and cellular mechanisms underlying synaptic transmission and the regulation of synaptic plasticity. We will discuss fundamental discoveries in the areas of synapse formation, transmitter release, vesicle recycling, ribbon synapses, dendritic modulation, LTP/LTD, and homeostatic regulation. Students will present two papers and provide written answers to questions about the assigned reading.

The course will illustrate the use of diverse approaches (molecular, biochemical, electrophysiological and behavioral) to decipher how psychotropic drugs impact the brain. The course will utilize a lecture format for the first two classes and then switch to a “journal club” format in which students will present classic and recent articles. Topics to be covered include: opiates, benzodiazepines, antipsychotic drugs, and antidepressant drugs.

ME.440.711. Cellular and Molecular Basis of Neural Development I: Neuronal Differentiation.
A seminar and reading course devoted to the discussion of the cellular and molecular processes underlying neuronal development. Topics include cell proliferation and migration, nervous system patterning, differentiation of neurons and glia, morphogen and growth factor signaling mechanisms, neuronal polarity, and neural stem cell biology. Examples from vertebrate and invertebrate model systems will be covered. This course is designed to complement The Cellular and Molecular Basis of Neural Development II: Axon Guidance and Synaptogenesis, offered alternate years.

This course will review recent research progress in the fields of aging and neurodegenerative disorders with coverage of cellular, molecular, and systems neuroscience.

From outer segments of photoreceptors to the Fusiform Face Area of the cerebral cortex we have come to understand how the visual system works at each of many fundamental levels. This course examines the basis for perception of visible objects at each of these levels. We will use the secondary literature (scientific reviews) to accent the hard-won truths about visual system functional organization and to highlight ongoing controversies. Students will be led through carefully chosen reviews in a series of lectures and written summaries prepared by faculty. Three exams and a final exam will test students not on their memorization of minutiae but on their understanding of fundamental principles.

ME.440.723. Writing About the Brain.
The goal of this course is to train working neuroscientists to effectively and clearly communicate ideas about nervous system function of a general audience

This course is intended to help graduate students in the Neuroscience Graduate Program obtain an appreciation of options, challenges, and steps towards careers in the field of neuroscience.

ME.440.800. Research in Neuroscience.
Research in Neuroscience.
ME.440.801. Readings in Neuroscience (Journal Club).
A weekly talk on current literature topics of special interest. Students present either journal articles or their own research depending on their year in the program.

ME.440.802. Current Topics in Neuroscience (Research Seminar).
Weekly lecture on current research by active researchers. Topics are chosen so that an overall balance of subjects in neuroscience are covered in the course of a year. Students receive a reading list before the seminar and will be given an opportunity to meet with outside speakers.

ME.440.808. Physiology of Sensory Transduction.
A reading/presentation course focusing on visual and chemical transductions. The electrophysiological approach will be emphasized. A couple of long or several short papers will be presented and discussed by students each week.

ME.440.810. Readings In Systems Neuroscience.
A weekly talk on current literature topics of special interest. Students present journal articles for discussion.

ME.440.811. Neuroscience Cognition I.
This is the first half of a 4-quarter course on the cellular and molecular basis of neural function and the neural basis of perception, cognition, and behavior. Topics covered in this half include (1) development and structure of the nervous system, (2) cellular neurophysiology, (3) neural signaling and coding, and (4) audition, vocalization, and language. Lectures will be presented by faculty in the Neuroscience, Neurology, Biomedical Engineering, Psychology, and Cognitive Science departments. The course will also include discussion sections based on current literature and several neurotechniques sessions designed to familiarize student with current experimental approaches in cellular, systems and molecular neurosciences. This course is required of all students in the Neuroscience Graduate Program.

ME.440.812. Neuroscience Cognition II.
This is the second half of a 4-quarter course on the cellular and molecular basis of neural function and the neural basis of perception, cognition, and behavior. Topics covered in this half include (1) perception of objects, space, and self, (2) movement and balance, (3) learning and memory, (4) neurological and psychiatric disorders, and (5) global function in the nervous system. Lectures will be presented by faculty in the Neuroscience, Neurology, Biomedical Engineering, Psychology, and Cognitive Science Departments. The course will also have a laboratory component. This course is required of all students in the Neuroscience Graduate Program.

The mammalian brain is an information processing system without parallel. It excels at recognizing objects and substances, reconstructing space, making decisions, and controlling complex behaviors. The neural mechanisms underlying these abilities are studied by a large community of systems and cognitive neuroscientists. This research has generated a rapidly evolving field of high-profile discoveries and lively debates between competing laboratories. Our course aims to convey a clear sense of this field by focusing on current experimental and conceptual controversies regarding organization and function in the primate nervous system. Each week will focus on a different topic represented by two or more recent papers selected by an instructor reflecting timely questions or opposing points of view. Students will present the papers informally and direct a debate over the relative merits of the conflicting viewpoints.

ME.440.814. Research in Neuroscience (BCMB).
The course is designed to hone students' skills in oral presentations, critical thinking, as well as composition and editing of manuscripts.

ME.440.816. Topics in Cortical Plasticity.
Experience-dependent changes in cortical synapses and circuits are critical for proper development of the nervous system and for memory storage. This course will focus on recent findings on fundamental mechanisms of plasticity from synapses to circuit level through discussions of recent research papers.

ME.440.817. Psychedelics.
In this course we will explore the history and uses of psychoactive compounds, the neurobiological basis of their activity, and their potential for healing. Along the way we will attempt to debunk some of the most common myths about this especially controversial class of drugs. Each session, one student will take the lead in discussing the assigned primary research articles (except for 2-3 documentary film sessions, which will take up the whole period). Beyond didactic learning, this graduate level course is designed to hone students' skills in oral presentations, critical thinking, as well as composition and editing of manuscripts.

In order to become successful scientists, graduate students need to learn much more than just how to design, perform, and interpret experiments. Graduate students need to learn many professional norms and practices central to a successful scientific career. Most importantly, graduate students need to learn about what constitutes scientific misconduct about proper behavior involving issues of authorship and various conflicts of interest. Student need to learn about rules, regulations, and ethics relating to animal and human experimentation. Further, they need to learn about how to choose a lab, keep proper records, deliver presentations, and seek funding. Finally, they need to learn the complex relationship between scientists and society.

ME.440.820. Circuits and Brain Disorders.
The course is designed to serve as an introduction to neurodegenerative disorders of the nervous system, and is intended to provide a balance of basic neuroscience, clinical presentation, biomarkers, genetics, and therapeutic approaches. One of the goals would be to highlight the distinct circuity that is most impacted by each disorder. The curriculum includes: (1) one lecture per week and (2) a coordinated journal club once per week.

Cross Listed Courses

Behavioral Biology

AS.290.510. Comparative Neural Systems and Behavior Research Discussions. 0.5 Credits.
This course is required concurrently with research in the Comparative Neural Systems Research and Behavior lab. During the scheduled meetings we will discuss scientific papers, policies and procedures, research ethics and other information related to activities in the lab. At the end of the semester, students will present their research in groups.

Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Writing Intensive
Area: Natural Sciences, Social and Behavioral Sciences
models serve to focus discussion. Also offered as AS.050.626.

Cognitive Science
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.105. Introduction to Cognitive Neuropsychology. 3 Credits.
When the brain is damaged or fails to develop normally, even the most 
basic cognitive abilities (such as the ability to understand words, or 
perceive objects) may be disrupted, often in remarkable ways. This 
course explores a wide range of cognitive deficits, focusing on what 
these deficits can tell us about how the normal brain works. Topics 
include brain anatomy and causes of brain damage, reading and spelling 
deficits, unilateral spatial neglect, hemispheric disconnection, cortical 
plasticity, and visual perception of location and orientation. Students read 
primary sources; journal articles that report deficits and discuss their 
implications.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.315. Cognitive Neuropsychology of Visual Perception: The 
Malfunctioning Visual Brain. 3 Credits.
When we think about our ability to see, we tend to think about our eyes, 
but in fact vision happens mostly in the brain. This course explores the 
remarkable perceptual deficits that occur when the visual regions of the 
brain are damaged or fail to develop normally, focusing on what these 
perceptual malfunctions tell us about normal visual perception. Topics 
include visual system anatomy and physiology; functional specialization 
in the lower visual system as revealed by cerebral achromatopsia (color 
blindness resulting from brain damage) and akinetopsia (impaired motion 
perception); cortical plasticity in the visual system; spatial deficits in 
perception and action; and the implications of high-level visual deficits, 
including prosopagnosia (impaired face recognition), Charles Bonnet 
syndrome (complex visual hallucinations in blind areas of the visual 
field), blindsight (accurate responding to visual stimuli despite apparent 
inability to see them), and aphantasia (lack of visual imagery).
Prerequisite(s): AS.050.105 OR AS.050.203 OR AS.080.203 OR 
AS.050.101 OR AS.200.110 OR AS.200.211 or instructor's permission.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.326. Foundations of Cognitive Science. 3 Credits.
This course explores general issues and methodologies in cognitive 
science through the reading of classic works (from Plato and Kant 
through Skinner and Turing) and recent research articles to begin 
construction of a coherent picture of many seemingly divergent 
perspectives on the mind/brain. Recent brain-based computational 
models serve to focus discussion. Also offered as AS.050.626.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.332. Developmental Cognitive Neuroscience. 3 Credits.
In-depth examination of the current literature on cognitive development in 
the context of developmental cognitive neuroscience. Please see course 
prerequisites. Meets with AS.050.632.
Prerequisite(s): AS.050.101 OR AS.050.339 OR AS.200.132 OR 
AS.050.105 OR Instructor's Permission.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.339. Cognitive Development. 3 Credits.
This is a survey course in developmental psychology designed for 
individuals with some basic background in psychology or cognitive 
science, but little or none in development. The course is strongly 
theoretically oriented, with emphasis on issues of nature, and 
development psychology as well as relevant empirical evidence. The 
principle focus will be early development, i.e., from conception through 
middle childhood. The course is organized topically, covering biological 
and prenatal development, perceptual and cognitive development, the 
nature and development of intelligence, and language learning.
Area: Natural Sciences, Social and Behavioral Sciences

Also offered as AS.050.326. This course explores general issues and 
methodologies in cognitive science through the reading of classic 
works (from Plato and Kant through Skinner and Turing) and recent 
research articles to begin construction of a coherent picture of many 
seemingly divergent perspectives on the mind/brain. Recent brain-based computational models serve to focus discussion.
Area: Natural Sciences, Social and Behavioral Sciences

Also offered as AS.050.339. This is a survey course in developmental 
psychology designed for individuals with some basic background in 
psychology or cognitive science, but little or none in development. 
The course is strongly theoretically oriented, with emphasis on issues of 
nature, and development psychology as well as relevant empirical 
evidence. The principle focus will be early development, i.e., from 
conception through middle childhood. The course is organized topically, 
covering biological and prenatal development, perceptual and cognitive 
development, the nature and development of intelligence, and language 
learning.

Psychological Brain Sciences
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.141. Foundations of Brain, Behavior and Cognition. 3 Credits.
A survey of neuropsychology relating the organization of behavior to the 
integrative action of the nervous system. Cross-listed with Behavioral 
Biology and Neuroscience.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.302. Behavioral Assessment of Animal Models of Cognition and 
Neuropsychiatric Disorders. 3 Credits.
What does a rat exploring its environment tell us about memory? How 
can a mouse help us better understand schizophrenia? This course will 
focus on procedures that are routinely used to study behavior in animal 
models of cognition and neuropsychiatric disorders. The procedures 
discussed will include assessments that fall into 3 broad functional 
domains: motor function, affective or emotional states, and cognition. 
Throughout the course, we will read and discuss original research articles 
to illustrate and compare some of the measures and results from the 
various procedures. Postdoc Teaching Fellowship. This is designed to be 
an upper level course.
Area: Social and Behavioral Sciences
AS.200.304. Neuroscience of Decision Making. 3 Credits.
This course will survey the neural mechanisms of decision-making. Current experimental research and theory concerning selection, control, and evaluation of actions are examined in humans and animals. Topics will range from simple perceptual judgements to complex social behavior. The course involves a weekly lecture about a specific topic followed by a student presentation of a current research paper. Cross-listed with Neuroscience.
Prerequisite(s): AS.080.305 AND AS.080.306 or instructor permission
Area: Natural Sciences

AS.200.329. Real World Human Data: Analysis & Visualization. 3 Credits.
Experiments in human cognition typically involve careful manipulation and control of variables in order to answer specific questions about the mind or brain. However, digital devices now provide an ocean of incidental human data: information collected continuously about our behavior and physiological states as we go about our lives. These incidental datasets are often large and noisy, and pose different analysis and visualization challenges from more traditional manipulated experiments. In this course students will learn computational tools and qualitative approaches for exploring, visualizing and interpreting large human data. The course emphasizes computer-based analysis of open-source human behavioral and neuroimaging datasets. Analyses will be conducted in MATLAB.
Instructor will grant approval as long as you have previous programming experience (roughly equivalent to material covered in an introductory-level programming course). Self-taught or real-world experience can be applicable in lieu of previous formal classroom instruction.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.200.334. Human Memory Psychology. 3 Credits.
This class will survey the behavioral and biological science of human memory. Historical perspectives as well as modern controversies will be discussed. Intersections with other fields such as law, education, medicine, and technology will be highlighted. The course will be a mixture of lectures and group discussions.
Area: Social and Behavioral Sciences

AS.200.344. Behavioral Endocrinology. 3 Credits.
An examination of the effects of hormones on behavior in non-human and human animals. Topics will include the effects of hormones on sexual differentiation, reproductive behavior, parental behavior, homeostasis and biological rhythms, regulation of body weight, learning and memory. Cross-listed with Behavioral Biology and Neuroscience.
Prerequisite(s): (AS.200.141 OR AS.080.306) OR (AS.020.151 AND AS.020.152) or instructor’s permission
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.368. Sleep, Dreams, and Altered States of Consciousness. 3 Credits.
Sleep, dreaming, resting and arousal to waking represent very different states of consciousness which differ dramatically both psychologically and physiologically. This course focuses on cognitive, psychological, physiological, biological and genetic aspects characterizing each of these states with some reference to other altered states. The course includes a focus on the major pathologies affecting sleep-wake states. Clinical cases will be considered. These inform about both psychological and biological aspects of these states. The relative biological functions of each state will be evaluated with particular attention to the mystery of why we have and apparently need REM and NREM sleep. Actual physiological recordings of sleep states will be reviewed and the student will learn how these are obtained and how to evaluate these. The circadian rhythms, ontogeny and evolution of these sleep-wake states will also be covered. This will include a review of information learned from non-human animal sleep. The change from sleep to full awakening reflects change toward increasing brain organization supporting consciousness. Understanding of the neurobiology of these states will be used to explore some of the more modern and scientific concepts of human self-awareness or consciousness. Recommended Course Background: AS.200.101 OR AS.080.203 OR AS.050.203
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.370. Functional Human Neuroanatomy. 3 Credits.
This course examines the general organizing principles of the anatomy of the human central nervous system and how this anatomical organization relates to function, from the level of neural circuits, to systems, to behavior. Students will learn to identify neuroanatomical structures and pathways in dissections and MRI images through computerized exercises. Readings and lectures will emphasize general structure-function relationships and an understanding of the functional roles of particular structures in sensory, motor, and cognitive systems.
Prerequisite(s): AS.080.305 AND AS.080.306 or Instructor Permission
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.376. Neuropsychopharmacology. 3 Credits.
Designed to provide information about how drugs affect the brain and behavior. The course focuses on biological concepts underlying structures and functions of the brain that relate to mental disorders. An introduction to neurobiology and brain function is presented as it applies to the interaction of various classes of drugs with the individual neurotransmitter systems in the brain. A brief historic review is followed by a discussion of clinical relevance. Cross-listed with Behavioral Biology and Neuroscience. Enrollment limited to juniors and seniors.
Prerequisite(s): (AS.080.305 AND AS.080.306) OR AS.020.306 AND AS.020.312) OR (AS.200.141 AND AS.020.306)
Area: Natural Sciences, Social and Behavioral Sciences

Neuroscience, Bachelor of Science

Neuroscience Major Requirements
(Also see Requirements for a Bachelor's Degree. (p. 1584))

Neuroscience is the study of the nervous system and how it functions. Neuroscientists study the nervous system from all levels, ranging from molecules interacting with cell membranes to brain systems subserving cognitive functions such as language. Dramatic progress has been made at all levels, and the field continues to grow. On the Homewood campus, researchers studying the nervous system are
in the departments of Biology, Biomedical Engineering, Biophysics, Cognitive Science, and Psychological and Brain Sciences and in the Krieger Mind/Brain Institute. Their presence provides the opportunity for Cognitive Science, and Psychological and Brain Sciences and in the departments of Biology, Biomedical Engineering, Biophysics, Mathematics, Statistics, and Science Courses

**Advanced Neuroscience Elective Courses and Focus Area**

Nine credits of 300-level or higher approved courses from one of four focus areas: systems neuroscience, cognitive neuroscience, computational neuroscience, or cellular and molecular neuroscience. Approved courses fulfilling this requirement are found on the neuroscience website (http://krieger.jhu.edu/neuroscience/bs-program/courses/) or in the schedule of classes.

Three credits of 300-level or higher approved course outside of focus area selected above

If pursuing the Computational Neuroscience focus area, EN.553.291 is required in addition to the other 12 credits required of the focus area (or the combo of AS.110.201/212 and AS.110.302 may be used)

If pursuing the Cellular and Molecular Neuroscience focus area, AS.020.306 and AS.020.316 must be selected as one of the two required biology courses with lab

**Research**

Six credits of neuroscience research

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.080.500</td>
<td>Scientific Communication: Neuroscience</td>
<td>0.5</td>
</tr>
</tbody>
</table>

Total Credits: 70.5-72.5

1 For students with Biology credit from an exam (AP, IB, GCE), exam credit may not use credits towards this requirement. Therefore, these students must take at least one biology course and its lab at JHU. Students who elect to take General Biology I or II with its lab will lose the corresponding exam credits.

2 Research must be conducted in one of the neuroscience laboratories participating in the program. Students must register for AS.080.500 Scientific Communication: Neuroscience concurrently with neuroscience research each term they register for research until they have completed 6 credits of research.

**Sample Program**

The following course sequence is only a suggestion and is based on the assumption that there are no AP/IB/TR credits applied. Please consult with your faculty advisor when selecting and registering for classes, as there are multiple ways to complete the major.

1. Biology Course Options and Biology Lab Options can be taken in any year. For Students who are obtaining a Cellular and Molecular focus area, one of the biology options must be Cell Biology with lab.
2. AS.080.305 Neuroscience: Cellular and Systems I & AS.080.306 Neuroscience: Cellular and Systems II can be taken sophomore or junior year.
3. Research in Neuroscience can be taken at any time.
4. AS.080.250 Neuroscience Laboratory can be taken any time after completing AS.200.141 Foundations of Brain, Behavior and Cognition or AS.080.305 Neuroscience: Cellular and Systems I & AS.080.306 Neuroscience: Cellular and Systems II.

**Honors in the Major**

To receive honors in Neuroscience, students must meet the following criteria:

- Earn a GPA of 3.5 or better in major requirements
- Earn 9 credits of research
- Presentation of research findings at the Day of Research in Engineering, Arts, Medicine and Sciences (DREAMS) or the Undergraduate Research Symposium (URS)
- Receive a recommendation from research mentor

**Neuroscience, Bachelor of Science/Master of Science**

**BS/MS Program**

Undergraduate students in the Krieger School of Arts and Sciences may pursue a five-year BS/MS in neuroscience, which involves a year of intense research and seminars in addition to courses for the major.

The principal aim of the BS/MS program is to allow students with a serious interest and commitment to pursuing research in a future MD, MD/PhD, or PhD program to spend a year conducting laboratory research full-time. Students are expected to concentrate fully on their research, attend seminars and journal clubs, and write extensively about their research and related topics.

The BS/MS program is structured to provide students with a genuine, intense research experience in an area of systems neuroscience, cognitive neuroscience, or cellular and molecular neuroscience.

The typical candidate is a senior who has completed all required courses for the major and has a major GPA of at least 3.5. The application process begins each fall semester (September–October), when the program administrator sends an email with specific due dates and requirements to students. Accepted students begin their research year in the spring.
semester of their senior year. The program covers 50 percent of the tuition cost for a student's fifth year of study.

Requirements for the B.S./M.S. Degree

Current JHU undergraduate Neuroscience majors who wish to apply for the B.S./M.S. Program in their junior or senior year must meet the following minimum requirements (prior to applying):

- A minimum 3.5 GPA in all required courses for the undergraduate major and cumulative GPA of 3.5.
- Completion of all courses required 6 credits of research for the JHU B.S. degree in Neuroscience.
- Completion of the neuroscience sequence as well as the mathematics and science courses required for the BS.

Students in the BS/MS program must complete all requirements for the BS degree in neuroscience, as well as a total of 43 credits of advanced and specialized courses to complete the MS degree. The additional requirements for the MS degree are as follows:

Advanced Seminars in Neuroscience (6 credits)
The Advanced Seminar in Neuroscience is offered in the fall and spring terms.

Final Spring Courses (12 credits)
Degree requirements include 12 credits of additional advanced course work (300-level or above). At least three credits must be at 400-level or above. Courses must be related to the study of neuroscience and ideally focused on the student's concentration of study and area of research. Students may choose courses from the approved list of undergraduate advanced courses. (In addition, up to six additional credits of the Advanced Seminar in Neuroscience, and/or statistics courses, graduate courses and seminars may be taken with the approval of the program director.)

Mentored Research (24 credits)
During the research year, students will complete a total of 24 credits of mentored research. Students must complete nine credits of research in a spring academic term, six in the summer and an additional nine in the fall.

B.S./M.S. Commencement Project (1 credit)
After completing the research year, students must register for a one-credit independent study course intended to track the progress and defense of the student's final research project.

Writing Requirement
Writing is an integral part of scientific work; accordingly, one aim of the mentored research year is to train students in scientific writing. BS/MS students prepare a research proposal for admission to the program, as well as a final report in scientific journal article format. Students are required to write 4 brief (>10 double-spaced pages) review papers in the spring and summer terms of their research year.

Note: This masters degree is only open to current Johns Hopkins University undergraduate students pursuing a major in neuroscience.

Philosophy
http://philosophy.jhu.edu/

The William H. Miller III Department of Philosophy offers programs and courses at the undergraduate and graduate levels. The courses cover major periods in the history of Western philosophy and many of the main topics of systematic investigation: epistemology, metaphysics, ethics, aesthetics, philosophy of language, mathematical logic, and philosophy of science.

The undergraduate courses are designed to introduce students to the history of philosophy and its place in Western civilization, to teach them how to read philosophical texts, and to help them think about philosophical problems, including those that arise in other disciplines. Students may major in philosophy or use it as a concentration for an area major in Humanistic Studies. They may also study philosophy along with another subject, either by constructing a double major or by taking courses designed to help them develop philosophical perspectives on their own fields of interest.

The graduate program is intended primarily for those planning to teach philosophy and make their own contributions to it. While the acquisition of a broad background in the history and different systematic fields of philosophy is required, students will have ample opportunity to develop their own special interests.

The William H. Miller III Department of Philosophy encourages its students to take advantage of the rich resources of other departments at Johns Hopkins University. As a look at their offerings will show, numerous philosophically important courses are offered by such departments as Political Science (political philosophy), History of Science and Technology (philosophy of science), the Humanities Center (hermeneutic, interpretive, and literary theory), and Cognitive Science.

Graduate Programs

When The Johns Hopkins University was founded in 1876, it was the first university in the United States designed as a center for research and doctoral education. Among its earliest graduate students were Josiah Royce and John Dewey; C. S. Peirce was an early faculty member. The Department of Philosophy continues this tradition today, preparing graduate students to make original contributions to the field and to pursue careers in college and university teaching. Usually there are about 15 graduate students taking courses and seminars, and another 15 at various stages in the writing of their dissertations. Because classes are small, we look for students who wish to take advantage of the individual attention available here. The department's purpose is to provide opportunities for students to develop special interests within a program that also ensures breadth of knowledge. We offer classes, seminars, and directed study in the history of ancient, modern, and contemporary Western philosophy, and in the systematic areas of epistemology, metaphysics, ethics, philosophy of science, philosophy of physics, philosophy of language, philosophy of mind, philosophy of mathematics, mathematical logic, and aesthetics. Courses with relevance to philosophy are frequently offered in other departments, and in certain circumstances these may be used toward the PhD or MA course requirements in philosophy.

The graduate program is designed primarily for those seeking the PhD, but under exceptional circumstances students aiming at the MA may be admitted.

Graduate Requirements

Graduate students are required to take 13 courses, some of which must be selected to meet the departmental distribution requirements. Students also take an examination in a field of special interest to them. During the third year, students work intensively on a substantial paper on a topic in
that field. After satisfying these requirements and writing a dissertation prospectus, students concentrate on the doctoral dissertation.

Students are expected to complete examinations and course work within three years. Most students take about two to three years to write their doctoral dissertation.

For complete details of PhD and MA requirements, advising, student evaluation, and other matters relating to the graduate program, view the following:

Philosophy Graduate Program Requirements (http://philosophy.jhu.edu/wp-content/uploads/sites/7/2015/09/Philosophy-Graduate-Program-Requirements-RevisedJuly2015-2.pdf) (students entering 2015 and after)

Philosophy Graduate Program Requirements (http://philosophy.jhu.edu/wp-content/uploads/sites/7/2013/01/Philosophy-Graduate-Program-Requirements-Revised.pdf) (students entering before 2015).

Courses

AS.150.100. Philosophy of Sport. 3 Credits.
This course introduces students to philosophical methods by bringing them to bear on the topic of sports and games. We will explore questions about what it is for a certain practice to be a game or a sport (the metaphysics of sport) as well as questions about fair play, performance enhancement, gender equity, and commercialism and corruption in sports (the ethics of sports).
Area: Humanities
Writing Intensive

AS.150.101. Freshman Seminar: Climate Ethics. 3 Credits.
It is no secret that the threat of global climate change raises difficult scientific, technological, and policy questions. However the threat of global climate change also raises profound ethical questions. For instance, what do present generations owe future generations? Who if anyone should bear more of the burden of mitigating climate change–rich countries or individuals, those more historically responsible for greenhouse gas emissions, those who currently emit the most, or some other group? What exactly is the right distribution? What do residents of relatively-unaffected countries owe to those displaced by climate change? Are we obligated to accept them as refugees, or is it permissible to refuse them entry? Do those countries most responsible for climate change owe reparations to those most affected by it? Do oil companies? Although these and other ethical questions have figured less prominently in public debate and discussions by policymakers in recent years, they are arguably more important because more fundamental: after all, it is ultimately our ethical stances that determine which scientific, technological, and policy questions we think matter and how we think about them. In this class, we will focus on these and other, related ethical questions raised by the threat of global climate change, connecting them where possible with related questions in political philosophy, ethics, and policy.
Area: Humanities

AS.150.109. Philosophy of Information and Data. 3 Credits.
Information and data have become a large part of almost every industry. From technology companies to marketing, from physics to the newsroom, the collection, analysis and interpretation of information and data is central. However, there are a number of philosophical issues that arise in such interpretation. In this course we will investigate these issues. Topics will include foundational issues in information theory, statistical paradigms and probability and the epistemology of machine learning. Emphasis will be placed on critical thinking and clear argumentation.
Area: Humanities, Natural Sciences

AS.150.111. Philosophic Classics. 3 Credits.
The course introduces students to philosophy by critically examining selected texts in the Western philosophical tradition. Philosophers whose ideas will be examined include Plato, Descartes, Rousseau and Nietzsche.
Area: Humanities
Writing Intensive

AS.150.112. Philosophical Problems. 3 Credits.
An introduction to philosophy through several central problems. This year's topics are free will, death, time, and race.
Area: Humanities
AS.150.116. Mortal Questions. 3 Credits.
What is the meaning of life? Is the question well-formed? What does living well require? Does death give human life meaning? What does it mean to say that life is ‘absurd’? Are we free to do as we choose? What should we make of human nature or the human condition in light of the great and ever more pervasive technological advances of the present epoch? Will we transform our nature? In light of threats of environmental catastrophes spurred by global warming, nuclear war and the like, what do we make of our daily lives and the activities that compose them? Do those equipped with the relevant capacities and apprised of the relevant information bear a moral obligation to the communities of which they are members? Crucially, these questions require us to reflect deeply on our human values. To address these questions, we will read selected works of philosophers ranging in time from Plato to the present – including both analytic and continental philosophers, men and women, the canonized and otherwise.
Area: Humanities
Writing Intensive

AS.150.118. Introduction to Formal Logic. 3 Credits.
An introduction to symbolic logic and probability. In the first two parts of the course we study formal ways of determining whether a conclusion of an argument follows from its premises. Included are truth-functional logic and predicate logic. In the third part we study the basic rules of probability, and learn how to make probability calculations and decisions in life. Co-listed with AS.150.632 (for graduate students) (01-F 11:00-11:50am).
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.122. Mortal Questions. 3 Credits.
What is the meaning of life? Is the question well-formed? What does living well require? Does death give human life meaning? What does it mean to say that life is ‘absurd’? What is free will, and do we have it? What should we make of human nature or the human condition in light of the great and ever more pervasive technological advances of the present epoch? Will we transform our nature? In light of threats of environmental catastrophes spurred by global warming, nuclear war and the like, what do we make of our daily lives and the activities that compose them? Are we living as we ought to? Crucially, these questions and others like them require us to reflect deeply on our human values. To address these questions, we will read selected works of philosophers ranging in time from Plato to the present.
Area: Humanities

AS.150.130. Dystopian Dreams - Utopian Ideals. 3 Credits.
In this course, we will be exploring fundamental questions of philosophy through the lenses of dystopias (in film, television, and literature) as well as utopias (in literature and philosophy). What is human nature? Do we still have duties if the world goes crazy? And do our lives maintain their meaning if we give up the notion of God? In this course, we'll be holding up dystopian and utopian mirrors to delve into questions about our everyday reality.
Area: Humanities

AS.150.135. Freshman Seminar: The Philosophy of Race and Racism. 3 Credits.
The twin specters of race and racism have perennially dominated nearly every aspect of American social, economic, and political life. In this course, we will try to appreciate the nature and scope of this dominance by addressing fundamental questions about the natures, functions, and manifestations of race and racism in contemporary American life. Topics include: the ‘metaphysics’ of race, conditions of racial membership, the moral harms introduced by racism, the psychology of racial bias, and institutional forms of racism.
Area: Humanities, Social and Behavioral Sciences

AS.150.140. Minds, Bodies, and Persons. 3 Credits.
This course is a philosophical exploration of the mind and its relation to the body, personhood, and artificial intelligence. First, we will consider competing definitions of the mind and how it fits into the world. From here, we will engage with the concept of human personhood through an examination of what it takes to remain the same person over time. We will also be considering whether machines could ever have minds in the same way that human persons do, as well as the metaphysical and practical implications of mind uploading. Through testing the boundaries of cognition and personhood through technology, we hope to bring the relationship between minds, bodies, and persons into clearer focus.
Area: Humanities

AS.150.191. Freshman Seminar: Feminism. 3 Credits.
Historical and contemporary readings in feminist philosophy.
Area: Humanities
Writing Intensive

AS.150.193. Philosophy of Language Seminar: Proper Names and Definite Descriptions. 3 Credits.
In talking with each other, we often use proper names like ’Juliet’ and definite descriptions like ’The most beautiful fresco in Italy’ to pick out persons and objects in our world. But what do these expressions mean exactly? In this seminar, we'll slowly and carefully work through some classic philosophical texts that address this issue. These texts will provide an introduction to the philosophy of language, and to analytic philosophy in general.
Area: Humanities
Writing Intensive
Minds and Machines. 3 Credits.
This course is a philosophical introduction to the topic of artificial intelligence. We will examine such questions as whether machines can think and whether we can build robots that have emotions, personalities and a sense of self. In doing so, we will touch upon a closely connected question: is the human mind itself a machine?
Area: Humanities

Business Ethics. 3 Credits.
What is a responsible business practice? Do corporations have responsibility as ‘moral agents’? What is the relation between business and environment? In this course we will investigate the relationship between business practices and ethical thinking by analyzing and assessing philosophical arguments about the moral status of business. We will start by reading philosophical texts that offer an analysis of moral practices, decision-making procedures, and moral theories. In particular, we will read historical text by Aristotle, Hume, Adam Smith, Mill, Marx, and Keynes. Then we will see how these philosophical concepts and theories can be applied to the contemporary world of business. The main goal of this course is to critically evaluate the philosophical foundations and justifications for business and economic systems, and how these applies to specific issues as workplace discrimination, ethics of advertising, environmental destruction and consumer protection.
Area: Humanities

Freshman Seminar: Skepticism Ancient and Modern. 3 Credits.
Can we gain knowledge of reality, or is everything a matter of opinion? Does it matter? Why do we want (or need) knowledge anyway? Questions like this have been the stock in trade of philosophical skeptics throughout the entire history of our Western philosophical tradition. This class will involve close readings of some classic works on the topic of skepticism with a view to understanding some of the main arguments for (and against) skepticism: how they work and how they may have changed over time. Readings include selections from Sextus Empiricus, Descartes, Hume and Wittgenstein.
Area: Humanities

Introduction to the History of Modern Philosophy. 3 Credits.
An overview of philosophical thought in the seventeenth and eighteenth centuries. We shall focus on fundamental questions in epistemology (knowledge, how we acquire it, its scope and limits), metaphysics (the ultimate nature of reality, the relation of mind and body, free will), and theology (the existence and nature of God, God’s relation to the world, whether knowledge of such things is possible); all questions that arose in dramatic ways as a result of the rise of modern science. The principal philosophers to be discussed are Descartes, Locke, Hume and Kant, though we shall also make the acquaintance of Spinoza, Leibniz and Berkeley.
Area: Humanities

Introduction to Ethics. 3 Credits.
How should one live? Can we establish firmly the truth of moral claims? Or is morality an invention of society? We will be exploring the works of Aristotle, Kant, and Mill, as well as looking into some more contemporary readings. Further, we will be making connections and discussing how the questions relate to bioethics and business.
Area: Humanities

Philosophy and Schizophrenia. 3 Credits.
Area: Humanities, Natural Sciences, Social and Behavioral Sciences

Minds, Consciousness, and Computers. 3 Credits.
This course is a philosophical exploration of the mind and its relation to the body, personhood, and artificial intelligence. First, we will consider competing definitions of the mind and how it fits into the world. We will also be considering whether machines could ever have minds in the same way that human persons do, as well as the metaphysical and practical implications of mind uploading.
Area: Humanities

Philosophical Intuitions. 3 Credits.
At least according to a prevalent conception, analytic philosophers frequently appeal to intuitions - immediate opinions we come to have about cases or claims. In this course, we will discuss three questions that naturally arise: (1) How can we define intuitions and what underlies them? (2) Do philosophers really appeal to intuitions as frequently as many seem to think? (3) Which role should intuitions play in philosophy?
Area: Humanities, Social and Behavioral Sciences
AS.150.235. Philosophy of Religion. 3 Credits.
Can one prove or disprove the existence of God? What is the relation between reason and faith? Are science and religion at odds with one another? We will consider historically significant discussions of these questions as well as important contemporary writings.
Area: Humanities

AS.150.236. Contemporary Moral Issues. 3 Credits.
In this course, we will discuss ethical controversies related to some of the issues currently debated in the public sphere: homosexuality, sexism, racism, immigration, abortion, cloning, genetic enhancement, war, terrorism, torture, and others. Our goal will be to explore how major philosophical theories in ethics approach these controversies, and how they can help us understand and resolve these controversies.
Area: Humanities

AS.150.237. Foundations of Modern Political Philosophy. 3 Credits.
This course is an introduction to modern political philosophy through an intensive study of the classic texts. The focus will be on the nature and limits of political authority under modern social conditions. Authors included are Machiavelli, Hobbes, Locke, Rousseau and Mill.
Area: Humanities

AS.150.238. Philosophy, Science Fiction, and Human Nature. 3 Credits.
This is an introduction to philosophy through themes in science fiction. Particular emphasis will be on philosophical questions related to what it means to be a human such as personal identity, free will, the nature of mind, and the nature of knowledge.
Area: Humanities
Writing Intensive

AS.150.240. Intro-Political Philosop. 3 Credits.
Area: Humanities
Writing Intensive

AS.150.245. Philosophy of Mind. 3 Credits.
Our minds are often thought to be exhaustively and intimately known to us. Despite this philosophers deeply disagree about the natures of the mental states and events which make up our minds. And there is equally little agreement as to what makes such states and events count as mental in the first place. This course will investigate the nature of different aspects of mind and their interrelations. Students will explore debates and puzzles about the nature of perception, memory, imagination, dreaming, pain and bodily sensation, emotion, action, volition and those states commonly classed as propositional attitudes: knowledge, belief, desire and intention. This will put us in a position to ask what if anything unifies such phenomena as mental.
Area: Humanities

AS.150.253. Introduction to Philosophy of Psychology. 3 Credits.
Psychology is the study of mind and behavior, and philosophy of psychology is the study of the foundations of psychology. Foundational issues in psychology addressed by philosophy of psychology come in the form of the following questions. What is the nature of mental representation? What is the basic architecture of the mind, and is it innate? Can psychological theories proceed in abstraction from the environment? The purpose of this course is to introduce students to these and related questions and the various answers they've been given.
Area: Social and Behavioral Sciences

AS.150.254. Philosophy and Memory. 3 Credits.
This course is designed as a survey of the major philosophical questions about memory, with a particular emphasis on the way in which these questions are affected by recent empirical evidence from psychology and the neurosciences. The course is divided into four main parts, exploring the topics of concern:1. Memory and Representation2. Memory and Reconstruction3. Memory, Time and Personal Identity4. Memory, Ethics and Politics In addressing these questions, we will read some of the major philosophical works concerning memory published in the last 100 years, but we will also investigate the emerging theoretical and experimental paradigms coming from psychology and the neurosciences.
Area: Humanities, Social and Behavioral Sciences

AS.150.256. Is There Progress in Science?. 3 Credits.
In this class we will consider the problems related to the progress of science. First, we will discuss the problem of theory change: is there a way to compare different scientific paradigms and to assess their progressiveness? Next, we will deal with a more specific question: does history of science provide evidence that our best current theories are approximately true? Indeed, are we even justified in thinking that our scientific theories gradually approach truth?

AS.150.260. Introduction to Metaphysics. 3 Credits.
Metaphysics addresses fundamental questions about the nature and structure of reality. This course will offer an introduction to metaphysics, and a survey of metaphysical debates about topics including time, causation, personal identity, God and free will.
Area: Humanities

AS.150.269. Freshman Seminar: Philosophy of Human Rights. 3 Credits.
This course introduces students to the methods of philosophical inquiry and writing via an exploration of philosophical questions about the foundations of human rights, the modern human rights culture, and the relationships between human rights, civil rights, group rights, and women's rights. No background in philosophy will be assumed, as the aim of the course is to teach philosophical methods while examining the language and practice of human rights, which have been central to the post-WWII global order.
Area: Humanities
Writing Intensive

AS.150.300. Prometheus Editorial Workshop. 1 Credit.
Prometheus is an international undergraduate philosophy journal published by students at Johns Hopkins University. The purpose of the journal is to promote philosophic discourse of the highest standard by offering students an opportunity to engage in open discussion, participate in the production and publication of an academic journal, and establish a community of aspiring philosophers. Students enrolled in this workshop will act as the staff readers for the journal. For more information, please visit www.prometheus-journal.com.Prerequisite: MUST have taken one philosophy course.
Area: Humanities

AS.150.301. Majors Seminar: Truth. 3 Credits.
A philosophical exploration of the nature of truth, looking at different theories of truth and related questions about science, morality, logic and rational disagreement.
Area: Humanities
AS.150.304. The Ethics of Human Experimentation. 3 Credits.
This course will explore ethical theory, key historical events, and operational requirements of research involving human beings. Weekly discussions will focus on seminal literature and case studies that highlight conceptual and practical challenges related to informed consent; research ethics review; risk/benefit analysis; justice/fairness; globalization of research; participation of vulnerable populations; clinical equipoise; obligations to research participants and communities during studies and after research is completed; and deception in psychological and behavioral research. The course will also explore the emergence and development of the rules governing the protection of human subject research.
Area: Humanities

AS.150.307. Plato's Phaedrus. 3 Credits.
This is a reading course. Together we will do a close reading of one of Plato's masterpieces, the Phaedrus. We will also use this text to address general questions of interpretation, such as how to approach a philosophical classic, how to discern its underlying idea, etc.
Area: Humanities

AS.150.316. Puzzles and Paradoxes. 3 Credits.
The course is a survey of puzzles and paradoxes of truth, belief, knowledge, meaning, confirmation, rational action, and vagueness. Specific puzzles and paradoxes include, among others: Russell's paradox, the Liar paradox, Moore's paradox, the Skeptical paradox, Newcomb's paradox, and the Sorites paradox. Besides being fun to think about, these puzzles and paradoxes touch on many areas of philosophy, including philosophy of language, logic, metaphysics, and epistemology. When introducing each puzzle or paradox, attention will be paid to its history and significance. In addition to this exposure to some of the many domains of philosophy, students will gain analytical skills applicable well beyond philosophy.
Area: Humanities

AS.150.317. Undergraduate Seminar for Philosophy Majors: Can Everything Be Explained?. 3 Credits.
We will study various philosophical theories about the nature of explanation, reduction, and speculation.
Area: Humanities

AS.150.325. Philosophy of Oppression and Resistance. 3 Credits.
Human social structures can be oppressive in either explicit or covert forms, even in societies highly committed to just democratic ideals. The course will investigate what it means for an individual, practice, or institution to be oppressive, and will explore the concrete mechanisms which can underlie racialized and gendered forms of oppression in particular. Special attention will be given to the political and moral problems raised by hate speech, pornography, propaganda, ideology, and material inequality. Finally, we will discuss how social agents can resist explicit and covert oppression in a way that is conducive to the realization of just ideals.
Area: Humanities

AS.150.326. Philosophy of Art: A Historical Introduction. 3 Credits.
A reading of a number of important texts from the history of philosophy dealing with topics in the philosophy of art. Particular attention will be given to the German aesthetic tradition, and especially to Hegel's aesthetics, although the most important ancient Greek contributions will be considered as well. In particular, we will read Plato, Aristotle, Plotinus, Kant, Schiller, early German Romantics, and Hegel, as well as selected secondary literature. No previous coursework in philosophy or history of art is required.
Area: Humanities

AS.150.328. Plato's Myths. 3 Credits.
Rather than writing long treatises, Plato wrote dialogues. These play-like works construct a conversation into which the reader is drawn. Plato's characters might be well-known for offering rigorous arguments, but they often tell each other, and the reader, quite fanciful stories. While philosophers tend to give more attention to the arguments, we will focus on the stories. We will encounter stories about the city of Atlantis, the Greek gods, love, the soul, and the afterlife.
Area: Humanities

AS.150.330. Decisions, Games & Social Choice. 3 Credits.
We investigate rational decision making at the individual and group level. In the first section of the course on decision theory, we consider how a single rational agent will act in a choice situation given her knowledge, or lack thereof, about the world and her particular risk profile. In the second section on game theory, we explore different kinds of competitive and cooperative strategic interactions between agents, and we define different kinds of solutions, or equilibria, of these games. We also apply game theory to the study of morality, convention, and the social contract. In the final section of the course on social choice theory, we turn to group decision making with a focus on the impossibility results of Arrow and Sen.
Area: Humanities

AS.150.331. Themes from the Philosophy of Religion. 3 Credits.
Religion has always been a contested and extensively debated topic throughout the history of philosophy, and the topics from the philosophy of religion are still relevant today. In this course, we will look at several of those topics: what is religion? Do we have reason to believe or not believe in God? How does God relate to the world (or are there many Gods)? How can we understand religious practice? And what role (if any) should religion play in our society?
Area: Humanities

AS.150.340. The Philosophy of Psychology. 3 Credits.
This course will explore a range of philosophical issues in cognitive psychology. Topics include the nature of psychological explanation, the computational theory of mind, the relationship between psychology and neuroscience, consciousness, intentionality, nativism/empiricism, and mental architecture. This course is intended for both philosophy students and any student interested in the mind-brain sciences.
Area: Humanities

AS.150.351. The Philosophy of Race and Racism. 3 Credits.
The twin specters of race and racism have perennially dominated nearly every aspect of American social, economic, and political life. In this course, we will try to appreciate the nature and scope of this dominance by addressing fundamental questions about the natures, functions, and manifestations of race and racism in contemporary American life. Topics include: the ‘metaphysics’ of race, conditions of racial membership, the moral harms introduced by racism, the psychology of racial bias, and institutional forms of racism.
Area: Humanities

AS.150.355. Philosophy of Law. 3 Credits.
In this course we will examine major issues in the philosophy of law, including the nature of law, the role of the Constitution in legal decisions, and the justification of punishment. No previous knowledge of law or philosophy is required.
Area: Humanities
AS.150.356. **Political Philosophy and Public Health Ethics. 3 Credits.**
In 2015, Rand Paul generated controversy by insisting that parents should have complete discretion over whether to vaccinate their children. When pressed to come up with a defense for this policy, Paul replied, 'The state doesn't own your children. Parents own the children, and it is an issue of freedom and public health.' His rationale for his policy proposal and the responses to it hint at several fundamental questions about the role of the State as it pertains to producing health, as well as more practically oriented questions concerning policy. In this seminar, we will consider both sorts of questions. We will consider the merits of and objections to various policies such as cigarette bans, mandatory seatbelt or helmet laws for motorists, taxes for sugary beverages, and prohibitions of the private sale of organs. We will also ask more philosophical questions: When discussing public health, what constitutes 'the public'? And how should we connect public health and policy measures to salient concepts such as legitimacy, justice, coercion, manipulation, paternalism, autonomy, liberty, privacy, and parental rights? In asking these questions, both at the level of policy and more philosophically, we will engage with a variety of political theories, including various strands of feminism, anarchism, libertarianism, perfectionism, critical race theory, leftist theories, broadly consequentialist theories, and public reason liberalism. Must have some background in philosophy or bioethics.

**Prerequisite(s):** AS.150.219 OR AS.150.220 OR AS.150.237 OR AS.150.240

AS.150.400. **Simone de Beauvoir. 3 Credits.**
Seminar on Beauvoir’s moral philosophy, covering the major works of the 1940s. Readings will include selections from The Blood of Others, Pyrrhus and Cineas, All Men Are Mortal, The Ethics of Ambiguity, and The Second Sex. Open to graduate students and advanced undergraduates. (Beginning undergraduates should contact Professor Kosch.) No prerequisites.

Area: Humanities
Writing Intensive

AS.150.401. **Greek Philosophy: Plato and His Predecessors. 3 Credits.**
A study of pre-Socratic philosophers, especially those to whom Plato reacted; also an examination of major dialogues of Plato with emphasis upon his principal theses and characteristic methods. Cross-listed with Classics.

Area: Humanities
Writing Intensive

AS.150.402. **Aristotle. 3 Credits.**
A study of major selected texts of Aristotle.

Area: Humanities
Writing Intensive

AS.150.403. **Hellenistic Philosophy. 3 Credits.**
A study of later Greek philosophy, stretching roughly from the death of Aristotle to the Roman imperial period. Epicureans, Stoics, and Skeptics will be the main philosophical schools examined.

Area: Humanities
Writing Intensive

AS.150.404. **The Idea of Power. 3 Credits.**
The Idea of Power surveys seminal texts in the history of political thought on the nature, promise, and dangers of political and social power; it also critically engages contemporary texts on race and gender power relations.

Area: Humanities

AS.150.407. **Enlightenment and Alienation. 3 Credits.**
Why does the increase in enlightenment not correlate with an increase in morality and happiness? Jean-Jacques Rousseau raised this question in the middle of the 18th century and it remains a pressing question today. The course will examine the issue in Rousseau, Hegel, Marx, and Adorno, as well as in the contemporary work of Richard Moran and Rahel Jaeggi.

Area: Humanities

AS.150.408. **The Ethics of Climate Change. 3 Credits.**
In this course we consider ethical issues related to climate change and climate change policy. These include issues about how we ought to distribute the burden of mitigation and adaption, what we owe to future generations and to the non-human world, and about our responsibilities as individuals (with respect, for example, to our diets). We briefly consider geoengineering and issues related to the widespread reliance on cost-benefit analyses in climate policy.

Area: Humanities

AS.150.409. **Wittgenstein On Certainty. 3 Credits.**
Wittgenstein’s On Certainty consists of four notebooks containing remarks on knowledge, certainty, doubt and truth. In this course, we will undertake a close study of Wittgenstein’s notes, critically examining competing interpretations of Wittgenstein’s ideas and the different use of those ideas have been taken up in current debates about philosophical skepticism.

Area: Humanities

AS.150.410. **The Philosophy of Afrofuturism I. 3 Credits.**
The main goal of speculative fiction is to render a familiar world slightly unfamiliar to then ask familiar questions in new ways. Afrofuturism as a genre of sci-fi, fantasy, and horror written by and about black people, applies this ethic to the problems of race, broadly speaking. In this course we survey major texts to philosophically inquire into phenomena like incarceration, Slavery and its lingering effects, and colonialism among other themes.

Area: Humanities
Writing Intensive

AS.150.412. **Kant’s Critique of Practical Reason. 3 Credits.**
A historical and systematic study of Kant’s ethics and philosophy of religion, with special attention to his Critique of Practical Reason.

Area: Humanities

AS.150.417. **Kant’s ‘Critique Of Pure Reason’. 3 Credits.**
An examination of the philosophy of Immanuel Kant, with emphasis on The Critique of Pure Reason.

Area: Humanities

AS.150.418. **Hermeneutics and Critical Theory. 3 Credits.**
An introduction to two of the most important and influential schools in twentieth-century German philosophy. This course examines the works of four leading representatives of these schools, i.e. Heidegger, Gadamer, Horkheimer, and Habermas.

Area: Humanities

AS.150.419. **Kant’s Critique/Judgment. 3 Credits.**
This course will examine closely and in detail the aesthetic and teleological parts of Kant’s third masterpiece, The Critique of the Power of Judgment.

Area: Humanities
AS.150.420. Mathematical Logic I. 3 Credits.
Mathematical Logic I (H.Q) is the first semester of a year long course. It introduces the two notions of validity and provability for both sentential logic and first-order predicate logic, showing in each case that there is a system of derivation such that any argument is valid if and only if the conclusion is provable from the premises. The result is non-trivial since validity is a semantic notion involving the preservation of truth, while a proof is a finite syntactic object whose correctness can be effectively decided. The goal of the course, however, is to learn how to formulate mathematical theories in first-order logic and to explore various of their properties (or lack thereof) such as completeness, decidability, axiomatizability, finite axiomatizability, and consistency. The course concludes with a brief introduction to model theory and the interpretability of one theory in another, which is the basis for relative consistency proofs in mathematics.

Area: Humanities, Quantitative and Mathematical Sciences

AS.150.421. Mathematical Logic II. 3 Credits.
Gödel's two incompleteness theorems are explored, first the Euclid set a precedent for the codification of mathematics by axiomatizing the set of geometric truths. An obvious question that arises is whether all branches of mathematics are axiomatizable, especially fundamental ones, such as arithmetic. In the late nineteenth century, what became known as Peano arithmetic was proposed as an axiomatization. The essential feature of an axiomatization is that, although one might have an infinite number of axioms, as does Peano arithmetic, one must have a decision procedure for determining whether a given proposition is or is not an axiom. In 1931, Gödel proved the astounding result that, not only is Peano arithmetic incomplete in the sense that it does not entail all arithmetic truths, but any attempted axiomatization of arithmetic is incomplete, and thus the set of arithmetic truths must be undecidable. Subsequently, Alfred Tarski showed the set of arithmetic truths is not even definable. Also, by finding a finitely axiomatizable undecidable subtheory of Peano arithmetic, Alonzo Church was able to show that there is not even an effective procedure for determining whether a given sentence is a logical truth. Finally, in his 1931 paper, Gödel argued a second incompleteness theorem, viz., that any theory strong enough to express its own consistency, as he showed Peano arithmetic to be, cannot prove its own consistency unless it is inconsistent. We will cover these and other results that have had a profound effect on the foundations of mathematics. It remains an open question whether so basic a theory as Peano arithmetic is consistent.

Prerequisite(s): AS.150.420
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.422. Axiomatic Set Theory. 3 Credits.
A development of Zermelo-Fraenkel set theory (ZF), including the axiom of choice (ZFC), a system in which all of mathematics can be formulated (i.e., entails all theorems of mathematics). Although, we'll do an exposure to transfinite ordinals and cardinals in general so that you can get a sense for how stupendously "large" these can be, the main thrust concerns certain simple, seemingly well-posed conjectures whose status appears problematic. For example, the Continuum Hypothesis (CH) is the conjecture that the cardinality of the real numbers is the first uncountable cardinality, i.e., the first cardinality greater than that of the set of natural numbers. Equivalently, there is no uncountable subset of real numbers strictly smaller in cardinality than the full set of reals. (You'd think that if there were one, you would be able eventually to find such.) Cantor thought that CH is true, but could not prove it. Gōdel showed, at least, that if ZFC is consistent, then so is ZFC+CH. However, Paul Cohen later proved that if ZFC is consistent, then so is ZFC + the negation of CH. In fact, CH could fail in amusingly many ways. For example, the cardinality of the continuum could be (weakly) inaccessible, i.e., of a cardinality that cannot even be proved to exist in ZFC (although the reals can certainly be proved to exist in ZFC). So, there are further, intuitively true axioms that can be added to ZFC to resolve the cardinality of the continuum, and CH is definitely true or false? Or, as Cohen thought, does CH simply lack a definite truth value?

Area: Humanities, Quantitative and Mathematical Sciences

AS.150.423. Theory of Knowledge. 3 Credits.
An advanced introduction to the central problems, concepts and theories of contemporary philosophical epistemology (theory of knowledge). Topics to be explored will includes: what is knowledge (and why do we want it?); theories of justification (foundationalism, the coherence theory, etc.); externalism and internalism in epistemology; skepticism, relativism and how to avoid them. Reading from contemporary sources.

Area: Humanities

AS.150.426. Philosophy and Disability. 3 Credits.
In this course, we will consider various philosophical issues related to disability. What counts as a disability? What obligations do we have, both as individuals and as a society, to people with disabilities? What counts as respecting people with disabilities, and what counts as unjustifiable discrimination against them?

Prerequisite(s): AS.150.219 OR AS.150.220
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.150.427. Aristotelian Philosophical Psychology. 3 Credits.
What did philosophy of mind look like before Descartes? It centered on study of the soul (psyche), or philosophical psychology. This course will focus on Aristotle's view of the soul, its functions, and its relation to matter (hylomorphism), as well as the development of his thought by later ancient and medieval Aristotelians, including Alexander of Aphrodisias, Averroes, and Aquinas. Will conclude with examination of some renewed interest in Aristotle relative to contemporary philosophy of mind.

Area: Humanities

AS.150.428. Spinoza's Theological Political Treatise. 3 Credits.
The course is an in-depth study of Spinoza's Theological-Political Treatise. Among the topics to be discussed are: Spinoza's Bible criticism, the nature of religion, philosophy and faith, the nature of the ancient Hebrew State, Spinoza's theory of the State, the role of religion in Spinoza's political theory, the freedom to philosophize, the metaphysics of Spinoza's Theological-Political Treatise, and finally, the reception of the TTP.
AS.150.429. Topics in Logic: Ontology and Knowledge Representation. 3 Credits.
Knowledge representation deals with the possible structures by which the content of what is known can be formally represented in such a way that queries can be posed and inferences drawn. Ontology concerns the hierarchical classification of entities from given domains of knowledge together with the relations between various classes, subclasses, or individuals. The main framework in which we will work is that of description logics, which are decidable fragments of varying degrees of first order predicate logic. In ontology development we will examine RDF (Resource Description Framework), its extension to RDFS, and OWL (Web Ontology Language), and use the software Protégé for specific applications. Finally, we will take a look at query languages such as SPARQL (SPARQL Protocol and RDF Query Language).
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.430. Hegel's Phenomenology of Spirit. 3 Credits.
An in-depth study of Hegel's masterpiece, the Phenomenology of Spirit. We will be concentrating on the first half of the text.

AS.150.433. Philosophy of Space & Time. 3 Credits.
Is space an entity that exists independently of matter (substantivalism), or is it only an abstraction from spatial relations between bodies (relationism)? Is there a lapse of time even when nothing changes, or is time only a measure of motion? Are motion and rest contrary properties or states of a body, or are there only changes in the positions of bodies relative to one another? Philosophers and physicists have disputed these questions from antiquity to the present day. We survey the arguments and attempt to find a resolution. But there are further questions. What is the significance of incongruent counterparts (left hands vs. right hands)? Is there a fact of the matter as to the geometry of space (flat, hyperbolic or elliptical), or as to whether space-like separated events occur at the same time? What is the principle of relativity? Does Einstein’s theory have consequences for the substantivalist/relationist debate? What is the status of spacetime in current physics and cosmology? Why does time but not space have a “direction”? Are past, present and future objective features of reality, or are they merely “stubborn illusions”? Does time flow? If not, how do we account for our sense of the passage of time?
Area: Humanities, Natural Sciences

AS.150.434. Formal Methods of Philosophy. 3 Credits.
For better or for worse (and we think better), during the last century or so, philosophy has become infused with logic. Logic informs nearly every area of philosophy; it is part of our shared language and knowledge base. Vast segments of literature, especially in contemporary analytic philosophy, presuppose basic competence in logic and a familiarity with associated formal methods, particularly set theoretical. The standard philosophy curriculum should therefore guarantee a minimum level of logical literacy, thus enabling students to read the literature without it seeming like an impenetrable foreign tongue. This course is an introductory survey of the formal methods that a contemporary philosopher should be familiar with. It is not mathematically demanding in the way that more advanced courses in metalogic and specialized topics may be. The emphasis is on basic comprehension, not on mathematical virtuosity. Co-taught with AS.150.223 Formal Methods of Philosophy.
Area: Humanities

AS.150.435. Maimonides' Guide of the Perplexed & Political Theology. 3 Credits.
The seminar is an in-depth study of Maimonides’ magisterial work, the Guide of the Perplexed. Special attention will be given to Maimonides’ views about the political functions of religion. We will also read modern commentaries and responses to the Guide, by Leibniz, Spinoza, and Salomon Maimon.
Area: Humanities

AS.150.436. Philosophy of Gender. 3 Credits.
In this class we will examine philosophical questions about gender, and about the intersections between gender and other social categories including race, class and sexuality. We will focus specifically on questions about the metaphysics of gender and other social categories.
Area: Humanities

AS.150.437. KANT’S Opus Postumum. 3 Credits.
Why did Kant, after he had completed the three Critiques, work on a book with the title, Transition from the Metaphysical Foundations of Natural Science to Physics — better known as his Opus postumum? Why did this project eventually come to include ethics and result in a revision of Kant’s transcendental philosophy? Questions like these will be answered by means of a close study of Kant’s text, and by relating the text to (a) his Metaphysical Foundations of Natural Science and (b) to his ethical writings from the critical period.
Area: Humanities

AS.150.440. The Making of Black Lives Matter. 3 Credits.
This course explores the history of black thought that informs the ethics of the contemporary movement for black lives.
Area: Humanities
Writing Intensive

AS.150.442. The Philosophy of Ludwig Wittgenstein. 3 Credits.
We will read Wittgenstein’s two great works: Tractatus Logico-Philosophicus (1921) and Philosophical Investigations (1953). We may also devote some time to his late, unpublished work, Uncertainty.
Area: Humanities

AS.150.447. The Logic of Spinoza’s Ethics. 3 Credits.
One of the unique aspects of Spinoza’s major work, the Ethics, is its formal or ‘geometric’ structure. The book is written following the model of Euclid’s Elements, with Definitions, Axioms, Propositions, and Demonstrations. In this seminar, we scrutinize the deductive structure of the Ethics and some of its earlier drafts. We consider the role and epistemic status of the definitions and axioms, attempt to provide rigorous reconstructions of some of its key propositions, and also investigate the possibility of alternative routes between these propositions.
Area: Humanities

AS.150.448. The Religion of Morality. 3 Credits.
In the wake of the Enlightenment criticism of traditional forms of religion, philosophers attempted to give religion a rational basis by equating it with moral practice. We will examine this religion of morality with the goal of determining whether it can vindicate its claim to be a genuine religion. We will read texts by Rousseau, Kant, Fichte, Hegel and Emerson.
Area: Humanities

AS.150.452. Freedom of Will & Moral Responsibility. 3 Credits.
What are freedom of the will and moral responsibility? Are they compatible with determinism or naturalism? This course will examine various philosophers’ answers to these questions.
Area: Humanities
Writing Intensive
AS.150.455. Ethics And Animals. 3 Credits.
Area: Humanities
Writing Intensive

AS.150.457. Color and Color Perception. 3 Credits.
An examination of philosophically relevant discussions of the nature of color and color perception, from both historical and contemporary perspectives.
Area: Humanities

AS.150.458. The Biggest Hits in Philosophy of Science (20th and 21st Centuries). 3 Credits.
Readings from Duhem, Carnap, Hempel, Popper, Quine, Kuhn, Feyerabend, van Fraassen, and others who got us where we are in the field today.
Quine said: Philosophy of science is philosophy enough. Is it?
Area: Humanities, Social and Behavioral Sciences

AS.150.459. Counterfactual Reasoning, Normative & Descriptive Aspects. 3 Credits.
Counterfactual reasoning is reasoning about what would be the case if things had been other than they are: If it had been sunny and so I didn't run into that store for cover from the rain, maybe I would never have met my future partner! How ought one to reason counterfactually? How do people in fact do it? Counterfactual reasoning might seem like a narrow topic, but it is of fundamental importance to both scientific and everyday inquiry, where it is intimately connected to the use of imagination, planning for the future, assessment of and learning from the past, providing explanations, understanding fictions, and constructing experiments. This course will explore both normative and empirical aspects of counterfactual reasoning, drawing upon readings in philosophy, psychology, and linguistics. An overarching goal of this course is to arrive at a better understanding of counterfactuality that is informed by research across these different disciplines.
Area: Humanities

AS.150.460. Rawls and His Critics. 3 Credits.
John Rawls was the most important moral and political thinker of the 20th century. In this course we will look at his two main works, A Theory of Justice and Political Liberalism, along with some of the more influential criticisms of his ideas. Main topics will include the derivation of principles of justice, the role of the good in liberal political theory, and the nature of reasonable pluralism.
Area: Humanities

AS.150.462. Islamic Political Philosophy. 3 Credits.
An introduction to the history of Islamic political philosophy, primarily focused on two flashpoints of encounter between the religion of Islam and other philosophical/political systems—an early one with ancient Greek philosophy (especially in the works of Plato and Aristotle), and a period of interface with modern Western secular political thought, from the late 19th century to present. Our goal will be to try to understand some of the varying responses in each period as Muslim thinkers seek authentic engagement with external and internal trends, both religious and philosophical. The focus will be on primary texts from philosophically engaged thinkers (who may or may not consider themselves philosophers).
Area: Humanities

AS.150.463. The Value of Humanity and Nature. 3 Credits.
We start by posing a question: who, or what, has standing in the moral community? First we consider an appealing answer—humanity—then we consider whether moral status extends to nonhuman animals and the environment. We will focus on the notion of being valuable, and how it relates to moral considerability. No background in philosophy is required.
Area: Humanities
Writing Intensive

AS.150.464. Hegel's Philosophy of Right. 3 Credits.
This course will be a close reading of G.W.F. Hegel's Philosophy of Right. Some of the main topics for discussion will be the relation of law and morality, the dependence of the political philosophy on Hegel's Logic, and the relation of individual and social conceptions of freedom.
Area: Humanities

AS.150.466. Recent Work in Skepticism. 3 Credits.
We all take it for granted that perceptual experience yields knowledge of the world around us. But in the first of his Meditations on First Philosophy, Descartes invents a new and puzzling thought experiment. He imagines an Evil Demon with the power to manipulate the total course of his (Descartes's) experience, so that what he naturally takes to be experience of the world around him is really a kind of perpetual dream: a simulation or virtual reality, as we might today. Descartes's problem, which has made its way into popular culture through films like those in the "Matrix" series, remains a source of philosophical puzzlement. While no one believes that skeptical hypotheses like Demon or computer deception are true, it is not easy to say how we can exclude them. Given that the deception is systematic, it seems that any "evidence" I cite could itself be part of the simulation. So how do I (or could I) know (for sure) that I'm not the victim of the Deceiver or the Matrix? We shall examine some of the latest attempts to respond to Descartes's challenge. Does the "How could I know?" question admit of a theoretical answer, or is the question itself somehow ill-posed? Can we answer it without making significant concessions to skepticism? Exploring such questions should teach us some interesting lessons about knowledge (or the concept of knowledge).
Area: Humanities

AS.150.467. Philosophic Logic. 3 Credits.
This course is a survey of various topics in philosophical logic. We begin with a review of the model theory of classical first-order logic (FOL). In our first unit, we will then move beyond the standard existential and universal quantifiers of FOL and consider generalized quantifiers, substitutional quantifiers, and plural quantification. In our second unit, we investigate the theory of propositional modal logic, considering its syntax, semantics, proof theory, and some of its applications. In our fourth unit, we inquire into the nature and normativity of logical validity.
Area: Humanities

AS.150.473. Classics of Analytic Philosophy. 3 Credits.
A reading of some of the classic philosophical works in 20th Century Analytic Philosophy, beginning with G. Frege and ending with V.O. Quine.
Area: Humanities

AS.150.474. Justice and Health. 3 Credits.
Course will consider the bearing of theories of justice on health care. Topics will include national health insurance, rationing and cost containment, and what justice requires of researchers in developing countries.
Area: Humanities
AS.150.476. Philosophy and Cognitive Science. 3 Credits.
This year's topic is perception. Questions will include: In what ways might perceptual states be like and unlike pictures? Does what we believe affect what we perceive? Is linguistic comprehension a kind of perception?
Area: Humanities, Social and Behavioral Sciences

AS.150.479. The Ethics of Making Babies. 3 Credits.
In this class, we will investigate many aspects of the ethics of making babies, asking not only which children we should create and how we should create them, but whether we should make any more people at all. Investigating these questions will take us through large chunks of moral theory, bioethics, and public health ethics. For more information, or to request permission of the instructor (for those who do not meet the prerequisite requirements), email Travis Rieder at trieder@jhu.edu. Recommended Course Background: One course in ethics or bioethics, or permission of the instructor.
Area: Humanities

AS.150.480. Death and Dying. 3 Credits.
What is death? How should we think about death? How should we think about it? How should we treat those who are dying including ourselves? This course will examine these and other philosophical questions.
Area: Humanities
Writing Intensive

AS.150.481. Hobbes' Leviathan. 3 Credits.
Thomas Hobbes' Leviathan is a masterpiece of modern political philosophy. This class is an in-depth study of that work.
Area: Humanities

AS.150.482. Food Ethics. 3 Credits.
Eating is an essential human activity: we need to eat to survive. But how should we eat? In this course, we consider such ethical questions as: Is it morally wrong to make animals suffer and to kill them in order to eat them? What is the extent of hunger and food insecurity, in this country and globally, and what should we as individuals do about it? Should the government try to influence our food choices, to make them healthier?
Area: Humanities

AS.150.483. Evidence, Foundations of Probability, and Speculation. 3 Credits.
The course examines major theories about the meaning of evidence and probability, and in terms of these provides answers to the questions "What is a scientific speculation?" and "When, if at all, is speculating important or even legitimate in science?" No preview study of evidence or probability is required.
Area: Humanities

AS.150.485. Descartes and Spinoza. 3 Credits.
Descartes and Spinoza are two of the leading philosophers of the modern period. In the class we will study the works of both figures. Special attention will be assigned to Spinoza's early works.
Area: Humanities

AS.150.486. Moral Imagination. 3 Credits.
This course explores the relationship between moral principles and how we use imagination to put or fail to put principles to work. We will read widely and eclectically in exploring this relationship.
Area: Humanities

AS.150.487. Fundamental Principles of Philosophical Rationalism. 3 Credits.
At the center of Leibniz rationalist metaphysics are four interrelated philosophical principles: (1) The Law of Non-Contradiction, (2) The Principle of Sufficient Reason (roughly, the claim that everything must have a reason), (3) The Identity of Indiscernibles (roughly, the claim that there are no two perfectly similar things), and (4) The Predicate in Subject Principle (the claim that in every true proposition the concept of the predicate is somehow contained in the concept of the subject). In this class we will study these four principles, i.e., their modal strength, range, justification, and interrelations both in early modern philosophy (Leibniz, Spinoza, and Clarke), and in contemporary philosophy (Della Rocca, Sam Levey, Dasgupta, Max Black).
Area: Humanities

AS.150.491. American Philosophy: Pragmatism. 3 Credits.
Studies of major figures in the history of American philosophy beginning with the 19th century. The course focuses on the development of pragmatism in the work Peirce, James and Dewey. Other philosophers, such as Royce and Mead, may also be studied.
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.492. Plato's Republic. 3 Credits.
This course will be a close reading of Plato's Republic, with special attention to the parallel of city and soul, the relevance of metaphysics to politics, and the relation of aristocracy, democracy and tyranny.
Area: Humanities

AS.150.498. Modal Logic and Its Applications. 3 Credits.
In the first part of the course, we'll investigate the theory of modal logic, considering its syntax, semantics, and proof theory. We'll then turn to some its philosophical applications: epistemic logic, counterfactuals, deontic logic, intuitionistic logic, and the metaphysics of time.
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.511. Directed Study. 3 Credits.
Individual study of special topics, under regular supervision of a faculty member. Special permission is required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
Writing Intensive

AS.150.512. Directed Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.150.551. Honors Project. 3 Credits.
See departmental major adviser.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.150.552. Honors Project. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
AS.150.600. Reason Virtue and the Good.
This is a course in theoretical ethics structured around the topics of reason, virtue, and the good. Questions include: Are there types of value? What is it to value something? Is there a property good? What would it mean for goodness to be relational rather than non-relational? What is the ground of excellence? How is excellence related to the good? Should we understand virtue on the model of perception? Is there an important difference between facts and values? Is there something distinctive about practical reason? What is the role of the good in intentional action?
Area: Humanities

An introduction to the major theories of probability and to theories of evidence. There are no mathematical or philosophical pre-requisites.
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.604. Graduate Seminar in the Philosophy of Science: The Big Issues.
Readings from Duhem, Carnap, Hempel, Popper, Quine, Kuhn, Feyerabend, van Fraassen, and others who, in the 20th and 21st centuries, got us where we are in the field today. And Quine added: philosophy of science is philosophy enough. Is it?
Area: Humanities, Social and Behavioral Sciences

The course will focus on ancient skepticism as a way of life, and on the role of epistemological argument in skepticism as so conceived. The seminar will end with a brief look at early modern reactions to ancient skepticism.

AS.150.607. Graduate Seminar: Knowledge and Perception.
How does perception reveal the world, if it does? Why have philosophical reflections on perception often led to skepticism? For background, we will start with readings from Ayer and Austin (on the sense-datum theory), and Sellars (on the Myth of the Given). We will then spend time on contemporary ‘disjunctive’ accounts of perceptual consciousness, with readings from McDowell, Travis and (possibly) others.
Area: Humanities

AS.150.608. Graduate Seminar-Speculation: Scientific and Philosophical.
Some say that speculation whether in science or philosophy, should be avoided at all costs (e.g., Descartes, Newton). Others say that speculation is okay as long as it is followed by argument or evidence (e.g., Popper). Still others encourage one to freely speculate in the absence of argument or evidence (e.g., Feyerabend). Are any of these views right? What is speculation, and is it subject to any universal standards? What is evidence, and is it subject to universal standards? Readings will be from authors mentioned above and from quite a few others. We will look at some very general influential philosophical-scientific speculations, such as the claim that nature is simple and that everything is explainable, as well as some more specific ones.
Area: Humanities

AS.150.609. Fichte, Schelling and Spinoza.
Spinoza constituted a major philosophical interlocutor for both Fichte and Schelling. In this class we will study the critical reception of Spinoza by the two philosophers. Among the topics we intend to discuss are: freedom, God, the concept of substance, the nature of thought, and reason. Recommended Course Background: Previous acquaintance with Spinoza's ethics.
Area: Humanities

AS.150.610. Virtue Ethics.
A study of recent work in virtue ethics.

AS.150.612. The Birth of German Idealism.
This course will mainly consist of close readings of the work F.H. Jacobi, J.G. Fichte, and F.W.J. Schelling. We will focus on the issues of freedom and systematicity in the transformation of Kant's critical philosophy through the influence of Spinoza.
Area: Humanities

AS.150.618. Martin Heidegger, Being and Time: Integral Reading and Current Perspectives II.
Starting with a brief overview and recapitulation of themes discussed in its Introduction and Division One, this jointly will focus on Division Two of Being and Time and bring phenomenological, hermeneutic, and deconstructive as well as analytic, epistemological, and pragmatist methods and viewpoints to bear upon this modern classic.
Area: Humanities

AS.150.619. Topics in Hegel's Philosophy: The Philosophy of Right.
This course will be a close reading of G.W.F. Hegel's Philosophy of Right. Some of the main topics for discussion will be the relation of law and morality, the dependence of the political philosophy on Hegel's Logic, and the relation of individual and social conceptions of freedom.
Area: Humanities

AS.150.620. Political Philosophy.
A high level review of key thinkers in contemporary political thought.
Area: Humanities

Writing Intensive

AS.150.625. Fatalism and the Logic of Unconditional.
Since the early eighties, there has been a growing movement away from traditional truth-centric theories of meaning and consequence towards more information-oriented accounts. Given these relatively new developments, I think the time is ripe for reconsidering one of the oldest arguments in philosophy: the 'Idle Argument' for fatalism. This notorious argument survives in Cicero's De Fato from 44BC but the version that we will focus on in the seminar is based on Dummett's classic 'Bringing About the Past' [1964].
Area: Humanities

AS.150.632. Formal Logic.
'An introduction to symbolic logic and probability. In the first two parts of the course we study formal ways of determining whether a conclusion of an argument follows from its premises. Included are truth-functional logic and predicate logic. In the third part we study the basic rules of probability, and learn how to make probability calculations and decisions in life.' Co-listed with AS.150.118 (for undergraduate students) (01-F 11:00-11:50am).
Area: Humanities, Quantitative and Mathematical Sciences

AS.150.633. Kant's Opus Postumum.
This research seminar examines the reasons that led Kant to revise his transcendental philosophy late in life. Special attention to problems in the Metaphysics of Nature and the Metaphysics of Morals. Students should be familiar with Kant's theoretical and practical philosophy.

AS.150.636. Spinoza and Hegel.
Spinoza and Hegel are two of the greatest philosophers of the modern period. Both philosophers are bold and difficult, and both exerted a decisive influence on later developments of Western philosophy. In this class, we will attempt to reconstruct a philosophical dialogue between the two philosophers. Topics to be discussed include: the nature of philosophy, basic ontology, kinds of knowledge, negation and contradiction, freedom, the reality of time, teleology and human history, the role and value of the state.
Area: Humanities
AS.150.645. Truthmakers.
An investigation into the metaphysics and semantics of truthmakers and their application in various areas of philosophy.
Area: Humanities

AS.150.653. Seminar. Philosophy of Physics.
The Hole Argument. There’s a rather simple argument that if the structure of spacetime is not absolute, but is dynamically influenced by physical fields, then determinism is impossible, i.e., unless one thinks that isomorphic models of the theory represent the same physical situation. Various rationales have been given for such identification, some metaphysical, some mathematical, some referential, some operational. For example, among the metaphysical, some have appealed to essentialism, counterpart theory, or haecceity. Others see the hole argument as a specialization of the general permutation arguments given by Quine, Davidson, and Putnam respectively for the relativity of reference, the inscrutability of reference, and internal realism. Still others appeal either to the practices of applied mathematics or to dependent type theory. Yet others invoke the operational foundations (in terms of observables). Detailed knowledge of spacetime theories or physics is not presupposed. To be sure, some formal tools are needed (e.g., the notions of isomorphism and permutation) but these will be introduced on an as needed basis.
Area: Humanities

AS.150.656. Practical Reason in German Idealism.
In this course we will examine the development of idealist theories of practical reason. We will read Kant’s Critique of Practical Reason, Fichte’s System of Ethics, and selections from Hegel’s writings.
Area: Humanities

AS.150.657. Philosophy of Language.
We will investigate one or more specialized topics in formal semantic and pragmatics.

Questions about the nature of metaphysical explanation are central to contemporary metaphysics. These questions are relevant to similar debates in philosophy of science about the nature of scientific explanation. In this seminar we will examine questions about the nature and role of metaphysical explanation, specifically focusing on the comparison between metaphysical explanation and scientific explanation.
Area: Humanities, Social and Behavioral Sciences

AS.150.668. Social Construction.
An exploration of the metaphysics of social construction, examining different theories of social construction and related questions about social ontology, scientific realism and the boundaries of metaphysics.
Area: Humanities

This course explores the relationship between moral principles and how we use imagination to put or fail to put principles to work. We will read widely and eclectically in exploring this relationship.
Area: Humanities
Cross Listed Courses

Classics
AS.040.109. Freshman Seminar: The Greeks and Their Emotions. 3 Credits.
This seminar is meant as an introduction to the study of ancient emotions, with a particular emphasis on how the ancient Greeks conceptualized, portrayed and lived their emotions through linguistic, literary and artistic expression. After an analysis of how the ancient Greek emotional experience differs from our own, we shall focus on the phenomenon of emotion as deeply rooted in the physical body, and in light of this we will contemplate (and question) its universality. You will also learn how to research and write a paper. Texts will be read in translation. No knowledge of ancient Greek required.
Area: Humanities
Writing Intensive

AS.040.241. The Greeks and Their Emotions. 3 Credits.
This seminar is meant as an introduction to the study of ancient emotions, with a particular emphasis on how the Greeks of the Archaic, Classical and Hellenistic periods conceptualized, portrayed and lived their emotions through linguistic, literary and artistic expression. After an analysis of how the ancient Greek terminology for the emotions differs from our own, we shall focus on the phenomenon of emotion as deeply rooted in the physical body, and in light of this we will contemplate (and question) its universality. Texts will be read in translation. No knowledge of ancient Greek required.
Area: Humanities
Writing Intensive

Comparative Thought and Literature
AS.300.203. Freshman Seminar: How Literature Works: Narrative Imagination from Ancient to Modern Times. 3 Credits.
Is storytelling part of human nature? Do myths and legends have a universal structure? As a bridge between experience and language, narratives inform the way we understand history, gender, politics, emotion, cognition and much more. This course will explore how narratives are composed, how they are experienced, and eventually, how they evolve throughout history. We will be reading a diverse selection of ancient and modern texts, including selections from Plato and Aristotle, the Odyssey, the Hebrew Bible, as well as 19th-and-20th-century authors such as the Brothers Grimm, Gustave Flaubert, James Joyce and Virginia Woolf. The second part of the course focuses on philosophical and critical approaches to narrative in arts and media, concluding with the evolving concept of narrative in the digital age. Theoretical readings include selections from Karl Marx, Roland Barthes, Jacques Derrida and Judith Butler. All readings will be in English.
Area: Humanities
Writing Intensive

AS.300.223. Philosophy and Infinity. 3 Credits.
What is the infinite? Can we comprehend it? Can we experience it? In this course we will explore various ways in which philosophers in the western tradition have answered questions such as these. In the first half of the semester, we will examine theoretical treatments of the infinite that inform how we understand the fabric of our world, from the ordinary objects around us to more sublime concepts of God, space, time, and mathematics. In the second half, we will turn to arguments in aesthetics and ethics that reveal an interplay between infinity and finitude occurring before our very eyes. Philosophers we will cover include Descartes, Spinoza, Locke, Kant, Hegel, Russell, Levinas, and Arendt. Throughout, we will ask such fundamental questions as, what is the starting point of philosophy? what is its methodology? what can it achieve in terms of knowledge? and in terms of practice?
Area: Humanities
Writing Intensive

AS.300.309. The Contemporary Philosophical Novel. 3 Credits.
What can literature offer to philosophical reflection? Can literature address experiences that evade theoretical philosophy? Or, does fictional writing conflict with rigorous philosophical inquiry? The long-standing separation of philosophy and literature begins when Plato bans poetry and tragedy from the ideal city in the Republic. This seminar focuses on nineteenth and twentieth century thinkers that challenge the predisposition against literature through different attempts to write the “philosophical novel.” In this seminar, we will take seriously the philosophical stakes of literary texts, and investigate how and why literature offers a unique perspective for philosophical reflection. We will read texts by Plato, Fyodor Dostoevsky, Friedrich Nietzsche, Jean-Paul Sartre, Simone de Beauvoir, Albert Camus, Iris Murdoch, and David Foster-Wallace.
Area: Humanities
Writing Intensive

AS.300.315. Philosophical Conceptions of the Infinite. 3 Credits.
What is the infinite? Can we comprehend it? Can we experience it? In this course we will explore various ways in which philosophers in the western tradition have answered questions such as these. In the first half of the semester, we will examine theoretical treatments of the infinite that inform how we understand the fabric of our world, from the ordinary objects around us to more sublime concepts of God, space, time, and mathematics. In the second half, we will turn to arguments in aesthetics and ethics that reveal an interplay between infinity and finitude occurring before our very eyes. Philosophers we will cover include Descartes, Spinoza, Locke, Kant, Hegel, Russell, Levinas, and Arendt. Throughout, we will ask such fundamental questions as, what is the starting point of philosophy? what is its methodology? what can it achieve in terms of knowledge? and in terms of practice?
Area: Humanities
AS.300.327. Introduction to Comparative American Cultures: Obama and Philosophy. 3 Credits.
This course will investigate the philosophical as well as theological, juridical and political, and rhetorical and literary backgrounds that have informed and shaped Barack Obama’s writings, speeches, and policy strategies leading up to and during his presidency. While paying minute attention to a few selected controversial debates in domestic and international governance and relations, and while discussing the question of Obama’s legacy in and after the upcoming elections, our primary focus will be on understanding the curious blend of Christian realism, influenced by the theologian Reinhold Niebuhr, the tradition of American civic republicanism and pragmatism, and Obama’s specific brand of post-Civil Rights, if not necessarily post-racial, politics. All these tenets coalesce in a vision and politics that may well be described as one of ‘deep’ pragmatism. Attention will be paid to Obama’s early appeal to ‘simple ideas’ and ‘small miracles,’ each of them yielding the Biblical and sobered injunction of a ‘hope against hope.’ But extensive consideration of his thought and impact in the assessment of biographers and intellectual historians, legal scholars and political theorists, cultural critics and pundits will add to our attempt to understand and take stock of the Obama phenomenon as well.
Area: Humanities

AS.300.399. Cinema and Philosophy. 3 Credits.
Do movies have anything to say about philosophical problems? Why is contemporary philosophy so interested in cinema? What are the most productive ways of bringing films and philosophy into conversation?
Area: Humanities

AS.300.402. What is a Person? Humans, Corporations, Robots, Trees. 3 Credits.
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course investigates recent debates about being a person in literature and law. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Although our explorations will be focused on these questions, the genre of materials examined will be wide-ranging (including legal essays, philosophy, contemporary novels, and film). Texts will include novels by William Gibson and Lydia Millet, essays by John Dewey and Daniel Dennett, and films such as Ex Machina and Her.
Area: Humanities

AS.300.422. Luther, Philosophy, Politics: 500 Years After the Reformation. 3 Credits.
As historical legend has it, in 1517 the German monk and then professor of theology Martin Luther inaugurated a revolution in thinking, belief and moral practice, known as the Protestant Reformation by nailing his Ninety-Five Theses, under the title Disputation on the Power of Indulgences, to the door of the Castle Church of Wittenberg. Known for his brutal characterization of reason as ‘the devil’s whore,’ his theology of the hidden god, his catechisms, the doctrine of the two realms, and his condemnation of peasants’ revolts of his days, Luther’s influence has been profound and lasting. We will study some of his most influential theses, treatises, and sermons and will seek to gauge the effect they had on the Western narrative of secularization and modernity, together with their deep influence on post-Reformation and, indeed, recent philosophy and political thought. Readings include: Luther, G.W.F. Hegel, Max Weber, Martin Heidegger, Karl Barth, Erik Peterson, Dietrich Bonhoeffer, Kaj Munk, Ernst Bloch, Philippe Lacoue-Labarthe, Marcel Gauchet, Giorgio Agamben, and others.
Area: Humanities

AS.300.424. Psychoanalysis as a Theory of Thinking. 3 Credits.
This course will introduce students to the writings of Wilfred Bion, the British psychoanalyst who expanded Sigmund Freud’s and Melanie Klein’s metapsychology. Bion developed an epistemological theory of thinking, surmising that the mind grows when it is exposed to the truth of one’s emotional experience. In his many writings and lectures, Bion developed a sophisticated theoretical model that conceptualizes the transformation of emotional experience into the capacity for thought. While in his early writings he is inspired by life sciences and mathematics, in his later writings Bion shifts away from the scientific view to an aesthetic/mystical vertex, drawing on poets mystics and philosophers, such as Keats, Milton, Shakespeare, Sophocles, Meister Eckhart, St John of the Cross, Plato, Hume and Kant.
Area: Humanities

AS.300.618. What is a Person? Humans, Corporations, Robots, Trees..
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course investigates recent debates about being a person in literature and law. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Although our explorations will be focused on these questions, the genre of materials examined will be wide-ranging (including legal essays, philosophy, contemporary novels, and film). Texts will include novels by William Gibson and Lydia Millet, essays by John Dewey and Daniel Dennett, and films such as Ex Machina and Her.
Area: Humanities

AS.300.657. Martin Heidegger, Being and Time: Integral Reading and Current Perspectives, II.
Starting with a brief overview and recapitulation of themes discussed in its Introduction and Division One, this jointly will focus on Division Two of Being and Time and bring phenomenological, hermeneutic, and deconstructive as well as analytic, epistemological, and pragmatist methods and viewpoints to bear upon this modern classic.

German Romance Languages Literatures
AS.211.265. Panorama of German Thought. 3 Credits.
This course introduces students to major figures and trends in German literature and thought from the sixteenth to the twentieth century. We will pay particular attention to the evolution of German political thought from the Protestant Reformation to the foundation of the German Federal Republic after WWII. How did the Protestant Reformation affect the understanding of the state, rights, civic institutions, and temporal authority in Germany? How did German Enlightenment thinkers conceive of ethics and politics or morality and rights? How do German writers define the nation, community, and the people or das Volk? What is the link between romanticism and nationalism? To what degree is political economy, as developed by Marx, a critical response to romanticism? How did German thinkers conceive of power and force in the wake of World Wars I and II? What are the ties that bind and rend a community in this tradition? We will consider these and related questions in this course through careful readings of selected works.
Area: Humanities

Writing Intensive
AS.211.640. The Literature of Existence.
This seminar will explore some key expressions of what could loosely be called existentialist writing from the early twentieth century to the present day, to the end of coming to terms with an emerging “new politics of existence.” While there will be some emphasis on Spanish language materials, including writings by José Ortega Y Gasset, Miguel de Unamuno, María Zambrano, and Jorge Luis Borges, we will also be reading important works by Martin Heidegger, Jean-Paul Sartre, Simone de Beauvoir, Albert Camus, and Martin Hägglund.
Area: Humanities
Writing Intensive

AS.211.707. Film and Philosophy: The Surrealist Cinema of Alejandro Jodorowsky.
The films of Chilean cult director Alejandro Jodorowsky have confounded, infuriated, and intrigued critics and audiences alike throughout his 50-plus-year career. In this seminar we will examine the expanse of his cinematic production in order to delve into fundamental philosophical questions of representation, violence, and the relation between visual imagery and poetry.
Area: Humanities
Writing Intensive

Criticism in the 21st century has tended to relegate psychoanalysis to a dustbin of fads that proliferated at the end of the prior century but that today are of interest only to answer and unranked cuffs of devotees. Bucking this trend, this seminar will examine the intellectual history and abiding influence of psychoanalysis’s key critical concept: the unconscious. Basing our discussions on in-depth readings from key thinkers in the analytic tradition such as Freud, Lacan, and Klein, as well as the post-analytic philosophical tradition, including Zizek, Butler, Laclau and Mouffe, Deleuze and Guattari, and Jameson, we will work to distill an understanding of the unconscious as essential to the practice of criticism tout court, and as inhering even in those discourses that have sought most stridently to distance themselves from it. Seminar discussions will take place in English; readings will be available in the original as well as in translation.
Area: Humanities
Writing Intensive

AS.213.271. Trust: Literature and Philosophy. 3 Credits.
Fake news, policing crises, political polarization, and the like challenge us to reevaluate the notion of trust. The course takes up this challenge with the help of both literary and philosophical texts that shall assist us in posing, and trying to answer, questions such as the following: What or whom should we trust (ourselves, others, neither)? Is it possible and sometimes even preferable not to trust? Or should we cultivate trust in society? If so, how? Authors may include ETA Hoffmann, Hegel, Nietzsche, and others.
Area: Humanities
Writing Intensive

AS.213.374. Existentialism in Literature and Philosophy. 3 Credits.
This course explores the themes of existentialism, including the meaning of existence, the nature of the self, authenticity and inauthenticity, the inescapability of death, the experience of time, anxiety, freedom and responsibility to others, in literary and philosophical works. It will be examined why these philosophical ideas often seem to demand literary expression, or bear a close relation to literary works. Readings may include writings by Kierkegaard, Nietzsche, Dostoevsky, Heidegger, Rilke, Kafka, Simmel, Jaspers, Buber, Sartre, de Beauvoir, and Camus.
Area: Humanities
Writing Intensive

AS.213.423. Reflections on Modernity. 3 Credits.
Taught in English. Reflections on Modernity takes up the problems of conflicts, and possibilities of modernity in aesthetic, literary, and philosophical texts. Questions about the modern self, our relationship to nature, to urban experience, to history and language, and the role of the artist and writer in reflecting on modern life. Texts include works by such authors as Kant, Nietzsche, Baudelaire, Weber, Rilke, Hofmannsthal, Simmel, Heidegger, Habermas, Foucault.
Area: Humanities

AS.213.643. Franz Kafka in Philosophical and Literary Perspective.
This course is devoted to close study of the writings of Franz Kafka from both philosophical and literary perspectives. Writings will include Kafka's short prose works and novels along with philosophical and literary critical interpretations thereof. Readings may include commentaries by Walter Benjamin, Theodor Adorno, Hannah Arendt, Albert Camus, Giles Deleuze, and Giorgio Agamben. Primary texts for students from the German section will be in original; any other students may read Kafka in translation.
Area: Humanities

AS.213.687. Imagination in Philosophy and Literary Theory.
Imagination in Philosophy and Literary Theory is devoted to studying theories of imagination in the history of philosophy and literary theory, from the ancient Greeks to the present day. We will study philosophical conceptions of the role of imagination in memory, cognition, perception, and creativity, and assess traditional philosophical oppositions between imagination and reason, the imaginary and the real. Readings may include selections from Aristotle, Kant, Coleridge, Nietzsche, Husserl, Heidegger, Merleau-Ponty, Sartre, Dufrenne, Stevens, Iser, Ricoeur, Ryle, Wittgenstein, and Nussbaum.
Area: Humanities

AS.213.705. Hegel’s Phenomenology of Spirit.
We will study key passages of The Phenomenology of Spirit from a queer-feminist perspective and engage with some of the feminist scholarship on Hegel.
Area: Humanities

AS.214.479. Dante Visits the Afterlife: The Divine Comedy. 3 Credits.
Dante’s Divine comedia is the greatest long poem of the Middle Ages; some say the greatest poem of all time. We will study the Commedia critically to find: (1) What it reveals about the worldview of late-medieval Europe; (2) how it works as poetry; (3) its relation to the intellectual cultures of pagan antiquity and Latin (Catholic) Christianity; (4) its presentation of political and social issues; (5) its influence on intellectual history, in Italy and elsewhere; (6) the challenges it presents to modern readers and translators; (7) what it reveals about Dante’s understanding of cosmology, world history and culture. We will read and discuss the Commedia in English, but students will be expected to familiarize themselves with key Italian terms and concepts. Students taking section 02 (for 4 credits) will spend an additional hour working in Italian at a time to be mutually decided upon by students and professor.
Area: Humanities
Writing Intensive

In this seminar we will examine the ways in which Jorge Luis Borges’s narratives intersect with lines of inquiry pursued by Martin Heidegger and Jacques Derrida around perception, knowledge, language, time, and space.
Area: Humanities
Writing Intensive
History
AS.100.295. American Intellectual History since the Civil War. 3 Credits.
Readings in American social thought since 1865, ranging across developments in philosophy, literature, law, economics, and political theory.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

Islamic Studies
AS.194.401. Themes in Medieval Islamic Thought. 3 Credits.
This seminar examines medieval Muslim thinkers who addressed themes at the intersection of theology, philosophy, science, and ethics: the definition of the nature of God's attributes, His uniqueness, transcendence and omnipotence; human freewill and the limits of human knowledge; the nature of the world; and the relationship among reason, religion, and science. The course will look at how these and other crucial themes were addressed by major medieval philosophers and philosophical schools not only in Islam, but also in Judaism and Christianity, and highlight similarities and differences among the three major monotheistic faiths.
Area: Humanities, Social and Behavioral Sciences

Political Science
AS.191.344. Belonging to Nature in the Anthropocene. 3 Credits.
This course explores debates in contemporary environmental political thought concerning humanity’s relationship to nature in the Anthropocene. The Anthropocene refers to the era in which ‘human’ activity becomes a force of ‘nature’—when the impact of human activity on natural processes manifests itself in the stuff of the Earth. For many of us, these planetary transformations are hardly noticeable in day-to-day life, but they are dramatic: we are living through the Earth’s sixth mass extinction. What is our relationship to these transformations? Do we have the power to stop them, or at least to minimize their harmful effects? Course readings and films introduce multiple visions of the human/nature relationship and examine the responses they recommend to these and other questions. The political stakes of these visions are brought to light as we consider: How do visions of the human/nature relationship shape and texture core political concepts like freedom, agency, responsibility, and progress? What do they suggest about the strategies most likely to motivate action amid the uncertainty of the Anthropocene? How do these visions subtly (and not so subtly) relegate some to the realm of ‘nature’ so that others can be classified as ‘human’?
Writing Intensive

Study of Women, Gender, Sexuality
AS.363.306. Feminist and Queer Theory: Race, Class, Gender, Sexuality-Intersectional Feminist Theory. 3 Credits.
In this course, we will get to know intersectional feminist philosophy through the lens of a Black feminist epistemology. What does this mean? That means that we will focus on how the contributions of Black feminist authors can bring out the specific political and philosophical nature of an intersectional theoretical framework.
Area: Humanities

Theatre Arts Studies
AS.225.328. The Existential Drama: Philosophy and Theatre of the Absurd. 3 Credits.
Existentialism, a powerful movement in modern drama and theatre, has had a profound influence on contemporary political thought, ethics, and psychology, and has transformed our very notion of how to stage a play. Selected readings and lectures on the philosophy of Kierkegaard, Nietzsche, Camus and Sartre – and discussion of works for the stage by Sartre, Ionesco, Genet, Beckett, Albee, Pinter, Athol Fugard (with Nkani & Nshone), Heiner Müller and the late plays of Caryl Churchill. Opportunities for projects on Dürrenmatt, Frisch, Havel, Witkiewicz, and Mrozek.

Philosophy, Bachelor of Arts Philosophy Major Requirements
(Also see Requirements for a Bachelor's Degree (p. 1584).)

Philosophy poses such fundamental questions as: What can we know? How should we live? and How do the results of human inquiry, obtained so far, hang together? It is an excellent preparation for professional studies such as law and medicine; it provides perspective on other disciplines such as psychology, mathematics, literature, and political science; and it centers on a set of questions that thinking people cannot avoid. At Hopkins it can be studied in a variety of ways.

A number of our courses are designed to provide broad introductions to the subject. Both AS.150.111 Philosophic Classics and AS.150.112 Philosophical Problems cover a wide range of topics, the former through the study of some of the major texts of Western thought, the latter by more systematic examination of representative issues. Either one will show a student a variety of approaches to philosophical problems. The courses AS.150.201 and AS.150.205 offer historically oriented introductions to the subject, giving the student a basic grasp of the development of philosophy in two of its major periods. Other courses, such as AS.150.118 Introduction to Formal Logic, AS.150.223 Formal Methods of Philosophy, and AS.150.220 Introduction to Moral Philosophy, are designed for students with an interest in the particular areas they cover. All of these courses are readily available without prior study of philosophy.

The 400-level courses are open to graduate students as well as to undergraduates. Some require no previous course work in philosophy. Others presuppose some familiarity with philosophy, such as would be provided by one of the introductory courses. Still others require more specific preparation. A student with questions about whether he/she has the background for a particular 400-level course should consult either the instructor or the departmental undergraduate studies.

A student who wants to study an area of philosophy not provided for in the regular curriculum or to undertake a special project of writing and research should consult with a faculty member about taking AS.150.511 Directed Study-AS.150.512 Directed Study. An undergraduate who has the proper background may enroll in a graduate seminar if the instructor approves.

An undergraduate who has the proper background may enroll in a graduate seminar if the instructor approves.

Requirements
Philosophy majors must take 11 departmental courses. A minimum of six courses must be at the 300 level or higher. Of the two general introductory courses, AS.150.111 Philosophic Classics and AS.150.112 Philosophical Problems, only one may count toward the major, and two total 100-level courses may count toward the major. Majors are required to take the Undergraduate Seminar, preferably in the junior year. Courses in which a grade of D is received may not count toward the major, nor may courses taken satisfactory/unsatisfactory.

Other courses must be distributed by taking at least one course in each of the five following categories:

- Ancient philosophy
- Modern philosophy
- Logic, philosophy of science, or philosophy of mathematics
- Philosophy of mind, theory of knowledge, philosophy of language, or metaphysics
- Ethics, aesthetics, or political philosophy

The first two categories are normally satisfied by taking AS.150.201 (http://e-catalog.jhu.edu/search/?P=AS.150.201) Introduction To Greek Philosophy and AS.150.205 (http://e-catalog.jhu.edu/search/?P=AS.150.205) Introduction to the History of Modern Philosophy. The student thus has four or five additional electives after satisfying the distribution requirements.

Well-qualified majors may be admitted to a graduate seminar during their senior year. They should consult their major advisor.

If you have any questions or concerns regarding these requirements, please contact the director of undergraduate studies.

Double Majors
The department encourages linking the study of philosophy with the
study of other disciplines. For example, the subject matter and course
requirements of the philosophy and psychology departments are such
as to make a double major both practical and intriguing. Similarly,
knowledge of literature or the history of art is pertinent to the study of
aesthetics; a solid understanding of science is valuable for those
interested in the philosophy of science; and students of ethics benefit
considerably by combining their work with study of political theory and
of the political realities in which morality must function. Members of the
department are available to assist students in planning double majors
tailored to their interests.

Honors Program in Philosophy
Students with an overall GPA of 3.0 and a Philosophy GPA of 3.5 or higher
(or outstanding recommendations from three department members)
are eligible for the Senior Honors Thesis Program. In addition to the 11
courses required for the major, successful applicants take AS.150.551
Honors Project and AS.150.552 Honors Project, to write a thesis of
about 50 pages under the supervision of a faculty member. The thesis
must be completed prior to spring vacation of senior year. If the student
withdraws prior to completion of a thesis, a satisfactory/unsatisfactory
grade will be awarded.
The grade for the thesis will depend on the thesis itself and an oral
examination about it, conducted by the thesis adviser and two other
faculty members. Graduation Honors will be awarded to those whose
work receives an A- or better. For more information about the Honors
Program, contact the department’s director of undergraduate studies.

BA/MA Program
The department offers an accelerated BA/MA program. See the BA/MA
Program page for more information.

Learning Outcomes
A student who graduates with a BA in philosophy will be able to
demonstrate:

• A broad understanding of the work of major figures in the history of
philosophy, both ancient (especially Plato and Aristotle) and modern
 esk specially the period of Descartes through Kant
• Familiarity with the most important topics in a range of areas
that are typically regarded as lying at the center of contemporary
philosophical thought, including metaphysics, theory of knowledge,
philosophy of mind, and philosophy of language
• Familiarity with the most important topics in ethics and political
philosophy
• Familiarity with formal logic, including the ability to understand the
logical symbolism used in many contemporary philosophical texts
• The capacity to think analytically and creatively about philosophical
texts and issues
• The capacity to express philosophical ideas and support them
effectively in argument, both in writing and orally.

Philosophy, Bachelor of Arts/Master of Arts
The department now offers an accelerated BA/MA program. The
requirements for the BA and for the MA remain unchanged, but in the
combined BA/MA program, two 400-level courses taken as part of the BA
can also be used toward the MA. This means that the MA requires only
eight additional courses, rather than the 10 required for a free-standing
MA. See the Graduate tab for more information.

Program Requirements
The department offers an accelerated BA/MA program. The
requirements for the BA and for the MA remain unchanged, but in the
combined BA/MA program, two 400-level courses taken as part of the BA
can also be used toward the MA. This means that the MA requires only
eight additional courses, rather than the 10 required for a free-standing
MA. For full details of the MA program and the BA/MA program, see the
Requirements handbook (2015 and after) in the Graduate section here
and on the department website.
In order to be admitted to the BA/MA program, you must already be a philosophy major; you can apply in the spring term of your junior year or any time in your senior year. If you meet the qualification for the BA honors thesis (overall GPA of 3.0, philosophy GPA of 3.5), you will automatically be admitted; others may be admitted on a case-by-case basis. Interested students should contact the chair of the department, Professor Richard Bett (http://philosophy.jhu.edu/directory/richard-bett/).

Please note that there is no departmental financial aid for BA/MA students. However, BA/MA students whose MA-level studies extend into a fifth year get a 50% discount on their tuition in their fifth year.

All application material and supporting documents should be uploaded through the online application; these include:

- Online application (https://app.applyyourself.com/AYApplicantLogin/fl_ApplicantLogin.asp?id=jhu-grad)—be sure to select Combined Graduate Student option
- Transcripts: unofficial transcripts must be uploaded through the online application.

**Philosophy, Minor**

**Philosophy Minor Requirements**

Philosophy minors must take seven departmental courses, which should include the following:

- At least one course in the history of philosophy, either ancient or modern.
- At least one course in two of the following areas:
  - Logic, philosophy of science, or philosophy of mathematics
  - Ethics, aesthetics, or political philosophy
  - Philosophy of mind, theory of knowledge, philosophy of language, or metaphysics

Students must earn a C- or better in all minor requirements and courses may not be taken satisfactory/unsatisfactory.

**Minor Restrictions**

- Either AS.150.111 Philosophic Classics or AS.150.112 Philosophical Problems, but not both, may count as one of the seven courses. Neither is a required course.

**Philosophy, PhD**

**Financial Aid**

All students admitted to the program receive financial assistance. Support is guaranteed for five years, provided that a student continues to make satisfactory progress toward completion of the PhD. Department fellowships cover tuition and pay a stipend. Outstanding applicants may be nominated for a George Owen Fellowship, which also covers tuition and for which the stipend is higher. All students receive fellowship support for the first two years; no teaching is required.

Third, fourth, and fifth-year students are supported by teaching assistantships, which carry full tuition and a stipend. In practice, the department is often able to offer teaching assistantships to students beyond their fifth year, though this support is not guaranteed.

**Sachs Fellowship Fund**

A generous bequest by a former member of the department, David Sachs, has established the Sachs Fellowship Fund. Sachs Fellowships are dissertation-year fellowships awarded to students who are making substantial progress toward completing their dissertations. For more information, see the Philosophy Graduate Program Requirements (http://e-catalog.jhu.edu/arts-sciences/full-time-residential-programs/degree-programs/philosophy/philosophy-phd/graduate_handbook_updates_2020.docx) (Attachments 4 and 5).

**Graduate Student Travel Funding**

The department encourages graduate students to present their work at conferences and workshops, and it is committed to helping to make this possible by providing funds for travel and/or accommodation to students whose papers are accepted for presentation. Funding for students to participate in special summer schools is also a possibility; however, in such cases the topic must be clearly related to the student’s actual or intended area of specialization.

The funds available to the department for these purposes are limited, and so some guidelines are necessary in order to ensure that the money is distributed in the most equitable and effective way possible. With this in mind, the following guidelines are in now in place:

- For any student who makes one request for funding in a given academic year, the department will do its best to provide funding. If a student requests funding for more than one event in a given academic year, the second request will have lower priority. Similarly, a student who has had numerous trips funded over several years may find further requests given lower priority.
- The amount provided may vary depending on the cost of the trip. However, more expensive trips are more likely to receive only partial funding than less expensive ones. In particular, those involving international travel may receive only partial funding.
- The significance and prestige of the conference, workshop, or summer school in which a student is to participate will be a factor in decisions as to whether, or to what extent, to provide funding.
- A student’s proximity to the job market may result in a funding request being given higher priority than it would otherwise.
- Since conferences and workshops can happen at any time of year, it is not practical to impose any specific deadlines for funding requests. The department will, however, ensure that some funds remain available throughout the year, so that students making requests late in a given year do not lose out simply because of the timing. (This means that students making requests early in the year may sometimes receive less than they have asked for.)

These guidelines may sometimes be in tension with one another. But these will be the major factors to be taken into account in making these decisions.

Students requesting funding should supply documentation concerning the event—a link to a website will often be sufficient—as well as a
breakdown of the expected costs of attending. Requests should be sent to the department chair and the director of graduate study.

William Miller Essay Prize
The Miller Prize is an essay prize awarded for an essay submitted by an eligible student in the philosophy graduate program. A prize competition is held every year. It is not guaranteed that an award will be made every year; however, provided at least one essay submitted in a given year is judged to be of superior quality, the prize will go to the author of the best essay submitted in that year. Given essays of sufficiently high quality, it is also possible that more than one award could be made in the same year.

Miller Prize Submission Guidelines
Entrants must be registered graduate students in philosophy at Johns Hopkins University who are prior to the completion of their eighth semester in the program (i.e., anyone in their first four years). Submissions should be self-contained essays of no more than 10,000 words, not including footnotes. Students may submit at most one essay per year. Papers accepted for publication are not appropriate submissions.

Submissions should be anonymous; your name should not appear anywhere in the paper. The papers should be submitted to Veronica Feldkircher-Reed, either electronically (via email at vfeldki1@jhu.edu) or as a hard copy. If you do the latter, you should include a separate cover page with your name, the title of the paper, and a word count. If you submit it electronically, do not include a cover page, but include the paper title and word count in the email to which you attach the paper. The cover pages or emails will be kept separately in the office and will not be shown to the selection committee.

The submission deadline for the Miller Prize is the same day the third-year papers are due.

Admission Requirements
While an undergraduate major in philosophy is good preparation for graduate study in the department, applications are welcomed from students with other majors whose interests are now turning toward philosophy.

To apply, please read the information below and on the Graduate Admissions website (http://www.grad.jhu.edu/admissions/apply/), and complete the application online.

If applying to more than one department, please send complete application materials for each department. All application documents must be provided in English (either the original or translations of the original documents). If you are unable to secure translations to English, we recommend that you contact World Education Services (http://www.wes.org/).

All application materials and supporting documents should be uploaded through the online application; these include:

- Online application (https://app.applyyourself.com/?id=jhu-grad)
- Application fee
- Statement of Purpose (briefly state your area of interest at the beginning of your Statement of Purpose; upload through the online application)
- Letters of recommendation (at least two): Letters of recommendation should be submitted and uploaded electronically following the instructions in the online application.
- Transcripts: Unofficial transcripts must be uploaded through the online application. Applications will be ready for review with unofficial transcripts, but official transcripts will be required if an offer of admission is made
- GRE scores (mandatory)
- TOEFL or IELTS score (for international applicants)
- Sample of work (the sample should reflect the applicant’s area of interest, and generally does not have to be more than 20 pages in length).

Application Deadline
The deadline for applications is January 15 or, if January 15 falls on a weekend or a holiday, the next business day. Admissions decisions will be made by around March 15.

For questions or inquiries about the online application and supporting documents, contact the Graduate Admissions office using the online contact form (http://www.grad.jhu.edu/contact/form/). You may also contact Veronica Feldkircher-Reed, the academic program coordinator for the philosophy department, at vfeldki1@jhu.edu or 410-516-7524.

Physics and Astronomy
http://physics-astronomy.jhu.edu/

Johns Hopkins is the nation’s first research university. That emphasis on research continues to this day and forms the backbone of the undergraduate and graduate programs in the Department of Physics and Astronomy. The department’s research program is focused into four areas of excellence:

- Astrophysics
- Condensed Matter Physics
- Elementary Particle Physics
- Plasma Physics

For graduate students interested in these fields, the department offers world-class research opportunities in a friendly and supportive setting. For undergraduates, JHU offers exposure to cutting-edge research combined with a level of personal attention that is typically found only in liberal arts colleges. Nearly all physics majors at JHU work on research projects and many begin as freshmen or sophomores.

All research builds upon an established body of knowledge. To be effective researchers, teachers, or professionals, both undergraduate and graduate students must acquire a core knowledge of physics. Our undergraduate and graduate courses are designed to cover the core subjects at the appropriate levels, leading to advanced courses on a variety of specialized topics. As a consequence, students having different backgrounds or different ultimate objectives can select those parts that are most appropriate for them. The selections are made under the guidance of a faculty advisor. The advisor aids the student in making the most efficient use of his or her time and ensures that his or her program contains a reasonable balance among classroom and laboratory, mathematics, seminars, and introduction to research.

Donald E. Kerr Memorial Prize
In recognition of Dr. Kerr’s work in microwave physics, the department awards the Donald E. Kerr Memorial Prize each year to the most outstanding undergraduate major graduating in physics.
Facilities
The Department of Physics and Astronomy’s first facility was Rowland’s measuring engine for determining the solar spectrum in the 1880s. Ever since that time the Department has maintained a long and continuous history in instrumentation. In recent decades this has extended to instrumentation for space missions. The Department maintains a Class-1000 clean room for microfabrication and nanofabrication, a high bay lab, professional and student machine shops, and supports a world-renowned Instrument Development Group (IDG) with six full-time engineers and three full-time machinists.

Among the diverse techniques used for studying condensed matter physics are magnetometry/susceptometry, specific heat and transport measurements, atomic force and magnetic force microscopy, X-ray and electron diffraction, terahertz spectroscopy, and neutron scattering at the nearby NIST Center for Neutron Research and at the Spallation Neutron Source, ORNL. A variety of cryostats, He3 refrigerators, and He3-He4 dilution refrigerators together with high temperature ovens, electromagnets, and superconducting magnets allow measurements to be made from 0.05 K to 1100 K and in magnetic fields up to 14 Tesla. Apparatus for the preparation of samples includes two image furnaces for floating zone growth, single-crystal growth vacuum furnaces, box and tube furnaces, arc furnaces, several high vacuum and ultra-high vacuum chambers for thin film fabrication using evaporation, MBE, pulsed laser deposition, sputtering, and focused ion beam (FIB) milling. Also available on campus are cutting-edge transmission electron microscopes and scanning electron microscopes.

In astrophysics, research groups have state-of-the-art laboratories for testing cryogenic transition-edge bolometer detectors with SQUID read-out electronics, and closed-cycle helium cryocoolers. Recent instrumentation advances include the design and manufacture of large free-standing polarization grids and novel high-bandwidth smooth-wall feed horns. Current activities include development of microwave and millimeter-wave instruments for far-infrared and microwave astronomy and cosmology.

The research groups in the department have a wide range of state-of-the-art computer facilities including high performance clusters with over a thousand processors and the largest database at a university—over a petabyte. All undergraduate majors and graduate students have access to high performance workstations.

Financial Aid
Graduate students in good standing are normally supported by a combination of fellowships, research assistantships and teaching assistantships. The financial package covers full tuition, individual health insurance, and an academic year salary commensurate with that of other leading research institutions. Teaching assistantship is a common mode of financial support; experience in teaching is a valuable part of the Ph.D. program. A teaching assistantship supports the student during the academic year and is supplemented by a research assistantship during the summer. The assistant is expected to help in the teaching of the general physics course and other introductory and major courses. The typical teaching duties include leading a problem-solving section or laboratory exercises and homework grading. Research assistantships are based on the availability of funding to the research advisor and are arranged directly with him/her. Research assistantships provide an opportunity for deep engagement in ongoing experimental or theoretical research. In addition, the department and the University offer several fellowships on a competitive basis, some covering travel, supplies or research expenses and some covering a semester’s or a year’s worth of the entire financial package. Some students are supported by external fellowships, such as the pre-doctoral fellowship of the National Science Foundation.

All fellows and teaching and research assistants in the Department of Physics and Astronomy register as full-time students and thus fulfill their residence requirements while holding appointments. Loans and work-study arrangements are available from the Office of Financial Aid.

Graduate Programs
Graduate study in physics and astronomy at Hopkins is intended primarily to prepare Ph.D. graduates for careers in teaching and research in physics and astronomy, or in applications such as biophysics, space physics, and industrial research. Entering students may elect to work toward a Ph.D. in physics or a Ph.D. in astronomy and astrophysics. The two programs are similar in structure but have somewhat different course requirements (see below). A wide range of research projects—both theoretical and experimental—are available for graduate students in Astrophysics (http://physics-astronomy.jhu.edu/groups/astro/), Condensed Matter Physics (http://physics-astronomy.jhu.edu/research/condensed-matter-physics/), Particle Physics (http://www.pha.jhu.edu/~morris/jhu_hep/jhu_hep.html), and Plasma Spectroscopy (http://physics-astronomy.jhu.edu/research/plasma-spectroscopy/).

Programs
- Astronomy and Astrophysics, PhD (p. 2111)
- Physics and Astronomy, Bachelor of Arts (p. 2112)
- Physics, Bachelor of Science (p. 2114)
- Physics, Bachelor of Science/Master of Science (p. 2115)
- Physics, Minor (p. 2116)
- Physics, PhD (p. 2116)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses
AS.171.101. General Physics: Physical Science Major I. 4 Credits. First semester of a two-semester sequence in general physics covers mechanics, heat, sound, electricity and magnetism, optics, and atomic physics. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Corequisite: AS.110.108-AS.110.109, AS.173.111-AS.173.112
Area: Engineering, Natural Sciences

AS.171.102. General Physics: Physical Science Major II. 4 Credits. Second semester of a two-semester sequence in general physics covers mechanics, heat, sound, electricity and magnetism, optics, and atomic physics. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Course Background: A grade of C- or better in either Physics I or the first semester of Intro to Mechanics I (AS.171.101 OR AS.171.103 OR AS.171.105 OR AS.171.107 OR EN.530.103)
Area: Engineering, Natural Sciences
AS.171.103. **General Physics I for Biological Science Majors. 4 Credits.**
First-semester of two-semester sequence in calculus-based general physics, tailored to students majoring in one of the biological sciences. In this term, the topics covered include the basic principles of classical mechanics and fluids as well as an introduction to wave motion. Recommended Corequisites: (AS.173.111) AND (AS.110.106 or AS.110.108 or AS.110.113). Midterm exams are given at 8am Tuesdays, so students must leave their schedules open at this time in order to be able to take these exams.
Area: Engineering, Natural Sciences

AS.171.104. **General Physics/Biology Majors II. 4 Credits.**
This two-semester sequence is designed to present a standard calculus-based physics preparation tailored to students majoring in one of the biological sciences. Topics in electricity & magnetism, optics, and modern physics will be covered in this semester. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Course Background: C- or better in AS.171.101 or AS.171.103. Corequisite: AS.110.109, AS.173.112.
Area: Engineering, Natural Sciences

AS.171.105. **Classical Mechanics I. 4 Credits.**
An in-depth introduction to classical mechanics intended for physics majors/minors and other students with a strong interest in physics. This course treats fewer topics than AS.171.101 and AS.171.103 but with greater mathematical sophistication. It is particularly recommended for students who intend to take AS.171.201-AS.171.202 or AS.171.309-AS.171.310. Recommended Corequisites: AS.173.115 and AS.110.108.
Area: Engineering, Natural Sciences

AS.171.106. **Electricity and Magnetism I. 4 Credits.**
Classical electricity and magnetism with fewer topics than 171.101-103, but with greater mathematical sophistication. Particularly recommended for students who plan to take AS.171.201-AS.171.202. Recommended Course Background: C- or better in AS.171.105; Corequisite: AS.173.116, AS.110.109.
Area: Engineering, Natural Sciences

AS.171.107. **General Physics for Physical Sciences Majors (AL). 4 Credits.**
This two-semester sequence in general physics is identical in subject matter to AS.171.101-AS.171.102, covering mechanics, heat, sound, electricity and magnetism, optics, and modern physics, but differs in instructional format. Rather than being presented via lectures and discussion sections, it is instead taught in an ‘active learning’ style with most class time given to small group problem-solving guided by instructors. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Corequisites: (AS.173.111) AND (AS.110.106 or AS.110.108 or AS.110.113).
Area: Engineering, Natural Sciences

AS.171.108. **General Physics for Physical Science Majors (AL). 4 Credits.**
This two-semester sequence in general physics is identical in subject matter to AS.171.101-AS.171.102, covering mechanics, heat, sound, electricity and magnetism, optics, and modern physics, but differs in instructional format. Rather than being presented via lectures and discussion sections, it is instead taught in an ‘active learning’ style with most class time given to small group problem-solving guided by instructors. Recommended Course Background: A grade of C- or better in either Physics I or the first semester of Engineering Mechanics (AS.171.101 OR AS.171.103 OR AS.171.105 OR AS.171.107 OR EN.530.103).
Area: Engineering, Natural Sciences

AS.171.113. **Subatomic World. 3 Credits.**
Introduction to the concepts of physics of the subatomic world: symmetries, relativity, quanta, neutrinos, particles and fields. The course traces the history of our description of the physical world from the Greeks through Faraday and Maxwell to quantum mechanics in the early 20th century and on through nuclear physics and particle physics. The emphasis is on the ideas of modern physics, not on the mathematics. Intended for non-science majors.
Area: Natural Sciences

AS.171.118. **Stars and the Universe: Cosmic Evolution. 3 Credits.**
This course looks at the evolution of the universe from its origin in a cosmic explosion to emergence of life on Earth and possibly other planets throughout the universe. Topics include big-bang cosmology; origin and evolution of galaxies, stars, planets, life, and intelligence; black holes; quasars; and relativity theory. The material is largely descriptive, based on insights from physics, astronomy, geology, chemistry, biology, and anthropology.
Area: Natural Sciences

AS.171.125. **It's not magic, it's physics: Extraordinary Experiments. 3 Credits.**
Students will learn key concepts of everyday physics through experimentation. They will design, build, and run experiments themselves. The course will be graded on participation and a graded final presentation.
Area: Natural Sciences

AS.171.133. **Black Holes and Other Compact Objects: For Non-Majors. 3 Credits.**
This is a lecture and discussion course aimed at undergraduate students who are not physics and astronomy majors. The topic of the lectures will be a basic overview of the qualitative properties of and historical work on compact astrophysical objects (such as black holes, neutron stars, white dwarfs) and related phenomena.
Area: Natural Sciences

AS.171.201. **Special Relativity/Waves. 4 Credits.**
Course continues introductory physics sequence (begins with AS.171.105-AS.171.106). Special theory of relativity, forced and damped oscillators, Fourier analysis, wave equation, reflection and transmission, diffraction and interference, dispersion. Meets with AS.171.207.
Area: Engineering, Natural Sciences

AS.171.202. **Modern Physics. 4 Credits.**
Course completes four-semester introductory sequence that includes AS.171.105-AS.171.106 and AS.171.201. Planck's hypothesis, de Broglie waves, Bohr atom, Schrodinger equation in one dimension, hydrogen atom, Pauli exclusion principle, conductors and semiconductors, nuclear physics, particle physics.
Area: Natural Sciences
AS.171.204. Classical Mechanics II. 4 Credits.
Principles of Newtonian and Lagrangian mechanics; application to central-force motion, rigid body motion, and the theory of small oscillations. Recommended Course Background: AS.110.108 and AS.110.109, AS.110.202, AS.171.201, or AS.171.309. AS.110.201 or equivalent is strongly recommended.
Area: Natural Sciences

AS.171.205. Introduction to Practical Data Science: Beautiful Data. 3 Credits.
The class will provide an overview of data science, with an introduction to basic statistical principles, databases, fundamentals of algorithms and data structures, followed by practical problems in data analytics. Recommended Course Background: Familiarity with principles of computing.
Area: Natural Sciences, Quantitative and Mathematical Sciences

AS.171.207. Special Relativity. 1 Credit.
Three-week introduction to special relativity for students who elect to take AS.171.209 in place of AS.171.201.
Area: Natural Sciences

AS.171.301. Electromagnetic Theory II. 4 Credits.
Static electric and magnetic fields in free space and matter; boundary value problems; electromagnetic induction; Maxwell's equations; and an introduction to electrodynamics.
Area: Natural Sciences

AS.171.303. Quantum Mechanics I. 4 Credits.
Fundamental aspects of quantum mechanics. Uncertainty relations, Schrödinger equation in one and three dimensions, tunneling, harmonic oscillator, angular momentum, hydrogen atom, spin, Pauli principle, perturbation theory (time-independent and time-dependent), transition probabilities and selection rules, atomic structure, scattering theory. Recommended Course Background: AS.110.302 or AS.110.306.
Prerequisite(s): (AS.171.204) AND (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211)
Area: Natural Sciences

AS.171.304. Quantum Mechanics II. 4 Credits.
Area: Natural Sciences

AS.171.309. Wave Phenomena with Biophysical Application. 4 Credits.
Introduction to wave phenomena, primarily through study of biophysical probes that depend on the interaction of electromagnetic radiation with matter. Topics include Fourier Analysis; standing waves; sound and hearing; diffraction and crystallography; geometrical and physical optics – the physics of modern light microscopy; quantum mechanics – how living things absorb light; NMR and MRI. Occasional laboratory exercises are included.
Area: Natural Sciences

AS.171.310. Biological Physics. 4 Credits.
Introduces topics of classical statistical mechanics. Additional topics include low-Reynolds number hydrodynamics and E&M of ionic solutions, via biologically relevant examples.
Area: Natural Sciences

AS.171.312. Statistical Physics/Thermodynamics. 4 Credits.
Undergraduate course that develops the laws and general theorems of thermodynamics from a statistical framework.
Prerequisite(s): Calculus II (AS.110.107 or AS.110.109 or AS.110.113). It is recommended that students have also taken Quantum Mechanics (AS.171.303), Linear Algebra (AS.110.201 or AS.110.212) and Calculus III (AS.110.202 or AS.110.211)
Area: Natural Sciences

AS.171.313. Introduction to Stellar Physics. 3 Credits.
Survey of stellar astrophysics. Topics include stellar atmospheres, stellar interiors, nucleosynthesis, stellar evolution, supernovae, white dwarfs, neutron stars, pulsars, black holes, binary stars, accretion disks, protostars, and extrasolar planetary systems. Recommended Course Background: AS.110.108-AS.110.109, AS.171.202
Area: Natural Sciences

AS.171.314. Introduction to Galaxies and Active Galactic Nuclei. 3 Credits.
This course will introduce student to the physics of galaxies and their constituents: stars, gas, dust, dark matter and a supermassive black hole in the central regions.
Area: Natural Sciences

AS.171.321. Introduction to Space, Science, and Technology. 3 Credits.
Topics include space astronomy, remote observing of the earth, space physics, planetary exploration, human space flight, space environment, orbits, propulsion, spacecraft design, attitude control and communication. Crosslisted by Departments of Earth and Planetary Sciences, Materials Science and Engineering and Mechanical Engineering. Recommended Course Background: AS.171.101-AS.171.102 or similar; AS.110.108-AS.110.109.
Area: Engineering, Natural Sciences

AS.171.324. Statistical thinking and data analysis. 3 Credits.
We live in a data-rich world where the flux of information increases exponentially. We will learn how to think statistically and see patterns and structure in many systems around us: news reports, images, cities, social networks, etc. We will learn how to use this knowledge to make decisions and predictions. We will explore correlations, patterns, entropy, fractals. This course will allow students to better understand the complex world we live in. It involves some python coding. Junior, senior and graduate students only
Area: Natural Sciences

AS.171.405. Condensed Matter Physics. 3 Credits.
Undergraduate course covering basic concepts of condensed matter physics: crystal structure, diffraction and reciprocal lattices, electronic and optical properties, band structure, phonons, superconductivity and magnetism. Co-listed with AS.171.621Recommended Course Background: AS.171.304, AS.110.201-AS.110.202.
Area: Natural Sciences

AS.171.406. Condensed Matter Physics. 3 Credits.
Area: Natural Sciences

AS.171.408. Nuclear and Particle Physics. 3 Credits.
Basic properties of nuclei, masses, spins, parity. Nuclear scattering, interaction with electromagnetic radiation, radioactivity, Pions, muons, and elementary particles, including resonances. Recommended Course Background: AS.171.303
Area: Natural Sciences
AS.171.410. Physical Cosmology. 3 Credits.
This course provides an overview of modern physical cosmology. Topics covered include: the contents, shape, and history of the universe; the big bang theory; dark matter; dark energy; the cosmic microwave background; Hubble’s law; the Friedmann equation; and inflation. Recommended Course Background: (AS.171.101-AS.171.102), or (AS.171.103-AS.171.104), or (AS.171.105-AS.171.106), or (AS.171.107-AS.171.108), or equivalent.
Area: Natural Sciences

AS.171.411. Light and Optics. 3 Credits.
What is light? How does it propagate and interact with matter? How do we use it to transmit information? How does technology make use of light? This course is designed for majors in physics as well as other science and engineering departments.
Area: Engineering, Natural Sciences

AS.171.416. Numerical Methods for Physicists. 4 Credits.
Area: Natural Sciences, Quantitative and Mathematical Sciences

AS.171.425. Group Theory in Physics. 3 Credits.
Introduction to finite and Lie groups, representations and applications to quantum mechanics, condensed matter physics, and other fields of physics; selected topics from differential geometry and algebraic topology. Recommended Prerequisite: AS.171.304
Area: Natural Sciences

AS.171.430. Introduction to Quantum Field Theory. 3 Credits.
Quantum Field Theory marries the principles of special relativity with quantum mechanics and provides a remarkably consistent description of a wide variety of phenomena, ranging from the theory of elementary particles to processes in condensed matter physics. It is an essential element in the toolkit of every physicist. In this course, we provide an introduction to this vast topic and aim to provide an intuitive understanding of this field. We will start by learning how to think about quantum mechanics in a manner consistent with special relativity (the Klein Gordon and Dirac equations), learn how to estimate relativistic quantum processes (Feynman diagrams), analyze nonsensical infinities that arise in these theories (Renormalization) and conclude with an overview of the Standard Model of Particle Physics (QCD and Electroweak theory). The course is aimed at introducing the student to how physicists think about these issues and it is a stepping stone to graduate study in this topic.
Prerequisite(s): AS.171.304
Area: Natural Sciences

AS.171.501. Independent Research- Undergraduate. 3 Credits.
Students may register for independent research with a faculty member in the Department of Physics and Astronomy. A research plan should be sent to the Director of Undergraduate Study before the add/drop date that includes project details, the number of hours of effort each week and the number of credits. This course may not be used for one of the two electives required for a BA, but one semester of research may be used as one of four focused electives in a BS program.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.171.502. Undergraduate Independent Research. 0 - 3 Credits.
Research done in senior year in conjunction with experimental equipment of intermediate laboratory or as special project in research group. Credit for independent study given to junior and senior students who act as tutors.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.171.503. Senior Thesis. 3 Credits.
Preparation of a substantial thesis based upon independent student research, supervised by at least one faculty member in Physics and Astronomy. This course may only be taken for credit during one semester. However, students are expected to have engaged in their research project during previous semesters through 171.501-502, summer research, etc. This course may not be used as one of the two electives required for a BA, but can be used as one of the four focused electives in a BS program. Open to senior department majors only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Writing Intensive

AS.171.504. Senior Thesis. 0 - 3 Credits.
Preparation of a substantial thesis based upon independent student research, supervised by at least one faculty member in Physics and Astronomy.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Writing Intensive

AS.171.597. Independent Research. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.171.603. Electromagnetic Theory.
Classical field theory, relativistic dynamics, Maxwell’s equations with static and dynamic applications, boundary-value problems, radiation and propagation of electromagnetic waves, advanced topics in electrodynamics in media and plasmas

AS.171.605. Quantum Mechanics.
Review of wave mechanics and the Schrodinger equation, Hilbert space, harmonic oscillator, the WKB approximation, central forces and angular momentum, scattering, electron spin, density matrix, perturbation theory (time-independent and time-dependent), quantized radiation field, absorption and emission of radiation, identical particles, second quantization, Dirac equation.

AS.171.606. Quantum Mechanics.
Review of wave mechanics and the Schrodinger equation, Hilbert space, harmonic oscillator, the WKB approximation, central forces and angular momentum, scattering, electron spin, density matrix, perturbation theory (time-independent and time-dependent), quantized radiation field, absorption and emission of radiation, identical particles, second quantization, Dirac equation. Recommended Course Background: AS.171.303 and AS.171.304
Topics in applied mathematics used by physicists, covering numerical methods: linear problems, numerical integration, pseudo-random numbers, finding roots of nonlinear equations, function minimization, eigenvalue problems, fast Fourier transforms, solution of both ordinary and partial differential equations. Undergraduate students may register online for this course and will be assigned 3 credits during the add/drop period.

AS.171.611. Stellar Structure and Evolution.
Basic physics of stellar structure and evolution will be discussed with emphasis on current research.

AS.171.612. Interstellar Medium and Astrophysical Fluid Dynamics.

AS.171.613. Radiative Astrophysics.
A one-term survey of the processes that generate radiation of astrophysical importance. Topics include radiative transfer, the theory of radiation fields, polarization and Stokes parameters, radiation from accelerating charges, bremsstrahlung, synchrotron radiation, thermal dust emission, Compton scattering, properties of plasmas, atomic and molecular quantum transitions, and applications to astrophysical observations.

AS.171.618. Observational Astronomy.
How do we observe the Universe at each wavelength and what do we see? This course will present the knowledge required for astronomical observations across the entire spectrum. For each wavelength range (gamma rays, X-rays, UV, visible, IR, radio) we will discuss the type of detector used, the range of possible observations and current open questions. We will also discuss the dominant astronomical and terrestrial sources across the spectrum, and study the differences between ground- and space-based observations.

An advanced graduate level course that emphasizes the importance of molecules in astrophysical environments as diverse as interstellar clouds, circumstellar outflows, cometary comae, and active galactic nuclei. Topics will include the chemistry and photochemistry of astrophysical molecules; molecular excitation; astrophysical masers; interstellar molecular clouds; interstellar shock waves; circumstellar outflows; cometary comae; molecular accretion disks.

This sequence is intended for graduate students in physics and related fields. Topics include: metals and insulators, diffraction and crystallography, phonons, electrons in a periodic potential, transport. Co-listed with AS.171.405.

This sequence is intended for graduate students in physics and related fields. Topics include superconductivity, magnetism, metal-insulator transitions, low-dimensional materials, quantized hall effect.

AS.171.625. Experimental Particle Physics.
For graduate students interested in experimental particle physics, or theory students, or students from other specialties. Subjects covered: experimental techniques, including particle beams, targets, electronics, and various particle detectors; and a broad description of high energy physics problems. Undergraduate students may register online for this course and will be assigned 3 credits during the add/drop period.

AS.171.627. Astrophysical Dynamics.
This is a graduate course that covers the fundamentals of galaxy formation, galactic structure and stellar dynamics and includes topics in current research.

AS.171.629. First Year Research.
AS.171.698. Physics Beyond the Standard Model.
The Standard Model of particle physics has withstood every direct experimental test, explaining physics from sub nuclear to cosmological length scales. But, we know that it is not a complete theory. It fails to explain observational facts such as the nature of dark matter and dark energy. The theory is also beset by theoretical problems such as the hierarchy, strong CP cosmological constant and the black hole information problem. Attempts to explain these puzzles have not been successful. In this course, we will highlight the main obstacles towards solving these problems and discuss new approaches to these problems, both from the experimental and theoretical point of view.
Area: Natural Sciences

AS.171.701. Quantum Field Theory.
Introduction to relativistic quantum mechanics and quantum field theory. Canonical quantization; scalar, spinor, and vector fields; scattering theory; renormalization; functional integration; spontaneous symmetry breaking; Standard Model of particle physics.

AS.171.702. Quantum Field Theory II.
Introduction to relativistic quantum mechanics and quantum field theory. Recommended Course Background: AS.171.605-AS.171.606 or equivalent.

AS.171.703. Advanced Statistical Mechanics.
Brief review of basic statistical mechanics and thermodynamics. Then hydrodynamic theory is derived from statistical mechanics and classical treatments of phase transitions, including Ginzburg-Landau theory.

Course covers phase transitions and critical phenomena. Building on the ideas of spontaneous symmetry breaking and scale invariance at a critical point we develop Landau’s theory of phase transitions and the apparatus of renormalization group using both analytic and numerical techniques for studying interacting systems.

In September 2015, one hundred years after Einstein’s prediction of the existence of gravitational waves, the LIGO/Virgo collaboration detected the gravitational radiation produced by the merger of two black holes, marking the beginning of a new era in astronomy. This course will review the theory of gravitational waves, the main astrophysical and cosmological sources of gravitational radiation, and the modeling of these sources through numerical and analytical techniques. We will discuss how present and future gravitational wave detections on Earth and in space can be used to study the astrophysics of compact objects (such as black holes and neutron stars) and to test Einstein’s theory of general relativity.
Area: Natural Sciences

AS.171.732. Elementary Particle Physics.
Description TBA

In the past decade there’s been an explosion of progress in machine learning, using models with billions of parameters that learn from enormous datasets. These models present an exciting opportunity for physicists interested in investigating how and why they work. This course will provide an introduction to the subject, including aspects of learning theory, neural network architectures, optimization, statistics, and information theory.
Area: Natural Sciences

AS.171.750. Cosmology.
Review of special relativity and an introduction to general relativity, Robertson-Walker metric, and Friedmann equation and solutions. Key transitions in the thermal evolution of the universe, including big bang nucleosynthesis, recombination, and reionization. The early universe (inflation), dark energy, dark matter, and the cosmic microwave background. Development of density perturbations, galaxy formation, and large-scale structure.

AS.171.752. Black Hole Astrophysics.
Black holes are the central engines for a wide variety of astrophysical objects: Galactic X-ray sources, active galactic nuclei, stellar tidal disruptions, and the black hole mergers that are the only directly-detected gravitational wave sources (as of this writing). Although the mass distribution of astrophysical black holes spans at least eight orders of magnitude and their circumstances can vary tremendously, the physical processes relevant to them are often closely related. This class will present the most important of them: relativistic orbits; accretion dynamics, the structure of accretion flows, and their radiation mechanisms; relativistic jet launching; binary black hole dynamics and gravitational wave radiation.

AS.171.753. String Theory.
Area: Natural Sciences

AS.171.755. Fourier Optics and Interferometry in Astronomy.
A course for advanced undergraduate and beginning graduate students covering the principles of optics and image formation using Fourier Transforms, and a discussion of interferometry and other applications both in radio and optical astronomy.

This course is designed for graduate students interested in learning the language, techniques, and problematic of modern quantum many-body theory as applied to condensed matter physics.

AS.171.782. Advanced Particle Theory: Quantum Gravity.
Advanced course on the AdS/CFT correspondence and its relationship with contemporary research topics.
Area: Natural Sciences

AS.171.783. Black Hole Physics.
General Relativity predicts its own demise in the existence of singular black hole solutions. There have been mounting astrophysical evidence that black holes do exist in nature. Thus they are not just pathologies of the theory but fundamental objects in gravity that require understanding. Theoretically, they serve as ‘laboratories’ for studies in quantum gravity; indeed, most of the research in the field aims to resolve various paradoxes and puzzles that emerge when one tries to understand physics inside or outside black holes. The goal of this course is to elucidate these paradoxes and puzzles. First, we will study the classical properties of black holes in general relativity such as horizons, causal history, singularity theorems, area theorems and black hole mining. Next, we will study semi-quantum and quantum properties such as black hole thermodynamics, Hawking radiation, black hole evaporation. We will also explore modern results and perspectives on the fundamental physics of black holes that are necessary for current research. A background in general relativity and quantum field theory is recommended for the course.

AS.171.784. Advanced Particle Theory: ‘What to Expect at the LHC’.
The course will focus on scenarios and principles for new particle physics that can be tested at the CERN Large Hadron Collider and other particle experiments.
AS.171.785. Advanced Particle Theory: Dark Matter.
The overwhelming evidence that dark matter exists and that it is not part of the fundamental theory of matter (the standard model) suggests the need for a graduate course. I will cover what is known and not known about dark matter, being specific enough to open lines of inquiry. I will cover what the rules of quantum field theory would allow it to be and how it could interact with us. I will go over possible mechanisms that explain the generation of dark matter in our universe in the first place. In addition, I will go over the ways to potentially discover (interact with) it directly. The first half or more of the course should be mostly accessible to advanced graduate students in astrophysics and high-energy particle experimentalists. The last half/third will be more field-theory oriented.

Area: Natural Sciences
AS.171.802. Independent Research-Graduate.
AS.172.203. Contemporary Physics Seminar. 1 Credit.
This seminar exposes physics majors to a broad variety of contemporary experimental and theoretical issues in the field. Students read and discuss reviews from the current literature, and are expected to make an oral or written presentation. Recommended Course Background: AS.171.101-AS.171.102, AS.171.103-AS.171.104, or AS.171.105-AS.171.106.
Area: Natural Sciences
AS.172.601. Department Colloquium.
AS.172.604. Joint JHU/STScI Colloquium.
A joint JHU Department of Physics and Astronomy and Space Telescope Science Institute Colloquium Series.
AS.172.633. Language Of Astrophysics.
Survey of the basic concepts, ideas, and areas of research in astrophysics, discussing general astrophysical topics while highlighting specialized terms often used compared to physics.
AS.172.722. Hot Topics in Astrophysics.
AS.172.732. CAS Research Seminar.
AS.172.751. Elementary Particle Physics Seminar.
AS.172.752. Elementary Particle Physics Seminar.
AS.172.753. Advanced Particle Theory Seminar.
AS.172.754. Advanced Particle Theory Seminar.
AS.173.111. General Physics Laboratory I. 1 Credit.
Experiments are chosen from both physical and biological sciences and are designed to give students background in experimental techniques as well as to reinforce physical principles. Corequisite: AS.171.101, AS.171.103, or AS.171.105.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences
AS.173.112. General Physics Laboratory II. 1 Credit.
Experiments are chosen from both physical and biological sciences and are designed to give students background in experimental techniques as well as to reinforce physical principles. Recommended Course Background: AS.173.111; Corequisite: AS.171.102.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
AS.173.101 OR AS.171.102 OR AS.171.104 OR AS.171.106 OR AS.171.108
Area: Natural Sciences
AS.173.115. Classical Mechanics Laboratory. 1 Credit.
Experiments chosen to complement the lecture course Classical Mechanics I, II AS.171.105-AS.171.106 and introduce students to experimental techniques and statistical analysis. Corequisite: AS.171.105.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences
AS.173.308. Advanced Physics Laboratory. 3 Credits.
A broad exposure to modern laboratory procedures such as holography, chaos, and atomic, molecular, and particle physics.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences
Writing Intensive
Cross Listed Courses
Applied Mathematics Statistics
EN.553.793. Turbulence Theory. 3 Credits.
An advanced introduction to turbulence theory for graduate students in the physical sciences, engineering and mathematics. Both intuitive understanding and exact analysis of the fluid equations will be stressed. Previous familiarity with fluid mechanics is not required, although it could be helpful.
Chemistry
The course is designed to provide the essential principles and concepts underlying the modern study of the structure and properties of solids in bulk crystals, thin films, and nanoscale objects. Topics include basic crystallography, structure determination by x-ray, neutron, and electron diffraction, fundamental concepts of bonding in solids, lattice dynamics, electronic band structure, magnetism, and strongly correlated electron behavior. Particular emphasis is placed on the impact of the structure, dimensionality, and electron count on electrical and magnetic properties (electric conduction, superconductivity, thermodielectricity, etc). More course info available at <a href="http://occamy.chemistry.jhu.edu">http://occamy.chemistry.jhu.edu</a>. Cross-listed with Physics and Astronomy.
Interdepartmental
AS.360.339. Planets, Life and the Universe. 3 Credits.
This multidisciplinary course explores the origins of life, planet formation, Earth’s evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions, and planetary protection. Recommended Course Background: Three upper level (300+) courses in sciences (Biophysics, Biology, Chemistry, Physics, Astronomy, Math, or Computer Science)
Prerequisite(s): Students may not register for this class if they have already received credit for AS.020.334 OR AS.020.616 OR AS.171.333 OR AS.171.699 OR AS.270.335 OR AS.360.671
Area: Natural Sciences
AS.360.671. Planets, Life and the Universe.
This multidisciplinary course explores the origins of life, planet formation, Earth’s evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions, and planetary protection. Recommended Course Background: Three upper level courses in sciences and buy textbooks
Prerequisite(s): Students may not register for this class if they have already received credit for AS.020.616 OR AS.020.334 OR AS.171.333 OR AS.171.699 OR AS.270.335 OR AS.360.339.
Area: Natural Sciences

Astronomy and Astrophysics, PhD
Advising
In the beginning of every fall semester, the department organizes a series of events (graduate orientation, various seminars and presentations) to provide an in-depth overview of research activities in the department. During a two-day research jamboree, students discuss possible research projects with multiple faculty members either in individual meetings or in a group setting. These events help familiarize the student with the department, with the faculty and with the expectations of the graduate program.

To help guide students through the first two years of the program, all entering graduate students are assigned an academic adviser who works closely with them during their first year. This first-year adviser meets regularly with the student to determine courses of study, familiarize them with the department, and help them find research opportunities. The first-year adviser works with the student until a thesis adviser has been appointed. During the orientation, the first-year adviser reviews the undergraduate record with the student. If there are any gaps in the physics background, the first-year adviser may recommend additional coursework or independent reading.

Admission Requirements
To obtain admission, a student is expected to submit evidence that he or she has a good chance to succeed.

Application requirements for admission:
• A completed application
• Transcripts of all previous work
• Three letters of recommendation
• Recent GRE general and subject scores (physics or related field)
• TOEFL or IELTS for international students (a reproduction is acceptable. Johns Hopkins prefers a minimum score of 600 (paper-based) or 250 (computer-based) or 100 (Internet-based) on the Test of English as a Foreign Language (TOEFL)).
• Statement of purpose
• $75 application fee. The application fee may be waived for applicants with documented (must be uploaded within the application) registration/participation in one of the following programs: GEM, Department Request, SACNAS, MMUF, POSSE, JHU Grad Student, McNair, ABRCMS, Vietnam Education Foundation, IRT, Graduate Horizons, Chocktaw/Chickasaw Scholarship Advisement Program, Baltimore Scholars Program, Leadership Alliance, UMBC Meyerhoff Program, LSAMP, Mellon Mays Undergraduate Fellowship Program, Project 1000, MARC and University of Puerto Rico Students. To request a waiver based on financial hardship please select the option on the application and upload one of the following: FAFSA SAR Report, a letter from a college/university financial aid office, unemployment verification. Do not send tax returns. All documents will be reviewed and verified for satisfactory evidence. If the uploaded document is not accepted you will be contacted to resubmit or to pay the application fee.

Successful applicants applying in the last year of their Bachelor’s program will need to demonstrate the completion of their Bachelor’s degree program before they can begin the Ph. D. program at JHU.

Program Requirements
Ph.D. in Physics
Students must complete the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>

Students in both programs must receive at least a B- in each required course, or they will be required to retake the specific course once more and pass it.

First and Second-Year Research Requirement

First-year students must find, by the end of the third week of class in the fall semester, and by the end of the first week of class the second semester, as well as before the summer term begins, a member of the professorial faculty to advise them in some type of research project. The students are required to submit a short written summary of that research experience at the end of the semester. Students may continue with one advisor through all three semesters, or they may choose to cycle through several different research advisors. In some cases, one of these first-year research advisors may become a thesis advisor, but in others, the thesis advisor may change. This research requirement continues until the end of the second year, or until the student finds a thesis advisor.

The nature of these first-year research projects may vary from student to student, from one advisor to another, and from one sub-field of physics to another. In some cases they lead to published research. In other cases, they may be first steps in a longer-term research project. And in some cases, they may comprise reading or independent-study projects to develop background for subsequent research. It is left to the individual advisor to determine what the written summary should entail. These research projects are not research assistantships and are performed in addition to other graduate student responsibilities (teaching and graduate classwork), although they are typically merged with RA-supported research for those students supported by RAs.

Thesis Research and Defense

Students are required to find a thesis advisor no later than the beginning of the third year. After the student chooses a thesis advisor, the student forms their Thesis Committee consisting of the advisor and two other faculty members (all Thesis Committees contain at least two full-time faculty from the department). These committees function as extended advisory bodies; students have the opportunity to discuss their progress and problems with several faculty. They also conduct one formal annual review of each student’s progress. Research leading to the dissertation can be carried out not only within the Department of Physics and Astronomy, but with appropriate arrangements, either partly or entirely at other locations if necessitated by the project goals. At the conclusion of thesis research, the student presents the written dissertation to the faculty committee and defends the thesis in an oral examination.

Physics and Astronomy, Bachelor of Arts

Physics Major Requirements (B.A.)

(See also Requirements for a Bachelor’s Degree (p. 1584.).)

The major program is structured so that nearly all students take the same classes during the first two years and must complete the same list of core upper-level courses during their second two years, but permits a variety of choices in upper-level electives. The total number of credits required for the B.A. degree is 120. By the end of the four years our students share an understanding of classical mechanics, electromagnetism, statistical physics and quantum mechanics, and have acquired physics lab skills that will support them in graduate school or in a host of other pursuits.

A grade of C- or higher is required for a course to be counted towards major requirements. This includes required math courses. An exception for a single course taken in the year before graduation may be granted by the Director of Undergraduate Studies under extenuating circumstances.

Core Courses

Mathematics

The standard mathematics requirements for all physics majors consist of:

<table>
<thead>
<tr>

Honors in the Major

Honors in Physics is granted to graduating students who achieve a GPA of 3.5 or higher in all courses taken to fulfill the major requirements.

Senior Thesis

Any student majoring in the department may write a senior thesis, based on original research conducted under the supervision of a member of the faculty. Arrangements for this research will be made on an individual basis. The department views the writing of a senior thesis as an excellent
capstone experience to an undergraduate education in physics, and encourages all students to consider it.

**Physics, Bachelor of Science**

**Physics Major Requirements (B.S.)**

(See also Requirements for a Bachelor's Degree (p. 1584).)

The major program is structured so that nearly all students take the same classes during the first two years and must complete the same list of core upper-level courses during their second two years, but permits a variety of choices in upper-level electives. The total number of credits required for the B.S. in Physics degree is 126. By the end of the four years our students share an understanding of classical mechanics, electromagnetism, statistical physics and quantum mechanics, and have acquired physics lab skills that will support them in graduate school or in a host of other pursuits.

A grade of C- or higher is required for a course to be counted towards major requirements. This includes required math courses. An exception for a single course taken in the year before graduation may be granted by the Director of Undergraduate Studies under extenuating circumstances.

*Note: For the B.S. in Physics five (5) additional courses (at least 3 credits each) at the 200-600 level in the following departments: Physics and Astronomy, Biology, Biophysics, Chemistry, Cognitive Science, Earth and Planetary Sciences, Mathematics, Neuroscience and/or the School of Engineering (excluding courses listed as 500.xxx, 660.xxx, 551.xxx and 661.xxx). These courses must constitute a coherent and rigorous program of study approved by the Departmental Advisor and Director of Undergraduate Studies no later than the registration period for the fall semester of the senior year. At least four (4) of these courses must be taken within a single department or program in the Krieger School of Arts and Sciences or the Whiting School of Engineering (note: called 'Department elective' in the Sample Program of Study). One (1) semester of research may be used as one elective.

**Note:** AS.171.101 General Physics: Physical Science Major I-AS.171.102 General Physics: Physical Science Major II, AS.171.103 General Physics I for Biological Science Majors-AS.171.104 General Physics/Biology Majors II or AS.171.107 General Physics for Physical Sciences Majors (AL)-AS.171.108 General Physics for Physical Science Majors (AL) with their labs is acceptable in place of AS.171.105 Classical Mechanics I-AS.171.106 Electricity and Magnetism I, AS.173.115 Classical Mechanics Laboratory.

### Sample Program of Study

A typical B.S. in Physics program might include the following sequence of courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>First Year</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>First Semester</strong></td>

</tr>
<tr>
<td>AS.171.105</td>
<td>Classical Mechanics I</td>
<td>4</td>
</tr>
<tr>
<td>AS.173.115</td>
<td>Classical Mechanics Laboratory</td>
<td>1</td>
</tr>
<tr>
<td>AS.110.108</td>
<td>Calculus I (Physical Sciences &amp; Engineering)</td>
<td>4</td>
</tr>
</tbody>
</table>

**Credits**

| 9 |
Senior Thesis
Any student majoring in the department may write a senior thesis, based on original research conducted under the supervision of a member of the faculty. Arrangements for this research will be made on an individual basis. The department views the writing of a senior thesis as an excellent capstone experience to an undergraduate education in physics, and encourages all students to consider it.

Honors in the Major
Honors in Physics is granted to graduating students who achieve a GPA of 3.5 or higher in all courses taken to fulfill the major requirements."

Physics, Bachelor of Science/Master of Science
Requirements for Four-year Bachelor/Masters in Physics
Requirements for acceptance into the four-year Bachelor/Masters in Physics.

- The program is open only to current JHU undergraduates.
- Interested students should apply no later than the end of the fall semester of their junior year.
- A minimum GPA of 3.6 in courses taken in the department of Physics & Astronomy (PHA) at the time of the application is required.
- The following courses or their analogs must be completed or in progress by the time of the application: AS.171.105 Classical Mechanics I, AS.171.106 Electricity and Magnetism I, AS.173.115 Classical Mechanics Laboratory, AS.171.201 Special Relativity/Waves, AS.171.204 Classical Mechanics II, AS.171.301 Electromagnetic Theory I, AS.171.303 Electromagnetic Theory II, AS.171.603 Quantum Mechanics I

As part of the application, the student must submit to the Director of Undergraduate Studies:

- A research advisor form signed by a faculty member in the Department of Physics & Astronomy who has agreed to supervise a minimum of two semesters of graduate-level research of a scope appropriate for the M.A. degree and on a subject appropriate for the Department of Physics & Astronomy.
- A research plan approved by the research advisor.
- A plan to satisfy the course requirements both for the B.A. or B.Sci. degree in Physics and for the M.A. degree in Physics or Astronomy & Astrophysics by the end of their fourth year at JHU.

Requirements for completing the four-year Bachelor/Masters in Physics.

- The student must satisfy all JHU requirements for a B.A. in Physics or a B.Sci. in Physics to be eligible for the M.A. degree.
- The student must complete the course requirements for the M.A. degree using courses outside of those used for the B.A. or B.Sci. degree.
- For the M.A. in Physics, the student must complete eight graduate courses. For the M.A. in Astronomy and Astrophysics, the student must complete eight graduate courses plus the AS.172.633 Language Of Astrophysics seminar.
- As part of the eight graduate courses, the student must pass the core graduate courses with a grade of B- or better. For the M.A. in Physics, the core courses are Quantum Mechanics I (AS.171.605 Quantum Mechanics), Quantum Mechanics II (AS.171.606 Quantum Mechanics), Advanced Statistical Mechanics (AS.171.703 Advanced Statistical Mechanics), and Electromagnetic Theory (AS.171.603 Electromagnetic Theory). For the M.A. in Astronomy & Astrophysics, the core courses are Stellar Structure & Evolution (AS.171.611 Stellar Structure and Evolution), Interstellar Medium & Astrophysical Fluid Dynamics (AS.171.612 Interstellar Medium and Astrophysical Fluid Dynamics), Radiative Processes (AS.171.613 Radiative Astrophysics), and Astrophysical Dynamics (AS.171.627 Astrophysical Dynamics).

At most one of the core graduate courses may be replaced with
another graduate course with a comparable workload and level, by prior approval of the graduate program committee.

- As part of the eight graduate courses, between two and four of the courses must be research seminar courses (AS.171.501 Independent Research- Undergraduate/AS.171.502 Undergraduate Independent Research, at 3 credits per semester).
- For every semester of research, the student must submit written research reports to the graduate program committee of the same format as that required for first- and second year students in the Ph.D. program.
- The student must pass a research examination of the same format as that required for second-year students in the Ph.D. program.
- The student must maintain status as a full time undergraduate while completing the M.A. requirements. The full program (B.A. or B.Sci. plus the M.A. degrees) should be completed in four years or less.

Successful applicants applying in the last year of their Bachelor’s program will need to demonstrate the completion of their Bachelor’s degree program before they can begin the Ph.D. program at JHU.

**Advising**

All entering students are assigned to a first-year advisor who works closely with the student through the first two years of graduate study, or until a thesis advisor is found. The first-year advisor advises the student on courses of study helps familiarize them with the department and provides guidance in finding research opportunities. In the beginning of each fall semester, the department holds a “research jamboree” where incoming students are introduced to the research in the department through a series of brief talks, lab tours, and research group open houses. Thus, the students are familiar, immediately upon their arrival, with the scope of research in the department and can identify prospective research advisors they may wish to work with.

**Program Requirements**

The Ph.D. program has strong emphasis on early and active involvement in graduate research. Thus, students are required to have a research advisor and file a research summary every semester they are enrolled in the program, starting with the first one. Furthermore, students must complete the required courses with a grade of B- or better; the coursework is typically done over the first two years. In the beginning of the second year, students complete the research examination, and in the beginning of the third year – the University’s Graduate Board Oral examination, both of which are based on completed or proposed research. During the first two years, students are typically involved in introductory research projects, which may or may not be related to their thesis work, and sometimes work with several different advisors, but they must identify (and have an agreement with) a thesis advisor no later than the beginning of their third year in the program, after which point students focus on their thesis research. The thesis is to be completed by no later than the end of the 6th year, ending with an oral presentation of the thesis to a faculty committee.

**Course Requirements**

**Ph.D. in Physics**

Students must complete the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.171.603</td>
<td>Electromagnetic Theory</td>
<td></td>
</tr>
<tr>
<td>AS.171.605</td>
<td>Quantum Mechanics</td>
<td></td>
</tr>
<tr>
<td>&amp; AS.171.606</td>
<td>and Quantum Mechanics</td>
<td></td>
</tr>
<tr>
<td>AS.171.703</td>
<td>Advanced Statistical Mechanics</td>
<td></td>
</tr>
</tbody>
</table>

**Ph.D. in Astronomy and Astrophysics**

Students must complete the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.171.611</td>
<td>Stellar Structure and Evolution</td>
<td></td>

<tr>
<td>AS.171.612</td>
<td>Interstellar Medium and Astrophysical Fluid Dynamics</td>
<td></td>
</tr>
<tr>
<td>AS.171.613</td>
<td>Radiative Astrophysics</td>
<td></td>
</tr>
<tr>
<td>AS.171.627</td>
<td>Astrophysical Dynamics</td>
<td></td>
</tr>
<tr>
<td>AS.172.633</td>
<td>Language Of Astrophysics</td>
<td></td>
</tr>
</tbody>
</table>

The department offers a wide range of graduate physics, astrophysics, mathematical methods and statistics classes, and while only five are required, the students are encouraged to use the flexibility of the
graduate program and the available classes to design programs of study
that best prepare them for their chosen area of research. In addition
to the required courses listed above, below is the list of the graduate
courses that have been taught in recent years:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.171.610</td>
<td>Numerical Methods for Physicists</td>
<td></td>
</tr>
<tr>

<tr>
<td>AS.171.785</td>
<td>Advanced Particle Theory: Dark Matter</td>
<td></td>
</tr>
</tbody>
</table>

Students in both programs must receive at least a B- in each required course, or they will be required to retake the specific course once more and pass it.

**First and Second-Year Research Requirement**

First-year students must find, by the end of the third week of class in the fall semester, and by the end of the first week of class the second semester, as well as before the summer term begins, a member of the professorial faculty to advise them in some type of research project. The students are required to submit a short written summary of that research experience at the end of the semester. Students may continue with one advisor through all three semesters, or they may choose to cycle through several different research advisors. In some cases, one of these first-year research advisors may become a thesis advisor; but in others, the thesis advisor may change. This research requirement continues until the end of the second year, or until the student finds a thesis advisor.

The nature of these first-year research projects may vary from student to student, from one advisor to another, and from one sub-field of physics to another. In some cases they lead to published research. In other cases, they may be first steps in a longer-term research project. And in some cases, they may comprise reading or independent-study projects to develop background for subsequent research. It is left to the individual advisor to determine what the written summary should entail. These research projects are not research assistantships and are performed in addition to other graduate student responsibilities (teaching and graduate classwork), although they are typically merged with RA-supported research for those students supported by RAs.

**Thesis Research and Defense**

Students are required to find a thesis advisor no later than the beginning of the third year. After the student chooses a thesis advisor, the student forms their Thesis Committee consisting of the advisor and two other faculty members (all Thesis Committees contain at least two full-time faculty from the department). These committees function as extended advisory bodies; students have the opportunity to discuss their progress and problems with several faculty. They also conduct one formal annual review of each student’s progress. Research leading to the dissertation can be carried out not only within the Department of Physics and Astronomy, but with appropriate arrangements, either partly or entirely at other locations if necessitated by the project goals. At the conclusion of thesis research, the student presents the written dissertation to the faculty committee and defends the thesis in an oral examination.

**Requirements for the M.A. Degree**

Although the department does not admit students who intend to pursue the master’s degree exclusively, students in the department's Ph.D. program and students in other Ph.D. programs at Johns Hopkins may apply to fulfill the requirements for the M.A. degree in the Department of Physics and Astronomy. Students from other JHU departments must seek approval from their home department and from the Department of Physics and Astronomy.

Before beginning their M.A. studies, students must have mastered the undergraduate physics material covered by the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.171.204</td>
<td>Classical Mechanics II</td>
<td>4</td>
</tr>
<tr>
<td>AS.171.303</td>
<td>Quantum Mechanics I</td>
<td>8</td>
</tr>
<tr>
<td>&amp; AS.171.304</td>
<td>and Quantum Mechanics II</td>
<td></td>
</tr>
<tr>
<td>AS.171.312</td>
<td>Statistical Physics/Thermodynamics</td>
<td>4</td>
</tr>
</tbody>
</table>

Courses taken elsewhere may qualify at the discretion of the Graduate Program Committee (normally this requirement is satisfied by the Ph.D.-track students before they arrive at JHU as they have completed a B.A. or B.Sci. in Physics at another institution).

To qualify for the M.A. degree in Physics, students must complete eight one-semester 3-credit graduate-level courses in the Department of Physics and Astronomy and pass the departmental research exam. For the M.A. degree in Astronomy, students must complete eight one-semester 3-credit graduate-level courses in the Department of Physics and Astronomy, plus the seminar “Language of Astrophysics” and pass the departmental research exam. The student must receive a grade of B- or above in each of the courses; graduate courses can be retaken once in case of failure.

Of the eight one-semester courses, four must be the core courses listed above in the Ph.D. requirements and two must be Independent Graduate Research courses. The remaining two course requirements for the M.A. degree may be fulfilled either by 3-credit graduate electives or by additional Independent Graduate Research. The research courses must include an essay or a research report supervised and approved by a faculty member of the Department of Physics and Astronomy.

Under most circumstances students pursuing their Ph.D. qualify for the M.A. degree by the end of their second year if they have taken all four core courses in their discipline at JHU, the “Language of Astrophysics”
In many ways, political science is the study of power. This includes the wide array of rules, authority structures, and forms of violence at the local, national, transnational and international levels, as well as how the value, distribution, and accumulation of resources create conditions of security and insecurity among nation states, regions, economic classes, or populations.

**Identities and Allegiances**
A second cluster of research centers on questions of identity and the various allegiances and attachments organized around them. These include how racial, ethnic, gender, and sexual identities inform citizenship and nationalism, the organization of civil society, or the formation of social movements.

**Agency and Structure**
A third cross-cutting area of activity in the department explores questions of agency and structures. Agency includes entrepreneurship, innovation and creative action, and the agency of material things. Structures include formal and informal institutions, particularly the rules, roles, and regulations that guide human relations in the public, private, and non-profit worlds, among states and within them, at the global level and in local communities.

**Borders and Flows**
A fourth cluster examines borders and flows. Research in this area examines the movement of people, ideas, material objects, and natural forces across space and over time. A focus on borders and flows informs the study of territorial regimes, sovereignty, religious intensities, immigration and diasporas, globalizing capital, information, and ecological politics.

**Undergraduate Programs**
Political Science courses can contribute to two different majors:

**Political Science, Bachelor of Arts**
The major in political science described below is designed for students interested in intensive study of the institutions, theory, and problems of politics, government and modern political culture.

**International Studies, Bachelor of Arts**
The department contributes to an interdisciplinary program leading to B.A. or B.A./M.A. degrees in International Studies. This program and its requirements are described under International Studies (http://e-catalog.jhu.edu/arts-sciences/international-studies/).

**Programs**
- Political Science, Bachelor of Arts (p. 2147)
- Political Science, PhD (p. 2148)

For current course information and registration go to https://sis.jhu.edu/classes/

**Courses**

**AS.190.101. Introduction to American Politics. 3 Credits.**
This course examines the ideals and operation of the American political system. It seeks to understand how our institutions and politics work, why they work as they do, and what the consequences are for representative government in the United States. Emphasis is placed on the federal government and its electoral, legislative, and executive structures and processes. As useful and appropriate, attention is also given to the federal courts and to the role of the states. The purpose of the course is to understand and confront the character and problems of modern government in the United States in a highly polarized and plebiscitary era.

Area: Social and Behavioral Sciences
AS.190.102. Introduction To Comparative Politics. 3 Credits.
To understand politics, the sound bites of the modern media take us only so far. In this course, we will take a step back and implement an intellectually rigorous method. Scholars of comparative politics use the method of comparison in order to illuminate important political phenomena of our times. Following this method, we will embark on a scholarly tour of the world and compare the politics of various countries. We will also trace these politics back to their historical sources. We will work from the assumption that there is something to be gained from such comparisons across space and time.
Area: Social and Behavioral Sciences

AS.190.108. Contemporary International Politics. 3 Credits.
An introduction to international politics. Emphasis will be on continuity and change in international politics and the causes of war and peace. The first half of the course will focus on events prior to the end of the Cold War, including the Peloponnesian War, the European balance of power, imperialism, the origins and consequences of WWI and WWII, and the Cold War. The second half will focus on international politics since 1990, including globalization, whether democracies produce peace, the impact of weapons of mass destruction, terrorism, and the prospects for peace in the 21st century. Theories of realism and liberalism will also be considered. This course was previously AS.190.209.
Area: Social and Behavioral Sciences

AS.190.109. Politics of East Asia. 3 Credits.
This course examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. We analyze two enduring themes of classic and contemporary scholarship in comparative politics: development and democracy. The purpose is to introduce students to the various schools of thought within comparative politics as well as to the central debates concerning East Asian politics.
Area: Social and Behavioral Sciences

AS.190.110. American Politics in Film. 3 Credits.
This class uses film to explore a central question in American politics: what is the relationship between the public and those who endeavor to represent them? Over the course of several weeks, we will address this question by viewing Mr. Smith Goes to Washington, A Face in the Crowd, The Candidate, Wag the Dog, and The Ides of March. We will use these films to discuss how political institutions, the media, and money shape our politics. We will also consider how the representation of politics in film has changed over time.
Area: Social and Behavioral Sciences

AS.190.111. Introduction to Global Studies. 3 Credits.
This course surveys scholarly approaches to processes, relations, institutions, and social structures that cross, subvert, or transcend national borders. The course will also introduce students to research tools for global studies. Students who have taken Contemporary International Politics 190.209 or International Politics 190.104 may not register.
Area: Social and Behavioral Sciences

AS.190.137. Freshman Seminar: Choosing a President. 3 Credits.
This fall, as they have done every four years for more than 230 years, Americans will elect a president. Presidential elections are one of the more peculiar rituals in American politics, but they are enormously consequential. In this course we will track the 2020 presidential campaign in real time while exploring the history and politics of presidential elections and considering how presidential elections affect other aspects of American politics. The course will involve a combination of reading and writing with hands-on research and exploration projects.
Area: Social and Behavioral Sciences

AS.190.180. Introduction to Political Theory. 3 Credits.
This course serves as an introduction to the study of political thought. Political thought critically considers what we think we mean when we talk about 'the political', reflections that often lead political theorists to examine not only various kinds of political regimes, institutions, and practices, but also to explore matters of ethics, morality, anthropology, history, and biology. This particular course will focus on classical debates about freedom, equality, authority, and justice that have been revisited and revised by feminist political theorists such as Mary Wollstonecraft, Simone de Beauvoir, Audre Lorde, Catharine MacKinnon, bell hooks, Iris Marion Young, and Wendy Brown.
Area: Social and Behavioral Sciences

AS.190.204. Ancient Political Thought. 3 Credits.
The premise of this course is that a political perspective is tied up with a (meta)physical one, that is to say, with ideas about the nature of Nature and of the status of the human and nonhuman elements within it. How is the universe ordered? Who or what is responsible for it? What place do or should humans occupy within it? How ought we to relate to nonhuman beings and forces? We will read three different responses to such questions and show how they are linked to a particular vision of political life. In the first, the world into which human are born is ordered by gods whose actions often appear inexplicable: Prometheus Bound by Aeschylus, Oedipus the King by Sophocles, and Hippolytus by Euripides will represent this tragic vision of the cosmos. In the second, Plato , in Republic and in Phaedrus, the forces of reason and ethos play central and powerful roles. In the third, Augustine of Hippo presents a world designed by a benevolent, omnipotent God who nevertheless has allowed humans a share in their own fate. We end the course with Nietzsche's Birth of Tragedy , which offers a perspective on these three visions of the world – the tragic, the rational, and the faithful – which will help us evaluate them in the light of contemporary political and ecological concerns.
Area: Humanities, Social and Behavioral Sciences

AS.190.205. Capital: The Best Seller. 3 Credits.
When Thomas Piketty published _Capital in the Twenty-First Century_, last spring, he made the rounds on talk shows just like a movie star with a new film out, or a rock star with an album about to drop. How is such an “event” possible, and what does it tell us about the book’s subject, capital? This class explores the questions Piketty’s book raises: What is capital? How does it come about, how does it function, and what are its effects?
Area: Humanities, Social and Behavioral Sciences

AS.190.207. The Power of Rhetoric. 3 Credits.
In a time when people claim language 'has no preference to facts, truths, or realities', the power of rhetoric is both vilified and lauded in the strongest possible terms. According to some, rhetoric is responsible for the dismissal of everything from political dissent to science as a species of 'fake news'. By contrast, others argue public life cannot be repaired without a 'restoration' of rhetoric. What are these people talking about? This course will help us figure this out. Students will be introduced to the art of persuasive speech, writing, and visual media so as to be prepared to critically examine and evaluate the claims made for and about the role of language in contemporary politics. Topics will include informal logic, appeals, fallacies, figures and tropes. Among others, we will read texts by Aristotle, Austin, Barthes, Foucault, Freud, Kierkegaard, Nietzsche, and Zizek. In addition to a number of short exercises and writing assignments throughout the semester, there will be a mid-term and a final paper.
AS.190.217. Introduction to International Relations Theory. 3 Credits.
This course is a broad introduction to international relations theory in
a format that encompasses lecture and discussion. We will explore
mainstream theoretical perspectives and critiques of those perspectives,
as well as more recent developments in the field.
Area: Social and Behavioral Sciences

AS.190.220. Global Security Politics. 3 Credits.
Contemporary and emerging technologies of nuclear (weapons, terrorism,
energy) outer space (missiles, missile defense, asteroids), biosecurity
(bioweapons, pandemics, terrorism) and cyber (war, spying, surveillance)
and implications for security, international politics, arms control, and
political freedom.
Area: Social and Behavioral Sciences

AS.190.226. Global Governance. 3 Credits.
Global problems like poverty, financial instability, human rights abuses,
and climate change threaten both international order and human well-
being. In the absence of a world state, these problems must be addressed
by an increasingly complex, transnational network of organizations and
social groups. First, we will aim to understand and explain how global
problems are governed through detailed case studies of International
Organizations and Non-Governmental Organizations such as the United
Nations, World Bank, Intergovernmental Panel on Climate Change,
Amnesty International and more. Second, we will critically evaluate
the successes and failures of these organizations and explore the
possibilities for improving democratic governance at the global level.
Area: Social and Behavioral Sciences

AS.190.227. U.S. Foreign Policy. 3 Credits.
This course will provide and analysis of US foreign policy with a focus
on the interests, institutions, and ideas underpinning its development.
While the course will offer a broader survey, the emphasis will be on
important developments during the Cold War, such as the articulation
of containment strategies and nuclear deterrence, and the analysis
of contemporary foreign policy questions, including the problems of
terrorism and failed states. In addition to security issues, attention will
also be paid to significant developments in international trade policy.
Area: Social and Behavioral Sciences

AS.190.245. The Politics of Global Development. 3 Credits.
Development is often assumed to be an economic issue. In this course
we examine the politics of development on a global scale. We begin
by looking at the colonial and Cold War histories of development. We
then use these histories to contextualise contemporary development
issues that directly affect international relations such as aid and debt,
humanitarianism, food security, land “grabs”, migration and indigenous
rights. The course also seeks to understand the ways in which the issues
underlying global development have always connected and continue to
connect the peoples and polities of the Global North and Global South.

AS.190.250. Statistics for Public Policy. 3 Credits.
This course is a short, intensive supplement to Thinking Visually About
Data, designed to give students a deeper understanding of the basic
statistical concepts needed to inform public policy decision-making.
Prerequisite(s): Cannot enroll in AS.190.250 if you have already taken
EN.553.111 OR AS.230.205
Area: Quantitative and Mathematical Sciences

AS.190.281. Virtue, Labor, and Power (Classics of Political Thought II). 3 Credits.
This is not a class in the history of political thought. Instead, it is an
opportunity for a selective, circumscribed, but very focused engagement
with some of the most powerful and provocative texts in that history.
We will read selections from six thinkers (Socrates, Machiavelli, Locke,
Kant, Mill, Hart, and Foucault), focusing on three themes (Virtue, Labor,
and Power). These texts have all profoundly shaped the way we think
about politics, and they are texts that resonate with our own political
problematics today.
Area: Social and Behavioral Sciences

AS.190.282. Authority and Liberty. 3 Credits.
Beginning with Plato, and using Nietzsche’s history of metaphysics as
a guide, this course serves as an introduction to Euro-American political
thought by analyzing the philosophical foundations of political authority.
In addition to works by Plato and Nietzsche, readings will include works
by Kant, Mill, Hart, and Foucault.
Area: Social and Behavioral Sciences

Writing Intensive

AS.190.284. Classics of Political Theory: Political Freedom. 3 Credits.
This course investigates core questions of what constitutes political
freedom, what limits on freedom (if any) should be imposed by authority,
and the relationship between freedom, responsibility and political
judgment. Spanning texts ancient, modern and contemporary, we shall
investigate how power inhabits and invigorates practices of freedom
and consent. Among the questions we will consider: Can we always tell
the difference between consent and coercion? Are morality and freedom
incompatible? Is freedom from the past possible? By wrestling with
slavery (freedom’s opposite) we will confront the terrifying possibility
that slavery can be both embodied and psychic. If our minds can be
held captive by power, can we ever be certain that we are truly free?
The political stakes of these problems will be brought to light through a
consideration of issues of religion, gender, sexuality, civil liberties, class
and race.
Area: Social and Behavioral Sciences
AS.190.300. Racial Inequality, Policy and Politics in the US. 3 Credits.
While policies were passed to ensure equal opportunity for racially subjugated Americans, the United States witnessed increasing stratification of wealth and income and deepening concentration of poverty, stagnation in closing racial gaps, and new forms of inequality posed by the striking upsurge in contact with the criminal justice system at the bottom of the skills ladder and concentration of wealth at the top. At the same time, the welfare state came under attack and faced challenges posed by an aging population, women entering the labor force, deindustrialization, and international pressures of globalization. Social spending withered in some areas while spending on citizens was increasingly likely to happen through tax expenditures and private means. This course investigates the politics around these developments and competing perspectives in debates over redistributive policies in the United States and their impact on inequality, particularly race and gender inequality. We will examine the contours of inequality and explanations for why it has expanded over the past several decades. We explore why the US is exceptional in both the level of inequality it tolerates and the generosity and types of remedies to alleviate poverty in comparison to its European counterparts and debate the role of race, unions, electoral politics and institutions. We investigate several specific cases of persistent racial inequality – concentrated poverty, segregation, and incarceration. We investigate both how policies have reinforced racial and gender divisions from a top-down perspective as well as examining under what conditions the disadvantaged contest inequality, exploring how political struggle shapes policy from the bottom-up. The last part of the course examines the consequences of inequality and social policy for representation and citizenship and how economic inequality affects political representation and responsiveness of elites to masses.
Area: Social and Behavioral Sciences

AS.190.301. Race, Politics and Literature. 3 Credits.
This course will explore theories and practices of race and immigration in order to illuminate the proliferation of populations regarded as disposable in contemporary politics. We will pay special attention to the contestable criteria used to determine eligibility for membership in the human race. We shall also examine how political power influences the relays between citizenship status and those whose lives are worthy of protection, and those who should be allowed to die.
Area: Social and Behavioral Sciences

AS.190.302. How to be a Capitalist. 3 Credits.
Everyone usually assumes that they know what capitalism is and how it works. Yet some of us often make very poor choices given the framework of a capitalist system, and many of us continually express shock and outrage over outcomes and results that are perfectly reasonable (and to be expected) given the operation of capitalism. This advanced seminar will engage with readings in political theory and political economy that explore the fundamental logic of capitalism. Previous course in Political Theory or Instructor's Permission.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.303. Latin American Politics and Society in Comparative and Historical Perspective. 3 Credits.
The seminar will introduce students to the political and economic trajectories of Latin America as a whole and of individual countries, including Mexico, Brazil, Argentina, and Chile. Special attention will be paid to the long-term trajectory of the political regime (democracy versus dictatorship) and of economic development (variations in GDP per capita). Competing theories, from economic dependence to historical institutionalism, will be examined for their contribution to our understanding of Latin America’s relative economic backwardness and low quality democracies.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.307. Race, Politics and Literature. 3 Credits.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.308. Democracy and Dictatorship: Theory and Cases. 3 Credits.
The course will cover three topics: 1) The conceptualization of political regime, democracy and authoritarianism. We will also consider neighboring concepts of other macro-political structures—government, state, and administration—in order to be able to demarcate what is distinctive about the study of political regimes. 2) The characterization of political regimes in most Western and some non-Western countries, in history and today. We will centrally focus on the so-called “Waves of Democratization,” but we will also consider stories with less happy outcomes, that is, processes that led to the breakdown of democracies and the installation of repressive dictatorships. 3) The explanation(s) of the stability and change of political regimes around the world. Theoretical accounts of regime change come in many flavors—emphasis on economic versus political causes, focus on agents and choices versus structured and constraints, international versus domestic factors, among others. We will consider most of them.
Area: Social and Behavioral Sciences

AS.190.311. Disposable People: Race, Immigration and Biopolitics. 3 Credits.
This course will explore theories and practices of race and immigration in order to illuminate the proliferation of populations regarded as disposable in contemporary politics. We will pay special attention to the contestable criteria used to determine eligibility for membership in the human race. We shall also examine how political power influences the relays between citizenship status and those whose lives are worthy of protection, and those who should be allowed to die.
Area: Social and Behavioral Sciences

AS.190.314. Struggles for Democracy: from the French Revolution to the Arab Spring. 3 Credits.
This course is a systematic introduction to theories of regime change, which includes episodes of democratic transitions (gradual or revolutionary) and breakdowns, as well as trajectories of regime stability, like the persistence of various types of authoritarian rule and democratic politics. Two thirds of the course will cover theories, which in comparative politics are mostly inductive constructions from historical experiences. The remaining third will be case studies of exemplary events and processes, for instance, the differentiation of political regimes in post-WWII Europe in terms of liberal, fascist, and social-democratic regimes; the convergence towards democracy in Western Europe and Latin America between 1950 and 1990, and the fragility of democracy in Tropical Africa and the Middle East.
Area: Social and Behavioral Sciences

AS.190.315. Asian American Politics. 3 Credits.
This course examines issues of political identity, political incorporation, and political participation of Asian Americans. Themes include Asian American panethnicity, the struggle for immigration and citizenship, Asian American electoral politics, political activism and resistance since the 1960s, and the impact of Asian Americans on the politics of race and ethnicity in the United States.
Area: Social and Behavioral Sciences
Writing Intensive
AS.190.317. Race and Segregated Time. 3 Credits.
This course explores how time, and not just space, is segregated along racial lines. We shall examine how racial injustices are experienced as impositions on human time, how resistance to racial inequality has often been figured in temporal terms, and what it means to think in untimely ways that challenge how the extended lifespans of racially dominant groups is contingent upon the foreshortened lifetimes of racial others. Readings will bring political theory into contact with contemporary experiences of race, such as: criminal (in)justice, environmental racism and the proliferation of human disposability. Recommended Course Background: One Political Theory course.
Area: Social and Behavioral Sciences

AS.190.318. Political Monsters. 3 Credits.
This undergraduate seminar in political theory will explore the politics of fear through the trope of political monsters. We will engage with the genre of horror as a political genre, and ask why our current time period seems to be marked by particular sorts of monsters – zombies, vampires, and others. The course will engage with a variety of texts (political tracts, literary and other fictional projects, theoretical works) along with film and television and other media. The trope of political monsters will be the vehicle through which we explore the politics of democracy, of race, of colonialism, and of capitalism.
Area: Social and Behavioral Sciences

AS.190.319. Policy & Politics Design. 3 Credits.
The study of public policy is the study of power—who has it, how it is acquired, and how policies themselves grant or diminish the power of individuals and groups. It is also the study of choice—how political actors make consequential decisions to deploy their resources in different ways, some of which enhance magnify their power while others diminish it. This class will examine the scholarly literature on how public policy is made and how it can be changed. We will also engage directly with actors seeking to change public policy, in order to integrate our academic knowledge with their practical experience.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.320. Politics Of East Asia. 3 Credits.
Examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. Topics include state-society relations, late development, nationalism, democratization, political culture, social movements, and globalization.
Area: Social and Behavioral Sciences

AS.190.321. Future of American Democracy. 3 Credits.
For the most part, observers of American politics have not considered the possibility that the American democratic regime might be at risk. But the unexpected election of Donald Trump in 2016 and the subsequent course of his presidency have occasioned a great deal of uncertainty and anxiety about whether democracy in the United States is at risk and whether American political institutions can withstand the stresses of contemporary politics. This course will use the Trump era to explore the conditions that seem to threaten the stability of the American regime. We will begin by exploring the political circumstances that led to Trump's rise. We will then examine what we can learn from the experience of other countries about the conditions that make democracy either robust or fragile. Finally, we will consider how a set of contemporary political conditions in the United States — extreme partisan polarization, intense racial antagonism, growing economic inequality, and expanded executive power — contribute to the challenges facing American democracy today and in the future.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.322. Finding Equality in Law and Society. 3 Credits.
In this class, we will ask questions about the relationship between equality, law, and society. We will investigate how people have used law in their movements for greater equality, and ask whether law has served these movements well and how it has worked. We will pay particular attention to movements based on race, gender, and economic class.

AS.190.323. Democracy And Elections. 3 Credits.
An examination of most aspects of democratic elections with the exception of the behavior of voters. Topics include the impact of various electoral systems and administrative reforms on the outcome of elections, standards for evaluations of electoral systems, and the impact of the Arrow problem on normative theories of democratic elections.
Area: Social and Behavioral Sciences

AS.190.324. Politics of Information. 3 Credits.
Considers global and comparative politics of information, information technologies, and the Internet. Examines governance of information (ownership of information, rights to information, privacy) and governance of information technologies (domain names, social media websites, etc.).
Area: Social and Behavioral Sciences

AS.190.325. National Security-Nuclear Age. 3 Credits.
This course examines the impact of weapons of mass destruction on international politics with an emphasis on security issues. The first half of the course focuses on the history of nuclear weapons development during the Cold War and theories of deterrence. The second half of the class considers contemporary issues including terrorism, chemical and biological weapons, ballistic missile defense and proliferation. Requirements include a midterm, final and a ten page paper.
Area: Social and Behavioral Sciences

AS.190.330. Japanese Politics. 3 Credits.
This course introduces students to the major debates and issues of postwar Japanese politics. Topics include nationalism, electoral politics, civil society, and immigration.
Area: Social and Behavioral Sciences
Writing Intensive
AS.190.331. America and the World. 3 Credits.
This course is a survey of the unique position of the United States in world politics. We will cover the broader international relations literature on the dynamics of hegemony, empire, and asymmetrical relationships, from work in the realist tradition to more critical approaches. We will also assess the importance of American domestic institutions in understanding past and contemporary developments.
Area: Social and Behavioral Sciences

AS.190.332. American Constitutional Law. 3 Credits.
This course covers enduring debates about the way the Constitution has structured the U.S. government and about which powers the Constitution assigns to the federal government and to the states. We will examine these debates in the context of American political history and thought by studying the writings of prominent participants, and landmark Supreme Court cases.
Area: Social and Behavioral Sciences

AS.190.333. American Constitutional Law. 3 Credits.
This course covers enduring debates about the way the Constitution has structured the U.S. government and about which powers the Constitution assigns to the federal government and to the states. We will examine these debates in the context of American political history and thought by studying the writings of prominent participants, and landmark Supreme Court cases.
Area: Social and Behavioral Sciences

AS.190.334. Constitutional Law. 3 Credits.
Topics include executive and emergency power, racial and gender equality, and selected free speech and religious freedom issues.
Area: Social and Behavioral Sciences

AS.190.335. Imagining Borders. 3 Credits.
What is a border and why do borders matter in global politics. What do borders mean under conditions of globalization? An examination of the politics of borders, transborder flows, and networks within and across borders. The readings which come from political science and other disciplines, will include theoretical and case-specific works.
Area: Social and Behavioral Sciences

AS.190.336. Foundations of International Relations Theory. 3 Credits.
This course is a broad conceptual introduction to international relations theory in a format that stresses close reading and critical discussion. We will explore mainstream theoretical perspectives and critiques of those perspectives, as well as more recent developments in the field. By the end of the course, students will have a firm grasp of the core issues and debates in the field. The course is conceptually demanding; interested students should have at least completed an introductory course in political science.

AS.190.337. Business, Finance, and Government in E. Asia. 3 Credits.
Business, Finance, and Government in East Asia explores the dynamics of East Asia's economic growth (and crises) over the last fifty years. We will examine Japan's post-war development strategy, the Asian tiger economies, and China's dramatic rise. Centered on case studies of major corporations, this course examines the interplay between politics and economics in East Asia, and considers the following questions: How have businesses navigated East Asia’s complex market environment? In what ways can the state foster economic development? How has the financial system been organized to facilitate investment? What are the long-term prospects for growth in the region?
Area: Social and Behavioral Sciences

AS.190.338. Comparative Political Behavior. 3 Credits.
An introduction to the study of political behavior, emphasizing electoral behavior in democratic countries.
Area: Social and Behavioral Sciences

AS.190.339. American Racial Politics. 3 Credits.
Recommended Course Background: AS.190.214
Area: Social and Behavioral Sciences

AS.190.340. Korean Politics. 3 Credits.
This course introduces students to the historical and institutional foundations of modern South Korean politics. Topics include nationalism, political economic development, civil society, globalization, and ROK-DPRK relations.(CP)
Area: Social and Behavioral Sciences

AS.190.341. Research Seminar on Political Parties. 3 Credits.
This seminar has two basic objectives: both theoretical and empirical study of selected topics in the comparative literature on political parties, and the ultimate production of a publishable-quality (or conference-presentable-quality) paper. Topics will include (but not be limited to) the place of parties in political theory and the nature of party systems, party organization, and party behavior in the United States and other countries.
Area: Social and Behavioral Sciences

AS.190.342. Seminar In Anti-Semitism. 3 Credits.
Jews exercise a good deal of power in contemporary America. They are prominent in a number of key industries, play important roles in the political process, and hold many major national offices. For example, though Jews constitute barely two percent of America’s citizens, about one-third of the nation’s wealthiest 400 individuals are Jewish and more than ten percent of the seats in the U.S. Congress are held by Jews.
One recent book declared that, “From the Vatican to the Kremlin, from the White House to Capitol Hill, the world’s movers and shakers view American Jewry as a force to be reckoned with.” Of course, Jews have risen to power in many times and places ranging from the medieval Muslim world and early modern Spain through Germany and the Soviet Union in the 20th century. In nearly every prior instance, though, Jewish power proved to be evanescent. No sooner had the Jews become “a force to be reckoned with” than they found themselves banished to the political margins, forced into exile or worse. Though it may rise to a great height, the power of the Jews seems ultimately to rest on a rather insecure foundation. Cross-listed with Jewish Studies. Course is open to juniors and seniors.
Area: Social and Behavioral Sciences

AS.190.343. The Social Contract and its Discontents. 3 Credits.
This course focuses on one of the most powerful stories told in the tradition of western political theory: the story of the social contract. This story is about the constitution of legitimate political authority. It is told in many ways and each version makes different assumptions, in particular about human nature, the power of reason, the value of order, and the character of justice. We examine this often-conflicting assumptions and explore how they continue to inform the way we think about the possibilities and problems of politics. Readings include texts by Arendt, Hobbes, Locke, Rousseau, Freud, Pateman, the Federalists, Derrida, and Douglass. Final grades are based on class participation, two exams and two papers.
Area: Social and Behavioral Sciences
AS.190.366. Free Speech and the Law in Comparative Perspective. 3 Credits.
This class explores the ideas and legal doctrines that define the freedom of speech. We will examine the free speech jurisprudence of the U.S. in comparison to that of other systems, particularly the jurisprudence of the European Court of Human Rights and the Supreme Court of Canada. Area: Social and Behavioral Sciences

AS.190.373. The Politics of Public Policy. 3 Credits.
This course is an introduction to the political structure and process of making public policy in the United States. Public policymaking is, above all, an arena in which policy professionals try to bring systematic evidence and scientific knowledge to bear to diagnose, understand, and solve social problems. At the same time, policymaking also takes place in a political environment, in which strategic and purposive actors contend for power and seek to advance their own goals and realize their own visions about how the world ought to be changed for the better. The goals that participants in the policymaking process pursue may take a variety of forms: substantive policy outcomes, of course, but also power, political advancement, or material advantage. The actors who populate the process, moreover, may disagree about the goals they seek and making policy — especially in democratic political systems — requires some means of resolving these disagreements. Actors also differ in the resources they have at their disposal to seek their goals — power, money, organization, for example, but also knowledge and expertise. Finally, policymakers cannot do anything they want in pursuit of their goals. They are constrained by the rules and structures that make up the policymaking system. These factors — actors, goals, resources, knowledge, and rules — shape the politics of policymaking and frame the strategic options available to policymakers.

AS.190.379. Nationalism and the Politics of Identity. 3 Credits.
Nationalism ties powerful organizations to political mobilization, territory, and individual loyalty. Yet nationalism is typically studied in isolation from other social formations that depend upon organizational — individual linkages. Alternative types of identity category sometimes depend similarly upon organizations that collect and deploy resources, mobilize individuals, erect boundaries, and promote strong emotional connections among individuals as well as between individuals and institutions. In this class, we study classic and contemporary works on nationalism, drawn from multiple disciplinary and analytic traditions, in the comparative context of alternative forms of identity. The focus of the class will be primarily theoretical, with no regional or temporal limitations.

AS.190.380. The American Welfare State. 3 Credits.
This course analyzes the distinctive US welfare state in historical and comparative perspective. We begin with a survey of the policy context, an historical overview from the poorhouses through the Great Society, and a tour of welfare states across the rich democracies. We then survey developments — and explain the actual workings of policy — across jobs, education, welfare, pensions, and health care. We explore the institutional and political factors behind their divergent trajectories through conservative revival and the age of Trump. Students will write a seminar paper exploring policy development over time in a program or area of their choosing. Enrollment restricted to Social Policy minors only. Prerequisite(s): Students may take AS.190.380 or AS.360.380, but not both. Area: Social and Behavioral Sciences Writing Intensive

AS.190.381. Global Environmental Politics. 3 Credits.
Area: Social and Behavioral Sciences Writing Intensive

AS.190.382. Democracy and Development: Theory and Cases. 3 Credits.
Most wealthy countries are democracies. But not all democracies are wealthy—India, Costa Rica, and Mongolia are prominent examples of poor countries with democratic regimes. The course will examine the relation between economic development and political democratization under three big questions. (a) Under what conditions, and through which mechanisms, does economic development promote democracy? (b) If economic development is not possible in the foreseeable future, how do countries achieve stable democratization? (c) Under what conditions, and through which mechanisms, does democracy foster economic development? Area: Social and Behavioral Sciences Writing Intensive

AS.190.384. Urban Politics & Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations. Cross-listed with Africana Studies. Area: Social and Behavioral Sciences

AS.190.385. Urban Politics and Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations. Cross-listed with Africana Studies. Area: Social and Behavioral Sciences

AS.190.387. Parties and Elections in America. 3 Credits.
Considers how parties and elections structure political conflict, and facilitate (or not) democratic control of government. Topics include campaigns, voting behavior, election administration, money in politics, presidential nomination, and party coalitions. Area: Social and Behavioral Sciences Writing Intensive

AS.190.394. Comparative Politics of the Middle East and North Africa. 3 Credits.
This course examines the domestic, regional, and transnational politics of the Middle East and North Africa. The class is organized into three units. The first examines major armed conflicts—anti-colonial, intra-state, and inter-state—from 1948 through the 1990s. It uses these historical moments as windows onto key issues in Middle Eastern and North African political issues such as external intervention/occupation, human rights, sectarianism, social movements, and memory politics. Unit Two focuses on policy relevant issues such as democratization, minority populations, religion and politics, and gender. In Unit Three, students will explore the politics of the Arab Uprisings through critical reading and discussion of new (post-2011) scholarship on MENA states, organizations, and populations. Enrollment limited to Political Science and International Studies majors. Area: Social and Behavioral Sciences
Writing Intensive

AS.190.396. Capitalism and Ecology. 3 Credits.
Capitalism and Ecology focuses on the relations between capitalism and climate during the era of the Anthropocene. How do capitalist processes of fossil extraction, consumption, production and governance contribute to the pace of climate warming, glacier flows, the ocean conveyor system, species loss and other phenomena? What are the effects and the possible modes of political response? How do the nonhuman, self-organizing processes such as glaciers, oceans and climate change on their own as they also amplify the effects of capitalist emissions? The course combines texts on capitalism and activism with those by geoscientists on how the nonhuman systems work. Books by authors in the fields of political theory, geology, anthropology, economics, philosophy and ethology will be drawn upon. Authors such as Michael Benton, Brian Fagan, Hayek, Naomi Klein, Fred Hirsch, Fred Pearce, van Dooren and Connolly are apt to be read to engage these issues. A previous course in political theory is recommended. The class is organized around student presentations on assigned readings. Two papers, 10-12 pages in length. Extensive class discussion.
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive

AS.190.398. Politics Of Good & Evil. 3 Credits.
The Politics of Good and Evil places a set of classic myths into conversation with recent philosophical and political work on existential questions. The myths include the Book of Job, Genesis (J version), two dramas by Sophocles, a selection from Augustine, and Voltaire's Candide. Texts by Nietzsche (Thus Spoke Zarathustra), William James, (A Pluralistic Universe) and Connolly are then placed into conversation with both each other and these classic stories. Kohlberg's The Sixth Extinction closes the class, encouraging us to think again about the relations between mythic orientations to responsibility, tragic possibility, nature/culture imbrications and the shape of contemporary life during the Anthropocene. Previous work in political theory is recommended. The course is devoted to "elemental theory", in which diverse existential stories jostle each other and periodically disturb us, challenging us to explore new thoughts in a new world. One class presentation, two 10-12 page papers, and extensive class discussion.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.402. Environmental Racism. 3 Credits.
This is an undergraduate political theory seminar that addresses the disproportionate impact of environmental destruction on racially stigmatized populations. We shall examine the logics of power whereby the natural world is subjected to exploitation and domination, in tandem with the subordination of racial subjects historically identified as closer to nature. Likewise, we will explore political and theoretical challenges to environmental racism, such as those posed by indigenous communities, decolonial theory, and political movements contesting the intersection of racial inequalities and ecological crises.
Writing Intensive

AS.190.403. Arendt/Foucault. 3 Credits.
This upper-level undergraduate writing intensive course brings together the work of Hannah Arendt and Michel Foucault to focus on their critiques of modernity and their discussions of political change/revolution. Although Arendt and Foucault are often understood as coming from and supporting different political theoretical traditions, the course will also explore ways in which their shared debt to the work of Friedrich Nietzsche illuminates sometimes surprising commonalities and complementary positions. There is no final exam in this course but in addition to reading assignments, students will be required to write three papers.
Area: Humanities
Writing Intensive

AS.190.404. Race and Debt: Living on Borrowed Time. 3 Credits.
This is an advanced undergraduate seminar that explores how racial stigma functions as a marker of being always already in debt. In view of the legacies of settler-colonialism, imperialism and chattel slavery, how is it that those from whom so much has been taken are nevertheless regarded as perpetually in debt? We shall examine the moral, economic and racialized logics of power through which a range of political subjects come to be regarded as ungrateful "takers" as opposed to "makers," and owing a debt to society. In so doing, we will investigate how temporality functions as a tool of power by considering how the indebted are made vulnerable to precarity, discipline, and disposability—in effect, forced to live life on borrowed time.
Writing Intensive

AS.190.405. Food Politics. 3 Credits.
This course examines the politics of food at the local, national, and global level. Topics include the politics of agricultural subsidies, struggles over genetically modified foods, government efforts at improving food safety, and issues surrounding obesity and nutrition policy. Juniors, seniors, and graduate students only. Cross-listed with Public Health Studies.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.406. The Executive Branch. 3 Credits.
In the 19th Century America was noted for its courts, political parties and representative institutions. Today, America's political parties and representative institutions have declined in importance while the institutions of the executive branch have increased in importance. This seminar will examine the nation's key executive institutions and aspects of executive governance in the U.S. Students will alternate primary responsibility for week's readings. Every student will prepare a 10-15 page review and critique of the books for which they are responsible in class.
Area: Social and Behavioral Sciences

AS.190.407. Geopolitics, Nuclear Weapons and World Order. 3 Credits.
Intensive examination of unresolved debates about the implications of nuclear weapons for world order, focusing on deterrence, strategy, arms control, multipolarity, proliferation, terrorism, and abolition, as well as roles of liberal, democratic, and constitutional political forms and popular public involvement. Readings from classic and contemporary sources.
Area: Social and Behavioral Sciences
AS.190.408. Sovereignty: Historical Perspectives and Contemporary Issues. 3 Credits.
This seminar provides an in-depth exploration of the concept of sovereignty by examining its historical development, current controversies, and its salience in international relations scholarship. Works in political theory and the international law literature will also inform our discussion. The course is open to advanced undergraduate students with previous coursework in political science. Area: Social and Behavioral Sciences

AS.190.409. Research Seminar in State Politics. 3 Credits.
The United States Constitution creates a federal system that leaves a great deal of power in the hands of the individual states. Each year, the states collectively adopt nearly 20,000 new laws, an average of 400 per state, while the U.S. Congress in recent years has on average enacted hardly more than 150 new statutes. In terms of spending, state and local governments collectively spent $3 trillion dollars last year—almost as much as the federal government. The states are especially important in the realms of education, health care, environmental policy and transportation. In all these areas, to be sure, the states share power with the federal government but possess considerable discretionary authority. Despite the importance of the states, most Americans know little about them. Hardly anyone knows much about their state's executive branch or legislature. In a recent survey, most Americans couldn't say whether their state had a constitution (they all do). In this seminar we will explore some of the mysteries of state politics. Each student will develop a research project designed to discover something about the states that no one else knows. Writing Intensive

AS.190.410. Beyond Bob Marley: Exploring the Rastafari Movement in the Greater Baltimore Area. 3 Credits.
This course uses a community based learning approach to inquire into the presence of the Rastafari community in the Baltimore area. Most people will have heard of Rastafari through the music of Bob Marley. People might not know, however, that Rastafari emerges out of and has been part of a global history of liberation struggles. This course is co-taught with a local Rastafari organization. You will be intellectually and practically equipped to take part in a project of original research on the Rastafari presence in the Baltimore region, starting with the demonization of the movement in the 1980s “war on drugs” and including the movement’s response. Area: Humanities, Social and Behavioral Sciences

AS.190.412. Political Violence. 3 Credits.
An examination of the ways in which violence has been used to secure political ends. Topics include terrorism, assassination, genocide, coups, rebellions and war itself. Students examine what makes types of political violence unique and what unites them. (Formerly AS.190.372) Area: Social and Behavioral Sciences

AS.190.416. Nuclear Weapons and World Politics. 3 Credits.
This course examines the impact of nuclear weapons on international politics and world order. Topics to be considered include theories of deterrence, proliferation, the development of new weaponry, terrorism, defense, arms control and abolition. The effect of nuclear weapons on the existing state system and prospects for new configurations of world governance will also be addressed.

AS.190.419. Race and Segregated Time. 3 Credits.
This course explores how time, and not just space, is segregated along racial lines. We shall examine how racial injustices are experienced as impositions on human time, how resistance to racial inequality has often been figured in temporal terms, and what it means to think in untimely ways that challenge how the extended lifespans of racially dominant groups is contingent upon the foreshortened lifetimes of racial others. Readings will bring political theory into contact with contemporary experiences of race, such as: criminal (in)justice, environmental racism and the proliferation of human disposability. Recommended Course Background: One Political Theory course. Writing Intensive

AS.190.421. Violence: State and Society. 3 Credits.
This course will examine violence that occurs mainly within the territory of nominally sovereign states. We will focus on violence as an object of study in its own right. For the most part, we will look at violence as a dependent variable, though in some instances it will function as an independent variable, a mechanism, or an equilibrium. We will ask why violence starts, how it “works” or fails to work, why it takes place in some locations and not others, why violence take specific forms (e.g., insurgency, terrorism, civilian victimization, etc.), what explains its magnitude (the number of victims), and what explains targeting (the type or identity of victims). Area: Social and Behavioral Sciences

AS.190.423. Planetary Geopolitics. 3 Credits.
With the tools of geopolitics, course explores political debates over globalization of machine civilization and changes in scope and pace, space and place, and role of nature in human affairs. Area: Social and Behavioral Sciences Writing Intensive

AS.190.424. Policy Disasters. 3 Credits.
Investigates the causes of large-scale policy disasters, examining the role of ideology, psychology, organization design and political incentives. Examples may be drawn from the Iraq War, Bay of Pigs, Hurricane Katrina, the U.S. Financial crisis, Shuttle Challenger disaster. economic development policy, privatization, and the Great Society. Limited to seniors or with permission of instructor. (CP / AP) Area: Social and Behavioral Sciences

AS.190.425. The New Deal and American Politics. 3 Credits.
This seminar explores how the New Deal, the fundamental moment in the post-Civil War United States, has structured politics and government across a variety of domains ever since. Topics include presidential leadership, executive power, political parties, labor, race, and the welfare state. Area: Social and Behavioral Sciences
AS.190.426. Qualitative Research. 3 Credits.
This class is designed to introduce students to qualitative methodology. Practically, students will gain first-hand experience with qualitative research methods via research design, ethics review, in-depth interviewing, participant observation, and archival/primary source research. They will learn to deploy analytical techniques such as discourse analysis and process tracing. Students will also be asked to consider the merits of qualitative approaches more generally, and discuss the relative advantages of qualitative, experimental, and quantitative approaches. Questions that we will discuss include: What place should qualitative research have in a research design? Can qualitative research test hypotheses, or only generate them? Can qualitative research explain social phenomena, or only interpret them? What are the disadvantages and advantages of qualitative approaches compared to quantitative approaches? For what kinds of research questions are ethnographic techniques best suited? Is replicability possible for ethnographic field research? What criteria of evidence and analytical rigor apply on this terrain?
Area: Social and Behavioral Sciences

AS.190.427. Political Economy of Japan and Korea. 3 Credits.
This upper-level seminar examines some of the major debates and issues of postwar Japanese and South Korean political economy. Topics include nationalism, gender politics, civil society, immigration, and US-Japan-South Korea trilateral relations.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.428. The Politics of Disaster in the Middle East and Beyond. 3 Credits.
This course examines the politics of natural and man-made disasters, including war, forced migration, drought, famine, earthquakes, tsunamis, storms, and epidemics. Focusing on the Middle East, it also presents comparative cases from Africa, South and Southeast Asia, and North America. In doing so, the class will examine the unique ways that different types of disasters interact with governance structures; social and economic inequalities; medical infrastructure; gender; race and ethnicity; and political cleavages. Throughout the course, students will learn basic elements of research design and methods in addition to welcoming experienced disaster response and analysis practitioners to class. Finally, the Politics of Disaster in the Middle East and Beyond addresses some of the philosophical aspects of working in and studying disaster-affected contexts, bringing an ethical sensibility to policy-relevant analysis.

AS.190.429. The Political Bases of the Market Economy. 3 Credits.
Although “the market” is conventionally understood as separate from “politics”, the modern market economy did not arise in a political vacuum. In fact, the very separation between the economy and politics is itself the product of a politically potent set of ideas. This course is an upper-division reading seminar on the origins and evolution of the modern market economy. Readings will include Smith, Marx, Weber, Polanyi, Keynes, Hayek, Friedman, Becker, and Foucault. Recommended course background: Introduction to comparative politics OR any college-level course in social or political theory.
Area: Social and Behavioral Sciences

AS.190.430. Time and Punishment. 3 Credits.
"If you can't do the time, don't do the crime." According to ask.com, this common expression was made popular in the 1970s by the theme song for the television show "Beretta." Aside from amusing us with the irony that the star of "Beretta" was Robert Blake who was later charged with the murder of Bony Lee Bakely, the expression raises a profound issue: What is the relationship between punishment and time? This course will explore that question. Topics to be discussed include different philosophical understandings and experiences of time, views of mortality and fate, theories of punishment, specific punishments in the U.S. (including sentences of juveniles, life, death, and LWOP), as well as punishments that are not specifically meted out but are known to be the consequences of political, social, and economic circumstance. Students will read texts in criminology, political theory, philosophy, and jurisprudence, as well as a selection of Supreme Court cases, novels, and short stories. This writing intensive course is limited to undergraduates who have taken at least one "Classics of Political Thought" course (190.280, 190.281, 190.282, or 190.283).
Area: Social and Behavioral Sciences

AS.190.431. Global Climate Governance. 3 Credits.
This course will offer an in-depth study of the history and politics of global climate governance. It will examine the central actors, agreements, and policy proposals that shape climate governance.
Area: Social and Behavioral Sciences

AS.190.432. Topics in Global Security Politics. 3 Credits.
Intensive examination of catastrophic and existential risks posed by natural and technogenic sources (including nanotechnology, synthetic biology, cyberwar, artificial intelligence, asteroidal collision, climate change and space colonization) and their political implications.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.433. Race and the Politics of Punishment in the US. 3 Credits.
Contact with criminal justice has become a primary way that many Americans see and experience government, particularly those from race-class subjugated communities. Yet, our field has been slow to appreciate the development of the carceral state or to consider its manifold for citizenship. In this advanced undergraduate seminar, we will survey key debates around punishment, state violence, and surveillance, with a particular focus on research that takes institutional development, history and racial orders seriously. Why did the carceral state expand in ’fits and starts’ and with what consequence for state-building? We explore its (racialized and gendered) relationship to other key systems: foster care, social provision, labor relations and the labor market, and immigration enforcement. A core preoccupation of this course will be to understand the ways in which the criminal justice system ’makes race’ and how debates about crime and punishment were often debates about black inclusion and equality. How does exposure to criminal justice interventions shape political learning, democratic habits, and racial lifeworlds? In addition to policy, political discourse, and racial politics, we will employ works from a range of fields - history, sociology, law and criminology - and a range of methods (ethnography, historical analysis, quantitative and qualitative). Required books include: Khalil Muhammad’s Condemnation of Blackness: race, Crime, and the Making of Modern Urban America, Elizabeth Hinton’s From the War on Poverty to the War on Crime, David Oshinsky’s Worse than Slavery: Parchman Farm and the Ordeal of Jim Crow Justice, Bruce Western’s Punishment and Inequality in America, and Michael Fortner’s Black Silent Majority: The Rockefeller Drug Laws and the Politics of Punishment.
Writing Intensive
AS.190.434. Does Israel Have a Future?. 3 Credits.
Israel is one of the only countries whose existence is openly challenged. This class will examine the future of Israel focusing on international and domestic threats to its continued existence as a Jewish democracy. Outside threats to be considered include nuclear attack and the growing international movement to delegitimize Israel. Domestic challenges include demographic changes, the role of religion in governance, and doubts as to whether one can be a Jewish state and still be a democracy. Lessons from the destruction of the ancient Israelite kingdoms and from contemporary state deaths will be included. The course will conclude by considering efforts that Israel can undertake to meet the threats it faces.
Area: Social and Behavioral Sciences

AS.190.437. Race and Ethnic Politics in the United States. 3 Credits.
Race has been and continues to be centrally important to American political life and development. In this course, we will engage with the major debates around racial politics in the United States, with a substantial focus on how policies and practices of citizenship, immigration law, social provision, and criminal justice policy shaped and continue to shape racial formation, group-based identities, and group position; debates around the content and meaning of political representation and the responsiveness of the political system to American minority groups; debates about how racial prejudice has shifted and its importance in understanding American political behavior; the prospects for contestation or coalitions among groups; the “struggle with difference” within groups as they deal with the interplay of race and class, citizenship status, and issues that disproportionately affect a subset of their members; and debates about how new groups and issues are reshaping the meaning and practice of race in the United States.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.438. Violence and Politics. 3 Credits.
This seminar will address the role of violence—both domestic and international—in political life. Though most claim to abhor violence, since the advent of recorded history, violence and politics have been intimately related. States practice violence against internal and external foes. Political dissidents engage in violence against states. Competing political forces inflict violence upon one another. Writing in 1924, Winston Churchill declared—and not without reason—that, “The story of the human race is war.” Indeed, violence and the threat of violence are the most potent forces in political life. It is, to be sure, often averted that problems can never truly be solved by the use of force. Violence, the saying goes, is not the answer. This adage certainly appeals to our moral sensibilities. But whether or not violence is the answer presumably depends upon the question being asked. For better or worse, it is violence that usually provides the most definitive answers to three of the major questions of political life—statehood, territoriality, and power. Violent struggle, in the form of war, revolution, civil war, terrorism, and the like, more than any other immediate factor, determines what states will exist and their relative power, what territories they will occupy, and which groups will and will not exercise power within them. Course is open to juniors and seniors.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.439. Advanced Topics in Global Politics: Learning Through Research. 3 Credits.
Join a research team. In this course, students will explore topics in global politics and methods for the conduct of inquiry in the Johns Hopkins tradition of learning through research. Under the guidance of the professor, students will learn about a topic from existing primary and secondary sources, collect new empirical evidence, analyze the evidence, and contribute to research products. Recommended for students planning to write a thesis. Junior or Senior standing in Political Science or International Studies or permission of instructor.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.440. European Politics in Comparative Perspective. 3 Credits.
Europe has been in a sense the first testing ground for theories of comparative politics, but many outsiders now see Europe as a pacified and somewhat boring place. This course will question conventional wisdom through an examination of European politics in historical and cross-national perspective. We will apply the comparative method to the study of European politics today, and conversely we will ask what Europe tells us more generally about politics. We will see that Europe is still a locus of intense conflict as well as remarkably diverse experimentation. Topics will include: political, legal, and economic governance; the evolution of democracy and fundamental rights, the welfare state, class stratification, immigration and race, the role of religion; European integration and globalization. Recommended background: Introduction to Comparative Politics.
Area: Social and Behavioral Sciences

AS.190.442. Civil Society. 3 Credits.
This course explores classic and contemporary debates on the concept of civil society and critically examines its analytical value in light of recent developments. Topics include the relationship between civil society, the state, and markets, the role of civil society in development and democratization, social capital, and global civil society. This course is open to graduate students from any discipline. Advanced undergraduate students must obtain permission from the instructor and are expected to keep up with graduate students during class discussions.
Writing Intensive

AS.190.443. Politics of Outer Space. 3 Credits.
Intensive examination of the political aspects of human activities in outer space, past, present and future, with focus on militarization, earth-remote sensing, surveillance, navigation, resource exploitation, the Outer Space Treaty, and colonization.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.444. Causes of Peace. 3 Credits.
Since 1945, the great powers have enjoyed their longest period of peace in history. Interstate conflict between lesser powers is also at an all time low. What accounts for this “long peace?” This course will look at various explanations including the spread of democracy, the proliferation of nuclear weapons, globalization, American hegemony, and fundamental changes in attitudes regarding the use of force. Students will present draft versions of their research papers during the last weeks of the course. Co-listed with AS.190.619
Area: Social and Behavioral Sciences
Writing Intensive
AS.190.445. Power and Wealth: Sources, Dynamics and Linkages. 3 Credits.
This seminar explores theoretical approaches to the multiple relations between political power and economic power, including pluralism, Marxism, and historical institutionalism. Major empirical transformations will provide the motivation: the rise of modern states, capitalism and social classes in Early Modern Europe, the creation of highly unequal societies in post-colonial Latin America and Africa, the varieties of Welfare State in the golden age of advanced capitalism (1950-75), and the powerful rebirth of inequality in advanced economies for the last 25 years. Theories of sources and interactions of political and economic power will be coupled with accounts of the effects of power and wealth on macroscopic change, especially democratization and economic development. Open to juniors, seniors, and graduate students.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.451. Geopolitics. 3 Credits.
Intensive exploration of theories of how geography, ecology, and technology shape political orders. Case studies of ancient, early modern, global, and contemporary topics, including European ascent, industrial revolution, tropics and North South divide, climate change, geo-engineering and global commons (oceans, atmosphere and orbital space
Writing Intensive

AS.190.452. Party Politics from the Founding to the Progressives. 3 Credits.
Though the torchlight parade has long since passed, American parties still stand in the shadow of the nineteenth-century Party Period. This course seeks to untangle the ideologies and practices of party politics from the Founding to the Progressive Era. Topics include the rise of mass parties, political violence, the coming of the Republican Party, the party politics of Reconstruction and westward expansion, corruption and the political machine, Populism, and movements for reform. We pay particular attention to comparisons between past and present, and to opportunities taken and foregone.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.455. Comparative Racial Politics. 3 Credits.
This upper-level seminar surveys the major trends and approaches to the comparative study of race in political science and critically examines the link between race and politics. Topics include race and state formation, citizenship and national membership, immigration, racial regimes, and the political economy of race. Recommended background: Courses in comparative politics, political economy, immigration, and racial politics.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.456. Politics of TransHumanism. 3 Credits.
Examination of politics of human biological and cybernetic augmentation, and replacement with focus on stratification, weaponization, collectivization, extinction and irregularation.
Writing Intensive

AS.190.471. The University and Society. 3 Credits.
In the 20th century, American universities became the envy of the world, leading in most categories of scholarly productivity and attracting students from every nation. In recent years, though, American higher education has come to face a number of challenges including rapidly rising costs, administrative bloat, corporatization and moocification. We will examine the problems and promises of American higher education, the political struggles within the university and the place of the university in the larger society. Upper classes and Grad Students only.
Area: Social and Behavioral Sciences

AS.190.473. Political Polarization. 3 Credits.
The American constitutional order, which was designed to operate without political parties, now has parties as divided as any in the democratic world. This course will examine explanations of how this happened, the consequences of party polarization for public policy and governance, and what if anything should be done about it.
Writing Intensive

AS.190.479. Imag(in)ing Cities. 3 Credits.
Cities exert a substantial degree of control over American life. Throughout the 20th and early years of the 21st Century they have been centers of industry, of social change, of political change. And in part because of their status, scholars have begun to theorize about cities. The purpose of this class is to interrogate these theories through a filmic lens. Students will be exposed to readings and then in the second half of the semester, to films about cities that implicitly and explicitly speak to and about these theories. Some coursework in urban studies preferred, though not necessary.
Area: Social and Behavioral Sciences

AS.190.480. Planetary Interdependence and World Governments. 3 Credits.
Intensive exploration of alternative global political architectures for high levels of security, ecological and internet interdependence.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.481. Conservatism and Crime. 3 Credits.
This course will examine the evolution of conservative thought on crime and criminal justice from the 1960s to the present. We will focus in particular on how the subject of crime illuminates different strains of conservatism, reveals tensions between its values of liberty, authority and anti-statism, and shows the changing approach that conservative intellectuals have had to race.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.498. Thesis Colloquium. 3 Credits.
Open to and required for Political Science majors writing a thesis. International Studies majors writing a senior thesis under the supervision of a Political Science Department faculty member may also enroll.
Topics include: research design, literature review, evidence collection and approaches to analysis of evidence, and the writing process. The course lays the groundwork for completing the thesis in the second semester under the direction of the faculty thesis supervisor. Students are expected to have decided on a research topic and arranged for a faculty thesis supervisor prior to the start of the semester. Seniors. Under special circumstances, juniors will be allowed to enroll. Enrollment limit: 15.
Writing Intensive

AS.190.499. Senior Thesis. 3 Credits.
Seniors also have the opportunity to write a senior research thesis. To be eligible to write this thesis, students must identify a faculty sponsor who will supervise the project.
Area: Social and Behavioral Sciences

Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.190.601. Qualitative Research.
This class is designed to introduce students to qualitative methodology. Practically, students will gain first hand experience with qualitative research methods via research design, ethics review, in-depth interviewing, participant observation, and archival/primary source research. They will learn to deploy analytical techniques such as discourse analysis and process tracing. Students will also be asked to consider the merits of qualitative approaches more generally, and discuss the relative advantages of qualitative, experimental, and quantitative approaches. Questions that we will discuss include: What place should qualitative research have in a research design? Can qualitative research test hypotheses, or only generate them? Can qualitative research explain social phenomena, or only interpret them? What are the disadvantages and advantages of qualitative approaches compared to quantitative approaches? For what kinds of research questions are ethnographic techniques best suited? Is replicability possible for ethnographic field research? What criteria of evidence and analytical rigor apply on this terrain?
Area: Social and Behavioral Sciences

AS.190.602. Introduction to Quantitative Political Science.
An introduction to measurement and data analysis in contemporary American political science. Measurement topics will include the formation of indices and cumulative scales. Analytic topics will include sampling variations, statistical association and causation, as manifested in contingency tables and correlation and regression. Emphasis will be on fundamental concepts and assumptions, and on comprehension and evaluation of the scholarly literature. Advanced undergraduates by permission only.
Area: Social and Behavioral Sciences

AS.190.604. Foucault and Kant.
This seminar will explore Kant and Foucault comparatively across the registers of ontology, morality, epistemology, time, and politics. How does each move into and across these registers? How do the two thinkers inform and challenge one another? Texts will include: Kant, The Critique of Practical Reason, Conflict of the Faculties, Perpetual Peace and Other Essays, The Anthropology (sections); Foucault, The Order of Things (chapters), Discipline and Punish, “On the Genealogy of Ethics,” “What Was Enlightenment?”, and Subjectivity and Truth.
AS.190.605. Environmentalism.
Environmental racism has largely been understood in terms of environmental policy-making that discriminates against people of color, particularly with respect to the state-sanctioned siting of toxic waste facilities, the distribution of pollutants, food deserts, and the exclusion of non-white peoples from leading positions in the environmental movement. This graduate seminar explores environmental racism more broadly, pushing beyond its conventional, place-based understandings and approaching the corresponding logics that produce human disposability and environmental waste from the standpoint of both space and time. Examining colonial legacies of coding racial others in terms of natural disasters, epidemics, infestations, non-human animals and dirt, we shall investigate how the natural world is subjected to exploitation and domination in tandem with the subordination of racial subjects historically identified with nature and rendered expendable. In other words, we shall illuminate the logics of power through which race-making coincides with waste-making. Accordingly, we will explore political and theoretical challenges to environmental racism in multiple registers; such as those posed by indigenous studies, decolonial thinkers and Afro-diasporic theories contesting the intersection of racial biopolitics, ecological crises and racial capitalism in an era of proliferating human disposability. Authors considered may include; Mbembe, Du Bois, Hage, Glissant, Césaire, Wynter & Chakrabarty.
Area: Social and Behavioral Sciences

AS.190.606. Nuclear Weapons and World Order.
This course examines the impact of nuclear weapons on international politics and world order. Topics to be considered include theories of deterrence, proliferation, the development of new weaponry, terrorism, defense, arms control and abolition. The effect of nuclear weapons on the existing state system and prospects for new configurations of world governance will also be addressed.

AS.190.607. Decolonizing the Episteme: Knowledge, Empire and the Academy.
What complicity does the Western academy have with empire? How might the development of certain intellectual dispositions be implicated in the challenges of imperial rule? And how might such implications have produced influential concepts and theories? In this course we will consider the ways in which - and extent to which - the academy's claim to epistemic privilege has a colonial provenance. Seniors permitted with instructor permission only.

AS.190.608. Influx and Efflux.
"While many contemporary philosophies of the self, and of human agency, tend to emphasize the activity of expression – the enactment or externalization of an intention, desire, will, or purpose, this course will explore the process through which the outside comes in. Influence: the default condition of intrinsically porous and relational bodies. We will examine different models of the process through which individuals are psychically and physiologically affected by forces, shapes, ideas, affects, and tendencies coming from the 'outside.' Readings include Walt Whitman's experimentation with the democratic potential of 'sympathy,' Alfred North Whitehead's theory of 'affective tone' (which focuses on unconscious and in-sensible modes of influence), Roger Caillois's theory of the 'instinct of abandon' (developed at the time of an emergent fascism in Europe), and contemporary theories (in behavioral psychology and cognitive science) of embodied cognition."

AS.190.609. Law, Critique, Genealogy.
This course will offer a survey of classical and contemporary trends in critical theory through the prism of the law. The readings will trace the development of two modes of critical reflection emerging from Kant's philosophical project, critique and genealogy, exploring the tensions between them through the study of categories such as judgment, case, and jurisdiction. We will examine how these categories themselves reflect the question of "modernity" and the Enlightenment as that question is posed and answered by thinkers from Kant to Foucault and Habermas and beyond. To ground this study, we will focus on critical engagements with human rights, property, and institutional justice around the world. Within an arch of readings that goes from Kant to Butler, the course will include key texts by Hegel, Marx, Benjamin, Horkheimer, Adorno, Marcuse, Habermas, Foucault, and Nancy, as well as texts drawn from critical legal studies and the anthropology of law and justice. There are no prerequisites for this interdisciplinary course. To receive credit, students will be required to attend seminar, prepare for class discussions, and turn in a 20-30 page final research paper, a draft of which will be presented at a workshop at the end of the year.

What do the process philosophies of Bergson, Whitehead and Daoism have to say to political manifestos advanced by writers such as Marx and Engels, Naomi Klein, Harriet and Negri, Dziga Vertov, Haitian and French revolutionaries, Folco Portinari. How, in turn, can the latter illuminate, deform, or inform them? The readings in this seminar bounce back and forth between the cosmic politics of process philosophy and a variety of short manifestos designed to speak to the vicissitudes of today.

AS.190.611. Comparative Citizenship and Immigration Politics.
Graduate students only. Examines the contemporary political dynamics of migration, citizenship, and race concentrating on North America, Europe and East Asia. We will focus on how citizenship and immigration policies shape immigrant political identities, claims, and strategies as well as how immigrants impact public debates and policies in receiving societies.
Area: Social and Behavioral Sciences

An exploration of the political aims and tactics, and strengths and liabilities, of Dada and Surrealism, as it operated in Europe and the Americas in the years between and after the World Wars. Readings by Andre Breton, Leonora Carrington, Georges Bataille, Roger Caillois, Meret Oppenheim, College of Sociology, and others. Seniors allowed by permission of instructor only.
AS.190.614. Nietzsche and Deleuze.
This seminar examines key texts by Nietzsche and Deleuze to see how the former influenced the latter and how, where and why Deleuze breaks the Nietzschean influence. Both are known for rethinking radically agency, nature, time, ethics, culture, explanation, politics and the multiple intersections between them. Deleuze treats Nietzsche as a key figure in the "minor" tradition that challenges western "majoritarian" Christian and secular thought. Both are attuned to the role of affective communication, the severe limits of human exceptionalism in Christianity and secularism, the ubiquity of heterogeneous connections, the pursuit of affirmative attachments, the exploration of tragic possibility, and the grasp of unruly periods in nature. While reading Nietzsche might help us to understand otherwise opaque moments in Deleuze (and vice versa) Deleuze can also be said to twist and turn Nietzsche's thought, as he pulls it to the political left, examines the global capitalist "axiomatic", explores 'nomadic' science, embraces critical social movements, pursues a world of intersecting "minorities", and emphasizes the rhizomatic character of culture/nature connections. The texts read by Nietzsche texts may include Daybreak, sections from The Gay Science, The Genealogy of Morals and sections from Will to Power. D&(G) texts may include Difference and Repetition, sections from A Thousand Plateaus, What is Philosophy? and The Fold. Untimely Interventions from Simondon, C Keller, Whitehead, L. Margulis, I Stengers, N. Lawtoo, or B. Massumi could be "folded" into the mix.

AS.190.616. American Political Development.
An examination of state-building and nation-building throughout American political history. (AP)

AS.190.618. What Was/Is Fascism?.
An examination of texts on twentieth century fascist movements and societies in relation to twenty first century movements. What roles do capitalism, imperialism, racism, democracy, the media, global processes and planetary processes play in them? To what extent does the production and exploitation of resentment shape their intensities? What rhetorical strategies mobilize such movements? What rhetorics and social movements to resist or retune such movements show promise?
Texts by Hitler, Arendt, Neumann, Adorno, Marcuse, Deleuze and Kenneth Burke may be among those included. Perhaps the films “Our Hitler” and “The Conformist”, plus a couple of speeches by Donald Trump will be included. Conceptions to democracy first united to challenge fascist drive will also be explored.
Area: Social and Behavioral Sciences

AS.190.619. Great Powers in the Middle East and North Africa.
How have Great Powers shaped the history and politics of states in the Middle East and North Africa? For over a century, Great Powers have been extensively involved in the region: they established colonies, protectorates, and mandates during colonial period; afterward, they employed military force to constrain and shape regimes. Focusing primarily on Great Britain, France, and the United States, this course examines the causes and consequences of foreign military intervention from colonial conquest through the post-colonial period. Students will critically assess claims that link Great Power actions to current-day conditions in the region through evaluating contemporary scholarship and analyzing the history of selected cases.

In Twilight of the Idols/The Anti-Christ, Nietzsche famously confessed, “I am afraid we are not rid of God because we still have faith in grammar.” Drawing from scholarship identified with the Law and Literature movement as well as philosophy, jurisprudence, literary theory, and political theory, this course will engage an on-going conversation about the capacity of language to invent and enforce the expectations, regulations, and ritual formulas we know as law. Readings will include texts by classical and contemporary scholars, including Arendt, Plato, Pierce, Nietzsche, and Nancy, as well as stories by Borges, Kafka, and Melville.
Area: Social and Behavioral Sciences

AS.190.621. Poesis and Politics.
This graduate seminar will investigate how an aesthetic approach to political concepts and practices – in particular the concept of the polity and the practice of judgment – responds to, troubles, and complicates political thought. In the company of Plato, Kant, Heidegger, Arendt, and Auden, we will explore two related sets of questions. First, what are the advantages and disadvantages of figuring the polity as a work of art or as an artistic creation? Second, how might poetry play a role in politics? Students will be required to submit weekly response papers and write a final 20-30 page paper on a topic related to the course, drawing on the work of at least two of the thinker-poets discussed.

AS.190.622. Republicanism, Realism, and Liberalism.
Close reading of major texts in western political thought on violence, security and politics developed by republicans, realists and liberals.
Area: Social and Behavioral Sciences

This course focuses on the affective dimensions of law, a power that both creates and preserves the system of rules which a particular country or community recognizes as regulating the actions of its members and which it may enforce by the imposition of penalties. Two related questions will guide our examination of the affective dimensions of law: What are the grounds of law? Why do we obey law? Students will turn in response papers every week on the reading. In addition, there will be a 20-30 page paper due at the end of the semester.
Area: Social and Behavioral Sciences

AS.190.624. Postcolonial Ecologies and Planetary Temporalities.
This is an exploratory seminar in which we place recent work on postcolonial ecology and images of time into conjunction with geological and philosophical texts detailing a world of multiple, interfolding human and nonhuman temporalities. The task is to see how each set of readings can enrich and exert pressure upon the others with respect to theory and politics. Texts may include Rob Nixon, The Environmentalism of the Poor; Viveiros de Castro, The Relative Native: Indigenous Conceptual Worlds; Michael Benton, When Life Nearly Died; Donna Haraway, Staying With the Trouble; Deleuze and Guattari, What is Philosophy?; Connolly, Facing the Planetary; Glissant, The Poetics of Relation, Nabokov, A Forest of Time Writing Intensive

AS.190.625. Theories of Comparative Politics.
This seminar is intended for graduate students planning to take the comprehensive exam in comparative politics, either as a major or as a minor. In addition to exploring central methodological debates and analytic approaches, the seminar reviews the literature on state-society relations, political and economic development, social movements, nationalism, revolutions, formal and informal political institutions, and regime durability vs. transition. Graduate students only.
Area: Social and Behavioral Sciences
AS.190.626. Quantitative Methods for the Study of Politics.
This course is intended as Ph.D.-level introduction to applied statistics, with a focus on the identification of causal effects in the tradition of the Neyman/Rubin potential outcomes framework. Prior coursework in applied statistics or quantitative methods will be useful but is not required. Upon completion of the course, students will be in a position to understand and critically assess scholarship that uses instrumental variables, difference-in-differences, regression discontinuity, and other quasi- and natural-experimental research designs. Formal mathematical proof will be kept to a minimum. Students will be asked to adapt existing code and write some of their own code in R.

AS.190.627. Gilles Deleuze and Classical Theory.
What can Deleuze teach classical Eurocentric theories? And what can representatives of those traditions teach him? We will read Deleuze in relation to theorists he has examined, such as Plato, Lucretius, Spinoza, Kant, Kafka, Nietzsche and Hegel, as we seek to hear the history of political theory in a new key. Concepts and issues such as politics, history, time, culture/nature divisions, capitalism, the source of ethics, the shape of political ideals, and the nature of explanation will come up for review. The course will typically read a text from a classical thinker and then consult Deleuze's engagements with them.
Area: Social and Behavioral Sciences

A close reading of Leviathan by Thomas Hobbes (1588-1679) and Ethics by Baruch Spinoza (1632-1677), with consideration of important commentaries on these works. What conceptions of the human being, nature, reason, God, and freedom are defended and affirmed by Hobbes and Spinoza? What rhetorical strategies accompany their theories of self, ethics, social life?

AS.190.629. American Racial Politics.
Race is not a biological fact but rather a social construction. However, it is a social construction with very real consequences. Definitions of citizenship, allocation of state resources, attitudes about government and government policy, the creation of government policy, all shape and are shaped by race and racial classifications. Serving as a critical corrective to American politics treatments that ignore race, this class will examine how race functions politically in the United States. While not required, some knowledge of statistics is helpful.
Area: Social and Behavioral Sciences

AS.190.630. Making Social Policy.
Examines American social policy in comparative perspective. Special attention to issues of poverty and inequality, and their relation to the political system.

AS.190.631. The Development of American Political Institutions.
This course explores institutional development in American national politics, from the Founding until the present. It traces parties, Congress, the presidency, bureaucracy, and courts, and also examines how those institutions have interacted with one another across American history. Throughout the course, we will consider how ideas, interests, procedures, and sequence together shape institutions as they collide and abrade over time. Finally, although it hardly covers the entire corpus across the subfield, the course is also designed to prepare students to sit for comprehensive examinations in American politics.

AS.190.632. Political Corruption.
Political corruption is widely seen to be an impediment to economic and political development and stability. But what is political corruption? The common definition of corruption as abuse of power for private gain is too vague to be of serious scholarly use. Is “abuse” culturally specific or merely a synonym for “illegal” - or even worse, for undesirable according to some unspecified standard? Does “private gain” refer only to under-the-table cash payments to a corrupt official, or does it extend to intangible private benefits, and does it extend to gains for identifiable favored groups (“club goods”) and may or may not include the corrupt official him or herself? This seminar will focus on several questions. How should political corruption be defined, and what is at stake in the choice if definition? Are there identifiable patterns to, or types of, political corruption? What conditions encourage or discourage corruption, and how might corruption be controlled or limited? What are the consequences of corruption - and are they necessarily all negative?

AS.190.633. Black Political Thought.
This course will introduce you to a survey of Black political thought. Our examination will cover the time period between the latter years of the Transatlantic Slave Trade and the present. In the first two thirds of the course we will deal with primary texts (including but not limited to Incidents in the Life of a Slave Girl, The Souls of Black Folk, and The Wretched of the Earth), and in the last third we will deal with modern day attempts to wrestle with the ideas in these texts (including but not limited to Intimate Justice and Critique of Black Reason).

AS.190.634. Politics of Information and Information Technologies.
Examines American social policy in comparative perspective. Special attention to issues of poverty and inequality, and their relation to the political system.
AS.190.637. The Colonial Constitution of the 'Human'.

This course inquires into the colonial constitution of the 'human' across philosophical, legal, political, social and economic dimensions. Special attention is paid to the ways in which sexuality, gender, race, class and faith are complicit in this constitution. The course finishes by critically considering theories of the 'post-human' from the perspective of both a colonial genealogy of the 'human' and anti-colonial claims upon humanism.

Area: Social and Behavioral Sciences

AS.190.638. Racial Capitalism.

This graduate seminar will explore the imbrication of the theory, history, and politics of the logic of race and the logic of capital.

AS.190.639. Critical IR Theories.

Generally relegated to the last week or two on the standard IR theory syllabus, critical IR theories take center stage in this course. We explore the intellectual roots of clusters of critical theories, the foundational works for each cluster, and the current debate. The course will cover Feminist IR Theory, the Practice Turn, and New Materialist IR, among other perspectives.

Area: Social and Behavioral Sciences
Writing Intensive

AS.190.640. Modes of Political Persuasion.

An examination of influential texts in Euro-American political thought, with an eye toward what each has to say about the "how-to" of political persuasion: What techniques can leaders, citizens, and theorists deploy to foster allegiance or conversion to a particular model of politics and public life? How are the powers of words, images, and feelings, especially eros, invoked and inflected? Given that being persuaded of something may or may not induce a will to enact it, what techniques are available to jump the gap between profession of ideals and undertaking of action? Texts include Aristophanes' Women Celebrating the Thesmophoria; Plato's Phaedrus and Books II and III of Republic; Machiavelli's Prince, Whitman's 'Calamus' poems, Freud's Civilization and Its Discontents, Foucault's writings on sexuality and ancient Greek ethical practices, and Beauvoir's Ethics of Ambiguity and 'Must We Burn Sade.'

Area: Social and Behavioral Sciences

Race has been and continues to be centrally important to American political life and development. In this course, we will engage with the major debates around racial politics in the United States, with a substantial focus on how policies and practices of citizenship, immigration law, social provision, and criminal justice policy shaped and continue to shape racial formation, group-based identities, and group position; debates around the content and meaning of political representation and the responsiveness of the political system to American minority groups; debates about how racial prejudice has shifted and its importance in understanding American political behavior; the prospects for contestation or coalitions among groups; the "struggle with difference" within groups as they deal with the interplay of race and class, citizenship status, and issues that disproportionately affect a subset of their members; and debates about how new groups and issues are reshaping the meaning and practice of race in the United States.

Area: Social and Behavioral Sciences
Writing Intensive

Comparative politics scholars have long identified institutions as a crucial source of cross-national variation in political life. Yet institutions are not static. We know from everyday experience that institutions change over time, sometimes quite fast. Scholars have attempted to address the problem of institutional change in various ways. Some institutionalist scholars underscore the endogenous logic of institutional evolution, whereas others resort to exogenous factors such as power. Constructivist and pragmatist scholars foreground ideas and practices as sources of institutional change. This course will explore these different strands of scholarship and attempt to reconstruct a fruitful dialogue between them.

This course covers a series of special topics in IR theory with an emphasis on how an appreciation of practices and process provides a fresh perspective on old questions and raises new ones. The course will focus on the pertinent sociological literature and how this has been applied in IR.

Writing Intensive

AS.190.645. Black Politics.

Grad Students Only.
Area: Social and Behavioral Sciences

This graduate seminar will examine a range of indigenous political theorists and critics of settler colonialism. In so doing, we will interrogate the role of liberal Anglo-centrism in contested theories and practices of sovereignty, property rights, freedom, equality, race, sexuality and nature. Likewise, we will investigate the contention that settler colonialism is acquisitive of territory in perpetuity, as opposed to being a moment in history, in order to assess the enduring political and theoretical impact of colonial legacies. Importantly, we shall explore how the relays between indigenous cosmologies and temporalities shape theories and practices of resistance, reason, identity and political imagination. Graduate students only.

AS.190.649. The Economic and the Political.

The neoclassical paradigm of economics utterly excludes politics, yet a large swath of the subfield of "political economy" presupposes or is predicated upon that very paradigm. Neither approach can account for the distinct force of "the economic" as it continually interacts with "the political" (and the social, the cultural, etc.) This graduate seminar will be an experimental effort in exploring a whole new terrain of the economic – not another critique of the neoclassical paradigm, but the initial (re)formulation of a new approach to the economic and the political.

Area: Social and Behavioral Sciences

AS.190.650. The Theories and Politics of Rights.

Grad Students only.
Area: Social and Behavioral Sciences

AS.190.651. Policy Dynamics.

Policy dynamics is the study of changes of the political system in its entirety, from the point of view of the system's outputs—what government actually does, or fails to do. It is dynamic in that it seeks to explain changes in what matters governments feel can or must be addressed, the tools that are available to deal with problems, and the interactions of government and non-government actors that generate change. Particular emphasis will be placed on studying policy dynamics over long periods of time, including such post-enactment issues as implementation, policy feedback on political identities and group formation, and policy durability.
AS.190.652. The Politics of Money, Debt and Credit.
This course will survey recent scholarship on the politics of monetary and financial flows in the economy. We will reflect on the significance and causes of changes in underlying political economy and institutions since the mid-20th century. We will pay special attention to the rise of a new political economy often characterized as neoliberal, and we will discuss how scholars within and beyond political science make sense of these changes.
Writing Intensive

AS.190.653. Organizations.
Graduate students only. ‘Organizations are the fundamental building blocks of economic, social and political life. This course will examine how different disciplines (sociology, economics, political science) approach the problem of explaining how organizations operate, as well as exploring the structure and development of a very wide range of organizations (firms, interest groups, charitable foundations, universities, militaries, bureaucracies, international organizations, and professions).’
Area: Social and Behavioral Sciences

AS.190.654. The Development of the Conservative Movement.
The last twenty years has seen a flourishing of literature on conservatism across multiple disciplines. This course will survey that literature, placing it in a developmental context. Particular focus will be placed on the relationship between elite and mass conservatism, especially in the light of the rise of populism in the US, UK and elsewhere.
Area: Social and Behavioral Sciences

AS.190.655. Decolonizing Time and Memory.
This graduate seminar is a critical encounter with the colonial imprint on the politics of memory, temporality and race. We shall investigate the recent turn to “decolonize” virtually everything and ask what such efforts might entail given that the hallmarks of colonialism include a disavowal of the past, the capacity to set the clock to zero and begin the world anew, a linear conception of time and an abiding desire for temporal sovereignty. While investigating the possibility of decolonizing futurity, we will pay particular attention to the Promethean construction of the human race (and its constitutive others) across history. We shall confront the role of segregated temporality and mnemonic politics in modern race-making projects and their impact on the contemporary political imagination. Authors may include Nietzsche, Wynter, Fanon, Foucault, Deleuze, Anzaldúa, Baldwin, & Du Bois.
Area: Social and Behavioral Sciences

AS.190.656. Sovereignty: Historical Persepectives and Contemporary Issues.
This seminar provides an in-depth exploration of the concept of sovereignty by examining its historical development and its use in international relations scholarship. Our discussion will also be informed by works in political theory and the international law literature. The course is open to advanced undergraduate students and graduate students. Co-listed with AS.190.408
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.657. Re-Turn to Language.
A central claim of structuralism is that all systems of meaning are structured along the lines of language. Post-structuralism challenges this claim but does not dismiss it so much as probe the ways in which these systems fail and reveal interesting things about how communication may (not) take place. What is sometimes called ‘post-post-structuralism’ rejects the focus on language, emphasizing instead how meaning is generated in and by culture or with the (mostly) unacknowledged collaboration of matter. This course will revisit these claims, challenges, and refusals within the context of contemporary, philosophy, literary theory, and political thought. We will read, among others, texts by Saussure, Liev-Strauss, Lacan, Barthes, Derrida, Foucault, Kristeva, Butler, and Barad. Students will be required to submit weekly response papers and write a final 20-30 page paper on a topic related to the course.

AS.190.659. Postcolonial Political Economy.
There is currently an intermittent and under-examined relationship between postcolonial studies and critical political economy. The aim of this module is to help you to account for this relationship on your own terms. We will examine the entanglements of capitalism and colonialism by building unconventional conversations between classical political economists (as well as their 19th century successors) and thinkers and traditions invested in confronting colonialism and its legacies. We will focus primarily on regions affected by (Anglo) settler colonialism – especially the Americas and the Pacific.

What gives democratic regimes the ability to withstand challenges such as extreme polarization, racial and ethnic conflict, rising economic inequality, and institutional sclerosis and avoid the prospect of backsliding toward authoritarianism? This course will examine the problem of democratic resilience by locating the contemporary crisis of American democracy in comparative and historical perspective, bringing together literatures in comparative democratization and American politics.
Area: Social and Behavioral Sciences

AS.190.666. Political Economy Of Development.
Graduate students only.

AS.190.667. Reconstructing International Relations Theory.
In this class, we will study IR theory in a reconstructive mode. We will return to foundational texts in light of more recent theoretical developments both in IR and social thought more broadly. Our goal will be to critically assess the basic epistemological, ontological, and historical assumptions of IR theory while charting paths for its possible futures.

AS.190.670. Capitalism, Marx and the Value-Form.
This seminar will explore the capitalist value-form (Wertform) by way of a reading of Marx and a number of value-form theorists. Grad students only.
Area: Social and Behavioral Sciences
Writing Intensive

AS.190.672. Money.
What is money? And given its absolute centrality to economics and politics, shouldn’t political economy and political theory hold answers to this question? Instead, the history of both neoclassical economics and modern political thought is marked by eschewals or refusals of it or its importance. This graduate seminar will explore the theory and politics of money, through critical readings of orthodox theories, engagements with heterodox political economy, and encounters with contemporary political theory.
AS.190.675. Neoliberalism.
Readings on the history, theory, and politics of neoliberalism, from midcentury to the present.
Writing Intensive

AS.190.676. Field Survey of International Relations.
This course provides a scaffold for the study of international relations theory, organized historically and by major approaches. The focus is on close reading and discussion of exemplars of important bodies of theory. Intended for doctoral students with IR as their major or minor field. Graduate students only.
Area: Social and Behavioral Sciences

AS.190.678. Law and Politics.
As a field, Law and Politics has evolved from the study of constitutional law and judicial politics to the political behavior of judges and their associates to the study of law and society, the operation of law and courts “on the ground” in the international arena as well as in the United States, historical institutionalism, and the carceral state. In this graduate course, we will review some of the classic texts in the field, with a focus on the tension between legal institutions and democratic politics. In particular, we will examine how that tension is manifest in the foundations of the American political system and in critical reflection on contemporary practices of American democracy. Students will turn in response papers every week on the reading. In addition, there will be two 10-20 page papers due during the semester. Graduate Students Only.
Area: Social and Behavioral Sciences

AS.190.679. The Political Poetics of Walt Whitman and Henry Thoreau.
Examination of the works of Thoreau and Whitman with an eye toward how their texts engage in subjectivity-formation and the inducement of publics. What are the powers and limits of their practices of language, including myth-making, affirmations of nonhuman agencies, and nature-writing? Grad students only.
Area: Social and Behavioral Sciences

AS.190.681. Race and Politics of Punishment in the U.S.
Contact with criminal justice has become a primary way that many Americans see and experience government, particularly those from race-class subjugated communities. Yet, our field has been slow to appreciate the development of the carceral state or to consider its manifold impacts for citizenship. In this graduate seminar, we will survey key debates around punishment, state violence, and surveillance, with a particular focus on research that takes institutional development, history, and racial orders seriously. Why did the carceral state expand in “fits and starts” and with what consequence for state-building? We explore its (racialized and gendered) relationship to other key systems: foster care, social provision, labor relations and the labor market, and immigration enforcement. A core preoccupation of this course will be to understand the ways in which the criminal justice system “makes race” and how debates about crime and punishment were often debates about black inclusion and equality. How does exposure to criminal justice interventions shape political learning, democratic habits, and racial lifeworlds? In addition to policy, political discourse, and racial politics, we will employ works from a range of fields – history, sociology, law, and criminology – and a range of methods (ethnography, historical analysis, quantitative and qualitative). Required books include: Khalil Muhammad’s Condemnation of Blackness: Race, Crime, and the Making of Modern Urban America, Elizabeth Hinton’s From the War on Poverty to the War on Crime, David Oshinsky’s Worse than Slavery, Parchman Farm and the Ordeal of Jim Crow Justice, Bruce Western’s Punishment and Inequality in America, and Michael Fortner’s Black Silent Majority: The Rockefeller Drug Laws and the Politics of Punishment.
Area: Social and Behavioral Sciences

AS.190.683. Research Seminar/Political Parties.
Area: Social and Behavioral Sciences

AS.190.685. Critical theory, method, and application in International Relations.
Critical theories are often taught by focusing on their various philosophical and ethical claims. But how do you “apply” critical theories in the study of International Relations? Is “method” only a “mainstream” concern? This course seeks to relate philosophy and ethics to method with a (future) eye to dissertation writing. We will consider e.g. Marxist, feminist, postcolonial, and poststructural lines of inquiry, as well as, at the same time, a range of conceptual areas of inquiry – e.g., the affective, the normative, the poetic, the phenomenological, and the material.
Area: Social and Behavioral Sciences

AS.190.687. Philosophy and the Anthropocene.
How do philosophers such as Heidegger, Whitehead, Deleuze and Braidotti help us to think about the dynamics of the Anthropocene? What do anthropologists and geoscientists such as Anna Tsing, Bruno Latour, Jason Moore, Michael Benton, Jan Zalasiewics and Wally Broecker teach those philosophies and us about the contemporary condition? Class presentations on assigned readings, seminar paper, and class discussions.
Area: Social and Behavioral Sciences

AS.190.688. Micro- and Meso-Level Approaches to Political Violence.
How is violence organized, produced, and understood? This course will introduce graduate students to advanced scholarship on political violence and will encourage students to explore the relationship between violence, agency, and structure. Central themes include: mobilization and recruitment; the emergence and behavior of armed organizations (e.g. militant groups, pro-state militias); ethnic violence; civilian targeting; gender-based violence in war; election violence; and vigilantism. The class will challenge students to critically examine violence as an outcome, political process, and as an indicator of underlying relationships and social structures.
Area: Social and Behavioral Sciences

AS.190.890. Political Science Practicum.
This course explores the role of diasporas - ethnic, religious, and migrant groups - in world politics. What impact do diaspora communities have on the foreign policy of their country of residence or country of origin? What is the involvement of diaspora communities in civil wars, ethnic conflicts, and conflict resolution? How does this kind of transnationalism affect international order?

AS.191.102. Diasporas in World Politics. 3 Credits.
This course explores the role of diasporas - ethnic, religious, and migrant groups - in world politics. What impact do diaspora communities have on the foreign policy of their country of residence or country of origin? What is the involvement of diaspora communities in civil wars, ethnic conflicts, and conflict resolution? How does this kind of transnationalism affect international order?

AS.191.103. The Politics of Crime and Punishment. 1 Credit.
In this class, we will ask questions about the relationship between crime, law, and punishment in modern democratic states. Students will be introduced to dominant modern approaches to understanding punishment and modern state’s power to enforce the law. In light of these theoretical approaches, we will consider the connection between criminalization, punishment, and politics in contemporary United States.
AS.191.104. Covert Action in International Politics. 3 Credits.
This course examines covert action from the Second World War up until the present. Covert action is any activity undertaken by a sponsor seeking to influence a target while remaining anonymous. We will be covering some of the more prominent examples of the use of assassinations, coup d'états bribery, blackmail, propaganda, election rigging, cyber-war, and economic sabotage. By the end of this course you should have a solid and detailed empirical knowledge of a large number of covert operations from around the world. You should be familiar with the definitions and categories for covert action and you should be able to engage with debates on the utility of covert action and the ethical and legal issues involved in using covert activities.
Writing Intensive

AS.191.106. Freshman Seminar: Mass Incarceration and American Politics. 3 Credits.
This freshman seminar examines how the United States became the world's leading jailer, the impact of mass incarceration on American politics, and the dynamics of reform. Points of emphasis include elections, federalism, and race.
Writing Intensive

AS.191.108. Introduction to Democratic Theory. 3 Credits.
Is democracy best understood as a form of government, or as 'a way of life' that opposes the inertia and failures of state institutions? What is the difference between representative democracy and participatory democracy? How have political thinkers distinguished between a democracy and a republic? Does democracy require collective identity and if so, is it necessarily exclusionary? This course explores influential answers to these questions, from Rousseau to Martin Luther King, Jr. and beyond.
Area: Humanities, Social and Behavioral Sciences

AS.191.119. Freshman Seminar: Thinking Critically through the Global South. 3 Credits.
This seminar exposes students to tools for thinking critically about life and politics by introducing them to contemporary debates in International Relations and Political Theory that have been proposed by authors from the Global South. Topics include, but are not limited to: development, postcolonial studies, environment, knowledge production, and gender and sexuality.
Area: Social and Behavioral Sciences

AS.191.201. Love in Politics, Politics in Love. 3 Credits.
In much of political science, political power is assumed to flow from fear. Using classic texts in political theory, this class will consider the existence of a different kind of political power, one flowing from love. The following questions will structure the course: What are the powers and forms of love? Are political bonds and loving bonds related? Class discussions will draw from a variety of sources, including readings by Hobbes, Nygren, Plato, Augustine, Rousseau, Engels, Jordan, and Berlant.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

This course explores various theoretical attempts to broaden the meaning of "politics" by examining three spheres of action typically equated with "personal" life: work, family, and consumption. The following questions orient our inquiry: what does the phrase "the personal is political" mean, and what sort of political solutions does it typically endorse? What can we learn about politics by studying family dynamics? Why do Americans work so much, and how does "work ethic" discourse promote punitive social policies? What is the relationship between our everyday acts of consumption and larger political phenomena such as climate change and racialization processes? What can theories of intersectionality tell us about such dynamics?
Area: Social and Behavioral Sciences
Writing Intensive

AS.191.216. Freshman Seminar: By Any Means Necessary? Political Theories of Violence. 3 Credits.
Questions of violence are as old as questions of politics itself. Are politics and violence essentially the same or is politics fundamentally non-violent? Is violence the only way to achieve political change? Has the state been a force for eliminating violence and securing freedom or has it only created more conflict? Who gets to define what counts as violent, and for what purposes? This course engages such questions through a theoretical lens, often focusing on political actors and activists responding on the ground to these pertinent questions. It asks students to reconsider what they normally think violence, non-violence, and politics are. We will particularly investigate this angle through the lens of race and colonialism—reading such figures as Michel Foucault, Franz Fanon, Mao Zedong, Gandhi, Martin Luther King Jr., Malcolm X, Angela Davis, and Ida B. Wells—as well as focusing on histories of state formation and state violence.
Area: Social and Behavioral Sciences
Writing Intensive

AS.191.217. Freshman Seminar: International Politics from the Global South. 3 Credits.
This course focuses on the interests and preferences of developing countries in international politics. The formal and informal rules of international politics tend to favor the interests and preferences of powerful countries: richer states, with better technologies and superior military capabilities. Sometimes, however, the interests and preferences of great powers do not align with what the rest of the countries want, especially with states in the Global South. We will analyze what developing countries do to restrain the leeway of powerful countries, particularly when their interests and preferences conflict. The course is divided into four main sections: a review of theories about international order and international hierarchies, tools to restrain great powers, review of strategies from countries in Latin America, Africa, and East Asia, and areas of disagreements between the Global North and the Global South.

AS.191.303. Critical Race Theory, Law, and Criminal Justice. 3 Credits.
In this course, students will gain a foundational understanding of critical race theory, including its genesis in legal theory. The course will examine its relationship and importance to social movements, including through key concepts like intersectionality. The course will also use critical race theory to grapple with law, racial segregation, and the criminal justice system in the United States.
Area: Social and Behavioral Sciences
Writing Intensive
AS.191.304. Writing Politics in an Age of Crisis. 3 Credits.
We live in an age of crisis. Social, political, and environmental disruptions both in the United States and around the world are the new normal. How do we – as individuals, citizens, and scholars – come to understand these issues? And how should we write about them? This course is designed to help students improve as writers, readers, and editors for a world where powerful young voices are more necessary than ever. The substantive focus of the course will be on the dynamics of interlinked contemporary political crises and on the responses available to individuals to address them. We will read a variety of scholarly, journalistic, and literary sources to inform our discussion and inspire our writing. However, this course is designed not as a standard seminar, but as a writing workshop. Students will write and critique a variety of pieces of different lengths and styles – including a political memoir, an op-ed, a long-form critical essay, and a piece of speculative fiction – spending the majority of in-class time on peer review, presentations, and writing exercises, which they will compile into a writing portfolio. Reading will include works by Alexander Chee, Ta-Nehisi Coates, Mary Annaise Heglar, Hunter S. Thompson, James Baldwin, Dave Zirin, Elizabeth Rush, Charlotte Shane, and Teju Cole, among many others.
Area: Social and Behavioral Sciences
Writing Intensive

AS.191.305. The Politics of Sound. 3 Credits.
What does politics sound like? Can sounds (sound waves, musical compositions, nonhuman voices, vocal timbres, ...) carry or even create political meaning? Listening to such questions, this course explores the role of sonic and musical figures in the political theory canon, the influence of sound on political events, as well as the involvement of the sensing human body and a more-than-human environment in public affairs. To do that, the course (1) introduces the soundscape as a methodological framework for describing politics as an aesthetic experience; (2) addresses sonic ways to conceptualize political matters, such as nationhood, civic resistance, speech, power, identity and warfare; and (3) uses sound to reimagine democratic and ecologically sustainable forms of living-together. The course combines readings in political theory with texts in cultural, sound and media studies. Multimedia resources (popular and classical music pieces, films, sound recordings, ...) accompany the theoretical discussions and relate them to contemporary events. Assignments include short presentations, a soundwalk report, and a final paper.
Area: Social and Behavioral Sciences

AS.191.307. Democracy and Political Psychology: Ideals and Realities of Democratic Citizenship. 3 Credits.
This course confronts the expectations of democratic theory regarding the way citizens should think and behave with findings from political psychology with respect to how they do think and behave. Divergences of the ideals and realities of democratic citizenship often seem quite glaring and disconcerting. What are the conclusions we should draw from such mismatches? Should we simply accept them or is there something to be done about them? Alternatively, should democracy be redefined or abdicated altogether? The course will center on the experience of the advanced industrial democracies – the places where one would presume democracy to work best. In addition to addressing substantive questions, the course also aims to equip students with approaches, methods, and techniques they can use in conducting their own empirical research.

AS.191.309. Theory of Conversation. 3 Credits.
What are the purposes of conversation, and how do we navigate these purposes? How do we excuse, justify, and explain ourselves to one another; how do we forgive each other; how do we come to agree with one another? When do we reach the conclusion that we have nothing more to say, and why? In this course, we will approach these and similar questions through the tradition of ordinary language philosophy as represented by Wittgenstein, Austin, and Cavell. We will then apply the method of ordinary language philosophy to conversations found in the plays of Beckett and Shakespeare, as well as the films of Hawks and McCarey. Students will be expected to write a short paper each week.
Area: Social and Behavioral Sciences
Writing Intensive

AS.191.311. Who Are You Laughing At?! Political Theories of Pluralism and Laughter. 3 Credits.
Laughter in recent years has emerged as a key experience through which diverse political interests, beliefs, and identities form, interact, and compete with one another. From Donald Trump's claims that China, Mexico, and North Korea 'are laughing at us,' to the 2015 Charlie Hebdo attacks and the 2010 Jon Stewart rally on the National Mall, the question 'who are you laughing at?!!' lies at the center of contemporary political struggles. This course puts various philosophical, historical, and literary accounts of laughter into conversation with classic and contemporary theories of pluralism to explore how practices of laughter construct, preserve, and transform barriers of political difference today.

AS.191.313. Why We Punish. 3 Credits.
A multidisciplinary exploration of the justifications and problems associated with punishment broadly defined, including prison sentences, personal acts of revenge, and military reprisals. Course texts will include international court cases, philosophical texts, and classic legal thinkers, in addition to fiction and news articles. Particular attention will be paid to when punishment is (or is not) cruel, deserved, or proportionate; when restraint should be shown; and whether it is desirable to abolish it altogether. Case studies will include the practice of solitary confinement, cycles of retaliatory violence in communal conflicts, the death penalty, and International Criminal Court efforts to punish perpetrators of war crimes and crimes against humanity. Writing intensive.
Writing Intensive

AS.191.315. The Domestic Politics of Israel. 3 Credits.
Israel's politics and history are complex, involving multiple military conflicts, domestic struggles and dynamic international relationships. This course will focus on Israel's domestic politics by tracing the story of the development of its party system and the parties composing it. A parliamentary democracy with a proportional representation electoral system, Israel's party system includes multiple parties who represent the various segments of Israeli society. What are the origins of this party system and the parties within it? What changes have they experienced and what are the factors that influence those changes? Who are the important actors and what might be motivating them? How have these parties influenced the development of Israel's domestic politics? Using both historical and statistical materials, these questions and others will serve as our guide on a journey to a better understanding of Israel's domestic politics, from its inception to the present day.
Area: Social and Behavioral Sciences
Writing Intensive
AS.191.317. No Justice, No Peace: Perspectives from Post-conflict Responses. 3 Credits.
The slogan 'No Justice, No Peace' has been uttered both as a call to arms for social unrest and as a warning that a lack of perceived justice in a society will mean lack of peace. While the demand is made in a variety of contexts ranging from urban protests in response to racial injustices to states in the aftermath of protracted civil strife or state-sponsored violence, a discussion of the kind of justice that is demanded with the slogan or the kind of peace that is foreseen is often missing from the public invocations of 'no justice, no peace.' This course aims to examine invocations of 'no justice, no peace' and mechanisms employed to respond to its demands. As such, the course readings will explore conceptions of justice and peace envisioned in a variety of post-conflict contexts. Students will be encouraged to evaluate and question the conceptions of justice and peace and the shifts in their meanings overtime through an examination of primary sources such as U.N. resolutions, Security Council Meeting Notes, UNCHR reports, international NGO reports, international tribunal reports in addition to seminal texts on the concepts of justice, peace and reconciliation. Students will be encouraged to articulate the ways in which response mechanisms delivered or failed to deliver the promises of justice, peace and futile reconciliation.
Area: Social and Behavioral Sciences

AS.191.325. Environmental Social Sciences meet Environmental Fiction. 3 Credits.
The course pairs readings of critical texts addressing environmental crises with literary fiction broadly dealing with the relationship between the human and the environment. We discuss the ways narratives affect our understanding of complex global phenomena, and how the tools of literary analysis can help us unpack the rhetorics and values of both fictional and nonfictional texts.
Area: Social and Behavioral Sciences
Writing Intensive

AS.191.335. Arab-Israeli Conflict. 3 Credits.
The course will focus on the origin and development of the Arab-Israeli conflict from its beginnings when Palestine was controlled by the Ottoman Empire, through World War I, The British Mandate over Palestine, and the first Arab-Israeli war (1947-1949). It will then examine the period of the Arab-Israeli wars of 1956, 1967, 1973, and 1982, the Palestinian Intifadas (1987-1993 and 2000-2005); and the development of the Arab-Israeli peace process from its beginnings with the Egyptian-Israeli treaty of 1979, the Oslo I and Oslo II agreements of 1993 and 1995, Israel's peace treaty with Jordan of 1994, the Road Map of 2003; and the periodic peace talks between Israel and Syria. The conflict will be analyzed against the background of great power intervention in the Middle East, the rise of political Islam and the dynamics of Intra-Arab politics, and will consider the impact of the Arab Spring.
Area: Social and Behavioral Sciences

AS.191.340. Cities, Space & Power. 3 Credits.
Gentrify! 80% of people live in urban areas. These locations are key for solving political dilemmas, including climate change, class, segregation, gender & immigration. This class explores all of these through the lens of gentrification. What does 20th century urban planning have to do with it? How can I talk to my friends about gentrification in Baltimore? Find out this and more!
AS.191.354. Congress and Foreign Policy. 3 Credits.
This course is an introduction to the Congressional role in foreign policy. The Constitution grants the President the authority to conduct foreign policy. Yet it also gives Congress a substantial role in the shaping of foreign policy. The distinct roles are not always clear, creating an inherent tension between these two branches of government and efforts on each side to increase their power. This class will address the “rules of the road” in conducting American foreign policy and how they change. The class will go beyond theory to include case studies that show the tension between Congress and the Administration—including the Iran Agreement, Climate Change, the use of sanctions and American policy towards Cuba. The course will include guest lecturers who work in Congress on the various aspects of foreign policy—including appropriations, intelligence, oversight and investigations. We will address the Congressional role in ratification of treaties and in declaring war. The class will consider the different ways that each branch of government approaches human rights, arms sales and sanctions. The class will also address the domestic political aspects of foreign policy—including the role of advocacy groups and special interests and the political use of Congressional investigations. Most of these classes will be in Washington, DC to facilitate guest speakers. Several classes will meet at the US Congress.
Area: Humanities, Social and Behavioral Sciences

AS.191.359. North Korea, Identity, and International Politics. 3 Credits.
This course analyzes the role of identity and foreign policy in contemporary North Korea. We begin with an overview of North Korea’s political economic development and the role of national identity in state formation. We will then use those concepts to explore North Korea’s relations with South Korea, China, and the United States through topics such as regime security, nuclear weapons, human rights, and social change. The course ties together academic literature, journalistic sources, and policy research with in-class activities and writing assignments. It is recommended that students have taken a survey course on International Relations (e.g., Global Security Politics, Contemporary International Politics).
Area: Social and Behavioral Sciences

AS.191.362. Covert Action in International Relation. 3 Credits.
This course introduces the use of covert action in relations between states. We will cover various cases with different sponsoring and targeted countries and from different time periods. The class ends with a review of the latest Russian covert activity against the United States. The class will go beyond theory to include case studies that show the tension between Congress and the Administration—including the Iran Agreement, Climate Change, the use of sanctions and American policy towards Cuba. The course will include guest lecturers who work in Congress on the various aspects of foreign policy—including appropriations, intelligence, oversight and investigations. We will address the Congressional role in ratification of treaties and in declaring war. The class will consider the different ways that each branch of government approaches human rights, arms sales and sanctions. The class will also address the domestic political aspects of foreign policy—including the role of advocacy groups and special interests and the political use of Congressional investigations. Most of these classes will be in Washington, DC to facilitate guest speakers. Several classes will meet at the US Congress.
Area: Social and Behavioral Sciences

AS.191.363. Populism and Politics. 3 Credits.
Around the world, from Italy to Brazil, and from Hungary to the United States, populist candidates are fundamentally changing the political landscape. In this course, we explore the nature of populism; investigate whether populism poses an existential threat to liberal democracy; explore the causes of the populist rise; investigate the ways in which populism is a response to demographic change; and discuss what strategies might allow non-populist political actors to push back.
Area: Social and Behavioral Sciences

AS.191.365. U.S Constitutional Law - Civil Liberities. 3 Credits.
The course is designed to introduce students to the study of civil liberties as protected by the Constitution of the United States. The emphasis will be upon those rights incorporated into the Bill of Rights and made applicable to the states through the Fourteenth Amendment. Specifically, the course will examine freedom of speech and freedom of the press—as well as freedom of freedom of thought, belief, and association. In addition, the course will address the right to privacy, the rights of those accused of crimes, and the rights and protections secured under the two clauses of the First Amendment relating to religious liberty—the Establishment Clause and the Free Exercise Clause.
Area: Social and Behavioral Sciences

AS.191.372. Making Social Change. 1.5 Credits.
Aitchison Students Only.
Area: Social and Behavioral Sciences

AS.191.375. Thinking Organizationally about Politics. 3 Credits.
Aitchison Students Only.
Area: Social and Behavioral Sciences

AS.191.376. Public Policy Writing. 3 Credits.

AS.191.381. Education Policy. 1.5 Credits.
Aitchison Students only

AS.191.382. Thinking Economically. 3 Credits.
Aitchison Students Only.
Area: Social and Behavioral Sciences

AS.191.383. Visualizing Data. 3 Credits.
Area: Quantitative and Mathematical Sciences

AS.191.389. The Politics of Race and Ethnicity in the Postcolonial Society. 3 Credits.
The postcolonial society offers a unique terrain for the study of comparative racial politics, providing a setting for which racial and ethnic politics often take place between predominately non-white groups. In this course, students will examine contemporary understandings of the concepts of race and ethnicity and how they are deployed politically in the postcolonial society, enabling students to make deeper explications about the relationship between race, ethnicity and national inclusion as global phenomena that are the persistent and widespread legacies of colonialism, nationalism and white supremacy. Specifically, students will become familiar with the processes of colonization and decolonization— as well as postcolonial theories of resistance—that structure group politics today, drawing upon theoretical sources from Africa, Asia and the Caribbean. These theoretical and historical tools will be used to study racial and ethnic politics across a range of postcolonial cases, including Indonesia, Mauritius, Fiji, Trinidad, Colombia and Brazil.
Writing Intensive

AS.191.402. Numbers, Pictures, Politics. 3 Credits.
Aitchison students only.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
Writings Intensive to examine the narratives ostensibly peaceful, liberal democracies tell about the relationships between institutions and rationality, visibility and invisibility, hygiene and marginalization, and labor and society, and to examine the narratives ostensibly peaceful, liberal democracies tell themselves about violence, history, and progress.

AS.191.405. Modernity and the Slaughterhouse: Labor, Violence, and Animals in Contemporary Society. 3 Credits.

Steven Pinker opens his influential bestseller The Better Angels of Our Nature with the claim that "If the past is a foreign country, it is a shockingly violent one," going on to argue that the contemporary age is one marked by relatively more peace and less violence than ever before. Drawing on a long tradition of optimist thinkers, he credits this civilizational progress to a combination of the intellectual legacy of Enlightenment humanism, greater faith in scientific rationality and technological progress, a strong system of states and social institutions, and the development of democracy and the liberal market economy. For Pinker, this account holds as much for humans as it does for animals, and he goes so far as to claim the emergence of animal rights as "another rights revolution" akin to civil rights and women's rights. But does this account of modern society hold up under scrutiny? Or, more specifically, where does it fail? And how exactly does contemporary society relate to different forms of violence (against humans and animals) that it has not done away with? The historical processes described by Pinker have not only drastically changed human society, but they have also impacted how we interact with animals. The United States today produces and consumes more meat than ever, but most Americans live at an increasing geographic and perceptual distance from animals and the humans who work with them, relying on a system of industrial production and a complex division of labor. This course approaches the politics of this distribution of labor, violence, and human-animal relations from a site rarely considered in political analysis: the modern slaughterhouse. It engages with this institution as a historical and cultural object, using the story of its emergence and operation to ask broader questions about the politics of social change. We will draw on an interdisciplinary range of academic and non-academic works to explore a range of questions about the relationships between institutions and rationality, visibility and invisibility, hygiene and marginalization, and labor and society, and to examine the narratives ostensibly peaceful, liberal democracies tell themselves about violence, history, and progress.

Writing Intensive

AS.191.406. Capitalism: Politics and Political Thought in a Market Economy. 3 Credits.

The United States is a capitalist economy and we live in a capitalist world. This a fact we take for granted and therefore spend little time examining. Capitalism’s proponents attribute our society's unprecedented wealth and technological advances to this economic system. Some go so far as to claim that modern democracy and social progress are impossible without a capitalist economy. Critics point to growing social inequality and a slew of environmental ills as proof of capitalism’s unsustainability. Some suggest that capitalism is antithetical to true democracy and human flourishing. But what exactly is capitalism? How did it evolve in the USA and how does the form capitalism takes in the United States differ from the forms it takes elsewhere? And, crucially, how is capitalism shaped by – and how does it shape – contemporary politics? And how exactly is this all related to liberalism, conservatism, neoliberalism, libertarianism, socialism, and democratic socialism? This seminar is designed to help students critically approach these questions. Rather than taking simplistic pro-contra approach, this seminar will examine capitalism along four axes: as a political-economic system, a corollary set of structures and institutions, the force behind a specific form of state organization, and the determinant of how society and individuals act and see themselves. To explore these issues, we will focus on a number of contemporary political issues, with a primary geographic focus on the United States, including the following: the debates over the welfare state and socialized healthcare; unions, lobbies, and special interests; the connection between capitalism, culture, and ideology; the effects of a capitalist organization of labor of questions of race, gender, and citizenship; the commodification of the environment and other species; and the process of critique, resistance, and social change in a capitalist system. Throughout, we will discuss the theoretical and empirical arguments put forward by a historically and disciplinarily broad range of thinkers including Karl Marx, Simone Weil, John Locke, Adam Smith, Robert Nozick, Thomas Sewell, Nancy Fraser, David Graeber, Melinda Cooper, Andreas Malm, and Guy Debord, through to Alexandria Ocasio-Cortez and Elon Musk.

Writing Intensive

AS.191.415. Fear and Loathing: Writing About Contemporary American Politics. 3 Credits.

This course is focused on reading, analyzing, and, most importantly, producing writing about the American political experience and contemporary events in American politics. We will use scholarly, print, and new media sources from different sides of the political spectrum, drawing on political and literary theory to inform our discussions. We will then try to do better. Students will write and workshop a variety of pieces of different lengths and styles, spending in-class time on peer critique, presentations, and writing exercises, which they will compile into a writing portfolio. We will discuss and write op-eds, memoirs, long-form book reviews, commentary essays, and satire. Throughout, we will devote considerable class time to critique and discussion of students’ writing. Readings will include works by James Baldwin, William F. Buckley, Claudia Rankine, Hunter S. Thompson, Ta-Nehisi Coates, Alexander Chee, Angela Nagle, and Omar el Akkad. We will draw on political commentary from sources ranging from The Washington Post to Jacobin to The Onion, through to Facebook and Twitter. Throughout, we will consider a wide range of topics pertinent to writing about politics, including questions of the make-up of the public sphere and diverse audiences, the use of voice and language, the deployment of facts and rhetoric, the place of fiction and humor in political critique, and the rise of fake news and trolling.

Area: Social and Behavioral Sciences

Writing Intensive
AS.191.420. Are We Living In an Age of Collapse?. 3 Credits.
This course will investigate the themes of civilizational crisis and collapse with the primary goal of understanding the “perfect storm” of converging crises confronting humanity in the 21st century, including earth system, economic, food and energy crises. While these crises are often studied in isolation from each other, this course will engage with more holistic approaches to study them as interrelated components of a deeper system-wide crisis in the contemporary world order. The first part will explore theories of world-systems, political ecology, and collapse in historical perspective. The second will focus on specific dimensions of the contemporary global crisis and their relations, in particular the earth system crisis, the global economic crisis, food and energy crises. The third part will then explore the implications of these crises for the future of world order by investigating possible scenarios, both for the world-system as a whole and for the United States in particular, and then by evaluating different responses and proposed solutions to our critical civilizational condition.

Cross Listed Courses
Agora Institute
AS.196.300. Getting to Truth: How to Navigate Today's Media Jungle. 3 Credits.
Our democratic system depends on an informed public, but media today are polarized along ideological lines, undercut by economic and technological change and sometimes polluted with bogus stories written for profit or spin. In this course, taught by a veteran journalist, we will discuss the evolution of news, examine the current challenges and assess what citizens can do to get a fair understanding of what’s going on. We'll use many concrete examples and students will have multiple writing assignments.
Area: Humanities
Writing Intensive

AS.196.301. Social Entrepreneurship, Policy, and Systems Change. 3 Credits.
This course will explore the dynamics and interplay between social entrepreneurship, social change, and policy. Students will explore frameworks for social transformation and systems change, and explore whether stable governance and effective policies are necessary for sustainable change. The course will examine the intersection between social change and policy change, examining how the two concepts intersect while focusing on the end goal of systems change. Students will examine different case studies of social transformation (or proposed social transformation) from across the United States and world. Guest speakers will include diverse practitioners of social entrepreneurship who think about long-term pathways to transformative social change, and dynamic policymakers. While the course will include case studies on broader domestic and international challenges and models of social transformation, a larger focus will be on specific local social problems and solutions. This will manifest through class discussions and a final project based on the surrounding community.
Area: Humanities
Writing Intensive

AS.196.364. This is Not Propaganda. 3 Credits.
We live in an era of disinformation, mass persuasion, and media manipulation run amok. More information was meant to improve democracy and undermine authoritarian regimes—instead the opposite seems to be happening. This course will take you from Russia to South Asia, Europe to the US, to analyze how our information environment has been transformed, why our old formulae for resisting manipulation are failing, and what needs to be done to create a model where deliberative democracy can flourish.
Area: Social and Behavioral Sciences
Writing Intensive

Anthropology
AS.070.333. Theologies of Political Life. 3 Credits.
This course explores the relationship between modern political forms and theological traditions. Looking at developments both in the West and the postcolonial world, we will examine the multiple ways in which theological traditions have continued to inform how political life is conceived and pursued. In particular, we will focus on the relation between liberalism and the Christian tradition; the turn to messianism in critical theory; the transformation of the shari'a into a legal form; and its imbrication in anti-colonial politics.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

Center for Africana Studies
AS.362.412. Black Political Thought. 3 Credits.
This course examines how modern black political thought emerged through a series of critical engagements with Enlightenment ideas about universalism, progress, the authority of reason, and the foundations of citizenship. Course readings include texts by W. E. B. Du Bois, Angela Davis, James Boggs, Frantz Fanon, bell hooks, and others.
Writing Intensive

Comparative Thought and Literature
AS.300.402. What is a Person? Humans, Corporations, Robots, Trees. 3 Credits.
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course investigates recent debates about being a person in literature and law. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Although our explorations will be focused on these questions, the genre of materials examined will be wide-ranging (including legal essays, philosophy, contemporary novels, and film). Texts will include novels by William Gibson and Lydia Millet, essays by John Dewey and Daniel Dennett, and films such as Ex Machina and Her.
Area: Humanities
East Asian Studies

AS.310.230. Chinese Politics and Society. 3 Credits.
This introductory course will familiarize students with the major dynamics of political and social change in contemporary China since 1949. The course will be divided chronologically into four main topics: 1. The contested processes of nation-state making in modern China before 1949; 2. The making of the socialist system during the Mao Years and its dismantling since 1978; 3. The Reform Era transformation to a market economy with Chinese characteristics; 4. The dynamic relationships among the state, market and society since the new millennium. Students will explore how scholars have explained major political and social changes with reference to individual and collective rationalities, specific organizational and institutional arrangements, and specific strategic and cultural mechanisms of Chinese political and social habits.
Area: Humanities, Social and Behavioral Sciences

AS.310.305. Southeast Asia and US Security Strategy. 3 Credits.
This survey course is designed to introduce students to Southeast Asia – the ten member countries of the Association of Southeast Asian Nations (ASEAN) plus Australia and New Zealand. Southeast Asia is an integral part of the broader region of East Asia and a geographic bridge to the Indian subcontinent (South Asia). Southeast Asia has been one of the great success stories in the saga of modernization and development of post-colonial Afro-Asia over the last six decades. Its resulting economic importance is matched by its strategic significance given the presence of imbedded jihadist networks and the emergence of China as a regional great power and aspirant superpower. Nevertheless, the region has been largely overlooked by senior foreign policy and defense officials in Washington. This course will equip students to fill that void by examining the region from the perspective of national security strategy – broadly understood in its multiple dimensions. Students will be challenged to formulate some element of a viable U.S. national security strategy for the region.
Area: Social and Behavioral Sciences

AS.310.340. Development and Social Change in Rural China. 3 Credits.
This course will survey the major issues of development and social change in rural China since 1950s. These issues will be addressed in chronological order. They include land ownership and land grabbing, organization of rural economic, political, and social life, rural elections and village governance, development strategies, urban-rural relationship in resource allocation, rural modernization strategies in regard to irrigation, clean drinking water, electricity supply, hard paved road, education and rural medical service, women's rights and family life, rural consumption, and etc. This course will prepare students, both empirically and analytically, to understand what happened in rural China from 1949 to the present, and how we can engage in policy and theoretical discussions based on what we learn.
Area: Humanities, Social and Behavioral Sciences

AS.310.402. Labor Politics in China. 3 Credits.
This course explores the transformation of labor relations in China over the past century. It will cover the origins of the labor movement, the changes brought about by the 1949 Revolution, the industrial battles of the Cultural Revolution, the traumatic restructuring of state-owned enterprises over the past two decades, the rise of private enterprise and export-oriented industry, the conditions faced by migrant workers today, and recent developments in industrial relations and labor conflict. The course is designed for upper division undergraduates and graduate students. Cross-listed with Sociology and International Studies (CP).
Area: Social and Behavioral Sciences
Writing Intensive

German Romance Languages Literatures

AS.211.341. Power and Resistance in French Political Thought. 3 Credits.
Even as a strong, divine-right monarchy emerged in France, following the Renaissance wars of religion, rebellious French thinkers never stopped questioning the foundations of power. They focused critically not only on the claims of authority issuing from the top, but also on the submissiveness of the governed and the reach of propaganda. This course examines how power shapes minds and bodies, from absolutism to the Revolution, to democratic laïcité. Readings include works by La Boétie, Montaigne, Loyseau, Bayle, Rousseau, Saint-Just, Maistre, Tocqueville, Foucault, Lefort, Rancière and the Assemblée Nationale. Readings and discussion in English.
Area: Humanities

AS.211.394. Brazilian Culture & Civilization. 3 Credits.
The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. Section 01: 3 credits in ENGLISHSection 02: 4 credits in Portuguese (instructor's permission required)
Area: Humanities
Writing Intensive

AS.212.470. Censorship in Language and Practice. From the Ancien Regime to Democracy. 3 Credits.
An exploration of the boundaries of acceptability when speaking about religion, government, sexuality and gender. Students will learn about the political, theological and legal basis of blasphemy and punishable behavior, and how they have changed from the time of divine-right monarchy to contemporary laïcité. Selected readings ranging from the clandestine culture of free-thinkers and rakes in the 17th century, to the trials and causes célèbres of the Enlightenment, to modern-day democratic polemics.
Pre requisite(s): AS.210.302
Area: Humanities

AS.213.705. Hegel's Phenomenology of Spirit.
We will study key passages of The Phenomenology of Spirit from a queer-feminist perspective and engage with some of the feminist scholarship on Hegel
Area: Humanities

AS.216.398. Zionism: Literature, Film, Thought. 3 Credits.
This course studies the relations between modern Hebrew and Israeli culture and Zionism. Based on a close reading of both literary and non-literary Zionist texts, we will explore the thematic, social and political aspects of the Zionist movement. The course focuses on primary sources and its main goal is to familiarize students with the various ways in which Zionism was formed and understood. In the last part of the semester we will investigate the different meanings of Post-Zionism through contemporary literary and non-literary texts as well as recent Israeli films.
Area: Humanities

History

AS.100.295. American Intellectual History since the Civil War. 3 Credits.
Readings in American social thought since 1865, ranging across developments in philosophy, literature, law, economics, and political theory.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
the contributions of semiotics, psychoanalysis and queer theory. Challenges to and recuperations of iconology, assessing the hermeneutics of the Pre-Modern Image since Panofsky; the critique of Modernity.

AS.010.404. John Locke. 3 Credits.
Seminar style course in which John Locke's major works will be read intensively, together with some of his contemporaries' works, and select scholarly interpretations.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.010.442. The Intellectual History of Capitalism, 1900 to present. 3 Credits.
This course examines shifting understandings of the philosophical foundations, political implications, and social effects of the market economy since the early twentieth century.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.100.699. Neoliberalism.
Readings on the history, theory, and politics of neoliberalism, from midcentury to the present.
Area: Humanities, Social and Behavioral Sciences

History of Art
AS.010.327. Asia America: Art and Architecture. 3 Credits.
This course examines a set of case studies spanning the last century that will enable us to explore the shifting landscape of Asian transnational art and architecture. Each week will focus on a different artist, group, exhibition, architect, urban space, or site to unpack artists’ and architects’ engagements with the changing landscape of immigration policies, movements to build solidarity with other artists of color, and campaigns for gender and sexual equality. The course will situate these artists within American art, and build an expansive idea of Asia America to include the discussion of artists whose work directly addresses the fluidity of location and the transnational studio practice.
Area: Humanities
Writing Intensive

AS.010.382. The Politics of Display in South Asia. 3 Credits.
Through an examination of colonial exhibitions, the rise of national, regional, and archaeological museums, and current practices of display and representation in institutions, we will explore how the image of South Asia has been constructed in the colonial, modern, and contemporary eras. We will engage with the politics of representation, spectacle, and the economies of desire as related to colonialism and the rise of modernity. Readings from postcolonial theory, museum studies, anthropology, history, and art history.
Area: Humanities
Writing Intensive

AS.010.634. Rethinking the Renaissance: Alternatives to 'Early Modernity'.
'The Renaissance' as a periodization under attack, and its persistance; the hermeneutics of the Pre-Modern Image since Panofsky; the critique of Eurocentrism; challenges to and recuperations of iconology, assessing the contributions of semiotics, psycholanalysis and queer theory.
Area: Humanities

History of Science, Medicine, and Technology
AS.140.364. The City Course: Disciplinary Perspectives on Urban Life and Form. 3 Credits.
This course aims, first, at enlarging our understanding of cities by looking at them from a variety of disciplinary perspectives and, secondly, at examining the distinctive ways of thinking associated with disciplines from engineering, the sciences and medicine to anthropology, sociology, economics, archaeology, history and literature. Baltimore and cities from around the world will provide resource material. Lectures, discussions, term projects.
Area: Humanities, Social and Behavioral Sciences

Interdepartmental
AS.360.247. Introduction to Social Policy: Baltimore and Beyond. 3 Credits.
This course will introduce students to basic concepts in economics, political science and sociology relevant to the study of social problems and the programs designed to remedy them. It will address the many inequalities in access to education and health care, unequal treatment in the criminal justice system, disparities in income and wealth, and differential access to political power. The focus will be on designing effective policies at the national and local level to address these pressing issues. This course is open to all students, but will be required for the new Social Policy Minor. The course is also recommended for students who are interested in law school, medical school, programs in public health, and graduate school in related social science fields. This course does not count as one of the required courses for the Economics major or minor, but it is required for the Social Policy Minor. Cross list with Sociology, Economics and Political Science. Freshman, Sophomore and Juniors only.
Area: Social and Behavioral Sciences

AS.360.331. Methods for Policy Research. 3 Credits.
This course will introduce students to quantitative methods for studying social policy problems. Topics to be covered include descriptive statistics and sampling, correlation and causation, simple and multiple regression, experimental methods, and an introduction to cost-benefit analysis. The emphasis will be on the selection, interpretation and practical application of these methodologies in specific policy settings, rather than with formal proofs. Skills will be reinforced by hands-on exercises using statistical software. Over the course of the semester, students will critically analyze policy reports and empirical research in a range of policy areas and learn how to present this research to a non-specialist audience. Finally, we will discuss the pros and cons of quantitative vs. qualitative methodologies. The course will conclude with group presentations that draw on all these skills. Enrollment restricted to Social Policy minors only.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
AS.360.366. Public Policy Writing Workshop. 3 Credits.
This workshop is designed to hone the analytical and communications skills necessary for effective formulation and advocacy of public policy. Topics include how to develop op-ed pieces and other forms of advocacy journalism, memoranda, position papers, and grant proposals. The workshop puts special stress on how to make a clear and persuasive exposition of complex or counter-intuitive policy arguments in the market place of ideas, including the challenges of writing for popular journals and communicating to specific audiences both in and out of government. Students receive intensive individual instruction, including close editing of their work and advice on how to publish or promote it in the public sphere. Enrollment restricted to Social Policy minors only. Area: Social and Behavioral Sciences Writing Intensive

AS.360.401. Social Policy Seminar. 3 Credits.
This course is designed for students who have completed either the Baltimore intensive semester of the Social Policy Minor. The students will make presentations and pursue joint projects based on what they have learned during the intensive semesters concerning key social policy issues. Area: Social and Behavioral Sciences

International Studies

AS.192.150. States, Regimes & Contentious Politics. 3 Credits.
This course introduces students to the study of politics and political life in the world, with a particular focus on the Middle East, Latin America, and Africa. Throughout the course, we will analyze the sources of order and disorder in modern states, addressing a series of questions, such as: why did nation-states form? What makes a state a nation? Why are some states democracies while others are not? How do people organize to fight oppression? Why does conflict sometimes turn violent? What are the causes of ethnic war? Drawing on a mix of classic works and contemporary scholarship, we will discuss the answers that scholars have formulated to address these and other questions, paying special attention to research design and the quality of argumentation. Area: Social and Behavioral Sciences

AS.192.225. Economic Growth and Development in East Asia. 3 Credits.
The course offers an overview of the complexities of East Asia's development experience from a variety of perspectives, and it is divided into three parts to allow students to develop expertise in one or more countries and/or policy arenas, while also cultivating a broad grasp of the region and the distinct challenges of "East Asia fast-paced, sustained economic growth." Part I considers the origins of Asian economic development, analyses the common economic variables behind the region's success, looks at the East Asian financial crisis and its lessons and assesses whether or not East Asian countries have learned them. Part II will focus on the development experiences of individual countries, with an emphasis on the ASEAN economies, NIEs, Japan and China. Part III considers topics of special interest to Asia, including trends toward greater regional economic cooperation, both in the real and financial/monetary sectors, and issues related to poverty, migration, and inclusiveness. Area: Social and Behavioral Sciences

AS.192.280. China Under Revolution and Reform. 3 Credits.
China is an emerging world power with a long history, a rich culture, and complex political structures and processes. As a modern state, the People's Republic of China (PRC) continues to amaze and confound observers both inside and outside its borders. More than three decades after opening its doors to the outside world, China remains as important as it is misunderstood. This course is de-signed to provide you with a road map to help understand the fascinating world of Chinese politics and the contemporary Chinese state. The course presumes no prior knowledge of China. Area: Social and Behavioral Sciences

AS.192.320. Colonialism and Foreign intervention in the Middle East and Africa. 3 Credits.
How did colonial rule and post-colonial foreign intervention shape the history and politics of states in the Middle East and Africa? The first part of this course focuses on the colonial period, examining the era of conquest, considering how and whether colonial rule differed from other types of ruling arrangements, and studying how people in colonized territories reacted to conquest and foreign rule. Part Two focuses on post-colonial foreign military interventions. Part Three considers the potential long-term consequences of colonialism and foreign intervention. The course focuses on British, French, and American imperialism. **This course is eligible for credit toward the Islamic Studies minor, but only if students relate their major research paper to Islam and also notify Prof. Lawrence at the beginning of the course of their intention to seek Islamic Studies credit. Area: Social and Behavioral Sciences Writing Intensive

AS.192.401. Political Violence. 2 Credits.
This class will function predominantly as a discussion seminar that uses the case of the Lebanese Civil War to examine the causes, duration, and dynamics of civil war as well as the debates surrounding foreign intervention and peacebuilding. Themes include: ethnic violence; economic explanations for civil war; civilian targeting; intra-rebellion dynamics; sexual and gender-based violence; election violence; occupation; peacekeeping; and the Responsibility to Protect. Area: Social and Behavioral Sciences

AS.192.402. Military Organizations in the Middle East and North Africa. 2 Credits.
This course will examine the diverse roles state and non-state military organizations play in MENA politics, economics, and society. Each week will use an organizational case study as a window into core themes such as military involvement in state economies, militia politics, or combatant discipline in war. Area: Social and Behavioral Sciences

AS.192.404. Democracy, Autocracy and Economic Development: Korea, Indonesia, and Myanmar. 3 Credits.
East Asia's "miracle growth" has not gone hand in hand with a decisive move toward democracy. The course explores the reasons why democratization proceeds slowly in East Asia, and seems to be essentially decoupled from the region's fast-paced economic growth. The course is divided into three parts. Part I introduces the specifics of East Asia's economic development strategies as well as key concepts of democracy, authoritarianism and military rule and the tensions between these theories and the East Asian experience. Part II will focus on the economic and political development experiences of Korea, Indonesia and Myanmar in light of what discussed in Part I. Finally, Part III presents lessons emerging from the comparison of Korea's, Indonesia's and Myanmar's economic and political developmental trajectories. Area: Humanities
AS.192.410. Kissinger Seminar on American Grand Strategy. 3 Credits.
Enrollment is at the discretion of the instructors and space in the course is limited. To apply, email a one-page resume, one-page personal statement on why you want to take the class including how it contributes to your professional interests, and a writing sample of less than ten pages to KissingerCenter@jhu.edu. Applications are due by Monday, October 21, 2019. This course is an initiative of the Henry A. Kissinger Center for Global Affairs at Johns Hopkins SAIS, meant to link SAIS with the undergraduate International Studies major at Homewood. It will expose exceptional undergraduate students to the study of grand strategy and the history of U.S. foreign policy. The bulk of the course will explore critical moments, themes, and people in the history of American grand strategy, from Washington’s Farewell Address to the statecraft of Donald Trump. The seminar will be rooted in applied history—the study of the past as a way of better understanding the challenges and opportunities of the present and future. It will also be interdisciplinary, drawing on international relations theory and contemporary policy studies. The seminar will equip students to evaluate and contribute to intense debates about the future of American grand strategy. In addition to regular classroom meetings, the course will feature events at the SAIS campus in Washington, DC, including meetings with current and former policymakers. These sessions will take place on February 10th, March 2th, April 6th, April 27th. Transportation between Homewood campus and SAIS will be provided. These sessions will be followed by a dinner hosted by the Kissinger Center.
Area: Humanities, Social and Behavioral Sciences

AS.192.415. The Battle of Ideas for the World Economy. 3 Credits.
This seminar is intended as a capstone intellectual experience for seniors and advanced juniors majoring in international studies. The course presumes some background in economics, comparative politics, and international relations. This course will hone your analytical and writing skills by exposing you to theoretically advanced forms of political economy argument in a “proposition-opposition” format. The seminar is organized around a series of thematic pairings, covering such political economy themes like free trade vs. protectionism, free market capitalism vs. socialism, democratic erosion vs. autocratic strength, hegemonic stability vs. US abdication of power, or whether the current populist wave has mainly economic or mostly cultural roots. Each segment will deal with a specific topic area. Our discussions will involve in-depth interrogations of the arguments of these ‘pro-con’ authors.
Area: Social and Behavioral Sciences
Writing Intensive

Philosophy

AS.150.404. The Idea of Power. 3 Credits.
The Idea of Power surveys seminal texts in the history of political thought on the nature, promise, and dangers of political and social power; it also critically engages contemporary texts on race and gender power relations.
Area: Humanities

AS.150.462. Islamic Political Philosophy. 3 Credits.
An introduction to the history of Islamic political philosophy, primarily focused on two flashpoints of encounter between the religion of Islam and other philosophical/political systems—an early one with ancient Greek philosophy (especially in the works of Plato and Aristotle), and a period of interface with modern Western secular political thought, from the late 19th century to present. Our goal will be to try to understand some of the varying responses in each period as Muslim thinkers seek authentic engagement with external and internal trends, both religious and philosophical. The focus will be on primary texts from philosophically engaged thinkers (who may or may not consider themselves philosophers).
Area: Humanities

Sociology

AS.230.275. Revolution, Reform and Social Inequality in China. 3 Credits.
This course explores various aspects of social inequality in China during the Mao Zedong and the post-Mao reform eras. We will examine inequality within villages, the rural/urban divide, urban inequality, education and health policies, and gender and ethnic inequality. Each of these issue areas will be tackled analytically, but the aim is also to understand what it was/is like to live in China during and after the Mao era. Formerly offered as AS.230.321.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.318. State and Society in Modern India. 3 Credits.
This course examines the complex, at times conflicting, relationship that has emerged between Indian seats of power from above and Indian expressions of society from below. Attention will be placed on the period between 1947 to the present.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.357. Baltimore and Beyond. 3 Credits.
This course uses the city of Baltimore as a lens through which to explore issues of urban inequality. We will focus on Baltimore’s history of racial segregation and concentrated poverty, and its effect on the social and economic well-being of the city and its residents, with attention to education, employment, health and crime. Students will learn how to employ Census data, GIS approaches, and sociological research to inform questions about population change, inequality and the distribution of resources across the city and metropolitan region. Students will also work on one or more policy relevant studies based in Baltimore, including: a project on abandoned and vacant housing, a desegregation intervention, and a longitudinal study of inner city youth. Finally, students will become familiar with Baltimore City’s programs and policy approaches to addressing the city’s most pressing problems, and will design innovative and effective and innovative solutions as part of their course assignments. Enrollment restricted to Social Policy minors only.
Prerequisite(s): Students that took AS.360.357 may not take AS.230.357
Area: Social and Behavioral Sciences
Writing Intensive
Study of Women, Gender, Sexuality
AS.363.416. WGS Internship/Practicum: Feminist Animals: Sex, Nature, and Nonhumans. 3 Credits.
Introducing feminist approaches to ecology and nonhumans, this course considers the interconnections between heteropatriarchal domination and the domination of nonhuman animals and ecologies. What different sensibilities and ways of seeing sex and gender open up when attention shifts to nonhumans? What tensions within and between feminism, animal liberation, and ecological concern come to the fore when each approach is alongside the others? How does the study of nonhumans extend the promise of feminism, and vice versa? In responding to these questions, we will see the real breadth of issues that the theory and practice of feminism can address.

Political Science, Bachelor of Arts
Political Science Major Requirements
(See also Requirements for a Bachelor’s Degree (p. 1584).)

All courses applied towards the major must be taken for a letter grade and students must receive a grade of C or higher. Six of the 12 political science courses required for the major must be taken at JHU. Only one letter-graded independent study of 3 credits may apply towards the major (unless honors thesis). The Department of Political Science does not award credit for the Advanced Placement Exam in government.

World Politics and Global Governance Double Major

The World Politics and Global Governance (WPGG) (http://politicalscience.jhu.edu/undergraduate/world-politics-and-global-governance-double-major/) program offers an intellectually rigorous path for students who want to understand world politics from a broad interdisciplinary perspective. Completing this course of study satisfies the requirements for a double major in political science and international studies. Students take courses from one of five different thematic foci: Global governance and law; Political economy; International security; Borders and identities; Environmental politics. The WPGG program enables students to develop their analytical skills and their critical judgment as citizens of the world. The program provides excellent preparation for professional careers as well as for graduate studies in political science, public affairs, law, business, and beyond. http://politicalscience.jhu.edu/undergraduate/world-politics-and-global-governance-double-major/
Honors Thesis Program

Seniors may choose to write a senior research thesis. After the student has obtained approval from a faculty sponsor to supervise the project, the student will enroll in three-credit thesis colloquium course during the fall semester of their senior year. If at the end of the fall semester adequate progress has been made and the project warrants further work, the student must enroll in a three-credit independent study supervised by the faculty sponsor.

Students who complete a distinguished senior thesis and have a final major GPA (including final semester grades) of 3.7 will be awarded departmental honors. All students may choose to write a thesis, regardless of GPA, provided they have a detailed proposal approved by a faculty member at the beginning of the fall semester of their senior year.

All thesis-related courses apply to the total of 12 political science courses required for graduation in the major.

Political Science, PhD

The Johns Hopkins University Department of Political Science is known for its strength in theory and in innovative and trans-disciplinary approaches to uncovering new knowledge, and the program of doctoral study draws on these strengths to provide rigorous training. Our program is designed for highly qualified, intellectually curious, and creative graduate students who can benefit by learning from and contributing to this community of scholars.

Doctoral students develop in-depth knowledge of a major field and a minor field (or two major fields), chosen from American politics, comparative politics, international relations, law and politics, and political theory. In addition, doctoral students may complete a certificate in comparative racial politics.

Students have opportunities to work closely with faculty and to pursue independent research, and faculty and doctoral students benefit from strong connections with colleagues in other social science and humanities disciplines and opportunities to collaborate with them.

The preparation of the next generation of scholars in the field of political science is a key part of the Johns Hopkins political science department faculty’s commitment to research and advancing the understanding of politics. The doctoral program reflects the distinctive strengths of the department’s cross-cutting intellectual orientations (encompassing the themes of power and inequality, identities and allegiances, agency and structure, and borders and flows), realized in faculty and PhD student research and teaching.

The department and Krieger School of Arts and Sciences provide opportunities for developing teaching and other career-related skills.

Financial Support

The department ordinarily provides financial aid to all students admitted to the graduate program unless they hold fellowships from sources outside the university. Departmental fellowships cover full tuition and an annual stipend. Assuming satisfactory progress toward the Ph.D., students can normally expect to receive funding for five years. All students receiving financial aid are expected to serve as teaching assistants for one semester of each academic year beginning their second year at the university.

Admission Requirements

The Department of Political Science admits approximately 16 new graduate students each year, selected from approximately 200 applications. Our entering class is typically around 10 students. The deadline for application for admission to graduate study and the award of financial assistance is January 15 (most years). Decisions are made exclusively in late February or early March and announced by March 15.

A bachelor’s degree (or equivalent) and results of the Graduate Record Examination are required for application. Students whose native language is not English must take the TOEFL examinations or provide other evidence of fluency in English (such as a degree from an institution in which the language of instruction is English.) A broad background in the liberal arts and sciences is preferred. Further information can be found at http://grad.jhu.edu/apply/application-process/.

Program Requirements

The requirements for the Ph.D. in political science are divided between those that must be satisfied by all candidates for that degree and those particular to the student’s major and minor fields.

Department-wide Requirements

All candidates for the Ph.D. must satisfy the following requirements:

Course Requirements

- To fulfill the requirements for the PhD in Political Science students must complete 12 courses at the 600-level with a grade of B or better.
- Of these 12 courses, eight must be graduate-level (600-level) courses taken in the Political Science Department.
- No more than two of these eight courses (600-level) may be Independent Studies.
- If a graduate student is interested in taking an undergraduate-level course, the student must make arrangements to take a graduate-level Independent Study with the professor teaching that course. (NB: As noted above, a student may take no more than two Independent Studies for credit toward fulfilling the requirements of the PhD).
- A student may take no more than one graduate-level course at another division of Johns Hopkins University (i.e. SAIS, Public Health, etc.) for credit toward fulfilling the requirements of the PhD in Political Science.
- Students may make a formal request to the DGS to have up to two graduate-level courses taken at another division count for credit toward fulfilling the requirements of the PhD in Political Science at JHU.

Foreign Language Requirement

All students must demonstrate proficiency in a foreign language. This requirement can be fulfilled as follows:

1. Demonstrate fluency in a foreign language (granted automatically for students whose first language is not English).
2. Complete four semesters of college-level foreign language instruction.
3. Pass a translation exam.
4. Earn a degree from a University where instruction is not in English.
5. With a degree from an institution in which the language of instruction is a language other than English.

Foreign Language Requirement

All students must demonstrate proficiency in a foreign language. This requirement can be fulfilled as follows:

1. Demonstrate fluency in a foreign language (granted automatically for students whose first language is not English).
2. Complete four semesters of college-level foreign language instruction.
3. Pass a translation exam.
4. Earn a degree from a University where instruction is not in English.
5. With a degree from an institution in which the language of instruction is a language other than English.
6. Place into a third-year foreign language course through online placement tests (see GRLL website).

Comprehensive Examination Requirement
Students are required, at a minimum, to take comprehensive exams in one major field and one minor field. Students may also elect to take two major exams or a major exam and two minor exams (one of which may be outside the Department of Political Science).

Faculty members in the field write and evaluate the exams and determine the format. Major field comprehensive exams take place over two days (8 hours per day); minor field exams take place over one day. The fields within the department are: American Politics, Law and Politics, Political Theory, Comparative Politics and International Relations.

Students choosing a second minor outside the Political Science Department must devise a coherent program of study in that discipline, in consultation with their Political Science faculty advisor and with faculty from the other department. Students choosing an external minor must complete a minimum of three courses at the 600 level in the external minor’s discipline, earning a grade of B or better. They must also pass a comprehensive examination prepared and evaluated in consultation with faculty of the Department of Political Science by the instructors in those courses.

Dissertation
The dissertation is the capstone of doctoral education, and it must be a substantial work of independent scholarship that contributes to knowledge in the student’s field of study. Students must identify a tenure-track or tenured member of the Political Science faculty who is willing to supervise the preparation of their dissertation. A dissertation prospectus must be submitted to two professors (one of whom must be the dissertation advisor) and that prospectus must be accepted by them both.

Defense
Students must pass a final examination that takes the form of a defense of the doctoral dissertation that is conducted under the rules of the Graduate Board of Johns Hopkins University.

Note: Exceptions may be made to some of these requirements but only with the approval of the graduate student’s advisor and the Political Science Department’s Director of Graduate Studies.

Field-specific Requirements
Field-specific basic expectations, procedures, and requirements are stated below. These are implemented, interpreted, and adjusted in the light of the intellectual orientations and objectives of individual students. It is important that students work closely with their advisors and with the faculty in their major and minor fields in constructing and pursuing their programs of study.

American Politics
Students majoring and minoring in American Politics will work with at least two faculty members to develop a plan of study that includes recommended course work and other preparation needed to pass a comprehensive exam. Students completing a major are expected to demonstrate a breadth of knowledge sufficient for framing a dissertation in the relevant disciplinary literature and teaching undergraduate courses in the field; students who pursue a minor may focus more narrowly on an area of study in which they demonstrate fluency. These may include, but are not limited to, the following areas of faculty interest:

- American Political Institutions (Congress, Courts, and the Executive)
- Urban Politics
- American Political Development
- Race and Politics
- Political Behavior and Public Opinion
- Public Policy
- American Political Thought
- Political Parties and Elections

In addition, students majoring in the field are strongly encouraged to take AS.190.602 Introduction to Quantitative Political Science as part of their course of study.

Comparative Politics
All students majoring and minoring in this Comparative Politics will become conversant with major substantive and methodological debates in the field, and be able to comment on the key theoretical literature in several of those debates. They will normally also develop knowledge of at least one world region. Students majoring or minoring in Comparative Politics are required to take AS.190.625 Theories of Comparative Politics and at least one seminar in quantitative or qualitative methods. Students are expected to master the material covered in these courses, as well as others with more specialized topics.

Students will take a comprehensive exam that will test their ability to engage with several areas of theoretical debate in Comparative Politics, and their ability to use comparative examples to support their arguments. Students may focus on (but are not limited to):

- Civil Society
- Institutional Theories
- Transnational Relations, Social Movements, and Contentious Politics
- Political Parties, Interest Groups, Representation, and Political Behavior
- Comparative Political Economy
- Comparative Racial Politics, Nationalism, and Migration and Citizenship
- The Political Economy of Development
- Economic and Political Transitions
- Ideas and Politics

Within the spirit of this division of the overall field, students may propose alternative delineations of thematic subfields.

Students working in specific thematic and substantive subfields within Comparative Politics will be required to demonstrate competence in methodologies and bodies of theory judged by the faculty to be necessary for quality research and teaching in those subfields.

Requirements for the Major Exam
Student taking the major exam are expected to compile a reading list that includes at least six fields, including a general "Theories of Comparative Politics" field. The reading list must be approved by the student's advisor at least six weeks before the exam. We strongly advise students to submit their reading lists to all of the CP faculty for feedback at least a
few months before the exam. A minimum of three CP faculty members will read each major exam.

**Requirements for the Minor Exam**

Students taking the minor exam should seek two readers among the CP faculty for their exams. Students are expected to compile a reading lists that includes at least four fields, including a general “Theories of Comparative Politics” field. The reading list must be approved by the two readers at least six weeks before the exam. We strongly advise students to submit their reading lists to all of the CP faculty for feedback at least a few months before the exam.

**International Relations**

All students majoring or minoring in International Relations will be required to be conversant with the major theoretical, substantive, and methodological themes and debates of the field. It is strongly recommended that students take AS.190.676 Field Survey of International Relations and a methods course.

Students majoring in International Relations will take an examination covering two subfields. The first subfield must be International Politics. The other subfield is to be determined in consultation with faculty teaching International Relations. Choices include but are not restricted to:

- International Law and Diplomacy
- International Relations Theory
- International Security Studies
- Science, Technology, and Art and International Relations
- Global Political Economy

Students minoring in International Relations will take a comprehensive examination in International Politics.

**Political Theory**

Students majoring in Political Theory will take a comprehensive examination covering the following two subfields:

- Contemporary Political Theory
- History of Political Thought

Each student preparing for a major comprehensive exam will propose six or seven thinkers in the history of thought, six or seven recent or contemporary thinkers, and three or four issue areas. Examination questions are composed in light of the theorists and issues articulated in the exam prospectus.

The minor comprehensive exam in political theory asks the student to select half the number of thinkers required for the major exam and three issue areas.

Preparation for these examinations will be arranged in consultation with relevant faculty.

Students majoring in political theory will also take at least one minor field from American Politics, Law and Politics, Comparative Politics, or International Relations.

**Law and Politics**

Law and politics focuses on American constitutional thought, judicial politics, law and society, and philosophy of law. Students learn not only about the history and context of American constitutional developments, but also about the operation of the judicial branch of government in the past and the present. Studying how courts and judges do their work, students also consider how that work has changed over time. Students explore how legislation as well as court decisions reflect and influence a society's policies, politics, and moral commitments. In addition, they examine how social movements, interest groups, and professional networks help to shape law's content and implementation.

Students may major or minor in law and politics. In either case, students work closely with at least two members of the faculty to develop a plan of study regarding coursework and additional reading to prepare them for comprehensive exams. Majors are expected to demonstrate a breadth of knowledge in the field sufficient for framing a dissertation and for teaching undergraduate courses; minors may focus more narrowly on a particular area of study.

**Certificate in Comparative Racial Politics**

The graduate certificate program in Comparative Racial Politics is designed to help train graduate students who are developing empirically based and/or theoretically informed scholarship on citizenship, racism and immigration in contemporary societies, whether in a single national society or cross-spatially. There are two required courses: Comparative Racial Politics, and Qualitative Methods. In addition the student must take two electives from this (preliminary) list:

- Nationalism
- Comparative Citizenship and Immigration
- Politics
- Topics in Black Political Thought
- Race and Political Theory
- Civil Society
- States, Regimes and Governmentality
- American Political Development
- Political Economy of Development

**Progress Toward the Ph.D.**

The time necessary to obtain a Ph.D. in the department varies according to the preparation individual students bring to the program, the scope and complexity of their dissertation topics, and other factors. Students are required to make satisfactory progress, meaning that they must work toward fulfilling the requirements in a timely manner. Students are encouraged to satisfy the department's foreign language requirement by the time of their first comprehensive exam. Most students take their comprehensive examinations in the third year in the program. Students who have completed all requirements except the dissertation must work to complete their dissertations as quickly as is reasonable given the unique circumstances of their course of study, and they must periodically demonstrate progress on the dissertation.

The Master of Arts degree is offered only to students who have been admitted into the Ph.D. program. For the M.A., the student must complete at least seven one-semester courses at the 600-level with a grade of B or better, and demonstrate an effective reading knowledge of one approved foreign language.

**Psychological and Brain Sciences**

http://pbs.jhu.edu/
The psychological and brain sciences are concerned with understanding the biological and psychological processes underlying animal and human behavior at all stages of development.

The undergraduate program leading to the baccalaureate degree is intended to provide students with a sound background in psychological and brain sciences and, at the same time, to prepare them for advanced study.

The program for doctoral students in psychological and brain sciences has a strong empirical focus and emphasizes research methodology. The broad aim of the graduate program is to train students to become scientists rather than practitioners.

Facilities
The department's offices and laboratories contain dozens of desktop computers (PCs and Macintoshes) and UNIX workstations used for experimental control and for computational studies, simulation, data analysis, and manuscript preparation.

The F. M. Kirby Research Center for Functional Brain Imaging houses 3.0T and 7.0T Philips research-directed MRI scanners for fMRI studies of human perception, memory, and cognition.

The cognitive psychology and cognitive neuroscience laboratories contain a wide range of computer equipment and special-purpose research equipment, including image-processing and large-format graphics systems, eye-movement monitors, speech recognition and analysis systems, stereoscopic graphic systems, video equipment, EEG, Transcranial Magnetic Stimulation, and other stimulus-presentation and response-collection devices.

The biopsychology laboratories have all the facilities necessary to conduct modern behavioral neuroscience research, including equipment for behavioral and operant testing, electrophysiology, histology, surgery, neurochemistry, and systems for the analysis and synthesis of audio signals.

Programs

- Psychology, Bachelor of Arts (p. 2161)
- Psychology, Minor (p. 2162)
- Psychology, PhD (p. 2163)

Courses

AS.200.101. Introduction To Psychology. 3 Credits.
Do we all see colors the same way? How did so many 'good' people support the Nazi party? Do crossword puzzles really stave off Alzheimer’s Disease? This course tries to answer these questions and many others, providing a comprehensive overview of the scientific study of the mind. We'll explore topics such as perception, language, memory, decision-making, creativity, love, sex, art, politics, religion, dreams, drugs, brain damage and mental illness, grappling with deep and long-standing controversies along the way: differences between the sexes, the relationship between mind and brain, causes and consequences of racism, human uniqueness (or not) within the animal kingdom, nature vs. nurture, good and evil, consciousness. Appropriate for anyone wanting to know who and what we are as human beings (or who noticed that psychology is now on the MCAT).
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.109. Introduction to Clinical Psychology. 1 Credit.
Students will be exposed to the practice and science of Clinical Psychology. Students will learn about various clinical characteristics of psychiatric disorders and treatments available for these conditions. This class will emphasize critical thinking and analysis. It is designed to help students gain an understanding of the scientific strengths and limitations essential to becoming a good diagnostician, therapist, and researcher in the field. This course does not count towards the psychology major.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.110. Introduction to Cognitive Psychology. 3 Credits.
Introductory survey of current research and theory on topics in cognitive psychology. The course will cover a range of topics in perception, attention, learning, reasoning, and memory, emphasizing relationships among mind, brain, and behavior.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.131. Introduction to Developmental Psychology. 3 Credits.
An introductory survey of human development from the prenatal period through adolescence. The developing child is examined in terms of cognitive, social, emotional, motor, and language development.
Area: Social and Behavioral Sciences

AS.200.133. Introduction to Social Psychology. 3 Credits.
An introductory survey of social psychology. Topics include social perception, social cognition, attitudes, prejudice, attraction, social influence, altruism, aggression, and group behavior.
Area: Social and Behavioral Sciences

AS.200.141. Foundations of Brain, Behavior and Cognition. 3 Credits.
A survey of neuropsychology relating the organization of behavior to the integrative action of the nervous system. Cross-listed with Behavioral Biology and Neuroscience.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.142. Profiling Mentally Ill Mass Murderers. 1 Credit.
Mass Shootings by mentally ill are a scourge upon society. Factors like easy access to guns by dangerous mentally ill, inadequate commitment laws, the inability to predict dangerous behavior, and media frenzy, contribute to an increasing death toll. This course uses case studies to highlight the role played by diagnostic assessment (suicide by cop, psychopathic behavior, PTSD, major mental disorders), inadequate prevention civil and gun policy strategies, and stigmatization of the mentally ill as dangerous. Pre-college students only.
Area: Humanities, Social and Behavioral Sciences
AS.200.159. Freshmen Seminar: Evolutionary Psychology. 1 Credit.
In this course we discuss evolutionary psychology, which is the idea that the mind can be understood as an adaptation to our ancestral environment by means of natural selection. Freshmen only. Note: This course does not count towards the Psychology major.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.160. Illusions, delusions, and other confusions. 1 Credit.
This course is suitable for all, but would be especially useful for a student who does not expect to take many (or any) additional psychology or cognitive science courses. We will explore what modern psychology has uncovered about how our intuitions concerning human nature deceive us. Freshmen Only. Note: This course does not count towards the Psychology major.
Area: Social and Behavioral Sciences

AS.200.161. Gamechangers: Conceptual Breakthroughs in Neuroscience. 3 Credits.
Freshman Seminar; This introductory class will highlight some of the key findings in neuroscience over the past century and a half that have revolutionized our understanding of how the brain works. The goal is to convey both the essence of, and the excitement surrounding, neuroscience breakthroughs that caused paradigm-shifts. We will also look at recent neuroscience-related headlines in popular media and unpack them from a scientific perspective. Topics covered will include “Is the brain just one big lump of tissue?”, “Telephones in the brain?”, “The frog with upside-down vision”, “Brains vs. hard-drives”, “Monkey see=monkey do neurons”, Epigenetics, “Changing the brain’s wiring diagram”, “Do ants have GPS?”, The science behind the movie ‘Memento’, “Implanting false memories into brains”, “My brain sees you, but I don’t”, etc. For each big question, we will first examine the thinking that previously existed, and then explore the shift in thinking. Note: This course does not count towards the Psychology major.
Area: Natural Sciences
Writing Intensive

AS.200.162. Childhood Disorders & Treatments. 3 Credits.
This is an online course. The class will meet for ten weeks from May 26 through July 31 and will follow the deadlines for Term I for add/drop/withdraw and grade changes. This course examines the psychological disorders that are usually first diagnosed prior to adulthood. Some of the specific disorders that will be discussed are Attention-Deficit and Disruptive Behavior Disorders, Pervasive Developmental Disorders, Learning Disorders and Intellectual Disability. Students will become familiar with various diagnoses, etiologies, and methods of treatment. Note: This course does not count towards the Psychology major.
Area: Social and Behavioral Sciences

AS.200.163. Gamechangers: Conceptual Breakthroughs in Neuroscience. 3 Credits.
This is a seminar course. The class meets once weekly and will be devoted to exploring and discussing key papers in contemporary neuroscience. The goal is to familiarize students with leading research in neuroscience and to provide an opportunity for students to consider the implications of this work for their own research and career goals. Freshmen only. Note: This course does not count towards the Psychology major.
Area: Natural Sciences
Writing Intensive

AS.200.200. Research Methods in Psychology. 4 Credits.
The goal of this course is to introduce how psychological scientists develop and test research questions about the mind and behavior. We will explore how empirical investigation differs from other ways of making discoveries and learning about the world, and how psychologists employ various methodologies to tackle their phenomena of interest. We will examine the relationships between research questions and research designs, the benefits and drawbacks of differing measurement and sampling approaches, the ethical implications of various research paradigms, and best practices in communicating research findings clearly and engagingly. You will have the opportunity to engage “hands-on” with the research process through interactive labs and demonstrations. Over the course of the semester, you will develop and receive feedback on a research proposal, which will serve as a foundation for the spring course “Design and Analysis for Experimental Psychology”.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
Writing Intensive

AS.200.201. Design & Statistical Analysis for Psychology. 4 Credits.
The goal of this course is to expose you to the processes of data collection, analysis, and dissemination in psychology. This course is the follow-up to “Research Methods in Experimental Psychology,” and therefore will draw on the methodological principles and practices covered in the Fall semester. This course will cover a wide array of analytical techniques (i.e., statistics) that you will apply to data collected as part of a semester-long group research project. The course will also include extensive coverage of the R programming language for use in data management, analysis, and visualization. With your group members, you will collect primary research data, carry out appropriate statistical tests, compose individual research manuscripts, and collectively present a poster at an on-campus research symposium. In combination with the Fall course, this class will serve as strong preparation for those considering honors theses, joining research labs at Homewood and/or JHMI, conducting independent research projects, and ultimately pursuing careers/graduate work in experimental psychology.
Prerequisite(s): AS.200.200 (was AS.200.207)
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
Writing Intensive

AS.200.202. Forensic Psychology. 3 Credits.
The field of forensic psychology is focused on answering legal questions about the causes of human behavior. This survey course will explore the work that forensic psychologists do; their research, assessment, and clinical methods; and how their work influences lawyers, judges, and other legal practitioners. Specific topics will include mental capacity assessment, psychopathy, claims of mental distress, child custody evaluations, juvenile delinquency, forensic treatment, and forensic neuropsychological assessments.
Prerequisite(s): Students can only receive credit for AS.200.202 or AS.200.325, not both.
Area: Social and Behavioral Sciences
AS.200.204. Human Sexuality. 3 Credits.
Course focuses on sexual development, sexuality across the lifespan, gender identity, sexual attraction and arousal, sexually transmitted disease, and the history of commercial sex workers and pornography. Please note that the use of electronic devices is not permitted during this class, in order to promote the full interactive potential of this engaging seminar-style offering. Open to Juniors & Seniors within the following majors/minors: Behavioral Biology; Biology; Cognitive Science; Medicine, Science & the Humanities; Molecular & Cellular Bio; Neuroscience; Psychological & Brain Sciences; Public Health; Sociology; Study of Women, Gender, & Sexuality.
Corequisite(s): Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester.
Area: Social and Behavioral Sciences

AS.200.205. Psychological Profiling. 1 Credit.
“Psychological Profiling” focuses on strengths and limitations of psychological methods employed by forensic professionals who assist police in criminal investigations. Clinical cases of serial offenders, spree killers, disgruntled employees, police profiling, and terrorists will be studied. Legal and ethical issues will be explored, especially racial profiling controversies. We anticipate visits to the FBI Behavioral Sciences Unit at Quantico, Virginia; Baltimore County Forensic Crime Lab (with emphasis on crime scene analysis), and the Baltimore Police Profiling Program. This course does not count towards the psychology major.
Area: Social and Behavioral Sciences

AS.200.208. Animal Behavior. 3 Credits.
Examines basic principles of animal behavior (orientation, migration, communication, reproduction, parent-offspring relations, ontogeny of behavior and social organization). Evolution and adaptive significance of behavior will be emphasized.
Prerequisite(s): AS.200.141 OR Permission of Instructor.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.209. Personality. 3 Credits.
This is a survey course focused on theory and research on human personality. Topics include personality traits, motivation, unconscious processes, self-regulation, cognitive and behavioral aspects of personality, biological and evolutionary influences on personality, and dysfunctional manifestations of personality.
Area: Social and Behavioral Sciences

AS.200.211. Sensation & Perception. 3 Credits.
This course surveys how stimuli from the environment are transformed into neural signals, and how the brain processes those signals to interpret the objects and events in the world. A primary focus will be on the visual system, with additional coverage of hearing, touch, taste, and smell.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.212. Abnormal Psychology. 3 Credits.
A survey of the major syndromes of psychological disorders. Research and theory about the mechanisms, development, and diagnosis of psychopathology are emphasized.
Area: Social and Behavioral Sciences

AS.200.220. Health Studies: Application of Abnormal Psychology to Forensic Cases. 1 Credit.
This introductory course will examine the basic diagnostic psychology principles with special application to forensic psychology. The class will focus on investigating forensic psychology queries including: Does my client have a mental illness? Why did he or she act in such a self-defeating way? Does the law require special disposition? Should my client be punished or rehabilitated? We will explore the reasons behind why a movie star would shoplift or a famous athlete would engage in a series of extra marital relationships; why a policeman would commit a series of bank robberies in broad daylight; or why someone would shoot a Congresswoman and kill and wound many others in the process. As part of this course, students will visit with doctors and lawyers (including Judges), view and analyze video and movies about forensic cases, and participate in mock trial exercises. Note: This course does not count towards the Psychology major.
Area: Social and Behavioral Sciences

AS.200.222. Positive Psychology. 3 Credits.
The course will review the growing field of positive psychology and will review the research on positive human attributes such as optimism, happiness, hope, resiliency, self-esteem, altruism, empathy, and forgiveness. This course will explore the research on how such positive attributes are developed and how they relate to psychological and physical well-being.
Area: Social and Behavioral Sciences

AS.200.240. Industrial and Organizational Psychology. 3 Credits.
This course provides a survey of the field of Industrial and Organizational Psychology, a scientific discipline that studies human behavior in the workplace. The course focuses on understanding the psychological bases of work behaviors, cognitions, and emotions and practices that can be implemented to create a good fit between employees’ characteristics and work demands. A number of topics are addressed in the scientist-practitioner model, including the structure/characteristics of jobs, techniques for assessing and supporting employee performance, selecting and training a workforce, and the various mechanisms that influence employee motivation and attitudes, among other topics. Real-world applications and research are emphasized throughout the course.
Area: Social and Behavioral Sciences

AS.200.301. History Of Psychology. 3 Credits.
A survey of leading figures, schools, and systems in the history of psychology. The course will emphasize the development of experimental psychology in late 19th century Germany and its establishment in America at Johns Hopkins, Harvard, Chicago, and Columbia. Special topics will include the development of clinical and applied psychology and psychological testing. Enrollment limited to Juniors and Seniors only. Sophomores with instructor approval. Recommended Course Background: two prior Psychology courses.
Area: Humanities, Social and Behavioral Sciences
AS.200.302. Behavioral Assessment of Animal Models of Cognition and Neuropsychiatric Disorders. 3 Credits.
What does a rat exploring its environment tell us about memory? How can a mouse help us better understand schizophrenia? This course will focus on procedures that are routinely used to study behavior in animal models of cognition and neuropsychiatric disorders. The procedures discussed will include assessments that fall into 3 broad functional domains: motor function, affective or emotional states, and cognition. Throughout the course, we will read and discuss original research articles to illustrate and compare some of the measures and results from the various procedures. Postdoc Teaching Fellowship. This is designed to be an upper level course.
Area: Social and Behavioral Sciences

AS.200.304. Neuroscience of Decision Making. 3 Credits.
This course will survey the neural mechanisms of decision-making. Current experimental research and theory concerning selection, control, and evaluation of actions are examined in humans and animals. Topics will range from simple perceptual judgments to complex social behavior. The course involves a weekly lecture about a specific topic followed by a student presentation of a current research paper. Cross-listed with Neuroscience. 
Prerequisite(s): AS.080.305 AND AS.080.306 or instructor permission
Area: Natural Sciences

AS.200.305. Advanced Seminar in Forensic Psychology. 3 Credits.
Forensic psychologists determine clinical diagnoses and offer expert opinions to assist court decision makers who must employ legal tests to make case determinations. This course will explore how forensic psychologists communicate with the courts via consultation, report writing, and expert testimony. Students will write forensic analyses on a variety of controversial, cutting edge forensic topics (e.g., for competence to stand trial, child abuse, civil commitment, compensation for mental injuries, sex offender commitment, insanity, fitness for duty, child custody). Recommended background: AS.200.212 
Prerequisite(s): AS.200.202
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive

AS.200.307. Medical Psychology. 3 Credits.
Medical Psychology is a specialization within clinical psychology that focuses on the application of psychological theories, research, and techniques to physical health problems and health promotion. Students will learn about the consultation process and interventions used in medical psychology practice to improve the physical and psychological health of medical patients, including those with chronic conditions (e.g., chronic pain, heart disease) and those with acute illnesses and injuries. Enrollment limited to Juniors & Seniors.
Prerequisite(s): AS.200.212
Area: Social and Behavioral Sciences

AS.200.311. Sensory Representations in the Brain: Maps, Modules, & Distributed Coding. 3 Credits.
In this course we will explore the ways in which information from vision, hearing, touch, smell, and taste is encoded in the brain. We will compare and contrast different representation schemes and their computational advantages in order to uncover some overarching organizing principles of sensory processing in the brain. Class meetings will consist of lectures plus group discussions of classic papers in cognitive neuroscience, computational modeling, and neurophysiology. Enrollment limited to Juniors & Seniors. 
Prerequisite(s): AS.200.211 OR AS.080.203 OR AS.050.203 OR AS.200.141 OR AS.020.312
Area: Social and Behavioral Sciences

AS.200.313. Models of Mind and Brain. 3 Credits.
This is a seminar surveying computational approaches to understanding mental and neural processes, including sensory and conceptual representation, categorization, learning and memory. The course will also develop familiarity with computational tools such as numerical simulation, linear transformation and data visualization. Recommended Course Background: AS.110.106 / Calculus I OR AS.110.108 Calculus I, AS.050.101 / Cognition OR AS.200.211 / Sensation & Perception OR AS.080.105 / Introduction to Neuroscience OR other introductory coursework in cognitive & neural sciences. Experience with at least one programming language is strongly recommended.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.200.316. Thought and Perception. 3 Credits.
This year’s topic: Philosophical, Foundational, and Methodological Issues Connected to Bayesian Approaches in Cognitive Science. Bayesian probability theory and Bayesian decision theory aim to lay out how ideal reasoners update their beliefs in the light of new evidence and make decisions based on those beliefs. But what about such apparently non-ideal agents such as ourselves? The past few decades have witnessed a rising tide of Bayesian work on perception, higher cognition, neural coding, etc. It’s been accompanied by vigorous debate concerning the aims and claims of these approaches. Some see the prospect of a grand unified theory of the mind/brain; others demur. We’ll examine these debates and what one can learn from them regarding more generally about approaches to modeling the mind and the nature of rationality. Readings will be drawn both from the empirical and the philosophical literature. (This course meets jointly with AS.200.616 & AS.150.476)
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.200.317. Interpersonal Relations. 3 Credits.
This course will investigate interpersonal processes ranging from attraction and courtship to relationship functioning and distress. Enrollment limited to Psychology majors, Psychology minors, and Behavioral Biology majors. 
Prerequisite(s): AS.200.133
Area: Social and Behavioral Sciences

AS.200.320. The Interface of Psychology & Semantics: Procedural Matters. 3 Credits.
Often, languages are described as sets of expressions. But in acquiring a language, a child acquires a procedure that generates expressions. If Linguistic expressions pair pronunciations with mental representations, then one task shared by linguists and psychology is to specify the forms of these representations. This seminar explores this relationship in detail.
Area: Natural Sciences, Social and Behavioral Sciences
AS.200.321. Child and Adolescent Psychopathology. 3 Credits.
This course focuses on mental disorders in children and adolescents. The course begins with an exploration of the general models and theories for why psychopathology occurs in childhood. The second portion of the course provides a systematic review of the symptoms, course, risk factors, theories, and treatments for specific disorders, including mood disorders, anxiety disorders, autism, ADHD, eating disorders, and behavioral disorders.
Prerequisite(s): AS.200.212
Area: Social and Behavioral Sciences

AS.200.322. Clinical Neuropsychology. 3 Credits.
Clinical Neuropsychology is a clinical psychology specialty focused on assessment and treatment of acquired or developmental disorders of the nervous system, including dementia, neurodegenerative disorders, traumatic brain injury, learning disabilities, and neurodevelopmental disorders. This course will focus on research findings and techniques used by psychologists in the assessment, treatment, and rehabilitation processes. Recommended Course Background: AS.200.141 / Foundations of Brain Behavior Cognition.
Prerequisite(s): AS.200.141
Area: Social and Behavioral Sciences

AS.200.323. Psychology and Social Media. 3 Credits.
This course explores modern-day social media use (e.g., Facebook, Match.com) through multiple theoretical lenses within psychology. Through weekly student-led discussions and readings, it will accomplish 3 aims: 1) applying psychology of identity, motivation, and communication to social media (e.g., self-presentation, intergroup dynamics), 2) investigating clinical/health implications of social media use (e.g., addiction, loneliness), and 3) exploring social media as data-gathering environments (e.g., user experience research from already committed guest-speakers who work in social media industries).
Area: Social and Behavioral Sciences

AS.200.326. Law, Psychology and Public Policy. 3 Credits.
An introduction to applications of psychological research in policy analysis. Special emphasis is given to the use and misuse of psychology in Supreme Court advocacy and decision making in the areas of children's rights, adult sexuality, and educational and employment opportunity. Recommended Course Background: Statistics & Regression Analysis
Area: Social and Behavioral Sciences
Writing Intensive

AS.200.329. Real World Human Data: Analysis & Visualization. 3 Credits.
Experiments in human cognition typically involve careful manipulation and control of variables in order to answer specific questions about the mind or brain. However, digital devices now provide an ocean of incidental human data: information collected continuously about our behavior and physiological states as we go about our lives. These incidental datasets are often large and noisy, and pose different analysis and visualization challenges from more traditional manipulated experiments. In this course students will learn computational tools and qualitative approaches for exploring, visualizing and interpreting large human data. The course emphasizes computer-based analysis of open-source human behavioral and neuroimaging datasets. Analyses will be conducted in MATLAB. Instructor will grant approval as long as you have previous programming experience (roughly equivalent to material covered in an introductory-level programming course). Self-taught or real-world experience can be applicable in lieu of previous formal classroom instruction.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.200.332. Seminar in Theoretical Neuroscience. 3 Credits.
This course develops a theoretical understanding of the large-scale anatomical and functional organization of the mammalian cerebral cortex. We will discuss primary research readings and will implement essential concepts in numerical simulations. The theoretical principles to be explored will include: hierarchy; normalization; pattern completion; prediction; gradient-based learning; and conjunctive representation. We will consider the broader motivation for each of these computational principles, and we will ask how successfully they organize the empirical data about our brains. Specific questions include: What are the functional benefits of a hierarchical anatomical organization of the cerebral cortex? Do neocortical circuits generically implement a normalization operation? How and why is pattern completion implemented in the neocortex and the hippocampus? Can gradient-based representational learning occur in the cerebral cortex without external supervision or reinforcement signals? How is the flow of information between brain regions regulated? How can distinct cortical representations be 'bound' into joint representations? Cal 1; Computational Science or some programming experience highly recommended. Instructor approval required.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.200.333. Advanced Social Psychology. 3 Credits.
The class is designed as a seminar including discussion of primary readings of social psychology articles ranging in topics from interpersonal relationship to behavior in large groups. Rising junior & senior Psychology majors only.
Prerequisite(s): AS.200.133
Area: Social and Behavioral Sciences

AS.200.334. Human Memory Psychology. 3 Credits.
This class will survey the behavioral and biological science of human memory. Historical perspectives as well as modern controversies will be discussed. Intersections with other fields such as law, education, medicine, and technology will be highlighted. The course will be a mixture of lectures and group discussions.
Area: Social and Behavioral Sciences

AS.200.335. How Does the Brain Predict the Future?. 3 Credits.
'Have you ever wondered how you predict the beat will drop in a song or that a traffic light will change? A combination of evolution and experience have wired your brain to generate predictions about the future. In this course, you will learn about the factors which influence neural predictions. Understanding how the brain forms predictions is critical to understanding perception, movement, music, language, and cognition. Some examples include: hallucinations, how we walk, why we like pop music, how we converse, and how we make plans. We will read news articles and original research to strengthen scientific literacy and critical thinking. The content of our readings will encompass a variety of research methods (including behavioral assessment, fMRI, single electrode recordings, EEG, and ECoG). We will discuss key factors in neural predictions, such as: predictive domain (what is the objective of the prediction and where does it occur in the brain?), specificity (is the prediction very detailed or general?), timescale (when is something predicted to occur?), statistics (how probable is the predicted outcome?), consciousness (do you explicitly or implicitly know the prediction?), and reward (how much reward is associated with the predicted outcome?). Finally, we will talk about general theories of prediction, including predictive coding and Bayesian inference.'
Prerequisite(s): AS.200.141 OR AS.080.306
Area: Natural Sciences
AS.200.339. Cognitive Development. 3 Credits.
How do children acquire knowledge about the world? In this course, we will explore how children understand the world, looking at concepts of objects, number, space, and other people. Students will read both empirical and theoretical writing on these topics, participate in class discussions, and complete short critical writing assignments and final literature review paper.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.344. Behavioral Endocrinology. 3 Credits.
An examination of the effects of hormones on behavior in non-human and human animals. Topics will include the effects of hormones on sexual differentiation, reproductive behavior, parental behavior, homeostasis and biological rhythms, regulation of body weight, learning and memory.
Prerequisite(s): (AS.200.141 OR AS.080.306) OR (AS.020.151 AND AS.020.152) or instructor’s permission
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.350. Why is thinking hard?. 3 Credits.
In what ways and why is human cognition limited? This seminar will focus on understanding and explaining the limitations and capabilities of human cognition through deep dives into a number of subtopics. Possible topics include: What is 'intelligence,' does it have quantifiable units and/or a substance-like underpinning. Why does thinking feel hard, why and how do we experience mental effort? What limits visual attention and working memory? Where does insight come from? Why do we forget things? What is creativity? What makes some concepts hard to learn? Why do we misunderstand science? How do we evaluate our own knowledge and understanding?
Prerequisite(s): AS.200.110
Area: Social and Behavioral Sciences

AS.200.357. Advanced Statistical Methods. 3 Credits.
Topics in applied probability and statistical inference; analysis of variance; experimental design. Recommended Course Background: one statistics course.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.200.361. Tests & Measurements. 3 Credits.
Psychological tests and measures are used in several settings including research, clinical, business, forensic, school and other applied settings. This course will consider the methodological and practical issues involved in test construction, the evaluation of instruments, and the uses of psychological tests across settings and for different purposes. Examples of assessments that may be discussed are aptitude and achievement tests; personality and behavioral inventories; neuropsychological tests, observations and interviews; and tests for employment and forensic use. Enrollment limited to Junior & Senior Cognitive Science & Psychology Majors, or instructor approval.
Prerequisite(s): AS.200.201
Area: Social and Behavioral Sciences

AS.200.368. Sleep, Dreams, and Altered States of Consciousness. 3 Credits.
Sleep, dreaming, resting and arousal to waking represent very different states of consciousness which differ dramatically both psychologically and physiologically. This course focuses on cognitive, psychological, physiological, biological and genetic aspects characterizing each of these states with some reference to other altered states. The course includes a focus on the major pathologies affecting sleep-wake states. Clinical cases will be considered. These inform about both psychological and biological aspects of these states. The relative biological functions of each state will be evaluated with particular attention to the mystery of why we have and apparently need REM and NREM sleep. Actual physiological recordings of sleep states will be reviewed and the student will learn how these are obtained and how to evaluate these. The circadian rhythms, ontogeny and evolution of these sleep-wake states will also be covered. This will include a review of information learned from non-human animal sleep. The change from sleep to full awakening reflects change toward increasing brain organization supporting consciousness. Understanding of the neurobiology of these states will be used to explore some of the more modern and scientific concepts of human self-awareness or consciousness. Recommended Course Background: AS.200.101 OR AS.080.203 OR AS.050.203
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.369. Neuroscience of Motivation & Reward. 3 Credits.
This course will explore the neurobiological bases of motivated behavior, including eating, drinking, and reproduction, tracing the history of our understanding from early neuroscientific studies to the modern day, with a focus on mammalian model systems. We will discuss innate motivated behaviors, and well as how learning can guide the expression of these behaviors. Neural mediation of processes such as reward and aversion will be considered in depth, as will applications of these findings to the understanding of addiction and other behavioral disorders. The course will be a mixed lecture/seminar format; we will read original research articles and scholarly reviews.
Prerequisite(s): AS.080.306 (students may enroll concurrently); AS.080.305, Students may not have taken AS.200.366.
Area: Natural Sciences

AS.200.370. Functional Human Neuroanatomy. 3 Credits.
This course examines the general organizing principles of the anatomy of the human central nervous system and how this anatomical organization relates to function, from the level of neural circuits, to systems, to behavior. Students will learn to identify neuroanatomical structures and pathways in dissections and MRI images through computerized exercises. Readings and lectures will emphasize general structure-function relationships and an understanding of the functional roles of particular structures in sensory, motor, and cognitive systems.
Prerequisite(s): AS.080.305 AND AS.080.306 OR Instructor Permission
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.376. Neuropsychopharmacology. 3 Credits.
Designed to provide information about how drugs affect the brain and behavior. The course focuses on biological concepts underlying structures and functions of the brain that relate to mental disorders. An introduction to neurobiology and brain function is presented as it applies to the interaction of various classes of drugs with the individual neurotransmitter systems in the brain. A brief historic review is followed by a discussion of clinical relevance. Cross-listed with Behavioral Biology and Neuroscience. Enrollment limited to juniors and seniors.
Prerequisite(s): (AS.080.305 AND AS.080.306) OR AS.020.306 AND AS.020.312) OR (AS.200.141 AND AS.020.306)
Area: Natural Sciences, Social and Behavioral Sciences
AS.200.377. Neuroethology. 3 Credits.
A comparative and evolutionary approach to understanding the neural underpinnings of biologically relevant behaviors in vertebrate and invertebrate animals. Enrollment limited to Sophomores, Juniors, Seniors or by instructor approval. Recommended Course Background: AS.200.141
Area: Natural Sciences

AS.200.379. Research Seminar in Clinical Psychology. 3 Credits.
A small group exploration of current issues in clinical psychology, aimed at developing students' empirical research skills. Following critical analysis of the empirical literature, students develop research proposals for novel research and/or conduct research and author research reports. Topics vary by semester. In the current offering, the topic will be stress, coping, emotion-regulation, peer relationships, and psychopathology among adolescents and emerging adults. Recommended Course Background: AS.200.212 Abnormal Psychology AND EN.553.111 Statistical Analysis I AND EN.553.112 Statistical Analysis II AND AS.200.207 Research Methods in Experimental Psychology. Enrollment limited to Junior & Senior Psychology majors & minors by instructor approval.
Prerequisite(s): AS.200.212
Area: Social and Behavioral Sciences
Writing Intensive

AS.200.380. Neurobiology of Human Cognition. 3 Credits.
The complexity of human behavior surpasses even our closest primate relatives. Only humans communicate through language, build complex technology, devise legal system and wage war. What neurobiological capacities set humans apart from other animals? This course will explore the neurobiology of cognition, focusing on cognitive domains that are particularly developed in the human species: language, social cognition, number, executive function and concepts. The course format will consist of lectures and in class workshops.
Prerequisite(s): AS.200.141 OR AS.200.312 OR AS.080.105 OR AS.080.203 OR AS.050.203 OR AS.050.312
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.382. Models of Psychotherapy. 3 Credits.
This course reviews the major models of psychotherapy, including psychodynamic, cognitive, behavioral, interpersonal, and family therapy, with a focus on modern and empirically supported treatments. The application of the models through the analysis of clinical case studies is emphasized. Restricted to Junior & Senior Psychology Majors.
Prerequisite(s): AS.200.212
Area: Social and Behavioral Sciences
Writing Intensive

AS.200.385. Mind, Brain & Experience. 3 Credits.
How do nature and nurture shape the human mind? How does experience contribute to the development of visual perception, language and social reasoning? This course explores insights into these age-old questions from neuroscience and psychology. Studies of infant behavior reveal rich knowledge about objects and people in the first months of life. At the same time, experience has profound effects on behavior and neurobiology. For example, temporary absence of vision (i.e. blindness) during development permanently alters visual perception and the visual cortex. Key evidence also comes from studies of naturally occurring variation in human experience (e.g. blindness, deafness, socioeconomic and cultural differences). We will discuss what such studies of cognitive and neural function tell us about the origins of human cognition. This is a writing intensive course with weekly lectures and seminar style discussion of primary sources. Students will be required to write weekly responses to readings and a term paper.
Prerequisite(s): AS.200.141 OR AS.050.105 OR AS.080.105 OR AS.050.203 OR (AS.080.305 AND AS.080.306) OR AS.080.203
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive

AS.200.386. Animal Cognition. 3 Credits.
Examine relations between brain, mind, and behavior in nonhuman animals, focusing on topics such as learning, memory, attention, decision-making, navigation, communication, and awareness. We will take a variety of approaches, including behavioral, computational, evolutionary, neurobiological, and psychological perspectives.
Prerequisite(s): AS.200.141 OR AS.200.208 OR AS.290.101 or Instructor permission.
Area: Social and Behavioral Sciences

AS.200.388. Occupational Health Psychology. 3 Credits.
Occupational Health Psychology (OHP) concerns the application of psychology to improving the quality of work life, and to protecting and promoting the safety, satisfaction, health, and well-being of workers. This course will consider a broad range of topics in OHP including the role of work on well-being, job stress and burnout, diversity and work, safety climate, work-family balance, conflict, and counterproductive work behaviors. The emphasis will be on drawing connections between OHP theory and OHP practice and at the relationship between individual and organizational health and well-being. This class should be of interest to students interested in industrial/organizational psychology, social psychology, health psychology, clinical psychology, human factors, public health, preventive medicine, and industrial engineering.
Prerequisite(s): AS.200.240 or instructor permission
Area: Social and Behavioral Sciences

AS.200.401. Careers in Psychology - Freshmen. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Area: Social and Behavioral Sciences

AS.200.402. Careers in Psychology - Sophomore. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Area: Social and Behavioral Sciences

AS.200.403. Careers in Psychology - Juniors & Seniors. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Area: Social and Behavioral Sciences
AS.200.404.  Careers in Psychology - Seniors.  1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Area: Social and Behavioral Sciences

AS.200.501.  Psychological Research - Freshmen.  3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.502.  Psychology Research-Freshmen.  0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.503.  Psychological Research - Sophomores.  3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.504.  Psychology Research-Sophomores.  0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.506.  Psychological Readings.  0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.509.  Internship-Psychology.  1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.510.  Psychology Internship.  0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.511.  Psychological Research - Juniors.  3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.512.  Psychology Research-Junior.  0 - 4 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.513.  Psychological Research - Seniors.  3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.514.  Psychology Research-Seniors.  0 - 4 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.519.  Seniors Honors Research.  3 Credits.
Seniors working on the honors thesis enroll with the approval of the undergraduate coordinator.

AS.200.520.  Seniors Honors Research.  0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.540.  Independent Study-Seniors.  1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.541.  Independent Study - Juniors.  3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.542.  Independent Study - Sophomores.  3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.559.  Independent Study.  1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.597.  Psychology Research.  3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.200.599.  Independent Study.  1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

This is a required course for all first year PhD students in the Department of Psychological and Brain Sciences. The course covers foundational concepts and methods in neurobiology and cognitive neuroscience.
Area: Natural Sciences, Social and Behavioral Sciences
AS.200.616. Thought and Perception.
This year's topic: Philosophical, Foundational, and Methodological Issues Connected to Bayesian Approaches in Cognitive Science. Bayesian probability theory and Bayesian decision theory aim to lay out how ideal reasoners update their beliefs in the light of new evidence and make decisions based on those beliefs. But what about such apparently non-ideal agents such as ourselves? The past few decades have witnessed a rising tide of Bayesian work on perception, higher cognition, neural coding, etc. It's been accompanied by vigorous debate concerning the aims and claims of these approaches. Some see the prospect of a grand unified theory of the mind/brain; others demur. We'll examine these debates and what one can learn from them regarding more generally about approaches to modeling the mind and the nature of rationality. Readings will be drawn both from the empirical and the philosophical literature. (This course meets jointly with AS.200.316 & AS.150.476) Writing Intensive

This is a required course for all first year PhD students in the Department of Psychological and Brain Sciences. The course covers foundational concepts and methods in cognition.

This course will provide an overview of clinical, neuropsychological, imaging and neuropathological approaches to the study of cognitive systems altered in aging, AD and other neurodegenerative disorders. It will consider research using animal models as well as human subjects and clinical populations. The course is intended for graduate students and is open to advanced undergraduates only with permission of the professor. Predoctoral and Postdoctoral students from A&S, SPH and SOM students participating in the NIA Training Program on Age-Related, Cognitive and Neuropsychiatric Disorders are required to take this course; meets concurrently with PH.330.802(01).

AS.200.649. Aging, Cognition, and Neurodegenerative Disorders II.
Second part of a two-semester course. Course will provide an overview of clinical, neuropsychological, imaging and neuropathological approaches to the study of cognitive systems altered in aging, AD and other neurodegenerative disorders. It will consider research using animal models as well as human subjects and clinical populations. The course is intended for graduate students and is open to advanced undergraduates only with permission of the professor. Predoctoral and Postdoctoral students from A&S, SPH and SOM students participating in the NIA Training Program on Age-Related, Cognitive and Neuropsychiatric Disorders are required to take this course; meets concurrently with PH.330.802(01).

AS.200.650. Why is thinking hard?
In what ways and why is human cognition limited? This seminar will focus on understanding and explaining the limitations and capabilities of human cognition through deep dives into a number of subtopics. Possible topics include: What is ‘intelligence’, does it have quantifiable units and/or a substance-like underpinning? Why does thinking feel hard, why and how do we experience mental effort? What limits visual attention and working memory? Where does insight come from? Why do we forget things? What is creativity? What makes some concepts hard to learn? Why do we misunderstand science? How do we evaluate our own knowledge and understanding? Area: Social and Behavioral Sciences

AS.200.654. Psychological & Brain Sciences Core Topics A.
This course is designed to introduce students to core topics in psychological and brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field. Graduate students in Psychological and Brain Sciences.

AS.200.655. Psychological & Brain Sciences Core Topics B.
This course is designed to introduce students to core topics in psychological and brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field. Graduate Students in Psychological & Brain Sciences.

Topics in applied probability and statistical inference; analysis of variance; experimental design. Intended for graduate students. Recommended Course Background: one statistics course. Prerequisite(s): Statistics Sequence restriction: students who have completed any of these courses may not register EN.550.211 OR EN.550.230 OR AS.280.345 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430 OR EN.560.348
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

Second half of graduate statistics sequence, covering complex research design and analysis. Recommended Course Background: AS.200.657. Enrollment limited to seniors by instructor approval and graduate students.
Area: Quantitative and Mathematical Sciences

Focus on frequently-used quantitative methods used in the study of brain sciences, including gaining conceptual understanding of techniques, analysis and summarization of data, extracting the process underlying a data set, explaining data as a function of variables, data visualization, etc. Enrollment is limited to undergraduate seniors and graduate students with instructor approval. Recommended Course Background: Probability & Statistics, Linear Algebra, MATLAB programming.
Area: Quantitative and Mathematical Sciences

AS.200.661. Topics in Psychological & Brain Sciences.
An introduction to postdoctoral activities (e.g., grant applications, journal article submission, meeting presentations, the politics of psychology and American science) for Ph.D. candidates in psychology.

AS.200.662. Psychological and Brain Sciences: Career Development.

This seminar will cover advanced topics in vision from the perspectives of several disciplines. Topics include human visual psychophysics, perception and cognition, and computational vision. Graduate students only.

This seminar will cover advanced topics in neurocognitive aging. Topics will include animal models of memory loss in normal aging and in Alzheimer’s disease (AD), including both behavioral and neurobiological findings. Special attention will be given to the relation between such findings and the effects of aging and AD on memory and the brain in man. Similar comparative analysis in other cognitive domains (e.g. attentional processes) will also be considered.

Guided independent readings. The class is designed as a seminar including discussion of primary research articles of cognitive aging. Specific topics include human imaging and animal models of memory, aging, and neurodegenerative disease.
AS.200.810. Research In Psychology.
Students plan and execute original research under guidance of advisers. Results are usually prepared in a form suitable for publication. Graduate students only.

Guided independent readings and research in special fields. Graduate Students only.

Research seminar covering topics on human memory and perception in real-world settings.

Research seminar covering topics related to neural circuits for learning.

Graduate students only.

Graduate Students Only.

Graduate Students Only

Graduate Students Only

Graduate Students Only

Research seminar covering topics related to perception & mind.

Research seminar covering topics on the behavioral and brain basis of perception in dynamic scenes.

Research seminar covering topics on cognitive and systems neuroscience.

Research seminar covering topics on the behavioral neurophysiology of the hippocampal formation

Graduate students only. Permission Required.

AS.200.848. Current Advances in Psychological and Brain Sciences.
Introduces advanced research topics to graduate students (as well as faculty) through a series of speakers and discussions.

AS.200.849. Teaching Practicum.
All candidates are required to obtain special experience in various aspects of undergraduate teaching. Graduate students only.

AS.200.850. Advanced Teaching Practicum.

Cross Listed Courses
Behavioral Biology
AS.290.510. Comparative Neural Systems and Behavior Research Discussions. 0.5 Credits.
This course is required concurrently with research in the Comparative Neural Systems Research and Behavior Lab. During the scheduled meetings we will discuss scientific papers, policies and procedures, research ethics and other information related to activities in the lab. At the end of the semester, students will present their research in groups. Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

Cognitive Science
AS.050.339. Cognitive Development. 3 Credits.
This is a survey course in developmental psychology designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature, and development psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning. Area: Natural Sciences, Social and Behavioral Sciences

AS.050.358. Language & Thought. 3 Credits.
Have you ever wondered about the relationships between language and thought? Philosophers, linguists, psychologists, evolutionary theorists and cognitive scientists have too and this course will survey the current thinking on this matter. Classical papers such as those by Whorf and Sapir, more recent philosophical papers by people such as Fodor and Dennett, and recent empirical work by linguists and psycholinguists on the relationship between language and thinking in development and in adults will be covered. Discussions will focus on the theoretically possible relationships between language and thought and the empirical data that speak to these. Juniors and seniors only. Freshmen and sophomores by permission of instructor only. Prerequisite(s): AS.050.102 OR AS.050.320 OR AS.050.325 or instructor permission.
Area: Humanities, Natural Sciences, Social and Behavioral Sciences

AS.050.375. Probabilistic Models of the Visual Cortex. 3 Credits.
The course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modeling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks. Required Background: Calculus I and experience in a programming language (Python preferred). Prerequisite(s): AS.110.106 OR AS.110.108
Area: Quantitative and Mathematical Sciences

The course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modelling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks. Also offered as AS.050.375.
Neuroscience

AS.080.304. Neuroscience Learning and Memory. 3 Credits.
This course is an advanced survey of the scientific study of learning and memory. Different perspectives will be used to review the science of learning and memory including the cellular-molecular basis of synaptic plasticity, the functional circuitry involved in learning and memory and memory systems in the brain. The course is designed to provide a deep understanding of the issues and current debates in learning and memory research and focuses specifically on animal models of memory and memory impairment. This is an interactive lecture course with a strong emphasis on student participation.

Prerequisite(s): AS.200.141 OR (AS.080.305 AND AS.080.306) OR (AS.020.312 AND AS.020.306) or instructor permission.

Area: Natural Sciences

Psychology, Bachelor of Arts

Psychology Major Requirements

(Also see Requirements for a Bachelor’s Degree. (p. 1584))

The courses in Psychological and Brain Sciences have four purposes:

1. to acquaint all interested students with a sampling of topics through a variety of introductory and advanced courses;
2. to prepare majors for graduate work in psychology and related disciplines through a program that meets the admission requirements of the outstanding graduate departments in the United States;
3. to offer a distribution of foundational courses in psychology as well as advanced studies representing areas in the social, behavioral, and brain sciences; and
4. to provide an honors track designed for exceptional students who want training beyond that provided by the standard undergraduate curriculum.

General Requirement

All classes taken for the major (including those for NQE credit) must be taken for a grade and be completed with a C- or better.

Specific Requirements

- **Intro Level Course Requirement:** Three 100-level psychology courses. These are typically taken during Year 1 and Year 2.
- **Experimental Methods, Design & Analysis:** AS.200.200 Research Methods in Psychology and AS.200.201 Design & Statistical Analysis for Psychology should be taken as a two-course sequence in Fall and Spring of Year 2.
- **Upper Level Course Requirement:** Five upper level psychology courses (200- or 300-level), three of which must be at the 300-level. These are typically dispersed through Years 2-4.
- **Small Group Experience:** 3 credits of either research, internship, independent study or an additional 300-level psychology course with an enrollment cap of 19 students or less. Students who are interested in graduate work in psychology are encouraged to get involved in research/internship activity starting in Year 2 and to continue throughout their time at Hopkins.
- **9 NQE Credits:** Students must complete 9 additional NQE credits using courses not taught within the psychology department

(AS.200.XXX) and not counting otherwise toward the psychology major.

Please note that not all courses offered by the Department of Psychological & Brain Sciences (AS.200.XXX) will fulfill the requirements of the Psychology major/minor (ex. AS.200.220 Health Studies: Application of Abnormal Psychology to Forensic Cases). Consult with Academic Advising and your psychology major advisor to ensure appropriate progress toward degree completion.

Required Courses Outside the Department

1 The 300-level seminar course must have a maximum enrollment of 19 students. Courses used to fulfill the five upper-level course requirements may not be used to satisfy this requirement. Students may take 1-3 credits in any given semester to fulfill this requirement. All students are required to discuss their plans with their faculty advisor before junior clearance.

2 One upper level course in Cognitive Science may be used to satisfy these course credits with the approval of the Director of Undergraduate Studies. Research, independent study, and internships may not be used to satisfy these course requirements.

Restrictions
No courses through the School of Education and the Carey Business School may be counted toward the requirements for the major in Psychological and Brain Sciences (although a limited number of such courses may be counted toward the 120 credits required for graduation). As most Intersession courses are graded S/U or are less than 3 credits, they do not apply toward major requirements. Some courses offered by Psychological & Brain Sciences taught in the summer at Hopkins do not count toward the Psychology major or minor as they do not fit into the requirements of the major. You may make an appointment with Dr. Stephen Drigotas (drigotas@jhu.edu), Director of Undergraduate Advising for Psychological & Brain Sciences, to ensure that your enrollments will be considered toward your academic progress in the manner you intend.

Preparation for Graduate Work in Psychology
The Department of Psychological and Brain Sciences provides preparation for graduate training in all areas of psychology, including clinical and counseling. Virtually all psychology graduate programs, including those that provide training in clinical or counseling psychology, expect students to have a strong background in scientific psychology, including statistics. The department encourages students to obtain additional practical experiences outside the classroom, including research in a laboratory and/or an internship in a mental health care setting. These additional experiences are particularly salient to graduate school admission committees.

Honors Program in Psychology
The B.A. degree with honors provides recognition for outstanding achievement in formal course work and research. Students considering applying for honors should begin discussing possible research topics with a faculty sponsor (and research mentor, if different from the sponsor) in the fall semester of their junior year. The requirements for a degree with honors include those for the regular B.A. degree, plus the following:

- A minimum grade point average of 3.5 or better in psychology (200.XXX) courses through the semester before the student graduates.
- A public presentation (poster or talk) at a recognized student research or professional conference either on campus (e.g., DREAMS, Woodrow Wilson, ASPIRE, PURA) or off campus (e.g., APA, APS, VSS, SPSP). The presentation must be on the research conducted specifically for honors (e.g., research for 200.200 or 200.201 does not count).
- The support of a sponsor for honors research. The sponsor must have a full-time faculty appointment at Johns Hopkins and either a primary or a joint appointment in the Department of Psychological and Brain Sciences. Sponsors can sponsor research conducted under the direct supervision of another principal investigator (e.g., a faculty member in the School of Medicine).
- Completion of two 300- or 600-level psychology courses, in addition to those required for the Psychology major. These courses cannot be an independent study, research or internship credits, or a readings course. These additional courses can count toward the 120 credits required for graduation.
- Completion of six credits of research beyond research credits counting toward the major.

Please see the Department of Psychological and Brain Sciences (https://pbs.jhu.edu/) website for the application process details.

Undergraduate Academic Awards
The Department of Psychological and Brain Sciences offers two undergraduate academic awards.

- G. Stanley Hall Prize is awarded for outstanding achievement by an undergraduate in psychology.
- Julian C. Stanley Award is given to the psychology major who most closely approximates Dr. Stanley's personal and professional standards of excellence.

Psychology, Minor

Psychology Minor Requirements
A minor in psychology is available to undergraduates majoring in any department. Students electing to minor in psychology should declare their intention directly to the Director of Undergraduate Studies in the Department of Psychological and Brain Sciences by the end of junior year. All classes taken for the minor must be taken for a grade and be completed with a C- or better.

The minor requires successful completion of the following:

<table>
<thead>

<tr>
<td>AS.200.133</td>
<td>Introduction to Social Psychology</td>
<td>3</td>
</tr>
</tbody>
</table>
The Advanced Examination is designed to assess expertise in the student's area of concentration. This examination, which includes both written and oral portions of the advanced examination, is graded by a committee of at least two faculty members. The written and oral portions of the advanced examination offer the student an opportunity to demonstrate both in-depth, focused knowledge in their specialty area of study, and also a breadth of knowledge outside of their area of expertise. The student must pass the advanced examination by the beginning of the third year of study.

Advanced Seminars

Advanced seminars are more specialized in content than a Core Topics course, but are still geared to students with interests both inside and outside the area. Students are required to complete one advanced seminar outside their concentration area. Completion of an additional advanced seminar is strongly recommended.

Topical Seminars

The Department of Psychological and Brain Sciences offers topical seminars in which one or more faculty members leads seminars on topics of special interest, such as cognitive processes, developmental psycholinguistics, neuro-physiological aspects of behavior, mathematical psychology, and information processing. Through participation in these seminars, student are exposed to findings in subfields of psychology. Topics vary from semester to semester and are determined by the interests of both faculty and graduate students. The format of the seminar is optional, and the course may or may not require formal tests of knowledge. Students are urged to complete topical seminars as appropriate.

Research Seminars

Students and faculty engaged or interested in research in particular areas organize these seminars. Participants discuss their own research and other current research in the area.

Teaching Assistantships

Teaching requirements are fulfilled by graduate students serving as teaching assistants to members of the department's faculty, in courses taught in the School of Arts and Sciences. All graduate students are expected to TA a total of four semesters, beginning in the first semester of their second year, continuing consecutively through the second semester of the third year. The Department Chair, Director of Graduate Studies, Department Administrator, and Academic Program Coordinator collaborate to assess the instructional support needs of the department and assign these teaching duties.

Advanced students may apply for a Dean's Teaching Fellowship (https://krieger.jhu.edu/research/deans-teaching-fellowship/). This prestigious fellowship provides graduate students an opportunity to grow both as educators and scholars by allowing them to propose, design, and offer an undergraduate seminar course.

Literature Review

Students complete a written literature review in preparation of the completion of their dissertation. The literature review is modeled on articles appearing in professional journals, and it should be suitable for publication in such a journal. Typically the review provides a background for the thesis plan, but for some students it may be prepared on a topic other than the one selected for the thesis. The literature review is evaluated by the same committee that will evaluate the thesis plan.

Thesis Plan

At least one calendar year before receiving the Ph.D. degree, each doctoral candidate must develop a plan for the dissertation research and present the plan before a departmental committee. The thesis plan is a detailed document stating the issue the student wishes to address in a
dissertation, the experimental design to be used, and the way the student will interpret the various possible results. In essence, it is a proposal for a research project with predictions and preliminary data, rather than results. The outline of the experiments should be sufficiently clear that the readers will fully understand the procedures; the plan should also include a timeline.

This plan should be completed as soon as possible, but no later than the end of the fourth year. Dissertation research cannot proceed until the Thesis Plan has formally been approved. With the committee’s approval, the student then prepares a dissertation.

**Dissertation**

The dissertation represents the student’s culminating piece of scholarly work. It establishes the start of a research career and the basis for postgraduate employment. The Graduate Board of the University administers the final oral examination, a defense of the thesis. The doctoral dissertation must be in a form suitable for and worthy of publication.

**Financial Support**

Support for graduate students comes from many different sources. Domestic and international students in good standing can expect to receive tuition remission and a stipend.

Stipend support is competitive with that at other institutions and provides sufficient funds to live modestly. Stipends may come from research grants held by faculty members, allowing students to collaborate and be paid as research assistants. The university also provides funds for teaching assistants, as well as special fellowships.

All students are encouraged to apply for national awards, fellowships, and scholarships (e.g., NSF Graduate Fellowships). Our students have been remarkably successful at winning these honors.

The Department of Psychological and Brain Sciences is also affiliated with two diverse training programs (http://krieger.jhu.edu/psychology/graduate-training-programs-and-grants/) supported by the National Eye Institute and the National Institute on Aging, including the NIA-supported training grant titled “Research Training in Age-Related Cognitive Disorders.” Qualified graduate students are encouraged to discuss relevant and appropriate training grant applications with their advisers. Stipend and tuition remission may be provided to accepted applicants through these and other training programs.

*For further information on graduate study in psychology, contact the Academic Program Coordinator (ezurbuc1@jhu.edu) for the Department of Psychological and Brain Sciences ([https://pbs.jhu.edu/](https://pbs.jhu.edu/)).*

**Master of Arts in Psychology**

A student who has been admitted into the Ph.D. program can earn a Master of Arts degree in partial fulfillment of the requirements for the Ph.D. degree. Normally, candidates for the Ph.D. degree in psychology will qualify for the M.A. degree at the end of their second year; after having completed two area seminars and at least two courses in psychological research design and/or advanced statistics, provided that their performance is of the quality judged satisfactory for the M.A. level. There is no terminal master’s program.

**Public Health Studies**

http://krieger.jhu.edu/publichealth/

Public health combines a prevention orientation with a population perspective in pursuit of better health for all members of society. Public health professionals deal with critical large-scale issues such as access to health care; chronic disease control; mapping, predicting, and containing outbreaks of infectious disease; as well as researching factors such as gender, poverty, and education that contribute to health outcomes. Public health has close ties with medicine through clinical and biomedical research and healthcare policy.

The Public Health Studies Program offers undergraduates a major that links them to the world of public health through core courses taken on the Homewood campus, as well as electives taken at the Johns Hopkins Bloomberg School of Public Health (JHSPH).

Core coursework at Homewood includes Introduction to Public Health, Research Methods in Public Health, Fundamentals of Epidemiology, Environment and Your Health, Fundamentals of Health Policy and Management, Biostatistics, and a course in Social and Behavioral Health. Students also take coursework in Social Sciences, Biology and Calculus. Students will select additional public health coursework from a range of options that include the global health, demography, health economics, medical sociology, history, and politics. The major is flexible and easily adapted to further course work in the natural and social sciences. About two-thirds of Public Health Studies majors complete the premedical core curriculum.

Public Health Studies majors also complete the Public Health Applied Experience as part of their undergraduate degree requirements. This involves a supervised, hands-on experience working with public health professionals. The goal of the applied experience requirement is to ensure that students have practical public health exposure in a research or community setting. Find more information at [http://krieger.jhu.edu/publichealth/applied-experience/](http://krieger.jhu.edu/publichealth/applied-experience/).

The Johns Hopkins Bloomberg School of Public Health is the oldest and largest school of public health in the United States. Although its primary function is as a graduate school, seniors majoring in public health studies take a semester’s worth of courses there in fulfilling their B.A. degree requirements. Undergraduates may take classes in any of the 10 departments at JHSPH. Many students also get involved in ongoing research projects at JHSPH.

Available coursework at JHSPH includes the following areas: health education, environmental health sciences, epidemiology, health finance and management, health policy, human genetics, immunology and infectious diseases, international health, maternal and child health, mental health, nutrition, occupational medicine/health protection and practice, population studies, toxicology, and tropical medicine, among others.

An honors option is available to Public Health Studies seniors with a major GPA of at least 3.5. Public Health Honors students complete an independent research project under the supervision of a JHU faculty member and with the guidance of the Honors seminar instructor. Students register for AS.280.495 Honors In Public Health - Seminar in the fall and AS.280.499 Honors in Public Health in the spring. Interested students should discuss their plans with their PHS advisor no later than the spring of their junior year.

Many Public Health Studies students have pursued international public health internships and study abroad opportunities both during the academic year and over the summer. In addition to a wide array of general options available through the JHU Office of Study Abroad, the PHS program runs a public-health specific program during Intersession.
Bachelor of Arts/Masters Program

The Bachelor of Arts/Master of Health Sciences (BA/MHS) and Bachelor of Arts/Master of Sciences in Public Health (BA/MSPH) programs are a coordinated academic collaboration between the Krieger School of Arts and Sciences and the Johns Hopkins Bloomberg School of Public Health. It enables talented and committed Public Health Studies majors to complete a BA from KSAS and master’s degree from the JHSPH in five to six years.

The Department of Environmental Health Sciences, Department of Epidemiology, Department of Mental Health and Department of International Health will consider JHU undergraduates majoring in Public Health Studies for admission to the BA/MHS program. The Department of Environmental Health Sciences also offers a BA/MSPH in Occupational and Environmental Hygiene. The Department of Health Policy and Management offers a BA/MSPH in Health Policy. The Department of Population, Family and Reproductive Health offers two BA/MSPH programs, one in Adolescent Health, and the second in Sexual and Reproductive Health.

Public Health Studies students apply for early admission during their junior year. Admitted students must complete the BA degree before formally enrolling in the graduate school, but up to 16 of the public health credits earned inter-divisionally toward the BA may also apply toward the MHS or MSPH degree. In addition, students in this program will receive co-advising from both schools to optimize their academic experience. Find more information at http://krieger.jhu.edu/publichealth/academics/.

Public Health Studies Program Advisory Board

The Public Health Studies Program Advisory Board reviews the progress and status of the Public Health Studies Program. Members provide advice and guidance on issues that are vital to a successful program, such as faculty appointments, curriculum reviews, utilization of university resources, and new funding opportunities.

Board Members

Krieger School of Arts and Sciences

Andy Cherlin; Professor (Sociology); Benjamin H. Griswold III Professor of Public Policy

Joel Schilbach; Vice Dean for Undergraduate Education; Professor (Biology)

Adam Sheingate; Associate Professor (Political Science); Advisory Board Chair

Johns Hopkins Bloomberg School of Public Health

Colleen Barry; Fred and Julie Soper Professor in Health Policy and Management

Marie Diener-West; Abbey-Merrell Professor of Biostatistics; Chair, Master of Public Health Program

John Groopman; Anna M. Baetjer Professor in Environmental Health and Engineering

Laura Morlock; Executive Vice Dean for Academic Affairs and Professor in Health Policy and Management

James Yager; Professor (Environmental Health and Engineering)

Scott Zeger; Professor (Biostatistics); Professor (Epidemiology)

Programs

- Public Health Studies, Bachelor of Arts (p. 2176)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.280.101. Introduction to Public Health. 3 Credits.

This course provides an overview of the field of public health. Topics include the major causes of morbidity and mortality; the socioeconomic, behavioral, and environmental factors that affect health; the analytical methods used in the field; the role of government in protecting the public’s health; key features of the U.S. health care system; and current challenges in the field. The course also introduces students to the basic conceptual models and approaches that are central to public health practice. This course is restricted to freshmen and sophomores. Other students may enroll with the instructor permission. Your enrollment may be withdrawn at the discretion of the instructor if you don’t meet one of those criteria.

Area: Social and Behavioral Sciences

AS.280.120. Lectures on Public Health and Wellbeing in Baltimore. 1 Credit.

An introduction to Urban Health with Baltimore as a case study: wellbeing, nutrition, education, violence and city-wide geographic variation. Lectures by JH Faculty, local government/service providers and advocates.

Area: Social and Behavioral Sciences

AS.280.161. Applications of Biological Concepts in Public Health. 3 Credits.

This course explores the basic biology concepts relevant to public health. Case studies will be used to examine key scientific principles and their application. This course is designed for public health students who are not intending to pursue a career in natural sciences or medicine. This course satisfies the Public Health Studies Biology requirement, but does not satisfy Pre-Med requirement. All freshman must have taken or be currently enrolled in AS.280.101 to register. Department Approval Required.

Prerequisite(s): AS.020.151

Area: Natural Sciences
AS.280.225. Population, Health and Development. 3 Credits.
This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS. This course is restricted to Public Health Studies majors. Students minoring in Study of Women, Gender, and Sexuality can register with instructor approval.
Area: Social and Behavioral Sciences

AS.280.232. Applications of Precision Medicine in Public Health. 1 Credit.
This course will (1) introduce students to principles of precision medicine (PM) across the care continuum and (2) engage students to think critically about how PM will change the medical and public health landscape. Students will learn about the PM initiative and current examples of PM in disease prevention, diagnosis, treatment and surveillance. Students will identify challenges associated with incorporating PM into our health care system and discuss strategies to mitigate such challenges.

AS.280.235. Public Health Cardiology. 1 Credit.
This course will provide a hands on overview of the modern science behind cardiovascular disease. Topics will include the epidemiology of cardiovascular disease, prevention, interventions and risk factors that impact outcomes. Students will learn hands on skills to recognize and treat heart attacks including basic ECG recognition, cardiopulmonary resuscitation (CPR) and current treatment algorithms.
Area: Natural Sciences, Social and Behavioral Sciences

AS.280.240. Research Methods in Public Health. 4 Credits.
This course examines the research process, with an emphasis on formulating research questions, critically evaluating published research, and drawing objective conclusions from a body of scientific literature. Students conduct a systematic review of the scientific literature related to a public health issue. Labs focus on developing and documenting a sound review methodology and communicating the review findings effectively in writing.
Prerequisite(s): AS.280.101 AND (AS.280.345 OR AS.200.314 OR EN.553.230 OR EN.553.310 OR EN.553.311 OR EN.553.420 OR EN.553.430 OR EN.560.348 OR EN.553.211)
Area: Social and Behavioral Sciences
Writing Intensive

AS.280.312. Media, Politics, and Evidence in the History of Public Health. 3 Credits.
This writing intensive course will encourage students to consider what counts as evidence among public health professionals as well as popular audiences. Using case studies from the field of epidemiology, now emblematic of the field, students will learn about historical changes in theories of population health and disease. Through a series of writing assignments, students will interrogate the formal structure of scientific arguments and gain practice in synthesizing and communicating complex ideas to a lay audience. Juniors/Seniors Only
Prerequisite(s): AS.280.350
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.280.320. Seminar on Public Health and Well-being in Baltimore. 3 Credits.
Seminar combines lectures from AS.280.120 with additional readings and discussion to more deeply address urban health issues. The course will revolve around student projects that can impact health and wellbeing in Baltimore. If you are accepted for this course do NOT register for AS.280.120. Course registration is by instructor permission only. You will be asked to provide a brief description of a project in order to determine your potential linkage with this course. This course is utilizing the online active approval process. Permission requests should be submitted via SIS Self-Service upon the opening of your registration period. The instructor will review requests and approve registrations using SIS Self-Service for Faculty. Please note, a request does not guarantee registration into the course. Status inquiries should be address to the instructor or departmental administrator.
Area: Social and Behavioral Sciences

AS.280.325. Public Health in South Africa. 3 Credits.
This course provides an in-depth overview of Public Health in South Africa, including material on the political climate, health care services, and the impact of the HIV/AIDS epidemic. Course is taught in Cape Town, South Africa.
Area: Social and Behavioral Sciences

AS.280.326. Community-Based Learning in South Africa. 3 Credits.
3 Credit course taught in Cape Town, South Africa. This course may be used to satisfy the Public Health Applied Experience requirement. Students will participate in a community-based service learning program with a local NGO in Cape Town.
Area: Social and Behavioral Sciences

AS.280.329. The Good, the Bad, and the Ugly: Scientific Writing in Public Health. 3 Credits.
This course covers how to conduct a literature review, and interpret and evaluate scientific literature that focuses on public health. In addition, this course will provide students with fundamental skills of writing a scientific manuscript. Skills obtained in this course will prepare students for advanced-level senior year classes at Bloomberg and other graduate institutions.
Prerequisite(s): AS.280.350; AS.280.345
Area: Social and Behavioral Sciences
Writing Intensive

AS.280.335. The Environment and Your Health. 3 Credits.
This course surveys the basic concepts underlying environmental health sciences (toxicology, exposure assessment, risk assessment), current public health issues (air, water- and food-borne diseases) and global health threats (climate change, designing healthy communities, and sustainability). Public Health Studies, Environmental Sciences and Studies, Environmental Engineering, and Earth and Planetary Science majors have 1st priority for enrollment. Your enrollment may be withdrawn at the discretion of the instructor if you are not a PHS, ENVS, EHE or EPS major.
Area: Natural Sciences

AS.280.340. Fundamentals of Health Policy & Management. 3 Credits.
Through lectures and small group discussions, students will develop a framework for analyzing health care policy problems and gain familiarity with current issues including managed care, Medicare and the uninsured. Public Health Studies majors have 1st priority for enrollment. Your enrollment may be withdrawn at the discretion of the PHS program if you are not a PHS major.
Prerequisite(s): AS.280.101
Area: Social and Behavioral Sciences
AS.280.345. Public Health Biostatistics. 4 Credits.
Using problem-based learning focusing on public health topics, students learn to describe & summarize data, make inferences regarding population parameters, & test hypotheses. Recommended Course Background: Four years of high school math.
Prerequisite(s): Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR AS.200.314 OR AS.200.315 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430 OR EN.560.348
Area: Quantitative and Mathematical Sciences

AS.280.346. Introduction to R Programming for Public Health. 1 Credit.
Formerly known as Advanced Biostatistics Laboratory, a complementary course to 280.345, Public Health Biostatistics, this course teaches R programming skills necessary for conducting independent data analyses, beyond those presented in the main course. No programming experience is necessary, but a willingness to learn independently and work with other students is indispensable.
Prerequisite(s): AS.280.345
Area: Quantitative and Mathematical Sciences

AS.280.347. Health Data Analysis Practicum. 2 Credits.
Students will learn to formulate precise scientific and policy questions, design exploratory and confirmatory statistical analyses to address the questions, conduct appropriate analyses using the statistical package R, and communicate their findings through graphical and tabular displays that are presented in writing and in person. The course will be run seminar style in which students conduct data analysis to present to one another in one meeting per week. Evaluation will be through class participation and a final project in which students will analyze their own data set to address a question of their choice. Students need to have taken an introductory statistics course at the level of AS.280.345 (Public Health Biostatistics) and must have some experience using the statistical software R to perform basic analyses.
Area: Quantitative and Mathematical Sciences

AS.280.349. Making Work Safer. 3 Credits.
This course explores major health and safety issues that affect workers in the United States, with an emphasis on developing and selecting interventions to prevent occupational injuries. In this course, students will examine the morbidity, mortality, and economic costs associated with work-related injuries; interact with key surveillance systems and other data sources used for tracking such injuries; and apply principles of injury prevention and decision-making through a basic policy analysis process.
Prerequisite(s): AS.280.340
Area: Social and Behavioral Sciences

AS.280.350. Fundamentals of Epidemiology. 4 Credits.
A practical introduction to epidemiology focusing on the principles and methods of examining the distribution and determinants of disease morbidity and mortality in human populations. This course is restricted to Public Health Studies only. Any remaining open seats at the start of the semester will open up to all other majors.
Area: Quantitative and Mathematical Sciences

AS.280.360. Clinical & Public Health Behavior Change. 3 Credits.
This course explores the theory and practice of changing the health behaviors of individuals, and the public health and medical impact of doing so. Theoretical concepts are integrated with practical clinical applications, especially in the areas of diet and fitness. Skill building in persuasive, health-related communication will be included in smaller group discussions.
Area: Social and Behavioral Sciences

AS.280.380. Global Health Principles and Practices. 3 Credits.
Global health addresses the staggering global disparities in health status, drawing on epidemiology, demography, anthropology, economics, international relations and other disciplines. We review patterns of mortality, morbidity and disability in low and middle income countries, starting with malnutrition, infectious diseases and reproductive health, and continuing to an emerging agenda including mental health, injury prevention, surgical care, chronic diseases, and health impacts of climate change. Gender, health systems and health workforce challenges, and care trajectories in global health are also discussed. Recommended course background: Minimum of one prior course in Public Health.
Area: Social and Behavioral Sciences

AS.280.399. Community Based Learning - Practicum Community Health Care. 3 Credits.
This course is designed to expose students to urban health with focus on Baltimore City through lectures, class discussions, and experiential learning. Students will select a community-based organization (CBO) according to their expressed interests and schedule in order to complete 45 hours of service based learning. Grades are based on participation, completion of service learning project, presentation, and papers. Open to Junior Public Health Studies majors only. Others by permission of instructor.
Area: Social and Behavioral Sciences

AS.280.427. Communicating Science: Skills to Analyze and Communicate Science News. 3 Credits.
Science communication is challenging. Experts are seldom trained to translate jargon in everyday language. In this course students will expand their knowledge of the biology basics of several public health issues, develop the critical thinking needed to assess health science reporting, and practice science communication skills.
Prerequisite(s): AS.020.151 OR AS.020.152 OR AS.020.243 OR AS.020.123 OR AP Biology.
Area: Humanities, Natural Sciences

AS.280.428. Environmental Health and Disasters. 3 Credits.
Environmental Health and Disasters examines the core principles and applications of environmental health science in disaster and humanitarian emergency response. Lecture topics range from emerging infectious diseases to toxicology to climate change. Students will have the opportunity to apply lessons learned through completion of weekly in-class case studies based on recent global events. Juniors/Seniors only
Area: Natural Sciences, Social and Behavioral Sciences

AS.280.429. An Introduction to Public Health Evaluation Using Population-Based Survey. 3 Credits.
Students will be introduced to key concepts for public health program evaluation, including how to develop evaluation research questions, common evaluation study designs, and aspects of study implementation including sample size calculation and questionnaire development. Students will become familiar with how to analyze datasets to answer global health evaluation research questions, and effectively interpret and summarize evaluation study results for key audiences. Students will get hands-on experience working with a Demographic and Health Survey (DHS) dataset to apply skills learned in each module. The DHS program provides indicators in areas of population, health, and nutrition from more than 300 surveys in 90 countries (see www.dhsprogram.com). Juniors/ Seniors only
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
AS.280.430. Communicating Public Health Findings Through Research-Based Theatre. 3 Credits.

Results of public health research have the potential to catalyze positive social change, yet often need to be creatively communicated to target audiences in order to produce meaningful effects. Research-based theatre is gaining traction in the health and social sciences as a compelling and effective means of disseminating research findings to audiences beyond those that typically read scientific journal articles. Equipped with the results of a recent mixed-methods study of sexual violence on JHU campuses, students will collaboratively prepare a messaging strategy, a research-based script, print/digital materials, and an audience evaluation plan for a live campus dissemination event at the end of the semester.

Area: Humanities, Social and Behavioral Sciences

AS.280.431. Beyond Borders: Migration, Ethics, and Public Health. 3 Credits.

This course explores the public health, ethical, and policy implications of international human migration both globally and within the United States. It is intended for upper-level undergraduate students interested in bioethics, migration, public health, and political philosophy. The first part of the course acquaints students with the various types of migrants and relevant political theory, including citizenship, freedom of movement, open/closed borders, and human rights. In the second part of the course, students discuss different ethical/philosophical concepts related to migration and apply them in analysis of a wide variety of public health and health policy cases. The course culminates with a final paper that students workshop collaboratively. This course challenges students to draw connections between ethical theory and real-world events and policies involving human migration. This is a Gordis Teaching Fellowship course.

Area: Social and Behavioral Sciences

AS.280.432. Statistical Thinking for Informed Decision Making. 3 Credits.

Much of the science that we are exposed to on a daily basis is not through original research articles but through sources such as news reports, articles from content aggregators, and social media postings. While these convenient sources of information can be useful in some respects, it is important to read the original scientific articles on which these reports are based. Only in this way can we better understand the state of science on the issues we care about. In this course, students will primarily learn about statistical concepts within the domains of association studies, causal inference, survey analysis, and survival analysis that provide the background necessary to read a wide variety of primary research in public health. Required readings from a custom course textbook will be supplemented by in-class lecture, discussion, and guided simulation exercises. Simulation exercises will use the Shiny environment in the R programming language which allows for point-and-click style exploration and does not require any coding. All code used to create these simulation activities will be made available so that students familiar with R or who want to learn more have the chance to explore on their own time. Secondary goals of the class include (1) examining the differences between information contained in original research articles and secondary sources and (2) improving written and oral communication about statistical ideas.

Prerequisite(s): AS.280.345
Area: Quantitative and Mathematical Sciences

AS.280.433. How to Feed the World: Perspectives in Global Food and Nutrition Security. 3 Credits.

How do we produce not only enough food, but enough of the right kinds of food, to nourish a growing population? In this course we define global food security and position it within the landscape of nutritional problems. We then discuss key challenges associated with food production and food distribution including climate change, weak supply chains, and changing dietary patterns. Finally, we learn about current efforts to improve global food security through policies, programs, and new technologies. This course is suitable for students with an interest in food, nutrition, global health, environmental sustainability, and complex systems.

Area: Social and Behavioral Sciences

AS.280.434. Public Health Nutrition in Latin America. 3 Credits.

This course examines drivers and determinants of health in Latin American population from a public health nutrition perspective. Students will be able to discuss the Global Nutrition Transition framework, drawing from historical public health nutrition issues in Latin America to understand current diet-related concerns and patterns. This is a discussion-based course in which students will be constantly reflecting on past and current issues and lessons learned from these countries. By the end of this course, students be able to propose future public health policies and strategies to improve the nutritional profile of the Latin American population both in Latin American Countries and in Latino immigrant communities here in the United States. Gordis Teaching Fellowship course open to junior and seniors only.

Area: Social and Behavioral Sciences

AS.280.435. Alcohol Use and Social Disparities: A Public Health Perspective. 3 Credits.

This upper-level course examines alcohol use from an ethical, epidemiological, and social justice perspective. The course is structured in three parts: 1.) Ethical issues in alcohol-related harms, 2.) Alcohol and marginalized populations, and 3.) Alcohol and injustice. This course models how to frame a complex problem from a public health perspective and teaches students to critically engage with social justice concepts.

This seminar-format course incorporates guest lectures, small group exercises, case studies, and role plays. Gordis Teaching Fellowship course open to juniors and seniors.

Area: Social and Behavioral Sciences

AS.280.436. Using Secondary Data to Conduct Public Health Research. 3 Credits.

Students will learn how to use administrative claims, electronic health records, and other secondary data sources to conduct public health research. The course will address privacy issues, data cleaning, creation of new variables, missing data, and documentation of data analysis decisions. Students will have the opportunity to apply course concepts to real data sets. This course is intended for undergraduates in their junior or senior year who are interested in conducting public health research with large, secondary data sets. AS.280.345 (Public Health Biostatistics) or other introductory statistics class required. Some familiarity with R is recommended, but not required. This is a Gordis Teaching Fellowship course.

Prerequisite(s): AS.200.314 OR AS.230.205 OR AS.280.345] OR EN.550.211 OR EN.550.310 OR EN.550.311 OR EN.550.413 OR EN.550.420 OR EN.550.430 OR EN.560.348
Area: Quantitative and Mathematical Sciences
AS.280.437. Saving Newborn Lives in Low Resource Settings. 3 Credits.
Child mortality has declined precipitously over the past 25 years, but neonatal mortality has remained largely unchanged. Today, around the world, 45 percent of all child mortality occurs in newborns, and these deaths are overwhelmingly in low-income countries. Prematurity, events during childbirth, and infections like pneumonia and sepsis are the largest killers of newborns, and most of these deaths could be prevented with quality care during childbirth. Students will spend the first half of the course learning the direct and indirect causes of perinatal and newborn mortality and interventions that have been proven to prevent perinatal and newborn deaths in low resource settings, such as skilled birth attendance, essential newborn care, helping babies breathe, kangaroo mother care, and treatment of the sick newborn. Students will spend the second half of the course working in teams to critically evaluate newborn health in a chosen country and propose a solution that will reduce perinatal and newborn deaths. Students will have the opportunity to present their final project design to a panel of professionals working in international public health. This class is designed to be highly engaging, so students should come prepared to work in groups, debate ideas, and discuss their points of view. Students will also have the opportunity to learn how to treat a newborn who is not breathing at birth, and simulate kangaroo mother care for thermoregulation. This is a Gordis Teaching Fellowship course.
Prerequisite(s): (AS.280.225 OR AS.280.380) AND AS.280.350
Area: Social and Behavioral Sciences

AS.280.438. Reproductive Health in Crisis: Issues in Meeting the Needs of Vulnerable Populations. 3 Credits.
Introduces students to the reproductive health needs of over 65 million people affected by humanitarian, economic, and environmental crises globally. Presents an overview of health care delivery systems in a variety of contexts, and examines the reproductive health consequences of disruptions in service provision during times of crisis. Examines the impact of policies and programs targeting affected groups. Discusses international standards in humanitarian response. Includes discussion of maternal and newborn health, family planning, abortion, and gender based violence. Students develop competency to conduct reproductive health service needs assessments and design an emergency preparedness plan that ensures provision of essential care. For the final project, students apply their skills to plan a response program to meet the reproductive health needs of a specific crisis-affected population. This is a Gordis Teaching Fellowship course.
Area: Social and Behavioral Sciences

Writing Intensive

AS.280.439. Ecological Change and Infectious Disease. 3 Credits.
This course will introduce students to key concepts in infectious disease ecology and epidemiology. Students will also learn how key ecological changes are influencing infectious disease dynamics. Ecological changes explored in the course include climate change, water management, deforestation, agriculture, and urbanization. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Prerequisite(s): AS.280.350 can be taken concurrently; AS.280.335
Area: Natural Sciences

AS.280.440. Introduction to Harm Reduction: Principles and Examples in Public Health. 3 Credits.
Harm reduction is an increasingly popular paradigm in public health research and practice. This course introduces students to the principles of and current research in harm reduction. The class will focus on a) history and principles of harm reduction, and appropriate research methods; b) harm reduction & substance abuse and policy; c) harm reduction & sexual health and sex work; d) ethical considerations in harm reduction. This seminar-format course uses journal clubs, small group discussions, and interactive debates. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Prerequisite(s): AS.280.345 OR EN.553.112 OR EN.550.112 OR EN.553.211 OR EN.550.211
Area: Quantitative and Mathematical Sciences

AS.280.441. Social Media and Public Health. 3 Credits.
This upper-level undergraduate research methods design course explores the growing role of social media in public health research. The course first introduces the current social media landscape, tying in different public health and health communication theories of importance to social media research. This is followed by a discussion of qualitative and quantitative research methods that have been used to conduct social media research, as well as the unique ethical considerations presented by this novel field. The course will then delve into each type of social media platform in depth, discussing how public health research has been conducted and how this ever-changing field continues to move forward. By the end of the course, students will have given explicit consideration to the strengths and challenges posed by conducting social media research in public health, and will be able to apply social media research methods to a public health issue of their interest. Some background in research methods is preferred but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Area: Social and Behavioral Sciences

AS.280.442. Genetics and Public Health. 3 Credits.
DNA is the code of life and variability in this code can be critical in determining human health outcomes. In a post-genomic era with increasingly advanced genetic tools and data it is critical for future public health professionals to understand the role that genetics plays in disease on the individual and population level. More and more, genetics is instructing public health interventions by informing individuals of their risk of acquiring certain diseases, explaining disease etiology, guiding treatment options in the wake of personalized medicine, and may dictate the future of genetic-based disease treatment in the form of gene therapy. The goal of this semester long course is to expand upon basic genetic concepts and apply them to understanding how variation in the human genome can impact health outcomes and inform treatment. We will look at how genetic diseases are inherited, the various ways in which they can manifest as pathology, and how they are discovered and diagnosed. We will also learn how to interpret genome wide association studies and genetic test results and explore the field of genetic counseling.
We will finish by looking at the future of genetic medicine by looking at personalized medicine, gene therapy, and gene drive technologies and the potential ethical implications of these interventions. Prior genetics coursework is useful, but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Prerequisite(s): AS.020.151 AND AS.020.152
Area: Natural Sciences
AS.280.443. Health-Related Stigma: Concepts, Considerations, and Interventions. 3 Credits.
Health-related stigma plays an important role in health and social outcomes, however its impact on individuals and populations varies according to context. Through readings, discussions, and assignments, students acquire the framework and skills to conceptualize and assess stigma across a range of health domains. To develop their understanding and analytical approach, students examine examples of HIV/AIDS, smoking, obesity, addiction, and mental health stigma. In each case, students consider key questions including: What are the forms and consequences of stigma? What theories apply? What ethical issues exist? How might interventions minimize or leverage stigma for health promotion? Throughout the semester, students also consider broader questions including: When should interventions target stigma? What are the ethical considerations in health-related stigma research? Is stigma always a threat to health? As the course places a strong emphasis on reading, critiquing, and applying health and social scientific literature, knowledge of or experience with psychology, sociology, ethics, and/or statistics is recommended but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted registration as space allows.

Area: Social and Behavioral Sciences

AS.280.445. Mental Health and the Gut. 3 Credits.
Explores the strong, bidirectional communication between the gastrointestinal tract and the brain. Reviews the role of the microbiome in shaping brain health, the link between gastrointestinal symptoms and mental health, and new and seminal research on the brain-gut connection in specific psychiatric disorders, including neurodevelopmental disorders, sleep disorders, depression and anxiety, bipolar disorder, schizophrenia and other psychotic disorders, dementia, and Parkinson's/other movement disorders. Develops students' skills in reading and critiquing literature as well as designing and analyzing studies on the microbiome and mental health. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Prerequisite(s): AS.280.345 OR (EN.553.211 (EN.550.211) OR EN.553.112); Students who have taken AS.280.236 are not permitted to take AS.280.445.

Area: Social and Behavioral Sciences

AS.280.446. Quality of Life: Concepts and Challenges in Assessing Wellbeing. 3 Credits.
Quality of life means something different to nearly everyone. While public health and regulatory professionals agree that quality of life matters, developing tools that appropriately conceptualize and evaluate quality of life across varying populations remains a challenge. This course will explore the role of quality of life and other health status and functional outcomes in public health. The course is structured in three segments: 1) Conceptualizing quality of life, 2) Measuring quality of life, 3) Valuing quality of life. The class challenges students to assess the existing landscape in quality of life research and critically evaluate how diverse literature bases (including psychology, medicine, economics, & regulatory science) have influenced public health research, policy, and practice. Students will also gain experience in analyzing and drawing meaningful research and regulatory conclusions from experience data such as patient reported outcomes and patient preference information. This course will be structured as a seminar featuring lectures, in-class journal clubs, guest speakers, and small-group lab activities. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Prerequisite(s): AS.280.345 OR (EN.553.211 (EN.550.211) OR EN.553.112)

Area: Social and Behavioral Sciences

AS.280.447. Ethical Considerations When Working With Marginalized Populations- A Public Health Perspective. 3 Credits.
Interested in developing best practices to work with marginalized people in public health? This course is for you! We will use a combination of lectures and discussions to critically analyze public health research methodologies at the intersection of ethics, justice, and human rights when working with marginalized populations. The first part of the course is an introduction to theory to equip students with a shared language to understand how marginalization, justice, and ethics are conceptualized in public health. In the second part of the course, students will delve deeper into various public health research methodologies and apply ethical guidelines to a variety of public health cases in the U.S. and internationally. The course will culminate with students designing case studies to present and provide feedback on based on ethical considerations. Gordis Teaching Fellowship course. Priority registration given to Public Health Studies majors. Other students will be permitted to register as space allows.

Area: Social and Behavioral Sciences
AS.280.448. Vaccine Development, Epidemiology, and Hesitancy in the Modern World. 3 Credits.
Immunization is one of the most cost-effective and successful public health measures available, but loss of public confidence in vaccines has resulted in the resurgence of vaccine-preventable diseases. This course will review the process of vaccine development and students will understand the use and utility of immunizations for disease prevention. Students will gain an in-depth understanding of the vaccines that have been successfully introduced into routine immunization schedules. This course will discuss post-licensure vaccine surveillance as well as current domestic and international policy issues in vaccine development, supply, delivery and utilization. We will also examine the origins of vaccine hesitancy and discuss the impact of “anti-vaxxers” on immunization coverage and the subsequent return of vaccine-preventable diseases. Students will have the opportunity to work in teams to critically evaluate multi-level interventions to target vaccine hesitancy and improve immunization coverage, and propose a recommendation that will reduce the morbidity and mortality of a specified vaccine-preventable disease. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Prerequisite(s): AS.280.350
Area: Social and Behavioral Sciences

AS.280.449. Corporate Influence on Public Health. 3 Credits.
Corporate practices are an often under-recognized social determinant of health. Corporate-induced disease contributes to morbidity and mortality worldwide, and a better understanding of the mechanisms underlying corporate-induced diseases illuminates pathways by which social and environmental factors influence health. This course will investigate the influence of industry using tobacco, alcohol, sugar-sweetened beverage, food, and pharmaceutical industries as examples, emphasizing ecological models. Students will evaluate the historical and current role of each industry as they effect health outcomes, research, public health policy, and public perceptions and behaviors. Students will use case studies from around the globe that exemplify instances of influence and interference and critically consider the power and activity of multibillion-dollar multinational companies. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Area: Social and Behavioral Sciences

AS.280.450. The Dreaded R-Word: The Ethics of Rationing and Resource Allocation in Health Care. 3 Credits.
Uwe Reinhardt, the renowned Princeton health economist, once labeled rationing as “the dreaded ‘R-word.’” Sarah Palin infamously criticized the Affordable Care Act for, in her view, setting up rationing “death panels.” Many others recoil from the idea of rationing, considering it a “heartless, mechanistic withholding of desirable goods or services by faceless bureaucrats.” In contrast, “resource allocation” does not typically inspire the same response. Why does the idea of rationing in health care generate such a negative emotional response? Is this response justified? Does rationing differ from resource allocation as a means of setting priorities for health care? Who has the authority to set priorities for health care? On what basis should priorities be set? Why must priorities be set at all? This class addresses questions like these and offers a broad introduction to the ethics of priority-setting in health care. The class will devote significant time to understanding both the conceptual and normative foundations of priority-setting as well as specific proposals for how to set priorities. We will explore priority-setting in health care at both the individual and population level through various case studies including organ transplants and flu pandemic preparation. We will discuss priority-setting in the context of public health and universal health coverage and explore the role of global organizations like the World Health Organization and World Bank in setting priorities for health care. We will also consider whether priority-setting is compatible with the pursuit of social justice. Gordis Teaching Fellowship course.
Area: Social and Behavioral Sciences

AS.280.451. Born a Girl: Issues in Women's Health From a Life Course Perspective. 3 Credits.
The discussion surrounding women's health has often remained limited to understanding women's reproductive health needs. This course seeks to move beyond this topic to explore the key issues affecting women's health, utilizing a life course perspective. This undergraduate course will focus on a select number of themes including: a) understanding the history of women's health; b) sexual and reproductive health; c) maternal health; d) violence against women and girls; e) the needs of younger girls and aging women; and f) how mental health and stigma affect women. The course brings both U.S. and global perspectives to enhance the understanding of how the field of women's health has evolved over time. It will also address some of the challenges public health professionals continue to face in addressing the health and wellbeing of women today. This seminar-style course combines class presentations with journal clubs and small group discussions. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Prerequisite(s): AS.280.350
Area: Social and Behavioral Sciences
**AS.280.452. Policy, Politics, and Power in Health Equity. 3 Credits.**

Health disparities are avoidable, unjust differences in health opportunities and outcomes related to factors such as race and ethnicity, education, class, citizenship, disability, sex and gender identity, and sexual orientation. These disparities reflect the systems that distribute resources, privileges, and power across society and mediate exposure to physical and mental health hazards such as economic deprivation, discrimination, violence, unhealthy environments, uninsurance, and inadequate medical care. Health equity, which is often referred to as social justice in health, is an ethical value that drives efforts to eliminate these disparities. As the National Academy of Medicine asserts in each of its reports, “Knowing is not enough; we must apply. Willing is not enough; we must do.” The purpose of this course is to introduce students to essential concepts, literature, and policy issues related to health disparities and to prepare them to use their knowledge to build effective policy strategies in support of health equity. Gordis Teaching Fellowship course. Completion of AS.280.340/ Fundamental of Health Policy Management is recommended, but not required. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Area: Social and Behavioral Sciences

**AS.280.453. Contemporary Social Movements in Public Health. 3 Credits.**

Health social movements attempt to alter power structures in order to achieve greater health equity, promote access to resources, and change perceptions of disease. But what distinguishes a moment from a movement? Under what conditions can health social movements lead to lasting policy and social change? Together we will explore a wide range of contemporary health social movements such as Black Lives Matter, MeToo, gun reform, US healthcare reform, environmental movements, and others. We will analyze the types of goals, resources, and tactics used in these movements and consider their contributions to the shaping of health-related policies and practices. Students will compose a brief and highly polished analysis of a health social movement of their choosing that may be suitable for publication. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Area: Social and Behavioral Sciences

**AS.280.454. What is the Link Between Oppression and Mental Health? Combining Theory, Concepts, and Empirical Science to Explain Minority Mental Health. 3 Credits.**

In this three-module course, students will first gain knowledge on the theoretical orientations that inform the social determinants of health, in combination with conceptual approaches in the field of trauma and violence research, in order to formulate a theoretical, conceptual, and empirical understanding of minority mental health. In the final module, students will study select mental health concerns (e.g., trauma, depression, anxiety, suicide) that affect specific minority populations, including discussions around the lived experiences of minority mental health. This culminates in a final group presentation on empirical research from an approved minority mental health topic of their choice that will be delivered as a TED-style talk. The course will run with graduate-level expectations. Students should anticipate weekly reading assignments to inform group lab presentations and discussions. There will be three brief individual writing assignments of 5 pages or less that critically analyze current minority mental health research. Upon completion of the course, students will be able to discuss minority mental health research with the necessary contexts of theory, research, and life stories that inform current public mental health approaches. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Prerequisite(s): Students cannot take this course is they are taking AS.194.301.

Area: Social and Behavioral Sciences

**AS.280.455. Understanding and Engaging Adolescents in Public Health Context. 3 Credits.**

Adolescent health is an increasingly important component of the public health agenda. As adolescence is a unique and pivotal stage of life, a rich understanding of this population is important for successful public health engagement. This seminar-style course seeks to provide a foundation for those interested in adolescent health and support effective engagement with adolescent populations. The first half of the course offers theoretical and contextual insights on adolescents—ranging from discussing public health significance, to developmental and life course perspectives, to influences across socioeconomic levels. The course then delves into practical and methodological considerations for working with this population including ethical matters, insights on reaching adolescents, and approaches to collecting information. This course culminates with deliberations of successful examples of engaging adolescents in public health as well as the future of the adolescent health field. This is a Gordis Teaching Fellowship course open to juniors and seniors. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Area: Social and Behavioral Sciences

**AS.280.495. Honors In Public Health - Seminar. 3 Credits.**

Using lectures, oral presentations, and writing assignments, this seminar is designed to assist Public Health Studies majors in writing a senior thesis. Students will formulate their topics, develop research skills, and address issues of professional ethics. Participating in this seminar is required for students pursuing honors in Public Health Studies. Permission Required. Classes will be held at Bloomberg School of Public Health.

Area: Social and Behavioral Sciences

Writing Intensive
AS.280.499. Honors in Public Health. 3 Credits.
A research methods seminar to prepare students doing honors in Public Health Studies. Permission Required.
Area: Social and Behavioral Sciences
Writing Intensive

Perm. Req'd, Public Health Majors Only. This is a supervised, hands-on experience working with public health professionals. Students will complete 80 hours of applied work and will submit a synthesizing assignment at the end of the term. Students completing their AE in the current semester will be enrolled in Section 2. Students whose time will roll over to an additional grading period will be enrolled in Section 1. Please contact your PHS Advisor for complete details.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.501. Internship-Public Health. 1 Credit.
Permission Required. Public Health majors only
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.502. Internship-Public Health. 1 Credit.
Permission Required. S/U only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.505. Research in Public Health. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.506. Research in Public Health. 0 - 3 Credits.
Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.507. Independent Study-Public Health. 3 Credits.
Public Health majors only. Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.508. Independent Study-Public Health. 3 Credits.
Consult the public health studies adviser for procedure. Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.511. Research for Juniors/Seniors in Public Health. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.512. Research for Juniors/Seniors in Public Health. 0 - 3 Credits.
Restricted to public health studies majors. Consult the public health studies adviser for procedure. Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.590. Internship - Summer. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.596. Independent Study-Summer. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.597. Research in Public Health. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.280.598. Research for Juniors/Seniors in Public Health. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

Cross Listed Courses
Center for Africana Studies
AS.362.371. Public Health Crisis in Africa. 3 Credits.
This course examines the historical and current public health crises in Africa. Topics covered include infectious diseases and viral outbreaks, water and food access, sanitation, education, behavioral health, gender equality, health care and health care access, as well as the link between culture, economics and health. Introduction to Epidemiology is recommended but not required.
Area: Humanities, Social and Behavioral Sciences
Earth Planetary Sciences
AS.270.308. Population/Community Ecology. 3 Credits.
This course explores the distribution and abundance of organisms and their interactions. Topics include dynamics and regulation of populations, population interactions (competition, predation, mutualism, parasitism, herbivory), biodiversity, organization of equilibrium and non-equilibrium communities, energy flow, and nutrient cycles in ecosystems. Field trip included. Students who have not taken one of the prerequisites may register with the permission of the instructor.
Prerequisite(s): AS.270.103 OR AS.020.151
Area: Natural Sciences
AS.271.107. Introduction to Sustainability. 3 Credits.
Humans are having such a massive impact on Earth systems that some call this the Anthropocene epoch. Should we consider this state of affairs progress or catastrophe? How to we find a sustainable path to the future? This course provides an interdisciplinary introduction to the principles and practice of sustainability, exploring such issues as population, pollution, energy and natural resources, biodiversity, food, justice, and climate change through the lens of systems thinking. Course open to freshmen, sophomores, and juniors. Seniors by instructor permission only.
Area: Social and Behavioral Sciences
AS.271.360. Climate Change: Science & Policy. 3 Credits.
Prereq: 270.103 or permission of instructor. This course will investigate the policy and scientific debate over global warming. It will review the current state of scientific knowledge about climate change, examine the potential impacts and implications of climate change, explore our options for responding to climate change, and discuss the present political debate over global warming.
Area: Natural Sciences
Economics
AS.180.252. Economics of Discrimination. 3 Credits.
This course examines labor market discrimination by gender, race and ethnicity in the United States. What does the empirical evidence show, and how can we explain it? How much of the difference in observed outcomes is driven by differences in productivity characteristics and how much is due to discrimination? How have economists theorized about discrimination and what methodologies can be employed to test those theories? What has been the impact of public policy in this area; how do large corporations and educational institutions respond; and what can we learn from landmark lawsuits? The course will reinforce skills relevant to all fields of applied economics, including critical evaluation of the theoretical and empirical literature, the reasoned application of statistical techniques, and analysis of current policy issues.
Prerequisite(s): AS.180.102
Area: Social and Behavioral Sciences
Writing Intensive

AS.180.289. Economics Of Health. 3 Credits.
Application of economic concepts and analysis to the health services system. Review of empirical studies of demand for health services, behavior of providers, and relationship of health services to population health levels. Discussion of current policy issues relating to financing and resource allocation.
Prerequisite(s): AS.180.102
Area: Social and Behavioral Sciences

AS.180.390. Health Economics & Developing Countries. 3 Credits.
Benefits of good health and its costs. Health demand and supply in poor countries. Welfare economics of Public Health. This is a writing seminar. There are some lectures on how to write a paper and on the substance of the economics of international health but the focus and only assignment is a 40-page paper by each student under the supervision of the instructor.
Prerequisite(s): AS.180.301 or AS.180.401; Students may not take AS.180.390 if they took AS.180.391.
Area: Social and Behavioral Sciences
Writing Intensive

English
AS.060.155. Expository Writing: Introduction to the Research Paper - Controversies in Adolescence. 3 Credits.
"Introduction to the Research Paper" is designed to introduce more experienced student writers to the fundamental skills of the research process. These include asking research questions, evaluating the usefulness of sources to answer them, synthesizing sources, reading sources critically, and developing arguments that deliver an original thesis. Students will work with a research librarian at the Eisenhower Library, with whom they will learn to navigate traditional databases as well as new media sources. The Research Paper is topic-based and divided into three linked units of instruction. The course culminates with a paper of 10-12 pages that draws upon the cumulative skills of the semester. Each course is capped at ten students and available only to those who have taken "Expository Writing" (060.113/114)
Prerequisite(s): AS.060.113 OR AS.060.114
Area: Humanities
Writing Intensive

Environmental Health and Engineering
EN.570.108. Introduction to Environmental Engineering and Design. 3 Credits.
Overview of environmental engineering including water/air quality issues, water supply/ wastewater treatment, hazardous/solid waste management, pollution prevention, global environmental issues, public health considerations/environmental laws, regulations and ethics. Cross-listed with Public Health Studies.
Area: Engineering

History of Science, Medicine, and Technology
AS.140.105. History of Medicine. 3 Credits.
Course provides an overview of the medical traditions of six ancient cultures; the development of Greek and Islamic traditions in Europe; and the reform and displacement of the Classical traditions during the Scientific Revolution.
Area: Humanities, Social and Behavioral Sciences

AS.140.106. History of Modern Medicine. 3 Credits.
The history of Western medicine from the Enlightenment to the present, with emphasis on ideas, science, practices, practitioners, and institutions, and the relationship of these to the broad social context.
Area: Humanities, Social and Behavioral Sciences

AS.140.146. History of Public Health in East Asia. 3 Credits.
This course examines the history of disease, epidemics, and public health responses in East Asia from the 17th-20th centuries. This public health history emphasizes the interactions, connections, and comparisons among China, Japan, Korea, and Taiwan.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.140.156. Harm City? Public Health in Baltimore, 1797 to the present. 3 Credits.
Explores the history of public health in urban America using Baltimore as example. Examines topics such as include infectious diseases, mental health, sanitation, rodent control, primary care, substance abuse, and STDs using frameworks of racism, classism, poverty and inequality.
Area: Humanities, Social and Behavioral Sciences

AS.140.176. Public Health in East Asia Through Films & Documentaries. 1 Credit.
This course uses contemporary films and documentaries to address issues in public health in East Asia, past & present. Topics covered include medicine in turn-of-the-twentieth century Japan and China, revolutionary medicine, STDS, mental illness, HIV/AIDS in China, industrial pollution, the politics of universal health care insurance, and pandemics in East Asia.
Area: Humanities, Social and Behavioral Sciences

AS.140.311. Ecology, Health, and the Environment. 3 Credits.
Explores diverse problems linking ecological, environmental and public health themes, with focus on Chesapeake region. Students’ research projects can be outside Chesapeake region.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

Philosophy
AS.150.219. Introduction to Bioethics. 3 Credits.
Introduction to a wide range of moral issues arising in the biomedical fields, e.g. physician-assisted suicide, human cloning, abortion, surrogacy, and human subjects research. Cross listed with Public Health Studies.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
Political Science

AS.190.405. Food Politics. 3 Credits.
This course examines the politics of food at the local, national, and global level. Topics include the politics of agricultural subsidies, struggles over genetically modified foods, government efforts at improving food safety, and issues surrounding obesity and nutrition policy. Juniors, seniors, and graduate students only. Cross-listed with Public Health Studies.
Area: Social and Behavioral Sciences
Writing Intensive

Sociology

AS.230.150. Issues in International Development. 3 Credits.
Why do billions of people continue to live in poverty? What obstacles stand in the way of secure and dignified lives for all? Who is most likely to bring about change, what strategies should they follow, and what kinds of institutions should they put in place? This course will introduce the main theoretical perspectives, debates, and themes in the field of international development since the mid-20th century. It has three sections. The first section focuses on debates over the optimal conditions and strategies for generating economic growth and on the relationship between growth, human welfare, and inequality. The second section presents critical assessments of development interventions from various perspectives. The third section considers the role of social movements in shaping development and social change in the 21st century.
Area: Social and Behavioral Sciences

AS.230.154. Freshman Seminar: Gender, Health and Aging. 3 Credits.
In this course students will develop an understanding of the ways in which gender structures health and well being through adulthood and later life. The experience of sexual minorities and the intersection of gender with class and ethnicity will also be discussed. Students will be expected to participate actively and lead discussions on specific topics.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.324. Gender and International Development. 3 Credits.
This course employs a comparative perspective to examine the gendered impact of international development experiences and policies. Students will discuss the historical evolution of how the concept of gender has been constructed, conceptualized, and integrated into international development theory and practice. The course will also examine how greater international development. In particular, we will examine structural theories of poverty reduction, individual theories of power and processes of stratification at the household and family level. Specific issue areas will include the globalization, class and work political participation and social movements. Cross-listed with International Studies (CR, IR). Fulfills Economics requirement for IS GSCD track students only.
Area: Social and Behavioral Sciences

AS.230.335. Medical Humanitarianism. 3 Credits.
Humanitarian organizations play life-preserving roles in global conflicts, and have front-row views of disasters ranging from the 2010 Haiti earthquake to the 2011 Fukushima tsunami in Japan. Yet even while they provide vital assistance to millions of people in crisis, such organizations are beset by important paradoxes that hinder their capacity to create sustainable interventions. They work to fill long-lasting needs, but are prone to moving quickly from one site to the next in search of the latest emergency. They strive to be apolitical, yet are invariably influenced by the geopolitical agendas of global powers. How do such contradictions arise, and what is their impact upon millions of aid recipients around the world? Drawing on case studies from South Sudan to Haiti, this course addresses these contradictions by exploring how and why medical aid organizations attempt, and sometimes fail, to reconcile short-term goals, such as immediate life-saving, with long-term missions, such as public health programs and conflict resolution initiatives.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.341. Sociology of Health and Illness. 3 Credits.
This course introduces students to core concepts that define the sociological approach to health, illness and health care. Topics include: health disparities, social context of health and illness, and the Sociology of Medicine.
Area: Social and Behavioral Sciences

AS.230.358. The Politics of Mental Health. 3 Credits.
This course examines how the psy disciplines – psychology, psychiatry, psychotherapy and related fields – create knowledge about the mind, and how these fields have in turn shaped political and social life since early 20th century. We will explore how the psy disciplines have proven useful to projects of state building by reconstructing the human mind as a calculable, quantifiable entity, one that can be measured and governed across diverse educational, military, and healthcare settings. We will then ask how psychiatric categories such as bipolar disorder and PTSD (post-traumatic stress disorder) were created, and consider their impact on both the legal/medical management of illness and on lay and expert notions of sanity and normality. Finally, we will examine the rising influence of humanitarian mental health interventions, and immerse ourselves in the debates they have engendered concerning the use of psychotherapy to alleviate suffering in war and disaster zones.
Area: Social and Behavioral Sciences
Writing Intensive
AS.230.393. Global Health and Human Rights. 3 Credits.
Is access to healthcare a fundamental human right? If so, then which
global actors are obligated to provide healthcare to whom, and for
how long? How do meanings of health and illness vary across time
and place? And finally, how are human rights principles translated into
frontline practice in order to promote well-being? This course takes a
critical interdisciplinary approach to these questions through a series of
global case studies ranging from humanitarian aid in post-tsunami
Sri Lanka to anti-FGM (female genital mutilation) campaigns in Ghana.
How do international NGOs, UN bodies, and governments collaborate
(or compete) to distribute healthcare in places beset by dire resource
shortages? Do human rights principles carry legal weight across borders,
and if so, could access to healthcare services and essential medicines be
litigated in order to compel governments to provide it? And finally, what
cultural assumptions do human rights discourses carry with them, and
what happens if rights-based approaches are poorly received by recipient
populations? Moving beyond the basic principle of healthcare as a human
right, this course aims to bring this idea’s history and politics into focus
by offering an in-depth exploration of its ethics and implementation.

**Total Credits** 64-69

1 Other biology courses may apply with advisor approval.
2 All courses must be at least 3 credits and only 2 Gordis Teaching Fellowship (GTF) courses may apply (AS.280.4xx courses).
3 The Applied Experience (AE) is a required experiential learning component of the Public Health Studies curriculum. The purpose of the AE is to provide students with supervised, hands-on experience in a professional public health setting. The Applied Experience gives students an opportunity to explore an area of interest within the field of public health by actively engaging in and directly contributing to a public health project or program. The AE must be at least 80 hours and 4 weeks long under the supervision of a public health professor.
4 Courses are taken at the Johns Hopkins Bloomberg School of Public Health in the student’s final year. Students take 15 JHSPH credits, which is the equivalent of 10 Homewood credits. Blended courses may count for this requirement, Independent Research and Special Studies will not. Online courses will count toward you total number of credits needed to graduate, but will not count toward the 15 credits needed to fulfill this specific requirement. Within the 15 credits, students must create a 8 credits focus in one particular area, topic, or department.

**Sample Program of Study**
While there are many paths through the requirements, a typical
program might include the following sequence of Public Health Studies requirements:
---

**Course Title Credits**

**First Year**

**First Semester**

AS.280.101 Introduction to Public Health 3
AS.020.151 General Biology I 3
AS.020.153 General Biology Laboratory I 1
AS.110.106 Calculus I (Biology and Social Sciences) 4
or AS.110.108 Calculus I (Physical Sciences & Engineering)

Introductory Level Social Science from Table 1 3

Credits 14

**Second Semester**

AS.020.152 General Biology II 3
Introductory Level Social Science from Table 1 3

Credits 6

**Second Year**

**First Semester**

AS.280.345 Public Health Biostatistics 4
AS.280.335 The Environment and Your Health 3

Credits 7

**Second Semester**

AS.280.240 Research Methods in Public Health 4
AS.280.350 Fundamentals of Epidemiology 4
AS.280.340 Fundamentals of Health Policy & Management 3

Credits 11

**Third Year**

**First Semester**

Social/Behavioral Aspects of Public Health Course 3

Credits 3

**Second Semester**

AS.280.500 Applied Experience-Public Health (if not taken First Semester) 1

Upper Level Public Health Elective (200-400 level) 3

Credits 4

**Fourth Year**

**First Semester**

Bloomberg School of Public Health Courses 4-6
Upper Level Public Health Elective (200-400 level) 3

Credits 7-9

**Second Semester**

Bloomberg School of Public Health Courses 4-6
Upper Level Public Health Elective (200-400 level) 3

Credits 7-9

Total Credits 59-63

---

**Table 1**

Approved Introductory Level Social Science Courses. Students matriculating after 2017 or later must take these from two different departments:

**Honors in Public Health Studies**

An honors option is available to Public Health Studies seniors with a major GPA of 3.5. Public Health Honors students complete an independent research project under the supervision of a JHU faculty member and the guidance of the Honors seminar instructor. Students register for AS.280.495 Honors in Public Health - Seminar in the fall and AS.280.499 Honors in Public Health in the spring. Interested students should discuss their plans with their PHS advisor no later than the spring of their junior year. Students may not count the honors courses towards any other requirement of the major; they are in addition to major requirements.

---

**Social Policy**

Social policy is the study of policy solutions to the problems of education, inequality, poverty, crime, and other issues faced by society's families and children. It is an interdisciplinary field to which the disciplines of economics, sociology, and political science contribute in equal measure. It is a basic-science field with a strong applied-research focus that can prepare students for careers in government, nonprofits, and the private sector. Students who undertake the social policy minor will work with faculty who are experts in the study of poverty, the labor market, social demography, family structure, educational inequality, political participation, organizational dynamics, and health and welfare policy. They will be strongly grounded in social science training and will apply that training to real-world applications and policies. In the minor, students will be motivated to think about how knowledge translates into policy solutions, making this an appropriate specialization for young people who...
plan to attend law school, programs in public health, or graduate school in the constituent social science field.

**Programs**

- Social Policy, Minor (p. 2178)

**Social Policy, Minor**

**Social Policy Minor Requirements**

A Social Policy minor is offered jointly by the Departments of Economics, Political Science, and Sociology. To complete the minor, students must take an introductory course, Introduction to Social Policy and Inequality, Baltimore and Beyond; a 300-level social policy elective in one of the three departments; the Baltimore Policy Fellowship; and a capstone course to be taken after the semester is completed. The preferred sequence is for students to take the introductory course in their freshman or sophomore years, the elective in the fall of their junior year, the Baltimore Policy Fellowship semester in the spring of their junior year, and the capstone course in their senior year. However, modifications in the sequence will be considered. The Fellowship semester will involve course work focusing on urban and national social policy problems coupled with an internship in Baltimore or Washington in a governmental agency or non-governmental organization that is involved with some aspect of social policy, or as a research assistant to a faculty member conducting research on social policy. The capstone course will involve discussion and research among students who have completed the Fellowship semester and is intended to build upon experiences in that semester.

Enrollment in the Fellowship semester will be limited to 15 and requires application and admission. The Social Policy Minor is grounded in the three disciplines and priority will be given to students who are majoring in Economics, Political Science, or Sociology, but students with other majors will be considered.

A list of electives to be used to fulfill the 300-level social policy elective is available on the Social Policy Program website (http://krieger.jhu.edu/socialpolicy/). Students can identify these courses in the schedule of classes as they will have a POS-Tag of SPOL-UL.

Students interested in the minor should contact the Director of the Social Policy Program, by sending a message to socialpolicy@jhu.edu.

All courses must be taken for a letter grade and a grade of C- or better must be earned in all minor requirements.

**Sociology**

http://soc.jhu.edu/
Election to Alpha Kappa Delta is without regard to race, creed, or national origin. For more information, interested students should contact the AKD Faculty Chapter Representatives.

James S. Coleman Award

This award was established by the Department of Sociology in 1994 in honor of Dr. James S. Coleman, first chair of the department. The award is for outstanding academic achievement by a senior majoring in sociology.

Facilities

Each resident graduate student is provided office or desk space to conduct his or her studies and research. In addition, the department has a computer lab with a network of computers and printers for graduate student use. Close working relationships exist with other JHU Centers & Programs which provide excellent opportunities for research training.

Financial Aid

The department strives to provide five years of financial aid for all students who are in good academic standing. Eligibility for financial aid in the fifth year ordinarily requires successful oral defense of the dissertation proposal by May 31, following their fourth year in the Ph.D. program.

The department has a number of assistantships that are awarded each year to graduate students in the Ph.D. program. Opportunities are also available for graduate students to work as salaried research assistants with members of the Sociology faculty and staff at associated research centers.

Programs

- Sociology, Bachelor of Arts (p. 2192)
- Sociology, PhD (p. 2193)
- Sociology, PhD/Applied Mathematics and Statistics, MSE Joint Program (p. 2195)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.230.101. Introduction to Sociology. 3 Credits.

Introduces students to basic sociological concepts and perspectives, and applies them to a variety of topics including family, work, and the dynamics of class, gender, and racial/ethnic inequalities in the United States and globally.

Area: Social and Behavioral Sciences

AS.230.109. Freshman Seminar: Hot Topics in Education. 3 Credits.

This course examines current school reform initiatives and the controversies surrounding them through a sociological lens. Freshmen Only

Area: Social and Behavioral Sciences

Writing Intensive

AS.230.143. Global Migration: Refugees, Economic Migrants, and Borders. 3 Credits.

This course introduces students to the different forms, catalysts, and consequences of global migration. Even as the plight of migrants and refugees has elicited the sympathy of millions worldwide, the majority of them still encounter closed borders and draconian immigration regimes on the fringes of more “desirable” destinations in Europe, Australia, and the United States, and many others remain in limbo in their countries of origin or in transit states. Are these border restrictions new? Or are they consistent with states’ long-standing ways of regulating who is and is not worthy of being admitted through their borders? Throughout the course, we will trace the divergent factors that prompt refugees and economic migrants to migrate, juxtaposing these with the responses of states, international treaties, and humanitarian organizations to their movement and arrival in host countries. Using a variety of written and verbal assignments, we will question the fundamental categories of migration: What is an economic migrant? What is a refugee? How are they different or similar? Whose interests do such categories serve, and how have they been used to justify governmental practices of inclusion and exclusion over time?

Area: Social and Behavioral Sciences

Writing Intensive

AS.230.147. Introduction to Islam Since 1800. 3 Credits.

This course is an introduction to contemporary Islam and Muslim societies from approximately 1800 to the present. Key themes will include the colonial encounter, state formation and reform, revolution, Islamic revival, and globalization. Reflecting Islam’s status as a world religion, the course will touch on developments around the Muslim-majority world and in the West.

Area: Social and Behavioral Sciences

AS.230.150. Issues in International Development. 3 Credits.

Why do billions of people continue to live in poverty? What obstacles stand in the way of secure and dignified lives for all? Who is most likely to bring about change, what strategies should they follow, and what kinds of institutions should they put in place? This course will introduce the main theoretical perspectives, debates, and themes in the field of international development since the mid-20th century. It has three sections. The first section focuses on debates over the optimal conditions and strategies for generating economic growth and on the relationship between growth, human welfare, and inequality. The second section presents critical assessments of development interventions from various perspectives. The third section considers the role of social movements in shaping development and social change in the 21st century.

Area: Social and Behavioral Sciences

AS.230.154. Freshman Seminar: Gender, Health and Aging. 3 Credits.

In this course students will develop an understanding of the ways in which gender structures health and well being through adulthood and later life. The experience of sexual minorities and the intersection of gender with class and ethnicity will also be discussed. Students will be expected to participate actively and lead discussions on specific topics.

Area: Social and Behavioral Sciences

Writing Intensive
AS.230.175. Chinese Revolutions. 3 Credits.
This course introduces the origins, operation and impacts of five major revolutions in modern China between 1850 and 1950. These include the Taiping Rebellion, the republican revolutions, federalist and southern automatic movements, labor strikes as well as peasant rebellions. It draws on the existing historiography that examines China's transition from an empire to a republic, impacts of western and Japanese influences to China, as well as the continuity and change of Chinese social organizations. Cross list with International Studies and East Asian Studies. Fulfills IS History requirement.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.195. Exploring Baltimore: An Introduction to Urban Studies. 3 Credits.
This course will introduce students to the field of urban studies and Baltimore itself. Students will learn data collection and analysis methods used in the social sciences. Students will discuss relevant research published in urban studies by Johns Hopkins faculty and other experts in the field. Students will also gain an introduction to their adopted home, Baltimore, by collecting data and conducting field observations in different neighborhoods.
Area: Social and Behavioral Sciences
Writing Intensive

The purpose of this course is to provide a sound introduction to the overall process of research and the specific research methods most frequently used by sociologists and other social scientists. Required for Sociology majors and IS GSCD track students.
Area: Social and Behavioral Sciences

AS.230.205. Introduction to Social Statistics. 4 Credits.
This course will introduce students to the application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, confidence intervals, chi-square, anova, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research. Special Note: Required for IS GSCD track students.
Prerequisite(s): Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR EN.550.310 OR EN.550.311 OR EN.550.413 OR EN.550.420 OR EN.550.420 OR EN.550.420 OR EN.550.435 OR AS.280.345 OR AS.280.314 OR AS.280.315 OR EN.560.348; Statistics Sequence Restriction: Students who have completed EN.550.111 OR EN.550.113 may not enroll.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.230.213. Social Theory. 3 Credits.
This course will focus on four classical theorists whose ideas have greatly influenced the ways we study society: Karl Marx, Max Weber, Emile Durkheim, and W. E. B. Du Bois. The course is devoted to understanding how each theorist understood the origin, structure, and historical dynamics of modern societies. In addition to comparing their theories, we will use them to analyze current social issues, including those involving social inequality, conflict, cohesion, and change.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.216. Disability and Society. 3 Credits.
Objectives of this course are to achieve an understanding of the social context of disability from the population level to the individual disability experience. Topics will include social versus medical models of disability; the spectrum of ability; the history of disability; civil rights perspectives; life course and aging aspects of disability; and the role of the environment. Attention will be paid both to theoretical understandings of disability and the role of policies.
Area: Social and Behavioral Sciences

AS.230.219. Land, Labor and Environmental Movements in Contemporary Africa. 3 Credits.
The course examines the new wave of social protest and popular uprisings in contemporary Africa through the interconnected themes of land, labor, and environmental movements. Attention will be placed on the early 21st century.
Area: Social and Behavioral Sciences

AS.230.221. Global Social Change. 3 Credits.
This course introduces students to issues of global social change, with a particular focus on the challenges of international development and the contemporary globalization process. Specific themes include world income inequality and global poverty, the rise of supranational organizations (e.g. WTO and EU) and their relations with sovereign states, anti-globalization activism, the rise of China and India in the global economy, and the origins as well as consequences of the current global economic crisis, among others. Lectures will be aided by documentary films and other multi-media materials. Special Note: Fulfills Economics requirement for IS GSCD track students only.Formerly offered as AS 230.353. Students who took AS.230.353 cannot take AS.230.221.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.222. Land, Labor, Environmental Rights and Struggles in Contemporary Africa. 3 Credits.
The course examines the new wave of social protest and popular uprisings in contemporary Africa through the interconnected themes of land, labor and environmental struggles. Attention will be placed on the early 21st century.
Area: Social and Behavioral Sciences

AS.230.223. Housing and Homelessness in the United States. 3 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Area: Social and Behavioral Sciences
AS.230.224. Freshman Seminar: Public Opinion and Democracy. 3 Credits.
How does public opinion shape electoral behavior and democratic governance, and how have these relationships evolved as techniques for measuring public opinion have developed since the 1950s? After a consideration of models of effective democratic governance, the course will consider how public opinion is measured and interpreted in the United States by private pollsters, university-based survey researchers, and data journalists. The course will consider competing perspectives on the sources of variation within mass public opinion, such as social class membership, racial and gender identity, religious affiliation, and party identification. Throughout the course, emphasis is placed upon the alternative modes of inquiry and writing that opposing analysts adopt. Students will learn to interpret and write about public opinion patterns from these perspectives.
Area: Social and Behavioral Sciences

AS.230.228. Colonialism in Asia and Its Contested Legacies. 3 Credits.
This course surveys the impacts of colonialism in East and Southeast Asia. Special attention will be paid to the social and economic development in British Singapore and Hong Kong as well as Japanese Korea and Taiwan. Topics include free-trade imperialism, colonial modernity, anticolonial movements, pan-Asianism, and post-war U.S. hegemony.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.233. Inequality and Social Change in Contemporary China. 3 Credits.
This course examines the trajectory of economic development in China since the beginning of market reforms in the late 1970s, with a special focus on social inequality and forms of resistance that have emerged in response to the expansion of the market economy. The first part of the course focuses on understanding the academic debates around China's economic miracle and introduces students to theories about the relationship between market expansion and social resistance. The second part focuses on key thematic topics including the rural/urban divide, rural protest, urban inequality and labor unrest, gender and sexuality in social movements, environmental protests, and the politics of ethnic relations.
Area: Social and Behavioral Sciences

AS.230.238. Beyond the Wall: The Political Economy of the US and Mexico. 3 Credits.
Examining the exchange of culture, people, and commodities between the United States and Mexico since the 19th century, this course asks not just how US practices and policies have shaped Mexican society, but how, in turn, Mexico has shaped the United States. We will examine the social, political, and economic forces that have long pulled these two societies together — and pushed them apart.
Area: Social and Behavioral Sciences

AS.230.244. Race and Ethnicity in American Society. 3 Credits.
Race and ethnicity have played a prominent role in American society and continue to do so, as demonstrated by interracial and interethnic gaps in economic and educational achievement, residence, political power, family structure, crime, and health. Using a sociological framework, we will explore the historical significance of race and its development as a social construction, assess the causes and consequences of intergroup inequalities and explore potential solutions.
Area: Social and Behavioral Sciences

AS.230.255. The Sociology of Gender and Sexuality. 3 Credits.
This course will examine the processes by which gender is socially constructed and how society and its social institutions structure life chances based on gender. It employs Barbara J. Risman's (2004) conceptualization of "gender as a social structure": "Gender is deeply embedded as a basis for stratification not just in our personalities, our cultural rules, or institutions but in all these, and in complicated ways." Course lectures and assignments for this course center on the distinction between biological sex and sociological gender, causes and consequences of gender inequality, and the intersectionality of gender, sexuality, race-ethnicity, class, religions, and other social structures in contemporary society and in everyday life. Students will examine theories of gender through scholarly literature, and popular films are used to help offer insight into gender theory, research, and social and academic commentary. Though the course will primarily cover gender as enacted in the United States, other countries and their gender dynamics will also be addressed.
Area: Social and Behavioral Sciences

AS.230.265. Research Tools for Global Sociology and Development. 3 Credits.
This course will introduce students to a range of software programs that are critical for conducting social scientific research in the 21st century. Students will develop competency in the use of computer programs for statistical analysis, database management, the creation of maps and timelines, and the presentation of research reports. The course uses examples from ongoing social science faculty research projects at Johns Hopkins on global inequality and international development. Required for GSCD track students.
Course previously titled 'Research Tools and Technologies for the Social Sciences'
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

AS.230.275. Revolution, Reform and Social Inequality in China. 3 Credits.
This course explores various aspects of social inequality in China during the Mao Zedong and the post-Mao reform eras. We will examine inequality within villages, the rural/urban divide, urban inequality, education and health policies, and gender and ethnic inequality. Each of these issue areas will be tackled analytically, but the aim is also to understand what it was/is like to live in China during and after the Mao era. Formerly offered as AS.230.321.
Area: Social and Behavioral Sciences
Writing Intensive
AS.230.304. (Making Space For) Black Thought. 3 Credits.
How do we think about the power relations at work in the scholarship we read and in the important texts we consider essential to our educational experience? This course will critically investigate the role that concepts of race and racism have played in formulating dominant perceptions of who can be the producers of knowledge and what constitutes authoritative knowledge itself. We will consider how and why thinkers and scholarship produced outside of Europe and North America are too often ignored for their scholarly contributions and the dynamics that lead to this situation. We will also explore how and why new and important perspectives emerge from engaging and centering voices from beyond traditional canonical works. With a particular focus on the forms of knowledge arising from European Enlightenment approaches to concepts of thought reason and objective knowledge, this course will critically engage students with a wide range of thinkers such as G.W.F Hegel, W.E.B. Du Bois, Angela Davis, Ralph Trouillot, Sadiya Hartman, Walter Rodney, Derek Walcott, Sylvia Wynter and Frantz Fanon. This course will focus largely on thinkers engaging within the Black Atlantic and black diaspora traditions to question how we might consider voices and thought from beyond Eurocentric positions in our own scholarly practice.
Area: Social and Behavioral Sciences

AS.230.306. Plagues, Power, and Social Control. 3 Credits.
While developments in biomedicine and health care have led to the eradication, cure and management of many human diseases, disease, illness and health have also been the focus for aggressive social controls and population management. The technologies and practices of disease control and health management have been foundational to some of the most aggressive structures of oppression in recent history such as the Jewish Ghetto, the Concentration Camp, the South African Township and techniques of segregation. This course seeks to explore how epidemics and disease control are linked to larger questions of power, state craft and international dynamics. This course asks how have outbreaks of infectious disease shaped social and political action? How do societies respond to outbreaks and why? What do epidemic moments tell us about global structures of power and the dynamics of control? Drawing on historical cases including plague during the European Renaissance and before, the HIV/AIDS Pandemic and the West African Ebola Outbreak of 2013-2016, this course will introduce students to the history and practices of disease control as well as important theoretical perspectives by which to understand the sociological and historical effects of disease and the responses to them. Students will engage sociological concepts such as biopolitics, social construction of disease and illness and biosecurity and produce a final research paper examining the outcomes and responses to an epidemic event to show mastery of the topics covered in the course.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.312. Education & Society. 3 Credits.
This course analyzes educational systems as social institutions and organizations. It gives particular attention to the often taken-for-granted ways that we structure learning in schools and their consequences for social inequality. To these ends, the course will examine classical institutional and organizational theory in sociology and evaluate these theories in their application to historical process of educational formation and the contemporary organization of K-12 schooling in the US.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.313. Space, Place, Poverty & Race: Sociological Perspectives on Neighborhoods & Public Housing. 3 Credits.
Is a neighborhood just a grouping of individuals living in the same place, or do neighborhoods have collective meanings and impacts on children and families? We will capitalize on research methodologies used to define and describe neighborhoods and their effects on economic and educational outcomes. These include case studies, census data, surveys, quasi/experimental data. Focus is on how research measures neighborhood effects and incorporates community level processes into models of social causation (e.g., social capital/control, community efficacy, civic engagement). Also examined: patterns in residential mobility, segregation, and preferences within black and white populations; development of housing policy in the U.S.; programs to determine how neighborhoods affect issues of social importance. Statistics and public policy background is helpful but not required.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.316. African American Family. 3 Credits.
This course is an examination of sociological theories and studies of African-American families and an overview of the major issues confronting African-American family life. The contemporary conditions of black families are explored, as well as the historical events that have influenced the family patterns we currently observe. Special attention will be given to social policies that have evolved as a result of the prominence of any one perspective at a given point in time.
Area: Social and Behavioral Sciences

AS.230.317. Sociology of Immigration. 3 Credits.
This course surveys sociological theories and research on immigration to the U.S. Theoretical approaches include theories of international migration, economic sociology, immigration, and assimilation. Research topics include the impact of U.S. immigration laws and policies on immigrant inflows and stocks, self-selection of immigrants, the impact of immigration on the native-born population and the U.S. labor market and economy, and the adaptation of the first and second generations.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.318. State and Society in Modern India. 3 Credits.
This course examines the complex, at times conflicting, relationship that has emerged between Indian seats of power from above and Indian expressions of society from below. Attention will be placed on the period between 1947 to the present.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.320. Education & Inequality: Individual, Contextual, and Policy Perspectives. 3 Credits.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.322. Quantitative Research Practicum. 3 Credits.
This course provides “hands on” research experience applying sociological research tools and a sociological perspective to problems of substance. Quantitative methods will be emphasized, as applied to census data, survey data and/or archival data. Students will design and carry out a research project and write a research report. Juniors and seniors only. Sophomores require instructor’s permission. Recommended Course Background: AS.230.205, AS.230.202
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
Writing Intensive
AS.230.323. Qualitative Research Practicum. 3 Credits.
This course provides 'hands on' research experience applying sociological research tools and a sociological perspective to problems of substance. Qualitative observational and/or interviewing methods will be emphasized. Students will design and carry out a research project and write a research report. This course fulfills the 'research practicum' requirement for the Sociology major.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.324. Gender and International Development. 3 Credits.
This course employs a comparative perspective to examine the gendered impact of international development experiences and policies. Students will discuss the historical evolution of how the concept of gender has been constructed, conceptualized, and integrated into international development theory and practice. The course will also examine how greater international development. In particular, we will examine structural theories of poverty reduction, individual theories of power and processes of stratification at the household and family level. Specific issue areas will include the globalization, class and work political participation and social movements. Cross-listed with International Studies (CR/IR). Fulfills Economics requirement for IS GSCD track students only.
Area: Social and Behavioral Sciences

AS.230.325. Global Social Change and Development Practicum. 3 Credits.
This course provides 'hands on' research experience in the field of global social change and development. The course fulfills the 'research practicum' requirement for Sociology majors and is required for the GSCD track.
Prerequisite(s): AS.230.265 or permission of instructor.
Area: Social and Behavioral Sciences

AS.230.326. Race, Racism & Racial Privilege. 3 Credits.
This course will examine the concepts of race, racism, racial privilege in contemporary America, and the West in general. Examples from other countries will be integrated as well. Historical contexts such as the colonialism, the Civil War and Reconstruction, the Civil Rights movement, and the post Civil Rights era will help to provide an understanding of the social, political, economic, and cultural forces processes that have constructed and shaped the concepts of race and the racialized subject over time.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.327. Global Changes: Past and Present. 3 Credits.
This course will compare the current global crisis with previous major crises of historical capitalism through a combination of theoretical and historical readings. Throughout, we will ask: What can a study of past crises tell us about the nature and future trajectory of the current global crisis? Special emphasis will be placed on (1) "the late-nineteenth century great depression", (2) The Great Depression of the 1930s, and (3) the period of crisis and stagflation in the 1970s. We will be particularly concerned to understand the differential social and geopolitical impact of the crises. Which social classes bore the brunt of the disruptions in economic activity in each crisis? Which geographical areas or geopolitical groupings lost out (or benefited) from the crisis? How have environmental and ecological challenges resurfaced in each crisis including today?
Area: Social and Behavioral Sciences

AS.230.341. Sociology of Health and Illness. 3 Credits.
This course introduces students to core concepts that define the sociological approach to health, illness and health care. Topics include: health disparities, social context of health and illness, and the Sociology of Medicine.
Area: Social and Behavioral Sciences

AS.230.348. Society in the Anthropocene. 3 Credits.
If the progressive domination of nature has been the overriding ideology of modern societies, extreme weather events and now the Covid-19 pandemic have underscored the tenuousness of that domination. The pandemic has quickly put extreme stress on a variety of social institutions, realizing dystopian scenarios previously imagined by science fiction writers and apocalyptic climate change thinkers. While addressing the unfolding Covid-19 crisis, this course will place it within a broader set of concerns around climate change and what some call the Anthropocene—the era in which human activity has become the dominant influence on the Earth’s climate and environment. We will survey a range of social scientific literature—combined with journalistic and popular sources—on the social origins of ‘natural’ disasters; the ways in which social phenomenon—institutions, ideologies, poverty, inequality, racism, nationalism, anomy and politics—affect and are affected by such disasters; and the different ways in which various social factors—states, investors, social movements and sub-cultures—prepare for the coming crises of the 21st century.
Area: Social and Behavioral Sciences

AS.230.350. Capitalism, Dependency, and Development in Latin America. 3 Credits.
This course examines Latin American insertion into the global capitalist economy from the colonial period to the present. Examining various historical, sociological, and political-economic theories, this course will ask not only how Latin American economies and societies have developed their particular characteristics, but also how theorists within and outside the region have understood Latin American development over time.development over time.
Area: Social and Behavioral Sciences
AS.230.351. Capitalism, Development and Resistance in South Korea. 3 Credits.
This course examines the trajectory of capitalist development in South Korea (hereafter, Korea) in the twentieth and the early twenty-first centuries. We will examine debates around the political economy of development in Korea as well as class formation and social and labor protest. This course is designed to help students explore the dynamics of capitalist development and workers’ movements in Korea as a case of late development in the global South. The course also draws on theoretical perspectives and methodological tools from comparative and world-historical sociology to better understand the Korean case. Area: Social and Behavioral Sciences Writing Intensive

AS.230.352. Chinese Diaspora: Networks and Identity. 3 Credits.
This course combines lecture and class discussion. It examines the history and historiography of Chinese overseas migration. Major issues include overseas Chinese as “merchants without empire,” Chinese exclusion acts in the age of mass migration, the “Chinese question” in postcolonial Southeast Asia, as well as the making and unmaking of Chinese identity in the current wave of globalization. Prerequisite(s): Students may not have completed AS.230.217 previously. Area: Social and Behavioral Sciences

AS.230.357. Baltimore and Beyond. 3 Credits.
This course uses the city of Baltimore as a lens through which to explore issues of urban inequality. We will focus on Baltimore’s history of racial segregation and concentrated poverty, and its effect on the social and economic well-being of the city and its residents, with attention to education, employment, health and crime. Students will learn how to employ Census data, GIS approaches, and sociological research to inform questions about population change, inequality and the distribution of resources across the city and metropolitan region. Students will also work on one or more policy relevant studies based in Baltimore, including: a project on abandoned and vacant housing, a desegregation intervention, and a longitudinal study of inner city youth. Finally, students will become familiar with Baltimore City’s programs and policy approaches to addressing the city’s most pressing problems, and will design innovative and effective and innovative solutions as part of their course assignments. Enrollment restricted to Social Policy minors only. Prerequisite(s): Students that took AS.360.357 may not take AS.230.357 Area: Social and Behavioral Sciences Writing Intensive

AS.230.358. The Politics of Mental Health. 3 Credits.
This course examines how the psy disciplines – psychology, psychiatry, psychotherapy and related fields – create knowledge about the mind, and how these fields have in turn shaped political and social life since early 20th century. We will explore how the psy disciplines have proven useful to projects of state building by reconstructing the human mind as a calculable, quantifiable entity, one that can be measured and governed across diverse educational, military, and healthcare settings. We will then ask how psychiatric categories such as bipolar disorder and PTSD (post-traumatic stress disorder) were created, and consider their impact on both the legal/medical management of illness and on lay and expert notions of sanity and normality. Finally, we will examine the rising influence of humanitarian mental health interventions, and immerse ourselves in the debates they have engendered concerning the use of psychotherapy to alleviate suffering in war and disaster zones. Area: Social and Behavioral Sciences Writing Intensive

AS.230.359. Sociology in Economic Life. 3 Credits.
This course examines how geopolitics, technology as well as social differentiation (such as race, class and gender) shape the structure of economic actions. Special attention will be paid to patterns of state-business relationship, labor processes, migrant economy, globalization and international division of labor. Area: Social and Behavioral Sciences

AS.230.361. Migration & Development. 3 Credits.
This course focuses on the relationship between international migration and development. The course first introduces theories of international migration, immigrant integration, and international development. Building on this foundation, we then examine how immigrants interact with their homeland and how sending country governments tap their diaspora to improve development outcomes. Cross-listed with International Studies (CP, IR). Fulfills Economics requirement for IS GSCD track students only. Area: Social and Behavioral Sciences Writing Intensive

AS.230.362. Black Social Thought and Social Movements. 3 Credits.
This course will examine the reciprocal relationship between Black social thought and social movements. How have social movements informed thinkers who grapple with questions of freedom and liberation in racially and economically stratified societies, and how have their ideas affected movement tactics? This course will look at 20th century movements and investigate connections between theory and practice through concepts like civil disobedience, internal colonialism, Black feminism, Black internationalism, and others. Area: Social and Behavioral Sciences Writing Intensive

AS.230.363. Islamic Finance. 3 Credits.
Today, Islamic finance is a global industry comprising nearly $2 trillion in assets, with hubs from Kuala Lumpur to Dubai to London. But half a century ago, nothing called “Islamic finance” existed. So where did Islamic finance come from? Why is it growing so fast? And what does it mean for finance to be Islamic? We discuss the ban on riba in the Quran and hadith, finance in early and medieval Islamic societies, petrodollars and the birth of Islamic banking in the 1970s, the rise of Islamic capital markets since 2000, contemporary shariah-compliant financial structures, and the constitution of piety through financial practice. Area: Social and Behavioral Sciences Writing Intensive

AS.230.364. Sociology of Dispossession. 3 Credits.
The “grabbing” of land and natural resources has, in recent years, generated widespread political conflict across the world and put dispossession on the agenda of academics and policy-makers. Nevertheless, compared to other social relations of power, land dispossession has not been central to scholarly or public understandings of capitalism, the state, development, or politics. In this class, we will collectively explore the nascent field that we might call the sociology of dispossession. We will examine existing theories of dispossession, and proceed to challenge, reconstruct or supplant those theories as we consider a wide range of historical examples of dispossession from the English Enclosures and colonial plunder to contemporary urban redevelopment and rural land grabs. This is a reading- and writing-intensive seminar. Area: Social and Behavioral Sciences Writing Intensive

AS.230.365. Migration & Development. 3 Credits.
This course focuses on the relationship between international migration and development. The course first introduces theories of international migration, immigrant integration, and international development. Building on this foundation, we then examine how immigrants interact with their homeland and how sending country governments tap their diaspora to improve development outcomes. Cross-listed with International Studies (CP, IR). Fulfills Economics requirement for IS GSCD track students only. Area: Social and Behavioral Sciences Writing Intensive

AS.230.366. Black Social Thought and Social Movements. 3 Credits.
This course will examine the reciprocal relationship between Black social thought and social movements. How have social movements informed thinkers who grapple with questions of freedom and liberation in racially and economically stratified societies, and how have their ideas affected movement tactics? This course will look at 20th century movements and investigate connections between theory and practice through concepts like civil disobedience, internal colonialism, Black feminism, Black internationalism, and others. Area: Social and Behavioral Sciences Writing Intensive

AS.230.367. Islamic Finance. 3 Credits.
Today, Islamic finance is a global industry comprising nearly $2 trillion in assets, with hubs from Kuala Lumpur to Dubai to London. But half a century ago, nothing called “Islamic finance” existed. So where did Islamic finance come from? Why is it growing so fast? And what does it mean for finance to be Islamic? We discuss the ban on riba in the Quran and hadith, finance in early and medieval Islamic societies, petrodollars and the birth of Islamic banking in the 1970s, the rise of Islamic capital markets since 2000, contemporary shariah-compliant financial structures, and the constitution of piety through financial practice. Area: Social and Behavioral Sciences Writing Intensive

AS.230.368. Sociology in Economic Life. 3 Credits.
This course examines how geopolitics, technology as well as social differentiation (such as race, class and gender) shape the structure of economic actions. Special attention will be paid to patterns of state-business relationship, labor processes, migrant economy, globalization and international division of labor. Area: Social and Behavioral Sciences

AS.230.369. Islamic Finance. 3 Credits.
Today, Islamic finance is a global industry comprising nearly $2 trillion in assets, with hubs from Kuala Lumpur to Dubai to London. But half a century ago, nothing called “Islamic finance” existed. So where did Islamic finance come from? Why is it growing so fast? And what does it mean for finance to be Islamic? We discuss the ban on riba in the Quran and hadith, finance in early and medieval Islamic societies, petrodollars and the birth of Islamic banking in the 1970s, the rise of Islamic capital markets since 2000, contemporary shariah-compliant financial structures, and the constitution of piety through financial practice. Area: Social and Behavioral Sciences Writing Intensive
AS.230.370. Housing and Homelessness in the United States. 3 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Prerequisite(s): Students may not have previously taken AS.230.223.
Area: Social and Behavioral Sciences

AS.230.375. Nations, States, and Boundaries. 3 Credits.
This course explores the historical origins and development of the modern global political order based on sovereign nation-states, the crisis of this order through the twentieth century, as well as the unraveling of this order at the turn of the twenty-first century. We will focus on how dominant political organizations in the changing world order (such as states, political parties, and transnational governing bodies) have been shaped by different social forces (such as classes and ethnic groups) and vice versa. Topics covered include rise and fall of modern nationalism, formation of regional and global governing structures, “civilizational” turn of global politics, waves of separatism and redrawing of nation’s boundaries after the Cold War, politics of immigration and citizenship, among others.
Area: Social and Behavioral Sciences

AS.230.377. Colonialism and Anti-Colonialism. 3 Credits.
This seminar examines the theories and historiography of colonialism and anti-colonial movements. It focuses on the establishment of the colonial division of labor, comparative colonialism, identity formation, and nationalism as well as anti-colonial movement.
Area: Social and Behavioral Sciences

AS.230.378. Refugees, Human Rights, and Sovereignty. 3 Credits.
What is a refugee? Since World War II, states that have pledged to offer protection to refugees have frequently been drawn instead to the dictates of nationalism and communitarianism, which prioritize concern for their own citizens, rather than to the needs of forced migrants. As a result, even those migrants that have been formally recognized as refugees according to the 1951 UN Refugee Convention have not been assured of protection, and other migrants have been even less assured. In this course, we will locate the reasons for this reality in the legal, political, and historical underpinnings of political asylum. What is the difference between an asylum seeker and a refugee? How has the refugee category been redefined and contested by international bodies since 1951? How are the ambiguities of real-life violence and persecution simplified in asylum adjudication interviews that require clear, factual narratives? What kinds of protections are offered to asylum seekers, whether by UN bodies, NGOs, or host governments, and how have such protections varied geographically and historically? Finally, what protections, if any, are afforded to those migrants who are fleeing not persecution but rather “merely” endemic poverty or climate-induced displacement? The course draws on literature from sociology, history, anthropology, and international refugee law in order to understand the capacity (or lack thereof) of human rights discourses and declarations to contravene state sovereignty in the name of protecting the rightless.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.379. Undergraduate Research Seminar. 3 Credits.
Seminar for Sociology students writing senior honor theses and conducting pre-approved independent research projects. Juniors and Seniors Sociology majors only. Permission of instructor.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.385. Schooling, Racial Inequality and Public Policy in America. 3 Credits.
After examining alternative explanations for why individuals obtain different amounts and types of educational training, the course focuses on how an individual’s family background and race affect his or her trajectory through the educational system. The course covers the specific challenges that have confronted urban schooling in America since the 1960s, including the classic literature on the effects of school and community resources on student achievement as well as the development and later evaluation of school desegregation policies. The course also considers case studies of current policy debates in the US, such as housing segregation and school resegregation, voucher programs for school choice, and the motivation for and consequences of the establishment of state-mandated testing requirements. Throughout the course, emphasis is placed upon the alternative modes of inquiry and writing which opposing scholars, policymakers, and journalists use to address these contentious topics.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.388. Sociology of the Family. 3 Credits.
Sociological perspectives on contemporary family life, including marriage and divorce, cohabitation, single parenthood, same sex partnerships, children’s wellbeing, balancing work and family responsibilities, domestic violence, and government policy toward families.
Area: Social and Behavioral Sciences

AS.230.393. Global Health and Human Rights. 3 Credits.
Is access to healthcare a fundamental human right? If so, then which global actors are obligated to provide healthcare to whom, and for how long? How do meanings of health and illness vary across time and place? And finally, how are human rights principles translated into frontline practice in order to promote well-being? This course takes a critical interdisciplinary approach to these questions through a series of global case studies ranging from humanitarian aid in post-tsunami Sri Lanka to anti-FGM (female genital mutilation) campaigns in Ghana. How do international NGOs, UN bodies, and governments collaborate (or compete) to distribute healthcare in places beset by dire resource shortages? Do human rights principles carry legal weight across borders, and if so, could access to healthcare services and essential medicines be litigated in order to compel governments to provide it? And finally, what cultural assumptions do human rights discourses carry with them, and what happens if rights-based approaches are poorly received by recipient populations? Moving beyond the basic principle of healthcare as a human right, this course aims to bring this idea’s history and politics into focus by offering an in-depth exploration of its ethics and implementation.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.394. Social Statistics. 4 Credits.
The application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, confidence intervals, chi-square, anova, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
AS.230.395. Contemporary Social Theory. 3 Credits.
This course will examine how major social theorists of the 20th century advanced upon the "classical" social theories of Marx, Weber, and Durkheim. As they grappled with the historical events and social concerns of the 20th century—the Russian revolution and its degeneration into Stalinism, the failure of communist movements in the West, the rise and fall of fascism and Nazism, the consolidation of capitalist democracies and welfare states, the emergence of anti-colonial movements in the "Third World," and the persistence of race, gender and sexual identity as forms of domination—social theorists provided novel answers to classical questions of social theory: 1) what is the structure of modern society, how does it change, and how is it reproduced? 2) what is the relation between social structures and ideas, knowledge, and subjectivity?; and 3) what are the conditions of possibility for human freedom? Theorists to be covered include Antonio Gramsci, Franz Fanon, W.E.B. DuBois, Georg Lukacs, Talcott Parsons, Herbert Marcuse, Jurgen Habermas, Louis Althusser, Pierre Bourdieu, Michel Foucault, Nancy Fraser, Patricia Hill Collins, Judith Butler, and Henri Lefebvre. In addition to understanding and comparing the theories, we will try to use them to understand contemporary societies.

Prerequisite(s): AS.230.213
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.396. Politics and Society. 3 Credits.
This seminar surveys key problems of political sociology including the rise of the modern state, the origins and nature of liberal democracy, sources of authority, the relationship between political and economic power, the nation-state and nationalism, states and war, ideology and political contention, collective identity, social movements, and social revolutions. Fulfills Comparative Politics for International Studies.

Area: Social and Behavioral Sciences
Writing Intensive

AS.230.397. The Political Economy of Drugs and Drug Wars. 3 Credits.
In the United States, we spend more than $100 billion annually on illegal drugs—and the government spends more than $50 billion a year to combat their sale and use. These statistics raise important and complicated social questions. This course will examine the production, sale, use, and control of illegal drugs from a historical and sociological perspective. We will have three objectives: to understand the social construction of drug use and illegality in the United States and other rich countries; to uncover the political and economic consequences of drug trafficking in those countries that produce drugs, particularly in Latin America; and to examine the political economy of drug control through the so-called War on Drugs, both domestically and internationally.

Area: Social and Behavioral Sciences

AS.230.398. In Our Backyard: Housing and Community Change in Baltimore. 3 Credits.
This course will focus on how and why urban neighborhoods change. Why does vacant housing grow in some communities, while others seem on the brink of gentrification? Who benefits from neighborhood investment in Baltimore? Can urban revitalization benefit all residents? How can we study these challenging issues? These concerns are as relevant as they have ever been, as Baltimore contends with life after the death of Freddie Gray, contentious investment plans with major developers, and stubborn levels of poverty and crime. In this course, we will read scholarship in urban sociology, economics and housing policy data. A significant portion of the course will be dedicated to the analysis of longitudinal data on neighborhood change in the areas around both of Hopkins’ campuses, as well as other communities in the city. The data includes the perspectives of residents, landlords, developers, and community leaders, as well as ground-level observations of street and housing conditions. The course provides students an opportunity to become involved in timely and relevant research in the city, and possibly produce papers that would be suitable for conference submission, senior theses, and writing samples for graduate school. We will also compare efforts in Baltimore to those elsewhere, such as Detroit, Chicago, Brooklyn, Washington, D.C. Previous coursework in statistics and research methods is helpful but not required.

Area: Social and Behavioral Sciences

AS.230.405. Neoliberalism. 3 Credits.
Neoliberalism, a political project that seeks to subject all aspects of social life to free market forces, has ascended to orthodoxy in developed and developing countries alike over the last four decades. This course is a reading seminar focused on some of the key classic and cutting-edge original texts that critically examine and debate the origins, socio-political impacts, and crisis of the neoliberal project. It will cover such topics as the genealogy of the neoliberal idea, neoliberal state, informalization of works, neoliberal cities, rise of the one percent, and global governance. Class will be a mix of lecture and seminar-style discussions. Requirements include reading memo, class presentation, and a term paper.

Area: Social and Behavioral Sciences

AS.230.415. Social Problems in Contemporary China. 3 Credits.
In this course we will examine contemporary Chinese society, looking at economic development, rural transformation, urbanization and migration, labor relations, changes in class structure and family organization, health care, environmental problems, governance, and popular protest. The course is designed for both graduate and undergraduate students. Undergraduates must have already completed a course about China at Hopkins. Cross-listed with East Asian Studies.

Area: Social and Behavioral Sciences
Writing Intensive

AS.230.420. Class, Capitalism, Colonialism: Evaluating the work of Walter Rodney. 1 Credit.
This course will focus on key writings of Guyanese scholar and intellectual, Walter Rodney (1942-1980) with an emphasis on evaluating his legacy and the relevance of his work for the 21st century, globally and locally. The main course readings are Rodney’s three major books—(1) How Europe Underdeveloped Africa; (2) History of the Guyanese Working People; and (3) Groundings with my Brothers. The course will provide students with the background necessary to participate in the January 31, 2020 workshop on the legacy of Walter Rodney organized by the JHU Arrighi Center for Global Studies.

Area: Social and Behavioral Sciences
AS.230.435. The China Boom. 3 Credits.
This course addresses the origins, global impacts, and demise of China's economic ascendancy as a world economic and political powerhouse at the turn of the twenty-first century. The course will cover the historical origins of the China boom and impacts of the boom on global political economic order. It will also address the social-political imbalances within China that contribute to the global financial crisis and recent slowdown of the Chinese economy. Particular topics include late imperial and Maoist legacies' relation to contemporary economic growth, stages of China's capitalist development, China's outward investment in the developing world, formation and limits of US-China economic symbiosis, and China's participation in global governance, among others.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.440. Port Cities and Historical Capitalism in Maritime Asia. 3 Credits.
The goal of the seminar is to examine the prospects and limits of understanding the incorporation of Asia in the capitalist world-system from the prism of oceanic connections. The theoretical thrust of this course is to develop but also to adapt Janet Abu-Lughod emphasis on the connections across port cities and littoral in the Afro-Eurasian continents before the long sixteenth century in her Before European Hegemony. But instead of looking at a port city as its adjacent hinterland polity's gateway to global trade in the premodern era, the course examines the multifarious coast hinterland relationships. The readings are organized by a chronological order, which begins with the historical maritime silk road between the third and thirteenth centuries, and will be followed by Asian port cities in the European age of empire and postwar American-led Cold War Structure, as well as the present-day Chinese New Silk Road Diplomacy. Students are expected to select an issue of regional tensions and to analyze its historical root.
Area: Social and Behavioral Sciences

AS.230.445. Sociology of Religion. 3 Credits.
This seminar tackles major issues in the classical and contemporary sociology of religion. We begin with Ibn Khaldun, Friedrich Nietzsche, Karl Marx, Max Weber, Emile Durkheim, and Mary Douglas, asking basic questions: What are religion and the sacred? Why do they exist? What is the relationship between religion and social structure? And what role does religion play in morality, solidarity, boundaries, exploitation, patriarchy, and macrohistorical transformations such as the rise of capitalism? Keeping this theoretical grounding (and its flaws and biases) in mind, we continue to probe the problem of religion in modernity through more-recent writings. Topics include the secularization debate (Are modernity and religion antithetical?); "religious markets" and rational-choice theories of religion; religious revivalism, evangelicalism, fundamentalism, and proselytizing movements; feminist and queer sociologies of religion; civil religion (Is standing for the national anthem a religious act?); embodiment and prayer; Orientalism and postcolonial interrogations of the secular; religious violence and nationalism; the intersectionality of religion with race, class, and caste; and religion and neoliberalism. Although dominant sociologies of religion have focused on Christianity in Western Europe and North America, this course applies a global lens, training significant focus on non-Western and non-Christian contexts.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.500. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
A seminar in multiple regression (least squares and alternative estimation procedures) with a focus on sociological problems and software applications. Extensions to hierarchical linear models will be included. Graduate students should have completed AS.230.600 or the equivalent. Undergraduates only admitted with instructor's permission, and AS.230.205 or equivalent. Recommended Course Background: AS.230.205, AS.230.600 or equivalent.

AS.230.605. Categorical Data Analysis.
This course provides the students with a set of statistical tools to understand and interpret social science research dealing with categorical dependent variables and to prepare students to apply these models in their own research. The models covered in the course include logit, probit, Poisson, and log-linear models, as well as multi-level models of categorical dependent variables.
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences

This is an intensive reading seminar on working class formation from a comparative, historical and global perspective, including theoretical and empirical (case study) readings on changes over time in labor process, labor markets, and labor movements. We will build on a range of local case studies to establish spatial and temporal patterns, and discuss the connections between these global patterns and the dynamics of historical capitalism.

AS.230.608. Proseminar In Sociology.
Individual one-hour presentations by faculty members will introduce students to the faculty's substantive interests and research styles.

Advanced seminar for PhD students who are preparing their dissertation proposals or writing their dissertations. Sociology graduate students only.

AS.230.611. Seminar on Comparative & World-Historical Sociology.
In this seminar we will read key texts in comparative sociology. The topics covered are cross-national sociology, comparative national development, comparing world-systems, the modern world-system, globalization, and social movements.

AS.230.612. Seminar on Social Inequality.
This seminar attempts a broad survey of sociological theorizing and research on social stratification in the United States and the role of social institutions in generating and mitigating inequality.

A discussion-oriented seminar focused on major recent writings on the family, in both the developed and developing nations.

In-depth reading and discussion of theories and research on immigration to the U.S. theoretical issues include international migration, immigration, and assimilation. Research topics include: the impact of U.S. immigration laws on immigrant inflows and stocks, self-selection of immigrants, the impact of immigration on the native-born population, and the adaptation of the first and second generations. The course focuses on immigration since 1965 and its related controversies and debates.

AS.230.618. Introduction to Computational Social Science.
Computational social science is an interdisciplinary field combining social science and data science. Today's digital age presents both opportunities and risks to social scientists with the availability of increasingly big and complex data that depart from traditional data in remarkable ways. This course offers a foundational basis for social science students to embark upon the field. The weekly 2-hour seminar introduces the topics of big data ethics; research designs for the collection and use of digital trace data, automated texts, government administrative data, and large-scale social network data; new forms of surveys and experiments; and mass data collaborations. Research publications are used to illustrate each topic. The weekly 1-hour labs are for group activities on the weekly topic. There are no social science or data science prerequisites.
Area: Social and Behavioral Sciences

This course introduces strategies for estimating causal effects from a counterfactual perspective, uniting the potential outcome model with causal graph methodology. After an examination of the primary features of the counterfactual perspective and criteria for causal effect identification, the course focuses on developing a deep understanding of data analysis techniques that can work in favorable circumstances, such as matching, regression from a potential outcome perspective, and inverse probability of treatment weighting. The course concludes with the vexing challenges posed by unobserved determinants of both the cause and outcome of interest, and it provides a review of specialized designs that can salvage a research project in these situations.

AS.230.635. PGSC Research Seminar.
Working seminar focusing on new research in the field of comparative and world-historical sociology. Sociology graduate students or permission of instructor.

An intensive analysis of a wide range of sociological studies, designed to acquaint the student with how sociologists deal with important theoretical issues, using a variety of methods and sources of data. Particular attention will be paid to the logical coherence of the studies and to the fit between data and interpretation.
Area: Social and Behavioral Sciences

AS.230.644. Reading Capital @150.
Area: Social and Behavioral Sciences

AS.230.646. Race and Ethnicity in American Society.
Race and ethnicity have played a prominent role in American society and continue to do so, as demonstrated by interracial and interethnic gaps in economic and educational achievement, residence, political power, family structure, crime, and health. Using a sociological framework, we will explore the historical significance of race and its development as a social construction, assess the causes and consequences of intergroup inequalities and explore potential solutions.
Area: Social and Behavioral Sciences
This course will explore questions related to historical and contemporary trajectories of agrarian change. It begins with classical theoretical debates on the distinctiveness of peasant societies and their prospects under capitalism. It will then turn to major themes of agrarian change in the twentieth century: modes of production, class polarization and differentiation, peasant wars, moral economies, everyday resistance, collectivization and decollectivization, food regimes, and depeasantization. It will conclude with new themes in agrarian change, with a particular emphasis on contemporary forms of land dispossession and repossession. The course will be structured as a reading-intensive seminar.

AS.230.649. Qualitative Research Methods: Domestic and International Fieldwork.
This course discusses the conceptualization of qualitative research involving fieldwork, and the collecting, analyzing, and reporting of sociological field data in both domestic and international settings. Data collection techniques such as intensive interviewing, participant-observation, document analysis, and ethnography are included. The course also covers the logic of qualitative inquiry, choosing research sites and cases, engaging archival sources, judging the validity and reliability of data, and software-based data analysis.

Area: Social and Behavioral Sciences

AS.230.650. Macro-Comparative Research.
The course examines methods of studying long-term, large-scale social change. Both qualitative and quantitative methods are covered.

AS.230.651. Political Sociology.
This seminar surveys key problems of political sociology including the rise of the modern state, the origins and nature of liberal democracy, sources of authority, the relationship between political and economic power, the nation-state and nationalism, states and war, ideology and political contention, collective identity, social movements, and social revolutions.

Area: Social and Behavioral Sciences

This course will focus on how and why urban neighborhoods change. Why does vacant housing grow in some communities, while others seem on the brink of gentrification? Who benefits from neighborhood investment in Baltimore? Can urban revitalization benefit all residents? How can we study these challenging issues? These concerns are as relevant as they have ever been, as Baltimore contends with life after the death of Freddie Gray, contentious investment plans with major developers, and stubborn levels of poverty and crime. In this course, we will read scholarship in urban sociology, economics and housing policy data. A significant portion of the course will be dedicated to the analysis of longitudinal data on neighborhood change in the areas around both of Hopkins’ campuses, as well as other communities in the city. The data includes the perspectives of residents, landlords, developers, and community leaders, as well as ground-level observations of street and housing conditions. The course provides students an opportunity to become involved in timely and relevant research in the city, and possibly produce papers that would be suitable for conference submissions or journal articles. We will also compare efforts in Baltimore to those elsewhere, such as Detroit, Chicago, Brooklyn, Washington, D.C. Previous coursework in statistics, policy, research design and research methods is helpful but not required.

This course will introduce students to a range of software programs that are critical for conducting social scientific research in the 21st century. Students will develop competency in the use of computer programs for statistical analysis, database management, the creation of maps and timelines, and the presentation of research reports. The course uses examples from ongoing social science faculty research projects at Johns Hopkins on global inequality and international development.

AS.230.674. Political Economy of India.
This course is designed to critically engage political economy questions in contemporary India. The course will focus on the post-colonial era. A basic understanding of India's contemporary political economy is required.

Area: Social and Behavioral Sciences

AS.230.685. TRP PROPOSAL SEMINAR.
This seminar includes all members of the second year cohort of sociology graduate students. Class meetings will provide feedback and guidance as students develop proposals for their Trial Research Papers. The course will also include a series of professional developments seminars. For Sociology PhD students only.

AS.230.690. TRP PRESENTATION SEMINAR.
This seminar includes all members of the third year cohort of sociology graduate students. Class meetings will provide feedback and guidance as students revise the final drafts of their Trial Research Papers. For Sociology PhD students only.

AS.230.800. Independent Study.

AS.230.811. Teaching Apprenticeship.

AS.230.815. Trial Research Fellowship Semester.

AS.230.816. Trial Research Paper I.

AS.230.817. Trial Research Paper II.

AS.230.818. Trial Research Paper III.

Cross Listed Courses
Center for Africana Studies

AS.362.115. Introduction to Police and Prisons. 3 Credits.
This introductory course will examine policing and prisons in the United States and beyond, with a focus on racial inequality. It will consist of three parts. First, we will define key concepts in police and prison studies. Then, we will explore the contemporary state of prisons and policing in the United States and look at debates around the rise of “mass incarceration” and aggressive forms of policing in the final third of the 20th century. Third, we will explore policing and prison in other parts of the globe in the contemporary moment, highlighting similarities and differences from the U.S. case. What can studying the instruments of social control in other societies reveal about our own? Students will develop an understanding of major trends, keywords, and debates in the literature on policing and prisons, with particular reference to race and racism.

Area: Humanities
AS.362.160. Land, Labour and Environmental Rights and Struggles in Contemporary Africa. 3 Credits.

‘Africa rising’ has become an influential, albeit contested, narrative used by institutions like the International Monetary Fund and World Economic Forum to describe the rapid economic growth in 21st century Africa. This rapid ‘economic growth has been accompanied by another type of ‘Africa Rising’ – a mushrooming of social protest and popular uprisings across the continent. The course will introduce important theoretical perspectives, debates, and examples to equip students to critically examine contemporary social dynamics through the interconnected themes of land, labor and environmental rights and struggles that have gripped the African continent. What has given rise to these awakenings? Who are the actors involved in these actions? What are their demands and strategies? What lessons does it hold for social movement theory and development more broadly? The first section focuses on land reclamation movements, the new wave of ‘land grabs’ and responses from below. The second section presents the role of labour movements and its intersection with popular uprisings. The third section considers responses from communities and movements to the ecological destruction and climate change.

Area: Humanities

AS.362.207. Race and public policy in comparative perspective. 3 Credits.

This course will explore the relationship between racial inequality, racial politics, and policy-making in the western world, particularly as it concerns the fight for equality by people of African descent in the US, Canada, Britain, and France. It will cover historical and contemporary struggles over policy, beginning with the African-American civil rights movement, the ensuing War on Poverty and War on Drugs, and followed by contemporary debates over immigration, racial segregation, poverty and racial economic inequality across the four countries. We will take insights from theory and empirical research to study the role that racial constructs and politics play in policy designs, contests over power and resources, electoral representation, public opinion, social movements, and political change. Through case studies of policies aimed at racial inequality (e.g., affirmative action, police reform, urban revitalization), we will examine why and under what circumstances they arise, what form they take, and in what ways they alleviate or reproduce racial inequality. These questions will be considered in light of the broader impact of neo-liberalism on normative ideas about policy, race, and inequality.

Area: Humanities

AS.362.315. Black Against Empire. 3 Credits.

This course will examine the confrontation of Black social movements with imperialism in the twentieth century. How, we will ask, have key Black internationalist thinkers conceptualized and defined diaspora, capitalism, imperialism, war, and the global? What have been the effects of war and repression, as well as economic growth and globalization, on Black internationalism? Readings may include texts by W.E.B. Du Bois, Angela Y. Davis, Frantz Fanon, Ashley Farmer, Claudia Jones, Robin D.G. Kelley, Claude McKay, Huey P. Newton, Walter Rodney, Malcolm X, etc. Students will complete a research paper on a topic of their own choosing related to Black internationalism in the twentieth century.

Area: Humanities, Social and Behavioral Sciences

Writing Intensive

East Asian Studies

This course aims to inspire students to explore the impacts, meanings, and explanations of social transformation in contemporary China, via the lens of documentary photography. The photographic images of selective topics will include the products of photojournalism and documentary photography, and several documentary films, by both Chinese and non-Chinese photographers. While one picture is worth thousand words, one picture may also provoke countless interpretations. Students are strongly encouraged to read broadly about different aspects of social transformations in contemporary China, and to select and curate their own subjects of photo images. The spirit of comparative study of documentary photography of China and other parts of world will be strongly encouraged. Active class participation is imperative. A small exhibition on the campus will be organized by the Spring semester. The course is designed for upper division undergraduates. Cross-listed with Sociology and International Studies (CP).

Area: Social and Behavioral Sciences

AS.310.230. Chinese Politics and Society. 3 Credits.

This introductory course will familiarize students with the major dynamics of political and social change in contemporary China since 1949. The course will be divided chronologically into four main topics: 1. The contested processes of nation-state making in modern China before 1949; 2. The making of the socialist system during the Mao Years and its dismantling since 1978; 3. The Reform Era transformation to a market economy with Chinese characteristics; 4. The dynamic relationships among the state, market and society since the new millennium. Students will explore how scholars have explained major political and social changes with reference to individual and collective rationalities, specific organizational and institutional arrangements, and specific strategic and cultural mechanisms of Chinese political and social habits.

Area: Humanities, Social and Behavioral Sciences

AS.310.340. Development and Social Change in Rural China. 3 Credits.

This course will survey the major issues of development and social change in rural China since 1950s. These issues will be addressed in chronological order. They include land ownership and land grabbing, organization of rural economic, political, and social life, rural elections and village governance, development strategies, urban-rural relationship in resource allocation, rural modernization strategies in regard to irrigation, clean drinking water, electricity supply, hard paved road, education and rural medical service, women’s rights and family life, rural consumption, and etc. This course will prepare students, both empirically and analytically, to understand what happened in rural China from 1949 to the present, and how we can engage in policy and theoretical discussions based on what we learn.

Area: Humanities, Social and Behavioral Sciences

AS.310.402. Labor Politics in China. 3 Credits.

This course explores the transformation of labor relations in China over the past century. It will cover the origins of the labor movement, the changes brought about by the 1949 Revolution, the industrial battles of the Cultural Revolution, the traumatic restructuring of state-owned enterprises over the past two decades, the rise of private enterprise and export-oriented industry, the conditions faced by migrant workers today, and recent developments in industrial relations and labor conflict. The course is designed for upper division undergraduates and graduate students. Cross-listed with Sociology and International Studies (CP).

Area: Social and Behavioral Sciences

Writing Intensive
Interdepartmental

AS.360.247. Introduction to Social Policy: Baltimore and Beyond. 3 Credits.
This course will introduce students to basic concepts in economics, political science and sociology relevant to the study of social problems and the programs designed to remedy them. It will address the many inequalities in access to education and health care, unequal treatment in the criminal justice system, disparities in income and wealth, and differential access to political power. The focus will be on designing effective policies at the national and local level to address these pressing issues. This course is open to all students, but will be required for the new Social Policy Minor. The course is also recommended for students who are interested in law school, medical school, programs in public health, and graduate school in related social science fields. This course does not count as one of the required courses for the Economics major or minor, but it is required for the Social Policy Minor. Cross list with Sociology, Economics and Political Science. Freshman, Sophomore and Juniors only.
Area: Social and Behavioral Sciences
Writing Intensive

AS.360.387. Cities, Crime, and the Constitution. 3 Credits.
This course is meant to introduce students to the profound challenge of crime in American cities and to the opportunities and obstacles to address it. From gangs, gun violence, and the narcotics trade to crimes targeting vulnerable populations like children and the elderly, the course will survey the breadth and character of criminal enterprises in cities like Baltimore. Students will confront vexing questions raised by contemporary criminal justice practices relating to race, poverty, privacy, and policing. Students will also examine whether institutional reform in the areas of juvenile justice, conviction integrity, fairness in sentencing, and reentry reflect the Constitution’s promise of equal justice for all.
Area: Social and Behavioral Sciences

AS.360.401. Social Policy Seminar. 3 Credits.
This course is designed for students who have completed either the Baltimore intensive semester of the Social Policy Minor. The students will make presentations and pursue joint projects based on what they have learned during the intensive semesters concerning key social policy issues.
Area: Social and Behavioral Sciences

Political Science

AS.190.300. Racial Inequality, Policy and Politics in the US. 3 Credits.
While policies were passed to ensure equal opportunity for racially subjugated Americans, the United States witnessed increasing stratification of wealth and income and deepening concentration of poverty, stagnation in closing racial gaps, and new forms of inequality posed by the striking upsurge in contact with the criminal justice system at the bottom of the skills ladder and concentration of wealth at the top. At the same time, the welfare state came under attack and faced challenges posed by an aging population, women entering the labor force, deindustrialization, and international pressures of globalization. Social spending withered in some areas while spending on citizens was increasingly likely to happen through tax expenditures and private means. This course investigates the politics around these developments and competing perspectives in debates over redistributive policies in the United States and their impact on inequality, particularly race and gender inequality. We will examine the contours of inequality and explanations for why it has expanded over the past several decades. We explore why the US is exceptional in both the level of inequality it tolerates and the generosity and types of remedies to alleviate poverty in comparison to its European counterparts and debate the role of race, unions, electoral politics and institutions. We investigate several specific cases of persistent racial inequality – concentrated poverty, segregation, and incarceration. We investigate both how policies have reinforced racial and gender divisions from a top-down perspective as well as examining under what conditions the disadvantaged contest inequality, exploring how political struggle shapes policy from the bottom-up. The last part of the course examines the consequences of inequality and social policy for representation and citizenship and how economic inequality affects political representation and responsiveness of elites to masses.
Area: Social and Behavioral Sciences

AS.190.433. Race and the Politics of Punishment in the US. 3 Credits.
Contact with criminal justice has become a primary way that many Americans see and experience government, particularly those from race-class subjugated communities. Yet, our field has been slow to appreciate the development of the carceral state or to consider its manifold for citizenship. In this advanced undergraduate seminar, we will survey key debates around punishment, state violence, and surveillance, with a particular focus on research that takes institutional development, history and racial orders seriously. Why did the carceral state expand in ‘fits and starts’ and with what consequence for state-building? We explore its (racialized and gendered) relationship to other key systems: foster care, social provision, labor relations and the labor market, and immigration enforcement. A core preoccupation of this course will be to understand the ways in which the criminal justice system ‘makes race’ and how debates about crime and punishment were often debates about black inclusion and equality. How does exposure to criminal justice interventions shape political learning, democratic habits, and racial lifeworlds? In addition to policy, political discourse, and racial politics, we will employ works from a range of fields - history, sociology, law and criminology - and a range of methods (ethnography, historical analysis, quantitative and qualitative). Required books include: Khalil Muhammad’s Condemnation of Blackness: race, Crime, and the Making of Modern Urban America, Elizabeth Hinton’s From the War on Poverty to the War on Crime, David Oshinsky’s Worse Than Slavery. Parchman Farm and the Ordeal of Jim Crow Justice, Bruce Western’s Punishment and Inequality in America, and Michael Fortner’s Black Silent Majority: The Rockefeller Drug Laws and the Politics of Punishment.
Writing Intensive
AS.190.437. Race and Ethnic Politics in the United States. 3 Credits.
Race has been and continues to be centrally important to American political life and development. In this course, we will engage with the major debates around racial politics in the United States, with a substantial focus on how policies and practices of citizenship, immigration law, social provision, and criminal justice policy shaped and continue to shape racial formation, group-based identities, and group position; debates around the content and meaning of political representation and the responsiveness of the political system to American minority groups; debates about how racial prejudice has shifted and its importance in understanding American political behavior; the prospects for contestation or coalitions among groups; the “struggle with difference” within groups as they deal with the interplay of race and class, citizenship status, and issues that disproportionately affect a subset of their members; and debates about how new groups and issues are reshaping the meaning and practice of race in the United States.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.191.303. Critical Race Theory, Law, and Criminal Justice. 3 Credits.
In this course, students will gain a foundational understanding of critical race theory, including its genesis in legal theory. The course will examine its relationship and importance to social movements, including through key concepts like intersectionality. The course will also use critical race theory to grapple with law, racial segregation, and the criminal justice system in the United States.
Area: Social and Behavioral Sciences
Writing Intensive

Program in Latin American Studies
AS.361.130. Introduction to Latin American Studies. 3 Credits.
The goal of this course is to provide an overview of Latin America, analyzing political and cultural aspects, chronologically organized. We will begin studying the origins of the multi-ethnic societies, starting with the ancient civilizations and their transformation under colonization. It is important to understand the survival of cultural traits among indigenous peasants today in the countries that were the cradle of ancient civilizations: Mexico, Guatemala and the Andean countries. In the republican era the course will focus on the classical Caribbean dictators in the first half of the 20th century and their reflection in the literature, comparing the historical reality with the magic representation in the work of Garcia Marquez. The course will scrutinize the most important revolutions in the continent: the Mexican, Cuban and Bolivian revolutions and the geopolitics of USA in the Americas. Weekly lectures related to the assigned reading will focus on specific periods, topics and regions. After each lecture, we will review the material, connecting specific details from the readings with the more theoretical aspects provided in my lecture. The course has a website where the PowerPoint presentations will be posted. Students are encouraged to post their questions, comments and suggestions on the web after their readings. Students will be given a study guide for each lecture, which will be the basis for the exams. Our perspective on Latin America will be enhanced by a selection of films related to the topics.
Area: Humanities, Social and Behavioral Sciences

Study of Women, Gender, Sexuality
AS.363.328. Beyond the Global West: Gender/Sexuality, Post-colonialism & Global Capitalism: Feminist Inquiries from Asian Perspectives. 3 Credits.
This course examines gender and sexuality issues in both East and South Asian Societies and situates subject matters in the broader contexts of post-colonialism, state formation, revolution and global capitalism.
Area: Humanities
Writing Intensive

Sociology, Bachelor of Arts

Sociology Major Requirements
(Also see Requirements for a Bachelor’s Degree (p. 1584).)

A major in sociology offers undergraduates a variety of post-graduation opportunities. Graduates from the department have found positions in financial institutions, education, non-governmental organizations focusing on international development, research departments of major corporations, and local government social service agencies. Others continue to graduate school in sociology, public health, law, urban planning, and education. A major in sociology can also be combined with the pre-medical course sequence, resulting in a medical school candidate who is well versed in the hard science of the human body and the social science of the human experience. For more details, please visit http://soc.jhu.edu/undergraduate/.

The required courses for a major in sociology provide students with a fundamental understanding of sociological theory, methods, and social statistics. Beyond these core requirements, elective courses are offered on a range of important sociological themes, including gender and family, social structure and personality, education, race and ethnicity, immigration, political sociology, international development, and the evolution of a world social system. All courses must be taken for a letter grade and a grade of C or better is required. Nine of the eleven required Sociology classes must be taken at JHU. In some cases, students may request for eight of the eleven required Sociology courses to be taken at JHU. Foreign language study is not required, but it is strongly encouraged, especially for students considering graduate or professional study.

Sociology Major Requirements

Code Title Credits

Core Courses
AS.230.101 Introduction to Sociology 3
AS.230.202 Research Methods for the Social Sciences 3
AS.230.205 Introduction to Social Statistics 4
AS.230.213 Social Theory 3
AS.230.322 Quantitative Research Practicum 3
or AS.230.323 Qualitative Research Practicum
or AS.230.325 Global Social Change and Development Practicum

Sociology Electives
Six elective courses in sociology, at least four must be non-introductory courses (at the 200-level or above) 18

Additional Social Science Electives
A typical program might include the following sequence of courses:

**Course** | **Title** | **Credits**
---|---|---
**First Year**
**First Semester**
AS.230.101 | Introduction to Sociology | 3
---|---|---
**Second Semester**
Lower-level sociology elective | 3
Lower-level sociology elective | 3

Senior Honors Program

The senior year Honors Program affords highly motivated and qualified students the opportunity to pursue, with faculty guidance, a research project of their own design. The Honors Program culminates in an honors thesis; a substantial work of original scholarship. Prerequisites and requirements for the program are as follows:

- All the requirements of a traditional major in sociology.
- Minimum 3.5 GPA in all sociology courses.
- Declaration of intention to enroll in Senior Honors Program to faculty advisor and all prerequisites for this program must be fulfilled by the end of the junior year.
- At least two 300-level courses in sociology by the end of the junior year.
- Enrollment in the year-long AS.230.502 Senior Thesis Program.
- Completion and faculty approval of honors thesis.

For more information on the Senior Honors Program, contact your faculty advisor.

Global Social Change and Development Track

The Global Social Change and Development (GSCD) Track (http://krieger.jhu.edu/arrighi/undergraduate/gsdc/) is geared towards students interested in understanding critical issues surrounding contemporary processes of globalization and international development. The track provides students with a sophisticated set of research and critical-thinking skills, prepares students for twenty-first century professions and helps them to become thoughtful global citizens. Ultimately, students pursuing the Global Social Change and Development track will receive a double major in both International Studies and Sociology.

Sociology, PhD

The department's primary educational goal is to train first-class sociology Ph.D.'s. The sociology graduate experience at Johns Hopkins is best characterized as a research apprenticeship – a careful blend of formal instruction, faculty-directed individual study, and supervised as well as self-initiated research. The department's small size and specific concentrations yield a personalized course of study and close relationships with faculty members and fellow graduate students. The social climate is informal, and the mix of students and faculty, drawn from a wide variety of geographic and social backgrounds, constitutes a rewarding intellectual community. For more details, please visit http://soc.jhu.edu/graduate/.

Admission Requirements

Applicants must submit an application fee, personal statement, GRE scores, all college transcripts, at least two (preferably three) letters of recommendation, and a sample of written work. International applicants must also submit a TOEFL score and a financial statement (FS-1G Form: Graduate International Student Notification [F-1/J-1]). Applicants...
should have a broad background in social science, especially sociology, economics, and psychology. Training in mathematics is encouraged. The department gives greatest weight to an applicant’s demonstrated ability and past performance. For more details, please visit http://soc.jhu.edu/graduate/admissions/.

1 This fall semester course is taken during the first year. Faculty presentations introduce students to the substantive interests, research and professional background of the sociology faculty. It is graded pass/fail.

To count toward degree requirements, core curriculum courses other than the Trial Paper Research series of courses must be passed with a grade of B- or higher. After the core course requirement is satisfied, additional methods courses from the list above may be used to fulfill the seven-elective course requirement.

Electives

In addition to the core curriculum, graduate students must enroll in seven additional graduate-level courses. At least four of the seven electives must be JHU Sociology department courses. Up to four of the seven electives may be fulfilled by a combination of:

1. credit awarded for previous graduate coursework that predates matriculation at JHU;
2. courses taken outside the department that are permissible under the Handbook rules and with the Departmental advisor’s approval;
3. and one directed research and independent study courses within the Department.

All must be passed with a grade of B- or higher. While students are free to select these courses, the department strongly recommends that they be taken from diverse fields of specializations so as to maximize the breadth of exposure to core areas of sociology and other disciplines.

Teaching Assistantships

As part of their preparation for future academic work, graduate students are required to register for AS.230.811 Teaching Assistantship and serve as a teaching assistant for at least one semester.

Foreign Language

The Sociology Department no longer requires certification of fluency in a foreign language as part of the Ph.D. requirements. Students should be proactive in gaining the language skills necessary to conduct their TRP and dissertation research, and should work closely with their advisor to determine whether additional language education is needed.

1 This fall semester course is taken during the first year. Faculty presentations introduce students to the substantive interests, research and professional background of the sociology faculty. It is graded pass/fail.

To count toward degree requirements, core curriculum courses other than the Trial Paper Research series of courses must be passed with a grade of B- or higher. After the core course requirement is satisfied, additional methods courses from the list above may be used to fulfill the seven-elective course requirement.

Electives

In addition to the core curriculum, graduate students must enroll in seven additional graduate-level courses. At least four of the seven electives must be JHU Sociology department courses. Up to four of the seven electives may be fulfilled by a combination of:

1. credit awarded for previous graduate coursework that predates matriculation at JHU;
2. courses taken outside the department that are permissible under the Handbook rules and with the Departmental advisor’s approval;
3. and one directed research and independent study courses within the Department.

All must be passed with a grade of B- or higher. While students are free to select these courses, the department strongly recommends that they be taken from diverse fields of specializations so as to maximize the breadth of exposure to core areas of sociology and other disciplines.

Teaching Assistantships

As part of their preparation for future academic work, graduate students are required to register for AS.230.811 Teaching Assistantship and serve as a teaching assistant for at least one semester.

Foreign Language

The Sociology Department no longer requires certification of fluency in a foreign language as part of the Ph.D. requirements. Students should be proactive in gaining the language skills necessary to conduct their TRP and dissertation research, and should work closely with their advisor to determine whether additional language education is needed.

Residence

A minimum of two consecutive semesters of full-time residence is mandatory for all degrees. However, at least six semesters of full-time residence is recommended by the department for completion of the core curriculum, electives, and completion of a research apprenticeship and a trial research paper. By the end of the fourth year in the program, the student is expected to have written a dissertation proposal and have defended it successfully before the appropriate examining committees.

Research Assistantship/Apprenticeship

AS.230.801 Research Assistantship and AS.230.804 Research Apprenticeship

Students are required to develop practical research expertise through professional-level participation (data analysis, literature searches/reviews, non-routine data processing or coding, preparation and refinement of research instruments, and data/file management). This requirement is fulfilled by satisfactorily completing a Research Apprenticeship, which is required during the student’s first year of full-time graduate study in the department. The standard for certification is substantial research accomplishment as judged by the faculty supervisor.

Trial Research Paper

Students begin working on a Trial Research Paper (TRP) no later than the spring semester of their second year. The TRP affords students the experience of planning and executing a research project that leads to a publishable quality paper. The TRP is expected to be a serious, complete work of scholarship, suitable for conference presentation or journal submission. Whether or not the topic of the TRP is similar to that of the eventual dissertation, we believe all students will benefit from going through this exercise before planning for the dissertation.

By the end of the fall semester of their second year, students should invite a faculty TRP advisor to supervise the design and execution of the TRP project. Regular or adjunct faculty members whose positions entitle them to serve as dissertation advisors are eligible to serve as faculty TRP advisors. Work on the TRP generally will be done over three semesters. In order to facilitate progress on the TRP, students register for courses that are meant to consist of one-on-one meetings with their TRP advisor (TRP I, AS.230.815 Trial Research Paper I in the spring of your second year, TRP II, AS.230.816 Trial Research Paper II in the fall of your third year, and TRP III, AS.230.817 Trial Research Paper III in the spring of your third year.)

In order to facilitate student progress on the TRP, the department has also introduced two required TRP seminars, for which all students register in the spring of their second and third year. These are: AS.230.685 TRP PROPOSAL SEMINAR (spring of second year) & AS.230.690 TRP PRESENTATION SEMINAR (spring of third year). These courses will be graded pass/fail and will not count toward the fulfillment of the elective courses required for the Ph.D.

A TRP proposal must be approved by the faculty TRP advisor by the end of the spring semester of the second year. By the end of the fall semester of the third year, the TRP advisor must approve a draft of the paper which will then be reviewed by another department faculty member. The TRP advisor, at her or his discretion, may extend this deadline to the end of the intersession period following the fall semester. The faculty reviewer will evaluate the paper and, if necessary, recommend revisions that should
be made before the paper is certified. The TRP advisor will determine
required revisions and must certify a final TRP by the end of the spring
semester of the third year.

Dissertation
The student must propose and conduct original research presented in
a dissertation suitable for publication. The department administers an
oral examination which must be passed before the student is allowed to
defend before a university board. The dissertation must then be defended
either at a Graduate Board preliminary oral examination, based on the
dissertation proposal, or at a Graduate Board final oral examination,
based on the completed dissertation.

Special Programs
The department offers two special programs that coordinate activities in
its two areas of concentration. Doctoral students may affiliate with one
or both of these programs at their discretion. These programs function as
fields of doctoral specialization within the Department of Sociology.

Program on Global Social Change (PGSC)
This concentration of graduate study focuses on cross-national,
comparative research and long-term, world-scale social change. The goal
of the program is to give students knowledge of the various theoretical
perspectives in these areas, experience in data collection and analysis,
and expertise in one or more substantive fields.

The program does not focus on a particular geographic area, although
faculty members have conducted extensive research on Latin America,
Africa, Asia, the Middle East, and Eastern and Southeastern Europe.
Instead of a geographical approach, the emphasis is on issues of
development and social change that cut across different countries and
world regions. Examples are globalization and regionalization, labor and
development, city systems and urban primacy, social movements and
revolutions, state violence, migration and labor force formation, family
structure and change, social structure and personality, and national and
international stratification. Students enroll in a sequence of courses and
seminars and participate actively in ongoing faculty projects dealing with
one or more of the above issues.

In addition, the interdisciplinary character of graduate education
at Johns Hopkins offers students ample opportunity to enroll in
courses or collaborate in research with faculty in other departments.
Faculty associates of the program include distinguished scholars in
anthropology, economics, geography, history, political science, and public
health.

A graduate concentration is not required of Ph.D. students.

Sociology, PhD/Applied Mathematics
and Statistics, MSE Joint Program
The Department of Sociology, Krieger School of Arts and Sciences, and
the Department of Applied Mathematics and Statistics, Whiting School of
Engineering, announce a joint program leading to a Ph.D. in Sociology and
an M.A. or M.S.E. in Applied Mathematics and Statistics. The purpose of
the joint program is to offer Sociology doctoral students an opportunity
to acquire advanced statistical knowledge and applied research skills.

For more information, please visit http://soc.jhu.edu/graduate/
jointprogram/.

Program Requirements
The joint program requirements include all the Ph.D. requirements in
Sociology and the specially designed requirements for an M.A. or M.S.E.
in Applied Mathematics and Statistics. For Sociology Ph.D. requirements,
see the Sociology Ph.D. Students Handbook. Applied Mathematics and
Statistics courses may substitute for AS.230.600 Introduction to Social
Statistics and AS.230.604 Linear Models for the Social Sciences. Two
options for fulfilling the requirements are available for an M.A. or M.S.E.
in Applied Mathematics and Statistics. For both options, students are
required to meet the Applied Mathematics and Statistics department's
computing requirement (fulfilled through EN.553.413 Applied Statistics
and Data Analysis), the purpose of which is to ensure that students are
able to effectively use computers to solve mathematical problems.

Note: All Joint Program students are required to complete Responsible
Conduct of Research (RCR) training, which is in addition to the HIPPA
training required for the sociology Ph.D.

Space Science and Engineering
This minor is open to all students in the Whiting School of Engineering
and the Krieger School of Arts and Sciences who have the prerequisites
for the required courses. The objective of the Minor is to prepare students
for a career in Space Science and Space Engineering, either directly as
an entering professional in industry, government laboratories and other
organizations or as a student in a graduate program. The educational
goal of the Minor is to enable students to:

- Apply their understanding and mastery of the fundamental scientific,
  engineering, and mathematical principles obtained through their
  major subject of study to space science and space engineering.
- Develop an understanding and capacity for interdisciplinary
  approaches to technical activities.
- Improve their ability to work in multidisciplinary teams, which
  are typical in space and other complex technical activities,
through interdisciplinary education and internship(s) or equivalent experience(s).

**Programs**

- Space Science and Engineering, Minor (p. 2196)

---

**Space Science and Engineering, Minor**

**Space Science and Engineering Minor Requirements**

- A Proposal and Course Plan, which must be approved by your advisor for the minor (hereafter referred to as the “Advisor”). The proposal must discuss a theme that unites the individual elements of the program (courses and internship(s)) into an intellectual whole.

- Five courses in Science and Engineering. One course is specified (AS.171.321 Introduction to Space, Science, and Technology) and the remaining four are chosen through your Proposal and Course Plan, which must be approved prior to taking the courses by the Advisor. All courses must be taken for a grade rather than satisfactory/unsatisfactory. A grade of C- or better is required. Courses that are named as requirements for the student’s major may not be used. However, courses that are not named, but satisfy an elective requirement for the major, may be used.

- An internship or equivalent experience in the field of space science and engineering is required. This must have prior approval from the Advisor.

- A brief report on the internship or equivalent experience to the Advisor.

For a detailed explanation of the minor and its requirements, including sample programs of study, please visit the Student Handbook for the Minor in Space Science and Engineering (http://spacestudies.jhu.edu/space-minor/).

---

**Study of Women, Gender, and Sexuality**

https://krieger.jhu.edu/wgs/

The Program for the Study of Women, Gender, and Sexuality works to catalyze intellectual discussions—at Johns Hopkins, in Baltimore, and beyond—in which gender and sexuality concerns play important roles.

We are a forum that brings together undergraduates, graduate students, and faculty from different departments who share an interest and a need to address and interrogate their research fields from a queer, feminist, or otherwise gender- and sexuality-inflected perspective.

The activities of the program integrate teaching and research on all levels. Most importantly, the program encourages and supports initiatives for research projects, events, and curriculum developments emerging from all parts of the JHU campus—undergraduate students, graduate students, and faculty alike.

WGS brings new scholarship into conversation on campus in three main ways. First, the program sponsors a seminar series that brings speakers from academia and the broader community to Johns Hopkins University. Second, we organize workshops each semester around multiyear themes, such as “Affect and Emotion” and “Medical Humanities.” Finally, we bring renowned scholars and public figures to the Homewood campus through our annual Visiting Distinguished Professorship. Recent visiting professors have included Karen Barad (University of California-Santa Cruz), Joan Wallach Scott (Institute for Advanced Studies), Trinh-Minh Ha (University of California-Berkeley), and Michael Warner (Yale University).

WGS offers an undergraduate minor that enables students to devote a portion of their education to the study of women, gender, sexuality, and related issues. WGS also offers research fellowships for undergraduate and graduate students. Graduate students also have the opportunity to design and teach a course.

Through both interdisciplinary and specialized courses, students are encouraged to develop critical and comparative approaches to the study of gender and sexuality—often in interaction with related issues such as race, class, global health, and violence. Courses in the program are taught by prominent faculty members from across the disciplines and are cross-listed through a variety of departments. New courses are added frequently.

WGS also offers an undergraduate Seminar/Practicum, where students combine volunteer work in a local social service agency with a seminar that explores the connections between social justice and academic inquiry.

For current course information and registration go to https://sis.jhu.edu/classes/

**Courses**

**AS.363.201. Introduction to the Study of Women, Gender, and Sexuality. 3 Credits.**

This course offers an introduction into the fields of Women’s Studies, Gender Studies, and Sexuality Studies. It explores why we need these fields of inquiry, how they have emerged historically, what some of the major and most interesting contributions are and where we might go from here. The course is meant as a preparation for the other WGS core courses.

Area: Humanities, Social and Behavioral Sciences

**AS.363.303. Feminism and Queer Theory: ‘The Master’s Tools Will Never Dismantle the Master’s House’. 3 Credits.**

As a Black lesbian woman, Lorde denounced white feminism for being complicit with patriarchy by not acknowledging marginal women’s experiences as a source of strength and creativity. Inspired by the title and impetus of Lorde’s essay, this course seeks to ask what happens when we start seeing the world through unfamiliar, alternative, tools or sensibilities? What different pictures of critique—ones that don’t merely focus on replacing the master’s house with other strong edifices—are allowed to emerge? With these questions in mind, the main objective of this course is to expose us to alternative sensibilities and ways of thinking offered by voices that experience gender and sexuality beyond conventional Western norms and counter-norms.

Area: Humanities

Writing Intensive
AS.363.305. **Feminist & Queer Theory: Feminist Queer Theories: Past & Present.** 3 Credits.

This course offers a range of transnational and US feminist and queer theories, starting from the present with which we are familiar and moving backwards into history. It is designed to facilitate deep engagement with feminist and queer theoretical language/s and concepts, as well as critical approaches applicable to further discourses beyond the class in other disciplines and outside them. The course is divided into 5 units, which roughly organize the reading thematically around the topics of: 1. language and cultural translation, 2. feminist critique, and thinking through the lenses of 3. queerness, 4. race and 5. class. The organization reflects the focus of each unit, yet the topics are intertwined. Students are encouraged to be patient with themselves and the readings and, especially if encountering discursive discourses for the first time, not to expect to understand everything immediately but rather to accclimate to the radically different thinking of others throughout the course of the semester.

Area: Humanities
Writing Intensive

AS.363.306. **Feminist and Queer Theory: Race, Class, Gender, Sexuality-Intersectional Feminist Theory.** 3 Credits.

In this course, we will get to know intersectional feminist philosophy through the lens of a Black feminist epistemology. What does this mean? That means that we will focus on how the contributions of Black feminist authors can bring out the specific political and philosophical nature of an intersectional theoretical framework.

Area: Humanities

AS.363.307. **Feminist and Queer Theory: Family Matters: Queer and Feminist Responses to Family Life.** 3 Credits.

This course examines the historical development of feminist and queer critique, focusing on how the concept of family life has been understood by generations of writers, activists, and theorists. We will read important early works on western forms of kinship and family structure, and investigate how contemporary developments in reproductive technology, queer marriage, and workplace integration have produced new imaginings of familial belonging and its alternatives.

Area: Humanities

AS.363.316. **Health, Medicine, Gender, and Sexuality: Gender, Sexuality, and AIDS in Africa.** 3 Credits.

This course uses historical sources to connect constructions of gender and sexuality in Africa from the pre-colonial, colonial, and post-colonial periods to the epidemiology, politics, and culture of the AIDS epidemic.

Area: Humanities, Natural Sciences
Writing Intensive

AS.363.327. **Gender and Sexuality beyond the Global West: Feminism and Homosexuality in the Islamic World.** 3 Credits.

This course explores the emerging discourses on gender and sexuality in Islam. As minorities, women and homosexuals developed a shared interest in exegetic tools challenging the dominant narratives that shaped a so-called Muslim tradition. We will investigate disruptive narratives that take place within theological debates but we will also grapple with discourses that have been produced on women and homosexuals in the Islamic world. We will deal with the question of imposing on Muslims a specific conception - that a good amount of scholars have identified as being western - of homosexuality and feminism. A set of questions will guide us through our readings: does sexuality constitute an identity or refer to a practice? Should equality be reduced to identity or can it be understood differently? Are agency and freedom best manifested through subversion and opposition?

Area: Humanities

AS.363.328. **Beyond the Global West: Gender/Sexuality, Post-colonialism & Global Capitalism: Feminist Inquiries from Asian Perspectives.** 3 Credits.

This course examines gender and sexuality issues in both East and South Asian Societies and situates subject matters in the broader contexts of post-colonialism, state formation, revolution and global capitalism.

Area: Humanities
Writing Intensive

AS.363.329. **Gender and Sexuality Beyond the Global West: Gender and Sexuality in Contemporary Art in North Africa and the Middle East.** 3 Credits.

This course aims to explore how gender and sexuality is situated in contemporary artistic practices in the geographical Middle East, through concepts of religion, war, revolution, resistance, nation-state, post-colonialism, and neoliberalism, especially as written and observed first-hand by artists, curators and scholars from the Middle East and North Africa region and their diasporas. Every week, under an overarching topic, notions of gender and sexuality will be questioned through works of selected artists across the region, as well as texts that provide the historical, theoretical, sociological and political background.

Area: Humanities
Writing Intensive

AS.363.330. **Gender and Sexuality Beyond the Global West.** 3 Credits.

The course is an exploration of issues of gender and sexuality beyond the Global West.

Area: Humanities

AS.363.331. **Gender and Sexuality beyond the Global West: Stitching Women-Sewing and Gender, Labor, and Art.** 3 Credits.

What’s radical about stitching? And how did sewing coming to be viewed—across centuries, cultures, regions, and political epochs—as (in embroidery artist Hannah Hill's words) “women’s work”? This course will analyze and discuss how work with needle and thread has been associated with women, their bodies, and the domestic space where the repetitive labor of mending, the mixed opportunity for making, and the devalued practice of the “applied arts” took place. Looking at histories of work, fictions, and visual objects, we will explore stitching’s gendered past and its potential for oppressive normativity and radical, creative expression alike. Over the semester, our course follows the “red thread” of stitching via four short response papers (or one Unessay), one in-class presentation, and one final oral history/research project on an interdisciplinary discussion related to the (often radical) politics and poetics of women’s lives and works. Authors and artists may include Elizabeth Barrett Browning, Emily Dickinson, Elizabeth Gaskell, Virginia Woolf, Alice Walker, Carol Ann Duffy, Alice Dunbar-Nelson, Tracey Emin, Louise Bourgeois, Elaine Reichek, Silvia Federici, Mariarosa dalla Costa, Kyung-Ah Ham, and Project Runway.

Area: Humanities
AS.363.333. Poetics and Politics: Eros & Literature. 3 Credits.
What does it mean to love? From Antiquity to now, from Plato to Jeanette Winterson, writers have staged conversations on love and sex. In this way, they provide us with a “science of sex” (to use Foucault’s notion) that, though fully attuned to the power differentials that inhabit our most intimate physical experiences, gives free range to the imagination of desires. With Plato, the legend of Tristan and Isolde, and the study a few Renaissance love lyrics as a backdrop, we will delve into stories of desire that chart new configurations and break away from “normative heterosexuality.” Readings involve novellas by Balzac, George Sand, Colette; stories by Woolf, by Proust, and selected from Gender Outlaws as well as two films M. Butterfly and Call Me by Your Name. Meshing such stories with fundamental concepts in gender theory will enable us to chart ever changing configurations of desire from the double perspective of queerness and of sexual politics.
Area: Humanities
Writing Intensive

AS.363.334. The Poetics and Politics of Sex: Gender and Sexuality in Twentieth Century European Empires. 3 Credits.
This course explores themes around sexuality and empire in nineteenth and twentieth century European empires, including (but not limited to) the gendered policies of colonial regimes, how colonialism encouraged ideal forms of femininity and masculinity, and nationalist feminisms in the era of independence.
Area: Humanities
Writing Intensive

AS.363.336. The Poetics & Politics of Sex: Feminist Separatism & Its Afterlives. 3 Credits.
In 1977, feminist theorist Marilyn Frye asked, “What is it about separation, in any or all of its many forms and degrees, that makes it so basic and so sinister, so exciting and so repellent?” Her essay, “Some Reflections on Separatism and Power” was a response to the emergence and persistence in the 1960s of a feminist separatist politics, as well as its many detractors, both from outside the feminist movement and within (many black feminists, for example, critiqued the movement’s essentialism and its positioning of gender and sexuality above considerations of race). Today, Frye’s question still remains a live one; think, for example, of the now commonplace exclamation that one will “move to Canada” (or “leave Earth” as Tina Fey has it) in the face of an ominous political possibility. In a less facetious form, one might consider the separatism latent in the emergence of queer futurity politics, safe space discourse, and a more general pessimism about reform and assimilation as satisfying answers to a continually oppressive status quo. In this course, we will consider the ongoing salience of the idea of separatism, particularly as it is engaged within politics of gender and sexuality.
Area: Humanities
Writing Intensive

AS.363.337. The Poetics & Politics of Sex: Struck From the Record: Reclaiming Women's Contribution to the Global March Towards Modernity. 3 Credits.
The course examines claims that present women’s historic role as limited to confinement in the home, and bearing children. Students will gain an understanding of the complexity the world’s path to modernity and the important, and until recently, silent roles that women have played.
Area: Humanities
Writing Intensive

AS.363.338. The Poetics and Politics of Sex: Feminist Utopia in Theory and Fiction. 3 Credits.
This course examines the historical development of feminist utopia in theory and fiction. Readings will center Indigenous, Black, postcolonial, diasporic, and transnational perspectives that engage the topic of feminist utopia.
Area: Humanities
Writing Intensive

AS.363.340. Costumes and Masquerades of the Self. 3 Credits.
An introduction to some of the fundamental texts and concepts of gender theory through the study of representations, literary and art historical, of dress. From cross-dressing in Shakespeare and George Sand, Baudelaire’s Dandy, to Woolf’s notion of “frock consciousness,” Hwang’s Mr. Butterfly, and Cindy Sherman’s parodies. Theoretical readings in Barthes, Laqueur, Lacan, Garber, Butler, Potts, Lee.
Area: Humanities

AS.363.341. The Making of Modern Gender. 3 Credits.
Gender as we know it is not timeless. Today, gender roles and the assumption that there are only two genders are contested and debated. With the binary gender system thus perhaps nearing its end, we might wonder if it had a beginning. In fact, the idea that there are two sexes and that they not only assume different roles in society but also exhibit different character traits, has emerged historically around 1800. Early German Romanticism played a seminal role in the making of modern gender and sexuality. For the first time, woman was considered not a lesser version of man, but a different being with a value of her own. The idea of gender complementation emerged, and this idea, in turn, put more pressure than ever on heterosexuality. In this course, we will trace the history of anatomy and explore the role of literature and the other arts in the making and unmaking of gender.
Area: Humanities

AS.363.400. Feminist Modernisms. 3 Credits.
Prize Teaching Fellowship seminar. Triangulating feminist psychoanalysis and theories of embodiment and subjectivity with art criticism and case studies of artistic practice (primarily painting), this course comparatively investigates the routes modernism takes after the Second World War and decolonization (1945/1947). We will be interested in specific postcolonial and postwar contexts where modernism in the domain of the visual arts was mounted as a feminist project. Each week will pair readings that establish conceptual frameworks with close analyses of works by specific artists, including those represented by the Library’s Special Collections and the Baltimore Museum of Art. Texts include Freud, Spivak, Butler, Irigaray, Kristeva, and Mahmood.
Area: Humanities
Writing Intensive
AS.363.415. WGS Internship Practicum: The Carceral State, Gender, and the Family. 3 Credits.
This class will examine the U.S. government's use of incarceration, parole, and house-arrest as default forms of social management, in lieu of social welfare policy. We will explore the origins of the "carceral state" and its impact on targeted communities. The class will focus on often neglected aspects of the ongoing crisis of mass-incarceration in the U.S., in particular its debilitating effects on single-mother households, children who grow up with incarcerated family members, and the extreme violence and deprivation of basic medical needs faced by incarcerated women and LGBTQI individuals. Topics will include black-feminism and "black matriarchy," the relationship between domestic violence and mass-incarceration in communities of color, women and non-gender conforming prisoners, the "school-to-prison pipeline," the psychological effects of policing on targeted communities, and the fiscal interests served by mass-incarceration. We will engage sociological, historical, and philosophical materials, as well as literature, film, and past and present social movements.
Area: Humanities
Writing Intensive

AS.363.416. WGS Internship/Practicum: Feminist Animals: Sex, Nature, and Nonhumans. 3 Credits.
Introducing feminist approaches to ecology and nonhumans, this course considers the interconnections between heteropatriarchal domination and the domination of nonhuman animals and ecologies. What different sensibilities and ways of seeing sex and gender open up when attention shifts to nonhumans? What tensions within and between feminism, animal liberation, and ecological concern come to the fore when each approach is alongside the others? How does the study of nonhumans extend the promise of feminism, and vice versa? In responding to these questions, we will see the real breadth of issues that the theory and practice of feminism can address.
Area: Humanities
Writing Intensive

AS.363.418. Internship Practicum: Feminist Ethnographic Methods and Social Justice Organizations. 3 Credits.
This course is for students who are working with social justice organizations. It will introduce students to ethnographic research that is informed by feminist methodologies of listening, care, ethics, and structural analysis. Methods will be oriented to the "inside" and "outside" of organizations. "Inside" the organization might refer to listening to marginalized voices, examining the place of bureaucracy and paperwork, and engaging with activist research and records. Reaching beyond the organization proper, we will learn to analyze localities, and less tangible zones such as social media, political networks, and the state.
Area: Humanities

Cross Listed Courses

Anthropology
AS.070.436. Vulnerability. 3 Credits.
Many in the contemporary world live in states of acute vulnerability. In this course, we will look closely at situations like forced displacement, experience of poverty and injury, environmental devastation, and the politics of social protest. Thinking with ethnography, feminist philosophy, fiction, and film, we will explore whether vulnerability may be taken as a condition to live with rather than one to overcome at any cost.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
Behavioral Biology  
**AS.290.420. Human Sexual Orientation. 3 Credits.**  
This course will examine the historical and current theories of sexual orientation and sexual variation development by examining the biological, psychological and social contributing factors that influence the development of sexual orientations and variations along with treatment and modification of problematic sexual behaviors. Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester. Priority given to Behavioral Biology majors. Note: For credit towards a Psychology major, students should register for AS.200.204 Human Sexuality, rather than this course.  
**Corequisite(s):** Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester.  
**Area:** Social and Behavioral Sciences

Biophysics  
**AS.250.351. Reproductive Physiology. 2 Credits.**  
Focuses on reproductive physiology and biochemical and molecular regulation of the female and male reproductive tracts. Topics include the hypothalamus and pituitary, peptide and steroid hormone action, epididymis and male accessory sex organs, female reproductive tract, menstrual cycle, ovulation and gamete transport, fertilization and fertility enhancement, sexually transmitted diseases, and male and female contraceptive methods. Introductory lectures on each topic followed by research-oriented lectures and readings from current literature.  
**Area:** Natural Sciences

Classics  
**AS.040.140. Gender and Sexuality in Early Greece and the Eastern Mediterranean. 3 Credits.**  
In this course we will explore evidence and interpretations of gender and sexuality in the region of the Aegean and eastern Mediterranean during the third and second millennia BCE. Material investigated will include the "snake goddess" figures from Minoan Crete, anthropomorphic figurines from the Cyclades and Cyprus, wall paintings, etc. In each case we will consider the history of interpretation as well as investigate the objects' archaeological and sociocultural contexts. Discussion topics will include representational ambiguity, the specific materialities of objects, and their possible roles in activities construing gender. The course will incorporate material from the JHU Archaeological Museum.  
**Area:** Humanities

**AS.040.218. Celebration and Performance in Early Greece. 3 Credits.**  
Surviving imagery suggests that persons in Minoan and Mycenaean societies engaged in various celebratory performances, including processions, feasts, and ecstatic dance. This course explores archaeological evidence of such celebrations, focusing on sociocultural roles, bodily experience, and interpretive challenges.  
**Area:** Humanities

**AS.040.420. Classics Research Lab: The Symonds Project. 3 Credits.**  
This course gives participants a unique opportunity to engage directly in empirical research and its interpretation and dissemination. Topics vary. This semester's offering is organized around a project to reconstruct digitally the library of the nineteenth-century writer John Addington Symonds, author of one of the first studies of ancient sexuality. No prerequisites, but potential students should contact instructor for permission to enroll.  
**Area:** Humanities

Comparative Thought and Literature  
**AS.300.312. Imagining Revolution and Utopia. 3 Credits.**  
What form should revolution take, and what should society look like after the revolution? What would happen to the state, family, home, status of women, human interrelations, and everyday life? These questions consumed radicals in 19th century Russia and Europe, and their answers helped to shape the political culture of the 20th century. This course examines theories of revolution and utopia and responses to them in literature, art and film. Primary case study is Russia and the Soviet Union, with a comparative look at influential European works.  
**Area:** Humanities  
**Writing Intensive**

**AS.300.317. The Russian Novel. 3 Credits.**  
This course introduces students to the nineteenth century Russian novel and considers its lasting impact on world culture. We will read classic masterpieces of the psychological and philosophical novel, and their experimental forerunners. Short lectures on historical and cultural context and on methods of literary analysis will be combined with intensive group discussion. Novels include Anna Karenina, Crime and Punishment, Eugene Onegin, Dead Souls, and Hero of our Time.  
**Area:** Humanities  
**Writing Intensive**

**AS.300.320. Lover's Discourse. 3 Credits.**  
Much of what we know about love and desire we owe to fiction's ability to evoke these experiences. Consider for example that the publication, in Germany, of The Sorrows of Young Werther inspired young men across Europe to dress and behave just like him. We will study in this course a selection of love stories chosen because they break the mold and question their conventions. Taking a critical distance from these tales of seduction, we will examine not only the manifestations and meanings of love, but also the configurations of gender they inspire and reflect. Indeed, just as nowadays film and television represent, as well as mold, our identities as desiring subject, fictions from the eighteenth-century onwards have shaped our current understanding of gendered subjectivities. The readings for this seminar (all available in English) include: Austen, 'Persuasion'; Balzac, 'The Girl with the Golden Eyes' and 'Sarrasine'; Barthes, 'Lover's Discourse'; Goethe, 'The Sorrows of Young Werther'; Mann, 'Death in Venice'; Rousseau, excerpts from 'Julie or The New Heloise'; Sulzer, 'A Perfect Waiter', Winterson, 'Written on the Body'.  
**Area:** Humanities  
**Writing Intensive**

**AS.300.324. Cinema of the 1930s: Communist and Capitalist Fantasies. 3 Credits.**  
Comedy and musical comedy film flourished in the USA during the Great Depression as well as in the USSR during the Stalinist Great Terror. This course will compare films of the era in a variety of genres (musical, epic, Western, drama), examining the intersections between politics and aesthetics as well as the lasting implications of the films themselves in light of theoretical works on film as a medium, ethics and gender.  
**Area:** Humanities
AS.300.334. Love and its maladies. 3 Credits.
Much of what we know about love and desire we owe to fiction’s ability to evoke these experiences. Consider for example that the publication, in Germany, of The Sorrows of Young Werther inspired young men across Europe to dress and behave just like this lover. Just as nowadays film and television represent, as well as mold our conceptions of love, love-stories from the eighteenth-century onwards have given shape to gendered subjectivities in ways that still matter now. As, intriguingly, illness is a recurrent theme in many modern love stories, we will be prompted to decipher signs and symptoms in the bodies of mind of our protagonists. Why is it that in Western cultures, passion is tightly interwoven with a landscape of pain, suffering, and disease? In studying texts that represent major aspects of a romantic sensibility, we are indeed invited to trace the steps of a history of the body increasingly defined by gender and by medical knowledge. The readings for this class (all available in English) include: Austen, Persuasion; Balzac, The Unknown Masterpiece; Barthes, Lover’s Discourse; Goethe; The Sorrows of Young Werther; Mann, Death in Venice; Winterson, Written on the Body.
Area: Humanities

AS.300.367. Seeing Like a Woman. 3 Credits.
What does it mean to “see,” think, desire, feel, speak, act, or write “like a woman”? Gendered notions of seeing have had an impact on politics and society long before the #metoo movement and far beyond debates about women’s rights in isolation. This seminar examines the issues of female desire, subjectivity, spectatorship and performance in fiction, poetry, memoir and film from a variety of cultures and theoretical perspectives. This is not a course on “the image of the woman” in literature, film or politics, but a course in which we examine the ways in which both male and female theorists, novelists, poets, and filmmakers have imagined how women “see,” feel, think and behave.
Area: Humanities Writing Intensive

AS.300.372. Dance and the Russian Avant-Garde. 3 Credits.
This course will explore the relationship between art and dance during the explosion of artistic creativity at the time of the Russian Revolution (1900s-1920s) as well as the influence of the Russian Avant-Garde on modern dance and theories of movement through the 20th century. We will examine how dance both gave physical form to aesthetic, philosophical and political ideas and catalyzed new forms of thinking about the human body and modern spaces. Lecture and discussion of readings and screenings will be paired with a weekly movement workshop in the dance studio that will introduce students to different forms and theories of avant-garde and modernist dance and movement theory. No prior dance experience or knowledge of Russian is required.
Area: Social and Behavioral Sciences

AS.300.439. Stories of hysteria. 3 Credits.
Many are the stories that recount episodes of hysteria, and we owe them not only to medicine. To the modern observer, they are a puzzle, involving strange beliefs about wandering wombs, demonic possession, and female virtue (or lack thereof). Closer to our time, contemporary media, as well as accounts in the social and clinical sciences have evoked cases of “mass hysteria” in America and across the globe. Marriage, it was thought for a long time, might be the best cure, which might be the reason case-studies of this illness can be as intriguing and troubling as novels. Against a backdrop of medical and historical materials, we will examine a selection of stories, from the 17th century onward, that evoke aspects of hysteria. They serve as our case-studies and as prompts to study an illness born at the convergence of histories and myths, of medical science, and of cultural and gender assumptions. Among the notions we will explore: The birth of psychoanalysis, trauma and PTSD, the concept of repression, the visual aspects of an illness and its spread in the arts, including cinema.
Area: Humanities Economics

AS.180.252. Economics of Discrimination. 3 Credits.
This course examines labor market discrimination by gender, race and ethnicity in the United States. What does the empirical evidence show, and how can we explain it? How much of the difference in observed outcomes is driven by differences in productivity characteristics and how much is due to discrimination? How have economists theorized about discrimination and what methodologies can be employed to test these theories? What has been the impact of public policy in this area; how do large corporations and educational institutions respond; and what can we learn from landmark lawsuits? The course will reinforce skills relevant to all fields of applied economics, including critical evaluation of the theoretical and empirical literature, the reasoned application of statistical techniques, and analysis of current policy issues.
Prerequisite(s): AS.180.102
Area: Social and Behavioral Sciences Writing Intensive

English

AS.060.201. The Nineteenth Century British Novel. 3 Credits.
Reading major novelists from the nineteenth century including Austen, C. Brontë, Dickens, Eliot, Hardy, and Conrad. We will pay attention to formal conventions, and relation to social and historical context.
Area: Humanities

AS.060.205. Feminist Fiction: Violence, Sex and Gender. 3 Credits.
This course will start with passages from Lysistrata and the Book of Judges, and have as a running concern the overlapping structures of violence, race and gender. Novels will include the following pairs: Jane Eyre and Wide Sargasso Sea, The Bluest Eye and Bastard Out of Carolina, The Handmaid’s Tale and Octavia Butler’s novella Bloodchild.
Area: Humanities
AS.060.320. Icons of Feminism. 3 Credits.
This course looks at four crucial figures who have haunted feminist thought and responses to feminism over the centuries. Sappho, known as the first female poet, remains an enigmatic icon of feminine desire and creativity; Antigone, the daughter of Oedipus and the heroine of Sophocles's play Antigone, still inspires feminist analyses of women's relationship to law, the state and civil society; Joan of Arc, the militant maid of Orleans, troubles thinking about women and violence as well as women, religion and spirituality. The last figure is Mary Wollstonecraft, often cited as the first modern feminist. The course will examine literary works written about these iconic figures, as well as contemporary feminist writing about their influence and viability as models for the future of feminism.
Area: Humanities
Writing Intensive

AS.060.384. Virginia Woolf and Bloomsbury. 3 Credits.
An exploration of the achievements and investments of one of the most influential coteries in the history of Britain. In addition to delving into key fictions by Virginia Woolf, we will examine novels by Leonard Woolf and E. M. Forster, art criticism by Roger Fry and Clive Bell, biographical essays by Lytton Strachey, economic writings by John Maynard Keynes, and poetry by T. S. Eliot.
Area: Humanities
Writing Intensive

AS.060.388. Old World/New World Women. 3 Credits.
The course considers the transatlantic writing of three women in the early modern period, Anne Bradstreet, Aphra Behn, and Phillis Wheatley. We will consider issues of identity, spatiality, religion, commerce, enforced labor, sexuality, race, and gender, along with literary tradition, formal analysis and poetics. We will read a good deal of these early women writers. Foremost in our mind will be the question of how perceptions of space and time are mediated through the global experiences of early modernity.
Area: Humanities
Writing Intensive

AS.060.620. Thinking with Scale: Frameworks in Early Modernity.
Concepts include expansion, crowding, data collection, the miniscule, temporality, the planetary and the cosmic in the first age of European mercantile activity and colonial expansion. With readings from world-systems theory and theories of the anthropocene, our case studies will comprise pre-modern English literary texts, including Milton, Paradise Lost, Anne Bradstreet, The Four Monarchies, early modern science (Hooke, Newton), Defoe, The Storm, and early British and colonial American holdings in the Garrett Library. The class will be hands-on, working with material from Special Collections, and will include working towards a digital project (no digital project background necessary).
Area: Humanities
Writing Intensive

Film and Media Studies

AS.061.389. Women Making Movies (Europe). 3 Credits.
This course introduces students to some of the most exciting female directors of the 20th century, asking how gender shaped the production and reception of their films. Do particular directors attribute any significance to the fact of being a woman? Does a director's gender shape her choice of subject or how she represents it? Does wider knowledge of works directed by women change our sense of the canon and authorship? Covers non-U.S. films, strongly encouraged for FMS majors and minors. Cross-listed with WGS. No pre-requisite.
Area: Humanities

AS.061.391. Love and Film. 3 Credits.
In this course, we explore different understandings of 'love' and the way that film has dealt with the concept as a medium. We explore a variety of approaches to the question of 'love' - from the agapic to the familial to the romantic - through a series of interdisciplinary readings ranging from philosophy to anthropology. We will also equally explore the question of how film has engaged with the question of love as a concept, and what depictions of human affection - from the general to the personal - it has offered us. Screenings are required for this course. Lab fee: $50
Area: Humanities
Writing Intensive

AS.061.393. Violent Attractions. 3 Credits.
Violence, ritualized and anarchic, celebrated and deplored in popular film from silent era melodrama and slapstick comedy to contemporary sports, crime, and combat films. Twice-weekly screenings; oral presentation; two essays, 6 & 12 pp.Lab fee: $50
Area: Humanities

AS.061.397. French Masculinities. 3 Credits.
Examines changing ideals of masculinity in France after 1960 as they found expression on film, rooting the work of iconic stars and directors in their cultural, political and historical contexts.
Area: Humanities

German Romance Languages Literatures

AS.211.331. Vagabonds and Ramblers: Space & Place in Women's Cinema. 3 Credits.
In recent times in Italy, a new generation of women filmmakers has found its own space in the traditionally male dominated film industry. This "counter cinema" abounds with female city walkers, migrants, vagabonds and other types of urban nomads, whose movement through space signifies a quest for freedom, gestures of protest and rebellion, and a search for place. We start by looking at the work of a pioneer filmmakers such as Elvira Notari, the first woman director in Italy, and then discuss the issue of gender and space in contemporary films by directors Francesca Comencini, Alice Rohrwacher, and Eleonora Danco.
To enrich the analysis, we shall also examine films directed by non-Italians who deal with the theme of women's mobility and their centrality/marginality from different socio-geographic contexts. Other directors included will be Agnès Varda (France), Chantal Akerman (Belgium), Haifa al-Mansour (Saudi Arabia), and Xiaolu Guo (China) Readings will include essays by Laura Mulvey, Ann E. Kaplan, Linda Williams, and Patricia White.
Area: Humanities

AS.211.362. Critical Knowledges: Black, Feminist, Postcolonial, Queer and Other. 3 Credits.
Is it clear what "knowledge" means? Does it have the same meaning historically across different academic disciplines and in daily life? Rather than posing questions about the nature of knowledge explored in the branch of philosophy known as epistemology, this course will propose a minoritized critical inquiry into the matter of knowledge/s. Through works by Black, feminist, queer, and postcolonial theorists such as Patricia Hill Collins, Eve Kosofsky Sedgwick and Donna Haraway, we will address alternative epistemologies that operate with "partial" or "unfinished" models. Understanding knowledge as unfinished rather than universal enables consequential dialogue to take place: no longer focused on judgments, thought remains open to the ideas of others.
Area: Humanities
Writing Intensive
AS.211.364. Drama Queens: Opera, Gender, and the Poetics of Excess. 3 Credits.
What is a drama queen? According to the Oxford English Dictionary, a drama queen is "a person who is prone to exaggeratedly dramatic behaviour" and "a person who thrives on being the centre of attention." While drama queens exist among us, the world of opera is certainly one of their ideal environments. Echoing back to their tragic fates, the powerful voices of Dido, Medea, Violetta, and Tosca never ceased to affect their empathetic public. In fact, excess and overreactions are two main features of the operatic experience both on stage and in the audience. By focusing on the ways in which operatic characters are brought to life, the course explores the social, political, and gender dynamics that inform the melodramatic imagination. Students will have the opportunity to attend live HD broadcasts of Verdi's La Traviata and Tchaikovsky's Eugene Onegin from the Metropolitan Opera. No musical skills required.
Area: Humanities
Writing Intensive

AS.211.374. Gendered Voices. 3 Credits.
The course will explore the notion of 'voice' in order to show how poetry, literature, philosophy, and music have been dealing with it throughout the ages. In particular, by focusing on classical figures such as the Sirens, Circe and Echo, as well as by considering the seminal discussions of the 'voice' in Plato and Aristotle, the course will address the gendered nature of the voice as a tool to seduce and manipulate the human mind. More specifically, the course will discuss the ways in which male, female, queer, gendered and un-gendered voices embody different functions. Course materials include classical, medieval and early modern sources as well as later rewritings of myths concerned with the voice by authors such as Jules Verne, Karen Blixen, Giuseppe Tomasi di Lampedusa, and Italo Calvino. A selection of theoretical works (e.g. Cavarero, Silverman, Dollar, Butler) will also be discussed. The course is taught in English and all materials will be available in English translation; Italian majors and minors should enroll in section 2.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.211.400. Topics in Romance Literatures. 3 Credits.
This course provides an introduction to Romance Literatures from their origins to the present day. Topics and texts discussed vary year-to-year (e.g. the idea of progress in modern Europe; literature and war; poetry and music in medieval and Renaissance Europe). Special attention will be given to how Romance literatures and cultures have evolved in dialogue with each other throughout the centuries. The main language of teaching and discussion will be English, but students will be encouraged to read the materials in the original language compatibly with their skills. The course is a requirement for the Romance Languages and Literatures major.
Area: Humanities
Writing Intensive

AS.212.318. Women in French Literature of the 17th and 18th Centuries. 3 Credits.
This course will examine the changes in the relationship of women to literature in France before the French Revolution from several points of view: (1) What were the social and intellectual contexts of gender distinctions? (2) How did men writing about women differ from women writing about women? (3) How were these questions affected by the changing norms of literary productions? Texts by Mme. de Sévigné, Molière, Mme. de Lafayette, Prévost, Diderot, Rousseau, Laclós, and Beaumarchais.
Area: Humanities
Writing Intensive

AS.213.321. Bodies and Pleasures. 3 Credits.
Taught in English. This course traces a literary history of sexuality from the Middle Ages to contemporary women's writing. We will analyze how sexual pleasure changed over time. In particular, we will discuss what role literature plays in the reproduction and transformation of bodily pleasures. The course explores how the pleasures of bodies are imagined in and through literature, but also whether words are bodies that give pleasure and perhaps even have their own pleasures. Authors discussed will include Boccaccio, Cleland, Rousseau, Schlegel, Kleist, Hoffmann, Novalis, Arnim, Büchner, Freud, Rilke, Kafka, Rich, Foucault, Kristeva, Cixous, Giddens, and Winterson.
Area: Humanities

AS.213.350. Wie wir begehen. 3 Credits.
Taught in German. Human desire and sexuality proves of vital concern in German-speaking countries: from the invention by German sexologists of much of the terminology still in use today to the so-called sexual revolution in the late sixties to new perspectives on the topic today. We will study film, fiction and non-fiction. Recommended Background: AS.210.362
Area: Humanities

AS.213.359. Kleist. 3 Credits.
Heinrich von Kleist was one of the most intriguing literary figures of the early nineteenth century in Germany. Neither Classicist nor Romanticist, he developed a unique style that combines such different elements as complex rhythmicality, drastic imagery, and philosophical precision. His novellas, plays, and nonfiction explore questions of gender, colonialism, the tragic, and of innocence and double dealing. Among the texts we will read together are 'The Betrothal in St. Domingo' (Kleist's literary response to the Haitian revolution), 'Penthesilea' (the play about lovers who can find each other only in war ends in a splatter scene), and 'Marquise of O' (the story of a woman whose father rejects her because she finds herself pregnant, and yet she has no memory of the sexual intercourse that must have led to her current situation). Language of Instruction: German
Area: Humanities

AS.213.373. Sex und Macht. 3 Credits.
We will discuss postwar and contemporary literature and films that grapple with the effect of unequal power structures on sexual relations. Taught in German.
Area: Humanities

AS.213.763. Contemporary Theater: Gender/Violence.
The course explores 21st-century German theater in its diverse aesthetic and textual forms. Due to comparatively generous funding, German non-commercial theater has over the last decades been able to develop, adapt, and maintain a great variety of at one point "experimental" artistic styles, including frequently stark depiction of gender and violence. We will focus on the ways in which the productions take up, amplify, displace, disrupt, and/or reinforce cultural codes and images of gender and violence both in their symbolic and physical dimension. Topics include the "directors' theater," political theater, "pop-theater," "discourse-theater," "new documentary theater," "post-migratory theater," postcolonial theater and live art. The readings may include Nobel laureate Elfriede Jelinek, Dea Loher, René Pollesch, Milo Rau, Falk Richter, Sasha Marianna Salzmann and various works of shared authorship such as She She Pop, Rimini Protokoll, Gintersdorfer/Kläßen, and Yael Ronen. The Tuesday sessions will be used for the joint viewing of production recordings. Taught in English. Course material in German. No sessions after March 27th.
Area: Humanities
History

AS.100.258. Theorizing Marriage in the United States: Historical and Present Considerations. 3 Credits.
This course provides a historical and theoretical overview regarding thinking about marriage. Students will think critically about how marriage has changed over time, and marriage in contemporary culture.
Area: Humanities, Social and Behavioral Sciences

AS.100.272. Online: Prostitution in a Global Perspective, 1750 to Present. 3 Credits.
This course examines topics such as the 'medical model' of prostitution regulation, the rise of international anti-prostitution, and the responses of modern nationalists to sex work in a global context. *This course will view films complementary to the subject but it is not considered a Film Studies course. Therefore, montages and mise-en-scene will not be discussed.
Area: Humanities

AS.100.283. Making and Unmaking Queer Histories, 1800-Present. 3 Credits.
Making and unmaking queer histories introduces students to some of the major themes and historical developments which shape contemporary understandings of past queer lives and communities in the United States and Western Europe since the nineteenth century.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.100.323. America in the 1960s. 3 Credits.
The years between 1959, when the course begins, and 1971, when it ends, were tumultuous and divisive. This course explores the political, racial, and cultural struggles of a half a century ago.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.100.327. Gender and Sexuality in Reformation and Counter-Reformation Europe. 3 Credits.
This course will discuss the centrality of gender, sexuality, and gendered rhetoric to the genesis and development of the Protestant Reformation and Catholic Counter-Reformation in Europe.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.100.357. Panic and Liberation: The Politics of Sex in 20th Century Europe. 3 Credits.
This course examines the 20th century history of sexual attitudes, desires, behaviors, identities, communities, and movements in Western Europe (most notably, Germany, France, and the United Kingdom).
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.100.359. Gender, Patriarchy, and the English Revolution. 3 Credits.
This course explores the varied experiences of gender and gender roles in seventeenth-century Britain and analyzes how these roles were challenged, changed, and sometimes upended during the English Revolution (1642-1660).
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.100.408. Theorizing the Age of Enormity: Social Theory and the History of the 20th Century. 3 Credits.
We will read and analyze key works of social and critical theory produced in relation to 20th and 21st century problems of state and society, nationalism, empire, totalitarianism, genocide, capitalism, political order, gender, race, sexuality, secularism, religion, environmental catastrophe. Possible readings include Weber, Du Bois, Adorno, Arendt, Foucault, Balibar, Beckamong others.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.100.421. Sex, Law and Islam. 3 Credits.
ISIS, "virgins" in paradise, the sexual slavery of Yazidi women... This course will use anthropological and historical studies to examine the long history of how rules and understandings about sex, sexuality, and gender have mattered in how people think about Islam.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.100.424. Women & Modern Chinese History. 3 Credits.
This course examines the experience of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women's experiences for their own political and social agendas.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.100.426. Popular Culture in Early Modern Europe. 3 Credits.
Witchcraft, magic, carnivals, riots, folk tales, gender roles; fertility cults and violence especially in Britain, Germany, France, and Italy.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.100.430. Gender and Sexuality in African History. 3 Credits.
An upper-level history reading seminar with a focus on histories of gender and sexuality in colonial and postcolonial Africa.
Area: Humanities, Social and Behavioral Sciences

AS.100.498. History of the Family & Gender in the United States. 3 Credits.
Topics include: history of emotions; politics of sexuality and marriage; impact of race, ethnicity, and class on family life; women and gender inequality. Primarily colonial era through the early twentieth century, with some attention to contemporary politics of family, gender, and sexuality.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.100.635. Topics in European Imperial History. 3 Credits.
This graduate reading course covers key topics in European Imperial History, c. 1600-1900.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.100.713. Black Womanhood.
What does a usable history of black womanhood (black queer and trans womanhood inclusive) look like? Black women's history across time and space.
Area: Humanities, Social and Behavioral Sciences

AS.100.725. Sex and Slavery II.
Research and methods in the field of sexuality and slavery studies. Part 2: Caribbean & African Continent.
Area: Humanities, Social and Behavioral Sciences
AS.100.765. Problems in Women and Gender Studies.
An exploration of recent work in women's and gender history, focusing on some of the following: sexuality, cultural production, politics, family formation, work, religion, difference, and civic orders.

History of Art
AS.010.104. Freshman Seminar: Investigating Gender and Sexuality in Mesopotamian Art. 3 Credits.
Specifics of gender and sexuality are not universal norms, but rather are the product of particular cultural formations. Works of art are especially critical in shaping and conveying these particularities. This seminar examines how artistic products expressed and constructed gender identities and notions of sexuality in ancient Mesopotamia from the 4th millennium to the Hellenistic period. As a group, we will explore a variety of case studies, through which students will be introduced to ancient Mesopotamian culture and will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Humanities

AS.010.301. Michelangelo: Religion, Sexuality, and the Crisis of Renaissance Art. 3 Credits.
The course will focus on the controversies surrounding the representation of the body in the writings and figurative art of Michelangelo and his contemporaries, the historical circumstances under which the most admired artist in Europe was attacked as a blasphemer and an idolator, and the effect of widespread calls for censorship on his later production. The writings of Michelangelo, Pietro Aretino, Benvenuto Cellini and own writings will be considered with a focus on their staging of an ambivalent and transgressive eroticism.
Area: Humanities

AS.010.331. The Renaissance Body Exposed: Exhibiting the Nude in European Art 1400-1550. 3 Credits.
Explores the extraordinary currency of the naked human figure in pre-modern European visual culture, only inadequately accounted for by explanations such as the 'rise of naturalism' or the 'revival of antiquity.' Will also explore curatorial questions arising from an exhibition currently in preparation on the Renaissance nude. Assignment in the form of catalog texts and a 'virtual exhibition.'
Area: Humanities
Writing Intensive

History of Science, Medicine, and Technology
AS.140.381. History of Reproduction. 3 Credits.
This course investigates the history of reproduction in American medicine, science, politics, and culture. It explores changing ideas about reproductive bodies, sexuality, and the family as well as practices of contraception, conception, and childbirth.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

Music
AS.376.344. Powerful Women in Opera. 3 Credits.
Many opera scholars have noted that opera abuses its female characters. Many operatic heroines die, whether from violent acts or chronic diseases. However, women in opera also wield great power through their voices as ambitious queens, cunning servants, magical beings, and femmes fatales. In this course we will examine how these female characters operate through explorations of the operas' historical context, their texts and scores, and modern performance practice. Spanning from the 17th to 21st centuries, the repertoire studied in this class will provide an introduction to opera history. At the same time, we will delve deeply into different ways to do close analyses of opera through the lens of gender, reading the work of such thinkers as Carolyn Abbate, Naomi Andre, Adriana Caverero, Catherine Clément, and Wayne Koestenbaum.
Area: Humanities

Near Eastern Studies
AS.130.105. Freshman Seminar: Sex, Drugs, and Rock & Roll in Ancient Egypt. 3 Credits.
This seminar explores the social roles of sexuality, alcohol, other drugs, music, fragrance, and sensuality in secular and religious areas of Egyptian life, largely but not exclusively during the New Kingdom, ca. 1500 to 1000 B.C. The ancient attitudes towards these elements will be explored through the ancient textual sources in translation and the artistic representations.
Area: Humanities
Writing Intensive

AS.130.330. The Garden of Eden. 3 Credits.
References to the story of the Garden of Eden can be found in every significant issue of our time, from sex to politics, from race to the environment. The course will examine the story itself as well as how it's been interpreted, leading up to today. Enthusiastic participation required.
Area: Humanities

AS.130.395. Being... in Ancient Egypt: Ethnicity, Sexuality, and Gender. 3 Credits.
What was it like to live in ancient Egypt? At first this question may seem deceptively straightforward. But with further thought, its complexity becomes clear. Who are we concerned with? How the king lived? A poor farmer? His wife or children? A foreign immigrant? Moreover, what is our evidence for life in Egypt? Do all of the sources support similar interpretations? This course will begin to tackle these questions by considering the experiences of different people in ancient Egypt.
Area: Humanities

Philosophy
AS.150.191. Freshman Seminar: Feminism. 3 Credits.
Historical and contemporary readings in feminist philosophy.
Area: Humanities
Writing Intensive

AS.150.400. Simone de Beauvoir. 3 Credits.
Seminar on Beauvoir's moral philosophy, covering the major works of the 1940s. Readings will include selections from The Blood of Others, Pyrrhus and Cinesas, All Men are Mortal, The Ethics of Ambiguity, and The Second Sex. Open to graduate students and advanced undergraduates. (Beginning undergraduates should contact Professor Kosch.) No prerequisites.
Area: Humanities
Writing Intensive
AS.150.404. The Idea of Power. 3 Credits.
The Idea of Power surveys seminal texts in the history of political thought on the nature, promise, and dangers of political and social power; it also critically engages contemporary texts on race and gender power relations.
Area: Humanities

AS.150.436. Philosophy of Gender. 3 Credits.
In this class we will examine philosophical questions about gender, and about the intersections between gender and other social categories including race, class and sexuality. We will focus specifically on questions about the metaphysics of gender and other social categories.
Area: Humanities

Program in Museums and Society
AS.389.230. Queer & Trans Public History. 3 Credits.
This course introduces students to a blend of public history, queer studies and transgender studies. Students learn oral history and archival research methods as they draw on and contribute to the university’s archival, museum, and library collections.
Area: Humanities, Social and Behavioral Sciences

AS.389.325. Women of the Book: Female Mystics, Miracles, and Material Culture in Early Modern Europe. 3 Credits.
Students will study and assess JHU’s new, unparalleled rare book and manuscript collection about the spiritual lives of women at the crossroads of religious mysticism, miracles, and material culture, 1450-1800.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.389.346. Scribbling Women in the Literary Archive. 3 Credits.
Students examine select texts and archival materials related to Emily Dickinson, Frances Ellen Watkins Harper, Edith Wharton, Ida B. Wells, Charlotte Perkins Gilman, Sui Sin Far, Alice Duer Miller, and Zora Neale Hurston. Students interrogate how these writers navigated the constraints of gender, as informed by race and class, in the decades before and after the 19th Amendment and consider literary collecting in relation to gendered cultural politics.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.389.420. Curatorial Seminar. 4 Credits.
In collaboration with a local museum, conceptualize and develop an exhibition, potentially including but not limited to: checklists, exhibition texts, interpretive strategies, and programming. Exhibition theme varies year to year. Concepts, ethics and practicalities of curation are key concerns. Research visits to regional museums and private collections as relevant.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

Psychological Brain Sciences
AS.200.204. Human Sexuality. 3 Credits.
Course focuses on sexual development, sexuality across the lifespan, gender identity, sexual attraction and arousal, sexually transmitted disease, and the history of commercial sex workers and pornography. Please note that the use of electronic devices is not permitted during this class, in order to promote the full interactive potential of this engaging seminar-style offering. Open to Juniors & Seniors within the following majors/minors: Behavioral Biology; Biology; Cognitive Science; Medicine, Science & the Humanities; Molecular & Cellular Bio; Neuroscience; Psychological & Brain Sciences; Public Health; Sociology; Study of Women, Gender, & Sexuality.
Corequisite(s): Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester.
Area: Social and Behavioral Sciences

Public Health Studies
AS.280.225. Population, Health and Development. 3 Credits.
This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS. This course is restricted to Public Health Studies majors. Students minoring in Study of Women, Gender, and Sexuality can register with instructor approval.
Area: Social and Behavioral Sciences

Sociology
AS.230.154. Freshman Seminar: Gender, Health and Aging. 3 Credits.
In this course students will develop an understanding of the ways in which gender structures health and well being through adulthood and later life. The experience of sexual minorities and the intersection of gender with class and ethnicity will also be discussed. Students will be expected to participate actively and lead discussions on specific topics.
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.223. Housing and Homelessness in the United States. 3 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Area: Social and Behavioral Sciences

AS.230.255. The Sociology of Gender and Sexuality. 3 Credits.
This course will examine the processes by which gender is socially constructed and how society and its social institutions structure life chances based on gender. It employs Barbara J. Rismans's (2004) conceptualization of “gender as a social structure”: “Gender is deeply embedded as a basis for stratification not just in our personalities, our cultural rules, or institutions but in all these, and in complicated ways.” Course lectures and assignments for this course center on the distinction between biological sex and sociological gender, causes and consequences of gender inequality, and the intersectionality of gender, sexuality, race-ethnicity, class, religions, and other social structures in contemporary society and in everyday life. Students will examine theories of gender through scholarly literature, and popular films are used to help offer insight into gender theory, research, and social and academic commentary. Though the course will primarily cover gender as enacted in the United States, other countries and their gender dynamics will also be addressed.
Area: Social and Behavioral Sciences

AS.230.316. African American Family. 3 Credits.
This course is an examination of sociological theories and studies of African-American families and an overview of the major issues confronting African-American family life. The contemporary conditions of black families are explored, as well as the historical events that have influenced the family patterns we currently observe. Special attention will be given to social policies that have evolved as a result of the prominence of any one perspective at a given point in time.
Area: Social and Behavioral Sciences
AS.230.324. Gender and International Development. 3 Credits.
This course employs a comparative perspective to examine the gendered impact of international development experiences and policies. Students will discuss the historical evolution of how the concept of gender has been constructed, conceptualized, and integrated into international development theory and practice. The course will also examine how greater international development. In particular, we will examine structural theories of poverty reduction, individual theories of power and processes of stratification at the household and family level. Specific issue areas will include the globalization, class and work political participation and social movements. Cross-listed with International Studies (CR IR). Fulfills Economics requirement for IS GSCD track students only.
Area: Social and Behavioral Sciences

AS.230.370. Housing and Homelessness in the United States. 3 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Prerequisite(s): Students may not have previously taken AS.230.223.
Area: Social and Behavioral Sciences

AS.230.388. Sociology of the Family. 3 Credits.
Sociological perspectives on contemporary family life, including marriage and divorce, cohabitation, single parenthood, same sex partnerships, children's wellbeing, balancing work and family responsibilities, domestic violence, and government policy toward families.
Area: Social and Behavioral Sciences

Theatre Arts Studies

AS.225.318. 21st Century Female Playwrights. 3 Credits.
This is a writing intensive class exploring the current wealth of women playwrights, including Pulitzer Prize winners: Wendy Wasserstein, Paula Vogel, Lynn Nottage, and Jackie Sibbiles Drury (2019 Prize for FAIRVIEW). We will discuss Script Analysis and read (and see) plays by numerous writers including Claire Barron, Kia Corthron, Theresa Rebeck, Sarah Ruhl, Danai Gurira, Caleen Sinnette Jennings, and Hansol Jung. This class will include a mid-term and a Final Paper.
Area: Humanities
Writing Intensive

Women, Gender, and Sexuality, Minor Requirements

Students can receive a minor in women, gender, and sexuality by completing six one-semester courses. The following courses are examples of the WGS core curriculum (363 prefix):

- Introduction to the Study of Women, Gender, and Sexuality
- Feminist and Queer Theory
- Gender and Sexuality Beyond the Global West
- Health, Medicine, Gender, and Sexuality

- Internship/Practicum (offered in collaboration with the JHU Center for Social Concern, the internship-practicum combines academic work with volunteer experience)

Students are asked to complete at least two courses from the core WGS curriculum and may choose among the courses cross-listed with other departments for the remaining four. At least four 300- or 400-level courses are required for the minor; no more than two courses can be at the 100- or 200-level. Students must earn a C- or better in all minor requirements and courses may not be taken satisfactory/unsatisfactory.

Please direct inquiries about the undergraduate minor to Katrin Pahl (kpahl@jhu.edu).

1 These are either courses cross-listed with the Study of Women, Gender, and Sexuality or courses AS.363.xxx.

Theatre Arts Studies

http://krieger.jhu.edu/theatre-arts (http://krieger.jhu.edu/theatre-arts/)

The program offers a comprehensive approach to the arts of acting, directing, playwriting, and theatre history, along with the fundamentals of technical direction, play production, play analysis, and theatre management.

For those students who intend to prepare for a career in the theatre, the courses offered are taught exclusively by established professionals with experience on Broadway, in the best of regional theatres, and in many countries of the world.

For those students not focused on a career in theatre arts, the courses offer a broader perspective, an understanding of societal traditions and culture, and an appreciation for the arts, whether theatrical, literary, musical, or visual. Students pursuing careers in medicine, engineering, law, international relations, science, and others have been challenged and enriched by the school's courses in theatre arts.

For those who seek careers in the arts, the acting and directing workshops, playwriting courses, and independent study opportunities provide rigorous training in acting and other theatre crafts, as well as an appreciation for and an understanding of the history of dramatic arts, its cultural significance, and the industries it has produced.

Located in the program's home, the historic Merrick Barn, The Johns Hopkins University Theatre provides a vehicle for the fulfillment of student lab requirements. The University Theatre produces several plays each year in the John Astin Theatre and occasionally in the Meyerhoff Auditorium at the Baltimore Museum of Art, which adjoins the Homewood campus. Classes are also held in the Barn.

**Courses**

**AS.225.100. Introduction to Theatre. 3 Credits.**
An introduction to the drama: how and why the theatre came into being; its role in human history; and how changing social structures in different regions and epochs have shaped different kinds of theatre, plays and performance. Also: how theatre "works" for us and on us, and the major plays of world drama.
Area: Humanities

**AS.225.101. Acting I. 3 Credits.**
An introduction to the fundamentals of acting through exercises, improvisation, and work on scenes from established plays and Shakespearean sonnets, based on the teachings of Stanislavsky, Greet, Boleslavsky, Michael Chekhov, Clurman, and Meisner. This course also includes a brief survey of major playwrights. Plays will be read, analyzed, and employed in scene work.
Area: Humanities

**AS.225.201. Acting II. 3 Credits.**
As in Workshop I, the principal classroom activities will consist of scene work, exercises, lectures, and discussion. Some rehearsal will also take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises. Recommended Course Background: AS.225.301
Area: Humanities

**AS.225.202. Voice and Speech for the Actor. 3 Credits.**
It has been said that 90% of what an actor does onstage is dependent on being effortlessly heard and understood by their audiences. This course is designed to establish the tools for the actor to begin to create this foundation. Using a combination of both the benchmark texts by Edith Skinner and Kristin Linklater, along with in-class exercises and monologues, we will begin the process of exploring both vocal power through breathing and breath control, and the fundamental tools of clarity in the speaking of a dramatic text onstage.
Area: Humanities

**AS.225.205. Performing Musical Theatre. 3 Credits.**
Effective performance in musical theatre demands a committed analysis of the musical and dramatic values of the song and the libretto from which it springs, in order to develop a fresh, organic interpretation. This course will provide you with the training to both analyze and interpret musical theatre scenes and songs and to make the most of them in performance. Instructor Permission Only.
Area: Humanities

**AS.225.218. ANGELS IN AMERICA (The Play) The Millennium Shift in American Culture and Politics. 3 Credits.**
Tony Kushner's epoch-making play weaves together astonishingly diverse sides of America in a broad tapestry: a modern work that emerged at the end of the 20th Century, now being revived world wide: it provides keys to understanding the American zeitgeist and the coming transformations of the culture. In one pivotal work we find the emergence of LGBT rights, the Mormon Church, the AIDS epidemic, the new "spirituality," the Reagan-era transformation of both government and business, and the looming figure of Roy Cohn whose influence in American politics "behind the scenes" ranged from the Rosenberg trial to his work as counsel for the McCarthy Committee in the 1950s: and even his legacy in the 2016 as primary political and business mentor of the current President of the United States.
Area: Humanities, Social and Behavioral Sciences

**AS.225.300. Contemporary Theatre & Film. 3 Credits.**
An introduction to the performing arts, including an overview of theatre history, acting styles and the interaction of art and society. A personal view from inside.
Area: Clurman

**AS.225.303. Acting III. 3 Credits.**
Special attention is given to the development of spontaneity and emotional freedom using the principles of Workshops I and II. Hands on work with John Astin's "The Process" and the second Silverberg workbook are employed, along with the Uta Hagen text. Boleslavsky and Michael Chekhov are introduced. The Clurman, Meisner, Stanislavsky and Strasberg approaches are included. Substantial out of class time is required. Recommended Course Background: Two acting courses.
Area: Humanities

**AS.225.307. Directing Seminar. 3 Credits.**
Fundamentals of mounting, casting and staging the play; various theories of directing; students must commit to a practical lab. It is understood that students have a working familiarity with acting fundamentals.
Area: Humanities

**AS.225.308. Shakespeare in Performance. 3 Credits.**
Students will work with a selection of Shakespeare's plays — AS YOU LIKE IT, RICHARD III, CYMBELINE — in exploring specific ways in which the power of the lines can be translated dynamically and immediately into vocal and physical performance. This course can be repeated for credit, because it covers different topics. (Some background in the acting sequence is encouraged).
Area: Humanities

**AS.225.310. Stagecraft. 3 Credits.**
A hands-on approach to the technical and theoretical elements of production. Meets in the Merrick Barn Scene Shop. Permission Required.
Area: Humanities

**AS.225.311. Scene Study. 3 Credits.**
Classes and scenes tailored to the needs of the actors. Some rehearsal will take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises.
Area: Humanities

**AS.225.314. Theatre: Tech Direction. 3 Credits.**
An introduction to Technical Direction including pre-production and production with an overview of materials, tools, rigging and safety, together with design and its implementation.
Area: Humanities
AS.225.315. Scene Study 2. 3 Credits.
Classes and scenes tailored to the needs of the actors. Some rehearsal will take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises.
Area: Humanities

AS.225.318. 21st Century Female Playwrights. 3 Credits.
This is a writing intensive class exploring the current wealth of women playwrights, including Pulitzer Prize winners: Wendy Wasserstein, Paula Vogel, Lynn Nottage, and Jackie Sibbles Drury (2019 Prize for FAIRVIEW). We will discuss Script Analysis and read (and see) plays by numerous writers including Claire Barron, Kia Corthron, Theresa Rebeck, Sarah Ruhl, Danai Gurira, Caleen Sinnette Jennings, and Hansol Jung. This class will include a mid-term and a Final Paper.
Area: Humanities
Writing Intensive

AS.225.320. Performance. 3 Credits.
The student is given specific acting assignments, and develops them as special projects for public performance under the direct supervision of the instructor. A professional level performance is the goal. Audition Required. Out of class rehearsal time required. Permission only, signature required.
Area: Humanities

AS.225.321. The Lab - The Actor/Director/Playwright Lab. 3 Credits.
Student actors, directors, and playwrights will explore their respective crafts with emphasis on process and individual artistic growth. Participants in the class will also collaborate on the creation of new material for the stage. Recommended Course Background: one course in Acting, Directing, or Playwriting.
Area: Humanities

AS.225.323. Design for the Stage. 3 Credits.
The fundamentals of stage design, with an emphasis on process, including script analysis, research, conceptualization, and implementation, from the first reading of the play to opening night, along with an overview of theatre architecture from the Greeks to the current day and into our imagined future.
Area: Humanities

AS.225.324. Adaptation for the Stage. 3 Credits.
For aspiring playwrights, dramaturgs, and literary translators, this course is a workshop opportunity in learning to adapt both dramatic and non-dramatic works into fresh versions for the stage. Students with ability in foreign languages and literatures are encouraged to explore translation of drama as well as adaptation of foreign language fiction in English. Fiction, classical dramas, folk and fairy tales, independent interviews, or versions of plays from foreign languages are covered.
Area: Humanities
Writing Intensive

AS.225.328. The Existential Drama: Philosophy and Theatre of the Absurd. 3 Credits.
Existentialism, a powerful movement in modern drama and theatre, has had a profound influence on contemporary political thought, ethics, and psychology, and has transformed our very notion of how to stage a play. Selected readings and lectures on the philosophy of Kierkegaard, Nietzsche, Camus and Sartre – and discussion of works for the stage by Sartre, Ionesco, Genet, Beckett, Albee, Pinter, Athol Fugard (with Nkani & Nshone), Heiner Müller and the late plays of Caryl Churchill. Opportunities for projects on Dürrenmatt, Frisch, Havel, Witkiewicz, and Mrozek.
Area: Humanities
Writing Intensive

AS.225.329. Acting and Directing Musical Theatre. 3 Credits.
Musical Theatre is a unique form of theatrical expression that requires special skills of its actors and directors. In this course, students will study the form and structure of musicals as they apply to acting and directing. Students will direct and perform musical numbers as well as book scenes from classic and contemporary American musicals.
Area: Humanities

AS.225.330. Playwriting Strategies. 3 Credits.
A seminar and workshop in playwriting with Dr. Joe Martin, playwright and dramaturge. Student writers, developing their plays, will learn how to open up to the creative process, "brainstorm," refine their work, and shape it toward an act of artistic communication. Writer's techniques, such as attending to plot or "story," delineation of character, creating effective "dialog," even overcoming "writer's block," will be addressed. This course is designed to be complementary to – not a replacement for – playwriting classes in the Writing Seminars.
Writing Intensive

AS.225.333. Scene Study 3. 3 Credits.
Classes and scenes tailored to the needs of the actors. Some rehearsal will take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises.
Area: Humanities

AS.225.339. Exploring The Major Plays of Anton Chekhov. 3 Credits.
This is an advanced class for actors who are interested in delving into the 'world of the play.' Students will work on scenes from the four major plays of Anton Chekhov. We will also explore some modern adaptations including VANYA, SONIA, MASHA, and SPIKE.
Area: Humanities

AS.225.345. History of Modern Theatre & Drama. 3 Credits.
Designed to impart a deepened appreciation and understanding of today's theatre by surveying the major playwrights, historical movements, and theatre practices of the 20th century. The course also seeks to help students understand theatre's relationship to the societal and political power structure of each era and to introduce students to great dynamic literature in its intended form, which is performance.
Area: Humanities
Writing Intensive

AS.225.346. Creative Improvisation: For Theatre and for Life. 3 Credits.
An exploration of the imagination and the senses using basic techniques of improvisation: exercises, conflict resolution, ensemble building, and theatre games. Texts: Spolin, Johnstone, LaBan and Feldencreis. Open to all students.
Area: Humanities

AS.225.374. Acting IV. 3 Credits.
Work is tailored to individual students, using the principles of Workshops I and II and other previous experience. Students work with John Astin's "The Process", along with the texts of Uta Hagen, Boleslavsky and Michael Chekhov. The Clurman, Meisner, Stanislavsky and Strasberg approaches are further explored. Substantial out of class time is required. Recommended Course Background: Two acting courses. Permission Required.
Area: Humanities

AS.225.501. Independent Study. 1 - 3 Credits.
Permission only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Theatre Arts and Studies, Minor

Requirements

All courses for the minor here must be taken for letter grades and receive a grade of C- or higher. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the minor without permission of the Director of Undergraduate Studies.

Total Credits 21

1 Courses are identified by the POS-Tag THEA-DRAMA. Alternatively, another theatre history course from within the program (not counted towards another requirement) may apply towards this requirement with permission of the director of undergraduate studies.
2 This course may be an acting, theatre production, playwriting, or theatre history course.
3 Current options include: AS.225.328 and AS.225.345. Students may speak to the director of undergraduate studies about other options.

Visual Arts

http://krieger.jhu.edu/visualarts/

The Center for Visual Arts engages and challenges students in the study and practice of the visual arts to encourage innovative making and thinking, risk taking and creative problem solving that is applicable to research across disciplines.

Visual arts courses examine contemporary and historical perspectives in art while providing an inclusive environment where ideas are shared and acted upon.

Central to this mission of challenging students and advancing their knowledge and skills in the arts is classes that offer faculty led cross-disciplinary collaboration within diverse academic programs at JHU and the greater Baltimore community. CVA faculty are accomplished artists, photographers, designers, and illustrators.

Students can minor in art or take general elective classes from a diverse curriculum that includes drawing, painting, cartooning, sculpture, printmaking, digital photography, fiber art and a range of special topics courses. Through Hopkins' cooperative programs with MICA and other colleges in the Baltimore area, students can take courses not offered at the Center for Visual Arts. Each spring, the Hopkins community is invited to attend an exhibition of the year's best work by CVA students. Additionally, a variety of temporary exhibits are hosted in the department throughout the year.

The CVA invites award winning artists to campus every semester to work with students and give a public presentation about their art practice. News and events can be found on our social media pages:

https://www.facebook.com/jhuvisualarts/

https://www.instagram.com/explore/tags/jhuvisualarts/

The photography, painting and drawing departments offer a summer study abroad program at Burren College of Art in Ballyvaughan, Ireland. More information can be found on the Study Abroad website (http://jhu-usa.terradotta.com/).

Programs

• Visual Arts, Minor (p. 2217)

For current course information and registration go to https://sis.jhu.edu/classes/
Courses

AS.371.126. Fiber Art and the String Revolution. 2 Credits.
This course presents students with technical, historical and cultural understanding of the fiber medium. Students learn the basics of textile processes, including dyeing, felting, knitting, weaving, sewing, and lacemaking. Technical demonstrations and samples will be covered in class while students are encouraged to expand upon covered material through long-term personal projects. Technical demonstrations will be supported with slide lectures demonstrating the historical context of fiber processes and their contemporary applications. Attendance in 1st class is mandatory.
Area: Humanities

AS.371.131. Studio Drawing I. 2 Credits.
This course is designed as an introduction to the tools, techniques and concepts of basic drawing for students with little or no previous experience. Studio assignments focus on developing strong observation and rendering skills while experimenting with traditional and contemporary practices in drawing. Wet and dry media will be used. Attendance at 1st class is mandatory.

AS.371.133. Oil Painting I. 2 Credits.
This course is designed as an introduction to the tools, techniques and concepts of basic painting for the serious student with little or no previous experience. Studio assignments focus on developing strong observation and rendering skills focusing on issues of light, color and composition while experimenting with traditional and contemporary practices in painting. Lectures and a museum trip give students an art historical context in which to place their own discoveries as beginning painters. Oil paint will be used. Attendance at 1st class is mandatory. Approval for this course will be considered after enrollment in SIS.

AS.371.134. Oil Painting II. 2 Credits.
Students who have mastered basic painting skills undertake sustained projects, including portrait and plein air landscape work. Slide lectures and handouts deepen students’ appreciation of representational traditions. Advanced techniques, materials, and compositional issues are also investigated. Recommended Course Background: AS.371.133 or equivalent. Approval for this course will be considered after enrollment in SIS; no need to email.
Prerequisite(s): AS.371.133 or instructor’s permission.

AS.371.136. Drawing: The Portrait. 2 Credits.
An intensive look at the traditions and techniques of portrait drawing. Students work from live models in a variety of media and study master portraits by Holbein, Rembrandt, Ingres, Degas, etc. Trips to the Baltimore Museum of Art Print & Drawing Room and JHU Archaeological Museum will enhance knowledge and appreciation of the history and traditions of portraiture. Recommended Course Background: AS.371.131 or permission required.

AS.371.139. Still Life/Interior/Landscape. 2 Credits.
This intermediate drawing class will examine three grand traditions in representational art. We will explore problems in still life that have occupied artists from Chardin to Morandi; in interiors from Vermeer to Giacometti; in landscape from Corot to Diebenkorn. We will also look at where the boundaries between these genres blur and how they overlap.

AS.371.140. Cartooning. 3 Credits.
Not open to Freshmen. A history-and-practice overview for students of the liberal arts. The conceptual basis and historical development of cartooning is examined in both artistic and social contexts. Class sessions consist of lecture (slides/handouts), exercises, and ongoing assignments. Topics include visual/narrative analysis, symbol & satire, editorial/political cartoons, character development, animation. Basic drawing skills are preferred but not required.
Area: Humanities

AS.371.147. Art of Architecture: Homewood, Baltimore and Beyond. 3 Credits.
In this course, students will learn to design, draw, and see like an architect. A series of progressive design exercises will teach the practical capacities and habits of mind that lead not merely to competence but success and advancement in the field. We will look at what architecture has been, discuss what it is becoming, and explore both formal and narrative methodologies for design. The class will use the built environment of the city - and the Homewood campus - as a classroom and a site for interpretive drawing and creative design work. Essential in the architect’s education is the sketchbook, which functions not merely as a place to ‘store’ what has been witnessed, but a place to interpret and explore implications of design in the world, whether close to home or traveling in exotic locales.
Area: Humanities

AS.371.151. Photshop/Digital Darkroom. 3 Credits.
Photoshop is not only the digital darkroom for processing images created with digital cameras; it is also a creative application for making original artwork. In this course, students use Photoshop software as a tool to produce images from a fine art perspective, working on projectsthat demand creative thinking while gaining technical expertise. Students will make archival prints, have regular critiques, and attend lectures on the history of the manipulated image and its place in culture. We will look at art movements which inspire digital artists, including 19th-century collage, dada, surrealism, and the zeitgeist of Hollywood films. Students must have a digital SLR camera. Prior knowledge of Photoshop is not required. Attendance at first class is mandatory. Approval for this course will be considered after enrollment on SIS; no need to email.
Area: Humanities

AS.371.152. Introduction to Digital Photography. 3 Credits.
Students learn to use their digital cameras through a variety of documentary, landscape and portrait projects, which will help them develop technical and creative skills. Critiques and slide lectures of historic photographs, which range from postmortem daguerreotypes to postmodern digital imagery, help students develop a personal vision. Students are provided digital SLR cameras and gain proficiency with one-on-one instruction in the field. Basics for print adjustment and output will be covered. Attendance at first class is mandatory. Approval for this course will be considered after enrollment on SIS.
Area: Humanities

AS.371.154. Introduction to Watercolor. 2 Credits.
Watercolor is simultaneously the most accessible of all painting media and the most misunderstood. This course provides experience and instruction in observational and expressive watercolor techniques, materials, concepts, and vocabulary. Topics to be reviewed include line, perspective, value, texture, composition, color, and pictorial space. There will be an introduction to contemporary practices in watercolor, as well as experimental and abstract exercises, collage, and conceptual work.
AS.371.155. Introduction to Sculpture. 2 Credits.
A studio course introducing students to sculptural concepts and methods. Emphasis is on the process of creating. Even the simplest materials can effectively activate space, convey meaning, and elicit emotion when used thoughtfully and imaginatively. Students will learn different methods including additive and reductive techniques, construction, modeling, and mold-making. No prerequisites except a willingness to experiment, make mistakes... and clean up when you are done. Approval in this course will be considered after enrollment in SIS. Attendance in 1st class is mandatory.

AS.371.162. Black and White: Digital Darkroom. 3 Credits.
In this digital course, students explore the black-and-white aesthetic. They develop camera skills on numerous field trips and local walks. Students meet frequently for critiques and discussions based on historic and contemporary imagery. Techniques such as high dynamic range, and infrared are covered. Emphasis is on composition and developing a photographic style with shooting and post processing. Students are encouraged to make work that is meaningful to them and which communicates its intent to their audience. Camera experience is a plus, but not a prerequisite. Digital SLRs are available on loan for the semester. Attendance in first class is mandatory. Approval in this course will be considered after enrollment in SIS.

AS.371.156. Location Photography. 3 Credits.
Working in the studio and in various locations, students will learn the fundamentals of lighting interiors and strategies for working in almost any environment. Field trips will include the National Aquarium, Evergreen Museum & Library, a Howard County horse farm, a Tiffany-designed church and a photo studio. Students will also concentrate on the fine art of printing in our digital lab. They will develop a final portfolio of 10 photographs which express a personal vision about a location of their choosing. A basic knowledge of digital photography is helpful, but not required. Approval in this course will be considered after enrollment in SIS. First class is mandatory.

AS.371.165. Introduction to Printmaking. 2 Credits.
Working with non-toxic/water based inks and both an engraving press and hand tools, students will explore several types of printmaking. Methods will include intaglio, collograph and both simple and multi-plate relief. As they develop their prints, students can then observe and exploit the strengths that each method has to offer. Drawing and Photoshop skills are helpful but not required.

AS.371.166. Landscape Photography. 3 Credits.
Class begins: Wednesday, July 6th. In this course students will experience the drama and beauty of the urban and rural landscape. On numerous field trips they will hone their camera technique as well as learn elements of composition and develop a personal style. Students will learn the fundamentals of Photoshop and they will also be introduced to the beauty of black and white in Silver Efex software. Digital SLR cameras will be provided.

AS.371.177. Design Studies: Detail, Product, Prototype. 3 Credits.
When we undertake the design of an artifact—something material, perhaps interactive—we do more than create a pretty little sculpture, or simply enclose the inner workings of a product. We think about aesthetics; about ergonomics; about material heft and surface texture. In a successful product, toy, or building detail it is often something ineffable—the way the object interfaces with the human hand, or the way it takes on a personality in the mind—that results in its success as an object of design. The course is structured as a series of design exercises, each intended to develop the graphical and manual skill-set of the designer. Our subject, broadly speaking, is the design of small things: from building details to useful products and tools, the act of drawing iterative design sketches, and creating prototypes, will guide us in the development of practical design intelligence.

Area: Humanities

AS.371.178. Making of Masks: Inspired by World Tradition. 2 Credits.
Since before written history, humankind has conceived masks for a range of purposes using forms and materials to help develop, protect and preserve physical and spiritual existence. Great care and specificity went into these visages to obtain these various goals. These historical cultural roots will be examined, honored and transformed as students consider these elements and create their own versions of masks to produce these goals in a personal way. This investigation will provide the historical examples of masks from Native Americans to PTSD American soldiers, from Africa to Anime, Kabuki to Carnivale. Materials and sculptural methods used will arise from the needs of the artist. Such methods will likely include, paper mache, collage, wood construction and various painting and surface techniques. No pre-reqs. Attendance in first class is mandatory.

AS.371.180. Exploring Line. 2 Credits.
This challenging yet creatively playful course presents abstract, perceptual and conceptual concepts in art to understand line, one of the elements of art, from multiple perspectives, materials and practices. Be prepared to collaborate and experiment! Through an intense exploration of line, students will create artworks exploring line as marks on a flat surface (drawing), lines that communicate data (design), lines that build form (sculpture) and lines that embody movement (performance and video). Possible assignments will include projects with drawing, printmaking, fiber, cell phone video, installation, unconventional or recycled materials and collaboration. • This is not a drawing class but a multimedia course on one of the elements of art. Instructor approval and attendance at first class is mandatory.

Area: Humanities

AS.371.185. Printmaking: Multiples and Variations. 2 Credits.
In this course students learn to create marks, textures and imagery using a variety of printmaking techniques. Students create relief and intaglio printing matrices and practice printing by hand and with a press to reproduce their images. The class culminates with explorations of layered printing, monoprinting, and mixed media approaches to create unique 2-dimensional and 3-dimensional works. Attendance in first class is mandatory. No prior experience is needed.
This is an intermediate drawing class that builds on the concepts and skills in Studio Drawing 1. Students will explore contemporary and conceptual approaches to drawing while further developing their skills in various graphic mediums. Risk taking and experimentation will be encouraged while learning about contemporary practices in the medium. The course will conclude with students creating an individual series of drawings of their choice.
Prerequisite(s): AS.371.131 OR AS.371.250
Area: Humanities

AS.371.250. Life Drawing. 3 Credits.
An intermediate drawing course focusing on all aspects of the human form. Beginning with infrastructure (skeletal and muscular systems), we will work directly from the model using a variety of wet and dry media to address problems in figurative art from Renaissance to the present. Approval in this course will be considered after enrollment in SIS. No need to email. Attendance in first class is mandatory.
Prerequisite(s): AS.371.131 or permission of Instructor.

AS.371.302. Photographic Portfolio. 3 Credits.
In this upper level course, students will work on a semester-long project. They will develop their ideas within a seminar style format that allows for conversation and debate and provides a forum for the evolution of their work. Students will learn advanced techniques in Photoshop, NIK software and Lightroom to enhance content and develop a personal style. Through a combination of critique, lecture, and lab, students will complete a portfolio of ten printed images that work together in a series. Approval for this course will be considered after enrollment on SIS. Attendance in 1st class is mandatory.
Area: Humanities

AS.371.303. Documentary Photography. 3 Credits.
In this course, we will explore different genres of documentary photography including: the fine art document, photojournalism, social documentary photography, the photo essay and photography of propaganda. Field trips offer opportunities to explore Baltimore neighborhoods such as Waverly, Greenmount Avenue, and Baltimore's old Chinatown. Students will work on a semester-long photo-documentary project on a subject of their choice. Camera experience is a plus, but not a prerequisite. Digital SLRs are available on loan for the semester. Attendance at first class is mandatory. Approval in this course will be considered after enrollment in SIS.
Area: Humanities

AS.371.307. The Photographer's Book. 3 Credits.
Students create a handmade book of photographs that illustrate a favorite piece of text. They may work with poetry, song lyrics, a play, a narrative, a blog, a diary, any writing (including their own). Students may look at historical texts such as medieval manuscripts or even scientific treatises. The possibilities are endless. We will take fieldtrips to book collections at the George Peabody Library, Evergreen Museum and Library and the Betty and Edgar Sweren Collection. This course will be taught by a photographer and an artist book designer. A previous photography class is a plus, but not a requirement. Students who would like to combine their painting and drawing skills with their photographs are welcome to do so. Attendance in first class is mandatory. Students will have an exhibition of their artist books in the Special Collections Rare Books room of the MSE library. Approval for this course will be considered after enrollment in SIS.

AS.371.502. Independent Study. 0 - 2 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.371.590. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

Cross Listed Courses
Anthropology
AS.070.300. The Global Artwork. 3 Credits.
This course is about art practice in a postcolonial context, where the techniques and pictorial concepts formed by a European history of art are confronted by other traditions of representation, beset by different kinds of political struggles, and posed against the background of religious traditions other than that of Christianity. What problems of history, difference and the self arise in this context, and what forms of art practice emerge to address these problems? In what ways do these forms of art practice draw upon religious traditions, and how do we think about the displacement of religious traditions in modern art? In this course, we will explore these questions by examining the modern art of the Middle East, South Asia, and China, in conjunction with readings from anthropology, art history, comparative literature, philosophy and religious studies.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.343. On Seeing: Between Religion and Art. 3 Credits.
This course reflects on what it is to see, by examining how different religious traditions have conceived of seeing, and then considering how seeing is organized by modern forms of art practice. Our inquiry will range across a variety of cases—from devotional practices in Christianity and Hinduism; to concepts of vision in the Islamic tradition; to the critique of images during the Protestant Reformation and the legacy of that critique in modernism; and to the development of new technologies like photography and film—and it will draw on readings from anthropology, art history, critical theory and religious studies.
Area: Humanities, Social and Behavioral Sciences

AS.070.379. Social Ecology Studio. 3 Credits.
This course will grapple with the social and cultural dimensions of contemporary ecological problems through a local, project-based approach. Coursework will be organized on a studio basis in partnership with a local environmental organization, Friends of Stony Run. Continuing a collaborative project initiated in the fall of 2019, we will work together to develop interpretive materials for the Stony Run stream and urban watershed adjoining our campus.
Area: Humanities, Social and Behavioral Sciences

Classics
AS.040.137. Freshman Seminar: Archaeology at the Crossroads: The Ancient Eastern Mediterranean through Objects in the JHU Archaeological Museum. 3 Credits.
This seminar investigates the Eastern Mediterranean as a space of intense cultural interaction in the Late Bronze Age, exploring how people, ideas, and things not only came into contact but deeply influenced one another through maritime trade, art, politics, etc. In addition to class discussion, we will work hands-on with artifacts from the JHU Archaeological Museum, focusing on material from Cyprus.
Area: Humanities
Writing Intensive
AS.040.218. Celebration and Performance in Early Greece. 3 Credits.
Surviving imagery suggests that persons in Minoan and Mycenaean societies engaged in various celebratory performances, including processions, feasts, and ecstatic dance. This course explores archaeological evidence of such celebrations, focusing on sociocultural roles, bodily experience, and interpretive challenges.
Area: Humanities

AS.040.366. The Archaeology of Ancient Cyprus: Investigating a Mediterranean Island World in the JHU Museum. 3 Credits.
This course explores the visual and material worlds of ancient Cyprus from the earliest human evidence through the Iron Age. Course topics will include the island's unique position between the Aegean and Near East and how this has impacted both Cyprus' ancient past and the way in which it has been conceived in the modern world. Class involves regular analysis of artifacts based in the Archaeological Museum.
Area: Humanities

AS.040.373. Propaganda and the Art of Visual Politics during the Roman Empire. 3 Credits.
We will examine visual expressions of propaganda in the city of Rome, considering how emperors used public art to promote their political agendas and their ideological vision of power. Dean's Teaching Fellowship course
Area: Humanities

AS.040.420. Classics Research Lab: The Symonds Project. 3 Credits.
This course gives participants a unique opportunity to engage directly in empirical research and its interpretation and dissemination. Topics vary. This semester's offering is organized around a project to reconstruct digitally the library of the nineteenth-century writer John Addington Symonds, author of one of the first studies of ancient sexuality. No prerequisites, but potential students should contact instructor for permission to enroll.
Area: Humanities

AS.040.425. Classics Research Lab: Ancient Bodies of Modern Baltimore, The Peabody Cast Collection Project. 3 Credits.
The Peabody Cast Collection (PCC) Classics Research Lab project will revolve around a remarkable collection of plaster casts of classical Greek and Roman sculptures, created ca. 1879 for the Peabody Institute (now part of JHU). Such cast collections were a highly valued cultural resource in Europe and North America during the later 17th to early 20th centuries, produced for major museums, academic institutions and wealthy individuals. Because of the technical process of the cast formation, which is based directly upon the ancient sculptural surface, these collections brought contact with the actual classical artifacts into temporally and spatially distant contexts—including the burgeoning urban center of 19th century Baltimore. The PCC Lab's initial objective is archival and field research of the cast collection—its content, formation, access and usage by the people of Baltimore and its eventual disbanding and distribution. From this, we will aim to virtually reassemble its member objects, charting their biographies and, when extant, their current locations. This in part will be accomplished digitally, in a virtual reconstruction of the original display contexts of the casts within the Peabody Institute based on early hand-written ledgers, logs, and photographs. With this we will contribute a new open-access chapter to the collection's biography.
Area: Humanities

Comparative Thought and Literature
AS.300.353. Present Mirth: Stages of Comedy. 3 Credits.
A comparative survey of presentational comedies from Aristophanes to Beckett on stage and screen, with some attention to to the vexed question of theories of comedy [no laughing matter].
Area: Humanities
Writing Intensive

Energy, Resources Environment
SA.680.697. Global Energy Fundamentals. 4 Credits.
This class is geared to provide a good energy background to students who have previously not had much exposure to the wide array of issues that encompass the energy policy arena. Topics covered include: oil; gas; electricity (including traditional and new generation resources); alternative transportation fuels; energy efficiency options across the transportation, industrial, and buildings economic sectors; climate change, and energy in developing countries. Students learn how to make "back-of-the-envelope" calculations regarding the scope of a given problem or a proposed solution. They also learn how to evaluate problems and suggest solutions within a two-page policy format that is used widely both in the public and private sectors. The class will be taught in an innovative format called the flipped class where students will be asked to view the online lectures outside the class. Class time will be devoted to more interactive group activities as well as professor-student interaction providing students a higher critical understanding of policy issues related to energy. First and second year ERE primary concentrators will have seating priority.
AS.300.600[C] &lt;a href='http://www.sais-jhu.edu/sites/default/files/SelfEnroll%20ERE%202018.pdf' target='_blank'&gt;Click here for a video introduction for the course.&lt;/a&gt;&lt;a href='http://bit.ly/1bepb5s' target='_blank'&gt;Click here to see evaluations, syllabi, and faculty bios&lt;/a&gt;
Prerequisite(s): SA.680.600[<C>]
4 Credits.

German Romance Languages Literatures
AS.211.327. Ecocinema: Framing Italy's Environmental Crises. 3 Credits.
Over the past decade, growing numbers of filmmakers in Italy have addressed ecological crises in their work. This class takes an eco-critical approach to contemporary Italian cinema, examining a body of compelling place-centered stories that deal with local and global issues. Defining the scope of eco-cinema and the ways we can interrogate films as ecological texts, we shall screen earth-centered films that raise consciousness about the consequences of human manipulation of the natural world; the complicity of industry, government, and organized crime in creating environmental crises; and the effects of economic and social malaise. Screenings include iconic films such as Michelangelo Antonioni's Red Desert (1963), more recent, critically acclaimed films such as Matteo Garrone's Gomorrah (2008), Alice Rohrwacher's Happy as Lazzaro (2018), and many others.
Area: Humanities

AS.213.616. The Aesthetic Discourse of Modernity.
When, in 1985, Jürgen Habermas published his lectures on The Aesthetic Discourse of Modernity, he pursued a double aim. He offered a critique of French Theory while at the same time providing a foundation for a normative category of modernity in the tradition of Hegel. Curiously there is one subject he does not touch on, though it seems necessary for a sufficient understanding of modernity: the realm of art and literature. This course will develop a critique of Habermas’ normative notion of modernity through re-readings of texts by Nietzsche, Benjamin, Horkheimer/Adorno, Derrida, Bataille and Foucault to elaborate an alternative category of aesthetic modernity. Taught in English. Reading knowledge of German and French is not required, but recommended.
Area: Humanities

AS.213.763. Contemporary Theater: Gender/Violence.
The course explores 21st-century German theater in its diverse aesthetic and textual forms. Due to comparatively generous funding, German non-commercial theater has over the last decades been able to develop, adapt, and maintain a great variety of at one point “experimental” artistic styles, including frequently stark depiction of gender and violence. We will focus on the ways in which the productions take up, amplify, displace, disrupt, and/or reinforce cultural codes and images of gender and violence both in their symbolic and physical dimension. Topics include the “directors’ theater,” political theater, “pop-theater,” “discourse-theater,” “new documentary theater,” “post-migratory theater,” postcolonial theater and live art. The readings may include Nobel laureate Elfriede Jelinek, Dea Loher, René Pollesch, Milo Rau, Falk Richter, Sasha Marianna Salzmann and various works of shared authorship such as She She Pop, Rimini Protokoll, Gintersdorfer/Kläßen, and Yael Ronen. The Tuesday sessions will be used for the joint viewing of production recordings. Taught in English. Course material in German. No sessions after March 27th.
Area: Humanities

History
AS.100.331. Reading through Things: Early Modern Chinese Medicine, Technology, and Art. 3 Credits.
This course introduces the history of late imperial China from the perspective of medicine, technology, and the arts.
Area: Humanities, Social and Behavioral Sciences 
Writing Intensive

Interdepartmental
AS.360.339. Planets, Life and the Universe. 3 Credits.
This multidisciplinary course explores the origins of life, planet formation, Earth’s evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions, and planetary protection. Recommended Course Background: Three upper level (300+) courses in sciences (Biophysics, Biology, Chemistry, Physics, Astronomy, Math, or Computer Science)
Prerequisite(s): Students may not register for this class if they have already received credit for AS.020.334 OR AS.020.616 OR AS.171.333 OR AS.171.699 OR AS.270.335 OR AS.360.671
Area: Natural Sciences

AS.360.671. Planets, Life and the Universe.
This multidisciplinary course explores the origins of life, planet formation, Earth’s evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions, and planetary protection. Recommended Course Background: Three upper level courses in sciences and buy textbooks
Prerequisite(s): Students may not register for this class if they have already received credit for AS.020.616 OR AS.020.334 OR AS.171.333 OR AS.171.699 OR AS.270.335 OR AS.360.339.
Area: Natural Sciences

Near Eastern Studies
AS.130.129. Freshman Seminar: The Art of War and Peace in Ancient Mesopotamia. 3 Credits.
Ancient Mesopotamia, modern-day Iraq, Syria, and Iran, is the “cradle of civilization.” It witnessed new inventions previously unknown to the ancient world: urban cities, writing systems, kingship, and empires. This course examines the close relationship between war and peace and art in ancient Mesopotamia (ancient Sumer, Babylonia, and Assyria) from 3500 to 539 BCE. During the semester students will be introduced to the art, architecture, and archaeology of ancient Mesopotamia. This course is aimed at students without a previous background in art historical or archaeological approaches to Mesopotamia, but more advanced students are welcome.
Area: Humanities

AS.130.378. Geoarchaeology: Applications of Earth Science to Archaeology. 3 Credits.
Geoarchaeology is a multidisciplinary subfield that applies the tools and techniques of earth science to understand ancient humans and their interactions with environments. This course examines basic topics and concepts, including archaeological site formation, paleo-environmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar.
Area: Natural Sciences, Social and Behavioral Sciences

AS.130.420. Seminar in Research Methods in Near Eastern Studies: Religion and Science. 3 Credits.
This writing intensive seminar examines the relationship between religion and science in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, and through engagement with scholarly literature pertaining to the topic of the course, students will develop skills in specific research skills such as critical reading, analysis, and interpretation.

This course examines basic topics and concepts, including archaeological site formation, paleo-environmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar.
Area: Natural Sciences, Social and Behavioral Sciences

Program in Museums and Society
AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Crosslisted with Archaeology, History, History of Art, International Studies and Medicine, Science & Humanities.
Area: Humanities, Social and Behavioral Sciences
AS.389.205. Examining Archaeological Objects. 3 Credits.
We examine the Johns Hopkins Archaeological Museum collection to learn the materials and techniques utilized in the ancient world to produce objects in ceramics, stone, metal, glass, faience, bone and ivory. Area: Humanities

AS.389.303. World of Things. 3 Credits.
The course introduces and applies new concepts about materials, and materiality to museum objects. It treats the museum as a site for investigating the relationship between people and things.

AS.389.315. Ancient Color: The Technologies and Meanings of Color in Antiquity. 3 Credits.
What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum. Area: Humanities, Social and Behavioral Sciences

AS.389.322. Tigers to Teapots: Collecting, Cataloging, and Hoarding in America. 3 Credits.
Course will examine the collecting behavior of Americans. Students will explore how collectors have defined the holdings of the nation's museums, galleries, and libraries and used objects to shape taste and status in the U.S. Area: Humanities, Social and Behavioral Sciences

AS.389.340. Critical Issues in Art Conservation. 3 Credits.
The course examines recent controversies in the conservation of major global art works and sites, raising questions concerning the basic theoretical assumptions, practical methods and ethical implications of art conservation. Cross-Listed with History of Art and Anthropology Area: Humanities

AS.389.356. Halls of Wonder: Art, Science, and Literature in the Age of the Marvelous, 1500-1800. 3 Credits.
Explore the material culture of 'wonder' from the Renaissance to the Enlightenment in literature, science, and art, with Hopkins' rare book collections and the Walters Art Museum. M&S practicum course. Cross-listed with GRLL, History, and History of Art. Area: Humanities

AS.389.358. Ancient Color: The Technologies and Meanings of Color in Antiquity. 3 Credits.
What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum. Area: Humanities, Social and Behavioral Sciences

AS.389.384. Object Encounters at the Baltimore Museum of Art. 3 Credits.
Using the Baltimore Museum of Art as a laboratory, students examine canonical narratives in art museums and iterate new approaches to objects in museums that build equity, interrogate privilege, decolonise, revise and offer alternative stories. Class meets at the museum every other week. Area: Humanities, Social and Behavioral Sciences

AS.389.386. Islamic Art in the 21st Century Museum. 3 Credits.
What narratives about Islam and Islamic art does the visitor encounter at the museum? Recent re-installations of Islamic art will be studied in the context of current issues, including Islamophobia, attacks on cultural heritage, and hesitation in addressing matters of faith in public institutions. Cross-listed with History of Art and Islamic Studies. Area: Humanities, Social and Behavioral Sciences

AS.389.420. Curatorial Seminar. 4 Credits.
In collaboration with a local museum, conceptualize and develop an exhibition, potentially including but not limited to: checklists, exhibition texts, interpretive strategies, and programming. Exhibition theme varies year to year. Concepts, ethics and practicalities of curation are key concerns. Research visits to regional museums and private collections as relevant. Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.389.440. Who Owns Culture?. 3 Credits.
This seminar explores the complicated, often explosive concept of cultural property, including questions surrounding the ownership, preservation, and interpretation of artifacts, monuments, heritage sites, and living traditions. Cross-listed with Anthropology and History of Art. Area: Humanities, Social and Behavioral Sciences

AS.389.377. Black Artists in American Art Museums: Correcting the Canon. 3 Credits.
Students are invited to examine critically the history of Black artists exhibiting within American museums. With the help of BMA staff, class will develop interpretation for an installation to accompany a major retrospective of artist Jack Whitten that considers the “canon” of art history as a site of ongoing negotiation between taste-makers, artists, dealers, and critics, as well as art institutions that include the market and the museum. Students will take advantage of archives at the BMA, the Library of Congress and Howard University. Students will help select the artworks and themes for the show; research individual participants in the social networks that facilitated the success of some artists over others; and research the biographies of individual artworks - some that have entered the canon and some that should. M&S Practicum. CBL Course. Cross-listed with Africana Studies. Area: Humanities, Social and Behavioral Sciences

AS.389.337. Encountering American Art. 4 Credits.
Students investigate the Baltimore Museum of Art's American art collection and its presentation to the public alongside current scholarship on American art to develop strategies for a new permanent collection display that aligns with the museum's commitment to artistic excellence and social equity. M&S Practicum. Co-taught with BMA curator Virginia Anderson. Area: Humanities, Social and Behavioral Sciences Writing Intensive
Study of Women, Gender, Sexuality

AS.363.400. Feminist Modernisms. 3 Credits.
Prize Teaching Fellowship seminar. Triangulating feminist psychoanalysis and theories of embodiment and subjectivity with art criticism and case studies of artistic practice (primarily painting), this course comparatively investigates the routes modernism takes after the Second World War and decolonization (1945/1947). We will be interested in specific postcolonial and postwar contexts where modernism in the domain of the visual arts was mounted as a feminist project. Each week will pair readings that establish conceptual frameworks with close analyses of works by specific artists, including those represented by the Library's Special Collections and the Baltimore Museum of Art. Texts include Freud, Spivak, Butler, Irigaray, Kristeva, and Mahmood.
Area: Humanities
Writing Intensive

Voice

PY.530.579. Vocal Chamber Music. 2 Credits.
This class brings together singers and instrumentalists to explore the vast chamber music literature that includes voice, from the Baroque to the 21st century. Ensembles can include all orchestral instruments, organ, harpsichord, piano, guitar, and percussion. This course is offered as an elective. Permission of the instructor is required.
PY.530.580. Vocal Chamber Music. 2 Credits.
This class will bring together singers an instrumentalists to explore the vast chamber music literature that includes voice, from the Baroque to the 21st century. Offered in alternate years, 2017-2018.

Writing Seminars

AS.220.407. The Illustrated Short Story. 4 Credits.
A collaboration of The Writing Seminars and The Center for Visual Arts
Students will study JHU’s Homewood House, residence of the Carroll family, choosing a room as the site of a story or a series of prose poems. To illustrate their work and produce an artist book, students will learn camera handling and Photoshop.
Area: Humanities

Writing Seminars
(http://writingseminars.jhu.edu/)

Courses

AS.220.105. Fiction/Poetry Writing I. 3 Credits.
An introduction to basic strategies in the writing of poetry and fiction, with readings by Joyce, Woolf, Baldwin, Munro, Garcia Marquez, Donne, Bishop, Yeats, Komunyakaa, Treheway, and others. Students will learn the elements of the short story and try their hand at a variety of forms: realist, fantastical, experimental. They’ll also study the basic poetic forms and meters, from the ballad to the sonnet, iambic pentameter to free verse. Students will compose short stories and poems and workshop them in class. This course is a prerequisite for most upper level courses. This course is part one of the year-long Introduction to Fiction and Poetry, and must be taken before AS.220.106.
Area: Humanities
Writing Intensive

AS.220.106. Fiction/Poetry Writing II. 3 Credits.
The second half of IFP, this course delves deeper into the finer points of fiction writing, including tone, description, and point of view; students will also enrich their knowledge of poetic forms and devices, such as figurative language, verse rhythm, and the poetic line. Readings include work by Paley, Mahfouz, Calvino, Lessing, Richard Wright, Plath, Rich, Auden, Li-Young Lee, and others. Students will write and workshop their own stories and poems, and complete a final portfolio. This course is a prerequisite for most upper level courses.

Writing Intensive
AS.220.108. **Introduction to Fiction & Nonfiction. 3 Credits.**
A course in realist fiction and nonfiction, with readings by Eudora Welty, Vladimir Nabokov, Henry James; George Orwell, Beryl Markham and Truman Capote. Students compose short stories and essays with attention to literary models. AS.220.105 can be substituted for AS.220.108.
Area: Humanities
Writing Intensive

AS.220.142. **Seriously Funny: Writing Humor Poetry. 3 Credits.**
This course will examine both light verse and how humor can enrich serious subjects in poetry. We will explore many subjects, from bad love to aesthetic experiences. Principal readings will range from classic exemplars such as Shakespeare, Dryden, and Eliot to selections from American poets since 1950, as represented in the anthology 'Seriously Funny: Poems about Love, Death, Religion, Art, Politics, Sex, and Everything Else.' Students will be required to write several seriously funny poems of their own. Fun is mandatory.
Area: Humanities

AS.220.152. **Words of Light: Poetry and Photography. 3 Credits.**
This course examines the role of lyric poetry in a media culture that has become obsessed with photographs. In a world where everyone with a cell phone is a photographer — and every literate person a writer — how do we create valuable work? We will pair genres of photography and lyric poetry in discussion — landscape photos and poems of place, for example — and view each through the other. Students will read a body of poetry and criticism (prose by Walter Benjamin, Susan Sontag, Penelope Pelizzon, Roland Barthes, et al.). In addition to bringing worthwhile comments on the readings to each class, students will submit one original poem and one original photo each week for credit.
Prerequisite(s): Each student is required to have a device capable of taking digital photos. Cell phones are fine.
Area: Humanities

AS.220.162. **Writing for Children: The Tales We Can't Seem to Forget. 1 Credit.**
In this summer mini-course, students will use canonical works of children's literature to inspire their own stories and verses, which they will read aloud and discuss in a workshop setting. We will focus on the uses and reuses of fairy and folk tales — from early works compiled by the Brothers Grimm and Charles Perrault to fantasies from the Victorian era by Mary de Morgan and Oscar Wilde. We will end with contemporary reimaginings by Roald Dahl, Neil Gaiman, Angela Carter and Lauren Child. Class will include discussion of illustration, recent trends in children's literature, and the publishing process. Course instructor Sarah Smith is the former Children's Book editor at the New York Times Book Review. Students will learn how to write a child-appropriate screenplay format and write an 8-12 page screenplay that will be read in class and critiqued.
Area: Humanities

AS.220.165. **Writing Unreality: Fantastical Fiction. 3 Credits.**
While fiction is by definition not "real," some modes of fiction present deliberate departures from the world as we know it. This class will examine fantastical and non-realist writing, including surrealism and magic realism, as well as works with fairy-tale and folklore influences, and stories with elements of the uncanny or supernatural. Students will read and discuss representative fiction, complete weekly creative assignments, and participate in workshop of a final, full-length piece.
Area: Humanities

AS.220.200. **The Craft of Fiction. 3 Credits.**
"[I]n literature, only trouble is interesting," Janet Burroway says in Writing Fiction. Conflict is often referred to as the heart or the engine of a story: in this workshop-centered course, we'll investigate conflict within short fiction, giving attention to all its related components, such as narrative structure, pacing, character development, and dialogue. Both in workshop and in our weekly discussions of assigned readings, we'll always return to the question of how a story provokes readers' sense of anticipation and keeps readers engaged. This course builds upon the material covered in the Introduction to Fiction and Poetry course sequence and will prepare students for further study at the Intermediate and Advanced levels.
Course readings include diverse and contemporary authors such as Han Kang, Z.Z. Packer, Carmen Maria Machado, Haruki Murakami, George Saunders, and Curtis Sittenfeld.
Prerequisite(s): AS.220.105 AND AS.220.106
Area: Humanities
Writing Intensive

AS.220.201. **The Craft of Poetry. 3 Credits.**
A study of the fundamentals and strategies of poetry writing. This course combines analysis and discussion of traditional models of poetry with workshop critiques of student poems and student conferences with the instructor.
Prerequisite(s): AS.220.105 AND AS.220.106
Area: Humanities
Writing Intensive

AS.220.204. **Introduction to Dramatic Writing: Film. 3 Credits.**
Screenwriting workshop. This course will look at the screenplay as both a literary text and blue-print for production. Several classic screenplays will be analyzed. Students will then embark on their own scripts. We will intensively focus on character development, creating 'believable' cinematic dialogue, plot development, conflict, pacing, dramatic foreshadowing, the element of surprise, text and subtext, and visual storytelling. Several classic films will be analyzed and discussed (PSYCHO, CHINATOWN, BLADE RUNNER). Students will learn professional screenplay format and write an 8-12 page screenplay that will be read in class and critiqued.
Area: Humanities
Writing Intensive

AS.220.206. **Writing about Science I: Daily News Journalism. 3 Credits.**
This course is designed to teach students the skills of daily news reporting, with a focus on covering science news. Students will learn how to turn scientific discoveries into lively and engaging prose for the general public, interview sources, and pitch stories to news organizations. The skills taught are applicable to all areas of journalism, not just science journalism.
Area: Humanities
Writing Intensive

AS.220.211. **Journalism for Writers. 3 Credits.**
Learn reporting through analysis of famous and infamous work by contemporary journalists such as Janet Malcolm, Michael Finkel, Sarah Corbett and Seymour Hersch. Students will use readings to understand concepts central to news and feature writing, including libel, fair use, balanced reporting, and appropriate sourcing. They will then head out to find and write their own stories about local issues using best practices learned in class. Sarah Harrison Smith is a former managing editor of the New York Times Magazine and the author of 'The Fact Checker's Bible.'
Area: Humanities
AS.220.212. Line and Lineage: A Survey of Poetry Writing. 3 Credits.
In this lecture-based course, students will build their knowledge of the history of poetry writing in English through a chronological exploration of the poetic line. This course will serve as a foundation for future studies in the writing and reading of poetry.
**Prerequisite(s):** AS.220.105 AND AS.220.106
Area: Humanities
Writing Intensive

AS.220.213. Fiction Survey: Once Upon a Time. 3 Credits.
A review of the origins and development of the realist short story from fable, fairy tale, saint's life, Bible story, through versions created in the Renaissance and classic (19th and 20th century) periods, to modern narratives. Writing Seminars majors only.
**Prerequisite(s):** AS.220.105 AND AS.220.106
Area: Humanities

AS.220.218. Writers on Film. 3 Credits.
An interdisciplinary course focusing on the film writings of poets, novelists, critics, and essayists such as Virginia Woolf, H.D., James Agee, James Baldwin, and Pauline Kael; and films showing the intertitle and screenplay work of writers such as Anita Loos, F. Scott Fitzgerald, William Faulkner, and Jean Cocteau. Participants will write weekly assignments on film from a critical perspective.
Area: Humanities
Writing Intensive

AS.220.219. Readings in Fiction and Literary Nonfiction. 3 Credits.
This course offers an in-depth exploration of content, style, and crossover literary techniques among authors who write both fiction and nonfiction, including Jamaica Kincaid's memoir My Brother and 'Girl.' Students will evaluate why each genre was chosen to narrate, for example, such quandaries as ethics in surgery: Abraham Verghese's novel Cutting for Stone and Richard Selzter's essay, 'The Knife,' as well as the reportage and novels of Ernest Hemingway and others. Also explored: topics of social import and questions of identity in James Baldwin's essays ('Notes of a Native Son') and stories ('Sonny's Blues'), and other works; The course builds on literary writing and reading techniques established in Intro to Fiction & Nonfiction (IFN) and Intro to Fiction & Poetry (IFP). Either course is a prerequisite, with IFN preferred.
**Prerequisite(s):** AS.220.105 OR AS.220.108
Area: Humanities

AS.220.220. Reading Korean Literature in Translation: A Survey. 3 Credits.
An introduction for students unfamiliar with the Korean language but interested in Korean culture / literature. Students will read a variety of translated texts, especially of works written in the 20th and early 21st centuries by authors including Kim Tong-in, Hwang Sun-won, Pak Wanso, Hwang Sok-yong and Han Kang; there will also be classes on traditional sijo poetry. Students will become familiar with Korean literary genres and formal features, and develop a broad understanding of the historical and sociocultural context of Korean literature.
Area: Humanities
Writing Intensive

AS.220.221. Modernist Literature and Film. 3 Credits.
This course explores the exchange of ideas and techniques between modernist literature and cinema in response to the social and technological changes of the twentieth century. Prominent figures include Charlie Chaplin, Ezra Pound, T. S. Eliot, Virginia Woolf, Franz Kafka, Sergei Eisenstein, Jean Epstein, John Dos Passos, Zora Neale Hurston, Paul Strand, and Gertrude Stein. Participants will write weekly assignments on films and readings from a critical perspective.
Area: Humanities
Writing Intensive

AS.220.230. Reading Contemporary Korean Fiction in Translation. 3 Credits.
This course examines a range of contemporary Korean fiction produced since political liberalization of Korea in the 1990s. Students will see the many different ways in which individual selves relate to the world, question the value systems of a globalized society, and celebrate the instinct to survive and thrive. While exploring these things, students will develop their analytical skills and identify the central components of new Korean narratives.
Area: Humanities

AS.220.311. Intermediate Fiction: Point of View. 3 Credits.
In this course, we will workshop student short stories, complete short writing exercises, and discuss published writing with an emphasis on the possibilities of point of view. We will explore the opportunities and challenges of writing in first, second, and third person, think about how narrative distance and tense complicate these choices, and connect narrative voice to story shape and structure.
Area: Humanities
Writing Intensive

AS.220.312. Intermediate Fiction: Detail and Description. 3 Credits.
An intermediate workshop focusing on the question of how to make fictional worlds feel real. We'll read 19th, 20th, and 21st century short fiction by authors such as Anton Chekhov, Jhumpa Lahiri, Junot Diaz, and Alice Munro, focusing particularly on how authors make the lives on the page feel three-dimensional. Students will write stories and exercises, including exercises that involve exploring Baltimore in order to observe and write about the city in which we live. Recommend Course Background: Students need to have completed a 200-level Writing Seminars course.
**Prerequisite(s):** AS.220.105 AND AS.220.106
Area: Humanities

AS.220.313. Writing about the Arts. 3 Credits.
Learn the practice of arts journalism, from reviewing to conducting interviews and writing profiles. In class, students will study the work of some of the best writers in this field, pitch story ideas, report and write, and then discuss their pieces in a workshop setting. Instruction will include journalistic ethics, plagiarism, libel law, and use of social media. Students can expect class visits from established journalists. Writing Seminars Majors only
Area: Humanities
AS.220.317. Writing about Science II: Feature Writing Journalism. 3 Credits.
This course is designed to teach students the skills of long-form narrative journalism, with a focus on covering science news. Skills taught will include how to compose scenes, create three-dimensional characters, create narrative tension, and conduct on-site reporting. Class speakers will include award-winning science journalists from New York to DC, who will share the secrets of their craft. The primary writing assignment will be a 3,000-word feature piece that is pitched, reported, and workshoped throughout the course of the class. 'Writing About Science' is recommended as a prerequisite for this course. If you have not taken this, please contact instructor (dgrimm5@jhu.edu) to enroll.
Area: Humanities
Writing Intensive

AS.220.318. Intermediate Fiction: Voice. 3 Credits.
This workshop will focus intensely on student writing, and on reading stories with a strong narrative voice, the kinds of stories in which the reader can hear the narrator speaking, where the voice gets stuck in the reader's mind, where the story feels like an invasion of the narrator's private thoughts, or is a retelling of the tale for some invisible public, or is the quiet, clear prose of a diarist, journaling into the void.
Area: Humanities

AS.220.327. Intermediate Fiction: Characters. 3 Credits.
Area: Humanities

AS.220.331. Intermediate Fiction: Forms of Fiction. 3 Credits.
A workshop in the formative genres of fiction: romance, confession, anatomy, and novel. Readings include Flaubert, Stevenson, Camus, and Stephen Dixon. Frequent sketches and two stories.
Prerequisite(s): AS.220.200[C]
Area: Humanities

AS.220.332. Intermediate Fiction and Poetry: Poet-Novelists. 3 Credits.
We will look at writers in English who excel at both fiction and poetry. We will ask: How does a talent in one genre show itself in another? Novels will include: Thomas Hardy's Return of the Native, Sylvia Townsend Warner's Lolly Willowes, Vladimir Nabokov's Lolita, John Updike's Rabbit, Run. Other writers who may be included: Rudyard Kipling, D. H. Lawrence, Malcolm Lowry, Richard Wright, Muriel Spark.
Prerequisite(s): AS.220.200 AND AS.220.201
Area: Humanities

AS.220.333. Intermediate Fiction: Plot and Narrative Structure. 3 Credits.
This class is primarily a workshop. Students will write two 10-20 page short stories to present for discussion and critique. The craft focus of the class is plot and narrative structure. Through the assigned reading and a few short writing exercises, we will think about storytelling and the elements (character, conflict, desire, causality, consequence) that make a question a plot or narrative question, and how stories are shaped and structured by these questions. The course reading will begin with a variety of short stories. Later in the semester, we will discuss braided narratives and read novels by Virginia Woolf, Rebecca Makkai and Valeria Luiselli.
Prerequisite(s): AS.220.200
Area: Humanities

AS.220.356. Intermediate Fiction: A Story's Beginnings. 3 Credits.
Where does a story best begin? How does it successfully launch itself? We will look closely at a great many opening paragraphs and pages, analyzing the various strategies by which writers grab and hold a reader's interest. Most of the reading will be short fiction, drawn from various countries and languages.
Prerequisite(s): AS.220.200
Area: Humanities
Writing Intensive

AS.220.363. Intermediate Fiction: Writing about Adolescence. 3 Credits.
Only fairly recently has adolescence been recognized as a developmental period distinct from childhood or adulthood. In this course, we'll read a range of classic and contemporary literature that takes on the challenge of writing about this complicated and fraught stage of life. Readings may include work by Shakespeare, Louisa May Alcott, Colson Whitehead, Louise Erdrich, and others. Students will write and workshop their own stories or novel chapters.
Prerequisite(s): AS.220.200
Area: Humanities

AS.220.370. Intermediate Fiction: Dialogue and Exposition. 3 Credits.
We will look at a variety of ways in which dialogue furthers artistic ends. We will ask questions like: When is dialogue best expressed directly? When is the best summarized? How does dialogue-heavy short fiction differ from a play? When can dialogue stand on its own, and when should it require an author's explanation or interpretation? Students will write both creative and expository papers. Recommend Course Background: Students need to have completed a 200-level Writing Seminars class.
Prerequisite(s): AS.220.105 AND AS.220.106
Area: Humanities
Writing Intensive

AS.220.372. Intermediate Fiction: Style and Voice. 3 Credits.
In this course, we'll focus on the writing and workshop of student fiction, with special attention to style and voice. What distinguishes a good sentence from a bad one? How does one develop a style that feels both natural and distinctive at the same time? What do we even mean by "voice," and how on earth is a writer supposed to find one? In addition to each other's work, we'll read stories by authors with particularly unique voices, focusing on what makes their sentences sing.
Area: Humanities

AS.220.377. Intermediate Poetry: Poetic Forms. 3 Credits.
Poetic Forms fulfills one of the Intermediate requirements for The Writing Seminars Major. It deals with rhyme, meter, traditional forms, and ad hoc forms of students' own making. Whether you are a poet, novelist, song writer, science writer, or dramatist, this course will help you master lines and sentences even better.
Prerequisite(s): AS.220.201
Area: Humanities

AS.220.378. Contemporary Poetic Forms. 3 Credits.
In Contemporary Poetic Forms, we will look at exciting, mostly younger poets writing in a wide array of metrical forms. From Anthony Hecht to Erica Dawson, you will read a book a week and write eleven poems, and the assignments will be keyed but not beholden to those challenging authors.
Prerequisite(s): AS.220.201[C]
Area: Humanities
Writing Intensive
AS.220.391. Performing Poetry & Fiction: An Acting Workshop for Writers. 3 Credits.
This hands-on performance workshop, combining literary and theatrical practice, will look closely at what makes a performance or reading compelling, clear, and resonant. Through textual analysis, vocal technique, and group discussion, students will create a plant and powerful reading style to best serve their work. The course includes regular writing assignments in poetry and fiction and weekly performance and group discussion.
Area: Humanities Writing Intensive

AS.220.398. Intermediate Fiction: Fictional Frames. 3 Credits.
In this course, we'll focus on writing and workshopping student fiction while reading contemporary parallel texts representing a variety of styles, subgenres, and forms. We'll look at exceptionally short works, stories of intermediate lengths, and longer, novella-length works in an effort to understand what kinds of stories lend themselves to particular lengths and styles. How do you know whether your story should be a work of flash fiction or a novel? What kinds of stories can you tell in each form? We'll read work by Lydia Davis, Kirstin Valdez Quade, Jenny Zhang, Bret Anthony Johnston, Paul Yoon, Lauren Groff, Bryan Washington, and more.
Prerequisite(s): AS.220.200
Area: Humanities

AS.220.400. Advanced Poetry Workshop. 3 Credits.
In this course we'll explore poetic responses to myth and legend, looking at how poets from different cultures and eras have responded imaginatively to established stories about gods, heroes, and the supernatural, whether for the sake of aligning themselves with tradition, or for the sake of challenging it. Our discussions will take place in the context of a rigorous poetry workshop, where students will experiment with figurative language, management of the line, narrative organization, and the control of rhythm in both form and free verse. At the end of the semester students will turn in a final portfolio of revised poems, accompanied by a reflective letter that demonstrates a mature understanding of verse technique.
Prerequisite(s): AS.220.200
Area: Humanities Writing Intensive

AS.220.401. Advanced Fiction Workshop. 3 Credits.
Topics in Advanced Fiction
Prerequisite(s): AS.220.200
Area: Humanities Writing Intensive

AS.220.403. Readings In Poetry: Dramatic Verse. 3 Credits.
Why and how do playwrights make their characters speak in verse? What can we learn about writing—and speaking—“naturally” but with artifice? Blank verse is the most important model we have in English dramatic poetry, but not the only one. Readings in this course will range from Shakespeare's King Lear to modern verse plays by Caryll Churchill, Derek Walcott, and David Hirson. Students will write their own one-act verse play.
Prerequisite(s): AS.220.201
Area: Humanities Writing Intensive

AS.220.406. Readings in Fiction: Italian war-time and post-war fiction: Italo Calvino, Primo Levi, and Natalia Ginzburg. 3 Credits.
We'll read these three masterly fiction writers who found new ways to write about hard times.
Prerequisite(s): AS.220.200
Area: Humanities Writing Intensive

AS.220.407. The Illustrated Short Story. 4 Credits.
A collaboration of The Writing Seminars and The Center for Visual ArtsStudents will study JHU's Homewood House, residence of the Carroll family, choosing a room as the site of a story or a series of prose poems. To illustrate their work and produce an artist book, students will learn camera handling and Photoshop.
Area: Humanities

AS.220.408. Readings in Poetry: War Poetry From Troy to Afghanistan. 3 Credits.
The course will follow a chronological line from Homer through to American and British poets of the current war in Afghanistan. This means we will be looking at (among other things) Beowulf, poems of the English Civil War, poems of the American Civil War, poems of the First and Second World Wars, and poems about the conflicts in Iraq and Syria as well as Afghanistan. Each class will be divided into two sections of equal length. In the first half we will study poems written by our predecessors - poems by women as well as men, poems written in the front line as well as behind the lines in hospitals and 'at home', and poems written in a variety of forms - ranging from pure lyric to prose-poetry; in the second half we will discuss poems written by members of the class in response to conflict, and/or in response to the poems we are discussing in any given week.
Prerequisite(s): AS.220.201
Area: Humanities

AS.220.411. Community-Based Learning: Nonfiction and Social Engagement. 3 Credits.
In this Community-Based Learning course, students will read and write memoir and discuss issues of social concern with high-school age writers from Baltimore public schools in partnership with the organization Writers in Baltimore Schools Please note that this class is not a traditional workshop focusing on critique, but will instead explore how writing can build connection and foster conversation. Participation in some events outside of class time may be required.
Area: Humanities Writing Intensive

AS.220.413. Fiction Survey: Pairings Across Time. 3 Credits.
We will trace the ancestry of some modern genres, pairing a modern book with a nineteenth-century counterpart. We will look at suspense fiction (Patricia Highsmith's The Talented Mr. Ripley and Dickens's Tale of Two Cities), romantic comedy (Anne Tyler's Accidental Tourist and a Jane Austen novel), science fiction (Philip K. Dick's Do Androids Dream of Electric Sheep?—the basis for Blade Runner—and Wells's The Time Machine) and tales of the fantastic (stories by John Cheever and Steven Millhauser paired with Poe and ?Hawthorne). A few films may be shown, but not during class.
Area: Humanities
AS.220.414. Readings in Fiction: The Lyric Mode. 3 Credits.
This course will focus on musicality in prose, with close attention to the
effects that fiction writers can achieve through assonance, refrain,
and the careful management of rhythm. Readings will include work by
Toni Morrison, Vladimir Nabokov, Michael Ondaatje, Rainer Maria Rilke,
Marilynne Robinson, and Virginia Woolf.
Prerequisite(s): AS.220.201
Area: Humanities

AS.220.415. Community-Based Learning: Teaching Creative Writing in
Baltimore Schools. 3 Credits.
In this course, students will work alongside writing teachers from the
non-profit organization Writers in Baltimore Schools (WBS) to lead
creative writing workshops in local public middle schools. Students and
WBS teachers will also meet as a group once a week to plan classes,
discuss pedagogy, and share ideas. Students will write weekly responses
to reading assignments, write reflections on the volunteer experience, and
help to assemble a final project at their worksite. Upon completion of the
class, students will have the opportunity to apply to become instructors
with Writers in Baltimore Schools.
Area: Humanities

AS.220.418. Readings in Fiction: The Novella. 3 Credits.
Registration Restrictions: Permission required. Twentieth-century
novellas, with a new author and book each week. The course asks: What
can and has been accomplished by American fiction writers in fewer than
150 pages?
Area: Humanities
Writing Intensive

AS.220.422. Readings in Fiction: Race, Passing, and Performance. 3
Credits.
This course will explore the context and craft of racial passing texts in the
U.S, asking students to think critically about literal passing narratives and
their persistence over time, and more broadly about how we write about
cultural passing, codeswitching, and identity as conscious performance.
We'll start with texts that ground us in the genre—Chopin, Larsen, Fauset,
Ellison, and Morrison—and read our way into contemporary texts,
potentially including work by Danzy Senna, Mat Johnson, Britt Bennett,
Min Jin Lee, and Marcelo Hernandez Castillo. Students will write a critical
paper, a craft paper, and a short story or novella.
Prerequisite(s): AS.220.200
Area: Humanities

AS.220.424. Science as Narrative. 3 Credits.
Class reads the writings of scientists to explore what their words would
have meant to them and their readers. The course will focus on the
shifting scientific/cultural context throughout history. Authors include
Aristotle, Copernicus, Galileo, Descartes, Newton, Darwin, Freud, Einstein,
Heisenberg, Bohr, Crick and Watson.
Area: Humanities
Writing Intensive

AS.220.425. Readings in Fiction: The Story Cycle. 3 Credits.
A study of the short story cycle as a literary form. Authors may include
Joyce, Schulz, Anderson, Welty, Calvino, Munro, Erdrich, Diaz and others.
Area: Humanities

AS.220.427. Readings in Fiction: The Novella. 3 Credits.
A study of the novella as a literary form. Authors may include Melville,
Turgenev, Tolstoy, Chekhov; Kafka, James, Wharton, Baldwin, Porter, Rulfo,
Smiley, and others.
Prerequisite(s): AS.220.200
Area: Humanities
Writing Intensive

AS.220.437. Creating the Poetry Chapbook. 3 Credits.
Students will build on previous work in the major by completing a project
of sustained length, depth, and cohesion (15 - 25 pages) in their final
semester. Application only; Advanced Poetry prerequisite.
Prerequisite(s): AS.220.400
Area: Humanities
Writing Intensive

AS.220.438. Readings in Poetry: Of Late: Poetry & Social Justice. 3
Credits.
In this Community-Based Learning course, students will explore poetry
of social and political engagement in partnership with high-school age
writers from Writers in Baltimore Schools. Participants will put learning
into practice by organizing community conversation, reflection, and
collaboration. Participation in some events outside of class time will be
required.
Area: Humanities

AS.220.441. Readings in Poetry: Shakespeare and Company. 3 Credits.
A study of three of Shakespeare's plays, and of some of the most
important creative responses to these plays by modern writers, such as
Auden and Stoppard. Students will familiarize themselves with
Shakespeare's continuing place in contemporary culture, and write short
critical responses; they will also write a longer creative work that in some
way transforms one of Shakespeare's plays.
Prerequisite(s): AS.220.201[C]
Area: Humanities

AS.220.442. Readings in Fiction: Narrative Strategies of Jane Austen. 3
Credits.
We will read the major novels with the aim of detecting the chief patterns
and devices the author uses to make the familiar and ubiquitous marriage
plot suspenseful and gripping. Writing Seminars Majors only
Area: Humanities

AS.220.443. Readings in Poetry: International Voices. 3 Credits.
International voices will combine the workshopping of poems by students
with a study of contemporary poems written by black British writers and
British writers in dialect, African-American writers, Caribbean writers,
and Indian and South African poets who are writing in English. The
study of broad themes and subjects will be combined with a particular
appreciation of linguistic and acoustic matters - which means among
other things that time that will be spent listening to and evaluating recordings
of the poets concerned. Writing Seminars Majors Only
Prerequisite(s): AS.220.105 AND AS.220.106 AND AS.220.201
Area: Humanities

AS.220.446. Readings in Fiction: The Art of Fiction: the Novels of Henry
James and Robert Louis Stevenson. 3 Credits.
Given the significant differences between their aims and styles as
novelists - James the great investigator of the interior life, and Stevenson
the equally great exponent of the adventure story - it's somewhat
surprising to find the two men were good friends who admired one
another's work. This course will use their friendship as a starting point
to explore their novels in general, while paying particular attention to
their narrative techniques; the novels under discussion will include Daisy
Miller, Turn of the Screw, Portrait of a Lady, Treasure Island, Dr. Jekyll and
Mr Hyde, and Kidnapped. Students will also be asked to create original
work that both responds to and takes off from their reading of these
books.
Area: Humanities
AS.220.447. Theater and Social Concern. 3 Credits.
In this Community-Based Learning course, students will explore theatre and areas of social concern in partnership with high-school age writers from Writers in Baltimore Schools. Participants will put learning into practice by organizing community conversation, reflection, and collaboration. Participation in some events outside of class time will be required.
Area: Humanities

AS.220.449. Readings in Poetry: Exploring Baltimore Through Poetry. 3 Credits.
Students in this course will write poems based on an exploration of Baltimore itself: weekly assignments will require the students to get off campus, visit specific sites around town, and craft their observations into original poems. Course readings will include work by Baltimore authors past and present; other readings, drawn from further afield, will take up the question of what it means to explore a city. Writing Seminars majors only.
Prerequisite(s): AS.220.105 AND AS.220.106
Area: Humanities

AS.220.452. Reading Proust. 3 Credits.
An excursion through the 3,000 page, seven-volume masterpiece, *In Search of Lost Time.* We will closely read *Swann's Way* and *Within a Budding Grove*; we will cover, in a less intensive way, *Guermantes Way* and *Time Regained*.
Prerequisite(s): AS.220.200
Area: Humanities

AS.220.453. Border Crossings: Contemporary Writing from Canada. 3 Credits.
A survey of contemporary Canadian poetry and fiction. Course readings will include work by Margaret Atwood, Christian Bök, Anne Carson, Anne Michaels, Alice Munro, Michael Ondaatje, Madeleine Thien, and others. Students will have the opportunity to respond artistically as well as analytically to the course readings.
Prerequisite(s): AS.220.105 AND AS.220.106 AND AS.220.201
Area: Humanities

AS.220.454. Poetry and Social Engagement. 3 Credits.
In this Community-Based Learning course, students will explore poetry of social and political concern in partnership with high-school age writers from Baltimore public schools. Students will put learning into practice by engaging in community conversation and collaboration. Participation in some events outside of class time will be required.
Prerequisite(s): AS.220.201
Area: Humanities

AS.220.455. Readings in Fiction: Low, High, and Back Again: Experiments in Genre. 3 Credits.
In this course, we'll take a look at the increasingly obsolete notion of "genre fiction" and the way that many contemporary writers are borrowing the conventions of once-frowned-upon genres, from sci-fi to horror to crime, and imbuing them with the concerns of the "literary novel" (character, language, social critique, etc.). The course will pair classics of genre fiction with more contemporary works that take the genre in surprising directions. We'll also do a fair bit of writing ourselves, experimenting with various genres. Authors might include Mary Shelley, Colson Whitehead, Philip K. Dick, Kazuo Ishiguro, Edgar Allen Poe, Carmen Machado, Raymond Chandler, Joan Didion, Zane Grey, and Charles Portis.
Prerequisite(s): AS.220.200
Area: Humanities

AS.220.456. The Long Work. 3 Credits.
A course in the composition of a novella or short-story collection. Students will write and revise a thesis of 50 to 60 pages of fiction. Open to seniors by invitation.
Area: Humanities
Writing Intensive

AS.220.501. Independent Study. 3 Credits.
Ordinarily no more than one independent study course may be counted among the eight Writing Seminars courses presented for graduation.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.220.502. Independent Study. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.220.505. Writing Seminars Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.220.506. Writing Seminars Internship. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.220.507. Honors Thesis. 3 Credits.
Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.220.508. Honors Thesis. 0 - 3 Credits.
Department Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.220.509. Professional Internship. 1 Credit.
The Professional Internship is a one-credit independent course created to document internships in journalism, publishing, the arts, or other writing-related fields. Internships require a minimum of 120 work hours and a short final paper. Permission required. Satisfactory/ Unsatisfactory only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.220.510. Professional Internships. 1 Credit.
The Professional Internship is a one-credit independent course created to document internships in journalism, publishing, the arts, or other writing-related fields. Internships require a minimum of 120 work hours and a short final paper. Permission required. Satisfactory/ Unsatisfactory only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.220.513. Teaching Writing. 3 Credits.
Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.220.592. Internship - Summer. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.220.594. Professional Internships. 1 Credit.
The Professional Internship is a one-credit independent course created to document internships in journalism, publishing, the arts, or other writing-related fields. Internships require a minimum of 120 work hours and a short final paper. Permission required. Satisfactory/ Unsatisfactory only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.220.596. Teach Writing-Internship. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.220.598. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

A study of Modernism focusing on long poems and poem sequences by Stein, Pound, Eliot, Rukeyser, Tolson, and others. Coursework will include completion of a long poem or poem sequence.

This course will look at the ways in which poetry finds words to express moments of vision and self-forgetting. Ranging from the Elizabethans to the present day, it will begin by looking at poetic manifestos by Sidney and Shelley (among others), and explore the ways in which they require poetry to engage with what cannot easily be put into words, then go on to consider: poems about religious transcendence; poems about rapturous communication with nature; visionary poems; dream poems; poems about ghosts and haunting; and poems which explore the possibility of saying the unsayable. Donne and other Metaphysical poets, Wordsworth, Dickinson, Christina Rossetti, Whitman, Hardy, Edward Thomas, T. S. Eliot, and Seamus Heaney will be among those poets discussed. Workshop time will be divided equally between critical discussion, and the presentation of original work by students.
Area: Humanities

Study of classic/modernist novels written by the "I": Christopher Isherwood, Gertrude Stein, Albert Camus, Ford Madox Ford, and other practitioners. Mostly close study of texts, but some writing practice, too.
Area: Humanities

AS.220.608. Readings in Poetry: Sonnet and Sequence.
This course will use the sonnet form as a through line to consider both aesthetic shifts and the enduring lyric impulse across centuries of poetry in English, with a particular focus on how contemporary poets are working with the form through individual poems, sequences, and book-length works. Coursework will include reading, critical writing and presentation, discussion, and completion of an original lyric sequence.
Area: Humanities

An examination of some half-dozen English-language novelists who were also significant poets. Readings will include both novels and poems. The course seeks to bridge the gap between the two genres.
Area: Humanities

AS.220.619. Graduate Poetic Forms I.
We will read and write a variety of traditional and less traditional poetic forms with a keen ear toward meter, rhyme, and other prosodic curiosities.

AS.220.623. Fiction Workshop.
Discussion and critique of fiction manuscripts by students enrolled in the M.F.A. program. Some assignments possible.

AS.220.624. Fiction Workshop.
Discussion and critique of fiction manuscripts by students enrolled in the M.F.A. program. Some assignments possible.

AS.220.625. Poetry Workshop.
Discussion and critique of poetry manuscripts by students enrolled in the M.F.A. program. Some assignments possible.

AS.220.626. Poetry Workshop.
Discussion and critique of poetry manuscripts by students enrolled in the M.F.A. program. Some assignments possible.

A study of three major poets—Caribbean, Irish, and Russian—who self-identified with at least two cultures. We'll examine these poets' literary friendship and their shared engagement with subjects such as tyranny, empire, home, exile, and the English language. Exploration of these poets' shared debt to a predecessor, Robert Frost, and the debt owed to them by younger poets, will lead to students' own original projects in poetry and prose.
Area: Humanities

We will read all—or most—of Chekhov's short stories, his 'notebook,' as well as the letters that have been translated into English.

AS.220.646. Readings in Pedagogy: Teaching Fiction and Poetry.
A graduate course designed to develop both close reading and genre study, and to support the teaching of Introduction to Fiction and Poetry (IFP) I and II. Readings in selected works of American, English, and European poetry and short fiction. Course required by all graduate students in fiction and poetry.
Area: Humanities

This course focuses on three poets whose individual relationships with form, inspiration, and innovation continue to shed light on the poetic process.
Area: Humanities

AS.220.651. Readings in Fiction: Five from the Fifties.
We will examine five American writers who were emerging or thriving in the middle of the 20th century. John Cheever, Bernard Malamud, Vladimir Nabokov, Jean Stafford, John Updike. We will read short stories by all five, as well as the following novels: Malamud's The Assistant, Nabokov's Lolita and Pale Fire. Restricted to graduate students in the MFA program.
Area: Humanities
This course will look at the way poets have responded to the environment, from the early Romantic period to the present day. In the process, it will study and show how the role of the natural world in poetry has changed from being a cause for celebration and a mirror for self-scrutiny, into a way of continuing these things while also expressing anxiety about the effects of global warming any other dangers to the health of the planet. Poets included in the discussion will include Wordsworth, Clare, Hopkins, Frost, Auden, Hughes and Heaney.
Area: Humanities

Which books do writers often foist on other writers, telling them ‘You have to read this’? In this course, we'll look at books that have yet to find much popular appeal, but which writers often speak about in reverential tones. Authors may include James Salter, Paula Fox, Dezso Kosztolanyi, J.L. Carr, Juan Ruflo, Tom Drury, Christina Stead, Evan S. Connell, Leonard Gardner, Joy Williams, and Penelope Fitzgerald.
Area: Humanities

AS.220.654. Readings in Fiction: Rediscovered Masters.
Readings from modern novels and collections of short fiction which, however well received at time of publication, fell into subsequent eclipse before undergoing something of a revival. Many of the titles will be drawn from the series of New York Review of Books Classics.
Area: Humanities

A study of the interplay of the line and the sentence in poetry, with an emphasis on syntax. Some prose works will also be used for context. Poets employing syntax with great verve and precision, whether they obey or disrupt the rules, will be read in order to inform students’ own stylistic choices.
Area: Humanities

A study of major figures, including Dickinson, Moore, Bishop, Clampitt, Brooks, and others. The theme of place and displacement will be a focus.
Area: Humanities

Class will read nine short novels and begin to write one.
Area: Humanities

This hands-on performance workshop, combining literary and theatrical practice, looks closely at what makes poetry performance compelling, clear, and resonant. Through textual analysis, vocal technique, and group discussion and critique, students will create a pliant and powerful reading style, as an integral part of their work.
Area: Humanities

The course will begin by looking at theories of translation, and thereafter spend half of each class looking at examples of poems in translation before moving on in the second half to look at poems by members of the group - translated poems where people have been able to write them, otherwise at original pieces. I'll be providing texts for study each week.
Area: Humanities

AS.220.800. Independent Study.

Cross Listed Courses

Comparative Thought and Literature
AS.300.139. Introduction to Intellectual History. 3 Credits.
This course offers a conceptual and historical introduction to Intellectual History. What makes the "history of ideas" different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call "ideas"? In what sense do they have a history? These are examples of the kind of questions addressed in the course.
Area: Humanities

AS.300.311. Introduction to Intellectual History. 3 Credits.
This course offers a conceptual and historical introduction to Intellectual History. What makes the "history of ideas" different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call "ideas"? In what sense do they have a history? These are examples of the kind of questions addressed in the course.
Area: Humanities

AS.300.321. Rise of the Modern Short Story. 3 Credits.
A comparative tour of examples of short stories from three continents that emerged from earlier narrative forms in the 19th and 20th centuries. Attention will be given to new structural, rhetorical, and thematic concerns including the development of new sub-genres, e.g. fictions of detection, case histories, portraits of the artist, and the adaptation of several stories to newer media [at least 2 of the longer narratives translated to film will be screened]. A detailed syllabus of ourreadings will be available later in the summer; because there is no anthology that quite fits our needs, all the texts or translations, as well as critical and contextual notes will be supplied in digital forms. Note: there will also be an optional hour for questions & discussion TBA.
Area: Humanities Writing Intensive

AS.300.323. Shakespeare and Ibsen. 3 Credits.
William Shakespeare and Henrik Ibsen are the two most frequently performed playwrights in history, and both have been credited with reinventing drama: Shakespeare for the Elizabethan stage and Ibsen for the modern. In this course we will pair together plays by each author – those that stand in an explicit relation of influence as well as those that share a significant set of concerns – in order to investigate how each takes up and transform key problems in the literary, political, and philosophical tradition for their own historical moment. Plays to be studied: by Shakespeare, A Midsummer Night's Dream, Hamlet, Othello, King Lear, The Tempest, A Winter's Tale; by Ibsen, St. John's Night, Hedda Gabler, Rosmersholm, The Wild Duck, The Master Builder, When We Dead Awaken.
Area: Humanities

AS.300.331. The Authoritarian Image: Russian Cinema from Stalin to Putin. 3 Credits.
Vladimir Putin’s charismatic authority has a deep history in Russian culture. We’ll investigate that history through cinema, which Lenin called “the most important of the arts.” While Soviet cinema often served as immersive propaganda, directors also found ways to question authority and power. Films to be screened range from Sergei Eisenstein’s Ivan the Terrible (1944) to the 2013 documentary Pussy Riot: A Punk Prayer. This course will combine study of Russian and Soviet culture from the end of World War II to the present with study of film history, style, and technique.
Area: Humanities Writing Intensive

Area: Humanities
Writing Intensive

AS.300.337. The Tragic Tradition. 3 Credits.
This course offers a broad survey of tragic drama in the Western tradition,
from its origins in ancient Greece to the twentieth century. In weekly
lectures and discussion sections, we will study the specific literary
features and historical contexts of a range of different works, and trace
the continuities and transformations that shape them into a unified
tradition. Key questions and themes throughout the semester will include
what counts as tragic, the tragedy of social and political conflict, the
bearing of tragedy on the meaning and value of life, the antagonistic
relation between world and humans, the promises and dangers of tragedy
for contemporary culture. Authors to be studied: Sophocles, Euripides,
Seneca, Shakespeare, Racine, Goethe, Ibsen, Strindberg, Chekov, Brecht,
Pirandello, and Beckett.
Area: Humanities

AS.300.339. Introduction to Comparative Literature. 3 Credits.
This course offers an introduction to the history, theory, and praxis of
comparative literature. We will read texts from some of the founding
figures of the discipline and look at the most recent debates in the
field, including translation studies, literary theory, and world literature,
among others. Particular attention will be given to the methodologies
and problems of studying literatures in different linguistic traditions and
the relation between literature and other areas of thought and culture,
such as philosophy, art history, and psychoanalysis. Case studies in
comparative approaches to literature will provide concrete examples to
our discussions.
Area: Humanities

AS.300.372. Dance and the Russian Avant-Garde. 3 Credits.
This course will explore the relationship between art and dance during
the explosion of artistic creativity at the time of the Russian Revolution
(1900s-1920s) as well as the influence of the Russian Avant-Garde on
modern dance and theories of movement through the 20th century.
We will examine how dance both gave physical form to aesthetic,
philosophical and political ideas and catalyzed new forms of thinking
about the human body and modern spaces. Lecture and discussion
of readings and screenings will be paired with a weekly movement
workshop in the dance studio that will introduce students to different
forms and theories of avant-garde and modernist dance and movement
theory. No prior dance experience or knowledge of Russian is required.
Area: Social and Behavioral Sciences

Film and Media Studies
AS.061.148. Storytelling for Film and Fiction. 3 Credits.
Through the analysis of narrative films, short fiction, myths, fairy tales,
and ghost stories, and through the workshopping of their own creative
writing, students will explore the art and science of 'a good story
well told.' The course will offer an introduction to dramatic and visual
storytelling, and is an essential primer for upper-level screenwriting. Lab
fee $50.
Area: Humanities
Writing Intensive

AS.061.205. Introduction to Screenwriting. 3 Credits.
In this course we will explore the basic principles of visual storytelling
in narrative film as they apply to the design, creation, and revision
of the screenplay. Specifically, we will focus on learning the craft of
screenwriting — strategies, processes, and philosophies that writers
can develop, practice, and rely upon as they progress through a series
of screenwriting exercises and write three short screenplays, which will
be critiqued in-class during weekly table reads and with the Instructor
(one-on-one) during office hours. Select professional screenplays will
be read and analyzed — and clips from select films viewed — to further
explore what works well on the page, and how it translates to working
well onscreen. Final Draft screenwriting software is required; a FREE 18-
week trial will be made available for all students who don't already have
Final Draft.
Area: Humanities
Writing Intensive

AS.061.218. Modernist Literature and Film. 3 Credits.
This course explores the exchange of ideas and techniques between
literary modernism and modernist cinema: how Virginia Woolf's writings
on the cinema connect with her use of shifting points-of-view as
literary devices, how James Joyce influenced the Soviet filmmaker
Sergei Eisenstein and how Eisenstein in turn influenced the American
novelist John Dos Passos, how Franz Kafka's frequent trips to the
movies reflect in his fiction, and how artists ventured broadly to develop
experimental languages for expressing the new speeds and scales of
modern life. Additional texts will be drawn from novels, essays, poems,
and films from Ezra Pound, T. S. Eliot, Charlie Chaplin, Claude McKay,
Zora Neale Hurston, Anita Loos, Andrei Bely, Dziga Vertov, Gertrude Stein,
Louis Aragon, and René Clair. The course fulfills the writing intensive
requirement and involves a series of essays on literature and cinema
from a critical perspective.
Area: Humanities
Writing Intensive

AS.061.316. Characters for the Screenplay. 3 Credits.
A workshop devoted to creating complex characters for the screen.
Students will examine memorable film characters from the silent era
to the present, with attention to how these characters are revealed
through both the drama and the mise en scene. Weekly screenings.
Recommended Course Background: AS.061.148 OR AS.061.205
OR AS.061.265
Area: Humanities
Writing Intensive
AS.061.373. Intermediate Screenwriting. 3 Credits.
This course will explore strategy and process for developing a short screenplay from pre-existing literary or journalistic source material (short story, news/feature article, etc.). By exploring several “case studies” — feature films and the source material that inspired them — students will identify the practical strategies employed by professional screenwriters with the goal of employing such strategies with their own screenplay adaptations. Bulk of class will focus on designing, writing, and rewriting a 20-30 page screenplay, and sharing multiple drafts with the class (and with the professor one-on-one) for critique over the course of the semester. Each student should have 2-3 pieces of material under consideration for possible adaptation by the start of class. Discussions from time to time will also touch on the business of screenwriting. Students will be required to purchase a license for Final Draft screenwriting software for $99. Students are expected to have previously completed AS.061.205 or another lower level screenwriting class.
Area: Humanities
Writing Intensive

AS.061.404. Advanced Screenwriting. 3 Credits.
Intensive workshop course where students will write a first draft of a feature-length screenplay. Classes will focus on the specific challenges of the students’ works-in-progress, with an emphasis on developing a story idea that is suitable for a feature, and the craft to see it through to completion. Particular emphasis will be placed on the feature screenwriter’s central challenge: creating enough of a structure in the early writing stages to keep the screenplay on track, while remaining open to new ideas for scenes and sequences that inevitably arise as the characters come to life. Select professional screenplays will be read and analyzed — and clips from select films viewed — to explore what works well on the page, and how it translates to working well onscreen. Students will aim to have a solid and workable first draft at the end of the semester, at which point avenues for further revision may be discussed. Throughout the course, Instructor will also devote a portion of class time to discuss the business of screenwriting. Students will be required to purchase a license for Final Draft screenwriting software for $99.
Writing Intensive

German Romance Languages Literatures
AS.211.203. Propaganda: From Blut und Boden to Post-Fact. 3 Credits.
This course taught by Writing Seminars professor Wayne Biddle and Media Studies professor Bernadette Wegenstein covers the 20th-century history of propaganda with special focus on its visual techniques, on censorship, and how media serve as sites of both control and resistance to power. We will pay particular attention to the influence of misinformation abetted by the new media revolution, and both the rise of the political rhetoric of “fake news” and the massive dissemination of actual fake news since the 2016 election. Students will write papers pegged to current issues and events using the critical framework developed in class. Cap 30 students. Reader: Jason Stanley: How Propaganda Works, Princeton University Press, 2015.
Writing Intensive

AS.211.479. Dante's Journey through the Afterlife. 3 Credits.
Dante's Divine Comedy presents a complete picture of the medieval world-view in all its aspects: physical (the structure of the cosmos), historical (the major actors from Adam to Dante himself) and moral (a complete system of right and wrong). Dante shows how the Christian religion portrayed itself, other religions, the nature of God, humans, angels and devils, and human society. We will explore these topics both from the viewpoint of Dante's own time, and in terms of its relevance to our own societal and cultural concerns.
Prerequisite(s): AS.214.479
Area: Humanities
Writing Intensive

AS.214.479. Dante Visits the Afterlife: The Divine Comedy. 3 Credits.
Dante's Divina commedia is the greatest long poem of the Middle Ages; some say the greatest poem of all time. We will study the Commedia critically to find: (1) What it reveals about the worldview of late-medieval Europe; (2) how it works as poetry; (3) its relation to the intellectual cultures of pagan antiquity and Latin (Catholic) Christianity; (4) its presentation of political and social issues; (5) its influence on intellectual history, in Italy and elsewhere; (6) the challenges it presents to modern readers and translators; (7) what it reveals about Dante's understanding of cosmology, world history and culture. We will read and discuss the Commedia in English, but students will be expected to familiarize themselves with key Italian terms and concepts. Students taking section 02 (for 4 credits) will spend an additional hour working in Italian at a time to be mutually decided upon by students and professor.
Area: Humanities
Writing Intensive

AS.215.463. Borges: His Fiction and Critical Essays. 3 Credits.
This course will deal with close readings of Borges ficciones and critical essays in order to determine how his thinking on the problem of writing and thinking is fictionalized in his stories.
Area: Humanities
Writing Intensive

AS.216.300. Contemporary Israeli Poetry. 3 Credits.
This course examines the works of major Israeli poets such as Yehuda Amichai, Nathan Zach, Dalia Rabikovitch, Erez Biton, Roni Somek, Dan Pagis, Yona Wollach, Yair Horwitz, Maya Bejerano, and Yitzhak Laor. Against the background of the poetry of these famous poets we will study recent developments and trends in Israeli poetry, including less known figures such as Mois Benarroch, Shva Salhoov and Almog Behar. Through close reading of the poems, the course will trace the unique style and aesthetic of each poet, and will aim at presenting a wide picture of contemporary Hebrew poetry.
Area: Humanities
Writing Intensive

AS.216.342. The Holocaust in Israeli Society and Culture. 3 Credits.
This course examines the role of the Holocaust in Israeli society and culture. We will study the emergence of the discourse of the Holocaust in Israel and its development throughout the years. Through focusing on literary, artistic and cinematic responses to the Holocaust, we will analyze the impact of its memory on the nation, its politics and its self-perception.
Area: Humanities
Writing Intensive
AS.216.373. War in Israeli Arts and Culture. 3 Credits.
In this course we will study the various representations of what functions as one of Israel's most unifying and yet dividing forces: war. By analyzing literary and cinematic works as well as visual art and popular culture we will attempt to understand the role of war in shaping Israeli society, culture and politics. Topics such as commemoration and mourning, heroism, dissent and protest, trauma and memory and the changing image of the soldier will stand at the center of the course.
Area: Humanities

AS.216.398. Zionism: Literature, Film, Thought. 3 Credits.
This course studies the relations between modern Hebrew and Israeli culture and Zionism. Based on a close reading of both literary and non-literary Zionist texts, we will explore the thematic, social and political aspects of the Zionist movement. The course focuses on primary sources and its main goal is to familiarize students with the various ways in which Zionism was formed and understood. In the last part of the semester we will investigate the different meanings of Post-Zionism through contemporary literary and non-literary texts as well as recent Israeli films.
Area: Humanities

AS.216.444. The Apocalypse in Literature and Film. 3 Credits.
"Everything which we loved is lost! We are in a desert" – this emotional assertion was the reaction to Kazimir Malevich's 1915 painting The Black Square, as the artist himself recalled it. This sentiment of fearing, warning and even witnessing the end of the world as we know it, will stand at the center of the course. We will study the literary and cinematic representations of this apocalyptic notion and investigate its theoretical, theological, physiological and aesthetic aspects. We will seek to trace the narrative dynamics as well as literary and cinematic means of apocalyptic representations in works from various periods, languages, cultures and religions. Among the issues to be discussed: what is the apocalypse, biblical apocalypse, dystopia and nostalgia, trauma and post trauma, war and the apocalypse, the Holocaust as the end of civilization, the atomic bomb, realism and anti-realism, political changes and the apocalypse in popular culture.
Area: Humanities

Writing Intensive

Interdepartmental
AS.360.133. Freshman Seminar: Great Books at Hopkins. 3 Credits.
Students attend lectures by an interdepartmental group of Hopkins faculty and meet for discussion in smaller seminar groups; each of these seminars is led by one of the course faculty. In lectures, panels, multimedia presentations, and curatorial sessions among the University's rare book holdings, we will explore some of the greatest works of the literary and philosophical traditions in Europe and the Americas. Close reading and intensive writing instruction are hallmarks of this course; authors for Fall 2020 include Homer, Plato, Dante, John Donne, George Herbert, Christina Rossetti, Mary Shelley, Friederick Nietzsche, Isaac Bashevis Singer, Frederick Douglass.
Area: Humanities
Writing Intensive

Political Science
AS.191.415. Fear and Loathing: Writing About Contemporary American Politics. 3 Credits.
This course is focused on reading, analyzing, and, most importantly, producing writing about American political experience and contemporary events in American politics. We will use scholarly, print, and new media sources from different sides of the political spectrum, drawing on political and literary theory to inform our discussions. We will then try to do better: Students will write and workshop a variety of pieces of different lengths and styles, spending in-class time on peer critique, presentations, and writing exercises, which they will compile into a writing portfolio. We will discuss and write op-eds, memoirs, long-form book reviews, commentary essays, and satire. Throughout, we will devote considerable class time to critique and discussion of students' writing. Readings will include works by James Baldwin, William F. Buckley, Claudia Rankine, Hunter S. Thompson, Ta-Nehisi Coates, Alexander Chee, Angela Nagle, and Omar el Akkad. We will discuss and write critical commentary from sources ranging from The Washington Post to Jacobin to The Onion, through to Facebook and Twitter. Throughout, we will consider a wide range of topics pertinent to writing about politics, including questions of the make-up of the public sphere and diverse audiences, the use of voice and language, the deployment of facts and rhetoric, the place of fiction and humor in political critique, and the rise of fake news and trolling.
Area: Social and Behavioral Sciences
Writing Intensive

Program in Museums and Society
AS.389.311. From Treasure House to Production House: Exploring New Roles for the Museum in the 21st Century. 3 Credits.
Students work with the Director of, the Peale Center for Baltimore History and Architecture as it reinvents itself as a museum for the twenty-first century. Involves working with community story-tellers in residence. Extra time is to allow for field trip travel - most days class runs 1:30-3:50.
Area: Humanities, Social and Behavioral Sciences

AS.389.329. Author/Canon/Archive. 3 Credits.
Why are some literary works from the past reprinted, anthologized, and considered worthy of study, but not others? Why are some works "lost" and some "rediscovered," while others simply fall out of favor? Focusing on nineteenth- and early twentieth-century American literature, we will use rare books and archival materials from JHU collections to examine Edgar Allan Poe, Walt Whitman, Emily Dickinson, Stephen Crane, Charles Chesnutt, and Zora Neale Hurston, along with a few authors you've never heard of, in terms of the relationship between authorship, stewardship, and status.
Area: Humanities, Social and Behavioral Sciences

AS.389.334. Edgar Allan Poe and His Afterlives. 3 Credits.
We will investigate the creative development and iconic afterlife of a canonical American author, Edgar Allan Poe, as a case-study in literary legacy and cultural heritage. What is the lifespan of a literary work, and how do works "stay alive" for later generations? Students will examine rare Poe materials and create a digital exhibition of Poe archives.
Area: Humanities, Social and Behavioral Sciences

AS.389.346. Scribbling Women in the Literary Archive. 3 Credits.
Students examine select texts and archival materials related to Emily Dickinson, Frances Ellen Watkins Harper, Edith Wharton, Ida B. Wells, Charlotte Perkins Gilman, Sui Sin Far, Alice Duer Miller, and Zora Neale Hurston. Students interrogate how these writers navigated the constraints of gender, as informed by race and class, in the decades before and after the 19th Amendment and consider literary collecting in relation to gendered cultural politics.
Area: Humanities, Social and Behavioral Sciences

Honors
A GPA of 3.5 or better in all major requirements is required to earn honors in the major.

Writing Seminars, Master of Fine Art

The Writing Seminars offers a Master of Fine Arts (M.F.A.) in fiction and poetry. Students admitted to the M.F.A. program enroll in two years of course work and produce a substantial manuscript in the form of a novel or collection of fiction or poetry. M.F.A. candidates are chosen on the basis of a manuscript, college transcripts, GRE scores, and appropriate letters of recommendation that testify to the student's ability and willingness to undertake serious study in the literary arts. Since all students receive financial aid in the form of full tuition and a teaching assistantship, applicants must be able to demonstrate aptitude for college teaching.

The program requires two full years of residency in Baltimore. Students enroll each semester in two courses: a writing workshop in poetry or fiction and a second course in craft or literature taught within the department. At the end of the first year, students present a portfolio of revised work for faculty review. Successful completion of this work is a requirement for continuation in the second year.

The M.F.A. degree in The Writing Seminars is designed for students committed to the study and practice of literary writing at the highest level of accomplishment. Approximately four poets and four fiction writers will be admitted annually. Our pedagogy emphasizes genre-informed discussions, faculty conferences, independent readings, and interactions with visiting writers. Culminating in a book-length thesis, this immersion in literary study is designed to inculcate the habits and skills necessary for a productive writer's life.

Students applying to the M.F.A. program should have a bachelor's degree. All must demonstrate competence in a foreign language at the college level.

Multi-School Programs of Study

At Johns Hopkins University, some programs are offered through a partnership between two or more University’s nine schools

- Space Science and Engineering (p. 2195)
- Business Minor (p. 1212)
- Peabody Double Degree Program (p. 805)
GRADUATE AND PROFESSIONAL PROGRAMS (ADVANCED ACADEMIC PROGRAMS)

Academic Catalog 2020-2021

The University reserves the right to change without prior notice any programs, tuition and fees, requirements, or regulations published in this catalog. This catalog is not to be regarded as a contract. Multiple means of communication may be used by the University for announcing changes of this nature including, but not exclusive to, email and/or paper notice. Students are provided an email account from Johns Hopkins University (JHU). The JHU email account will be used by the university for general and official notice/business. To establish an email account, visit my.jh.edu (https://my.jh.edu/portal/web/jhupub/).

• Research Administration, MS/International Research Administration Management, Certificate (p. 2269)

About Krieger School of Arts and Sciences

The Krieger School of Arts and Sciences is at the heart of a leading, diverse, global coeducational university. Privately endowed, the Johns Hopkins University was founded in 1876 as the first true American university on the European model: a graduate institution with an associated preparatory college, a place where knowledge would be created and assembled, as well as taught.

Today, the Krieger School of Arts and Sciences is the core institution of the Johns Hopkins complex of schools, centers, and institutes. Its home is the park-like Homewood campus in the residential Charles Village section of northern Baltimore City.

Advanced Academic Programs

The School of Arts and Sciences recognizes the intellectual strength and educational requirements of working adults. Through Advanced Academic Programs, it offers a Johns Hopkins education to those wishing to attend graduate school. Courses leading to master’s degrees are held in the evening and on weekends at the Homewood campus in Baltimore; the Washington, DC Center near Dupont Circle; and online.

Drawing upon over a century of research and teaching expertise, the programs offer advanced instruction in scientific fields of current interest and innovative graduate study in the humanities and social sciences. While based on the latest scientific and scholarly knowledge, course work emphasizes the application of such knowledge to practical problems. Classes are designed to provide individual attention and to encourage student contribution.

Degree-Granting Divisions of the Johns Hopkins University

• Bloomberg School of Public Health
• Carey Business School
• Krieger School of Arts and Sciences
• Paul H. Nitze School of Advanced International Studies
• The Peabody Institute
• School of Education
• School of Medicine
• School of Nursing
• Whiting School of Engineering

The Johns Hopkins University is privately endowed and accredited by the Middle States Commission on Higher Education
3624 Market St.
Philadelphia, PA 19104-2680
267-284-5000

Since the university’s first president, Daniel Coit Gilman, assembled the first faculty in 1876, education in the arts and sciences at Johns Hopkins has been carried out in a research environment, with international distinction, under the supervision of active researchers. The belief in the inseparability of education and research still guides the academic programs of today’s School of Arts and Sciences. Distinguished scholars and scientists share and exchange ideas and knowledge with undergraduates and graduates, encouraging creative thinking and independent research. Residential students take courses from anthropology to writing seminars, offered by 24 degree-granting departments that confer the Bachelor of Arts, the Bachelor of Science, the Master of Arts, the Master of Fine Arts, the Master of Science, and the Doctor of Philosophy. Information regarding full-time education can be found in the Arts and Sciences/Engineering Undergraduate and Graduate Programs catalog.

Enrollment Services
The Advanced Academic Programs Enrollment Services Office, consisting of the Admissions Office and the Registration Office, is located at the:
Johns Hopkins Bernstein/Offit Building
1717 Massachusetts Ave. NW, Suite 101
Washington, DC 20036-2001

The DC Admissions and Registration offices are open Monday through Thursday from 9 a.m. to 6 p.m. and Friday from 9 a.m. to 5 p.m. Students may also reach the office by email:
- Admissions: aapadmissions@jhu.edu (aapinfo@jhu.edu) or
- Registration: aapregistration@jhu.edu.

Academic Regulations for Online Courses

Academic Regulations for Online Courses

Online Orientation for Online Students
All students taking their first fully online AAP course should participate in the Blackboard orientation course before the term starts. Students will learn how to navigate, collaborate, and communicate in a fully online course. The orientation provides valuable hands-on experience with the course management system. Important information regarding the technical requirements and support resources available will be given in the orientation. Students should expect to devote one to four hours to the orientation, but it may be spread out over several days. Information about where and how to take the orientation course will be provided to students by email.

Please note that completion of the online orientation course is required by the following programs:
- Environmental Sciences and Policy;
- Energy Policy and Climate;
- Geographic Information Systems;
- Museum Studies;
- Writing;
- Teaching Writing; and
- Science Writing.

Returning students are welcome to participate and review techniques and tools. All students are encouraged to revisit the orientation to test for access to online library resources in the Library Module.

Online Library Access
AAP provides online library resources to all students. New online students are required to obtain access as part of the Blackboard orientation and are supported in this process. The JHED ID and password are needed to access most resources. For a list of resources, visit the library homepage at library.jhu.edu (https://www.library.jhu.edu/).

Online Class Structure
AAP online courses are asynchronous, though they may have some optional synchronous components. Students access course materials and discussions at individually desired times. Students share learning actively through the Web-based course site with readings, assignments,
Online Bookstore
AAP has partnered with an online bookstore, MBS Direct, to service online students and students enrolled in on-site courses. MBS Direct offers competitive pricing, new and used books, and buybacks from its large distribution center. Students can access the bookstore at mbsdirect.net (https://www.mbsdirect.net/) approximately four weeks prior to the start of each semester to purchase their texts. Questions about MBS Direct or its services can be directed to the customer service center at 800-325-3252 or vb@mbsDirect.net.

Residency Requirement
Some programs are offered fully online, and some have on-ground courses. Other programs have an on-ground residency requirement in addition to courses offered online. Each program has specific requirements, and it is the student’s responsibility to check with his/her program advisor to ascertain the requirements pertaining to his/her program.

AAP Online Course Access Policy
According to AAP policy, students have one full semester after the end of the semester in which they take an online course to retrieve their student-generated work and access course materials. The University’s policy on the use of intellectual property applies in all cases where students access online classes after a semester has already ended. Additionally, individual instructors or University administration have the option to make courses available for longer or shorter periods.

Advisors / Terms
Each student accepted into a degree program or certificate is assigned an academic advisor, who is available for consultation regarding the student’s program of study. A student advisor’s name and email address are provided on the admissions decision letter. Advising is available year-round. Consultation takes place by phone, email, Internet, or in person by appointment. Please see the program sections in this catalog for specific program advisor information.

Courses in all programs are offered in the summer, fall, and spring terms. The summer term formats:
- one full semester (12 weeks) and
- two accelerated six-week formats.

The fall and spring term formats:
- one full semester (14 weeks) and
- two accelerated seven-week formats for regular classes depending on the program.

The spring semester includes a three-week intersession. Courses run from the beginning of January to the end of the month. Similarly, the summer term includes a May intensive schedule available in select programs. These intensive semester formats allow students to complete special-interest courses, such as travel courses, as well as regular courses offered in a compressed format.

Course Numbering System
Advanced Academic Programs courses are numbered in the following form:

420.601.51 (Example)
- 420 indicates the program—in this case, Environmental Sciences and Policy;
- 601 indicates the course number—in this example, Geological Foundations of Environmental Science; and
- 51 indicates the section number and location where the course is offered—i.e.,
  - sections 01 to 09 are offered at the Homewood campus in Baltimore;
  - sections 51 to 59 are offered at the Washington, DC Center;
  - sections 81 to 89 are offered online; and
  - section 91/92 indicates an international or off-site course.

Course Credit
Effective summer 2016, all Advanced Academic Programs graduate-level courses are assigned credits. In addition, graduate-level students may receive letter grades (A, B, etc.) or P (passing). Prior to May 2016, credit hours were not assigned to graduate-level courses unless taken by an undergraduate student. No GPA is calculated. A transcript guide is available upon request that features grade points needed to calculate grade-point averages. The AAP Registration Office will not calculate grade-point averages for students or third parties.

Course Cancellations
The University reserves the right, in its sole discretion, to change instructors or cancel courses with insufficient enrollment.

Enrollment/Degree Verification
Enrollment verification provides proof of enrollment for a student’s financial lender, insurance company, sponsor, etc. Enrollment verification can be obtained through SIS. Please expand the registration menu and choose the last option listed on the menu. Verification may also be placed through the National Student Clearinghouse. If you have any questions regarding enrollment verification, please
contact the Homewood Registrar’s Office by phone at 410-516-8080 or ASENverify@jhu.edu.

Transcripts
The transcript is part of the student’s permanent record at the University. No grade may be changed except to correct an error or to replace an incomplete with a grade. Active students can request a transcript through SIS. Please expand the registration menu and choose the last option to request a transcript. If you need assistance, please contact the Homewood Registrar’s Office by phone at 410-516-8080 or visit jhu.edu/registrar (https://studentaffairs.jhu.edu/registrar/).

Second Master’s Degree
After receiving a master’s degree from Advanced Academic Programs, students may continue in a second program if prerequisites for that program are fulfilled. To receive a second master’s degree from Advanced Academic Programs, all course requirements for the second program must be satisfied. The student may count up to three courses taken as part of the first degree toward requirements of the second degree. However, the relevant program committee must approve the course(s) as appropriate to the plan of study, and the course(s) must satisfy the requirements of the second degree. The course(s) also must fall within the five-year limit for the second degree (i.e., the second degree must be completed within five years, counting from the beginning of the first course accepted toward the second degree).

To apply for a second master’s degree, the student must submit a new Advanced Academic Programs application form, an application fee (waived if previous master’s degree was earned within the past year), and any additional admissions materials required by the second degree program.

Admission

Admissions

- Admission Process (p. 2236)
- Admission Requirements for Degree or Certificate Seeking Applicants (p. 2236)
- Instructions for Submitting an Official Transcript (p. 2237)
- Graduate Record Examination (p. 2237)
- Acceptance of Admission (p. 2237)
- Provisional Student / Conditional Student (p. 2237)
- Deferral of Admission (p. 2238)
- Denial of Admission (p. 2238)
- International Applicants (p. 2238)
- Special Student/Non-Degree Applicants (p. 2239)
- Admission to Other Divisions or Programs of the University (p. 2239)
- Dual or Combined Program Admissions (p. 2239)
- Accelerated Status (p. 2239)
- Waived and Replaced Courses (p. 2239)
- Advanced Standing (p. 2239)
- New Student Orientation (p. 2239)

Admissions Process

Applicants may apply throughout the year and begin study during any of the three semesters (summer, fall, spring). While applications are accepted year-round for all programs, all applicants are strongly encouraged to apply and complete the application process four to six weeks before the start of the desired semester. International applicants seeking a visa should submit all application materials three months prior to the start of the intended semester of study. However, the Admissions Office requires no deadlines by which an applicant needs to submit an application.

Applications are accepted up to one year in advance of the intended semester of study. An incomplete application (including application fee) is valid for one year from the date submitted. Applicants who fail to submit required supporting materials within this period and who wish to be considered for admission are required to submit a new application, fee, and all required supporting documents.

Review Process

Once the Admissions Office has received all required materials, the completed application is sent to the Admissions Committee. The Admissions Committee for the chosen program assesses the application and its supporting documents. All materials must be received prior to the Admissions Committee review. Academic background; personal, professional, and field-related experience and achievements; and any program-specific criteria are all considered in this review. Review times for completed applications range from approximately three to four weeks. If a decision is not reached by the Admissions Committee in time for the upcoming semester, the program will automatically consider the applicant for the following semester. The Admissions Committee reserves the right to require that more than the minimum standards be met for admission to any academic program and may require additional materials of the applicant, if deemed necessary to make an admission decision.

Admissions Requirements for Degree or Certificate Seeking Applicants

- Bachelor’s degree from a regionally accredited U.S. college or university (or current enrollment in final semester of undergraduate studies). Applicants who receive their bachelor’s degree in a country other than the U.S must have the U.S. equivalency of a bachelor’s degree from a regionally accredited institution (https://www.ed.gov/accreditation/). AAP’s Post-Master’s certificates also require the
completion of a master’s degree or equivalent (example: Post-Master's Certificate in Sequence Analysis and Genomics).

- **Minimum GPA of 3.0 on a 4.0 scale.** Meeting the minimum GPA requirement does not guarantee admission, and may vary by program when combined with relevant work and industry experience. Admissions are subject to Program Director and Admissions Committee approval.

- **AAP online application.**

- **Nonrefundable application fee of $75.**

- Applicants who have completed their undergraduate degree must ensure that an official transcript confirming degree conferral is submitted to AAP Admissions by the application due date and in accordance with the instructions below.

- AAP may admit applicants with an official transcript on a conditional basis pending degree conferral if, at the time of application, the individual is completing the last semester of their undergraduate degree. If a student is currently finishing their degree, they must ensure that an official transcript that includes the current semester is submitted to AAP Admissions by the application due date in accordance with the instructions below for submitting official transcripts. If a student is admitted, that admission is conditional until AAP receives a second official transcript that confirms degree conferral. Students admitted on a conditional basis will have until the course Withdrawal/Audit deadline for the first semester in which they are enrolled at AAP to ensure the final official transcript that confirms degree conferral is submitted to AAP Admissions in accordance with the instructions below.

- All applicants admitted on a conditional basis are responsible for ensuring that their official transcript confirming degree conferral is submitted to AAP Admissions by the course Withdrawal/Audit deadline in accordance with the instructions below. AAP will automatically dismiss, without a refund, a student who does not ensure their final official transcript confirming degree conferral is submitted to AAP Admissions in accordance with the instructions below.

- Applicants who have completed their undergraduate degree must ensure that an official transcript confirming degree conferral is submitted to AAP Admissions by the application due date and in accordance with the instructions below for submitting official transcripts. If a student is admitted, that admission is conditional until AAP receives a second official transcript that confirms degree conferral. Students admitted on a conditional basis will have until the course Withdrawal/Audit deadline for the first semester in which they are enrolled at AAP to ensure the final official transcript that confirms degree conferral is submitted to AAP Admissions in accordance with the instructions below.

**Instructions for Submitting an Official Transcript**

- To send an official transcript and avoid delays, students graduating from a domestic institution are highly encouraged to use one of the providers listed here. ([https://advanced.jhu.edu/admissions-aid/how-to-apply/](https://advanced.jhu.edu/admissions-aid/how-to-apply/))

  Please list aapadmissions@jhu.edu as the recipient address.

- Unless the official transcript is being sent directly from the institution to AAP, students graduating from an institution outside the United States must submit official transcripts to JHU AAP through: World Education Services (WES) ([https://www.wes.org/](https://www.wes.org/)) or One of the credential evaluation services listed here ([https://advanced.jhu.edu/admissions-aid/how-to-apply/](https://advanced.jhu.edu/admissions-aid/how-to-apply/)).

- JHU AAP also accepts official transcripts that are sent directly from the institution:
  - If via email: aapadmissions@jhu.edu.
  - If via regular mail:
    - Johns Hopkins University AAP Admissions Office
    - 1717 Massachusetts Avenue, NW, Suite 101 Washington, DC 20036

- Regardless which of the above methods are used to submit official transcripts, applicants are responsible for ensuring their transcripts are received by JHU by the stated deadlines. It takes time for an institution, approved provider, or credential evaluation service to process and send official transcripts — in some cases at least 4 to 6 weeks. Therefore, applicants should allow sufficient time for their transcripts to be processed and transmitted to JHU.

- **Official TOEFL, IELTS, or PTE score** report is required for international applicants who do not meet the criteria. See section titled "English as a Second Language (p. 2238)" for details.

- **Additional materials** required by the chosen program as listed in that program’s section of this catalog.

**Note:** All application materials submitted to Advanced Academic Programs become the property of Johns Hopkins University and will not be returned to applicants under any circumstance. Any misrepresentation or omission of information included as part of an application will constitute cause for cancellation of the application prior to admission, reversal of acceptance, dismissal, or initiation of disciplinary action. In the event new information is provided/discovered after a final decision has been made, the Admissions Committee has the right to re-evaluate the application.

**Graduate Record Examination**

Most of AAP’s programs do not require GRE scores. Applicants should check program to determine if they must submit a GRE score. Do not send in the GRE score unless it is required by the program or the committee. If required, applicants must send scores to AAP. Our institutional code is listed under the District of Columbia: 8747 (Johns Hopkins Adv.Acad.Programs).

**Acceptance of Admission**

Newly accepted students are directed to an Enrollment Decision form, available through the electronic version of their official admissions decision letter. Students will have 10 business days to accept admission for the current term, decline admission, or defer admissions to a specific future term not to exceed one year. Failure to comply with the enrollment decision form will result in being blocked from registering for classes. Students who accept the offer of admissions but later decide to defer their enrollment to a future term must contact the Admissions Office immediately with their intent to defer. Not contacting the Admissions Office may result in a temporary delay in a student’s ability to enroll in a future term. Starting from the point of enrollment, the first course counted toward fulfillment of the master’s degree or certificate program, the student has a maximum of five years to complete all coursework. However, students must maintain continuous enrollment throughout the duration of time spent in the degree or certificate (see Continuous Enrollment section under Registration). Applicants can pursue only one program at a time, unless they are applying to an approved dual or combined program in AAP.

**Degree/Certificate Candidates**

Qualified applicants are admitted as degree or certificate candidates by the committee after the Admissions Committee for that program reviews the completed application and determines eligibility. A degree or certificate candidate may also be admitted conditionally, if Admissions determines eligibility. (See Conditional Status below.)

**Provisional Student**

Provisional students are admitted to this status because, in the view of the Admissions Committee, they do not fulfill academic requirements for admission as a degree candidate at the time of the application. A
provisional student may also be admitted conditionally, if Admissions determines eligibility. (See Conditional Status below.)

Provisional students are required to take specific prerequisite courses and/or program courses, identified in their admissions letter (additional criteria may be listed). Those with provisional status are held to grading criteria stricter than those required of degree candidates. **Provisional students must receive a grade of B or better (A- or better for the Writing, Science Writing, and Teaching Writing programs) in all courses taken while under provisional status.** Failure to meet the provisional grade requirement will result in dismissal from the program. When the provision is met, the student’s status will be changed from provisional to degree candidate.

**Note:** Provisional Students may not qualify for financial aid.

For eligibility for provisional students, contact the Office of Financial Aid (https://finaid.jhu.edu/contact/) for specifics.

**Conditional Student**
The conditional status is applied to any admitted student, who at the time of admission, is an undergraduate student in the last semester of undergraduate studies.

These applicants can be admitted with the conditions that they successfully complete their undergraduate studies and submit an official transcript or evaluation verifying degree conferral prior to the course Withdraw/Audit deadline for the first semester in which they are enrolled at AAP.

Once the condition is met, final transcript is received, the conditional status will be removed.

**Note:** Conditional students are not eligible to receive financial aid nor permitted to register beyond the term for which they have been admitted.

**Deferral of Admission**
Admitted students may defer the start of their studies for up to one year from the term of admission (example: a fall admit can defer until next fall; a spring admit can defer until next spring). Applicants need to complete the Enrollment Decision form, which is available through the electronic version of their official admissions decision letter. Students who accept the offer of admissions but later decide to defer their enrollment to a future term must contact the Admissions Office immediately with their intent to defer. Not contacting the Admissions Office may result in a temporary delay in a student’s ability to enroll in a future term. If an admitted student wishes to enroll beyond the year of admission, he/she will need to reapply to the program by submitting a new application, application fee, and any additional supporting documents. A student who re applicies must satisfy admission and program requirements in effect at the time of reapplication.

**Denial of Admission**
All admission decisions are final. The Admissions Office cannot discuss the committee decision. In the case of denied admission, applicants must take at least one year to attempt to improve their qualifications before reapplying to the same degree or certificate program. Improvements can include but are not limited to taking the GRE, submitting a new writing sample, or taking additional courses in a related field at a regionally accredited college or university. Please note that an improvement to the application or reapplication does not guarantee admission into the program. The applicant will need to reapply to the program by submitting a new application, application fee, and any additional supporting documents. All application material is shredded immediately following denial of admission.

**International Applicants**

**Collegiate-Level Course Work Earned Outside of the U.S.**
Applicants who have earned their post-secondary degree(s) or course work in a country other than the United States are required to have a “course-by-course” credential evaluation with GPA performed by an outside evaluation service. Evaluations are waived only if the student received his/her undergraduate degree from a U.S. institution and the undergraduate course work taken internationally was transferred to that institution. However, the official transcript, in English, is still required of the international school. (https://www.ed.gov/accreditation)

Evaluations must be completed by a current National Association of Credential Evaluation Services member such as the World Education Services (WES). The most up-to-date list of current members can be found at the following website (https://advanced.jhu.edu/admissions-aid/how-to-apply/international-students/).

**English as a Second Language**
International applicants must demonstrate English proficiency by meeting at least one of the following requirements:

- The applicant submits official TOEFL, IELTS, or PTE scores.
- The applicant holds a post-secondary degree from an accredited U.S. institution.
- English is both the official language and the only language of instruction in the applicant’s native country.
- TOEFL: Official TOEFL score reports must be sent to AAP in the mail. Photocopies or electronic TOEFL score reports will not be accepted. AAP requires a minimum score of 600 on the paper test, 250 on the computer-based test, and 100 on the Internet-based test. However, scores requirements may vary by program. Our institutional code is listed under the District of Columbia: 8747 (Johns Hopkins Adv.Acad.Programs).
- IELTS: Applicants should contact the test center where they took the test directly and request that test scores be sent electronically using the IELTS system. Please be sure to select “Krieger School of Arts and Sciences Advanced Academic Programs.” All IELTS test centers worldwide are able to send scores electronically. AAP requires a band score of 7.0. However, scores requirements may vary by program.
- PTE: Official PTE Academic results must be sent to AAP in the mail or electronically. Photocopies of PTE Academic score reports will not be accepted. AAP requires a minimum score of 68. However, scores requirements may vary by program. Our institutional code is: Krieger School of Arts and Sciences – Advanced Academic Programs.

**Student Visas**
Applicants seeking admission to enroll in on-site courses in the U.S., taking at least three courses per semester, may request certification for an F-1 visa by indicating “yes” for the “Do you plan to initiate the F-1/ J-1 visa process through Johns Hopkins University?” question on their admissions application.

AAP international students on F-1 visas usually begin their program in the fall or spring semester. In order to maintain status on an F-1 visa, students in AAP must be enrolled in a minimum of three courses per semester, one of which can be an online course. Students must complete
their certification process with the Office of International Services (https://ois.jhu.edu/).

**Dual or Combined Program Admissions**
A limited grouping of programs is considered dual (two Master's degrees) or combined (Master's degree + Certificate). Programs combined with those from other Johns Hopkins Schools will have separate admissions requirements and will require a different application, fee, etc. Please see each program's admissions requirements for more information.

**Special Student/Non-Degree Applicants**
A non-degree seeking or special student is one who would be eligible for admission as a degree or certificate candidate to the chosen program, but who is not interested in pursuing the credential. Admitted students with non-degree seeking/special status are:

- Permitted to enroll in courses for which they satisfy the prerequisites;
- Permitted to take up to four courses;
- Not qualified to receive financial aid;
- Not eligible for graduation; and
- Required to reapply to become degree-seeking (Acceptance not guaranteed).

To be considered for special student or non-degree admission to any Advanced Academic Programs course, applicants must do the following:

- Submit a completed online application;
- Indicate non-degree seeking under the AAP Program tab in the application;
- Upload unofficial transcripts (preferred) or copy of diploma;
  - Submit official transcript for the highest degree attained
- Submit a Statement of Purpose;
- Submit a resume;
- Submit a writing sample (Writing, Science Writing, and Teaching Writing applicants only); and
- Submit two Recommendation Letters (see program admissions requirements for more information).

**Admission to Other Divisions or Programs of the University**
An admitted student in Advanced Academic Programs who wishes to transfer to another school in the University or to a full-time program in the School of Arts and Sciences must apply to the appropriate school or the School of Arts and Sciences' full-time programs. Admission to Advanced Academic Programs establishes no claim or priority for admission to other divisions or programs of the University.

**Accelerated Status for Recent Hopkins Undergraduate Students**
Recent Johns Hopkins graduates may be allowed to accelerate their time to complete an AAP Master's degree. Academically strong and eligible candidates from JHU’s undergraduate programs may be considered for the accelerated option at the time of application. Students who start an AAP Master's Degree program within 5 semesters (including summer) following their graduation from their first Bachelor's degree may have up to two upper-level courses applied through advanced standing toward the Master's degree. Coursework will be approved at the sole discretion of the program director. This evaluation is final and not eligible for appeal.

**AAP Course Opportunities for Current Hopkins Undergraduate Students**
Eligible upper-level JHU students may be allowed to begin taking a limited number of courses in AAP programs on a space-available basis prior to the completion of their undergraduate degrees. Students must contact the appropriate AAP program director/advisor for further details, specific program requirements, and approval.

**Advanced Standing**
Advanced Standing signifies a student receiving credit for academic coursework that was achieved prior to applying to their current program. This coursework comes from programs outside of any JHU division and must have been completed within seven years from the date of application. Advanced Standing will only be considered when the relevancy and currency of the prior course content clearly contributes meaningfully to the graduate degree.

The following restrictions apply for coursework being considered for Advanced Standing:

- Advanced Standing can only be granted for those courses that have 75% or higher alignment with course objectives within the AAP program.
- Coursework must have received the minimum grade of B- to be considered; however, individual AAP programs may require a higher grade. Please contact the Program Director for guidelines.
- No more than two courses may qualify for Advanced Standing.
- Courses being considered for Advanced Standing must not have been part of a completed degree or certificate program.
- Advanced Standing will only be considered for Master's degree programs. No advanced standing at the Certificate level will be considered.
- Students admitted with provisional status will not be considered for Advanced Standing

To be considered for Advanced Standing applicants must:

- Request Advanced Standing at the time of application. Advanced Standing cannot be granted or requested once a student is admitted to a program.
- Submit course syllabi for those credits they are seeking to transfer into the program. Advanced Standing requests without syllabi will not be reviewed.

**Waived and Replaced Courses**
In some programs, the Admissions Committee may allow a core or prerequisite course to be waived based on previously completed coursework. Supporting documentation, such as copies of syllabi and course descriptions, may be requested by the committee to assist in making a decision. Students can only be granted a waiver at the time of admission; waivers cannot be granted or requested once a student is admitted to a program. All waived courses must be replaced by electives in order to satisfy the required number of courses to complete the degree.

**New Student Orientation**
Once admitted to Advanced Academic Programs, all students are encouraged to complete a Web-based new student orientation (http://advanced.jhu.edu/current-students/new-student-orientation/). This orientation provides guidance for all AAP students, regardless of modality, to understand administrative processes at Advanced Academic Programs and to learn about available resources. New student orientation
is separate from "Blackboard orientation," which is available to all students enrolled in online courses and required by certain academic programs. The Blackboard orientation provides specific information regarding the use of Blackboard and enrollment in online courses.

Alumni Benefits

Alumni Benefits

Johns Hopkins University alumni are welcome to return for courses in AAP. Having alumni in courses boosts academic rigor, knowledge, and experience in the classroom. To promote this interaction and to provide opportunities for alumni to take courses they missed or that will help them remain current in their fields, AAP offers the Alumni Tuition Benefit Program.

Alumni may be eligible for admission as degree or certificate candidates to the chosen program but may not necessarily be interested in pursuing the credential. These alumni are permitted to enroll in any courses for which they satisfy the stated prerequisites. As long as alumni do not interrupt their studies for more than one year and remain in good academic standing, they can take up to four courses in an individual program under the Alumni Benefit. The program director for the selected program must sign off on each course for which alumni want to register through the Alumni Benefit. Alumni may not register in more than one program at the same time and must reapply for the Alumni Benefit to take courses in additional programs. Alumni who do not remain in good academic standing may be dismissed from AAP. If more than one year lapses between registrations, alumni are required to reapply for the Alumni Benefit.

Alumni are welcome to apply to be accepted as new degree candidates at any time during their studies. The program's Admissions Committee will determine if any credit-bearing courses completed at the time of application will count toward the degree. Program requirements and time limitations in effect when applying will guide the admission decision.

To apply for the AAP Alumni Benefit, alumni must complete the standard AAP online application (https://apply.grad.jhu.edu/apply/?sr=2816e1e1-979b-49e1-9502-a48cc8b682e6), checking the appropriate box to indicate alumni status. The application fee will be waived for alumni applying for the Alumni Benefit.

Qualification Required: In all cases above, alumni can enroll only in courses for which they qualify. A program may elect to limit the courses open to alumni or may reserve a certain number of slots for current students.

Full-Tuition Option (with credit): Alumni who have applied for the AAP Alumni Benefit through the online application will be able to register for an approved course. Their registration will be processed promptly during regular registration or late registration. In most instances, they will compete for seats along with current students (first come, first served). Students should contact the program director for more detailed information. The course will appear with a grade on the transcript.

Space-Available Tuition Benefit (noncredit, audit): Alumni interested in this option will be eligible for a reduction in tuition, paying 1/3 of the normal tuition in any course for which they qualify, on a space-available system. The reduction does not apply to fees, which must be paid at the standard student rate. The course will appear with an "AU" to indicate the audit status on the transcript. Courses taken as noncredit or audit cannot be applied toward the completion of a degree or graduate certificate.

Grades / Performance / Conduct

Grades / Performance / Conduct

Grading System (p. 2240)
Performance Standards (p. 2240)
Probation and Dismissal (p. 2241)
Incomplete Grades (p. 2241)
Withdrawal (p. 2241)
Academic Standing and Conduct (p. 2241)
Academic Integrity (p. 2241)
Grade Appeals (p. 2241)
Time Limitation (p. 2242)

Grading System

The grading scale for students enrolled for credit is A+, A, A-, B+, B, B-, C, and F. An Incomplete (I) grade is assigned by the instructor who has given the student permission to delay completion of specific course for a justifiable reason for a specific amount of time. W (official withdrawal) and AU (audit) are requested by the student and cannot be assigned by the instructor. A grade of F indicates the student's failure to complete or comprehend the course work, and therefore, does not count toward the courses needed for completion of the degree. F and C grades are not removed from a student's transcript even if a course is repeated.

Students are graded under the following system:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Meaning</th>
<th>Equivalent</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>Excellent</td>
<td>4.00</td>
</tr>
<tr>
<td>A-</td>
<td>Excellent</td>
<td>3.70</td>
</tr>
<tr>
<td>B+</td>
<td>Satisfactory</td>
<td>3.30</td>
</tr>
<tr>
<td>B</td>
<td>Satisfactory</td>
<td>3.00</td>
</tr>
<tr>
<td>B-</td>
<td>Satisfactory</td>
<td>2.70</td>
</tr>
<tr>
<td>C</td>
<td>Satisfactory</td>
<td>2.00</td>
</tr>
<tr>
<td>F</td>
<td>Failure</td>
<td>0.00</td>
</tr>
<tr>
<td>P</td>
<td>Pass</td>
<td></td>
</tr>
<tr>
<td>I</td>
<td>Incomplete</td>
<td></td>
</tr>
<tr>
<td>W</td>
<td>Withdrawal</td>
<td></td>
</tr>
</tbody>
</table>

Performance Standards

If a degree candidate receives a grade of C or below in a core course, the student must repeat that course. Even if the course is repeated, the original grade will remain on the student’s transcript, and the student may not receive another grade of C or below. For specific guidelines on what courses are considered core and/or required, please review the curriculum requirements listed for the corresponding program in this catalog or on the AAP website.
Special students—those who satisfy all requirements for admission to degree candidacy but who choose not to seek a degree—are held to the same performance standards as degree candidates. Provisional students cannot continue in a program if they earn a grade of B or below (B+ or below for the Writing or Science Writing programs) in any course taken while they are in provisional admissions status.

Probation and Dismissal
Degree candidates who receive a grade of C or below are on academic probation. See “Requirements” section above for details and clarification regarding grade requirements for degree, special, and provisional students. When a course is repeated, both the original grade and repeated grade appear on the transcript. The degree candidate receives credit only once for the course; however, the original grade of C (or below) places the student on probation. If a degree candidate receives a grade of C in an elective course, the course need not be repeated and the course can be counted toward degree requirements. Degree candidates who receive a second grade of C or below in either a repeated core course or any course taken in the program will be dismissed from the program. Special students are held to the same performance standards as degree candidates. Provisional students who receive a grade of B or below (B+ or below for the Writing or Science Writing programs) in any course cannot repeat the course and are dismissed from the program.

Students dismissed may apply to another program in Advanced Academic Programs immediately. Admission is not guaranteed. A dismissed student must wait one year from the date of dismissal before reapplying for admission to the program in which he/she has been dismissed. Readmission is not guaranteed.

Incomplete Grades
Students who experience extenuating circumstances that prevent them from completing coursework within a given term may request an Incomplete (I) grade from their instructor. Approval of incomplete grade requests is neither automatic nor guaranteed. To receive an “I” in a course, the student must be in good academic standing at the time of the request, have completed all assignments up to that point, and receive instructor approval.

A student must request an Incomplete grade from the instructor in writing. Requests made before the withdrawal/audit deadline will not be considered as students still have the opportunity to withdraw or switch to audit at that point. Requests must include an explanation of the extenuating circumstances. The Instructor has the right to ask for documentation. All documentation must be submitted to the Office of Student Affairs for evaluation to safeguard student privacy, not directly to the instructor.

If the instructor, after consultation with the Program Director, determines that circumstances warrant an Incomplete grade, the Instructor and the student will complete the Request for Resolution of Incomplete Grade form. This form outlines the reason for the Incomplete, the remaining work to be done, and the deadline. The instructor also indicates the grade the student will earn if he or she fails to complete the outstanding assignments.

An Incomplete is granted at the instructor’s discretion; the instructor establishes the conditions for resolving the missing work. It is the student’s responsibility to submit all work at the agreed-upon time. If a student does not complete the missing course work within 60 days from the last day of the term, the “I” will automatically convert to the grade indicated by the instructor on the Request for Incomplete Grade.

Withdrawal
The W (withdrawal) grade signifies an official withdrawal from a course that has been approved by the Advanced Academic Programs Registration Office. The student initiates the withdrawal by completing an online add/drop form (https://advanced.jhu.edu/forms/). A ‘W’ cannot be assigned by the instructor. Students who register for a course but never attend or stop attending, and later drop, are subject to the refund schedule at the time of their drop. All registered students are subject to the refund schedule, regardless of attendance. For further information, see advanced.jhu.edu/registration (https://advanced.jhu.edu/current-students/register-for-classes/), and then select Step 4: Paying for Your Courses.

Academic Standing and Conduct
The University reserves the right to dismiss at any time a student whose academic standing or general conduct is deemed unsatisfactory.

Academic Integrity
Graduate students at Johns Hopkins are expected to understand the ethical standards of the University, hold the highest standard of integrity for their work, and avoid academic dishonesty in all forms. Ignorance of ethical rules is no excuse for cheating. It is the further responsibility of every student to report to the instructor or their program's director any suspected violations of academic ethics by peers. Enforcement of our code of conduct is a shared responsibility and should not depend on the University alone. We all celebrate the rigor of a Johns Hopkins education, but that rigor loses its meaning if students cheat. Students who violate this code of conduct face a range of penalties, including failure of a course, permanent university transcript notation of an ethics violation, loss of a degree, or expulsion from the University. Please see the Student Code of Conduct (https://studentaffairs.jhu.edu/policies-guidelines/student-code/) for procedures and responsibilities. At publication time for this catalog, Advanced Academic Programs was considering changes to the Student Code of Conduct. The revised code will be announced and posted at the link above.

Ethics violations of any kind are taken seriously and may result in dismissal from AAP’s programs. The best way a student can keep from committing an act of plagiarism is to be properly informed. At a minimum, please remember that any words taken verbatim from a source must be cited and contained within quotation marks. Even if a student has paraphrased an idea from a source, they must provide the appropriate citations. Ignorance of these principles will not be an acceptable excuse for violation of the policy. For further information and assistance in determining when and how to properly cite your sources, here is an excellent resource (https://guides.library.jhu.edu/citing/) provided by the Milton S. Eisenhower Library of Johns Hopkins University. An equally useful resource with clear and specific definitions of plagiarism can be found at turnitin.com (https://www.turnitin.com/).

Grade Appeals
Grades are awarded for an individual student's academic work during each semester based on that individual's mastery of the course content. Grades are determined by faculty, and AAP will not override an instructor's considered academic judgment when it comes to grade award decisions. Unhappiness with the grade is not sufficient basis for a grade appeal.

Facts considered during a grade appeal include but are not limited to: (1) verification that there was not an error in recording the grade or (2) whether the grade was a result of a faculty member's failure to follow the
Grade appeals on the basis of discrimination are not within the purview of this policy. Students should send concerns regarding discrimination directly to the Office of Institutional Equity (OIE) (https://forms.jh.edu/view.php?id=164822).

If an extension is granted, it will be communicated in a letter, and the limitation.

Prior to submitting the appeal, the student must first contact the auditor to attempt to resolve the disputed grade. If the auditor and the student are unable to reach an agreement, or if the auditor does not respond to the student's attempt to contact them, the student may submit a formal appeal to the AAP Grade Appeal Committee AAPgradeappeals@jhu.edu. The student should work with their auditor to prepare necessary documentation for submission, which includes a student's statement justifying the appeal along with all related supporting documentation. [Note: In the event that the course instructor is also the student's faculty advisor, an alternative mediator will be identified by the Program Director and/or the Faculty and Academic Affairs Officer.]

Once the formal appeal has been submitted, the AAP Grade Appeal Committee has 10 business days to verify that the appeal meets the above criteria and all documentation has been submitted. Once the appeal is verified as complete, the AAP Grade Appeal Committee will reach out to the auditor for clarification of the grade; the auditor has 7 business days to respond. The AAP Grade Appeal Committee then has 14 business days from the time of the auditor's response to determine whether the disputed grade should be changed or retained and inform the student and the auditor of its decision. If the committee supports the appeal, the auditor has 10 business days to complete any work directed by the committee and update the grade.

The committee's decision is final. Limited appeals to the Associate Dean following a committee decision are possible only if (1) the timeline or process for the grade appeal was not followed, (2) the auditor did not follow the guidelines set forth in the appeal decision, or (3) if new evidence is made available after the AAP Grade Appeal Committee decision. A student submitting a limited appeal of the Committee decision must submit a statement and supporting documentation to the aapgradeappeals@jhu.edu mailbox. This appeal must be made within 10 business days of the receipt of the AAP Grade Appeal Committee's decision to deny the appeal or of the resubmission of the student's grade.

Time Limitation
Students must complete all academic work in a master's degree or certificate program within five years, calculated from the start of the first course that counts toward the degree (including time spent on continuous enrollment). Continuous enrollment does not stop or extend the time limitation requirement. This time limit includes any courses taken at another Johns Hopkins school/division that have been approved to count toward the degree or certificate.

If necessary, students may request from their program committee an extension of time to complete their program beyond the five-year limitation. If an extension is granted, it will be communicated in a letter, and the five-year limit increased by the time included in the extension. All other criteria apply, including continuous enrollment should students fail to enroll in courses without approved leaves. An extension may be granted for a semester up to a full year, and in rare circumstances, for two years.

Graduation Requirements

Application for Graduation
Students planning to complete their degree requirements at the end of the semester for which they are registering must notify the AAP Registration Office of their intentions by completing the online graduation application form found in SIS. This form should be completed when registering for the last course(s) needed to complete the degree; it initiates the graduation review process that students must undergo to be cleared for graduation. The AAP Registration Office will periodically correspond with the student using the JHU email address provided to all students in order to provide important information about administrative details, events, and deadlines. A paid $100 graduation fee is required at the time of application for graduation. This fee must be paid for every degree earned.

The application for graduation form is valid for only one semester. If students do not complete their degree requirements during the semester expected, they must resubmit the application form while registering for the next semester. Students who paid the $100 graduation fee (a one-time payment) are not required to submit another graduation fee.

Completion of Degree Requirements
The Johns Hopkins University confers degrees three times a year (August, December, and May) to all students who have completed requirements during the semester. The University-wide commencement ceremony and the master's degree ceremony take place once a year in May. Diplomas are mailed to graduates at the address provided on the graduation application found online in SIS. The conferral date is the date that will appear on a graduating student's transcript.

JHU Tuition Remission (p. 2245)
Leave of Absence (p. 2245)
Inactive Status (p. 2245)
Maximum Number of Courses (p. 2245)

Student Information System (SIS)
The Student Information System (SIS) provides students access to financial aid, billing, and enrollment records in one location with the same interface. Strong authentication security assures confidential access to information by students using any popular Web browser and their JHED login ID and password.

New and active students can register for courses online using SIS at sis.jhu.edu (https://sis.jhu.edu/). Students can also register using the online add/drop form (https://advanced.jhu.edu/forms/). Students who complete the paper form should fax it to 202-452-1970 or email a PDF file to aapregistration@jhu.edu.

A completed registration requires verification of how payment is to be made. Students who have not completed financial aid forms or have unpaid bills from a previous semester/term will have a “Hold” in the registration process and will not be allowed to register until Student Accounts processes payment and removes the “Hold.” Several business days are required to complete these processes.

Students are required to have fulfilled the appropriate prerequisites for each course before registering. It is the student’s responsibility to make sure the requirements are met and appropriate grades are in place in order to register and advance through their academic program. If the student has any questions, they should consult their advisor. Once a registration is received, allow one to three business days before checking confirmation online at sis.jhu.edu (https://sis.jhu.edu/).

Proof of Immunization Prior to First Registration
The District of Columbia requires all students under the age of 26 to submit an immunization form (https://advanced.jhu.edu/forms/). This requirement may be waived for students if they meet both of the following criteria:

1. The student is in a fully online program that does not have optional or mandated residency requirements, classes, or activities that may be taken in D.C.
2. The student does not currently live in D.C., nor does he/she plan to move to D.C., or any contiguous state, including Maryland, Virginia, Delaware, Pennsylvania, or West Virginia. If he/she moves to D.C. or one of the states mentioned above, it is the student’s responsibility to complete the immunization form (https://advanced.jhu.edu/forms/) and conform to the immunization requirement prior to the move.

Course Enrollment Limits
All AAP courses have enrollment limits. It is not always possible to offer additional sections of oversubscribed courses. A waiting list option is available in SIS during the registration period for most courses with full enrollment. Enrollment is not guaranteed.

Effective Spring 2019, SIS will limit students from registering for more than two waitlists at a time. If a course’s waitlist opens, the student will be notified and have 48 hours to add the class. Once a student removes themselves from a waitlist, they will be able to register for an additional waitlist, up to a total of two waitlists at any given time.

Completion of Prerequisites
The prerequisites for each course can be found in the program sections of this catalog. It is the student’s responsibility to check the prerequisites for each course and register appropriately. A student may be administratively dropped from a course if he/she has not met the stated prerequisite. Students are encouraged to consult with their academic advisors.

Course Load
Full-time course load for a graduate student is nine credit hours per semester.

Students expecting to take three or more courses should consult with their Program Director. Some programs require permission from the academic advisor before enrolling in more than three courses per term.

Ways to Register
• Online at sis.jhu.edu (https://sis.jhu.edu/)
• Online add/drop form
• Fax paper registration form to: 202-452-1970
• Hand-deliver paper registration form to AAP at any of the three locations
• Email completed registration form to: aapregistration@jhu.edu

Each semester, the course schedule (https://sis.jhu.edu/classes/) is posted. The course schedule (https://sis.jhu.edu/classes/) is available only online, and students are encouraged to enroll early for best selection.

Registering for Courses in Other JHU Programs
With advisor approval, AAP students may take up to two comparable courses and apply these courses from other JHU programs toward their master’s degree or certificate.

Interprogram Courses
AAP students wishing to count a course outside their program toward their degree need to obtain advisor permission, unless the course is cross-listed in the course schedule or otherwise listed as part of shared concentrations. To obtain advisor approval, students must forward to their advisor a written request that includes documentation of course description and any other information that may be helpful in assessing the course’s applicability to a student’s program. The student’s advisor or academic program director then determines if the requested course is appropriate and whether the student is eligible to take it.

Interdivisional Registration for AAP Students
AAP students who wish to take a course at another Johns Hopkins school/division must submit a request to the AAP Registration Office using the online add/drop form or a paper add/drop form. To ensure that there is time for review and approval from other divisions within Johns
Auditing a Course

Students may register as auditors, but there is no reduction in fees or tuition when auditing a course. Auditors receive no credit for the course, and a grade of “AU” is placed on their official transcript. Students who take courses for credit are given enrollment priority over auditors. Prior to registering as auditors, students must document with the instructor what tasks are required to earn the audit.

Students who are enrolled for credit but wish to become auditors during the active semester must be in good academic standing in the course as determined by the instructor. They may request the necessary change by consulting with their instructor and receiving subsequent approval from both the instructor and their academic advisor. Students can only change from credit to audit in a course prior to the withdrawal deadline, and if they do not uphold the agreed-upon tasks associated with the audit, the course will revert to a withdrawal on the student’s transcript.

Please refer to the Academic and Registration Calendar for the deadline by which to request to audit a course. Auditors cannot change their status to credit-seeking after the start of the semester. Students should note that choosing to audit a course may have ramifications on other aspects of enrollment, including, but not limited to, financial aid, immigration status, and GPA. Please consult with an advisor for full details related to your program of study.

Change of Program

Students who wish to change to another degree program within Advanced Academic Programs must fill out a change of program (COP) request form (https://advanced.jhu.edu/forms/). Documents required by the new program but not submitted previously must be included with the COP form. Students are not automatically admitted to a new program; their request is reviewed by the appropriate Admissions Committee according to the stipulations of the new program. Any courses taken in one AAP program that are the exact courses in another AAP program will be counted toward the new degree when a student changes programs, provided that the new program’s requirements for core and elective are met. There is no change for change of program. Tuition rates in AAP vary with each academic discipline/program; therefore, changing programs may result in different tuition rates. COP applications may be submitted at any time, but if approved, the student’s program information will not be updated until the end of the current semester. Please note: Taking courses outside the program to which you are admitted does not guarantee admission to another program. Average processing times for COP range from six to eight weeks from the date received.

Tuition Payment

In order to complete a registration, a verification of payment method of all tuition and fees is required for each semester at the time of registration. Students will not be dropped from their courses if payments are not made in full. Subsequently, students remain financially responsible for the tuition and fees associated with each course.

AAP students can make payments by check, credit card, employer contract (employer authorization), tuition remission, or financial aid. In all cases, students are not permitted to register if there is a balance due on their account from a previous semester.

Financial Aid

Students who plan to request financial aid (https://finaid.jhu.edu/graduate-aid/) to cover their tuition should submit the appropriate paperwork in ample time before registering. Students must take a minimum of two courses to be eligible for federal financial aid. Students may also look at alternative loans for single course registration.

The JHU Policy for Satisfactory Academic Progress requires all students to advance in their program with appropriate grades and within the
Withdrawal Policy.

Students who anticipate that they will not enroll in classes for one semester or more (not including May intensive sessions and summer semesters) but believe that they will resume their studies must notify the University by fax or email to the AAP Registration Office at 202-452-1970 or aapregistration@jhu.edu. Students using an employer contract are financially responsible for any tuition and fees not paid by the employer.

Employer Reimbursement

Students who are requesting employer tuition reimbursement must pay for the course upon receipt of a bill (through SIS) from the Student Accounts Office with their own funds and request reimbursement from the employer at the appropriate time.

JHU Tuition Remission

Students receiving tuition remission benefits from Johns Hopkins University should read the contract carefully. Call the Center for Training and Education at 443-997-6800 to address any questions. Please note that students are financially responsible for dropped courses paid for with tuition remission and any associated fees, if applicable.

Leave of Absence

Students who anticipate that they will not enroll in classes for one semester or more (not including May intensive sessions and summer semesters) but believe that they will resume their studies must notify their program of their intention to do so. AAP students have three options: continuous enrollment, leave of absence, and emergency leave of absence. [Note: students who are concerned about completing a course or courses in the current semester but anticipate normal return to study in the immediately following semester should consult the Incomplete Policy or Withdrawal Policy.]

Continuous Enrollment: Continuous Enrollment allows students to pay a nonrefundable $75 fee that is charged automatically for any fall or spring semester that students are not enrolled in a credit course (May intensive sessions and summer semesters are excluded). Unless they request a Leave of Absence, students must enroll in the fall or spring semester immediately following the semester in which they paid the Continuous Enrollment fee, if not they will become inactive and will be withdrawn from the program. Continuous Enrollment entitles students to advising, career and internship services, and use of the Johns Hopkins facilities, including library facilities, computer labs, and athletic facilities. AAP students on continuous enrollment have a maximum of five years to complete all degree requirements applied toward graduation. Students have a responsibility to maintain active status in their programs, and they should refer to the Inactive Student Policy for details.

Leave of Absence: Leave of Absence (LOA) is an approved absence from the University during which time students are not charged tuition nor are they required to register for courses. Time spent on LOA is regarded as an approved break in study and is not counted toward the total time-to-degree. If a student fails to register without requesting LOA, and the student qualifies for Continuous Enrollment, the student will automatically be placed on Continuous Enrollment for one semester (see above). Students on LOA will have access to their JHU email accounts as well as to limited advising and career services; however, they will not have access to student health benefits or to Johns Hopkins facilities, including library facilities, computer labs, and athletic facilities.

Students are encouraged to contact AAP Registration prior to applying for LOA for details regarding health benefits while on LOA. International students must contact OIS before filing for LOA. Students on LOA are not charged tuition for the semesters they are granted the leave; the period of leave is regarded as an approved interruption of the degree program; however, the University cannot guarantee that financial support will be available when students resume their studies.

To apply for LOA, students complete a Request for Leave of Absence form at advanced.jhu.edu/current-students/forms. Students who are granted a LOA must contact AAP Registration before resuming their studies at the end of the allotted leave time. If granted LOA, students automatically receive an extension in their time to complete their degree for the same period of time as their leave. All other criteria listed in the Time Limitation Policy remain in place. Students are limited to two years for LOA, taken at one time or in combination during the student’s academic career with AAP. Please note, a LOA will not be granted to a student who is currently in thesis or capstone continuation. AAP will withdraw students from their programs if they do not resume their studies after a LOA has expired (refer to the Inactive Status Policy for more information).

Emergency Leave of Absence (ELOA): Emergency Leave of Absence (ELOA) should be taken when a student must withdraw from all classes during the semester in which the student currently is enrolled and the student does not anticipate enrolling in the subsequent semester (or longer). Students are eligible for ELOA if one of the following conditions prevents them from continuing with their graduate studies: 1) a documented physical or mental medical condition; 2) compulsory military service; 3) change in employment; or 4) personal or immediate family hardship. Students are still subject to the refund schedule. If they believe they qualify for an exception to the Refund Policy, they may submit a Refund Request form and supporting documentation to aapregistration@jhu.edu. Please refer to the Refund Policy for more information.

Inactive Status

Except for those on a leave of absence, students who do not enroll for two semesters will lose their active status. The student is considered to have withdrawn from the program. To resume taking courses in Advanced Academic Programs, students must reapply by submitting a new application form, application fee, and any new application materials required. Reapplying students are subject to the admissions and program requirements in effect at the time of the new application. Acceptance for inactive students is not guaranteed, and courses taken prior to the interruption of studies may not count toward degree requirements. Time limitation still applies; see the Time Limitation policy.

Maximum Number of Courses Beyond Program Degree Requirements

With advisor approval, AAP students may take up to two courses beyond their degree program requirements. To obtain advisor approval, students must forward a written request that includes documentation of the course description and a rationale for taking the course(s). Students are advised that Financial Aid may not cover courses that
Tuition and Fees

Tuition and Fees

Payment (p. 2246)
Application Fee (p. 2246)
Tuition (p. 2246)
Course Fees (p. 2246)
Technology Fee (p. 2246)
Withdrawal from Academic Program (p. 2246)
Thesis Continuation Course (p. 2246)
Graduation Fee (p. 2246)
Refund Policy (p. 2246)
Appeal Process (p. 2247)
Refund Schedule (p. 2247)

Payment

Full course tuition is due upon receipt of a bill (through SIS) from the Student Accounts Office. All other fees are payable as noted below. All fees are nonrefundable. Tuition is refundable only according to the refund schedule. If a student registers for a course but does not attend or officially drops/withdraws from a class, the student remains financially responsible for the tuition and fees associated with the course.

Application Fee

The application fee is $75 for all programs. The application fee must be submitted with the application and is not refundable under any circumstances. Johns Hopkins University alumni from any academic program will have their application fee waived. Please contact the Admissions Office to waive your fee.

Tuition

All tuition in the Advanced Academic Programs is determined according to the academic program of study and varies across AAP disciplines. Students will be charged tuition based upon individual courses within the program of study in which they have been admitted. If courses are taken outside of a student’s program of study, the student will pay the tuition rate in effect for the program in which the course is taken. Restrictions apply for how many courses may be taken outside of a student’s academic program and applied toward the degree (see section regarding registering for courses in other programs in AAP and outside of AAP).

Course Fees

In addition to tuition, some courses require field trip, laboratory, technology, material, or other related fees. These fees, specified in the course schedule (https://sis.jhu.edu/classes/) for each term, are payable at the same time as the regular tuition charges and are nonrefundable.

Technology Fee

All fully online and blended courses in AAP require an additional technology fee. This fee applies to all students registered in online classes, and it is not refundable.

Withdrawal from Academic Program

Students who elect to discontinue their program of study must formally withdraw from the program in writing by sending an email to aapregistration@jhu.edu. Once students formally withdraw from their program, they are no longer considered students at AAP and can no longer receive services including, but not limited to, library access, health insurance coverage, or career services.

Students who do not formally withdraw from their program by the end of the add/drop period will be charged the Continuous Enrollment Fee for up to two semesters, or until their status goes Inactive (please see Inactive Section (p. 2245)). Inactive students are considered Withdrawn.

Thesis Continuation Course

Students who are in a thesis course and do not finish the thesis in the semester in which they enrolled for it must pay a thesis continuation fee of $500 for each subsequent term (including summer) until a final grade has been submitted. Thesis continuation is relevant only for students currently in the process of completing a thesis and who need more time to finish the thesis. Thesis continuation has a course number in the AAP schedule of classes and can be registered for through SIS. Thesis continuation and continuous enrollment are different. A student working on his/her thesis should not complete the continuous enrollment registration; rather, they should complete the thesis continuation course. This fee, when paid, allows students to continue using university facilities, such as libraries and the Johns Hopkins Enterprise Directory (JHED).

Graduation Fee

The graduation fee is $100, payable upon receipt of a bill (through your JHU email account) from the Student Accounts Office. Student Accounts sends this bill upon submission of the application to graduate. Billing schedule is subject to change without advanced notice. However, any student who graduates must pay the $100 graduation fee.

Refund Policy

Students may elect to withdraw from one or more course(s) for a variety of reasons. Refunds apply only to the tuition portion of a student’s charges, excluding the field trip, lab, or technical fees, and are calculated based on the date the student request to drop or withdraw is received by the:

Advanced Academic Programs Registration Office
The Johns Hopkins Bernstein/Offit Building
1717 Massachusetts Ave. NW, Suite 101
Washington, DC 20036-2001

Such a request can be made by using the add/ drop form (https://advanced.jhu.edu/forms/). Complete the form online or fax the form to the Registration Office at 202-452-1970. Telephone withdrawals are not accepted. Instructors or advisors never authorize or process withdrawals, though it is certainly courteous to inform the instructor of the intent to withdraw. Refunds are not granted to students suspended or dismissed for disciplinary reasons. Students who drop a course before Week 4 of the term will not have that course listed on their official transcript. Students who drop a course after the start of Week 4 and before the end of the semester will receive a W on their official
transcript, indicating withdrawal from a course. The refund schedule (https://advanced.jhu.edu/forms/) for each semester is posted on the Website (choose Step 4: Paying for Your Courses).

Refunds are made in accordance with the schedule listed below and are updated on the website for each semester/term. If a student withdraws after the registration has been processed, the refund to which the student is entitled depends on the date the request is received by the Advanced Academic Programs Registration Office. On-site courses (e.g., international or regional) may be subject to a separate refund policy. Courses offered by other JHU divisions are subject to that division’s refund schedule.

**Appeal Process**

In the case of rare or exceptional personal medical situations or personal military requirements, a student may request to appeal the standard AAP refund schedule/policy. Refund policy appeals must be submitted in writing (and received) by the Advanced Academic Programs Registration Office no later than the last day of classes of the next semester/term. All supporting documentation and/or a thorough written explanation for the appeal must be included. In cases of rare or exceptional medical situations, supporting documentation should be limited to a letter from the appropriate medical professional, detailing the dates of care and the fitness for the student to attend class during that time. The appeal will be reviewed by the associate dean of AAP. Review times may vary depending upon the complexity of the appeal. Average review times for appeals range from four to six weeks from the date received. All decisions are final.

**Refund Schedule**

Some AAP programs may offer courses at an international location or at a site that is not on the Johns Hopkins University premises. These courses may have different registration deadline requirements and refund schedules, as well as additional registration paperwork and fees. Students should check the website and SIS messaging carefully for these differences.

**Programs**

- Applied Economics, Master of Science (p. 2248)
  - Applied Economics, MS/Finance, Certificate (p. 2249)
- Applied Economics, MS/MBA Dual Degree (p. 2250)
- Center for Advanced Governmental Studies (p. 2251)
  - Data Analytics and Policy, Master of Science (p. 2252)
    - Data Analytics and Policy, MS/Intelligence, Certificate (p. 2253)
  - Geospatial Intelligence, Master of Science (p. 2254)
  - Global Security Studies, Master of Arts (p. 2255)
- Global Security Studies, MA/Intelligence, Certificate (p. 2257)
- Government Analytics, Certificate (p. 2257)
- Government, MA/MBA (p. 2258)
- Government, Master of Arts (p. 2259)
  - Government, MA/Intelligence, Certificate (p. 2261)
- Intelligence Analysis, Master of Science (p. 2261)
- Intelligence, Certificate (p. 2263)
- International Research Administration Management, Certificate (p. 2263)

- Research Administration, Master of Science (p. 2268)
  - Research Administration, MS/International Research Administration Management, Certificate (p. 2269)
- Center for Biotechnology Education (p. 2270)
- Bioinformatics, Master of Science (p. 2270)
- Biotechnology Education, Certificate (p. 2271)
- Biotechnology Enterprise, Certificate (p. 2272)
- Biotechnology, Master of Science (p. 2272)
- Biotechnology, Master of Science/MBA (p. 2276)
- Food Safety Regulation, Master of Science (p. 2276)
- Individualized Genomics and Health, Master of Science (p. 2277)
- Master of Biotechnology Enterprise and Entrepreneurship (p. 2278)
- Regulatory Science, Master of Science (p. 2278)
- Sequence Analysis and Genomics, Post-Master’s Certificate (p. 2279)
- Communication, Master of Arts (p. 2280)
- Communication, Master of Arts/Nonprofit Management, Certificate (p. 2283)
- Cultural Heritage Management, Master of Arts (p. 2284)
  - Cultural Heritage Management, MA/Digital Curation, Certificate (p. 2286)
  - Cultural Heritage Management, MA/Nonprofit Management, Certificate (p. 2286)
- Digital Curation, Certificate (p. 2287)
- Energy Policy and Climate, Master of Science (p. 2288)
- Environmental Sciences and Policy, Master of Science (p. 2290)
  - MS in Environmental Sciences and Policy/Geographic Information Systems, Certificate (p. 2293)
- Film and Media, Master of Arts (p. 2294)
- Geographic Information Systems, Master of Science (https://e-extncatalog.jhu.edu/arts-sciences/advanced-academic-programs/programs/geographic-information-systems-master-science/)
  - Geographic Information Systems, Post-Baccalaureate Certificate (https://e-extncatalog.jhu.edu/arts-sciences/advanced-academic-programs/programs/geographic-information-systems-post-baccalaureate-certificate/)
An Applied Economics degree is no longer just for PhD-trained specialists. Instead, it's becoming an increasingly ubiquitous and rapidly changing field of inquiry that requires people who are skilled in analyzing and interpreting economic data, and then using it to effect decisions about national and global markets and policy involving everything from health care to fiscal policy, from foreign aid to the environment, and from financial risk to real risk. The Master of Science in Applied Economics is a 10-course degree program, designed to prepare you for a career where you’ll need to use econometrics and other quantitative techniques to construct and estimate economic models through a rigorous and demanding curriculum and the use of econometrics.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

Program Specific Requirements

In addition to the materials and credentials required for all programs, the Master of Science in Applied Economics also requires:

- One semester of introductory microeconomics, passed with at least a B
- One semester of introductory macroeconomics, passed with at least a B
- One semester of undergraduate calculus or equivalent, passed with at least a B
- A grade in a higher level course trumps a grade in a lower level course. A B grade or higher upon repeat is not acceptable.

Prerequisite Math Requirement

Those entering with only a single calculus course must take in their first semester AS.440.304 Math Methods for Economists, a three-credit course, full-length course, at half tuition. The course does not count toward the degree. In order to waive the Math Methods for Economists course, evidence of multivariable calculus is required.

Environmental Economics
(on-site and online)

For contributing to efficient corporate and public policy. Students take Environmental & Resource Economics, Cost-Benefit Analysis, and Microeconometrics and/or Macroeconometrics in the Applied Economics Program. Computable General Equilibrium Modeling builds a powerful tool with widespread use in the field. Up to two courses from the in-house Environmental Science and Policy, Energy and Climate Change, or Geographic Information Systems programs, some of which are available online, can count towards the electives in the program.

Health Economics
(on-site and online)

Bring to bear the tools of economics in this burgeoning field. Students take Economics of Health Care, Cost-Benefit Analysis, and Microeconometrics in the Applied Economics Program, and choose three to six credits from science, specialized quantitative, and policy courses in the part-time Master of Public Health Program at the Bloomberg School, offered online.

Quantitative Methods
(on-site and online)

Any or all courses offering training in advanced econometrics and empirical methods — Microeconometrics, Macroeconometrics, Financial Econometrics, Macroeconomic Forecasting, Bayesian Econometrics, Survey Research Methods, Cost-Benefit Analysis, Computable General Equilibrium Modeling, and Machine Learning in Statistics — are sincerely recommended for consideration to non-degree seeking students and degree candidates alike.

Formal Concentration in Financial Economics
(on-site and online)

Students may declare a formal concentration in Financial Economics if they wish to elect their courses according to the requirements listed here (https://advanced.jhu.edu/academics/graduate-degree-programs/applied-economics/concentration-in-financial-economics/). Such a concentration would be noted on the student’s transcript.

Applied Economics, MS/Finance, Certificate

Applied Economics, MS/Graduate Certificates in Finance

To allow students to better exploit the strong complementary nature between finance and economics, Carey Business School and the Applied Economics Program have eliminated the overlap between the MS in Applied Economics, the Graduate Certificate in Financial Management, and the Graduate Certificate in Investments. This enables students to earn both the MS degree and a graduate certificate for a total of 15 courses, eight at Applied Economics and seven at Carey.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Science in Applied Economics also requires:

- Economics of Health Care
- Game Theory
- Thesis
- Total Credits 30

Applied Economics students tailor their own course of study and can pursue any of the following areas, or mix and match:

Public Policy
(on-site and online)

Financial Economics and the Macroeconomy
(on-site and online)

These are two by now obviously strongly complementary subjects, and we have a rich set of offerings. The foundation for the microeconomic analysis of intertemporal and interstatial [risk] allocation is laid in Financial Economics. Financial Intermediation & Financial Markets considers how existing institutions cope with both. Theory and practice are deepened in Economics of Investments & Financial Management and Economics of Derivatives. Further perspective is gained through Behavioral Economics & Finance. The economic aggregates are treated in Monetary Economics, International Finance [Open Economy Macro], and Economic Growth, while Finance and the Macroeconomy and Topics in Macroeconomics provide additional depth and integration. Quantitative tools are found in Macroeconometrics, Financial Econometrics, and Macroeconomic Forecasting.

International Economics and Development
(on-site and online)

For gaining an analytical and quantitative perspective on global matters. Substantive courses include International Finance [Open Economy Macro], International Trade [Open Economy Micro], Development Microeconomics, and Economic Growth. Here too, Cost-Benefit Analysis provides essential conceptual and quantitative tools. Microeconometrics and/or Macroeconometrics, as well as Survey Research Methods, further develop the corresponding quantitative skills. Computable General Equilibrium Modeling builds a powerful tool with widespread applicability in this field.

Spatial Economics
(online only)

For contributing to local economic policy analysis and policy making. Students choose Regional Economics and Urban Economics from the Applied Economics Program, and up to two courses from the Geographic Information Systems Program, or one course from the Geographic Information Systems Program and 470.703 Urban Data Analytics from the Government Analytics Program.
• One semester of introductory microeconomics, passed with at least a B
• One semester of introductory macroeconomics, passed with at least a B
• One semester of undergraduate calculus or equivalent, passed with at least a B
• A grade in a higher level course trumps a grade in a lower level course. A B grade or higher upon repeat is not acceptable.

PREREQUISITE MATH REQUIREMENT
Those entering with only a single calculus course must first take AS.440.304 Math Methods for Economists, a noncredit, full-length course, at half tuition, as the first of eight program courses. Those entering with two calculus courses may study the extra material on their own.

Program Requirements
Dual degree recipients receive both diplomas upon completion of both programs.

MBA Requirements—Carey Business School
Courses offered in Washington, DC, Baltimore, Maryland; and online. All courses are two credits.
Center for Advanced Governmental Studies

Center for Advanced Governmental Studies
advanced.jhu.edu/govstudies (https://advanced.jhu.edu/academics/cen- ters/center-for-advanced-governmental-studies/)

The Johns Hopkins University Center for Advanced Governmental Studies (CAGS) encompasses a set of graduate programs designed to build knowledge and skills to prepare our students to be leaders in the government, including security and intelligence, and in the nonprofit or private sectors as well. In addition, CAGS is involved in a number of government and private sector partnerships. The overall mission of all the Center’s programs and initiatives is to provide a strong foundation of knowledge upon which innovative policy programs and promising leaders can develop.

Based at the Johns Hopkins University Washington, DC center in Dupont Circle, CAGS is a vibrant learning environment both for our onsite and online graduate programs and also as a forum for policy discussions which are usually offered onsite and virtually as well. The Center provides a venue for unbiased, nonpartisan efforts to expand knowledge of the U.S. government and the policymaking process and apply analytical tools to assess the impacts of governmental action. Both training in and assessment of the best management practices in the nonprofit and private sectors as well as in the government are also a focus of CAGS programs.

Graduate Degrees and Certificates

The graduate degree programs of the Center bring together theory and practice in the study of government and its impacts domestically and abroad, while preparing individuals for leadership positions in the public and private sectors. At CAGS, students use their graduate education to better inform their professional work and find that their practical work experience often augments their graduate studies. While our degree programs are designed as part-time studies, students have the option of accelerating their course of study by attending at a full-time pace.

The Center is comprised of seven (7) master’s degrees and three (3) certificate programs. These are: MS in Data Analytics and Policy, MS in Geospatial Intelligence, MA in Global Security Studies, MA in Government, MS in Intelligence Analysis, MA in Non-Governmental Organization (NGO) Management, and MA in Public Management; and Certificate in Government Analytics, Certificate in Intelligence, and Certificate in Nonprofit Management.

In addition, students have various options for combining our master’s degrees with our certificates in intelligence, nonprofit management, or government analytics, allowing them to graduate with two credentials after pursuing a concentrated and efficient course of study. These dual degrees and combined programs are: MA in Global Security Studies/ Certificate in Intelligence, MA in Government/Certificate in Intelligence, MA in Government/MBA, MS in Government Analytics/Certificate in Intelligence, MA in Public Management/Certificate in Government Analytics, MA in Public Management/Certificate in Intelligence, and MA in Public Management/Certificate in Nonprofit Management.

Partnerships, Events, and Publications

The Hopkins Center for Advanced Governmental Studies is involved in a number of government and private sector partnerships. We welcome opportunities for collaborations and initiatives that fit within the Center’s goals of educational exchange and workshop/training efforts that further the understanding of the roles and functions of government.

CAGS has developed and instituted ongoing leadership exchange programs between U.S. federal executives and their counterparts in China, Germany, and other countries. In addition, the Center frequently hosts special events, policy workshops, and summits with embassies, government agencies, Washington think tanks, and other organizations. Periodically, white papers are published by the Center on topics that can help inform current policy debates. CAGS full-time faculty are actively engaged in their academic fields, as are the practitioner-scholars who comprise our adjunct faculty, and each year collectively publish numerous books, articles, and other works.

International Study

The Center offers degree-seeking students frequent opportunities for intensive international study. The basic format is several intensive course meetings and readings with JHU professors before the students leave; spending one week to 10 days abroad with classes about 4.5 hours a day and field trips, site visits, or other exercises, and a research project or major paper due after students return. Past courses have included The Birth of Modern Democracy” (Scotland and France), “China’s Place in the 21st Century,” “Command and Leadership in Modern War: Operation Overlord,” (United Kingdom and France); Politics, Security and Culture in Israel; Politics, Security and Culture in India; Environmental Governance, Climate Change and Energy Security in Europe and America (Belgium and Germany); Policymaking in the U.S. and Latin America: Perceptions and Misconceptions (Mexico); and Sustainable Cities in France and Germany: Lessons for the United States (Germany and France); European Security: Russian Challenge, Western Response (Belgium, Ukraine, and Estonia); and Nature Conservation and Sustainability in Cuba. Each summer CAGS students can apply to a course, International Security and Intelligence, offered in partnership with the Cambridge Security Institute in England.
Data Analytics and Policy, Master of Science

MS in Data Analytics and Policy

The Master of Science in Data Analytics and Policy prepares students to use analytics to tackle policy challenges in the public and private sectors. Students graduate with expertise in cutting-edge analytical methods relied upon by government agencies, research institutes, private companies, and non-profit organizations. The program emphasizes the application of analytics to substantive issues to develop students into data-driven leaders.

The schedule for completing this 12-course degree program is flexible. Many students work full-time while attending the program on a part-time basis and complete their degree in two years. Full-time students can complete the degree in one year. The MS in Data Analytics and Policy is offered primarily online, though some electives are offered at the Johns Hopkins Washington, DC Center each term.

Students may choose to focus within one of the following specialized areas: political behavior and policy analysis, geospatial analysis, statistical analysis, or public management. The electives cover a wide range of analytical methods, including machine learning, predictive analysis, text analysis, database management systems, computational modeling, civic technology, economic analysis, survey methodology, risk analysis, and data privacy.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Science in Data Analytics and Policy requires:

- Statement of purpose (two pages double-spaced): Explain your reasons for seeking admission and how you will use the degree to advance your career. Your statement should also address your ability or potential to perform quantitative analyses.
- Writing sample (5-7 pages double-spaced). The writing sample should demonstrate your ability to make and support an argument. It does not need to be quantitative.

With approval of the program director, students may also choose electives from selected degree programs within Advanced Academic Programs, including Government, Global Security Studies, Applied Economics, Communication and Energy Policy and Climate.

Sequence of Study
It is recommended that students begin the program by taking AS.470.681 Probability and Statistics along with one elective. In the following term, it is recommended that students take AS.470.768 Programming and Data Management along with one elective. Students should then work through the additional core and elective requirements (generally taking one core course and one elective course per term). The final core course, AS.470.862 Capstone for Data Analytics and Policy, should be completed during the student’s final term (or penultimate term with permission from the student’s adviser).

Concentrations
There are four concentrations offered through the MS in Data Analytics and Policy. The concentration in Statistical Analysis focuses on the use of advanced quantitative methods to make data-driven decisions. The concentration in Geospatial Analysis focuses on the applied use of spatially-distributed data. The concentration in Political Behavior and Policy Analysis prepares students to evaluate campaigns, elections, political institutions, and government programs using quantitative methods. Finally, the concentration in Public Management provides students with the tools and skills needed to solve management issues related to policy, finance, and administration. Pursuing a concentration is optional. To earn a concentration, four of the student’s electives must be in the concentration area.

Honors
Students in the MS in Data Analytics and Policy are eligible for program honors. Students who earn a grade of “A” or better in all their coursework and the capstone seminar will graduate with the distinction of cum laude. Students who earn a grade of “A-” or better in all their coursework and earn an “A” or better in the capstone seminar will graduate with the distinction of magna cum laude. Students who earn the grade of “A” or better in all their coursework and an “A” or better in the capstone seminar will graduate with the distinction of summa cum laude. These honors are program-based and recognized by the Center for Advanced Governmental Studies only.

Data Analytics and Policy, MS/Intelligence, Certificate
Students pursuing an MS in Data Analytics and Policy may obtain an additional credential by completing courses that lead to the Certificate in Intelligence. This combined credential prepares graduates for careers in the U.S. Intelligence Community, as well as other parts of the national security community. Students can complete the program with 15 courses.

Admissions Criteria for all Advanced Academic Programs (p. 2236)
In addition to the materials and credentials required for all programs, the Master of Science in Data Analytics and Policy requires:

- Statement of purpose (two pages double-spaced): Explain your reasons for seeking admission and how you will use the degree to advance your career. Your statement should also address your ability or potential to perform quantitative analyses.
- Writing sample (5-7 pages double-spaced). The writing sample should demonstrate your ability to make and support an argument. It does not need to be quantitative.
- Current resume.

Program Requirements
Students pursuing an MS in Data Analytics and Policy may obtain an additional credential by completing a sequence of courses offered by the Certificate in Intelligence. This combined credential will require students to complete 15 courses (in lieu of 17 to complete both degrees separately). Students are required to take the following courses:

Students complete 12 courses to earn their degree:

**Program Requirements**

Five Elective Courses

**Geospatial Intelligence, Master of Science**

MS in Geospatial Intelligence

advanced.jhu.edu/geospatialintelligence/ [http://www.advanced.jhu.edu/academics/graduate-degree-programs/geospatial-intelligence/

Geospatial intelligence informs and influences policy, military, diplomatic, environmental and disaster relief and recovery decisions, and operations by governments at every level. Increasingly, in non-governmental sectors, it is informing and influencing public health, business, infrastructure, energy, regulatory, and advocacy decisions.

The Geospatial Intelligence Program unites three fields of study: the history of geospatial intelligence; the science and mathematics of digital geography and its related databases; and the art of converting geospatial data into written, spoken, and visual intelligence. Students analyze historical intelligence examples to understand the development of the concepts and practices behind collection, analysis, reporting, and technology. They also will focus on current challenges in the profession, among them the analytics and technology needed for the volume of current and future collection, the challenges of new sensors, and the development of new non-governmental geospatial communities.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

**Program Specific Requirements**

In addition to the materials and credentials required for all programs, the Master of Science in Geospatial Intelligence requires:

- A four-year degree in a related discipline, such as Geography, GIS, Social Sciences (Political Science, International Relations, Area Studies). For those holding degrees in other disciplines, attention will be given to overall GPA and demonstrated writing ability. The program requires proficiency in mathematical statistics and probability. Prospective students will have the opportunity to assess their level of proficiency before enrolling in the program.
- A completed geospatial writing sample, per the requirements here [https://advanced.jhu.edu/wp-content/uploads/2018/01/msGeospatialIntelligenceWritingSample.pdf].

**Program Requirements**

Students complete 12 courses to earn their degree:

**Capstone Experience**

AS.472.800 Capstone in Geospatial Intelligence 4

Total Credits 43-47

1 The Capstone is the culmination of the instruction and the learning in the program. In this experience, the student selects a mentor, identifies a geospatial issue of interest with an associated collection strategy, analytic methodology, and reporting strategy, and a written summary product and presentation.

**Sequence of Study**

The program commences with a required introductory course, and progresses through core courses, electives in specific areas of geospatial concentration, and a capstone exercise that provides students the opportunity to display advanced proficiency and thoughtful geospatial analysis based on the content of the program. Individual and collaborative projects are woven through the courses.
Learning Outcomes

The MS in Geospatial Intelligence weaves the history, science, mathematics, and art of geospatial analysis into a program that will enable its graduates to lead and shape this rapidly-growing intelligence discipline. The program combines recognized faculty with extensive geospatial experience and publications, an interactive and online curriculum, and the research resources, tools, and opportunities for its students to:

- Understand the history and evolution of geospatial intelligence and its enduring challenges.
- Develop the habits of mind and the conceptual framework to thrive as analysts, researchers, program leaders, and managers in the geospatial communities.
- Employ the appropriate mathematical models and scientific sensor knowledge necessary to design advanced commercial geospatial collection management for big data and small data problems, and to design geospatial databases for complex issues.
- Develop analytic processes and products as well as demonstrate the ability to communicate geospatial information and analysis accurately and persuasively in writing and briefing.
- Produce original research on the history and methodologies of geospatial intelligence.

Global Security Studies, Master of Arts

MA in Global Security Studies

globalsecurity.jhu.edu (http://www.globalsecurity.jhu.edu)

The curriculum of the JHU Master of Arts in Global Security Studies is designed for working adult students who are looking to develop or expand their expertise regarding the security challenges of the 21st century. Students confront the complexities of today's security environment with the latest policy and theoretical tools for analysis and action. Particular strengths of the program are in intelligence; terrorism, insurgency, and other forms of "small wars" and armed social movements; energy and environmental security; and the emerging cyber domain and its implications for war fighting, security, privacy, and the economy.

Courses draw from the best in academia and policy making in order to offer students the cutting edge in intellectual preparedness for career advancement. Classes are designed to maximize individual attention, encourage student contribution, build analytical skills, and provide the tools for engaging in original research.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

PROGRAM SPECIFIC REQUIREMENTS

A 5-page, double-spaced essay on the following question:

"America does not go abroad in search of monsters to destroy. She is the well-wisher to Freedom and independence of all." — John Quincy Adams

This quote reflects the trends in American national security for much of the nation's history. Are the implications that can be drawn from the statement consistent with the demands of American national security in the 21st century? Discuss this problem in reference to some recent policy issues or political events, citing at least three references.

PROGRAM REQUIREMENTS

- Four core courses
- Five elective courses
- Three research courses

Core Courses

Students must complete four core courses. With the exception of AS.470.601 Climate Change and National Security and AS.470.657 Energy, Security, and Defense all of these courses are offered every semester.

Total Credits: 12

1 This class should be taken in your first semester.

Research Study Courses

This program does not require a thesis. However, it does require the completion of a rigorous research study of journal article length. The research study should make use of the qualitative and quantitative research methods that students learn in AS.470.851 Qualitative Methods in Social Science, and AS.470.854 Fundamentals of Quantitative Methods or AS.470.853 Historical Methods.

Total Credits: 9

1 This course will usually be taken in the second or third semester.
2 With permission from the instructor.
3 This class must be taken as the final semester of study. Prerequisite: Students must have passed all previous courses in the Research Study track.

Areas of Concentration

Students may pursue a concentration in one of the fields listed below. A complete list of concentration courses is available in the multi-year schedule. A selected list of electives pursuant to the concentrations is below. Please consult with your advisor if in doubt about the applicability of a course to a particular concentration. All courses are three graduate credits unless otherwise specified. Courses

Further on Electives
This is not a comprehensive list of electives; rather, it is a sampling.

After consultation with their advisor, students may also take up to two relevant courses offerings in the School of Public Health, the School of Advanced International Studies, and other graduate programs in the Krieger School of Arts and Sciences.

Sequence of Study
Students take AS.470.603 Introduction to Global Security Studies in their first semester. This course exposes students to the basic concepts that are important to the field of global security studies and allow them to apply these tools to selected security issues. In the other core classes, which should be taken early on, students use these intellectual tools as they explore the three pillars of the degree: strategic studies, energy and environmental security, and economic security.

In their second or third semester, students take 470.851 Introduction to Qualitative Methods, the first step in the research study process. After that, students take either AS.470.854 Fundamentals of Quantitative Methods or AS.470.853 Historical Methods. With this sound basis in methodology, students are prepared to write a journal article-length study in their final semester when they take AS.470.855 Research Study Seminar. Students must successfully defend their research study in order to graduate.

Students may pursue an area of concentration in one of the fields listed above. An area of concentration requires that at least four of the elective courses be from the list approved for that concentration. All concentration courses also count as general electives for students not pursuing an area of concentration.

Global Security Studies, MA/Intelligence, Certificate

MA in Global Security Studies/ Certificate in Intelligence

Students pursuing an MA in Global Security Studies may obtain an additional credential by completing a sequence of courses that lead to the Certificate in Intelligence. This combined credential will prepare its graduates for careers in the U.S. Intelligence Community and in those parts of the government and private sector that use intelligence or work with the Intelligence Community. Students can complete this program with only 15 courses.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

Program Specific Requirements

5-page, double-spaced essay on the following question:

"America does not go abroad in search of monsters to destroy. She is the well-wisher to Freedom and independence of all." — John Quincy Adams

This quote reflects the trends in American national security for much of the nation’s history. Are the implications that can be drawn from the statement consistent with the demands of American national security in the 21st century? Discuss this problem in reference to some recent policy issues or political events, citing at least three references.

Program Requirements

Students pursuing a Master of Arts in Global Security Studies may obtain an additional credential by completing a sequence of courses offered by the Certificate in Intelligence. This combined credential will require students to complete 15 courses (in lieu of 17 to complete both degrees separately). Students are required to take the following courses:

1 This course should be taken in the second or third semester.
2 Must have permission from the instructor.
3 This class must be taken as the final semester of study. Prerequisite: Students must have passed AS.470.851 Qualitative Methods in Social Science as well as AS.470.854 Fundamentals of Quantitative Methods or Historical Methods.

Five Intelligence Certificate Requirements

Completion of five courses, one each from the following areas (See Certificate in Intelligence for specific course options):

- Introductory Courses
- Law and Ethics
- Theory, History, and Context
- Intelligence Operations
- Applications of Intelligence

For information on exact dates, times, locations, fees, and instructors for any particular term, students should consult the course schedule available at globalsecurity.jhu.edu (http://www.globalsecurity.jhu.edu) typically two and a half months before each semester begins. Courses are held at the Johns Hopkins University Washington, DC Center at 1717 Massachusetts Avenue NW, close to Dupont Circle and also online and in hybrid formats. Please note that not all courses are available each semester.

Government Analytics, Certificate

The Certificate in Government Analytics provides students with the knowledge and skill set needed to perform sophisticated data analyses, draw substantive conclusions, and communicate results for the purpose of improving policy-making and governance. Through the use of cutting-
edge tools and skills, students will be able to address contemporary policy challenges in both the public and private sector.

Admissions Criteria for all Advanced Academic Programs (p. 2236)
In addition to the materials and credentials required for all programs, the Certificate in Government Analytics requires:

- Statement of purpose (two pages double-spaced): Explain your reasons for seeking admission and how you will use the certificate to advance your career. Your statement should also address your ability or potential to perform quantitative analyses.

Note: With approval of the program director, students may also choose electives from selected degree programs within Advanced Academic Programs, including Government, Global Security Studies, Applied Economics, Communication, and Energy Policy and Climate.

Curriculum
The Johns Hopkins Certificate in Government Analytics provides students with the knowledge and skill set needed to perform sophisticated analyses, draw substantive conclusions, and communicate results for the purpose of making data-driven decisions. No prior coursework in quantitative methods is required. Five courses are required to complete the program.

Students will work with their academic advisor to determine which electives are appropriate for the student’s interests and career goals. Please note that not all courses are available each term.

Sequence of Study
It is recommended that students begin the program by taking AS.470.681 Probability and Statistics along with one elective. In the following term, it is recommended that students take AS.470.709 Quantitative Methods along with one elective. Students can then complete the last elective in their final term of the program.

Government, MA/MBA
MA in Government/MBA Dual Degree
advanced.jhu.edu/govmba (http://www.advanced.jhu.edu/govmba/)

Management education typically addresses the public and private sectors separately. Universities typically offer the MBA degree for business leadership and the MA, MPP, or MPA for public-sector management. The assumption is that managers working in the public and private sectors are involved with completely different sets of issues and problems. The reality is that both face similar challenges, and managers frequently move from the public sector to the private sector and vice versa.

The MA in Government/MBA uniquely prepares individuals for the combination of public-and-private sector responsibilities they are likely to face during their careers. This program enables those working in government to expand their knowledge and skills in business and management, preparing them to take on leadership roles in nonprofit, public sector, or commercial enterprises. Students in these degrees complete both the professional managerial education requirements of the MBA and the advanced disciplinary requirements of a specialized MA in Government. Graduates of the Johns Hopkins University MA in Government/MBA are capable of integrating rigorous scholarship with business acumen in bringing both intellectual and strategic leadership to the complex challenges of management in government and business in today’s global economy.

The MA in Government/MBA is designed with class schedules to accommodate working adults and may be taken onsite at the at the JHU Washington, DC Center (near Dupont Circle) or online. Students who pursue the dual degree will take classes in the government program at the School of Arts and Sciences and in the MBA program at the Carey Business School. They are assigned an advisor from each school who will oversee their coursework. To earn the MA in Government/MBA, students must take 10 classes in the government program and 21 classes in the Carey Business School. Students working full time can take up to two courses a semester. Students who do not work full time can take up to four courses a semester. Dual degree recipients receive both diplomas upon completion of both programs.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

Program Specific Requirements
- GRE or GMAT exam
- At least two years of progressive, full-time, professional experience after the completion of undergraduate studies for the MBA.
- A writing sample of five to seven pages that is research-focused. The purpose of the writing sample is to demonstrate your ability to make and support an argument.

If you do not have an existing research paper that you wish to submit, you may write a five-page paper on the following question:

“If men were angels, no government would be necessary. If angels were to govern men, neither external nor internal controls on government would be necessary. In framing a government which is to be administered by men over men, the great difficulty lies in this: you must first enable the government to control the governed; and in the next place oblige it to control itself.”

— James Madison, Federalist 51

In this well-known quote, Madison points towards the age-old problem of reconciling democracy and political power. Discuss this problem in reference to some recent policy issues or political events, citing at least three references.

A waiver from these exams may be approved if a candidate has:
• Completed a graduate degree and can demonstrate quantitative ability through coursework of B or better in statistics, corporate finance, or microeconomics.
• Completed an undergraduate degree and has at least five years of professional experience. Applicant has also taken at least one course in statistics, corporate finance, and microeconomics, earned a B or better, and earned an overall GPA of 3.0 or better.
• A professional designation, such as CPA or CFA

Program Requirements
All dual-degree students are required to complete the following:

<td>3</td>
</tr>
</tbody>
</table>

Total Credits: 9

These three classes would count toward the eight government electives you must take to complete the MA/MBA. MA/MBA students who successfully complete and defend their theses will be awarded honors at graduation.

For details on these concentrations and a full list of classes and descriptions, see the AAP website: advanced.jhu.edu (http://www.advanced.jhu.edu).

MBA Courses
All dual-degree students are required to complete the following MBA courses (all courses are two credits):

For more information, please contact Carey Business School Admissions at carey.admissions@jhu.edu (http://ecatalog.jhu.edu/carey). MA in Government

MA in Government (http://www.government.jhu.edu)

The curriculum of the Master of Arts in Government program is designed for working adult students who have specialized skills in a particular field and desire the broader perspective necessary for leadership in politics and administration. The courses are based on the latest scholarly and scientific knowledge but emphasize the application of such knowledge to practical governmental, political, and policymaking problems of today.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Arts in Government requires:

• A writing sample of five to 10 pages that is research-focused. The purpose of the writing sample is to demonstrate the applicant’s ability to make and support an argument.
If the applicant does not have an existing research-focused writing sample that he or she wishes to submit, the applicant may write a five-page paper responding to the following:

"If men were angels, no government would be necessary. If angels were to govern men, neither external nor internal controls on government would be necessary. In framing government which is to be administered by men over men, the great difficulty lies in this: You must first enable the government to control the governed; and in the next place oblige it to control itself." — James Madison, Federalist 51

In this well-known quote, Madison points toward the age-old problem of reconciling democracy and political power. Discuss this problem in reference to some recent policy issues or political events, citing at least three references.

**PROGRAM REQUIREMENTS**

- Four core courses (includes thesis courses)
- Eight elective courses

Total Credits 12

### Sequence of Study

Elective courses may be taken in any order, but the core and required courses must be taken in this sequence: Government and Politics, Research and Thesis I, Research and Thesis II, and Research and Thesis.
III. Students cannot register for these courses out of order. In their first semester, students take the core course, Government and Politics, which introduces students to the basic tenets of government and politics. Students should take the required courses, that is, Research and Thesis I, early in the program (i.e., as their fourth or fifth class), and the third core class, Research and Thesis II, shortly after. The final required course of the program is Research and Thesis III, which students take after completing all other core and required courses and electives.

There are three concentrations offered in the government program for students choosing to specialize in one of these specific areas: Political Communication, Security Studies, and Democracy Studies and Governance. The concentration in Political Communication provides students with the opportunity to study with academics and practitioners in the field: reporters, political operatives, journalists, and campaign news, and media professionals. The concentration in Security Studies covers the fundamentals of administering and preserving American security. The concentration in Democracy Studies and Governance provides students with an understanding of what makes democracies work and will be applicable to both “old” and “new” democracies, and to countries transitioning to democracy. Students may (but are not required to) identify a concentration in one of the fields after completion of the core courses.

Students must complete the core course, Government and Politics, eight electives, and the three required thesis courses, which include completion of the final thesis paper to be awarded an MA in Government.

**Thesis Process**

The thesis is a portfolio of three papers that are thematically linked and written during the student’s graduate school career. The papers are accompanied by an introductory critical comment of approximately eight to ten pages and a conclusion of similar length, which both address the contribution that these papers make to the existing literature and further address how the three papers are interrelated.

Students are expected to have written a literature review related to their theses topics in the Government and Politics course prior to enrolling in Research and Thesis I. During Research and Thesis I, students will study research and writing methods in more depth and expand their literature review to write the first paper of their portfolio thesis. In Research and Thesis II, students will, under the supervision of the thesis instructor, revise the second and possibly third paper for submission that is appropriate for their thesis portfolio. Students have the option of taking AS.470.709 Quantitative Methods instead of Research and Thesis II with the permission of the Program Director. By the conclusion of Research and Thesis I and II, all students will have at least two of their three required thesis papers completed. The third paper should be well under way before taking Research and Thesis III also, but it can be reworked and revised during the remaining elective courses. Students will bring these three papers to their final class of the program, Research and Thesis III. In this course, students will work on any small revisions to the three papers and write the critical comment that thematically links the three papers together. The thesis must be successfully defended in order to graduate.

**Government, MA/Intelligence, Certificate**

MA in Government/ Certificate in Intelligence

Students pursuing an MA in Government may obtain an additional credential by completing courses that lead to the Certificate in Intelligence. This combined credential prepares graduates for careers in the U.S. Intelligence Community and in those parts of the government and private sector that use intelligence or work with the Intelligence Community, as well as other parts of the national security community. Students can complete the program with 15 courses.

**Admissions Criteria for all Advanced Academic Programs (p. 2236)**

**PROGRAM REQUIREMENTS**

Students pursuing an MA in Government may obtain an additional credential by completing a sequence of courses offered by the Certificate in Intelligence. This combined credential will require students to complete 15 courses (in lieu of 17 to complete both degrees separately). Students are required to take the following courses:

**Five Intelligence Certificate Requirements**

Completion of five courses, one each from the following areas (See Certificate in Intelligence for specific course options.)

- Introductory Courses
- Law and Ethics
- Theory, History, and Context
- Intelligence Operations
- Applications of Intelligence

**Intelligence Analysis, Master of Science**

**MS in Intelligence Analysis**

advanced.jhu.edu/intelligenceanalysis

The Master of Science in Intelligence Analysis (MSIA) provides students interested in launching or advancing their career in intelligence analysis with the core competencies needed to succeed in an array of intelligence analysis roles. The program provides a theoretical grounding in the discipline, as well as mastery of the core skills required to succeed as an intelligence analyst in the public and private sectors. Hopkins’ MSIA degree emphasizes the critical thinking and analytical skills necessary to identify actionable insights from diverse and complex intelligence sources, and persuasively communicate those findings to decision makers. Courses are taught by leading practitioners in the intelligence community with significant opportunities for students to engage with both faculty and their peers. Graduates of the program will be highly qualified for key roles within public and private sector intelligence agencies.
Admissions Criteria for all Advanced Academic Programs (p. 2236)

Program-Specific Requirements

In addition to the general admissions criteria for all Advanced Academic Programs, applicants should submit:

1. A 1-2 page Statement of Purpose. The Statement of Purpose explains the applicant’s reasons for seeking admission and includes a plan of study addressing the applicant’s analytical abilities and interest in studying the theory and practice of intelligence analysis.

2. Two recommendations. Please include the contact information for two references who can verify professional and/or academic accomplishment. The references will be automatically emailed information on how they can access the recommendation system.

3. A resume or CV.

4. A writing sample. Submit a 5-page, double-spaced original paper responding to the following question:

   "Is intelligence analysis an art or a science?"

Your submission should demonstrate your writing skills, demonstrate evidence-based argumentation, and cite three sources from the extant research literature in support of your position.

PROGRAM REQUIREMENTS

- Eight core courses
- Two elective courses
- Two research courses

470.743 Data Mining and Predictive Analytics
470.792 Social Science, National Security, and Intelligence
470.795 The Constitution and National Security

1 Students must enroll in either 473.600 The Art & Practice of Intelligence or 473.601 Intelligence: From Secrets to Policy in their first semester. Credit from only one of these courses may be applied to the degree requirements.

2 Students must enroll in 473.801 Capstone: Special Issues in Intelligence in their final semester in the program.

Course Sequencing

All MSIA students must enroll in either 473.600 The Art of Practice of Intelligence or 473.601 Intelligence: From Secrets to Policy during their first semester in the MSIA program. These courses provide the foundational knowledge necessary for success in subsequent courses, including coverage of intelligence collection methods, the intelligence production cycle, and the use of intelligence by decision-makers to formulate policy. One or both of these courses is offered every semester. Credit from only one of these courses may be applied to the degree requirements.

Students must complete 473.800 Research Seminar prior to enrolling in 473.801 Capstone: Special Issues in Intelligence, which must be taken in the student’s final semester in the program. Capstone projects proposals are developed and approved during the 473.800 Research Seminar course and completed during the 473.801 Capstone: Special Issues in Intelligence, providing students a year to pursue their selected research initiative.

MSIA Learning Outcomes

Graduates of the Master of Science in Intelligence Analysis (MSIA) are expected to master the following key learning outcomes:

- Discern, extract, and synthesize relevant information from diffuse and extensive intelligence sources in response to current policy and security challenges.
- Employ time-sensitive critical analysis in an environment of ambiguity.
- Inform and persuade diverse audiences using oral, written, and visual media to inform decision-making.
- Evaluate ethical and legal principles in the field of intelligence analysis.
- Analyze and apply effective leadership and management skills for resourcing intelligence operations and organizations.
- Create an inclusive approach to decision-making that fosters awareness of regional and global contexts.
Intelligence, Certificate
Certificate in Intelligence
advanced.jhu.edu/intelligence (http://www.advanced.jhu.edu/intelligence/)

The Johns Hopkins Certificate in Intelligence is designed for students who are interested in pursuing or advancing careers in intelligence, be it in analysis, human or technical collection, or counterintelligence. It is also useful for professionals in the policy and operational world whose careers involving consuming intelligence.

The certificate can stand on its own as a credential, or students can pair it with the MA in Global Security Studies, MA in Government, MS in Government Analytics, or MA in Public Management for a combined credential. (See the sections for those master's degrees for further details.) Students availing themselves of one of these options can count two of their intelligence studies courses toward their Master's degree elective requirements.

The Certificate in Intelligence also has a partnership with the Cambridge Security Initiative and the War Studies Department of King's College, London under which each summer five competitively chosen Johns Hopkins students can satisfy one of their Certificate requirements through summer study at Cambridge University in the United Kingdom. (See AS.470.707 International Security and Intelligence.)

Admissions Criteria for all Advanced Academic Programs (p. 2236)
PROGRAM REQUIREMENTS
Students must pass one course from each of five categories. All courses are three credits unless otherwise noted.

International Research Administration Management, Certificate
Certificate in International Research Administration Management
PROGRAM REQUIREMENTS
Students interested in enrolling in the Certificate in International Research Administration Management are required to submit an application for the MS in Research Administration degree and be admitted into the program. Students must specify in their application that they are only seeking the Certificate in International Research Administration Management. The certificate requires one required course and four elective courses for a total of five courses in order to complete the certificate.

Non-Governmental Organization (NGO) Management, Master of Arts

MA in Non-Governmental Organization (NGO) Management

https://advanced.jhu.edu/academics/graduate-degree-programs/non-governmental-organization-management/

Johns Hopkins online Master of Arts in Non-Governmental Organization (NGO) Management provides students with the leadership, management, and organizational skills needed to succeed in the nonprofit sector, both domestically or abroad. The MA in NGO Management is made up of ten asynchronous online courses (6 core courses, 3 electives, and 1 capstone). Courses focus on nonprofit management, leadership, fundraising, grant writing, strategic planning, project management, monitoring and evaluation, communications, resource development, social enterprise, and working with international mission-based organizations. Students complete their studies with an professor-led capstone seminar that will focus on a contemporary real-world issue relevant to the nonprofit sector. With the MA in NGO Management students and alumni may work for nonprofits, non-governmental and international agencies, foundations, think tanks, educational institutions, hospitals, museums, environmental organizations, human rights and animal rights organizations, or religious institutions, among others.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Arts in NGO Management also requires:

- Statement of Purpose: This 750-word statement should describe how your academic and/or professional experiences have led to your decision to pursue a career in the field of nonprofit or non-governmental management.
- Recommendations: Two letters of recommendation that verify professional and/or academic accomplishment.

Program Requirements

- Six core courses
- Three elective courses
- Capstone Seminar

Please note that students may select three electives listed below, each elective is three credits, totaling to nine credits. Also, please note that not all courses are available each semester.

Capstone Seminar

AS.470.864 NGO Management Capstone Seminar 3

Total Credits 30

Curriculum

Students in the Master of Arts in Non-Governmental Organization (NGO) Management program pursue an advanced degree in the specialized field of nonprofit/non-governmental organization management with a special emphasis on analysis, leadership, problem-solving, and most importantly, professional application. Students may select one of the three areas of focus, best suited for their professional needs, including: mission-based international organizations (e.g., humanitarian aid, emergency relief, and foreign assistance); project management (e.g., monitoring and evaluation, proposal development, and leadership); or social enterprise (e.g., hybrid organizations and mission-based entrepreneurship). Students will work with their advisor to determine which electives to take towards their selected area of focus. Classes are designed to maximize individual attention, encourage student contribution, build analytical skills, and provide the technical tools needed in the field. Students complete their studies with the Capstone Seminar. For the final capstone project students may select to a) write an in-depth research paper on a topic relevant to the field; b) design a project in tandem with the needs of an existing social need, cause, or mission-based organization; or c) intern with a nonprofit organization in the US or abroad. Although there is an aspect of independent study, all students enroll in a professor-led online capstone course to help guide them and track their progress.

SEQUENCE OF STUDY

Students must complete 10 courses, one of which includes a capstone project that may be a hands-on experience or in-depth research paper to showcase the skills and knowledge they have gained throughout their studies. Students will take six core courses, and select one area of focus, each made up of three courses, and complete their studies with the capstone. The areas of focus are International Mission-Based Organizations; Project Management, Evaluation, and Leadership; and Social Enterprise. Students also have the option of taking courses from each area of focus with the approval of their advisor. In their first semester, students must take the AS.470.728 Fundamentals of Nonprofits and Nonprofit Management course. Elective courses may be taken in any order, with the capstone seminar as their final course.
Nonprofit Management, Certificate
Certificate in Nonprofit Management

The Certificate in Nonprofit Management recognizes the substantial role nonprofits play in the formulation and delivery of public services, and as vehicles for citizen influence and expression. The coursework focuses on building the specific analytical and management skills needed by those assuming leadership roles as executive staff or board members in a variety of nonprofit fields. All the courses feature a global perspective for relevance in today's world of interconnected economies and communication. For students already working in nonprofit subspecialties, such as arts and culture, health, environmental conservation, or international development, the courses will show how their fields fit into the larger nonprofit sector and how the larger forces affect their own leadership and management challenges. The courses are also relevant for students pursuing careers in government agencies that require extensive interaction with nonprofits in the U.S. or other countries. For students in other countries, the courses offer a greater understanding of the role and potential of nongovernmental organizations, and convey the best practices emerging from the American experience and from other countries with an advanced or growing nongovernmental sector. Students are able to take courses at a full- or part-time pace. The curriculum is designed for working professionals in the government and nonprofit sectors who are looking to expand their expertise in nonprofit management with the latest skills and approaches taught by faculty members at the forefront of their field.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

PROGRAM SPECIFIC REQUIREMENTS

- Statement of Purpose: This 750-word statement should describe how your academic and/or professional experiences have led to your decision to pursue a career in the field of nonprofit or nongovernmental management.
- Recommendations: Two letters of recommendation that verify professional and/or academic accomplishment.

Program Requirements

Six online courses are necessary to complete the certificate. It is strongly recommended that students take AS.470.728 Fundamentals of Nonprofits and Nonprofit Management and AS.470.798 Financial Management and Analysis in Nonprofits before enrolling in the four remaining courses. Students may complete the certificate on its own or in addition to one of the designated combined degree programs, including the MA in Public Management, MA in Museum Studies, MA in Cultural Heritage, or the MA in Communication at Johns Hopkins University.

Public Management, Master of Arts

MA in Public Management

At a time when governments at all levels are expected to do more with less, good management is essential. The Johns Hopkins MA in Public Management will empower you to be strategic by teaching students the fundamentals of public management: policy analysis and evaluation, financial management, economics and fiscal policy, and public policy and administration. This innovative degree prepares emerging leaders to tackle complex public policy and management problems faced by leaders at all levels of government.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Arts in Public Management requires:

- A writing sample of two to five pages that is policy oriented. If the applicant does not have a policy-oriented paper that he or she wishes to submit, the applicant may write a three page, double-spaced essay on the following question:

  "A memorandum is not written to inform the reader, but to protect the writer." —Former Secretary of State Dean Acheson

  Please discuss whether you think the quote from former Secretary Acheson is accurate or not and why?

PROGRAM REQUIREMENTS

- Five core courses
- Six elective courses
- Capstone course

For more information about core and elective courses, please visit publicmanagement.jhu.edu (http://www.publicmanagement.jhu.edu). Please note that not all courses are available each semester.

</tbody>
</table>
The MA in Public Management weaves the study of public administration, public policy, economics, quantitative and qualitative analysis, and financial management into a program that will enable its graduates to lead and shape this rapidly-growing field. The program combines recognized faculty with extensive governmental experience experience and publications, an on-site and online curriculum, and the research resources, tools, and opportunities for its students to:

1. Utilize analytical skills—including quantitative and qualitative tools—to assess policies and program effectiveness.
2. Appraise and compare management and organization systems utilized in public sector for the purpose of maximizing efficiency and effectiveness.
3. Design, evaluate, and experiment with specific policies with regard to their ability to meet public priorities.
4. Formulate and construct budgets and financial systems used in non-profit and government organizations to their ability to meet public priorities.

The curriculum is designed for working professionals in government, the public policy sector (including think tanks and advocacy organizations), and nonprofits. Courses may be taken at a full- or part-time pace. All undergraduate majors are welcome. Students can take any combination of on-campus and online courses, or all on-campus or all online, to complete their degree. Twelve courses, including a capstone project, are necessary to complete the degree.

The Public Management program is endorsed by the Maryland Higher Education Commission and is a member of the Network of Schools of Public Policy, Affairs, and Administration (NAS PAA).

Sequence of Study

Students should make every effort to take the core course Public Policy and the Policy Process in their first semester. Students are strongly encouraged to complete the other core course requirements as early as possible in their program of study as possible. The final required course of the program is Capstone for Public Management, which students take in their final semester. Students expecting to graduate at the completion of the summer session should take capstone during the prior spring semester.

AREAS OF FOCUS

Students may pursue an area of focus (AF) in one of the following fields:

1. Public Administration & Leadership
2. Public Policy & Evaluation
3. Public Financial Management and Budgeting

Choosing an AF would not be required; however, students wanting to earn an area of focus would be required to take 3 courses from a list of select electives on top of their core requirements and the Capstone for Public Management.

All courses are three graduate credits unless otherwise specified.

LEARNING OUTCOMES

The MA in Public Management equips students with the strategic skills needed to meet today's challenges in the public sector. This is accomplished by a rigorous and demanding curriculum taught by leading academics and practitioners in the fields of public policy and administration.

The degree program encompasses both the analytical and administrative side of public policy and management. The MA in Public Management educates students in several key disciplines: financial management, policy analysis, tax and budget policy, quantitative methods, and public administration. Students learn to apply the latest theory, scientific findings, and new management methods to help solve real-world governance and policy issues.
Public Management, MA/Government Analytics, Certificate

MA in Public Management / Certificate in Government Analytics

Students pursuing a MA in Public Management may obtain an additional credential by completing a sequence of courses offered by the Certificate in Government Analytics. This combined credential will require students to complete 15 courses (in lieu of 17 to complete both degrees separately).

Admissions Criteria for all Advanced Academic Programs (p. 2236)

Interested applicants must complete all admission requirements for both the Master of Arts in Public Management and the Certificate in Government Analytics.

PROGRAM REQUIREMENTS

In addition to four electives from the public management curriculum and three electives from the government analytics curriculum, students are required to take the following courses:

<table>

Total Credits: 24

Intelligence Certificate Requirements

Completion of five courses, one each from the following areas (See Certificate in Intelligence for specific course options):

- Introductory Courses
- Law and Ethics
- Theory, History, and Context
- Intelligence Operations
- Applications of Intelligence

Public Management, MA/Nonprofit Management, Certificate

Program Requirements

Students pursuing an MA in Public Management may obtain an additional credential by completing a sequence of courses offered by the Certificate in Nonprofit Management. This combined credential recognizes the interdependence of the governmental and nonprofit sectors and their common ground in mission-driven performance. Students who complete it will be prepared to move among the public, private, and nonprofit sectors or work for agencies that span them. This combined credential will require students to complete 16 courses (in lieu of 18 to complete both degrees separately). In addition to five electives from the public management curriculum, students are required to take the following courses:

<table>

Research Administration, Master of Science

MS in Research Administration
advanced.jhu.edu/researchadmin

The MS in Research Administration is designed to accommodate both career practitioners and those who seek a career in research administration. The program requires that students complete a core curriculum of four courses, and a minimum of two specialized tracks. As part of the core curriculum, students must either write a thesis or engage in an approved capstone project. In all, the total number of courses taken must be 12 courses or higher, regardless if it is a three-credit or four credit course. Courses within tracks are grouped in areas of interest to benefit students who work or want to work in various areas of research administration, or who may have varying levels of experience or special needs. Two tracks must be completed (four courses in each) for students to meet degree requirements.

Curriculum

Students in the MS in Research Administration program will receive a firm foundation, through the core curriculum, for understanding how the research enterprise is organized worldwide and within the United States, how university and college research offices are organized and led, how the federal government and nonprofit sectors facilitate research and how they are organized, funded, and led. Through the core curriculum, students will be introduced to the basics of the management for sponsored programs, including finances and information technology, as well as legal, ethical, regulatory, and compliance issues. As part of the core curriculum, students will be required to elect either a thesis or capstone project, which will be initiated within the core curriculum sequence and completed while the students take elective courses or, through continuous enrollment, within five years.

In addition to the core courses, students may elect two additional tracks. The program's tracks allow students to choose from several groupings in Program Administration and Facilitation; Financial Management of Sponsored Programs; Compliance, Legal, and Regulatory Issues; and International Research Administration Management. The curriculum has been developed to prepare students with skills identified by the research community including several national and international research administration associations.

The program prepares emerging leaders in research administration to face complex management challenges of today. Students will gain an appreciation for these issues through their core courses and their electives. Twelve courses, including a capstone project, are necessary to complete the degree.

Sequence of Study

Students should make every effort to take the core courses, other than the capstone, in their first two semesters. The final required course of the program is the Capstone Project in Research Administration or the Research and Thesis in Research Administration, which students can only take in their final semester.

Research Administration, MS/International Research Administration Management, Certificate

MS in Research Administration/Certificate in International Research Administration Management

[advanced.jhu.edu/academics/certificate-programs/international-research-administration-management/](https://advanced.jhu.edu/academics/certificate-programs/international-research-administration-management/)

Students pursuing an MS in Research Administration may obtain an additional credential by completing courses that lead to the Certificate in International Research Administration Management. This combined credential will prepare graduates for careers in managing international sponsored projects and international contracting. Students can complete this program with only five additional courses, for a total of 17 courses to complete the degree and the certificate.

Students interested in enrolling in the Certificate in International Research Administration Management are required to submit an application for the MS in Research Administration degree and be admitted into the program. Students must specify in their application that they are only seeking the Certificate in International Research Administration Management. The certificate requires one required course and four elective courses for a total of five courses to complete the certificate. If the student is in good standing and decides to pursue
the MS in Research Administration, they may transition into the degree program by notifying the Director of the MS program and submitting a Change of Program application to the registration office.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

**PROGRAM REQUIREMENTS**

Students pursuing an MS in Research Administration may obtain an additional credential by completing courses that lead to the Certificate in International Research Administration Management. This combined credential will prepare graduates for careers in the managing international sponsored projects and international contracting. Students can complete this program with only five additional courses, for a total of 17 courses to complete the degree and the certificate.

**Center for Biotechnology Education**

**Center for Biotechnology Education**

biotechnology.jhu.edu (https://advanced.jhu.edu/academics/centers/center-for-biotechnology-education/)

The Center for Biotechnology Education, established in 2010, expands the scope of biotechnology education at home and abroad to build a pipeline of students and professionals ready to succeed in graduate school, K-12 education, and the work environment in the fields of biotechnology, bioinformatics, regulatory science, and bioscience business and leadership. The mission of the Center for Biotechnology Education is to increase public awareness and understanding of biotechnology, inform educators of the resources and programs available locally and nationally, become a resource center for biotechnology information, coordinate training workshops for students and professionals, and secure funds in support of biotechnology training and education locally, nationally, and internationally. The goals of the center are to develop partnerships with industry and government organizations to provide community outreach, professional development educational opportunities, workshops, research symposia, and lecture series for academia, industry, and the general public.

**Bioinformatics, Master of Science**

**MS in Bioinformatics**

Joint Offering with the Whiting School of Engineering for Professionals

bioinformatics.jhu.edu (https://bioinformatics.jhu.edu)

Johns Hopkins University offers students the ability to learn, advance, and succeed in this exciting field, with a variety of learning opportunities designed to meet the needs of working adults.

**Admissions Criteria for all Advanced Academic Programs (p. 2236)**

**Program Specific Requirements**

- An undergraduate degree in the biological sciences or in engineering with at least a 3.0 on a 4.0 scale. All the prerequisites listed below can be taken from the existing Master of Science in Computer Science or the Master of Science in Biotechnology program. Students who have not completed all the prerequisites may be admitted provisionally to complete the admission requirements.
  - Two semesters of organic chemistry (or AS.410.302 Bio-Organic Chemistry)
  - One semester of biochemistry (or AS.410.601 Biochemistry)
  - Introduction to programming using Java, C++, or C (or EN.605.201 Intro to Programming Using Java)
  - Data structures (or EN.605.202 Data Structures)
  - One course in probability and statistics (or AS.410.645 Biostatistics)
  - Calculus

- The Admissions Committee reserves the right to request additional information from applicants, such as GRE or letters of recommendation, if needed, to assess their candidacy for admission.

**Program Requirements**

Students take 11 courses to complete the degree—five core courses, four concentration courses, an elective from bioscience, and an elective from computer science. After completion of the core and concentration
Students have up to five years to complete the program. Courses, students may choose an independent study project (optional).

Select one of the following:

- **Biotechnology**
  - EN.605.788
  - EN.605.547
  - EN.605.461

  - EN.605.531

---

**MS in Bioinformatics with Thesis Option**

Students interested in pursuing the MS in Bioinformatics with the thesis are required to take 12 courses. The thesis requires a two-semester research project. Students complete AS.410.800 Independent Research in Biotechnology first and AS.410.801 Biotechnology Thesis the following semester. Students interested in this option should consult with the program advisor. **Biotechnology Education, Certificate**

The Certificate in Biotechnology Education incorporates the fundamental and emerging ideas in biology and biotechnology, as well as issues related to teaching and learning of bioscience at the middle and high school levels. Middle and secondary teachers, as well as curriculum and instructional leaders, will strengthen their content knowledge and pedagogical techniques in bioscience, and develop ways to teach bioscience effectively in their classrooms. This Certificate consists of five graduate-level courses. The Independent Research Project course will emphasize inquiry-oriented approaches and integrating technology in bioscience education. Moreover, teachers will analyze recent research on bioscience education, reflect on their learning and practice, and develop teaching tools and assessment strategies to engage students in bioscience-related problems and inquiries.

### Biotechnology, Master of Science

MS in Biotechnology

biotechnology.jhu.edu (http://biotechnology.jhu.edu)

The MS in Biotechnology program offers a comprehensive exploration of basic science, applied science, and lab science, with a biotechnology focus. The program gives students a solid grounding in biochemistry, molecular biology, cell biology, genomics, and proteomics, and the flexibility for students to tailor elective coursework to meet their individual career goals. In addition to the general degree, the program offers seven different concentrations:

- Biodefense;
- Bioinformatics;
- Biotechnology Enterprise;
- Molecular Target and Drug Discovery Technologies;
- Regulatory Affairs;
- Regenerative and Stem Cell Technologies; and
- Health Science Intensive.

Thus, students can choose to solely focus on strengthening their science knowledge and research skills, or to also develop the skills to lead lab teams, make development and planning decisions, create and apply research modalities to large projects, and take the reins of management and marketing decisions.

This 10-course degree program is thesis-optional, part-time or full-time, and can be completed fully on-site, online, or through a combination of on-site and online courses.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

#### Program Specific Requirements

An undergraduate degree in the natural sciences or engineering with at least a 3.0 on a 4.0 scale in undergraduate studies (relevant work experiences are also considered); applicants with degrees in other
Disciplines may be able to enroll if their undergraduate work included the prerequisite courses that follow:

- Two semesters of biology
- Two semesters of college chemistry, preferably with laboratories
- Two semesters of organic chemistry, preferably with laboratories
- Students without adequate organic chemistry may be admitted provisionally to take AS.410.302 Bio-Organic Chemistry

The Admissions Committee reserves the right to request additional information, such as a GRE score or letters of recommendation, from applicants to assess their candidacy for admission.

<td>Select six elective courses</td>
<td>24</td>
</tr>
</tbody>
</table>

Total Credits: 40

See course listings page; at least two must be science electives.

See course requirements in the Center for Biotechnology Education (p. 2270).

Course requirements differ for the certificate and concentration programs.

For information on exact dates, times, locations, fees, and instructors for any semester/term, students should consult the course schedule at advanced.jhu.edu (https://advanced.jhu.edu). Courses are open only to students who meet enrollment requirements.

Please note: Many of the elective courses require prior completion of core courses. The core courses introduce the foundational information required for these courses. Some students may have covered the material of one or more core courses in previous academic work or through pertinent work experience. Such students can request to waive the appropriate core science courses (excluding AS.410.604 Advanced Cell Biology II) by contacting the Program Director and providing supporting documentation, such as copies of syllabi and course descriptions. All waived courses must be replaced by science electives to satisfy the program course requirements.

### MS in Biotechnology Concentrations (Optional)

Students wishing to focus on a specialized discipline within the MS in Biotechnology program may enroll in one of seven concentrations:

- Biodefense (with an optional combined credential of a Certificate in National Security Studies);
- Bioinformatics;
- Biotechnology Enterprise;
- Molecular Targets and Drug Discovery Technologies (MTDDT);
- Bioscience Regulatory Affairs;
- Health Science Intensive (HSI); or
- Regenerative and Stem Cell Technologies Concentration (RSCT).

### Concentration in Biodefense

The biodefense concentration integrates basic and translational science to train the next generation of professionals for employment in academia, industry, and government. The curriculum provides students with a solid foundation in basic science, and investigates the various applications of medical science and biotechnology for detection, identification, and response to bio threats.

Specific disciplines of study include molecular biology, infectious diseases, bioinformatics, immunology, epidemiology, molecular diagnostics, and policy.

- AS.410.631 Infectious Diseases
- AS.410.632 Emerging Infectious Diseases
- AS.410.639 Protein Bioinformatics
- AS.410.640 Molecular Phylogenetic Techniques
- AS.410.641 Clinical & Molecular Diagnostics
- AS.410.645 Biostatistics
- AS.410.652 Cell Culture Techniques
- AS.410.655 Radiation Biology
Concentration in Bioinformatics

Given the vast amount of information generated from studies on humans and other organisms, and the need for scientists and researchers to access and manipulate these data, the biotechnology program offers courses that can either be sampled individually or taken together to complete a concentration in bioinformatics.

In addition to the four core courses (Biochemistry, Molecular Biology, Advanced Cell Biology I, and Advanced Cell Biology II), degree candidates must complete any four of these courses to satisfy the bioinformatics concentration requirements:

Concentration in Biotechnology Enterprise

For research discoveries to reach the public, an understanding of the overall enterprise of biotechnology is essential. Success in this industry requires two distinct sets of skills and perspectives: understanding the science and understanding the business. Students in this concentration must complete four core science courses, four core enterprise courses, and two science electives.

1 These courses count toward science elective requirement.
The following is a list of recommended electives for the MTDDT concentration.

### Concentration in Regulatory Affairs

Developed in consultation with representatives from the Food and Drug Administration, the Regulatory Affairs Professional Society, and the biotechnology industry, this concentration in the Master of Science in Biotechnology provides students with the knowledge and understanding required for companies and organizations to comply with federal and state regulatory statutes for the development, approval, and commercialization of drugs, biologics, foods, and medical devices.

Students in this concentration must complete four core science courses, four core regulatory affairs courses, and two science electives.

Total Credits: 16

Students may choose any two science electives for which they have met the prerequisites. For a complete list of electives, visit biotechnology.jhu.edu (http://www.biotechnology.jhu.edu).

### Concentration in Regenerative and Stem Cell Technologies

Within the biotechnology industry, there is increasingly a need for highly skilled professionals in the area of regenerative technologies, who possess an in-depth understanding of stem cells, gene therapy, regenerative medicine, and the laboratory skills necessary to advance this rapidly expanding field of research and clinical development.

Graduates of this concentration will fill key positions in clinical, industry, and research laboratories which are using cell therapies for treatment of diseases.

In addition to the four core courses (Biochemistry, Molecular Biology, Advanced Cell Biology I and Advanced Cell Biology II), students must complete the four concentration courses and any two electives.

### Concentration in Health Science Intensive

Through this unique post-baccalaureate program, students enroll full-time in an innovative curriculum specifically created to help students build a more competitive medical school application. In addition to the six required courses, students work with their advisor to choose four elective courses that meet their professional goals. Students must also attend at least 80 percent of an advising seminar series.

Below is a potential list of elective courses. Not all courses are available every semester. Contact your adviser for course selection options. Online courses will not be accepted toward required or elective course requirements.

### Biotechnology, Master of Science/MBA

**MS in Biotechnology / MBA**

[advanced.jhu.edu/biomba](http://www.advanced.jhu.edu/biomba/)

Johns Hopkins University offers a dual degree graduate program that prepares bioscience professionals for success in both the science and business of biotechnology. Drawing from the strengths of the Krieger School of Arts and Sciences and the Carey Business School, this innovative program allows students to earn two advanced degrees in less time than it takes to earn them separately. Dual degree recipients receive both diplomas upon completion of both programs: one from the Krieger School of Arts and Sciences, and one from the Carey Business School.

### Admissions Criteria for all Advanced Academic Programs (p. 2236)

#### Program Requirements

The program requires 60 credits, 42 credits (30 credits Flex MBA Business Foundation and 12 credits of electives) for the MBA. Course scheduling allows for completion of the MBA portion of the program in 30 months. Students must complete the MBA portion within six years. A waived course must be replaced with an equivalent number of credits in an advanced course. Dual degree recipients receive both diplomas upon completion of both programs.

### Food Safety Regulation, Master of Science

**MS in Food Safety Regulation**

[advanced.jhu.edu/foodsafety](http://www.advanced.jhu.edu/foodsafety/)

The Master of Science in Food Safety Regulation is designed to provide students with an understanding of the legal and regulatory complexities of food production, labeling, and distribution. The program will provide students with the knowledge required for companies and organizations that grow, process, distribute, or sell foods and beverages while complying with federal and state regulatory statutes for the production, distribution, and commercialization of food products. Students will complete ten graduate-level courses within a five-year timeline.

On completion of the Master of Science in Food Safety Regulation, students will be able to do the following:

- Demonstrate a mastery of technical and critical thinking skills in food safety regulation submissions and statutes.
- Design, develop, and implement food safety regulatory submissions.
- Analyze and evaluate food safety regulatory statutes, regulations, guidance documents, and submissions.

The curriculum offers hands-on, real-life food safety regulatory experience through case studies and other assignments. Students will research, evaluate, and present scientifically and legally justifiable positions on case studies from different perspectives of advanced regulatory topics.

The Master of Science in Food Safety Regulation program offers all courses conveniently online. Most of the highly interactive coursework consists of courses taught by professionals in the field of food safety, from the FDA, and the food industry.

### Admissions Criteria for all Advanced Academic Programs (p. 2236)

#### Program Specific Requirements

- One semester of biochemistry and one semester of organic chemistry at the undergraduate or graduate level, or AS.410.302 Bio-Organic Chemistry (available to students admitted provisionally only)
- An undergraduate degree in the life sciences or engineering from a four-year college with at least a 3.0 on a 4.0 scale

The Admissions Committee reserves the right to request additional information from applicants, if needed, to assess their candidacy for admission.

### Program Requirements

#### Code | Title | Credits
---|---|---
AS.410.674 | Food Microbiology | 4
AS.410.686 | Regulation of Good Food Production Practices | 4
AS.410.700 | Food Labeling and Packaging Regulations | 4
AS.410.701 | Introduction to Food Safety | 4
AS.410.716 | Food Toxicology | 4
AS.410.717 | Risk Assessment and Management | 4
AS.410.718 | Food Safety Audits and Surveillance | 4

#### Electives

Select three of the following: 12

- AS.410.621 Agricultural Biotechnology
- AS.410.645 Biostatistics
- AS.410.649 Introduction to Regulatory Affairs
- AS.410.675 International Regulatory Affairs
- AS.410.676 Food And Drug Law
- AS.410.690 International Food Regulations
- AS.410.720 USDA Regulation of Food Safety, Wholesomeness, and Labeling

Total Credits 40

See course requirements in the Center for Biotechnology Education (p. 2270).

- Seven core courses
- Three electives

The three electives can be chosen from any of the Biotechnology program courses for which the student has met the prerequisites or have received permission from the program committee.
Individualized Genomics and Health, Master of Science

MS in Individualized Genomics and Health

Individualized genomics and health is a rapidly growing area of research and applied science. The growth is due in large part to the increasing dependence on DNA and RNA sequence analysis of human and microbial genomes for diagnosis and treatment of disease. This emerging field requires a workforce with multi-disciplinary skills in bioinformatics, bioscience, regulatory science, policy, and ethics. The goal of this degree program is to produce a highly skilled workforce with the theoretical knowledge and practical skills to meet the demands of the academic, research, and business communities.

As the field of individualized genomics and health requires practitioners to have multiple competencies, the core of the Master’s degree will include foundation courses in epigenetics, human molecular genetics, ethical, legal and regulatory aspects of individualized genomics, bioinformatics, and individual genome analysis. After completion of the core requirements, students may choose to concentrate in Laboratory Diagnostics, Genomics, Regulatory Science or Policy, or choose a general concentration. Specifically, the degree program consists of six core courses, three concentration courses, and one elective.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

**PROGRAM SPECIFIC REQUIREMENTS**

In addition to the materials and credentials required for all programs, the Master of Science in Individualized Genomics and Health requires:

- A 4-year bachelor’s degree in the life sciences or engineering with a grade-point average of at least 3.0 on a 4.0
- Organic chemistry or AS.410.302 Bio-Org Chemistry
- Biochemistry or AS.410.601 Biochemistry
- Advanced cell biology I, or AS.410.603 Advanced Cell Biology I
- Molecular biology, or AS.410.602 Molecular Biology
- Biostatistics or AS.410.645 Biostatistics

The Admissions Committee reserves the right to request additional information, such as a GRE score or letters of recommendation, from applicants to assess their candidacy for admission.

**One Elective**

Any course in the Biotechnology program. Please consult advisor.

**LEARNING OUTCOMES**

Students will be able to:

- Explain the molecular and genetic basis for human disease including the role of epigenetic.
- Analyze interaction between Inherited, symbiotic, disease, and environmental inputs to health.
- Apply bioinformatics tools to the analysis of human DNA sequences.
- Explain the ethical, legal and regulatory aspects of individualized genomics and health.
- Discuss the laboratory methods required to identifying genes responsible for disease.

- Explain the molecular and genetic basis for human disease including the role of epigenetic.
- Analyze interaction between Inherited, symbiotic, disease, and environmental inputs to health.
- Apply bioinformatics tools to the analysis of human DNA sequences.
- Explain the ethical, legal and regulatory aspects of individualized genomics and health.
- Discuss the laboratory methods required to identifying genes responsible for disease.

AS.410.680 Finance for Biotechnology 4
AS.410.804 Practicum in Biotechnology Enterprise & Entrepreneurship 4

Total Credits 24

Master of Biotechnology Enterprise and Entrepreneurship Concentration (Optional)

Students wishing to focus on a specialized discipline within the Master of Biotechnology Enterprise and Entrepreneurship program may enroll in a concentration in Biotechnology Legal/Regulatory.

In addition to the six core courses and practicum, degree candidates must complete any three of these courses to satisfy the Biotechnology Legal/Regulatory concentration requirements:

<table>

Total Credits 12

1. This list is subject to change. See program director regarding eligibility of course to count as concentration course.

See course requirements in the Center for Biotechnology Education (p. 2270).

- Core courses: Six
- Practicum: One
- Electives: Three

Students must choose three electives from the Biotechnology Program for which they have met the prerequisites or have received permission from the program committee. See Biotechnology Studies Courses for a full list of courses.

Regulatory Science, Master of Science

MS in Regulatory Science

regulatory.jhu.edu (http://www.regulatory.jhu.edu)

As the biomedical industry continues to grow, more companies are developing and commercializing new products. There are thousands of biomedical products in the development pipeline that require regulatory oversight. Many of the companies providing reagents and supplies to the industry must also provide stringent quality controls to ensure compliance with the Food and Drug Administration’s Current Good Manufacturing Practices and Quality Systems Regulations. These
companies will continue to require trained and educated staffing in regulatory science.

Students entering this program will have completed the prerequisite courses in biochemistry and cell biology, and must undertake six required core regulatory courses. Students then may specialize in an aspect of regulatory science of their choice through three elective courses, including advanced regulatory and science courses. Students receive practical, hands-on, real-life regulatory science experience through case study assignments and a unique practicum course at the end of the program, which distinguishes this program as a leader in graduate, regulatory science education. Students completing this regulatory science program are expected to become regulatory science leaders in government and industry.

This degree program is designed for full-time working adults and should take approximately two to three years to complete, although students may accelerate completion of the program if they wish. The entire 10-course curriculum may be completed entirely online. The faculty members teaching the program are all leaders in the field of regulatory sciences. They work in the industry for both private biomedical science organizations and the federal government, including the FDA.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

**PROGRAM SPECIFIC REQUIREMENTS**

In addition to the materials and credentials required for all programs, the Master of Science in Regulatory Sciences requires:

- One semester of biochemistry and one semester of cell biology at the undergraduate or graduate level

The Admissions Committee reserves the right to request additional information from applicants, if needed, to assess their candidacy for admission.

**PROGRAM REQUIREMENTS**

- Six core courses
- One practicum
- Three electives

The three electives can be chosen from any of the Advanced Biotechnology Studies program courses for which a student has met the prerequisites or have received permission from the program committee.

See course requirements in the Center for Biotechnology Education (p. 2270).

Prerequisite for provisional students accepted in program who have not previously taken biochemistry or cell biology:

AS.410.303 Foundations in Bioscience (4 credits)

**Sequence Analysis and Genomics, Post-Master's Certificate**

The field of bioinformatics is continually expanding and challenging our ability to bridge the gap between molecular biology and computer technology. Specifically, the revolution in sequencing technology has resulted in vast quantities of data that require storage and analysis. The analysis of nucleic acid and protein data requires specialized bioinformatics tools and an understanding of genomics. The emerging sequencing technologies and accompanying bioinformatics tools will advance personalized medicine, pharmacogenomics, and molecular diagnostics methods. The advancement of these tools will open new avenues of research on many fronts.

This certificate is targeted at scientists who already have grounding in biochemistry, molecular biology, and cell biology, and do not need advanced computer skills; thus, they do not require all the core requirements of the other two master's programs. It introduces students to the foundations of bioinformatics through the core bioinformatics courses, and then the students take upper-level courses that are required for understanding and performing sequence and genomic analysis. The program is offered both online and on-site.

**Admission Requirements**

- Master's or doctoral degree in the biological sciences or engineering from an accredited institution
- One semester of biochemistry or equivalent, or AS.410.601 Biochemistry
- One semester of molecular biology or equivalent or AS.410.662 Molecular Biology

See course requirements in the Center for Biotechnology Education (p. 2270).

**Communication, Master of Arts**

**MA in Communication**

communication.jhu.edu (http://www.communication.jhu.edu)

The Master of Arts in Communication program helps professionals advance or switch their careers. Although our diverse group of students are already working in the field of communication and looking for additional training to advance, some are transitioning from another field. Regardless, the majority of our graduates testify that the master’s degree helps with getting a new position. Our alumni are managers, directors, vice presidents, presidents, and other leaders in various organizations, such as government agencies, associations, nonprofits, and corporations. Students and alumni have access to our exclusive job opportunities network and career services center. This degree provides a great opportunity to hone or perfect your communication skills, learning from leaders in the field. It is not necessarily a path to a PhD program in that it is geared toward providing practical, leading edge skills that will prepare students to be leaders in the field.

**Learning Outcomes**

The curriculum of the Master of Arts in Communication program aims for the following learning outcomes for students:

1. Provide theoretical knowledge about the social science of communication that students can use on the job to produce more effective messages and strategic communication programs.
2. Provide cutting-edge, real-world job skills and training for students to move into the field of communication or move up to jobs that require more responsibility and greater knowledge.
3. Improve students’ critical thinking, problem-solving, and writing skills.
4. Help students develop into communication professionals who understand how to conduct, read, evaluate, and use research to further their professional objectives.

Electives meet the second learning outcome, while required and core courses address the remaining learning outcomes. All courses help students develop strong portfolios that they can present to their current or prospective employers. Students must take a total of 10 courses, or 30 credits. Each semester, courses are offered on-site and online, but due to popular demand, more courses are offered online than on-site. For this reason, students who prefer being on-site may have to take some courses online. There is no guarantee that a particular course will be offered online in any given semester (i.e., it may be offered on-site only). Every attempt is made to offer a variety of courses both online and on-site.

**Admissions Criteria for all Advanced Academic Programs**

**Program Specific Requirements**

- Statement of purpose: Explain why you are interested in earning the Master of Arts in Communication and how it will help your career or other goals. Double space your essay and limit it to 500 words or less (place the word count at the end of the document).
- Writing sample: Please go to the online application to download instructions and an article for your writing sample. This exercise asks you to write a single, brief paragraph. It should not take the form of a larger document, such as a letter, an email, a report, or a plan. Submit one paragraph with no more than 250 words.

**Program Requirements**

**Program Tracks**

Students will choose to follow either the strategic planning track or the research track. The majority of students opt for the strategic planning track, which is geared toward preparation to become a communications practitioner. Students with an interest in conducting communication research may opt for the research track. Students must satisfy the appropriate core courses and electives to be eligible to receive the MA degree. Students may choose to switch from one track to the other during the course of studies. Note that this may increase time to graduation if it requires additional courses to be taken in order to satisfy the track requirements.

**Core Courses**

Degree candidate students must complete Research and Writing Methods before taking any core courses. Strategic planning students can enroll in Practicum in their last semester. Students who earn a C or below in a core course may not count that course toward core requirements and will not earn credits for that course.

**Strategic planning TRACK**

**Concentrations**

Students are not required to specify a concentration. Students who want a concentration may identify one, or occasionally two, of the fields
Students must complete at least three of the following electives:

Public and Media Relations
The concentration in public relations and media covers everything from pitching and planning, to budgeting and executing a comprehensive communication campaign. Private companies, nonprofit organizations, and federal agencies all employ communication strategies and need employees knowledgeable in theory and practice. Students must complete at least three of the following electives:

<table>

</tbody>
</table>

Health Communication
The concentration in health communication covers how to develop and evaluate effective public information campaigns, how to manage the demands placed on communication specialists during a crisis, and how to incorporate behavior change messages into a variety of channels and genres, such as entertainment. Health communication professionals must develop, deliver, and evaluate modern health communication programs. This concentration explores what has been done, what works, and why.

Students must complete at least three of the following electives:

<table>

Digital Communication
The concentration in digital communication examines the strategic use of digital technologies for communication professionals. This concentration addresses how to use the Web and social media to reach out to diverse public groups and how to incorporate digital with traditional communication campaigns. Digital communication tools are an important part of the modern communication workplace.

Students must complete at least three of the following electives:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.480.622</td>
<td>Branding by Motion Picture</td>
<td>3</td>

Communication, Master of Arts/MBA
MA in Communication / MBA
Dual Degree Program with the Carey Business School
advanced.jhu.edu/commba (http://www.advanced.jhu.edu/commba/)

The university allows students to simultaneously pursue a Master of Arts in Communication in the School of Arts and Sciences and a Master of Business Administration at the Carey Business School. To pursue these dual degrees, students must apply and be accepted to both programs. Students who successfully complete the requirements for both degrees will receive two separate degrees. Students may complete one degree first and be awarded the diploma before continuing with the second degree, or strive toward both degrees concurrently. Pending graduates must complete the graduation application for each school. Dual-degree students may participate in both commencement exercises.

Leaders in business and industry recognize the importance of communication, but few MBA programs offer communication courses. At the same time, communication professionals recognize the importance of good business practices, but programs rarely offer courses in business. The Master of Arts in Communication/Master of Business Administration dual degree program was developed to fill that need. It helps advance the careers of managers in public and media relations, advertising, crisis communication, organizational development, and risk communication. Students and alumni have access to our exclusive job opportunities network and career services center.

Admissions Criteria for all Advanced Academic Programs (p. 2236)
Program Specific Requirements
Individuals who wish to apply for the dual MA in Communication/MBA program must apply through Advanced Academic Programs. They can apply to both programs concurrently, or they can start with one program and then apply for the dual degree by submitting an application to the second program through the AAP Admissions Office. The MA in Communication program will consider applicants for the MA in Communication portion of the degree, while the MBA program will consider applicants for the MBA portion of the degree. An individual can be accepted by one rather than both programs; in this case, that person can decide whether to enroll in the single program. (The Admissions Committees reserve the right to request additional information from applicants, if needed, to assess their candidacy for admission. All application materials submitted to Advanced Academic Programs become the property of the Johns Hopkins University and will not be returned to applicants under any circumstances.)

- The MA in Communication and MBA programs have different requirements for GRE or GMAT scores:
  - The MA in Communication program may require GRE scores. The program waives this requirement for applicants who have (a) a cumulative undergraduate GPA of 3.0 or higher or (b) five or more years of full-time work experience after earning an undergraduate degree. Submit results directly to the Advanced Academic Programs
Program Requirements

MA in Communication Curriculum

The curriculum of the MA in Communication program portion of the dual degree is the same as that of the MA in Communication program. Refer to the latter's section of the catalogue for detail.

MBA Curriculum

Students must take the following courses. All courses are two credits, with the exception of Strategic Management.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

Program Specific Requirements

Individuals who wish to apply for the combined MA in Communication/Certificate in Nonprofit Management program must apply through Advanced Academic Programs. They can apply to both programs concurrently, or they can start with one program and then apply for the combined program by submitting an application to the second program through the AAP Admissions Office. The MA in Communication program will consider applicants for the MA in Communication portion, while the Certificate in Nonprofit Management program will consider applicants for the Certificate in Nonprofit Management portion. An individual can be accepted by one rather than both programs; in this case, that person can decide whether to enroll in the single program. (The Admissions Committees reserve the right to request additional information from applicants, if needed, to assess their candidacy for admission. All application materials submitted to the Advanced Academic Programs become the property of the Johns Hopkins University and will not be returned to applicants under any circumstances.)

- Statement of Purpose: Explain why you are interested in entering the MA in Communication and Certificate in Nonprofit Management combined program, and how it will help your career or other goals. Double space your essay and limit it to 500 words or fewer (place the word count at the end of the document).
- Writing Sample: Effective for summer 2015 and beyond, applicants to the MA in Communication program must submit a writing sample. Please click here to download the instructions and article for...
your writing sample. This exercise asks you to write a single, brief paragraph. It should not take the form of a larger document, such as a letter, an email, a report, or a plan. Submit one paragraph with no more than 250 words.

- GRE scores: The MA in Communication and Certificate in Nonprofit Management programs have different requirements for GRE scores:
  - The MA in Communication program may require GRE scores. The program waives this requirement for applicants who have a cumulative undergraduate GPA of 3.0 and higher or at least five years of full-time work experience after completing college. Submit results directly to the Advanced Academic Programs Office of Admissions, using the code 8747. Photocopies will not be accepted.
  - The Certificate in Nonprofit Management program does not require GRE scores.

Program Requirements

The combined MA in Communication/Certificate in Nonprofit Management program enables students to reduce their course load. If students were to complete the two programs separately, they would complete a total of 16 courses. Yet students in the combined program take a total of 14 courses, by ensuring that they take the following courses under the MA in Communication program:

<table>
<thead>
<tr>

</table>

Nonprofits are offered every semester, all other electives are offered only once per academic year. Please check with your advisor on when select electives are offered. Refer to the Certificate in Nonprofit Management section of the catalog to learn more about the program’s requirements.

Cultural Heritage Management, Master of Arts

MA in Cultural Heritage Management

heritage.jhu.edu (https://heritage.jhu.edu)

The challenges of the 21st century and the expansion of heritage tourism worldwide have increased the need for forward-thinking management and preservation strategies. With a focus on emergent technology and its impact on conservation, preservation, and engagement; together with integrated approaches to management, and community and stakeholder partnerships, Johns Hopkins University offers an innovative, online graduate degree in Cultural Heritage Management. This degree program immerses students in a broad context of cultural heritage issues, including social, environmental, and economic trends, and provides them with the qualifications needed to assume leadership and management roles in the cultural heritage sector.

We train leaders in the field that embrace our shared humanity and heritage in order to advance its interpretation, documentation, preservation, and management for the betterment of a global society.

Our program is built around several guiding principles:

- We incorporate an inclusive definition of heritage beyond sites, monuments, and artifacts, to include full landscapes, environments, and intangible heritage.
- We recognize grassroots efforts and community buy-in as critical to successful management strategies.
- We support an integrated approach to management and a wide understanding of its ties to sustainability, development, and community.
- We take full advantage of our online medium by focusing on emergent technologies related to the field and their impact on preservation, engagement, documentation, and asset management.
- In addition to a sustained focus on digital technologies, the program is framed through a global lens, situating the local, regional, and national within a global context.

We welcome students from around the world interested in cultural heritage management. The interdisciplinary nature and international focus and concern of cultural heritage is supported well in the online format where domestic and international students have the opportunity to learn together.

The MA in Cultural Heritage Management faculty is made up of highly regarded experts in the heritage field and academia from diverse geographic locations. The faculty is primarily heritage practitioners who are active members of the global heritage community. They are passionate about training the next generation of heritage leaders and professionals and enthusiastic about the online course format.
Admissions Criteria for all Advanced Academic Programs (p. 2236)

Program Specific Requirements

Applicants must hold a baccalaureate degree in study areas relevant to the curriculum (Anthropology, Archaeology, Architecture, Preservation, Art History, Conservation, Environmental Sciences, Geography, Preservation, Cultural Management or Tourism, Public History, or related field).

Applicants are accepted to the program on the understanding that they have sufficient background in a relevant field, either through their previous degree or through relevant professional experience, to be able to complete the program.

- A statement of purpose (approximately 750 words): This statement should address how your academic and professional experiences have led to your decision to apply to this program. It should demonstrate an understanding of the cultural heritage sector and describe your academic and career goals, highlighting how this program will serve those goals. If you have worked in the heritage sector in any capacity, please incorporate your experience into your statement. Your statement will be reviewed for content, organization, and writing style.
- Two letters of recommendation that verify professional and/or academic accomplishment. Under “Recommendations,” include the contact information for two recommenders. They will be automatically emailed access information to the system. They can then complete and upload their recommendation form.

Program Requirements

All students earn a Master of Arts in Cultural Heritage Management. Nine online classes and one on-site seminar are required to complete the degree. These 10 courses are made up of three required courses, three core courses, and four electives, which must be completed within five years of beginning the graduate program.

Onsite Seminar

A two-week intensive period of on-ground heritage management study in a location organized by the MA in Cultural Heritage Management program is a required component of the degree. The seminar includes practicum opportunities related to site management, heritage tourism, and conservation, alongside classroom sessions that integrate the daily experiences. Using the rich diversity of the designated location, the seminar provides students with the chance to use what they have learned in their prior courses, develop networks with fellow students and heritage experts, and explore the latest in cultural heritage practice. Students work on directed activities during the two-week period, coupled with multiple site visits focused on the academic work being accomplished.

Note: To register for this course, students must have completed a minimum of two courses in the program, although four or more courses are recommended. Students are strongly encouraged to take AS.465.702 Studies in World Heritage, AS.465.704 Cultural Heritage Management/Leadership and AS.465.707 Reading the Landscape: Cultural Heritage at Scale. Some seminars may have other specific requirements. Individual course descriptions will be posted for each location. Students are responsible for travel to and from the location, accommodations, and meals, as well as any specified field trip fees.
Waiver option: Students who are unable to travel to a seminar location due to accommodation needs, financial hardship, or family challenges may apply to the program director for an exemption to the two-week seminar. If a waiver is granted, the student must enroll in the internship option (AS.465.780 Internship) to fulfill the on-site component of the degree requirement.

Curriculum
The MA in Cultural Heritage Management offers a structured curriculum of required and core courses augmented with electives. This curriculum provides opportunities for students to gain the knowledge and skills necessary for current professional heritage practice with an eye to the future and integration of past philosophies. We emphasize the interdisciplinarity of the field, and as a result, the curriculum allows each student to customize his or her studies to their unique career goals and trajectory. The program encompasses both theory and practice, focusing on providing real-world skills and training that enable students to move into the heritage field or advance into jobs with more responsibility.

Students must take a total of 10 courses:
- Three required courses;
- Three core courses; and
- Four elective courses.

Cultural Heritage Management, MA/Digital Curation, Certificate

MA in Cultural Heritage Management / Certificate in Digital Curation

Students who are interested in pursuing an MA in Cultural Heritage Management and are also interested in the preservation and management of cultural heritage digital assets may enroll in this dual program. Cultural Heritage Management students may earn the Graduate Certificate in Digital Curation by taking two of the required six courses in the MA program plus the additional four courses required to complete the certificate. This enables students to earn both the MA degree and the Graduate Certificate for a total of 14 courses, 10 in Cultural Heritage Management and four in Digital Curation.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

Applicants must hold a baccalaureate degree in study areas relevant to the curriculum (Anthropology, Archaeology, Architecture, Preservation, Art History, Conservation, Environmental Sciences, Geography, Preservation, Cultural Management or Tourism, Public History, or related field).

Applicants are accepted to the program on the understanding that they have sufficient background in a relevant field, either through their previous degree, or through relevant professional experience, to be able to complete the program.

- A 750-word statement of intent, that addresses your preparation and experience leading to your application to this program. It should describe how your academic and professional experiences have led to your decision to pursue a career in the heritage field with an emphasis in digital curation and how this combined degree will help you succeed in your goals. If you have worked in the heritage field in any capacity, please incorporate your experience into your statement.

Your statement will be reviewed for content, organization, and writing style.
- Two letters of recommendation that verify professional and/or academic accomplishment. Under “Recommendations,” include the contact information for two recommenders. They will be automatically emailed access information to the system. They can then complete and upload their recommendation form.

Program Requirements

Courses From the MA in Cultural Heritage Management
10 courses from the MA in Cultural Heritage Management (CHM) program are required. See Cultural Heritage Management (CHM) Degree Requirements (p. 2285) page. Of those 10 courses, the following apply.

1 This course satisfies one CHM core requirement.
2 Prerequisite: AS.465.740 Cultural Heritage in the Digital Age, this course satisfies one CHM elective requirement.
3 Prerequisite: AS.465.740 Cultural Heritage in the Digital Age
4 Can be taken after completion of AS.465.740 Cultural Heritage in the Digital Age; and AS.460.670 Digital Preservation or AS.460.671 Foundations of Digital Curation (both are recommended)

Cultural Heritage Management, MA/Nonprofit Management, Certificate

MA in Cultural Heritage Management / Certificate in Nonprofit Management

Students pursuing an MA in Cultural Heritage Management, who are interested in furthering their nonprofit education, may enroll in the dual degree program offered with the Graduate Certificate in Nonprofit Management of Advanced Academic Programs. Cultural Heritage Management students may earn the Certificate in Nonprofit Management by taking an additional four of the six online courses necessary to complete the certificate. This enables students to earn both the MA degree and a Graduate Certificate for a total of 14 courses, 10 in Cultural Heritage Management and four in Nonprofit Management.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

Applicants must hold a baccalaureate degree in study areas relevant to the curriculum (Anthropology, Archaeology, Architecture, Preservation, Art

...
Applicants are accepted to the program on the understanding that they have sufficient background in a relevant field, either through their previous degree, or through relevant professional experience, to be able to complete the program.

- A 750-word statement of intent, that addresses your preparation and experience leading to your application to this program. It should describe how your academic and professional experiences have led to your decision to pursue a career in the heritage field with an emphasis in nonprofit management and how this combined degree will help you succeed in your goals. If you have worked in the heritage or nonprofit fields in any capacity, please incorporate your experience into your statement. Your statement will be reviewed for content, organization, and writing style.
- Two letters of recommendation that verify professional and/or academic accomplishment. Under "Recommendations," include the contact information for two recommenders. They will be automatically emailed access information to the system. They can then complete and upload their recommendation form.

Program Requirements
MA in Cultural Heritage Management students pursuing the Nonprofit Management Certificate must meet the following course requirements:

**Courses From the MA in Cultural Heritage Management**
10 courses from the MA in Cultural Heritage Management program are required. See Cultural Heritage Management (CHM) Degree Requirements (p. 2285). Of those 10 courses, the following applies:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.465.704</td>
<td>Cultural Heritage Management/Leadership</td>

**Total Credits** 18

1 Recommended for students new to Nonprofit Management.

**Digital Curation, Certificate**

**Certificate in Digital Curation**
[https://advanced.jhu.edu/academics/certificate-programs/digital-curation-certificate/](https://advanced.jhu.edu/academics/certificate-programs/digital-curation-certificate/)

Digital curation is an emerging field that encompasses the planning and management of digital assets over their full lifetime, from conceptualization through active use and presentation to long-term preservation in a repository for future reuse.

Museums worldwide are now routinely digitizing all collection objects as they are acquired and loaned, not only for access but as documentation in the event of loss, damage, or theft, and to support research on collections and objects. They are also digitizing significant portions or even all of their holdings in order to create the robust websites that the public now expects. Also, museums are acquiring and creating born-digital content, such as digital media art, historical data in digital formats, administrative records, and scientific research data. The creation and acquisition of valuable digital assets continues at a rapid pace, and cultural heritage institutions now have a critical need for professionals in the field to manage and preserve all types of digital assets to ensure their long-term availability for researchers, educators, internal users, and the public, and to participate in the development and promotion of standards and best practices for digital curation in the scientific and cultural heritage sector.

The Johns Hopkins University Certificate in Digital Curation, offered through the graduate program in museum studies, advances the education and training of museum and other cultural heritage professionals worldwide in this emerging field. The certificate program offers a specialized curriculum that prepares current and aspiring professionals to work with digital collections, exhibitions, and research data to ensure the effective stewardship of our global cultural heritage in all types of museums, from art museums to zoos, and related scientific and cultural heritage organizations. Students in this program will also contribute to the critically needed professional literature in the field.

**Admissions Criteria for all Advanced Academic Programs (p. 2236)**

**PROGRAM SPECIFIC REQUIREMENTS**

Students may enroll in the digital curation program as a stand-alone graduate certificate or as a dual master’s degree and digital curation certificate in conjunction with the MA in Museum Studies or the MA in Cultural Heritage Management.

In addition to online coursework, the program includes a customized internship designed to meet the student’s interests and career goals, and a supervised research paper that enables the student to develop and demonstrate research and communication skills that will contribute to the professional development of the field and will last throughout their careers.

Applications to the Certificate in Digital Curation will be accepted from:
• Individuals applying simultaneously to the dual Museum Studies/Digital Curation Certificate program or the dual Cultural Heritage Management/Digital Curation Program; two approved courses may be applied to both the MA and the certificate for a total of 14 courses.
• Individuals with a master’s degree in museum studies or other relevant fields.
• Individuals with a bachelor’s degree and at least 3 years of experience working in a museum, library, or archive, or related cultural heritage organization.
• Students currently enrolled in the MA in Museum Studies or MA in Cultural Heritage Management upon submission of an application via a Change of Program form.

1 Courses should be taken before enrolling in the digital curation internship or research paper; any exceptions must be approved by the digital curation program coordinator.
2 AS.460.670 Digital Preservation or AS.460.671 Foundations of Digital Curation is a prerequisite for this course.

Energy Policy and Climate, Master of Science

The program prepares students to become leaders in the museum, cultural heritage, and digital curation communities upon successful completion of the program.

By the end of the program, students will be able to:

# Analyze and apply the principles of digital preservation and digital curation.
# Create and assess digital preservation plans and strategies.
# Demonstrate knowledge of key historical materials on digital curation, theoretical perspectives, institutional practices, and legal and ethical concerns.
# Analyze and apply archival principles of appraisal and the management of digital objects in trustworthy repositories.
# Evaluate and apply workflows for the creation and management of digital collections in museum and cultural heritage environments.
# Design and conduct a supervised digital curation research project.
# Apply and promote best practices and standards for digital curation of cultural heritage materials.

Energy Policy and Climate, Master of Science

MS in Energy Policy and Climate

energy.jhu.edu (http://www.energy.jhu.edu)

The MS in Energy Policy and Climate program will prepare the next generation of interdisciplinary professionals to address the challenges of climate change and a global transition to energy systems.

Graduates will be able to demonstrate an understanding of the science related to a changing climate, the impacts of current and future climate change on natural and human systems, the vulnerabilities of these systems to predicted changes, and a variety of possible legal, policy, and technological strategies for mitigation and adaptation. Graduates will also develop a comprehension of energy production, delivery, and consumption for both traditional systems and sustainable/renewable energy alternatives, and the implications of our energy choices for averting dangerous levels of climate change.

The program was originally designed by members of JHU’s Department of Earth and Planetary Sciences in the Krieger School of Arts and Sciences and by industry and policy specialists. Courses are taught by distinguished instructors with valuable experience in the academic, public, corporate, and nonprofit sectors. The program seeks to build in students the technical and management skills needed to become
highly competent and ethical professionals capable of leading societal responses to the challenges of a changing climate and the quest for a revolution in energy production. The curriculum is designed to help students develop an understanding of policy strategies employed at all levels, from the local to the international level, in response to these challenges. Graduates of the program will have an understanding of the current state of the U.S. response to climate change, as well as a familiarity with multilateral agreements and non-U.S.-based approaches to both mitigation of and adaptation to climate change. Additionally, students will develop expertise in energy production and policy making.

**Admissions Criteria for all Advanced Academic Programs (p. 2236)**

**Program Specific Requirements**

In addition to the materials and credentials required for all programs (see Admission Requirements), the Master of Science in Energy Policy and Climate program requires:

- One semester of undergraduate calculus and one semester of undergraduate statistics
- One semester of undergraduate chemistry or equivalent thereof

Students who do not have the necessary undergraduate training in calculus, statistics or chemistry may be offered provisional admission if their other credentials are strong. Students who are admitted provisionally due to lack of quantitative skills have the option to:

- Take appropriate courses at an accredited college/university.
- Take AS.420.301 Quantitative Methods.
- Pass a math placement test, administered by the EPC program.

Students who are admitted provisionally due to lack of training in chemistry have the option to:

- Take one semester of general chemistry at an accredited college or university.
- Take AS.420.302 Chemistry of Natural Processes.
- Pass a chemistry placement test, administered by the EPC program.

**Program Requirements**

**Code** | **Title** | **Credits**
---|---|---
AS.425.601 | Principles and Applications of Energy Technology | 3
AS.425.602 | Science of Climate Change and its Impact | 3

Select two of the following:

- AS.425.603 Climate Change Policy Analysis
- AS.425.604 Energy & Climate Finance
- AS.425.605 Introduction to Energy Law & Policy

**Electives**

Select five of the following:

- AS.425.615 Understanding Public Attitudes for the Communication of Climate and Energy Policy
- AS.425.619 Renewable Energy and Climate Change Projects in California
- AS.425.621 Renewable Energy and Climate Change Projects in Australia
- AS.425.622 Renewable Energy and Proactive Climate Change in Benelux

- AS.425.623 Transportation Policy in a Carbon-constrained World
- AS.425.624 Wind Energy: Science, Technology and Policy
- AS.425.625 Solar Energy: Science, Technology & Policy
- AS.425.628 Renewable Energy Project Development and Finance
- AS.425.630 Cities and Climate Change
- AS.425.634 Climate Change and Health
- AS.425.636 Emerging Energy Technologies and Applications
- AS.425.637 International Climate Change Policy
- AS.425.638 Adaptation to Climate Change
- AS.425.644 Principles & Applications of Energy Technology II
- AS.425.645 Global Energy Policy
- AS.425.646 US Offshore Energy: Policy, Science and Technology
- AS.425.647 Energy and Water Security in South Asia
- AS.425.651 The Electric Grid: Technology and Policy
- AS.425.652 Nuclear Energy: Technology, Policy, and Regulations
- AS.425.689 Energy and Environmental Graduate Seminar

**Capstone**

AS.425.800 Research Design for Capstone Projects in Energy and Environmental Sciences | 3

**Total Credits** | 30

**Suggested Electives**

**Code** | **Title** | **Credits**
---|---|---
**Suggested Electives From Environmental Sciences and Policy**
AS.420.608 | Oceanic & Atmospheric Processes | 3
AS.420.651 | Environmental Risk in Decision Making | 3
AS.420.654 | Environmental & Natural Resource Economics | 3
AS.420.656 | Environmental Impact Assessment & Decision Methods | 3
AS.420.659 | Management for Environmental Results with Performance-based Measurement | 3
AS.420.665 | Climate Change on the Front Lines: The Study of Adaptation in Developing Countries | 3

**Suggested Electives from Geographic Information Systems**
AS.430.601 | Geographic Information Systems (GIS) | 4
AS.430.602 | Remote Sensing: Systems and Applications | 4

**Suggested Electives from Global Security Studies**
AS.470.734 | Organizational Leadership and Ethics in NGO Management | 3
AS.470.773 | Energy and Environmental Security | 3

**Electives from Other Johns Hopkins University Divisions**
EN.575.710 | Financing Environmental Projects | 3
EN.575.723 | Sustainable Development and Next-Generation Buildings | 3

**MS in Energy Policy and Climate Tracks (Optional)**

Students wishing to further customize their degree can focus on one of the following tracks or combine them. These are suggested elective courses to illustrate how degree customization can take place.
Students should consult with their advisor for further recommendations appropriate to their career and academic goals.

</table>

### Program Course Work

- Four core courses
- Five electives
- Capstone project

### Core Courses

The core courses introduce the relevant body of knowledge in science and policy upon which students will base their studies. Some students may have covered most of the material of one or more of the core courses in previous academic work or through pertinent work experience. Such students should consider requesting that the appropriate core course(s) be waived (see Student Special Requests).

If approved, the waived core course must then be replaced with an additional elective. The core courses can be taken in any order, although it is recommended that students begin with AS.425.601 Principles and Applications of Energy Technology. Students must complete fulfillment of the four core courses within the first seven courses in the program toward their degree.

### Prerequisite Courses

Provisional students who have not fulfilled the required courses for admission are required to complete one or more of the following prerequisites:

- AS.420.301 Quantitative Methods (3 credits)
  Provisional students may also take appropriate undergraduate-level courses at an accredited university or successfully pass the math assessment test to fulfill this prerequisite. Provisional students should discuss these options with their advisor.

- AS.420.302 Chemistry of Natural Processes (3 credits)
  Provisional students may also fulfill this prerequisite by taking one semester of general chemistry at an accredited university. Provisional students should discuss these options with their advisor.

### Learning Outcomes

Graduates will be able to demonstrate:

- Understanding of the scientific principles that explain current and projected changes in climate and the role of humans in this process.
- Knowledge of the impacts of current and future climate change on natural and human systems, the vulnerabilities of these systems to predicted changes, and a variety of possible strategies for adaptation.
- Comprehension of the principles and applications of energy technologies for the mitigation of and adaptation to climate change.
- Business and management skills for designing and implementing carbon constraint policies and carbon offset structures.
- Understanding of policy options being considered at the local, state, and national level, including both regulatory and market-based approaches, for addressing long-term climate change.
- Knowledge of multilateral agreements and non-U.S.-based approaches to mitigate and adapt to climate change.

### Environmental Sciences and Policy, Master of Science

**MS in Environmental Science and Policy**

[environment.jhu.edu](http://environment.jhu.edu)

Climate change, population growth, energy consumption, habitat loss, water depletion and degradation, air pollution, and species extinction have increasingly come to the fore in minds of citizens around the world. To manage the Earth’s environment effectively, there is a need to understand the processes that shape the planet’s surface, control the chemistry of its air and water, and generate the natural resources on which humans depend. Our unique program is distinct in its focus on the interplay between science and policy. This program is founded on the premise that rational solutions to complex, twenty-first century environmental challenges require an in-depth understanding of applicable scientific principles and an appreciation for relevant political, ethical, economic, legal, and historical contexts. Graduates of the program develop combined expertise in science and policy that empowers them to become change agents and leaders in public and private organizations responsible for safeguarding our environment. Many of the program’s students are currently employed in environmental fields but wish to enhance their knowledge or move in new directions. Others seek to transition into the arena of environmental science and policy.

The program offers a flexible curriculum that allows students to customize their academic experience to suit their personal needs and interests. Courses are focused on wide ranging issues such as imperiled global ecosystems, natural resources economics, and multinational environmental trusts and laws. The program is open to students with limited scientific background as well as those that already have a background in the environmental sciences. Core course work includes geology, hydrology, oceanography, meteorology, ecology, geographic information systems (GIS), and policymaking. Electives range across a spectrum from courses strongly oriented toward policy to ones focused...
more heavily on science. Electives are selected by students under the guidance of advisors.

The program was originally designed by members of the Department of Earth and Planetary Sciences at Johns Hopkins, in conjunction with experts in applied science at regional and federal institutes and agencies. Courses are taught by distinguished instructors with valuable experience in the academic, public, and corporate sectors. Many of the program’s alumni are highly successful professionals. Taking a holistic approach, curricula in the Environmental Sciences and Policy (ESP) program positions students to join and contribute to the global science community.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

Program Specific Requirements
- One semester of undergraduate calculus, statistics, and general chemistry

Program Requirements
The core courses introduce the relevant body of knowledge in science and policy upon which students will base their studies. The core courses can be taken in any order.

Tracks (Optional)
Students in the Master of Science in ESP program could choose to follow a track. The tracks are general recommendations of logical course groupings that could be pursued. Our goal is to maintain flexibility of the ESP program, and allow students to choose courses that best fulfill their interests.

- Conservation Biology
- International Environmental Policy
- Sustainability
- Climate and Energy
- Remediation, Compliance and Assessment

The same five out of six core courses would be required, with electives chosen to support the desired concentration.

### Intensive Study Courses

Several ESP courses are offered as intensive study field courses. These courses meet the residency requirement and occur in a compressed format during the summer, winter, or over spring break. Each intensive study course has an additional field trip fee. Students are responsible for travel to the location of their residency course.

Program Educational Objectives

Our overall programmatic goals at ESP have several objectives and we will hit upon all of these as we read, discuss and proceed through course. Among our learning goals, we want to identify root and structural causes and the systemic nature of environmental issue (such as invasive species), critical interpretation of environmental information (e.g. examining forest carbon sequestration trends), synthesizing scientific studies (e.g. the impacts of land use change on forests), integrating basic principles derived from your core courses (e.g. geology and ecology) and finally we want to frame our science discussions around sound policy decisions (e.g. National Park mining exploration and fire policy).

When you successfully complete the program requirements, you would achieve the following goals: (Number Objectives)

1. Understand environmental policy making processes, institutions, and organizations to be able to identify root and structural causes and the systemic nature of environmental problems.
2. Research and recommend methods for collection, analysis, presentation and critical interpretation of environmental information using appropriate statistical and quantitative tools.
3. Develop competency in evaluating and synthesizing scientific studies to guide environmental decision making, policy making, and advocacy. Utilize the practical and theoretical components of environmental science and policy to develop local and global environmental strategies.
4. Describe and analyze environmental problems by applying or integrating basic principles derived from natural and social science, legal, and economic frameworks. Additionally, to conceptualize, develop and devise bridges between the realms of policy and science on critical environmental issues.
5. Evaluate effective strategies, technologies, and methods for sustainable management of environmental systems at and for the remediation or restoration of degraded environments in conjunction with evidence-based, science-informed environmental policy analysis.

Residency Requirement

Many courses are offered online, but at least one ESP course must be taken in an on-site classroom or as an in-person field course to fulfill the requirements of the degree. Students may choose to come to our campus in Baltimore or Washington DC for a whole semester, during intersession, or opt for an intensive field course. These are offered throughout the year, but the majority are scheduled during the summer or in January. Compressed field courses require an additional fee and often include lodging, course transportation, and some food (this is variable). Students are responsible for travel to the location of their residency course. Note: The University does not have lodging facilities in Washington DC.

Electives Outside of ESP Program

Electives should be chosen in consultation with the student’s advisor and should accommodate individual career goals. To customize the ESP experience, each student should choose electives that align with their scholarly and professional interests such as courses in environmental sustainability, monitoring, planning, or management. These electives may be chosen from any combination of the environmental sciences and policy offerings. Students may also consider related courses elsewhere in Advanced Academic Programs or in the schools of Engineering, Public Health, Advanced International Studies, Business, or Education (see Registering for Courses in Other Divisions/Programs). Students are permitted, with the written consent of the director of the program, to take up to two pertinent courses outside of the ESP degree. Please refer to the Advanced Academic Programs course schedule for exact dates, times, locations, fees, and instructors.

MS in Environmental Sciences and Policy/Geographic Information Systems, Certificate

MS in Environmental Sciences and Policy / Certificate in Geographic Information Systems

The use of geographic information systems (GIS) has become standard for many environmental professionals. At the same time, during environmental investigations, GIS remains one of the most popular and powerful applications. To enable students to exploit the complementary nature of the fields, we have eliminated the overlap between the MS in Environmental Science and Policy and the graduate certificate in GIS. This enables students to earn both the MS degree and the Graduate Certificate by completion of a total of 13 courses rather than the 15 courses that would be required to complete the programs separately. Interested students, including those already enrolled in either program, should apply to the combined MS in ESP/Graduate Certificate in GIS program.

Admissions Criteria for all Advanced Academic Programs (p. 2236)
Program Specific Requirements

- One semester of undergraduate quantitative methods, programming, or equivalent experience.

B.A./M.S. Option for Johns Hopkins ENVS Majors

Undergraduates majoring in Environmental Science or Environmental Studies (ENVS) may apply for accelerated status toward an M.S. in Geographic Information Systems (GIS) through the JHU Krieger School of Arts & Sciences' Advanced Academic Programs. Interested students should speak with their advisor and the Director of the GIS Program, Jerry Burgess (jerry.burgess@jhu.edu), in their senior year. ENVS students may apply up to two courses toward the M.S. in GIS, thereby leaving only eight more courses to complete the M.S. following receipt of their bachelor's degree. ENVS students will receive two separate degrees, so the requirements of both degrees must be fulfilled. Students cannot earn the M.S. degree without completion of the B.A. or B.S., however, students who do not complete the M.S. retain their B.A. or B.S.

Admission Requirements

ENVS students may apply for the B.A./M.S. anytime during the senior year or after conferment of their undergraduate degree. The application procedure is the same as that for other AAP applicants. Details are found online at: http://advanced.jhu.edu/. Students admitted to the B.A./M.S. program will be assigned a graduate advisor but will also continue to be advised by their ENVS advisor for all matters concerning the bachelor's degree.

Courses for the B.A./M.S. in Environmental Sciences and Policy

Up to three courses completed while an undergraduate can count toward the ten courses required for the M.S. Two of the following courses can be used to satisfy the corresponding core course requirements for the M.S. in Environmental Sciences and Policy.

Program Requirements

Select one of the following: 15 Credits

- Five ESP core courses

Select four of the following: 15-16 Credits

Substitution of other GIS courses allowed with approval of the Program Director.

Film and Media, Master of Arts

MA in Film and Media

advanced.jhu.edu/filmandmedia (http://www.advanced.jhu.edu/filmandmedia/)

The Master of Arts in Film and Media provides an in-depth curriculum designed to develop skill sets required to succeed in the film, television, and media industries. Students are exposed to the latest technology, taught the most current financial and distribution strategies, and explore a range of storytelling techniques. The program emphasizes experiential learning and focuses on the latest trends and advances in the entertainment industry. All courses balance practice with theory and are taught by successful creators and executives in the film, television, and media world. The program has been specifically designed to keep up with constant advances in technology, ideas, and trends, both practical and aesthetic.

Courses and workshops feature current case studies that help expose students to the latest tools, equipment, and resources in specific fields. The Johns Hopkins MA in Film and Media brings the industry to Baltimore, as our students grow their professional network while creating a two-way bridge between the local burgeoning film scene and the industry hubs in Los Angeles, New York, and abroad. Courses are held at the JHU/MICA Film Center, Baltimore's new film studio and recording center in the Station North Arts and Entertainment District.

Students can choose two concentrations from the fields of Business of Film & Media, Sound Production & Design, Writing for Film & Television, and Immersive Storytelling & Emerging Technology. While they specialize in one or two of these tracks, students acquire hands-on experience in...
developing, shooting, editing, and marketing original film, television, and
digital short-form content in the Graduate Filmmaking Studio.

**Admissions Criteria for all Advanced Academic Programs (p. 2236)**

**Curriculum**

Students take 11 courses, including the two-course Graduate Filmmaking Studio and a capstone within the required course sequence. Students take at least eight elective courses from up to two concentrations within the areas of Writing for Film & Television, Sound Production & Design, Immersive Storytelling & Emerging Technology, and Business of Film & Media.

The Business track revolves around a two-semester seminar taught by veteran development and acquisitions executives. This Fundamentals of Business seminar is structured around presentations by internationally renowned industry leaders, who—together with students—analyze case studies in the film and television industries. Students are required to develop their own business plans, investor decks, and marketing plans, and present them to invited executives, investors, and entrepreneurs.

Students in the Sound concentration acquire hands-on experience in creating and recording sound effects, dialogue, and music as they pertain to film, television, and media projects. Leveraging the experience and resources of The Peabody Institute and featuring a new sound studio co-designed by Thomas Dolby and Scott Metcalfe, the Sound concentration provides students the opportunity to create, edit, and mix soundtracks and soundscapes at the highest level.

Award-winning screenwriters and television writers lead the intensive workshops in the Writing concentration, centered on creating and developing original narratives. Students create and strengthen their writing portfolios as they design, draft, and polish their feature-length screenplays, television spec scripts, original television pilots, and web series. The program is launching a new area of curriculum focused on Immersive Storytelling and Emerging Technologies.

Master classes are offered by guest executives, agents, writers, directors, and executive producers, providing excellent opportunities to network within the industry.

- Two core courses
- Eight electives in two concentrations
- Capstone

**Capstone**

Students are required to complete a capstone project at the culmination of the program. During the capstone project, students will demonstrate professional expertise in one of their concentrations, completing a project that will be part of a work portfolio to be used to gain a professional position in the industry.

**Geographic Information Systems, Master of Science**

**MS in Geographic Information Systems**

gis.jhu.edu (http://www.gis.jhu.edu)

Geographic Information Systems (GIS) is a dynamic and versatile technology that enables visualization, analytics, and data management capabilities for an increasingly wide spectrum of industries. It has come to play a key role in empowering decision makers, helping them understand various processes and make well-informed decisions. It is used in diverse fields, such as environmental planning, law enforcement, defense and intelligence, business, utilities, telecommunications, economic development, transportation, public health, and many others.
It is this dynamism that the Johns Hopkins University GIS programs encompass in their offerings, the Master of Science in GIS and the Post-Baccalaureate Certificate in GIS.

These two programs are fully online and provide a strong foundational education that delves into the principles and real-world applications of geospatial technology, allowing students to build their credentials and capitalize on a marketplace that continues to grow in its demand for skilled employees. The Master of Science in GIS is designed to prepare the next generation of geospatial professionals and data scientists, skilled in all facets of geospatial technology, including programming and application development, geospatial data science, spatial and predictive analytics, visualization, big data technologies, enterprise GIS administration, and project management.

Both programs are designed for students who have little or no knowledge of the GIS field, as well as students with prior experience. Students entering either program will be introduced to the most widely used commercial software, as well as open-source software, often utilizing cloud computing infrastructure. Hands-on experience is emphasized and students in the program can expect to work on real-world geospatial scenarios.

Students in the Master of Science program could choose to follow one of two tracks. The tracks are general recommendations of logical course groupings that could be pursued. The goal is to maintain flexibility for the GIS program, and allow students to choose courses that best fulfill their own interests.

- Core Geospatial Technology
- Geospatial Data Science and Predictive Analytics

Admissions Criteria for all Advanced Academic Programs (p. 2236)

Program Specific Requirements
In addition to the materials and credentials required for all programs, Post-Baccalaureate Certificate in Geographic Information Systems program requires:

- A semester of statistics, quantitative methods, or technology-oriented experience for a quantitative background.

Students who do not have the necessary quantitative background may be offered provisional admission if their other credentials are strong.

PROGRAM REQUIREMENTS
1. Four out of five post-baccalaureate certificate courses
2. Five electives from the following list
3. Capstone Project

<table>

</tbody>
</table>

Elective Courses
It is recommended that one of the four electives be a GIS programming course and one be a spatial data management course.

Students may also consider taking related courses in other divisions of AAP, especially the Environmental Sciences, Energy Policy and Climate, and Government Analytics programs. Students are permitted, with permission of the GIS Associate Program Director, to take up to two pertinent courses outside of the GIS curriculum to fulfill their requirements toward the degree.

Geographic Information Systems, Certificate
Certificate in Geographic Information Systems
gis.jhu.edu (http://www.gis.jhu.edu)

The Online Certificate in Geographic Information Systems equips students with the knowledge they need to pursue new opportunities created by the expanding demand for geospatial professionals and data analytics experts. The five-course certificate program explores the principles and real-world applications of geospatial technology and data science in a convenient, fully online course format.

The Certificate offers you a foundation in the fascinating fields of Web GIS, geospatial data science, spatial and predictive analytics, programming and application development. You will gain invaluable experience in geospatial technology, utilizing web-based platforms and cloud computing environments, to further your understanding of the digital transformation that is revolutionizing business, government, industries, and social organizations.
Admissions Criteria for all Advanced Academic Programs (p. 2236)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Certificate in Geographic Information Systems program requires:

1. Quantitative Background – a semester of statistics, quantitative methods or technology oriented experience.

Students who do not have the necessary quantitative background may be offered provisional admission if their other credentials are strong. Students who are admitted provisionally due to lack of quantitative skills have the option to:

1. Take appropriate courses at an accredited college/university.
2. Take AS.420.301 Quantitative Methods.

Master of Liberal Arts

Master of Liberal Arts

mla.jhu.edu (http://www.mla.jhu.edu)

Established in 1962, the Johns Hopkins Master of Liberal Arts (MLA) Program has gained national recognition for the quality of its teaching and for its rigorous interdisciplinary liberal arts education. The program is designed to serve independent thinkers from a variety of academic, professional, and personal backgrounds. Our program thrives on the curiosity, passion, and diversity of its students. The MLA is a unique non-traditional graduate degree. Whereas most graduate programs ask you to become more and more specialized, the MLA expects you to broaden and deepen your educational experience. MLA students interact with professors and one another in a stimulating learning environment, both on the ground at the Homewood campus and online in an asynchronous format compatible with all work schedules and time zones.

In consultation with their academic advisor, candidates for the Master of Liberal Arts degree enroll in topic-based interdisciplinary courses that draw from a wide range of subjects, including history, philosophy, religion, literature, music, art history, African-American studies, environmental studies, digital humanities, critical theory, psychology, and sociology. Given the breadth and flexibility of our program, the MLA is able to meet the different goals and expectations of our students. Our students represent the full range of working professions and are at all stages of their careers.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

The Admissions Committee reserves the right to request additional information from applicants to assess their candidacy for admission.

10 three-credit-hour courses, including:
- One core course within the first three courses, plus either:
  - Eight electives and a three-credit Graduate Project or Internship for the Capstone
  - Nine electives and a zero-credit Portfolio for the Capstone

Learning Outcomes

Graduates will be able to:

- Evaluate different methods of inquiry within the liberal arts, building upon a foundation in the history of ideas and enduring humanistic questions.
- Analyze complex problems from interdisciplinary perspectives, utilizing various fields of study, sources, and methodologies.
- Design and conduct research that critically analyzes the chosen subject matter in well-informed, nuanced, and original ways and that engages scholarship across several fields of study.
- Create work that expresses fluency in critical theory, considers ethical responses to contemporary global challenges, and incorporates the voices and experiences of marginalized persons.
- Formulate and present research and ideas utilizing advanced communication skills that are suitable for diverse academic, professional, and cultural contexts.

Museum Studies, Master of Arts

MA in Museum Studies

museum-studies.jhu.edu (http://www.museum-studies.jhu.edu)

To prepare current and future museum professionals to be the visionary leaders of museums in contemporary society, Johns Hopkins University offers an innovative Master of Arts in Museum Studies. The format of the program itself—an almost fully online program—looks to the future. As an online program, we can offer the expertise of highly regarded professors and museum professionals from around the world, innovative virtual field trips, and global resources from a wide array of museums brought together in new and exciting ways. An international student
body provides diverse perspectives and experiences in a dynamic online learning environment.

Museums of the 21st century are in the midst of a tremendous period of growth and change. New demands and challenges are emerging in every aspect of the museum landscape. Innovations in information and communication technologies are being integrated into the core strategies of the museum. Museums are increasing in number, expanding in size, and attracting more diverse audiences every day. The museums of the 21st century need leaders with the knowledge and skills to face these challenges and who possess a vision for the future.

This program aims to provide a perspective on the theory and practice of museums in a changing technological, social, and political environment for current and future museum professionals. It emphasizes the role of technology as a pervasive aspect in today's museum; examines new models of education, exhibition, and business strategies; and explores the role of the museum in a global society and as an agent of social change.

We welcome students interested in all types of museums, including history, technology, science, art, special topic or themed museums, historic sites, national parks, and zoos, and those interested in collections and exhibitions for corporations, government agencies, and private organizations.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

Program Specific Requirements

In addition to the materials and credentials required for all programs, the Master of Arts in Museum Studies also requires:

- Statement of Purpose: This 750-word statement should describe how your academic and professional experiences have led to your decision to pursue a career in the museum field and how this museum studies degree will help you succeed in your goals in the museum profession. If you have worked for a museum in any capacity, please incorporate your experience into your statement. Your statement will be reviewed for content, organization, and writing style.

- Recommendations: Two letters of recommendation that verify professional and/or academic accomplishment.

**Curriculum**

The MA in Museum Studies offers a structured curriculum of required and core courses augmented with electives. This curriculum provides opportunities for students to gain the knowledge and skills necessary for current professional museum practice with an eye to the future and an integration of past philosophies. The program encompasses both theory and practice, focusing on providing real-world skills and training that enable students to move into the museum field or advance into jobs with more responsibility.

Students must take a total of 10 courses
- AS.460.601 Exploring Museum Professions or AS.460.602 Museums in the Digital Age
- Three core courses
- On-site two-week seminar AS.460.610 Two-Week Onsite Seminar
- Five elective courses

**On-site Seminar**

A two-week intensive period of on-ground museum study in a location organized by the MA in Museum Studies program is a required component of the program. The seminar includes practicum opportunities in a variety of museum settings, conversations with local museum professionals, observation of and interaction with museum visitors, and class sessions to integrate the daily experiences. Using the rich diversity of museums, this course provides students with the chance to use what they have learned in their prior courses, develop networks with fellow students and museum experts, and explore the latest in museum practice, including exhibition design and development, public programming, collections management, conservation, and the uses of technology in the museum. Seminars have taken place in locations as diverse as Washington, DC, New York, Philadelphia, Atlanta, Chicago, San Diego, London, Berlin, and Barcelona. Students work in teams on directed activities during the two weeks. Note: Students must have completed a minimum of two courses in the program, although four or more courses are encouraged, to register for this course. One of these courses must be AS.460.601 Exploring Museum Professions or AS.460.602 Museums in the Digital Age and some seminars may have other specific requirements. Students are responsible for travel to and from the location, accommodations, and meals, as well as any specified field trip fees.

**Waiver option:** Students who are unable to travel to a seminar location due to accommodation needs, financial hardship, or family challenges may apply to the program director for an exemption to the two-week seminar.

If a waiver is granted, the student must enroll in the internship option (AS.460.750 Museum Internship) to fulfill the on-site component of the degree requirement.

**Museum Studies, MA/Digital Curation, Certificate**

**MA in Museum Studies / Certificate in Digital Curation**

Students who are interested in pursuing an MA in Museum Studies and are also interested in the creation, management, and preservation of digital assets in museums may enroll in this combined program.

Museum Studies students may earn the Certificate in Digital Curation by taking two of the required six courses as electives in the MA program plus the additional four courses required to complete the certificate. This enables students to earn both the MA degree and the certificate for a total of 14 courses, 10 in museum studies and four in digital curation.

**Admissions Criteria for all Advanced Academic Programs (p. 2236)**

**PROGRAM SPECIFIC REQUIREMENTS**

In addition to the materials and credentials required for all programs, the combined program of the Master of Arts in Museum Studies and the Certificate in Digital Curation also requires:
- Statement of Purpose: This 750-word statement should describe how your academic and professional experiences have led to your decision to pursue a career in the museum field with a focus on digital curation and how this combined degree will help you succeed in your future goals. If you have worked for a museum in any capacity and have any experience working with digital assets, please incorporate this into your statement. Your statement will be reviewed for content, organization, and writing style.
- Recommendations: Two letters of recommendation that verify professional and/or academic accomplishment.

**Program Requirements**

**MA in Museum Studies Courses**

MA in Museum Studies students pursuing the Digital Curation Certificate must take 10 courses from the Museum Studies course list. Two approved courses may be applied to both the MA and the certificate for a total of 14 courses. See course listings under MA in Museum Studies and possible electives under the Digital Curation Certificate listings.

**Digital Curation Certificate Courses**

Prerequisites and additional electives are listed in the Digital Curation Certificate section.

**Museum Studies, MA/Nonprofit Management, Certificate**

Students pursuing an MA in Museum Studies who are interested in furthering their management education may enroll in the combined degree program offered with the Certificate in Nonprofit Management. Museum Studies students may earn the Certificate in Nonprofit Management by taking an additional four of the six online courses necessary to complete the certificate, provided they have taken two courses of Museum Studies courses, listed under the Requirements tab. This enables students to earn both the MA degree and a graduate
certificate for a total of 14 courses, 10 in museum studies and four in nonprofit management.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

Program Specific Requirements
Interested applicants must complete all admission requirements for both the Master of Arts in Museum Studies and the Certificate in Nonprofit Management.

In addition to the materials and credentials required for all programs, the Master of Arts in Museum Studies also requires:

- Statement of Purpose: This 750-word statement should describe how your academic and professional experiences have led to your decision to pursue a career in the museum field and how this museum studies degree will help you succeed in your goals in the museum profession. If you have worked for a museum in any capacity, please incorporate your experience into your statement. Your statement will be reviewed for content, organization, and writing style.
- Recommendations: Two letters of recommendation that verify professional and/or academic accomplishment.

PROGRAM REQUIREMENTS

MA in Museum Studies students pursuing the Nonprofit Management Certificate must take the 10 required Museum Studies courses and 4 Nonprofit Management courses for a total of 14 courses. Two specific Museum Studies courses can be applied to both the masters and the certificate per the listing below.

Organizational Leadership, Master of Science

MS in Organizational Leadership

MSOL students develop core competencies in methodologies and frameworks; theories relevant to critical thinking and analytic techniques; application of analytic techniques and theories to problem sets; and visualization techniques for producing reports, briefs, and infographics.

Students demonstrate these core competencies by achieving six learning outcomes: (1) applying research and analytical skills to solve complex problems; (2) leading at the intersection of strategy, execution, and creativity; (3) developing and applying ethical principles; (4) evaluating professional frameworks; (5) designing, developing, and communicating strategic plans; and (6) comparing and contrasting industry standards and techniques.

Quantitative Methods in Applied Economics, Post-Master’s Certificate

The four-course Post-Master’s Certificate in Quantitative Methods in Applied Economics is intended for those who already hold a master’s degree in economics or statistics, and who wish to expand or update their knowledge. All courses are offered on-site in the evenings at the Washington, DC Center of the Johns Hopkins University (near Dupont Circle) and online. Admissions requirements are the same as for our MS in Applied Economics degree plus a master’s degree in economics or statistics. Students lacking prerequisite courses can take them with us, on-site or online. Admissions are rolling; one can begin in the summer, fall, or spring semester.

Science Writing, Master of Arts

MA in Science Writing

advanced.jhu.edu/sciencewriting (http://www.advanced.jhu.edu/sciencewriting/)

Science writing explores and explains how our world works. The best science writing inspires a deeper understanding, a sense of wonder, or a need to act. The online/low-residency Science Writing program at Johns Hopkins strives to guide the next generation of writers and editors who will help the public comprehend the increasingly complex issues of science, medicine, and technology that affect their lives. Students choose from a nine-course Master of Arts or a five-course graduate certificate. Eligible applicants may take only a course or two of special interest as non-degree students. A brief residency course, required for the degree and optional for the certificate, provides intensive face-to-face study to complement the group and personal interaction of online courses.

The program recognizes that contemporary science writing involves journalism, communication, multimedia, and the literary arts. Our typical student hones journalistic and creative writing techniques to craft enticing, understandable prose for digital or print venues, from magazines
and books to social media and websites for companies, associations, agencies, or others. Along the way, students acquire communication skills to promote viewpoints and develop expertise to thrive in the digital universe. Our writers and editors are also challenged to monitor science itself, to disclose how research can falter or be misused.

Johns Hopkins Science Writing students have visited a research island in Maine, control rooms at NASA, historic museums in Italy, and world-famous genetics and biotech labs in Washington and Baltimore. They have observed surgeons in the operating room, sailed with biologists on the Chesapeake Bay, heard from Nobel and Pulitzer winners, and met with science writers from The Washington Post, The New York Times, National Public Radio, National Geographic, Discover, Science, Nature, and other institutions. From space and the oceans to nanotechnology and climate change, from cellphones and robots to fitness and genetics, the ever-changing topics chosen by our science writers are essential to an enlightened citizenry of the 21st century.

Students in the Science Writing program do not focus on creating scientific research reports, journal articles for peer review, or other scholarly/academic constructs, nor do we teach technical writing for instruction manuals or complicated textbooks. Our curriculum also is not designed to help scientists or others who need remedial help or instruction manuals or complicated textbooks. Our curriculum also is not designed to help scientists or others who need remedial help or instruction in English as a second language. Science Writing students aim to translate the complicated information and trends of science, medicine, and technology into meaningful, perceptive prose for a broad audience.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Arts in Science Writing requires:

- Writing samples, including some works of science writing, demonstrating the applicant’s current development as a writer. The samples should total 10 to 20 typewritten, double-spaced pages, or about 2,500 to 5,000 words. A combination of several shorter pieces rather than a single, lengthy piece is recommended. Applicants lacking samples about science, medicine, or technology may submit writing about other topics; explanatory writing is especially appreciated. Any factual form or combination of forms, including news or feature article, commentary/blogs, memoir, travel, essay, review, profile, book chapters, and creative nonfiction, is permitted. Applicants may submit published or unpublished works. Digital writing samples should be submit in their entirety, not as links. The majority of an applicant’s samples should be no more than five years old. Academic papers, peer-reviewed research reports, technical writing, or government documents are not recommended as writing samples; the samples should be journalism, communication writing, creative writing, blogging, etc. Applicants may submit uncompleted work if they label it as such.

PROGRAM REQUIREMENTS

9 courses:

- Techniques of Science-Medical Writing
- Contemporary Science-Medical Writing: Creative and Professional Forms
- Two science writing workshops
- Two science writing electives, approved by advisor
- One residency course
- One student choice: Another workshop, elective, residency, internship, independent study, or (with special permission) course in another AAP program
- Thesis and Careers in Science Writing

Course Sequence

The MA in Science Writing curriculum starts with core courses that focus on fundamental skills in reporting and writing, and a broad understanding of contemporary science writing forms. Students then enroll in workshops and electives, with internships and independent studies available under certain circumstances. In writing workshops, students submit their own writing and revisions for peer review and
Graduate Certificate in Science Writing requires:

In addition to the materials and credentials required for all programs, the PROGRAM SPECIFIC REQUIREMENTS Programs residency courses.

Students should take Techniques of Science-Medical Writing first, if possible, and should complete that course before enrolling in a workshop. Exceptions can be granted to this guideline with advisor approval. Thesis and Careers in Science Writing should be taken in the last term of degree studies, although exceptions can be made for students who need to complete a residency following Thesis.

Science Writing, Certificate
Certificate in Science Writing

https://advanced.jhu.edu/academics/certificate-programs/science-writing/

The Graduate Certificate in Science Writing shares the same mission as the MA in Science Writing Program. Certificate students complete five courses, a mix of workshops electives, and core courses that develop the reporting and writing skills for communicating science broadly. The program recognizes that contemporary science writing involves journalism, communication, multimedia, and the literary arts. Our typical student hones journalistic and creative writing techniques to craft enticing, understandable prose for digital or print venues, from magazines and books to social media and websites for companies, associations, agencies, or others. Along the way, students acquire communication skills to promote viewpoints and develop expertise to thrive in the digital universe. Our writers and editors are also challenged to monitor science itself, to disclose how research can falter or be misused. Certificate students may complete all courses online, but have the option of enrolling in one of the Science Writing Program’s onsite residency courses.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Graduate Certificate in Science Writing requires:

- Writing samples, including some works of science writing, demonstrating the applicant’s current development as a writer. The samples should total 10 to 20 typewritten, double-spaced pages, or about 2,500 to 5,000 words. A combination of several shorter pieces rather than a single, lengthy piece is recommended. Applicants lacking samples about science, medicine, or technology may submit writing about other topics; explanatory writing is especially appreciated. Any factual form or combination of forms, including news or feature article, commentary/blogs, memoir, travel, essay, review, profile, book chapters, and creative nonfiction, is permitted. Applicants may submit published or unpublished works. Digital writing samples should be submit in their entirety, not as links. The majority of an applicant’s samples should be no more than five years old. Academic papers, peer-reviewed research reports, technical writing, or government documents are not recommended as writing samples; the samples should be journalism, communication writing, creative writing, blogging, etc. Applicants may submit uncompleted work if they label it as such.

PROGRAM REQUIREMENTS

(Five courses, residency optional)

- Techniques of Science Writing
- One science writing workshop
- One science writing elective, approved by advisor
- Two student choice courses: The second core course, a residency, another workshop or elective, an internship or independent study, or, if approved, a course in another AAP program

Select courses available from AAP programs in Communication, Biotechnology, Environmental Sciences and Policy, Museum Studies, and other disciplines. With special permission, students also may consider other Johns Hopkins courses in science, medicine, or public health. Science Writing students pay the tuition charged by the offering program.

Teaching Writing, Master of Science

MA in Teaching Writing

advanced.jhu.edu/teachingwriting (http://www.radadvanced.jhu.edu/teachingwriting/)

The Master of Arts in Teaching Writing Program help teachers at all levels, K-University, in all disciplines, learn to become master teachers of writing, acquiring new and innovative ways to teach writing to their students, studying theories and best practices on the teaching of writing that they can share with their colleagues, and pursuing their own writing in an exciting and supportive online community of teachers and writers. The Teaching Writing Program allows participants to address individual situations, needs, and interests while learning within a diverse community. By offering flexible, interactive, and customized learning, the program provides a model for teaching writing and a forum where all teachers can learn and grow together as teachers of writing, and as writers too.

The Program is built around five core principles:

1. Teachers of writing must write. Every course devotes some time and attention to having teachers explore their own writing, in whatever form or forms that course is built around.
2. Teachers can learn from studying theories and best practices in the teaching of writing. Some readings and discussions about both accepted practices and the theories behind those practices are included in every course.
3. Teachers can learn from and share with each other. Participants in the program will have experience and expertise in teaching and writing. Every course provides opportunities for participants to share that knowledge with their classmates, and to learn from each other.
4. Teachers must have the freedom and encouragement to apply what they learn to meet their own specific needs and situations. The makeup of every class includes teachers teaching at different grade levels and in different disciplines. Every course encourages teachers to reflect on what they are learning and adapt that material to suit their individual needs.
5. Teachers learn best in an interactive classroom (even a virtual one). Every course seeks to establish a sense of community.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Arts in Teaching Writing requires:

- Writing sample. The writing sample may be in any form or genre, on any subject, and should not exceed 10 typed, double-spaced pages.

PROGRAM REQUIREMENTS

Nine courses required:

- Teaching Writing: Theory, Practice and Craft
- One course from the genre writing group
- One course from the reading group
- One residency course
- Four electives
- Thesis in Teaching Writing

Writing, Master of Arts

MA in Writing
writing.jhu.edu (https://advanced.jhu.edu/academics/graduate-degree-programs/writing/)

The MA in Writing Program offers students the option of a fiction or nonfiction concentration to study the practice of writing in a series of workshops and reading courses. Students on the fiction track work on short stories, novellas, or novels. Students on the nonfiction track pursue long-form, literary journalism or personal essays, and memoir. Students may take courses online, face-to-face, or in a combination of the two modalities.

Students in the MA in Writing program learn primarily through the practice of writing and the study of reading with a focus on craft. Depending on student goals, the program offers a broad foundation in fine arts/creative writing, in journalism or in both fields. Some students cultivate skills to prepare for a career; others are seasoned writers who want to change focus; still others favor artistic exploration over professional ambition. Within the realm of literary writing, students have the flexibility to develop individual styles and pursue specialized subjects. The program’s goal is to create a nurturing yet demanding environment where writers work toward publication at the highest artistic and professional levels.

Admissions Criteria for all Advanced Academic Programs (p. 2236)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Arts in Writing requires:

- Familiarity with writing in the applicant’s chosen concentration. Applicants to the Fiction concentration should have read in their area of interest and explored their writing voice. Applicants to the Nonfiction concentration should have read in their field. For Nonfiction applicants, some exposure to journalistic fundamentals is helpful but not necessary.
- Writing samples. The samples should be up to 15 typewritten, double-spaced pages, or about 3,500 to 4,500 words, in the concentration of interest. Samples do NOT have to be a single, lengthy piece of writing.
- The program’s admissions committees offer the following additional suggestions for writing samples for each concentration:
**Fiction:** Short stories or novel chapters in prose fiction, demonstrating literary content or themes. Any style, vision, or approach is permitted—traditional, experimental, hybrid, etc.

**Nonfiction:** Up to five separate works of prose nonfiction about any subject. Any nonfiction form or combination of forms, including feature article, commentary/blogs, memoir, travel, essay, profile, biography, book chapters and creative nonfiction, is permitted. Academic assignments, term papers, government reports, or scholarly criticism generally are not acceptable nonfiction writing samples.

**Dual-Concentration Applicants**
Applicants may seek formal degree candidacy in both Fiction and Nonfiction by submitting full writing samples in each proposed area. Such applicants should explain their multiple interest and reading in a single statement of purpose. The program makes individual admission decisions for each concentration in a dual-concentration application. Dual-concentration students must complete two to four more courses than the nine required for a single-concentration degree.

**PROGRAM REQUIREMENTS**
Nine courses:

- Two core courses: Contemporary American Writers and the appropriate Techniques course
- Three writing workshops in the chosen concentration (core courses usually must be completed before enrolling in a workshop)
- Three electives (at least one elective must focus on reading or other work in the student's concentration)
- The thesis course (all eight earlier courses must be completed before starting the thesis course)

**SEQUENCE OF STUDY**

Fiction and Nonfiction students should complete both of their concentration's core courses before enrolling in a workshop; electives may be taken at any time. At least one of those electives should be specifically within the student's concentration. Students should carefully plan their studies to include their top choices for elective courses. Electives are offered on a rotating basis; some are scheduled only every two or three years. Students enroll in the program's final thesis course only after completion of all core courses, workshops, and electives required for the MA in Writing. All thesis students should submit a thesis planning form at least one month before taking the course.

**Science Writing and Teaching Writing Courses for MA in Writing Students**

Students in the MA in Writing program also can consider earning electives through the online MA in Science Writing and MA in Teaching Writing programs. For instance, Nonfiction students might consider a Science Writing Workshop or a Science Writing reading course; Writing students who teach or want to teach might consider the core Teaching Writing course, Teaching Composition in College and Community College, or Teaching Creative Writing. All regular Science Writing and Teaching Writing courses are offered fully online.

**Johns Hopkins Summer Programs**

The Johns Hopkins Summer Program offers many different types of credit and non-credit courses to Hopkins undergraduates, visiting college
students, and qualified high school learners. The Krieger School of Arts and Sciences and the Whiting School of Engineering sponsor summer session courses, providing identical academic rigor as that found in the university's fall and spring terms. In addition to earning college credit, students experience academic life at Hopkins while living on campus and engaging in a wide variety of academic and social activities.

**Admission Requirements**

1. Application fee
2. Official Academic Transcript
3. 3.0 Grade Point Average (4.0 scale)
4. One (1) Letter of Recommendation (from a teacher, principal, or guidance counselor)
5. Enrollment Forms
6. TOEFL, IELTS, or Duolingo scores ([https://englishtest.duolingo.com/](https://englishtest.duolingo.com/)) (International applicants only)**
7. Minimum Age Requirements: Must be 15 years old by the first day of the class/program, and completed one year of high school.

*An official transcript is required for full admission to a summer course or program at The Johns Hopkins University. All physical copies of transcripts can be mailed to:

Johns Hopkins University  
Krieger School of Arts and Sciences  
Summer at Hopkins  
1717 Massachusetts Avenue, NW, Suite 104  
Washington, DC 20036-2005

**A high level of proficiency in English is expected of applicants for summer programs and courses at The Johns Hopkins University. Applicants should typically receive a minimum of 100 total for the Internet-based TOEFL (iBT) with preferred sub-scores of 26 (Reading), 26 (Listening), 22 (Writing), and 25 (Speaking). A score of 7.0 or higher on each band is expected on IELTS, and a score of 120 or higher is expected for the Duolingo English Test ([https://englishtest.duolingo.com/](https://englishtest.duolingo.com/)). International applicants who have attended an English-speaking school (high school or college) for a minimum of two years are waived from the proficiency requirement.
COURSE DESCRIPTIONS

A

- AS.010 (History of Art) (p. 2310)
- AS.020 (Biology) (p. 2325)
- AS.030 (Chemistry) (p. 2335)
- AS.040 (Classics) (p. 2344)
- AS.050 (Cognitive Science) (p. 2350)
- AS.060 (English) (p. 2358)
- AS.061 (Film and Media Studies) (p. 2376)
- AS.070 (Anthropology) (p. 2387)
- AS.080 (Neuroscience) (p. 2398)
- AS.100 (History) (p. 2405)
- AS.110 (Mathematics) (p. 2420)
- AS.120 (Near Eastern Studies) (p. 2426)
- AS.136 (Archaeology) (p. 2437)
- AS.140 (History of Science, Medicine, and Technology) (p. 2438)
- AS.145 (Medicine, Science and the Humanities) (p. 2444)
- AS.150 (Philosophy) (p. 2447)
- AS.171 (Physics & Astronomy) (p. 2459)
- AS.180 (Economics) (p. 2465)
- AS.190 (Political Science) (p. 2476)
- AS.192 (International Studies) (p. 2500)
- AS.194 (Islamic Studies) (p. 2503)
- AS.200 (Psychological & Brain Sciences) (p. 2504)
- AS.210 (German & Romance Languages & Literatures) (p. 2513)
- AS.220 (Writing Seminars) (p. 2551)
- AS.225 (Theatre Arts & Studies) (p. 2559)
- AS.230 (Sociology) (p. 2562)
- AS.250 (Biophysics) (p. 2573)
- AS.270 (Earth & Planetary Sciences) (p. 2578)
- AS.280 (Public Health Studies) (p. 2589)
- AS.290 (Behavioral Biology) (p. 2598)
- AS.300 (Comparative Thought and Literature) (p. 2600)
- AS.310 (East Asian Studies) (p. 2610)
- AS.360 (Interdepartmental) (p. 2613)
- AS.361 (Program in Latin American Studies) (p. 2618)
- AS.362 (Center for Africana Studies) (p. 2620)
- AS.363 (Study of Women, Gender, & Sexuality) (p. 2623)
- AS.370 (Center for Language Education) (p. 2627)
- AS.371 (Art) (p. 2634)
- AS.374 (Military Science) (p. 2637)
- AS.376 (Music) (p. 2640)
- AS.389 (Program in Museums and Society) (p. 2643)
- AS.410 (Biotechnology) (p. 2647)
- AS.420 (Environmental Sciences) (p. 2662)
- AS.425 (Energy Policy and Climate) (p. 2674)
- AS.430 (Geographic Information Systems) (p. 2679)
- AS.440 (Applied Economics) (p. 2683)
- AS.450 (Liberal Arts) (p. 2688)
- AS.455 (Film and Media) (p. 2702)
- AS.460 (Museum Studies) (p. 2707)
- AS.465 (Cultural Heritage Management) (p. 2715)
- AS.470 (Government) (p. 2718)
- AS.472 (Geospatial Intelligence) (p. 2742)
- AS.475 (Research Administration) (p. 2743)
- AS.480 (Communication) (p. 2746)
- AS.485 (Organizational Leadership) (p. 2753)
- AS.490 (Writing) (p. 2754)
- AS.491 (Science Writing) (p. 2760)
- AS.492 (Teaching Writing) (p. 2764)
- AS.492 (Non-Departmental) (p. 2767)
- AS.990 (-JHU Department) (p. 2768)
- AS.999 (AAP) (p. 2769)

B

- BU.001 (Graduate Business) (p. 2770)
- BU.001 (MBA) (p. 2773)
- BU.120 (Management) (p. 2777)
- BU.132 (Real Estate) (p. 2778)
- BU.210 (Finance) (p. 2781)
- BU.300 (Information Systems) (p. 2785)
- BU.410 (Marketing) (p. 2788)
- BU.510 (Quantitative Methods) (p. 2791)
- BU.550 (Business of Health) (p. 2792)
- BU.610 (Operations Management) (p. 2795)

E

- ED.610 (Interdisciplinary Studies in Education) (p. 2796)
- ED.810 (Educator Preparation Programs) (p. 2807)
- ED.810 (Teacher Preparation) (p. 2808)
- ED.813 (Teacher Development/Leadership) (p. 2814)
- ED.855 (Research and Doctoral Programs) (p. 2822)
- ED.860 (Counseling & Human Services) (p. 2828)
- ED.871 (Special Education) (p. 2834)
- ED.885 (Graduate Education) (p. 2840)
- ED.893 (Educational Technology) (p. 2841)
- EN.500 (General Engineering) (p. 2842)

**AS.010 (HISTORY OF ART)**

**AS.010.101. Introduction to Art History I. 4 Credits.**
A survey of painting, sculpture, and architecture from Egyptian, Greek, Roman, and medieval culture. 
Area: Humanities 
Writing Intensive

**AS.010.102. Introduction to Art History II. 4 Credits.**
This introductory course surveys major developments in the arts primarily in Europe and North America from the fourteenth century to the present day, looking in particular at painting, sculpture, printmaking, photography, and, starting in the twentieth century, new media. Topics to be considered include the landmark innovations of Renaissance artists and theorists; the drama of Baroque art; the impact of the Enlightenment on eighteenth-century art; artistic responses to the advent of modernity; and the emergence of abstraction, the avant-garde, and a range of new mediums during the twentieth and twenty-first centuries. Throughout the semester, we will explore how the artistic practices and theories under consideration relate to their specific historical, intellectual, social, political, and geographical contexts, and we will also consider the roles that works of art and artists played in shaping many of those very same contexts. 
Area: Humanities 
Writing Intensive

**AS.010.103. Introduction to the Art of Asia. 3 Credits.**
A survey of the art and architecture of Asia, from the ancient world to the present and including the Indian subcontinent, China, Japan, Korea, and Southeast Asia. 
Area: Humanities

**AS.010.104. Freshman Seminar: Investigating Gender and Sexuality in Mesopotamian Art. 3 Credits.**
Specifics of gender and sexuality are not universal norms, but rather are the product of particular cultural formations. Works of art are especially critical in shaping and conveying these particularities. This seminar examines how artistic products expressed and constructed gender identities and notions of sexuality in ancient Mesopotamia from the 4th millennium to the Hellenistic period. As a group, we will explore a variety of case studies, through which students will be introduced to ancient Mesopotamian culture and will develop skills in specific research skills such as critical reading, analysis, and interpretation. 
Area: Humanities

**AS.010.110. Art of the Islamic World. 4 Credits.**
This course is an introduction to the art of the Islamic world, covering a geography that stretches from Spain to India and a chronology that extends from the seventh century into our own time. Within this rich and varied continuum, we will look at a range of art forms—including architecture, painting, sculpture, ceramics, and calligraphy—in relation to such themes as patronage, production, function, and audience. A number of the artworks will be viewed firsthand in local collections. We will also explore the intersection of Islamic art with today's political realities. 
Area: Humanities

**AS.010.105. Art of Mesoamerica. 3 Credits.**
This course explores key monuments of medieval art and architecture in Italy from c. 400 until 1350. We will concentrate on historical, functional, and aesthetical aspects that lead to the creation of single monuments and art works. Emphasis is given to the analysis of “sacred space” by means of architecture, painted, and sculptural decoration, as well as ritual performances. Another focus is laid on the emergence on the political dimension of art for the creation of civic identity as well as in the context of the late medieval courts. We raise questions about the importance of materiality and science for the creation of medieval art works.
Area: Humanities 
Writing Intensive

**AS.010.203. Abstraction. 3 Credits.**
This course will examine the elaboration and dissemination of major iterations of “abstract” art at key junctures throughout the twentieth century, with an emphasis primarily on developments in Europe and the Americas. Why abstraction? What were the formal, social, and philosophical stakes of divergent models and paradigms of abstract practice? And what difference do they make in the history and theory of artistic modernism? Class visits to the BMA and Special Collections. 
Area: Humanities

**AS.010.205. Art of Mesoamerica. 3 Credits.**
This course provides a basis for the study of ancient Americas art and architecture and a broad exposure to the issues relevant to its study. Select visual arts within the primary regions of Mexico and Central America will be emphasized. In conjunction with the Baltimore Museum of Art (BMA) and the JHU Archaeological Museum (JHAM), students will participate in on-site study of the collections. Students who have taken AS.010.105 are not eligible to register. This course duplicates AS.010.105. 
Area: Humanities

How does a notary’s son trained as a painter come to claim expertise in the construction of machines and acquire knowledge of the principles of optics, human anatomy, the flight of birds, the dynamics of air and water? The course will focus critically on the myth of Leonardo’s singularity and explore his achievements with regard to the artisanal culture of his time, as well as the problems of authority in the recognition of artisanal knowledge as scientific discovery.

Area: Humanities

**AS.010.209. Art since 1945.** 3 Credits.

Critical survey of developments in the visual arts primarily in Europe and the United States from 1945 to the present, ranging from painting and sculpture to performance, photography, and video, with emphasis on the critical concepts and the aesthetic, social, and historical implications of new forms of artistic production and dissemination. Visits to the BMA and Special Collections.

Area: Humanities

**AS.010.210. The Art of Colonial Latin America.** 3 Credits.

This course offers a broad introduction to the arts of colonial Latin America: students will become familiar with the artistic production in the areas of Latin America invaded and controlled by the Spanish Crown from the time of the conquests in the sixteenth century to independence movements in the early nineteenth century. We will explore a wide range of materials from maps to featherwork, paintings to urban grids, cathedrals to mummy bundles. The course is thematically organized, such that students will not only become familiar with the art of Latin America, but will come to understand critical topics related to the study of early modern colonialism: conquest, race, missionary control, literacy, extraction, and indigenous and imperial systems of governance.

Area: Humanities

**AS.010.212. Mirror Mirror: Reflections in Art from Van Eyck to Velázquez.** 3 Credits.

Explores the different ways Early Modern painters and printmakers incorporated mirrors and optical reflections into their works for the sake of illusion and metaphor, deception and desire, reflexivity and truth-telling. Connecting sense perception and ethical knowledge, embedded mirror images often made claims about the nature of the self, the powers of art, and the superiority of painting in particular.

Area: Humanities

**AS.010.214. Ancient Americas in Motion.** 3 Credits.

This course critically examines the visual arts and their makers as portrayed in documentary, historical, and Hollywood films.

Area: Humanities

**AS.010.218. Modern Art, 1880-1950.** 3 Credits.

Critical survey of developments in the visual arts primarily in Europe and the United States from 1880 to 1950 with emphasis on the critical concepts and the aesthetic, social, and historical implications of new forms of artistic production and dissemination. Visits to the BMA and Special Collections.

Area: Humanities

**AS.010.222. Freshman Seminar: Representing Roman Power: Sculpture as Political Rhetoric from Republic to Empire.** 3 Credits.

Rome created one of the world’s most powerful empires that dominated the Mediterranean from the 3rd century BCE into the 4th century CE. As Rome expanded its borders, its cities saw a proliferation of sculptural monuments that produced a visual political rhetoric and expressed imperial ideologies. This class examines the close relationship between Roman sculpture and politics from the Republic through the Severan principate. Through close visual analysis of the ancient materials and critical readings of scholarship, this course will examine the role of sculpture in the formation, reproduction, and attenuation of imperial rule.

Area: Humanities

**AS.010.226. Art, Medicine, and the Body: From Leonardo to Body Worlds.** 3 Credits.

This course explores five centuries of fruitful collaboration between physicians and artists — those who observe the body in order to heal it, and those who do the same in order to picture it. From medieval medical manuscripts, where the body is portrayed as a microcosm of the created world, to the anatomical forays of Renaissance artists such as Leonardo da Vinci and Albrecht Dürer; from gruesome depictions of bodily pain, disease, and corruption in the art of Matthias Grünewald to the eloquent exposure of the body’s interior by anatomists such as Andreas Vesalius; from the spectacularization of the body in Enlightenment science to the rubberized cadavers of Gunther von Hagen’s Body Worlds project — these and other topics will bring into focus the complex intersections between the history of medicine and the history of art.

Area: Humanities

**AS.010.228. Prophets, Kings, and Demons: The Art of Islamic Book Painting.** 3 Credits.

Despite the widespread misconception that Islam forbids images of humans and animals, figural representation played a rich and varied role in the historical arts of the Muslim world, particularly in the form of book painting. This course explores the production and consumption of illustrated Islamic manuscripts and albums, situating the paintings in their wider artistic and social contexts. Extending in scope from the Near East to India and from the medieval to the early modern period, the course takes a thematic approach that will introduce some of the key genres of the tradition — including chronicles, fables, and religious works — and investigate broader questions of style, meaning, viewership, text-image relationships, and cross-cultural borrowing. Students will have the opportunity to look at examples of this art firsthand in local collections.

Area: Humanities
AS.010.232. Art and Architecture of the Global Medieval Mediterranean World. 3 Credits.
This course serves as an introduction to the art and architecture of the Mediterranean region between the early Christian period and the Second Crusade (c. 250-1150). We will analyze the interactions between Western European, Byzantine, and Islamic cultures through the development of religious art and architecture, asking specifically how these interactions were mediated by culturally distinct representational practices. The course will cover the broad Mediterranean region by focusing on specific sites of interaction around the Sea (i.e. Islamic Spain, Norman Sicily, Byzantine North Africa, Venice and the Adriatic Coast, and Crusader Palestine). Select topics will include: the rise of religious image theory and its effect on the visual cultures of the Mediterranean region; the trans-regional movement of artists, crafted objects, and artistic technologies; the history of urbanism and the production of artistic objects in port cities and centers of trade; and the concept of the Mediterranean as “Premodern Globalism.” Readings will include both primary and secondary sources, and we will investigate a variety of methods and approaches to the interpretation of art objects.
Area: Humanities

AS.010.233. Asian Art Since 1945. 3 Credits.
This course examines the art and architecture of East, South, and Southeast Asia produced since the mid-twentieth century. We will engage with theoretical, visual, and political developments in the recent art of this region, reading statements by artists and architects, discussing the rising commercial and international profile of contemporary Asian art, and exploring established and emerging art histories of this period.Cross-list with East Asian Studies
Area: Humanities

AS.010.235. Art, Medicine, and the Body: Middle Ages to Modernity. 3 Credits.
This course explores seven centuries of fruitful collaboration between physicians and artists, uncovering the shared discourses, diagnostic techniques and therapeutic agendas that united the art of picture-making with the art of healing. Topics include the origin and development of medical illustration; the long, cross-cultural history of the therapeutic artefact; the anatomical investigations of Renaissance artists such as Leonardo and Michelangelo; depictions of bodily pain and disease in the art of Matthias Grünewald and psychosomatic syndromes like melancholy in the work of Albrecht Dürer; the spectacularization of the body in Enlightenment science and the ethics of medical specimen display today -- all in order to bring the complex intersections of the history of medicine and the history of art into view.
Area: Humanities

AS.010.236. Palaces, Temples and Tombs in Mesopotamia. 3 Credits.
Mesopotamia, the “land between the rivers,” is considered the cradle of civilization. Its earliest urban centers appeared by 3500 BCE in the region of modern-day Iraq, Iran, and Syria. Along with urbanism came the emergence of temples and palaces as large-scale elite institutions (along with written records). Their arts manifest some of the earliest complex representations and follow a vibrant course for several millennia. The first empires marshaled large armies and amassed fabulous riches. Complex religious and ritual ideologies were expressed in the art and architecture. And all has been revealed by the archaeologist’s spade. This class explores the art and architecture of Mesopotamia (ancient Sumer, Babylonia and Assyria) from 3500 to 330 BCE. Emphasis is placed on the relationship between the arts and ancient society in order to enable students to acquire the skills for accessing and appreciating ancient civilizations.
Area: Humanities

AS.010.237. Freshman Seminar: Art and Medicine in the ancient Mediterranean (600-100 BCE). 3 Credits.
The visual arts played an important role in the foundations of medicine often traced to the ancient Mediterranean. Drawing on a range of objects from representational art to surgical tools and magic spells, this seminar will explore the ways in which the visual arts crafted a different narrative of ancient medicine from that of the texts of the Hippocratic canon. Of particular focus will be the relationship between the doctor Hippocrates and the healing god Asclepius, the representation and subsequent excision of the goddess Hygeia, anatomical votives dedicated in sanctuaries, depictions of medical practices, surgical tools, as well as curse and healing spells. Participation will include visits to local museums and collections.
Area: Humanities

AS.010.251. Medieval Spaces: Site, Image, and Viewer in the Middle Ages. 3 Credits.
This course serves as an introduction to medieval art by analyzing the formal relationships between architecture and images at important cultural sites between the third century and the fourteenth century. The course will focus primarily on how those relationships structured viewers’ experiences of the divine and other ideological forces by understanding how works of art functioned for specific audiences in a particular spatial context. Along the way we will encounter a wide array of geographical sites and histories, including early Christian examples in Rome and Byzantium (e.g. the Roman catacombs and Hagia Sophia); monastic settlements in France and Germany during the eighth and ninth centuries (e.g. St. Gall); the interaction of Islamic and Christian visual culture in Spain and North Africa; twelfth century architectural sculpture along the pilgrimage routes; French, German, and Italian Romanesque and Gothic churches; and monumental painting cycles in Italy (e.g. the Arena Chapel in Padua).
Area: Humanities

AS.010.260. By the Book: Illuminated Manuscripts in the Middle Ages. 3 Credits.
This course aims to introduce students to Western medieval book painting from the birth of the codex to the advent of the printed book, between 400 and 1500 C.E. Each week we will study a theme of particular importance for the period. Besides learning about questions central to medieval art and history (artistic practices, patronage, gender, race, and representation of power), we will pay particular attention to the issue of how these manuscripts were read, perceived, and used. To this end, the course will have an interdisciplinary approach to codices. Beside art history, we will mobilize the tools of history, history of religion, manuscript and book studies, anthropology, and psychology. Taking advantage of the rich collections of Johns Hopkins and Baltimore, we will study original manuscripts, facsimiles, and incunabula every week.
Area: Humanities

AS.010.301. Michelangelo: Religion, Sexuality, and the Crisis of Renaissance Art. 3 Credits.
The course will focus on the controversies surrounding the representation of the body in the writings and figurative art of Michelangelo and his contemporaries, the historical circumstances under which the most admired artist in Europe was attacked as a blasphemer and an idolator, and the effect of widespread calls for censorship on his later production. The writings of Michelangelo, Pietro Aretino, Benvenuto Cellini and own writings will be considered with a focus on their staging of an ambivalent and transgressive eroticism.
Area: Humanities
AS.010.307. Diplomats, Dealers, and Diggers: The Birth of Archaeology and the Rise of Collecting from the 19th c. to Today. 3 Credits.
The development of archaeology in the Middle East – its history of explorers, diplomats, missionaries and gentlemen-scholars – profoundly shaped the modern world, from the creation of new museums and the antiquities market to international relations and terrorism.
Area: Humanities

AS.010.309. The Idea of Athens. 3 Credits.
This course will explore the art, architecture, material culture, and textual evidence from the ancient city of Athens, the many cultures and social positions that made up the ancient city, and the idea of the city as something far beyond its reality.
Area: Humanities

AS.010.310. The 'Long Sixties' in Europe. 3 Credits.
This seminar examines aspects of advanced artistic production that emerged in France, Italy, the Benelux, and German-speaking countries primarily in the years 1945-1972 as constituent elements of the “Long Sixties,” a period of extraordinary and often rapid social transformation. Among our questions: How was the work of art reimagined and repositioned in the wake of World War II and the horrors of the Holocaust, in the context of reconstruction and an emerging consumer society, and in light of the Cold War, decolonization, and other political tensions and cataclysms? How did artists conceive the claims of artistic tradition in a rapidly expanding field of aesthetic practices and possibilities? What were the relations among advanced artistic practices and the “cultural revolutions” generally taken to have come to a head ca. 1968? Integral to this course is a student-curated exhibition of avant-garde materials at the MSE Library, to open in November 2018.
Area: Humanities

AS.010.315. Art of the Assyrian Empire, 1000-600 BCE. 3 Credits.
From 900 to 609 BCE, the Assyrian Empire dominated the ancient Near Eastern world, stretching from western Iran to the Mediterranean and Egypt. In concert with imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This course provides an integrated picture of the imperial arts of this first millennium BCE. In its conquest of foreign lands, this powerful state came in contact with and appropriated a diversity of cultures, such as Phoenicia, Egypt, and Greece, which we will also study.
Area: Humanities

AS.010.316. Venice: Art, Architecture and Ecology from the Late Middle Ages to the Present. 3 Credits.
This course is an investigation into the fashioning of Venetian identity in architecture and the visual arts, with a particular address to the encounter with Byzantine and Islamic traditions and exchanges with other centers of the Italian peninsula.
Area: Humanities

AS.010.319. Medieval Art and Architecture of the Holy Land. 3 Credits.
The course focuses on art and architecture in the political and religious contexts of the Middle East, from the 4th to the 14th c. The three monotheistic religions all claimed specific territories – in particular the city of Jerusalem – for cult practices. This situation resulted in military conflicts that had an impact of Jewish, Medieval, Byzantine, and Islamic art in the Holy Land. The political conflicts, which still plague the region today, are rooted in the complex situation of the medieval period. The Roman, Arab, Byzantine, and crusader invasions resulted however in exciting eclectic styles that characterize the art and architecture of the region. We will discuss concepts behind political and religious leadership, as they intersect with the power of the arts.
Area: Humanities
Writing Intensive

AS.010.320. Art of Colonial Peru. 3 Credits.
Viewed within the dynamic historical context of colonial society, we consider the pictorial, sculptural, and architectural programs that ensued in viceregal Peru (1532-1825). We examine the role of religious orders; art schools, artisan guilds and cofradía, and consider the social and political implications of art patronage.
Area: Humanities

AS.010.325. Arts of the Spanish Empire. 3 Credits.
From the sixteenth through the eighteenth centuries, visual forms and practices linked such far-flung places as Mexico City and Naples, Manila and Lima, Cuzco and Antwerp, Quito and Madrid: all cities in the Spanish Empire. This course is conceived as a voyage, moving city by city to explore objects that connected Spain’s vast holdings. We will investigate how the Spanish Crown and the Catholic Church used visual strategies to consolidate political power and instill religious faith across the world; and, alternatively, we will consider how local conditions, concerns, and resistance reshaped those efforts. This course surveys a diverse range of artistic production: religious paintings and sculptures; maps used for imperial surveillance; luxury goods crafted from shimmering feathers, ceramics, ivory, and precious metals; urban design and architecture from the ports of Europe to the highland outposts of the Andes; ephemeral cityscapes for civic performances. In examining such materials, students will be introduced to the art historical methods and theoretical concerns used to study a wide diversity of objects within an imperial frame.
Area: Humanities

AS.010.327. Asia America: Art and Architecture. 3 Credits.
This course examines a set of case studies spanning the last century that will enable us to explore the shifting landscape of Asian transnational art and architecture. Each week will focus on a different artist, group, exhibition, architect, urban space, or site to unpack artists’ and architects’ engagements with the changing landscape of immigration policies, movements to build solidarity with other artists of color, and campaigns for gender and sexual equality. The course will situate these artists within American art, and build an expansive idea of Asia America to include the discussion of artists whose work directly addresses the fluidity of location and the transnational studio practice.
Area: Humanities
Writing Intensive
AS.010.321. The Renaissance Body Exposed: Exhibiting the Nude in European Art 1400-1550. 3 Credits.
Exploring the extraordinary currency of the naked human figure in pre-modern European visual culture, only inadequately accounted for by explanations such as the "rise of naturalism" or the "revival of antiquity." Will also explore curatorial questions arising from an exhibition currently in preparation on the Renaissance nude. Assignment in the form of catalog texts and a "virtual exhibition."
Area: Humanities
Writing Intensive

AS.010.322. Jade, Turquoise, Feathers, and Gold: Valued Materials in Aztec Art. 3 Credits.
This seminar (which meets twice weekly) introduces students to the art of the Aztec Empire (1428-1521 CE) through the lens of the production of art from valued materials. The issue of value—how it is constructed, conceptualized, and deployed—provides key insights into the political, religious, economic, and conceptual life of a society. Throughout this course, we will examine these questions by focusing on the major themes of art's social functions, materiality and artistic process, historicity, and cross-cultural exchange. Special emphasis will be placed on in-person examination of objects in local museum collections and the study of writings by indigenous authors.
Area: Humanities

AS.010.323. The Re-Making of Rome: from Michelangelo to Mussolini. 3 Credits.
The transformation of Rome from a medieval backwater into a world center with multiple, overlapping identities: the ruinous symbol of ephemeral glory, the spiritual destination of pilgrims and tourists, the seat of a priest/monarch claiming universal dominion, and, above all, the "theater of the world" where a cultural and ethnic heterogeneity unparalleled in any other European urban center was permanently on display.
Area: Humanities

AS.010.330. Art of the Caliphates: Visual Culture and Competition in the Medieval Islamic World. 3 Credits.
Despite its modern-day association with a fringe extremist movement, the term "caliphate" was traditionally used to describe the Muslim world at large, the political and spiritual ruler of which bore the title of caliph. The original Islamic caliphate was established in the seventh century as a vast empire centered on the Middle East and extending deep into Africa, Asia, and Europe. It soon broke apart into a series of competing powers, until in the tenth century, three rival dynasties—the Baghdad-based Abbasids, the Spanish Umayyads, and the Fatimids of North Africa—each claimed to be the rightful caliphate. This course will examine how these fascinating political developments and conflicts played out in the realm of art and architecture between the seventh and thirteenth centuries. As well as palaces, mosques, and commemorative buildings, the course will look at media ranging from ceramics and metalwork to textiles and illustrated manuscripts, with many of the artifacts being viewed firsthand in local museum collections. These works will be considered in relation to such themes as patronage, audience, ceremony, and meaning. Particular attention will be paid to how the various caliphates—both in emulation of and competition with one another—used visual culture as a powerful tool to assert their legitimacy.
Area: Humanities

AS.010.329. Building an Empire: Architecture of the Ottoman Capitals, c. 1300–1600. 3 Credits.
Centered on modern-day Turkey and encompassing vast territories in Asia, Africa, and Europe, the Ottoman Empire (1299 – 1923) was the longest lived and among the most powerful Islamic states in history, with an artistic tradition to match. This course explores the functional and symbolic role that architecture played during the empire’s formative centuries, when three successive capital — Bursa, Edirne, and Istanbul — served to visualize the sultans’ growing claims to universal authority. With reference to mosques, palaces, tombs, and other categories of architecture, the course will examine the buildings in their artistic, social, and political contexts. Themes to be addressed include patronage and audience, architectural practice and the building trade, ceremonial and ritual, topography and urban planning, and the relationship of Ottoman architecture to other traditions.
Area: Humanities

AS.010.331. Global Amsterdam: The Golden Age of a Small but Mighty Metropolis. 3 Credits.
This course examines the visual and material culture of the Dutch Golden Age as the product of global forces. The young Dutch Republic quickly achieved a global reach in the seventeenth century. And Amsterdam served as its commercial capital, which by 1630 could be counted as one of the most important port cities in the world and home to the Dutch East India Company (VOC), the world’s first multinational corporation. Moving an incredible quantity of goods (spices, silks, porcelain, coffee, precious stones, "exotic" arts, and slaves) generated not only the economic riches, but also the cultural touchpoints that would give rise to art produced by the likes of Rembrandt, Vermeer, Hals, and the many exceptional craftsmen that have left us some of the most enduring masterpieces of the seventeenth century. This course situates that art, and the city of Amsterdam itself, within networks that connected it to such far flung places as Japan, Jakarta, Surinam, Curacao, Brazil, and the Indian Subcontinent.
Area: Humanities

AS.010.332. The Re-Making of Rome: from Michelangelo to Mussolini. 3 Credits.
The transformation of Rome from a medieval backwater into a world center with multiple, overlapping identities: the ruinous symbol of ephemeral glory, the spiritual destination of pilgrims and tourists, the seat of a priest/monarch claiming universal dominion, and, above all, the "theater of the world" where a cultural and ethnic heterogeneity unparalleled in any other European urban center was permanently on display.
Area: Humanities

AS.010.332. Jade, Turquoise, Feathers, and Gold: Valued Materials in Aztec Art. 3 Credits.
This seminar (which meets twice weekly) introduces students to the art of the Aztec Empire (1428-1521 CE) through the lens of the production of art from valued materials. The issue of value—how it is constructed, conceptualized, and deployed—provides key insights into the political, religious, economic, and conceptual life of a society. AS.010.334. Global Amsterdam: The Golden Age of a Small but Mighty Metropolis. 3 Credits.
This course examines the visual and material culture of the Dutch Golden Age as the product of global forces. The young Dutch Republic quickly achieved a global reach in the seventeenth century. And Amsterdam served as its commercial capital, which by 1630 could be counted as one of the most important port cities in the world and home to the Dutch East India Company (VOC), the world’s first multinational corporation. Moving an incredible quantity of goods (spices, silks, porcelain, coffee, precious stones, “exotic” arts, and slaves) generated not only the economic riches, but also the cultural touchpoints that would give rise to art produced by the likes of Rembrandt, Vermeer, Hals, and the many exceptional craftsmen that have left us some of the most enduring masterpieces of the seventeenth century. This course situates that art, and the city of Amsterdam itself, within networks that connected it to such far flung places as Japan, Jakarta, Suriname, Curacao, Brazil, and the Indian Subcontinent.
Area: Humanities
AS.010.338. Art and the Harem: Women’s Spaces, Patronage, and (Self-)Representation in Islamic Empires. 3 Credits.
Long characterized in the Western imagination as exotic realms of fantasy, harems in Islamic tradition served as private domestic quarters for the women of elite households. This course explores the harem—as an institution, a physical space, and a community of women—from various art-historical perspectives, considering such topics as the harem’s architecture, the agency of its inhabitants as patrons and collectors, the mediating role of eunuchs in the harem’s visual and material culture, and the ability of harem women to make their mark through public artistic commissions. Our case studies will address a range of Islamic geographical and chronological contexts, though we will focus on the empires of the early modern period and, above all, the famous harem of the Ottoman sultans at the Topkapi Palace in Istanbul. In challenging popular misconceptions, the course will also look at the wealth of exoticizing imagery that the harem inspired in Western art, which we will consider through Orientalist paintings at the Walters Art Museum and illustrated rare books at Hopkins itself.
Area: Humanities

AS.010.340. Renaissance Art in the Netherlands: Broederlam to Bosch. 3 Credits.
Explores the major painters working in the Low Countries during the fifteenth century: Melchior Broederlam, the Master of Flémalle, Jan van Eyck, Rogier van der Weyden; Hans Memling, Hugo van der Goes, Hieronymus Bosch, and others.
Area: Humanities

AS.010.360. Medieval Art in Europe: Methodology, Historiography, Theory. 3 Credits.
The course explores the conceptual character of medieval European art from Late Antiquity to the end of the Middle Ages with an emphasis on methodological, historiographical, and theoretical issues. Using selected monuments and objects from a wide geographical range and dating from the 4th to the 14th centuries as case studies, students will also familiarize with the methodological developments of art historical research. The course will focus in particular on the ‘anthropological turn’ of medieval art history and medieval image theory.
Area: Humanities

AS.010.364. Babylon: Myth and Reality. 3 Credits.
Babylon—the name resonates even today, from the biblical whore of Revelation to sci-fi. It evokes exotic places and time long past. But what do we really know about the ancient city and the civilization that flourished there thousands of years ago? The first part of this course examines the archaeological city of Babylon, located in the modern state of Iraq, and considers its artistic and architectural achievements in the context of Mesopotamian history. The second part of the class explores the ongoing impact of Babylon in the cultural imagination of later periods, from the Classical and biblical authors, to European artists, Hollywood movies, science fiction, and contemporary political movements.
Area: Humanities

AS.010.365. Art of the Ancient Andes. 3 Credits.
The ancient visual arts of Andean South America and their respective cultural contexts form the basis of this course. In conjunction with the Baltimore Museum of Art and the Johns Hopkins Archaeological Museum students will have access to collections for study.
Area: Humanities

AS.010.366. Native American Art. 3 Credits.
The works of Native American artists are examined and discussed in their respective social and historical contexts. Such works include Hopewell stone sculpture, Mimbres pictorial painting, and Tlingit guardian figures. We examine the concept of sacred landscape through analysis of monumental earthworks and effigy mounds, Anasazi architecture, and rock art. In conjunction with the Baltimore Museum of Art (BMA), and Johns Hopkins Special Collections, students will have access to collections for study.
Area: Humanities

AS.010.367. Photography, the Archive, and Memory. 3 Credits.
This seminar will culminate in an exhibition in the library, focused on the photographic works of Dayanita Singh (b. India, 1961) in Hopkins’ collections. Singh’s work delves deeply into her subjects, exploring issues of identity, the body, and sexuality as well as questions related to memory and the archive. She has long presented her photography in the form of the book, and as such we will pursue readings in photography, book arts, and the archive, and bring nineteenth-century illustrated books in our collection into dialogue with Singh’s work. This will be a hands-on seminar: students will develop the framework for the exhibition, write the textual materials (labels, wall text), and decide on the arrangements of objects in the show.

AS.010.371. Materials and Methods in Contemporary Art. 3 Credits.
How and from what do artists make art today? This course will consider some of the staggering array of methods and materials that characterize the contemporary art scene. Among our topics: industrial fabrication, digitalization, ephemerality and technological obsolescence, the revitalization of craft, the increasing visibility of indigenous techniques, and questions of environmental impact and sustainability.

AS.010.382. The Politics of Display in South Asia. 3 Credits.
Through an examination of colonial exhibitions, the rise of national, regional, and archaeological museums, and current practices of display and representation in institutions, we will explore how the image of South Asia has been constructed in the colonial, modern, and contemporary eras. We will engage with the politics of representation, spectacle, and the economies of desire as related to colonialism and the rise of modernity. Readings from postcolonial theory, museum studies, anthropology, history, and art history.
Area: Humanities

AS.010.389. The Stone and the Thread. 3 Credits.
Advanced inquiry into imperial Inka architecture and fiber arts.
Area: Humanities

AS.010.390. Ancient Americas Object Workshop. 3 Credits.
Analysis of ancient Americas collection held in the Johns Hopkins Archaeological Museum.
Prerequisite(s): AS.010.105 OR AS.010.407 OR AS.010.398 OR AS.010.365 OR AS.010.389 OR AS.010.366 OR AS.010.214 or in consultation with professor prior to registration.
Area: Humanities

AS.010.398. Tombs for the Living. 3 Credits.
Centering on the tomb as the unit of analysis, this course examines the cultural and material aspects of death and funerary ritual. Case studies are drawn from North America, Mesoamerica, and the Andes. Collections study in museums.
Area: Humanities
AS.010.405. The Medieval Image and Concepts of Authenticity. 3 Credits.
The course examines the notion of the authentic in conjunction with medieval images, relic veneration, and the practice of law. It investigates the construction, reception, and theoretical grounding of authenticity of reliquaries, icons, and imprints on cloth or seals, and legal documents. These objects elucidate artistic strategies such as cross media references, abstraction, mimesis and bricolage to convey an aura of authenticity. We address other authenticating factors, such as complex ritualized forms of communication. This is a new course for the undergraduate section, existing course is AS.010.644. Will be taught as a hybrid this Fall 2020.
Writing Intensive

AS.010.407. Ancient Americas Metallurgy. 3 Credits.
This course addresses the technology, aesthetics, and social significance of metals. Case studies are drawn from North America, Mesoamerica, and the Andes. Collections study in museums.
Area: Humanities

AS.010.409. Theories and Works of “The Baroque”. 3 Credits.
There is perhaps no more confounding, though also no more persistent, art historical concept than that of “the Baroque.” This course introduces students to foundational histories and critiques of “the Baroque” while exploring works of art that have proved central to these formulations. That is, this course will balance careful reading of historiography with close examination of works of art (both digitally presented and visited in local collections). Students will come away with a layered understanding of the Baroque objects—from relatively small-scale museum works to major architectural and sculptural monuments—and their place within the broader evolution of the history of art. Particular attention will be given to newer global and (post-)colonial approaches to notions of the Baroque, ultra-Baroque, and neo-Baroque.
Area: Humanities
Writing Intensive

AS.010.410. The Epistemology of Photography. 3 Credits.
This seminar will ask how photography produces ways of knowing: how does photography’s reality-effect shape its dissemination and absorption? Is photography’s emergence during the colonial era coincidental or catalytic? How is memory (re)constituted in a photography-saturated world? What kinds of histories does photography encourage and discourage? Is a photograph an object? We will read across disciplines (literature, anthropology, history, history of art, political science, theory) to investigate the epistemology of photography and the photograph.
Area: Humanities
Writing Intensive

AS.010.413. Historical and Conceptual Bases of Art History. 3 Credits.
Critical readings in and of relevance to the intellectual foundations of the modern discipline of art history. Texts by Wölfflin, Riegl, Warburg, Panofsky, Baxandall, Clark, Krauss, Fried, and others.
Area: Humanities
Writing Intensive

AS.010.415. Interrogating the Material Turn. 3 Credits.
This course considers the turn to centering materials and materiality in the history of art. Since the publication of Michael Baxandall’s Painting and Experience in Fifteenth Century Italy (1972) and in particular since the turn of the millennium, critical engagement with the materiality of art has proliferated. This seminar will tackle renewed investment in materiality within the discipline of art history and draw on perspectives from archaeology, philosophy, anthropology, conservation science, feminist and queer theory, and postcolonial studies, among others. Particular emphasis will be placed on the polycentrism of materiality as a theoretical lens that cuts across seemingly disjunct cultural, social, and political frames and subject positions. While this course focuses on the art of the ancient Mediterranean, students will be encouraged to bring their own subfields to bear on the material turn and to pursue research topics related their individual research goals. Open to interested students from all disciplines.
Area: Humanities
Writing Intensive

AS.010.416. Medieval Art and Architecture in Southern Italy. 3 Credits.
This seminar discusses the exceptionally high standard and wide range of artistic and architectural creativity in medieval southern Italy. The specific historical situation of Italy’s southern regions and islands—which were exposed to a long sequence of military invasions, subjected to foreign rulers and centrally positioned within the Mediterranean—resulted in a fascinating, often interconnected, artistic and architectural landscape. We will address in particular the multiethnic and multi-religious environment of the region, the specific mobility of artists and patrons, questions of materiality of art works, and the intersection of art and science in the centers of learning (schools, monasteries, and courts). Those issues will be investigated by raising also larger theoretical and historiographic questions.
Area: Humanities
Writing Intensive

AS.010.418. The Icon in East and West. 3 Credits.
The chronologically structured seminar discusses the conception and reception of holy images in the Middle Ages from Late Antiquity until the beginning of the Renaissance. We will investigate their creation during the rise of Christianity and their affinities with Graeco-Roman portraits and cult images. Another focus is dedicated to the theological and political context of icons during the waves of early medieval iconoclasm, in particular in Byzantium. We will address icons made in the Holy Land during the crusades, which are often characterized by merging Frankish and Byzantine styles and motifs with Islamic art. We will discuss the emergence of new icons in Italy, and their pan-European distribution after 1100. Here we will focus on the influence of the papal court and the economic impact of icons in the later Middle Ages in the Italian commune.
Area: Humanities
Writing Intensive

AS.010.419. Passion Image, Passion Cult, Passion Drama: Narrative and Metaphor in the Middle Ages, Renaissance, and Beyond. 3 Credits.
A set of interdisciplinary explorations of the Passion of Christ narrative in Scripture, theology, visionary literature, cultic devotion, the visual and dramatic arts in Europe from the Central Middle Ages to the Reformation, with a special fast-forward to modern cinematic retellings of the Passion story.
Area: Humanities
Writing Intensive
AS.010.421. Creating Sacred Space in the Ancient and Medieval World. 3 Credits.
What makes a space sacred? How is it different from other spaces? This seminar explores the various means - visual, artifactual, architectural, and performative - of creating sacred space in the ancient and medieval worlds of the Near East and Mediterranean. Possible cases for study include early Sumerian temples, state-sponsored Assyrian temples, votive deposits, Greek sanctuaries, sanctuaries and landscape, early medieval Jewish, Christian, and Islamic cult buildings, cave sanctuaries, pilgrim sites, icons and sacred space.
Area: Humanities
Writing Intensive

AS.010.422. Challenge to Painting: Collage, Montage, Assemblage. 3 Credits.
The invention of Cubist collage is generally regarded as a watershed in twentieth-century art. This seminar will examine key junctures in the rapid proliferation and redefinition of collage strategies primarily in Europe and the United States, including but not limited to Futurist ‘words in liberty’, Dada and Constructivist photomontage; the Surrealist exploration of desire; Situationist ‘détournement’, and selected varieties of postwar assemblage. Frequent meetings in Special Collections.
Area: Humanities
Writing Intensive

AS.010.423. Modern and Contemporary Art in South Asia. 3 Credits.
How does modernism operate in the colonial context, work with and against the nationalisms of new countries (India, Pakistan, Sri Lanka, Nepal, and Bangladesh), challenge existing norms of the art world and the art market, engage with the difficult and violent upheavals of Partition and sectarian conflict, and allow for experiments and new forms all the while? This course will explore the history of the art of the subcontinent from c. 1880 to the present by critical engagement with the art, artists, and theories at play in the South Asian region.
Area: Humanities
Writing Intensive

AS.010.424. Art and Colonialism: Nineteenth-century India. 3 Credits.
This seminar explores the technologies of colonial power, from small ephemeral watercolor images of religious processions to massive multi-volume photographic projects documenting the “people of India,” and extending to the establishment of new urban and architectural spaces, archaeological museums, and art schools, the circulation of diplomatic art collections, and the commissioning of survey data. We will engage with the anti-colonial movements of resistance and uprising that took place across this century, examining the central participation of modern artists with these political movements, and explore the way this period fundamentally shaped the foundations for the study of South Asian art and archaeology. Readings will include colonial and postcolonial theory, Orientalism, historiography; we will be actively working with materials in the library’s Special Collections.
Area: Humanities
Writing Intensive

AS.010.425. Patronage and Power: The Art of the Book in the Middle Ages. 3 Credits.
This research seminar surveys the rich history of manuscript painting in the Middle Ages through the lens of patronage. By focusing on elite patrons - i.e. Popes, Clerics, Holy Roman Emperors, Princes, Princesses, and other ruling figures - we will investigate how changes in style from the early Christian period through the fifteenth century reveal the fluid nature of politics and power during this volatile time period. We will visit local collections of manuscripts (e.g. the Walters Art Museum) and make use of the extensive holdings of medieval facsimiles in Special Collections.
Area: Humanities

AS.010.431. Obsessed with the Past: the Art and Architecture of Medieval Rome. 3 Credits.
In antiquity, Rome became the capital of an empire, its growing status reflected in its sophisticated urban planning, its architecture, and the arts. While an abundance of studies explores the revival of this glorious past in the Renaissance, this seminar discusses various ways of the reception of antiquity during the medieval period. We address the practice of using ‘spolia’ in medieval architecture, the appropriation of ancient pagan buildings for the performance of Christian cult practices, the continuation of making (cult)images and their veneration, the meaning and specific visuality of Latin script (paleography and epigraphy) in later medieval art. We discuss the revival and systematic study of ancient knowledge (f. ex. medicine, astronomy, and the liberal arts), in complex allegorical murals. As we aim to reconstruct the art and architecture of medieval Rome, this course discusses ideas and concepts behind different forms of rebuilding and picturing the past, as they intersect with the self-referential character of a city that is obsessed with its own history.
Area: Humanities
Writing Intensive

AS.010.433. Hands-On Approaches to European Books and Prints before 1800. 3 Credits.
Baltimore’s rich museum and library collections create a dynamic laboratory for students to gain an understanding of early modern European traditions of prints and books. Engraving, etching, woodcut, mezzotint, à la poupée; Rembrandt, Dürer; Aldus Manutius, Plantin-Moretus. This course will introduce students to the basic techniques, concepts, termini, and artists that shaped the production of reproductive works on paper in early modern Europe and their subsequent art historical study. All sessions will be taught out of local collections (BMA, Walters, NGA, Hopkins Special Collections); that is, this is a hands-on class that—while requiring no previous experience—will attend to the nitty-gritty details and methods of studying works in person, giving students the tools, expertise, and confidence to pursue their own research with historical printed materials.
Area: Humanities
Writing Intensive

AS.010.434. Italian Art, Politics, and Religion in the time of Dante, c. 1250-1400. 3 Credits.
This seminar will investigates the interrelationship between art, politics, and religion on the Italian peninsula during the later Middle Ages. We will focus on the major cities as patrons of the arts (visual and poetic), e.g. Florence, Siena, Padua, Milan, Naples, Venice, and Rome, in order to understand how the elite used art to further their political and religious agendas. Select topics include: the rise of the Mendicant orders; the importance of Dante’s Divine Comedy on manuscript production; artistic competition among communes; the rise of the individual artist; humanism and the arts.
Area: Humanities
AS.010.440. Power Dressing: The Politics of Costume between the Ottoman Empire and the West. 3 Credits.
In the Ottoman Empire—a vast multiethnic state straddling Africa, Asia, and Europe—a dress was a deeply political affair. Ottoman rulers and subjects alike used clothing to express (and sometimes transgress) the hierarchical, religious, and communal distinctions defining their society, much to the fascination of foreigners who visited the empire or sought knowledge of its sartorial traditions in texts and images. This seminar will explore Ottoman dress and dress codes in the context of the empire’s long and complicated relationship with Western powers, focusing on the role that costume played as a charged site of cross-cultural interaction, posturing, and self-assertion from the sixteenth to the nineteenth century. Our case studies will include costume albums—books showing people high and low in their characteristic garb—painted by Ottoman artists for Western buyers; diplomatic robes of honor and their attendant ceremonies; and cultural cross-dressing as manifested in European turquerie portraiture and masquerades. Moving into the modern period, we will consider how nineteenth-century dress reforms bridged the gap between Ottoman and Western costume while engendering new modes of Ottoman sartorial self-representation that challenged hardening Orientalist discourses in such venues as mannequin museums and world’s fairs. The seminar will make considerable use of artworks in local collections, including rare books and prints at Hopkins itself.
Area: Humanities
Writing Intensive

AS.010.444. Classics Research Lab: Antioch Recovery Project (ARP). 3 Credits.
Antioch Recovery Project investigates mosaics from the ancient city of Antioch (modern Antakya, Turkey, near the border with Syria) now in the collection of the Baltimore Museum of Art. Excavated by an international team of archaeologists in the 1930s, hundreds of ancient mosaics from the cosmopolitan city were subsequently dispersed to museums across the globe, with twenty-four mosaics entering the collection of the BMA. Phase I will focus on the digital documentation and analysis of the mosaic of Narcissus as a prototype for ongoing research bringing together the fragments of ancient Antioch for contemporary beholders. The Greek myth of Narcissus tells the story of a beautiful Theban hunter doomed to love his own reflection and is the origin of the modern psychiatric term “narcissism”. Researching the mythology, materials, conservation history, archival material, historiography, and contemporary reception of the Narcissus mosaic and myth offers extensive opportunities to collaborate with scholars across a range of disciplines at JHU, in the Baltimore museum community, and beyond. Investigators will move between the Baltimore Museum of Art, the CRL processing lab in Gilman Hall, and Special Collections. The course will involve some travel to visit other mosaics from Antioch now in collections at Harvard’s Dumbarton Oaks in Washington D.C., and the Princeton Art Museum in Princeton, New Jersey.
Area: Humanities

AS.010.470. Power and Politics in Assyrian Art. 3 Credits.
Assyria, centered in northern Iraq, created one of the world’s first great empires that dominated the ancient Near Eastern world from around 900 to 612 BCE. In concert with imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This seminar examines the close relationship between the arts and politics in the Assyrian empire. Some themes that will be explored are: historical narrative, text and image, portable luxury arts and gender, politics and religion. The course will engage in close visual analysis of the ancient materials and readings of critical scholarship.
Area: Humanities
Writing Intensive

AS.010.501. Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.010.502. Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.010.503. Reading Course in History of Art. 2 Credits.
Open to students by arrangement with a faculty advisor in the History of Art Department. Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.010.504. Internship - Spring. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms. Writing Intensive

AS.010.603. Beyond Word & Image.
The relationship of “word” and “image” has been a central concern of both the history of art and other humanistic disciplines; and semiotics, (post-)structuralism, narrative studies, media studies, and theories of ekphrasis and representation have been marshalled to probe how visual and verbal systems work in conjunction, overlap, and conflict. Much less art historical attention has been paid to the visuality of writing itself. Against the backdrop of robust work on the relationship between text and image, this course focuses on text as image: the visuality of text, the imagistic dimensions of writing, Schriftbildlichkeit. The seminar takes as guiding premise that art historical method might be robustly brought to bear on the visual and material features of texts, both those that appear as part of traditional art historical media (paintings, sculptures, and architectural monuments) and those that have primarily remained within the purview of other humanistic subfields: books, archival documents, writers’ manuscripts, epistolary communication, and inscriptions (both analog and digital). In this course, we will survey a broad range of textual objects, from ancient inscriptions to moveable type to digital texts to “writing” in twenty-first century artists’ books; and we will work together towards assembling an art historical toolkit for excavating the full valences of texts, accounting for the ways they make meaning in linguistic, semiotic, formal, material, visual, and media-specific registers. Though art historical in focus, this course will be essentially interdisciplinary, and students from other subfields are warmly welcomed. There will be ample opportunity for discussing and studying objects in local collections.
Area: Humanities

AS.010.606. Approaches to Ancient Art.
The discipline of art history has passed through a number of major methodological and theoretical shifts since its inception (and in particular, over the last thirty years). Foundational disciplinary methods derive principally from the arts of Classical Greece, the Renaissance and contemporary periods. As the discipline embraces an enlarged field of inquiry, particularly drawing upon developments in anthropology, material culture studies, feminism, queer theory, and political theory, additional avenues for understanding the arts of the ancient world are emerging. The seminar focuses on how art historical method and theory — both foundational and emergent — might be profitably applied to the subfields of the ancient Near East and eastern Mediterranean (understood in the broadest sense).
Area: Humanities
Writing Intensive

AS.010.607. The Epistemology of Photography.
This seminar will ask how photography produces ways of knowing: how does photography’s reality-effect shape its dissemination and absorption? Is photography’s emergence during the colonial era coincidental or catalytic? How is memory (re)constituted in a photography-saturated world? What kinds of histories does photography encourage and discourage? Is a photograph an object? We will read across disciplines (literature, anthropology, history, history of art, political science, theory) to investigate the epistemology of photography and the photograph.

AS.010.608. The Picture as Object.
The seminar will explore cases of European pre-modern picture-making in various media that solicit tactile as well as sensory engagement, and that call into question the ‘Albertian’ metaphor of pictura as window. Case studies will include mosaics, reliefs, pastiglia, medals, portable paintings, et al."
Area: Humanities

AS.010.612. Medieval Art and Architecture in Southern Italy.
This seminar discusses the exceptionally high standard and wide range of artistic and architectural creativity in medieval southern Italy. The specific historical situation of Italy’s southern regions and islands—which were exposed to a long sequence of military invasions, subjected to foreign rulers and centrally positioned within the Mediterranean—resulted in a fascinating, often interconnected, artistic and architectural landscape. We will address in particular the multiethnic and multireligious environment of the region, the specific mobility of artists and patrons, questions of materiality of art works, and the intersection of art and science in the centers of learning (schools, monasteries, and courts). Those issues will be investigated by raising also larger theoretical and historiographic questions.
Area: Humanities

AS.010.613. Renaissance Italy: Questions of Artistic Geography.
The role of place in the art historiography of the Renaissance, with readings in geographical theory. The seminar will also consider the role in the art of Lorenzo Lotto, Gaudenzio Ferrari, Cesare da Sesto, Romanino, Moretto, Pordenone, Titian, and other artists active before the canon-formation enterprise of Giorgio Vasari definitively altered the map of Italian art after 1550.

AS.010.618. Historical and Conceptual Bases of Art History.
Critical readings in and of relevance to the intellectual foundations of the modern discipline of art history. Texts by Wölfflin, Riegl, Warburg, Panofsky, Baxandall, Alpers, Clark, Fried, and others. There will be two papers, no exams.
Area: Humanities
Writing Intensive

AS.010.619. Readings in Modern and Contemporary Asian Art.
Focusing on a range of art practices and movements in South, Southeast, and East Asia from the 20th and 21st centuries. Specific topics may include: performance art and the body, exhibitionary practices, nationalism and transnationalism, the role of the figural, modes of abstraction, art and the authoritarian state, Marxism and art practices, postcolonial politics and visual culture, artists’ travels to, from, and within Asia, spirituality and modernism, sexuality and gender. Undergraduates by special permission of the instructor.
Area: Humanities

AS.010.620. Re-thinking the Baroque: the Carracci to Poussin.
Area: Humanities

AS.010.621. Topics in Early 20th Century Abstraction.
Critical examination of key works, texts, and topics in early 20th century abstraction, with an emphasis primarily on developments in Europe and the US.
Area: Humanities
AS.010.623. The Icon in East and West.
The chronologically structured seminar discusses the conception and reception of holy images in the Middle Ages from Late Antiquity until the beginning of the Renaissance. We will investigate their creation during the rise of Christianity and their affinities with Graeco-Roman portraits and cult images. Another focus is dedicated to the theological and political context of icons during the waves of early medieval iconoclasm, in particular in Byzantium. We will address icons made in the Holy Land during the crusades, which are often characterized by merging Frankish and Byzantine styles and motifs with Islamic art. We will discuss the emergence of new icons in Italy, and their pan-European distribution after 1100. Here we will focus on the influence of the papal court and the economic impact of icons in the later Middle Ages in the Italian commune.

Writing Intensive

AS.010.624. Art and Colonialism: Nineteenth-century India.
This seminar explores the technologies of colonial power; from small ephemeral watercolor images of religious processions to massive multi-volume photographic projects documenting the "people of India," and extending to the establishment of new urban and architectural spaces, archaeological museums, and art schools, the circulation of diplomatic art collections, and the commissioning of survey data. We will engage with the anti-colonial movements of resistance and uprising that took place across this century, examining the central participation of modern artists with these political movements, and explore the way this period fundamentally shaped the foundations for the study of South Asian art and archaeology. Readings will include colonial and postcolonial theory, Orientalism, historiography; we will be actively working with materials in the library's special collections.

Area: Humanities
Writing Intensive

The arts of the Near East, Aegean and Egypt are typically taught separately from one another. However, the Mediterranean Sea has always served as a connector, and the diverse cultures of these areas were in close contact with one another for much of their histories. During the Bronze Age (3000 to 1200 BCE), these interactions were particularly dynamic, resulting in a diversity of arts including wall frescoes, precious jewelry, and elaborate furnishings and weaponry. This course examines the arts of the interactions among Near Easterners, Greeks, Egyptians and others. It focuses special attention on the role of artistic products in intercultural relations, including trade, diplomacy, war and imperialism. Students are not expected to have extensive knowledge of all the areas, although some experience in at least one of them will be helpful. The course will interweave establishing a knowledge base necessary to tackle this topic with broader conceptual concerns and interdisciplinary approaches (art historical, archaeological, anthropological, and historical). There will be a final paper.

Area: Humanities

AS.010.627. Patronage and Power: The Art of the Book in the Middle Ages.
This research seminar surveys the rich history of manuscript painting in the Middle Ages through the lens of patronage. By focusing on elite patrons – i.e. Popes, Clerics, Holy Roman Emperors, Princes, Princesses, and other ruling figures – we will investigate how changes in style from the early Christian period through the fifteenth century reveal the fluid nature of politics and power during this volatile time period. We will visit local collections of manuscripts (e.g. the Walters Art Museum) and make use of the extensive holdings of medieval facsimiles in Special Collections.

Area: Humanities

AS.010.629. Periodization and its Discontents.
This seminar scrutinizes the problem of periodization between the Middle Ages and the Early Modern period (or, the "Renaissance"). Topics include various medieval "Renaissances" (e.g. the Carolingian & 12th century); early modern attitudes toward the Middle Ages; the relationship between arts north and south of the alps during the late fifteenth century; the persistent use of medieval techniques and materials during the Renaissance; the problem of perspective; Nicholas of Cusa; and, the "International Gothic Style". Readings include Panofsky, Belting, Nagel & Wood, Nagel, Campbell, Gombrich, Da Costa Kaufmann, and Kubler.

Area: Humanities

AS.010.631. Performing Power: Ceremonial, Diplomacy, and Gift-Giving in and beyond the Ottoman Empire.
As a major global power straddling three continents, the Ottoman Empire developed a rich and diversified ceremonial culture aimed at impressing local and international audiences alike. This seminar will explore the ways in which works of art and architecture provided settings and apparatus for, and were themselves shaped and enlivened by, the ceremonial acts in which they featured. Covering the period between the sixteenth and nineteenth centuries, we will address a range of case studies—including mosque inaugurations, royal processions, the reception of foreign ambassadors, and the exchange of diplomatic gifts—with regard to their sociopolitical, visual, material, and spatial contexts. A major concern of the seminar will be the question of how Ottoman ceremonies, together with their staging and attendant art forms, were adapted in response to changing conditions and audiences, particularly with the shift from the early modern to the modern period. While our focus will be on the Ottoman Empire, the course will also consider the ceremonial cultures of the various Asian and European polities with which the Ottomans interacted, investigating the points of comparison and contrast that defined these multifarious but connected interregional approaches.

Area: Humanities

AS.010.632. Painting and Subjectivity.
Readings from a range of theoretically and philosophically interesting texts on painting and the visual arts. Among our authors: Cavell, Lacan, Merleau-Ponty, Foucault, Derrida, Nancy, Lyotard.

Area: Humanities
AS.010.633. Theories and Works of “The Baroque”.
There is perhaps no more confounding, though also no more persistent, art historical concept than that of “the Baroque.” This course introduces students to foundational histories and critiques of “the Baroque” while exploring works of art that have proved central to these formulations. That is, this course will balance careful reading of historiography with close examination of works of art (both digitally presented and visited in local collections). Students will come away with a layered understanding of the Baroque objects—from relatively small-scale museum works to major architectural and sculptural monuments—and their place within the broader evolution of the history of art. Particular attention will be given to newer global and (post-)colonial approaches to notions of the Baroque, ultra-Baroque, and neo-Baroque.
Area: Humanities
Writing Intensive

AS.010.634. Rethinking the Renaissance: Alternatives to ‘Early Modernity’.
‘The Renaissance’ as a periodization under attack, and its persistance; the hermeneutics of the Pre-Modern Image since Panofsky; the critique of Eurocentrism; challenges to and recuperations of iconology, assessing the contributions of semiotics, psycholanalysis and queer theory.
Area: Humanities

AS.010.635. Orientalism and Occidentalism: The Discourse of the Other in the Visual Arts.
This course explores works of art and architecture that reveal or are informed by the long, complex, and often troubled relationship between the West and the Islamic world. Though extending in scope from the early modern period into our own time, the course focuses on the eighteenth and nineteenth centuries, when East-West artistic interactions were arguably at their liveliest and most charged. Topics to be addressed include Ottoman Baroque architecture, Orientalist painting of the nineteenth century, Qajar portraiture and photography, Islamicate architecture at Western world’s fairs, and the recent Danish cartoons of the Prophet Muhammad. Students will be encouraged to consider the differences as well as commonalities between these various modes of cross-cultural representation and engagement, and to think critically about the political, cultural, and artistic conditions that engendered and shaped them.
Area: Humanities

AS.010.636. Ottoman Baroque and Beyond.
The eighteenth century saw the Ottoman capital of Istanbul transformed by the introduction of a brand-new style of architecture that scholars have dubbed the Ottoman Baroque. Informed, as its name suggests, by Western European models, this new manner of building heralded a permanent shift in late Ottoman visual culture that has been reductively discussed as decadent “Westernization.” This seminar will challenge the conventional wisdom and reconsider the Ottoman Baroque as a timely and sophisticated artistic statement by which the empire reaffirmed its global standing in terms that were both locally rooted and internationally resonant. Topics to be addressed include the semiotics of style; the roles and relationships of patrons, artists, and viewers; architecture as a locus of ceremonial and spectacle; and cross-cultural connections and networks. Although focusing on the architecture of eighteenth-century Istanbul, the seminar will extend into other regions and art forms that demonstrate the impact of the Ottoman Baroque, and it will also consider the style’s afterlife in the context of nineteenth-century Ottoman modernity.
Area: Humanities

AS.010.637. Modernity.
This course considers the turn to centering materials and materiality in the history of art. Since the publication of Michael Baxandall’s Painting and Experience in Fifteenth Century Italy (1972) and in particular since the turn of the millennium, critical engagement with the materiality of art has proliferated. This seminar will tackle renewed investment in materiality within the discipline of art history and draw on perspectives from archaeology, philosophy, anthropology, conservation science, feminist and queer theory, and postcolonial studies, among others. Particular emphasis will be placed on the polycentrism of materiality as a theoretical lens that cuts across seemingly disjunct cultural, social, and political frames and subject positions. While this course focuses on the art of the ancient Mediterranean, students will be encouraged to bring their own subfields to bear on the material turn and to pursue research topics related their individual research goals. Open to interested students from all disciplines.

AS.010.638. Interrogating the Material Turn.
This course considers the turn to centering materials and materiality in the history of art. Since the publication of Michael Baxandall’s Painting and Experience in Fifteenth Century Italy (1972) and in particular since the turn of the millennium, critical engagement with the materiality of art has proliferated. This seminar will tackle renewed investment in materiality within the discipline of art history and draw on perspectives from archaeology, philosophy, anthropology, conservation science, feminist and queer theory, and postcolonial studies, among others. Particular emphasis will be placed on the polycentrism of materiality as a theoretical lens that cuts across seemingly disjunct cultural, social, and political frames and subject positions. While this course focuses on the art of the ancient Mediterranean, students will be encouraged to bring their own subfields to bear on the material turn and to pursue research topics related their individual research goals. Open to interested students from all disciplines.

In antiquity, Rome became the capital of an empire, its growing status reflected in its sophisticated urban planning, its architecture, and the arts. While an abundance of studies explores the revival of this glorious past in the Renaissance, this seminar discusses various ways of the reception of antiquity during the medieval period. We address the practice of using spolia in medieval architecture, the appropriation of ancient pagan buildings for the performance of Christian cult practices, the continuation of making (cult)images and their veneration, the meaning and specific visuality of Latin script (paleography and epigraphy) in later medieval art. We discuss the revival and systematic study of ancient knowledge (f. ex. medicine, astronomy, and the liberal arts), in complex allegorical murals. As we aim to reconstruct the art and architecture of medieval Rome, this course discusses ideas and concepts behind different forms of re-building and picturing the past, as they intersect with the self-referential character of a city that is obsessed with its own history.
Area: Humanities
Writing Intensive

AS.010.640. Challenge to Painting: Collage, Montage, Assemblage.
The invention of Cubist collage is generally regarded as a watershed in twentieth-century art. This seminar will examine key junctures in the rapid proliferation and redefinition of collage strategies primarily in Europe and the United States, including but not limited to Futurist “words in liberty”; Dada and Constructivist photomontage; the Surrealist exploration of desire; Situationist détournement; and selected varieties of postwar assemblage. Frequent meetings in Special Collections.
Area: Humanities
Writing Intensive
Baltimore's rich museum and library collections create a dynamic laboratory for students to gain an understanding of early modern European traditions of prints and books. Engraving, etching, woodcut, mezzotint, à la poupee; Rembrandt, Dürer, Aldus Manutius, Plantin-Moretus. This course will introduce students to the basic techniques, concepts, terms, and artists that shaped the production of reproductive works on paper in early modern Europe and their subsequent art historical study. All sessions will be taught out of local collections (BMA, Walters, NGA, Hopkins Special Collections); that is, this is a hands-on class that—while requiring no previous experience—will attend to the nitty-gritty details and methods of studying works in person, giving students the tools, expertise, and confidence to pursue their own research with historical printed materials.
Area: Humanities
Writing Intensive

AS.010.642. Matisse and his Century.
Critical examination of key cruxes in the work of Henri Matisse and his reception, with visits to Special Collections, the BMA, and other collections along the East Coast. This seminar will curate an exhibition of Matisse's books from Special Collections.
Area: Humanities

The course examines the notion of the authentic in conjunction with medieval images, relic veneration, and the practice of law. It investigates the construction, reception, and theoretical grounding of authenticity of reliquaries, icons, and imprints on cloth or seals, and legal documents. These objects elucidate artistic strategies such as cross media references, abstraction, mimesis and bricolage to convey an aura of authenticity. We address other authenticating factors, such as complex ritualized forms of communication.

Acknowledging the central role art from around the globe played in the production of the modern, this seminar will engage with the emergent art historical, methodological, and theoretical literature shaping the history of modern art after the global turn. Particular case studies of regional art movements (in e.g. Cuba, Brazil, India, Japan, Iran, Nigeria) alongside discussion of key exhibitions and institutions. A special focus on the theoretical interlocutors for art movements and artists around the world, such as Fanon, Glissant, Bhabha, Chow, Spivak, Freire.

AS.010.646. Art and Architecture at the Eastern Frontier: Medieval Georgia.
This seminar investigates the fascinating landscape of medieval art and architecture of Georgia. Its specific geographic position in the South Caucasus, at the cross roads between the East and West, the Christian and Islamic Worlds, had a profound impact on the art and architecture in the region. Ancient sites show close connections with the Graeco-Roman World on the western border and with the Sassanid Empire in the East. The Christianization of the Kingdom of Kartli in the early fourth century resulted in close ties with the development of early Christian art in Syria, the Holy Land, and Byzantium. While the Christian religion remained an identifying factor during several hundred years of Muslim rule (736 to 1122) during which the city of Tbilisi was the capital of an emirate, Islamic motifs and style became an important factor for art works in medieval Georgia. Art and architecture with a specific Byzantine profile flourished in particular after the reunification of Georgia during the reign of King David the Builder (1073-1125) and Queen Tamar (1184 to 1213). The cathedral and monastery of Gelati and Mzcheta, the murals in the royal monasteries of Vardzia and Khintsvisi, and the countless icons are a testimony to this relationship. We will discuss the specific diverse aesthetics and materiality (stone, enamel and metal works) of Georgian art with the goal to reassess the map of medieval art and architecture that currently does not include the Eastern Frontier. A mandatory c. 10 days field trip to Georgia is planned after classes end in May 2020.
Area: Humanities
Writing Intensive

What role does language play in the creation of art, and how can it inform its art historical interpretation? Through a series of case studies drawn from art history, anthropology, and linguistics, this graduate seminar will examine the multifaceted relationships between traditions of verbal and material expression in the Indigenous Americas. Key topics will include Mayan decipherment and the interpretation of ancient Maya art; Mesoamerican linguistics and concepts of color; and compositional structure in modern Quechua weaving and storytelling. Through this course, students will critically evaluate language-based analysis as a method for the study of art, while also learning about historical relationships between art and language in the indigenous Americas.
Area: Humanities
AS.010.649. Power Dressing: The Politics of Costume between the
Ottoman Empire and the West.

In the Ottoman Empire—a vast multiethnic state straddling Africa, Asia, and
Europe—how one dressed was a deeply political affair. Ottoman
rulers and subjects alike used clothing to express (and sometimes
transgress) the hierarchical, religious, and communal distinctions
defining their society, much to the fascination of foreigners who visited
the empire or sought knowledge of its sartorial traditions in texts and
images. This seminar will explore Ottoman dress and dress codes in the
context of the empire's long and complicated relationship with Western
powers, focusing on the role that costume played as a charged site of
cross-cultural interaction, posturing, and self-assertion from the sixteenth
to the nineteenth century. Our case studies will include costume albums
—books showing people high and low in their characteristic garb—painted
by Ottoman artists for Western buyers; diplomatic robes of honor and
their attendant ceremonies; and cultural cross-dressing as manifested in
European turquerie portraiture and masquerades. Moving into the modern
period, we will consider how nineteenth-century dress reforms bridged
the gap between Ottoman and Western costume while engendering new
modes of Ottoman sartorial self-representation that challenged hardening
Orientalist discourses in such venues as mannequin museums and
world's fairs. The seminar will make considerable use of artworks in local
collections, including rare books and prints at Hopkins itself.

Area: Humanities
Writing Intensive

AS.010.650. Before and After Trent: the Image and Sacred Space in
Rome and Spanish Italy.

The seminar will investigate the question of art and reform in three major
centers of the Italian peninsula (Rome, Naples, Milan), with attention to
parallel phenomena in other centers of Catholic Europe (Spain and the
Spanish Netherlands). We will examine transformations in the practice
of pilgrimage and the organization of sacred shrines, tensions between
centralization and the persistence of the local, and the initiative of artists
and architects in responding to the call for a "reform" of sacred art.

Antioch Recovery Project investigates mosaics from the ancient city of
Antioch (modern Antakya, Turkey, near the border with Syria) now in the
collection of the Baltimore Museum of Art. Excavated by an international
team of archaeologists in the 1930s, hundreds of ancient mosaics
from the cosmopolitan city were subsequently dispersed to museums
across the globe, with twenty-four mosaics entering the collection
of the BMA. Phase I will focus on the digital documentation and
analysis of the mosaic of Narcissus as a prototype for ongoing research
brining together the fragments of ancient Antioch for contemporary
holders. The Greek myth of Narcissus tells the story of a beautiful
Theban hunter doomed to love his own reflection and is the origin of
the modern psychiatric term "narcissism". Researching the mythology,
materials, conservation history, archival material, historiography, and
contemporary reception of the Narcissus mosaic and myth offers
dependent opportunities to collaborate with scholars across a range of
disciplines at JHU, in the Baltimore museum community, and beyond.
Investigators will move between the Baltimore Museum of Art, the CRL
processing lab in Gilman Hall, and Special Collections. The course will
involve some travel to visit other mosaics from Antioch now in collections
at Harvard's Dumbarton Oaks in Washington D.C., and the Princeton Art
Museum in Princeton, New Jersey.

Area: Humanities

AS.010.655. The Cut.

This seminar focuses on "the cut"—both as material practice and
conceptual trope. Looking specifically at the early modern period, we
will attempt to stitch together arts of cutting that have all too often been
thought of separately or entirely in isolation—decoupage and inlaid stone,
silhouette and turned ivory, repurposed drawing and perfectly hewn
precious gem, pared-down panel and paper cut-out. To do so, we will look to
expansive modern treatments and theorizations of "the cut" as literal
gesture and figurative process, material technique and metaphoric mode.
At stake is a reappraisal of creative paradigms that rest upon myths of
wholeness, finitude, completion, generation, etc., and that thus undergird
the early modern emergence of the very notion of "Art." This seminar thus
asks whether recentering the cut has the potential to position the art
object within more expansive fields of material culture and to resituate
artistic production within less hegemonic frameworks of creation and
creativity. Though focused on the early modern period, students are
encouraged to pursue research in their own fields/periods of study.

Writing Intensive

AS.010.659. Passion Image, Passion Cult, Passion Drama: Narrative and
Metaphor in the Middle Ages, Renaissance, and Beyond.

A set of interdisciplinary explorations of the Passion of Christ narrative
in Scripture, theology, visionary literature, cultic devotion, the visual and
dramatic arts in Europe from the Central Middle Ages to the Reformation,
with a special fast-forward to modern cinematic retellings of the Passion
story.

Assyria, centered in northern Iraq, created one of the world’s first great
depth that dominated the ancient Near Eastern world from around
900 to 612 BCE. In concert with imperial expansion came an explosion
of architectural and artistic production including entire cities and their
ornamentation. This seminar examines the close relationship between
the arts and politics in the Assyrian empire. The course will engage in
close visual analysis of the ancient materials and critical readings of
scholarship. There will be a final project.

Area: Humanities

AS.010.689. Seeing Sculpture.

This course explores the art of sculpture in all of its historical forms,
from the ancient world to contemporary art, and introduces students
to the experiential and spatial challenges sculpture poses. Our focus
will combine on-site studies of sculpture in local collections with the
development of a critical vocabulary with which to write about those
objects, one that draws on the rich history of responses to sculpture from
the birth of modern art history to the present.

Area: Humanities

AS.010.701. What is a Stifterbild?

Critically examines classic and recent approaches to the study of donor
portraits, votive images and gifts, embedded likenesses and ‘crypto-
portraits’ of patrons and rulers, with an emphasis on developments in
Germany, France, and the Netherlands between 1250 and 1500.

Area: Humanities

AS.010.702. 1525: Prints and Politics in the German Reformation.

Examines the involvement of prints, print culture, and the professional
activity of the German painter-printmaker with the patterns of social and
religious dissent, propagandizing, and political confrontation that marked
the first decade of the Protestant Reformation, with a special focus on
the revolutionary year 1525. Seminar includes planned visits to the print
collections of the Baltimore Museum of Art and the National Gallery in
Washington.

Area: Humanities
AS.010.703. Patterns of Attention in the Visual Arts.
This seminar aims to excavate six distinct modalities of attention and attentiveness in the visual arts from Middle Ages to Modernity (cultic, narrational, speculative, ethical, sexual, and artistic). While emphasizing European developments, close consideration will be given to the role of visual attention in Hindu and Islamic visual cultures, providing the opportunity for cross-cultural comparison. Each case study will consider the historically shifting roles given to vision, cognition, imagination, affect, desire and power-knowledge in the culturally prevalent patterns of attention we study, and explore how specific kinds of pictorial schema or spatial environments served to structure and guide, or deflect and disrupt, the attention of their beholders. Finally, we will ask whether the historical study of attention can suggest analytical models or ethical lessons for the (re)mobilization of attentiveness in our own art-historical methods.
Area: Humanities

AS.010.704. Pieter Bruegel the Elder: New Directions in Scholarship.
Examines major interpretations of the art and career of the great Flemish painter Pieter Bruegel the Elder (1525?-1569), with an emphasis on new approaches and research agendas. In the aftermath of the 450-year Bruegel Anniversary of 2019, with its major exhibitions and comprehensive catalogues, what comes next?
Area: Humanities

This seminar examines Dürer’s project to transform the genres of late medieval devotional art in line with his self-image as a Christian humanist painter. Against the backdrop of new agendas for reform, we consider Dürer’s collaborations with Celtis, Chelidonius, and Pirckheimer; the therapeutic impulse behind his self-portraits, the works dedicated to friends, and his altarpieces; the Meisterstiche; and other works that thematized the Renaissance philosophical ideal, first found in Petrarch, of a life lived self-consciously and in service to others.
Area: Humanities

AS.010.801. Special Rsrch & Problems.
AS.010.802. Spec Research/Problems.
AS.010.803. Individual Work.
AS.010.804. Individual Work.
AS.010.890. Summer Practicum - History of Art.
AS.020 (BIOLOGY)

AS.020.101. Freshman Seminar: The Cell Biology of Neurodegeneration. 3 Credits.
This course will examine the underlying biology of multiple neurodegenerative disorders, ranging from the well known (Alzheimer’s, Parkinson’s, etc.) to the rare (Cockayne syndrome, Salla disease, etc.). For each disease, relevant cellular and molecular mechanisms important for normal functioning of the nervous system will be examined, followed by exploration of the errors that can occur in these processes and give rise to disease states. Specific cellular activities to be explored include protein folding and stability, DNA repair, and lysosomal trafficking and degradation. Popular topics in biology and neuroscience (e.g., personal genome sequencing, CRISPR-based gene editing, microbiomes) will also be covered.
Area: Natural Sciences

AS.020.104. Freshman Seminar: From Genes to DNA and Back. 1.5 Credits.
A course consisting of introductory lectures followed by student presentations in the form of seminars. The issues we usually analyze are: How did we arrive at the concept of the "gene"? What are the early observations that gave substance to this concept? How did we arrive at the "one gene, one enzyme" dogma? What is the chemical nature of the gene? Is DNA enough for regulated gene expression? Is it "all in our genes"? What is genetic plasticity and epigenetics? What about genomics and proteomics? In the course of our analyses we bring together observations, and experimental results and ideas not only from biological sciences (Genetics, Cell and Developmental Biology and Genetics) but also from Physics, Sociology, Politics and Philosophy. We do all this in order to clarify how observations turn to ideas, then dogmas and even biases that distort the true meaning of objective Sciences.
Area: Natural Sciences

AS.020.106. Freshman Seminar: Tuberculosis. 1 Credit.
Mycobacterium tuberculosis is an extremely successful intracellular bacterial pathogen able to manipulate phagocytic cells and its own metabolism to survive within a host. The molecular mechanisms of this survival and resistance to antibiotics will be studied. Freshmen only.
Area: Natural Sciences

AS.020.115. Bioenergetics. 2 Credits.
This course is a combination of lectures, student presentations and group discussions that address fundamental principles and also contemporary issues examining the way all forms of Life on Earth are ultimately dependent on sunlight to satisfy their food and energy requirements. We examine the steps from the capture of Physical energy (photons), to the development of electrochemical potentials and finally, to their utilization by cellular organelles towards the synthesis of the chemical ‘currency’ that fuels all biological processes (biosynthesis, cell communication, movements, etc.). Special emphasis will be on current developments in biotechnologies that utilize microbial populations to supply us with fuels and also to clean up environmental hazards. The course will also consider ways to extract lessons from Nature’s successful designs and harmonious adaptations so that we, in the long run, can utilize them towards a minimization of our negative impact on the environment. Note: Freshmen and Sophomores only, with good foundations in any two of the following: Physics, Chemistry, Biology, Biophysics.
Area: Natural Sciences

AS.020.120. Introduction to Laboratory Research. 1 Credit.
This course will introduce students to a variety of biochemical and molecular biological laboratory techniques. These will include DNA analysis by restriction enzyme mapping, amplification of DNA segments by PCR, lipid analysis by chromatography. Additionally, students will visit a variety of biological laboratories to observe actual research projects. * Prerequisites: High school biology and chemistry.

AS.020.125. Techniques in Molecular Biology. 1 Credit.
This course is designed to supplement the scientific classroom experience of students by providing hands on experience with the essential core molecular biology techniques of bacterial DNA cloning, DNA analysis, and protein analysis. Students will be able to understand and explain how these methodologies work scientifically and will develop the basic laboratory skills necessary for the successful completion of the assays.

AS.020.129. Introduction to Biology & Medicine. 1 Credit.
Introduction to Biology & Medicine: from Textbook to Application. Biology is the study of life dynamics, and medicine is the application of biology to enhance human health. With a particular emphasis on imaging approaches from the scale of the cell to that of the whole body, this course explores how biology research is designed to improve our knowledge and health. The goal is to show students the possible ways of using information learned in textbooks as a starting point to explore new application frontiers and careers in academic research, industrial/biotech development, and medicine. Course is highly interactive and includes lectures, readings, field trips, and guest lectures by professors involved in the scientific advancements. Grades determined by class participation, attendance, quizzes, and oral presentation.

AS.020.132. Medical School Intensive. 1 Credit.
The 2-week program is designed to engage bright high school students who are interested in medicine. Taught and guided by Johns Hopkins University School of Medicine faculty post-docs and fellows, students will learn basic knowledge and techniques related to surgery, internal medicine, pediatrics, emergency medicine, and biomedical science by participating in interactive lectures and labs, experiencing hands-on medical trainings at Johns Hopkins Medical Simulation Center, interviewing and networking with diverse medical professionals, and visiting the world-renowned hospital.

AS.020.135. Project Lab: Phage Hunting. 2 Credits.
This is an introductory course open to all freshman regardless of intended major. No science background is required. This is the first semester of a year-long research-based project lab course in which students will participate in a nation-wide program in collaboration with undergraduates at other colleges. Students will isolate and characterize novel bacteriophages (viruses that infect bacteria) from the environment using modern molecular biological techniques. The course includes two lab meetings per week. Continues in the spring. Each semester provides 2 credit hours of Natural Sciences (N) distribution credits and/or counts 2 hours toward the research requirement for the Molecular and Cellular Biology degree. No textbook is required. Freshmen only.
Area: Natural Sciences
AS.020.136. Phage Hunting II. 1 Credit.
This is an introductory course open to all freshman regardless of intended major. No science background is required. This is the second semester of a year-long research-based project lab course in which students will participate in a nation-wide program in collaboration with undergraduates at other colleges. In the spring semester, students will annotate the genome of a bacteriophage isolated and characterized by a student in AS.020.135, in preparation for submission to a database and eventual publication. Enrollment by permission of the instructor only. 
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module. AS.020.137 or permission of instructor
Area: Natural Sciences

AS.020.137. Project Lab: Phage Discovery. 1 Credit.
In this small-section introductory research lab course, students are introduced to basic microbiological techniques as they isolate and characterize a bacteriophage, a virus that infects bacteria, from an environmental sample. One meeting per week. No textbook required. Modeled after the Phage Hunting project lab course, with a focus on benchwork. Students cannot receive credit for both AS.020.135 and AS.020.137.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module. Not open to anyone who has taken AS.020.135
Area: Natural Sciences

AS.020.151. General Biology I. 3 Credits.
This course is an introduction to biology from an evolutionary, molecular and cellular perspective. Specific topics and themes include evolutionary theory, the structure and function of biological molecules, mechanisms of harvesting energy, cell division, classical genetics and gene expression. This section will involve in-class problem solving and the use of assigned pre-class videos and questions.
Area: Natural Sciences

AS.020.152. General Biology II. 3 Credits.
This course builds on the concepts presented and discussed in General Biology I. The primary foci of this course will be on the diversity of life and on the anatomy, physiology, and evolution of plants and animals. There will be a special emphasis on human biology.
Prerequisite(s): AS.020.151
Area: Natural Sciences

AS.020.153. General Biology Laboratory I. 1 Credit.
This course reinforces the topics covered in AS.020.151. Students participate in a semester-long project, identifying bacteria from Homewood campus soils using molecular biology techniques. Other laboratory exercises cover aspects of evolution, genomics and biochemistry. Cross-listed with Behavioral Biology. Student must have enrolled in AS.020.151 either this term or in past terms. Students who have credit for AP Biology but take General Biology Lab I will lose four credits of AP Biology credit. Cross-listed with Behavioral Biology.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module. AS.020.151
Area: Natural Sciences

AS.020.154. General Biology Lab II. 1 Credit.
This course reinforces the topics covered in AS.020.152. Laboratory exercises explore subjects ranging from evolution to anatomy and physiology. Students participate in a project using molecular biology techniques to determine whether specific foods are made from genetically engineered plants. Cross-listed with Behavioral Biology. Students who have credit for AP Biology but take General Biology Lab II will lose all four credits of their overall credit for AP Biology.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences

AS.020.161. Current Events in Biology I. 1 Credit.
In this lively and collaborative course, students discuss current events and controversies in biology ranging from bioterrorism to the health of the Chesapeake Bay.
Area: Natural Sciences

AS.020.162. Current Events in Biology II. 1 Credit.
Students will discuss current events and controversies in biology, ranging from genetic engineering to nanotechnology in medicine.
Area: Natural Sciences

AS.020.205. Introduction to Biological Molecules. 3 Credits.
This course presents an overview to biochemistry and molecular biology, especially focusing on biotechnology and medicine. Students will have classroom and laboratory experience and group presentations.
Prerequisite: High school level Chemistry and Biology (both with a grade of A).
Area: Natural Sciences

AS.020.303. Genetics. 3 Credits.
Presentation of the principles of heredity and variation, and their application to evolution and development; physico-chemical nature of the gene; problems of recombination; gene action.
Prerequisite(s): Students may receive credit for AS.020.330 or AS.020.303, but not both.
Area: Natural Sciences

AS.020.304. Molecular Biology. 3 Credits.
This course will focus on the ways that nucleic acids direct the synthesis of nucleic acids and proteins. Emphasis will be on modern techniques to study these fundamental processes and important biological molecules. This course fulfills a core requirement for biology majors and molecular and cellular biology majors and cannot be taken by students who have already taken AS.020.305. This course does not fulfill does not fulfill the elective requirement for biology or molecular and cellular biology majors.
Area: Natural Sciences

AS.020.305. Biochemistry. 4 Credits.
The molecules responsible for the life processes of animals, plants, and microbes will be examined. The structures, biosynthesis, degradation, and interconversion of the major cellular constituents including carbohydrates, lipids, proteins, and nucleic acids will illustrate the similarity of the biomolecules and metabolic processes involved in diverse forms of life. Sophomores, Juniors, and Seniors Only.
Prerequisite(s): AS.030.205 OR AS.030.212 OR EN.540.202, may be taken concurrently.
Area: Natural Sciences
AS.020.306. Cell Biology. 4 Credits.
How the molecules of living systems are organized into organelles, cells, tissues, and organisms will be explored, as well as how the activities of all of these are orchestrated and regulated to produce “life”—a phenomenon greater than the sum of its parts. Considerable emphasis is placed on experimental approaches to answering these questions. Topics covered include biological membranes, cytoskeletal elements, cell locomotion, membrane and protein traffic, the nucleus, signal transduction, the cell cycle, the extracellular matrix, epithelial structure and function. Sophomores, juniors, and seniors only. Recommended Course Background: (AS.020.151 or AS.020.305) or equivalent knowledge of biomolecules or AS.020.303.
Prerequisite(s): Cell Biology restriction: students who have completed EN.540.307 may not enroll.
Area: Natural Sciences

AS.020.312. Introduction to the Human Brain. 3 Credits.
This course explores the outstanding problem of biology: how knowledge is represented in the brain. Relating insights from cognitive psychology and systems neuroscience with formal theories of learning and memory, topics include (1) anatomical and functional relations of cerebral cortex, basal ganglia, limbic system, thalamus, cerebellum, and spinal cord; (2) cortical anatomy and physiology including laminar/columnar organization, intrinsic cortical circuit, hierarchies of cortical areas; (3) activity-dependent synaptic mechanisms; (4) functional brain imaging; (5) logictist and connectivist theories of cognition; and (6) relation of mental representations and natural language.
Prerequisite(s): AS.020.306 OR EN.540.307
Area: Natural Sciences

AS.020.315. Biochemistry Project lab. 1 Credit.
This research project laboratory investigates the flow of energy through biological systems using focused examination of key cellular energy-conversion processes. Students will be introduced to the broad field of biochemistry research through computational structural analysis, directed mutation, recombinant protein production, and enzymatic analysis. Participants will be trained in biochemical laboratory techniques and expected to contribute their findings to the scientific community using formal, academic communications.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module. AS.020.305 OR AS.250.307 OR AS.250.315. These may be taken concurrently.
Area: Natural Sciences

AS.020.316. Cell Biology Lab. 1 Credit.
The Cell Biology Laboratory will use projects with the nematode C. elegans and mouse 3T3 cells in culture to illustrate experimental systems which are used in cell biology. Light microscopy, fluorescence microscopy, RNA interference, fluorescence-activated cell sorting, Western blotting and the culture of nematodes and cells are techniques which will be used. Because we will be using growing organisms, there will be at least one week when students will have to visit the lab the day after their section meets to complete an experiment.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Corequisite(s): Students must have completed EN.540.307 prior to enrolling in AS.020.316. Students may concurrently enroll in AS.020.306 AND AS.020.316 OR students must have previously completed both EN.540.202 and AS.045.307 prior to enrolling in AS.020.316.
Area: Natural Sciences

AS.020.317. Signaling in Development and Disease. 3 Credits.
An advanced undergraduate level seminar on current topics on signal transduction mechanisms underlying neuronal morphology, development and function. The proper functioning of the nervous system relies on the establishment of precise neuronal circuits through a developmental program including proliferation, neuronal migration, axonal growth, and neuronal survival. This course pertains to the extracellular cues and downstream neuronal signaling pathways that coordinate these key events during neuronal development. The course will also cover the role of aberrant signaling mechanisms in neuronal degeneration and disease. Recommended Course Background: AS.020.305, AS.020.306, and AS.080.306
Area: Natural Sciences

AS.020.319. Human Genome Variation. 2 Credits.
A supplement to this course is the elective “Analysis of Genomic Data” 020.xxx that takes a deeper dive into the data presented in HGV. Students of HGV are encouraged to enroll separately in this exciting new course.
Prerequisite(s): AS.020.303
Area: Natural Sciences

AS.020.320. Cell Division Mechanisms and Regulation. 3 Credits.
This course will focus upon the molecular mechanisms that underpin the reproduction of eukaryotic cells. General topics will include chromosome duplication, mitotic spindle action, cytokinesis, meiosis, cell cycle control, damage repair and checkpoints, and aberrant regulation characteristic of cancer. Most readings will be from recent research manuscripts and review articles. Classes will consist of a mix of lectures and student oral presentations.
Prerequisite(s): AS.020.306
Area: Natural Sciences
AS.020.321. Human Genome Variation with Computational Lab. 3 Credits.
The prerequisite/co-requisite course on Human Genome Variation has exposed you to the power of genomic studies for understanding human evolutionary history as well as revealing the genetic basis of human traits and disease. What does real human genomic data look like? How are these data analyzed in practice? Supplementing the main course, this module will explore public datasets and computational tools used to analyze human genomic data to better understand how patterns in these data can be used to test hypotheses about evolution and human phenotypes.
Prerequisite(s): AS.020.303
Area: Natural Sciences

AS.020.329. Microbiology. 3 Credits.
This course explores the physiology and genetics of microorganisms within an evolutionary and ecological framework. Concepts in microbiology will be supported by molecular studies of microbial evolution and microbial communities including that of the human microbiome. Recommended Course Background: AS.020.305
Area: Natural Sciences

AS.020.331. Human Genetics. 2 Credits.
Will examine the growing impact of human genetics on the biological sciences, on law and medicine, and on our understanding of human origins. Topics include structure and evolution of human genome, genetic and physical mapping of human chromosomes, molecular genetics of inherited diseases and forensic genetics.
Area: Natural Sciences, Social and Behavioral Sciences

AS.020.337. Stem Cells & the Biology of Aging & Disease. 2 Credits.
This will be a team-taught lecture course that focuses on the properties of stem cells, their possible role in cancer (breast and prostate), stem cell aging, and the potential utilization of stem cells for therapy. Topics will include: mechanisms of stem cell renewal, stem cell potency, the impact of the stem cell niche, stem cells and the hematopoietic system, stem cells and the neural system, stem cells in the male and female gonads, induced pluripotent stem cells and cellular reprogramming, stem cell changes with aging, and ethical and policy issues in stem cell research and use. Most lectures will be research-oriented. Students will be expected to read and critically analyze current literature, with an emphasis on the experimental bases from which our current understandings derive.
Prerequisite(s): AS.020.305 (Biochemistry) or AS.020.306 (Cell Biology) or EN.580.221 (Molecules and Cells) or EN.540.307 (Cell Biology for Engineers) or permission of instructor.
Area: Natural Sciences

AS.020.340. Developmental Genetics Lab. 2 Credits.
This class will explore the development of animals from a single fertilized egg into a fully formed organism. We will emphasize experimental methods to understand the molecular mechanisms controlling development.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module. AS.020.303 can be taken prior to or during enrollment in AS.020.340.

AS.020.341. Quantitative Methods in Biology. 3 Credits.
This course reviews a variety of quantitative tools commonly applied in biological research. The course is divided into three sections. The first section covers dynamical modeling of biological processes, with an emphasis on chemical kinetics and cell signaling. The second section is devoted to statistical tools used to analyze datasets, as well as techniques to reduce data complexity and clustering. The third section applies the learned statistical tools to image processing, as well as commonly used techniques to process and extract features from images. Students will learn the quantitative concepts during lecture and discussion, and apply these concepts in lab sections where they will use MATLAB to apply the learned tools to biological problems.
Prerequisite(s): AS.020.305 AND AS.020.305 and one year of calculus.
Area: Natural Sciences

AS.020.344. Virology. 3 Credits.
This course will cover basic principles of viral replication and pathogenesis, as well as the host response to viral infection. It will then focus on several viruses of interest, including HIV-1, Influenza, Human Papilloma Virus, Hepatitis C, Ebola Virus, and Zika Virus.
Prerequisite(s): AS.020.305 OR AS.250.315
Area: Natural Sciences

AS.020.346. Immunobiology. 3 Credits.
A course for upper level undergraduates that introduces the molecules, cells, systems and biology of the immune system.
Prerequisite(s): AS.020.306 AND (AS.020.303 OR AS.020.330)
Area: Natural Sciences

AS.020.347. AIDS. 3 Credits.
AIDS is the world's deadliest infectious disease. This course will cover the biology of human immunodeficiency virus (HIV, the infectious agent that causes AIDS), the effects of HIV on the immune system, the pharmacology of the anti-viral agents that are used to suppress HIV infection, and the ongoing quest for an HIV vaccine. Because HIV drugs cannot cure HIV-infected individuals and no HIV vaccine yet exists, we will also study the long-term consequences of HIV infection including opportunistic infections, comorbid conditions, and the HIV-related cancers Kaposi's Sarcoma and AIDS-Related lymphoma. Recommended Course Background: AS.020.306
Prerequisite(s): AS.020.306
Area: Natural Sciences

AS.020.349. DNA Repair, Damage and Genomic Instability. 3 Credits.
Errors in DNA replication and damage response pathways are the source of many pathologies, including cancer. In this literature-based discussion course, students will have the opportunity to examine our current understanding of DNA damage and repair mechanisms, as well as the many strategies cells employ to ensure fidelity during DNA replication and chromosome segregation. Students will examine various repair mechanisms have evolved with the emergence of complex organisms and gain a comprehensive knowledge of DNA double stranded break repair by nonhomologous end joining and homologous recombination. This course will leave students with a complete understanding of both internal and external sources of DNA damage, as well as the many different ways organisms have adapted to maintain genome integrity and the health consequences when these adaptations do not work as designed. Prior completion of genetics is required for this course, as well as a basic comprehension of the principles of transcription and translation.
Prerequisite(s): AS.020.303
Area: Natural Sciences
AS.020.350. Introduction to Clinical Medicine. 2 Credits.
Perm. Req’d. Post-Bac Students Only
Area: Natural Sciences

AS.020.351. Cancer Biology. 3 Credits.
While the “war on cancer” has produced modest victories with respect to clinical outcomes, our knowledge of the cellular mechanisms of cancer is now vast and represents one of the most significant scientific achievements of the past 40 years. Key aspects of cancer biology will be covered with a combination of textbook and original literature readings. Topics will include cancer cell characteristics, oncogenes, tumor suppressor genes, apoptosis, metastasis and immuno-surveillance of cancer cells. Application of our knowledge to the rational treatment of cancer will also be discussed.
Prerequisite(s): Cell Biology 020.306 or permission of instructor
Area: Natural Sciences

AS.020.355. Fundamentals of Genome Informatics. 3 Credits.
This course will cover fundamental methods used in the analysis of genomic sequencing data, with a particular focus on recent developments in comparative and functional genomic assays. In particular, we will cover approaches for 1) genomic sequencing and assembly, including resequencing and personal genomes, 2) comparing genomes and modeling genome evolution, 3) identifying functional elements using both functional genomics and computational models. While the course will focus on particular problems in genomics, we will emphasize core algorithmic concepts that generalize to the analysis of other types of biological data.
Prerequisite(s): AS.020.151 AND (AS.020.152 OR AS.020.303)
Area: Natural Sciences

AS.020.360. Gene Regulation During Development and Disease. 3 Credits.
This course examines how regulation of gene expression impacts development and disease. The course will focus on the mechanisms controlling transcriptional, post-transcriptional, translational, and post-translational regulation. For each topic, one class will be a lecture/discussion of key concepts and experimental approaches followed by a class with student-led presentations of related publications. Recommended Course Background: AS.020.303 and AS.020.305.
Area: Natural Sciences

AS.020.361. Advanced Research Lab in Cell and Molecular Biology. 3 Credits.
An intensive research laboratory course on single-molecule, live-cell imaging of chromatin and epigenetic factors designed for undergraduate students with interests in biochemistry, molecular, cellular and computational biology. The course introduces the use of advanced fluorescence microscopy to visualize the single-molecule dynamic behaviors and spatial distributions of important nuclear proteins and chromatin factors in living cells of Saccharomyces cerevisiae as a model for conserved epigenetic regulators in humans. Students will learn and apply imaging and computational tools to localize and track single protein molecules in real time and calculate their diffusive parameters. Students are expected to interpret and integrate data to acquire conceptual insights on chromatin functions, e.g. how chromatin proteins, enzymes, and large protein complexes are distributed in nuclear space and time. Students will gain practical experience in yeast molecular genetics by engineering protein tags on designated factors, and evaluating protein functionality under natural levels of expression.
General access to laboratory facilities, with two afternoons (~8 hours/week) mandatory. After course completion, option for post-course research in the Wu laboratory.Open to advanced sophomores or upper level students with permission of Instructor Carl Wu (wuc@jhu.edu).
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences

AS.020.362. Single Molecule Approaches to Biology. 3 Credits.
This course examines how recently developed single-molecule methods have enhanced our understanding of cellular processes. The ability to observe and manipulate individual biological macromolecules has revolutionized our understanding of the machines and processes that enable life. The course will provide an overview of single-molecule approaches and discuss relevant publications that exemplify how these methodologies are applied to biological problems. For each approach, key concepts will be introduced in a lecture/discussion, followed by a student-led presentation of a related publication.Recommended coursework: Physics II
Prerequisite(s): AS.020.305 OR AS.250.316
Area: Natural Sciences

AS.020.363. Developmental Biology. 3 Credits.
This class will explore the development of animals from a single fertilized egg into a fullyformed organism. We will emphasize experimental methods to understand the molecular mechanisms controlling development.
Prerequisite(s): AS.020.306 AND (AS.020.330 OR AS.020.303)
Area: Natural Sciences
AS.020.364. Molecular and Cellular Mechanisms of Reproduction. 3 Credits.
This course will address current research in the cellular and molecular biology of fundamental reproductive processes. The topics covered will vary from year to year, based on current issues in the scientific literature. The focus will be on cellular and molecular mechanisms involved in the synthesis and actions of hormones, gametogenesis, fertilization, pathologies of the reproductive tracts, developmental origins of reproductive health and disease, contraception, and infertility. The emphasis will be on defining cellular and molecular mechanisms that regulate reproductive processes, identifying the hypotheses tested in scientific papers and the strengths and limitations of experimental methods used to test the hypotheses, and evaluating and integrating data described in scientific papers. Classes will consist of a mix of lectures and student oral presentations. Recommended coursework: Reproductive Physiology

Prerequisite(s): AS.020.306
Area: Natural Sciences

AS.020.365. Intro To Human Skeleton. 3 Credits.
This course will provide a basic understanding of human skeletal biology, including bone composition and bone growth, recognition of skeletal elements, functional anatomy of different skeletal systems, comparative anatomy, and forensic anthropology (sexing and aging, body size reconstruction, bone pathology). Lectures will be combined with hands-on experience with bone models and real bone specimens.

Area: Natural Sciences

AS.020.367. Primate Adaptation and Evolution. 3 Credits.
A close look at our closest relatives, the primates. Topics include: evolutionary theory, primate evolution, primate behavior and ecology, human evolution, and modern human variation.

Area: Natural Sciences

AS.020.373. Develop Biology Lab. 2 Credits.
This laboratory is designed to give students exposure to the different techniques and organisms used in Developmental Biology research. Our primary goal in this course is to help you learn to think like a scientist and gain a better understanding of how scientists study development. With that goal in mind, students design and execute an independent project during the second half of the semester. The independent projects will culminate with a poster session in which the project and its outcome will be shared with the other students. Please be aware that because we are working with live developing embryos, you will sometimes be required to return to lab between scheduled class times.

Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class.; AS.020.363

AS.020.374. Comparative Animal Physiology. 3 Credits.
This class examines animal physiology from an evolutionary and comparative viewpoint. The goal is to examine the commonalities, as well as unique differences, in how various animal organisms address the necessary life functions. Topics will include metabolism, neural systems, respiration, muscle systems, water and salt homeostasis, thermal regulation, and reproduction

Prerequisite(s): AS.020.305
Area: Natural Sciences

AS.020.377. Comparative Physiology Lab. 1 Credit.
This course examines the physiological principles that guide animal life processes. As a complement to the Comparative Animal Physiology lecture course, this Laboratory examines fundamental physiological principles through hands-on investigations of animal physiology using zebrafish and mussel as model systems and research-grade data acquisition systems.

Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.; AS.020.374, students may enroll concurrently.
Area: Natural Sciences

AS.020.379. Evolution. 3 Credits.
This course takes a broad look at the impact of natural selection and other evolutionary forces on evolution. Emphasis is placed on what we can learn from genome sequences about the history of life, as well as current evolutionary pressures. Recommended Course Background: AS.020.306, AS.020.330, or permission required
Area: Natural Sciences

AS.020.380. Chromatin, Chromosomes and The Cell Nucleus. 3 Credits.
The course will present analysis of the structural basis of the genome organization in a eukaryotic nucleus and the utilization of its genomic content. We start with the analysis of the fluctuations of the structure of the double helix in response to its cellular microenvironment that yield DNA structural and functional polymorphism. Next we will deal with the mechanics of DNA compaction into chromatin and the differentiation of the chromatin structure at the level of the nucleosome via histone variants and posttranslational modifications and chromatin-based epigenetics. We will next move to chromosomal territories, chromosomal imprinting and chromosome inactivation. Finally, a few lectures will focus on selected topics of special interests that bridge current basic discoveries with potential medical applications such as the nature of telomeres and telomerase-related diseases; the role of histone octamer tails in epigenetics; transcription factors and the regulated expression of the genome. Whenever possible, paradigms will be used that correlate chromatin differentiation to certain human diseases.

Prerequisite(s): AS.020.305 OR AS.020.306; AS.020.303 with approval of the instructor only.
Area: Natural Sciences

AS.020.382. A Biophysical View of Biology. 3 Credits.
The objective of this course is to develop in students a strong, intuitive, and physically based sense of how fundamental biological processes work—that is, the sizes, shapes, motions, interactions, and cellular functions of biological molecules. Topics will include cell and population growth, diffusion, enzyme kinetics, the qualitative and quantitative aspects of the synthesis, structure, and function of proteins and nucleic acids, least squares equation fitting, Bayesian statistics, and the fluctuation test. The biophysical constraints that dictate the form of the immune system and constraints relevant to development will be discussed.

Prerequisite(s): AS.020.303 AND AS.110.107 AND AS.171.104
Area: Natural Sciences
AS.020.384. Fundamentals of Drug Discovery. 3 Credits.
The creation and implementation of new approaches to the drug
discovery and development process is a very active area of research.
Currently, only one compound out of 5,000 that enter preclinical
studies becomes a drug. Moreover, the development process is
time consuming, lasting more than ten years on average. The rate of failure
is extremely high. It has become evident that this field is in urgent
need of revolutionary changes. This course will cover drug discovery
issues ranging from the identification of hits to their optimization as
drug candidates. Current as well as novel and proposed approaches
aimed at accelerating discovery, potency optimization, selectivity,
pharmacokinetics and other drug properties will be discussed.
Prerequisite(s): AS.020.305 AND AS.020.306
Area: Natural Sciences

AS.020.385. Epigenetics. 3 Credits.
Course description: This course emphasizes epigenetic regulatory
mechanisms including DNA methylation, histone modifications, histone
variants, non-coding RNA regulation, and chromatin remodeling, etc.
We will discuss the broad impact of epigenetic regulation in various
biological events, ranging from stem cell activity, small RNAs' and long
non-coding RNAs' function, to transgenerational epigenetic inheritance
and human diseases. We will mainly use recent literatures to discuss
various topics. There are both students' presentation and writing
components for this course. Students will be assigned a series of papers
for their presentation and faculty will meet with student presenters ahead
of the time to go through the presentation content.
Prerequisite(s): AS.020.303 OR AS.020.330
Area: Natural Sciences

AS.020.392. Anatomy & Physiology. 3 Credits.
Lectures will cover descriptive and functional anatomy; and should leave
students with a better understanding of anatomical terminology and the
relationship of structure to biological function within the human body.
Additionally, students will gain perspective on human disease as they
study the anatomical and functional basis of clinical symptoms.
Area: Natural Sciences

AS.020.401. Master's Seminar: Molecular & Cellular Biology I. 3
Credits.
This is a weekly seminar designed for graduate students enrolled
in the B.A./M.S. and Ph.D. programs. The seminar involves student
presentations of research and discussion of topics of current interest in the
field. BA/MS candidates only.
Area: Natural Sciences

AS.020.402. Master's Seminar: Molecular and Cellular Biology II. 3
Credits.
This is a weekly seminar designed for students enrolled in the BA/MS
program. The seminar involves student presentations of research and
discussion of topics of current interest in the field. BA/MS students only.
Area: Natural Sciences

AS.020.410. Teaching and Learning in Biology. 1 Credit.
THIS COURSE IS BY INSTRUCTOR PERMISSION AND ONLY AND
ECSUVELY FOR STUDENT WHO ARE INVITED AND ACCEPTED TO BE
LEARNING ASSISTANTS FOR OTHER BIOLOGY COURSES. THE COURSE
WILL FOCUS ON DISCUSSING EDUCATION AND APPLICATION OF
CURRENT BEST TEACHING PRACTICES TO BIOLOGY CLASSES.
Area: Natural Sciences

AS.020.415. Advanced Biomedical Research. 3 Credits.
This course for advanced undergraduates includes classroom
instruction in interdisciplinary research approaches and lab work on an
independent research project in the lab of a Bloomberg Distinguished
Professor. Lectures will focus on cross-cutting techniques such as data
visualization, statistical inference, and scientific computing. In addition
to two 50-minute classes per week, students will commit to working
approximately 3 hours per week in the lab of one of the professors.
The student and professor will work together to schedule the research
project. Students will present their work at a symposium at the end of the
semester. This course can be used as 1 credit of independent research
for the MCB major requirement.
Area: Natural Sciences

AS.020.441. Mentoring in General Biology. 1 Credit.
To become a mentor, students must have successfully completed
AS.020.151/152, must apply using the form on the Biology Dept. website
(https://bio.jhu.edu/undergraduate/courses/), and must be accepted by
the instructors. The deadline to apply is April 15th. S/U
Area: Natural Sciences

AS.020.442. Mentoring in General Biology. 1 Credit.
This course provides students who have taken General Biology I & II
the opportunity to mentor new students in General Biology I & II.
Mentors collaborate with faculty on how to lead effective sessions,
help student teams complete team assignments, and generally help
students understand difficult concepts and principles in biology.
Mentors must have a firm command of the topics covered in biology
and must meet with both faculty and students through the course of the
semester. To become a mentor, students must have successfully
completed AS.020.151/AS.020.152, must apply using the form on the
Biology Department website, and must be accepted by the instructors.
The deadline to apply is April 8th. Recommended Course Background:
AS.020.150/AS.020.152
Area: Natural Sciences

AS.020.501. Introduction Independent Study. 3 Credits.
An independent course of study may be pursued under the direction of
an adviser on those topics not specifically listed in the form of regular
courses. Freshmen and Sophomores only. Perm. Req’d.
Prerequisite(s): You must request Independent Academic Work using
the Independent Academic Work form found in Student Self-Service:
Registration & Online Forms.

AS.020.502. Introduction Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using
the Independent Academic Work form found in Student Self-Service:
Registration & Online Forms.

AS.020.503. Independent Research in Biology. 3 Credits.
Planning and conducting original laboratory investigations on biological
problems, collection and analysis of data, reporting of results. Permission
of full-time faculty member in Biology dept.
Prerequisite(s): You must request Independent Academic Work using
the Independent Academic Work form found in Student Self-Service:
Registration & Online Forms.

AS.020.504. Introduction to Research. 0 - 3 Credits.
Perm. Req’d. Freshmen or Sophomores only
Prerequisite(s): You must request Independent Academic Work using
the Independent Academic Work form found in Student Self-Service:
Registration & Online Forms.
AS.020.505. Internship - Biology. 0 - 3 Credits.
An independent course of study may be pursued under the direction of an adviser on those topics not specifically listed in the form of regular courses. Consent of adviser required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.020.506. Internship - Biology. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.020.511. Independent Study. 3 Credits.
An independent course of study may be pursued under the direction of an adviser on those topics not specifically listed in the form of regular courses. Perm. Req'd.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.020.512. Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.020.513. Research Problems. 3 Credits.
Planning and conducting original laboratory investigations on biological problems, collection and analysis of data, reporting of results. Juniors and Seniors Only. Recommended Course Background: Permission of full-time faculty member in Biology dept.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.020.514. Research Problems. 0 - 3 Credits.
Perm. Req'd. Juniors and Seniors only
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.020.515. Mentored Research. 9 Credits.
This course provides BA/MS students with intensive research experience for a full academic year. Students in the program work under the direction of a research mentor on an original research project, produce a written report in the form of a thesis, and make a presentation of the work to the Biology Department. BA/MS or BS/MS candidates only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.020.553. Mentored Research. 9 Credits.
BA/MS candidates only.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.020.591. Summer Research Experience. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.020.594. Internship - Summer. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.020.597. Research. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

This course involves 30 minute sessions with each member of the training faculty. It is designed to acquaint incoming graduate students with the research topics and research philosophy of each laboratory. This should help students choose future rotations. More generally the course provides a range of perspectives on the future of specific fields and strategies for success in science. First year Biology Graduate students only

AS.020.605. COMPUTATIONAL SIMULATION AND ANALYSIS OF PROTEIN STABILITY AND INTERACTIONS.
This course deals with the development of computer code for the simulation and non-linear least squares analysis of experimental macromolecular data including protein stability (chemical and temperature denaturation, single and multiple domain proteins); different types of binding (single site, multiple sites, independent and cooperative binding); linkage between conformational equilibrium and binding; enzyme kinetics and inhibition; kinetics of protein denaturation/aggregation. The course will use Python as the programing language. Requirements for this course include: 1) Basic Python programing skills; 2) Calculus; 3) Students must have a basic understanding of conformational equilibrium, binding equilibriam and enzyme kinetics. If not sure, please talk to the Instructor.
Area: Natural Sciences

AS.020.607. Quantitative Biology Bootcamp.
Quantitative and computational methods have become essential to modern biological research. The goal of this course is to provide an introduction to basic skills that will enable students to employ these methods. Students will learn how to work in a command line shell and use software to perform analyses of large biological datasets. Students will learn basic programing using the Python language. Throughout the course students will apply the skills learned to practical analysis problems emphasizing parsing and working with biological data formats, exploratory data analysis and visualization, and numerical and statistical methods. This course is only open to first-year students in the CMDB program and will be held from September 2nd through September 5th, 2014.

AS.020.612. Introduction to the Human Brain.
This course explores the outstanding problem of biology: how knowledge is represented in the brain. Relating insights from cognitive psychology and systems neuroscience with formal theories of learning and memory, topics include: (1) anatomical and functional relations of cerebral cortex, basal ganglia, limbic system, thalamus, cerebellum, and spinal cord; (2) cortical anatomy and physiology including laminar/columnar organization, intrinsic cortical circuit, hierarchies of cortical areas; (3) activity-dependent synaptic mechanism; (4) functional brain imaging; (5) logicist and connectist theories of cognition; and (6) relation of mental representations and natural language. Co-listed with AS.020.312.
AS.020.614. Signaling in Development and Disease. A seminar on current topics on signal transduction mechanisms underlying neuronal morphology, development and function. The proper functioning of the nervous system relies on the establishment of precise neuronal circuits through a developmental program including proliferation, neuronal migration, axonal growth, and neuronal survival. This course pertains to the extracellular cues and downstream neuronal signaling pathways that coordinate these key events during neuronal development. The course will also cover the role of aberrant signaling mechanisms in neuronal degeneration and disease. Area: Natural Sciences

AS.020.617. Quantitative Biology Lab 1. This computer lab is designed for first year CMDB graduate students to enhance their quantitative skills for fall core courses. This course will cover quantitative and computational analysis of biological datasets, emphasizing molecular biology. In a hands-on lab setting, students will carry out computer analyses using techniques such as DNA methylation, analysis of transcription factor binding and motifs, detecting genome variation, measuring expression of genes, and understanding genome evolution. Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, log in to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.020.618. Quantitative Biology Lab II. This computer lab is a continuation of the fall quantitative biology lab for CMDB graduate students. This semester will cover quantitative and computational modeling of selected topics from biophysics, cellular biology, and developmental biology. Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, log in to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.020.619. Communicating Science. "Communicating Science" is a required course for 2nd year students in the CMDB program. It will be held at the Carnegie Institution for Science Bldg., 3520 San Martin Drive commencing August 30th, 2018. The course is intended to provide students with practical experience organizing oral presentations, preparing science manuscripts, and writing an application for an NIH National Research Service Award (F31). Participants will also learn about critically reviewing grants and papers. Instructor: Dr. M.E. Halpern.

AS.020.629. Microbiology. This course explores the physiology and genetics of microorganisms within an evolutionary and ecological framework. Concepts will be supported by primary literature exploring microbial evolution and microbial communities including that of the human microbiome.

AS.020.630. Human Genetics. Will examine the growing impact of human genetics on the biological sciences, on law and medicine, and on our understanding of human origins. Topics include structure and evolution of human genome, genetic and physical mapping of human chromosomes, molecular genetics of inherited diseases and forensic genetics. Area: Natural Sciences, Social and Behavioral Sciences

AS.020.637. Genomes & Development. This course covers gametogenesis, embryogenesis, post-embryonic development, genetic analysis, developmental genetics, model developmental systems, and cell determination. Biology graduate students only except with written permission from the instructor.

AS.020.643. Graduate Virology. This course will cover basic principles of viral replication and pathogenesis, as well as the host response to viral infection. It will then focus on several viruses of interest, including HIV-1, Influenza, Human Papilloma Virus, Hepatitis C, Ebola Virus, and Zika Virus.

AS.020.644. RNA. A graduate seminar course that will explore RNA from its beginning in the primordial RNA world to its present-day roles in gene regulation in bacteria, mammals, and viruses. Topics will include: The early RNA world, Riboswitches, Ribozymes, evolution of protein synthesis, splicing, telomerase, RNA interference, microRNAs, long non-coding RNAs, viral non-coding RNAs, and RNA therapeutics. Biology PhD students only. MCB MS students with instructor’s permission during ADD/DROP Period. Area: Natural Sciences

AS.020.662. Single Molecule Approaches to Biology. This course examines how recently developed single-molecule methods have enhanced our understanding of cellular processes. The ability to observe and manipulate individual biological macromolecules has revolutionized our understanding of the machines and processes that enable life. The course will provide an overview of single-molecule approaches and discuss relevant publications that exemplify how these methodologies are applied to biological problems. For each approach, key concepts will be introduced in a lecture/discussion, followed by a student-led presentation of a related publication. Area: Natural Sciences

AS.020.668. Advanced Genetics and Molecular Biology. This course examines modern concepts in genetics and molecular biology. The course focuses on the mechanisms controlling replication, recombination, transcriptional, posttranscriptional, translational, and posttranslational regulation. Lectures will have three parts: a student-led paper presentation, a discussion about the concepts surrounding atopic, and a discussion of modern techniques to experimentally probe the topic. Biology PhD students only.

AS.020.674. Quantitative Biology and Biophysics. Students will be given instruction in the concepts of physical and quantitative biology. Students will learn to simulate biological processes, identify the relationship between data and models, and will learn to fit biological data. Note: Friday classes will be held in UTL 398.

AS.020.675. Graduate Comparative Physiology. This course addresses the basic principles that underlie physiological processes in animals. Framed in an evolutionary context, processes ranging from respiration, circulation, neural control, movement, excretion and metabolism will be understood in terms of core principles that also apply to humans. Emphasis is placed on the physical and chemical principles underlying the comparative biology of how different animals solve physiological problems.
The creation and implementation of new approaches to the drug discovery and development process is a very active area of research. Currently, only one compound out of 5,000 that enter preclinical studies becomes a drug. Moreover, the development process is time consuming, lasting more than ten years on average. The rate of failure is extremely high. It has become evident that this field is in urgent need of revolutionary changes. This course will cover drug discovery issues ranging from the identification of hits to their optimization as drug candidates. Current as well as novel and proposed approaches aimed at accelerating discovery, potency optimization, selectivity, pharmacokinetics and other drug properties will be discussed. Grad students only.
Area: Natural Sciences

All aspects of cell biology are reviewed and updated in this intensive course through critical evaluation and discussion of the current scientific literature. Topics include protein trafficking, membrane dynamics, cytoskeleton, signal transduction, cell cycle control, cell physiology, and the integration of these processes in neurons. Recommended Course Background: AS.020.306

AS.020.687. Foundations & Applications of Molecular Biology.
An advanced course for graduate students in the biological sciences, although undergraduates are welcome, that stresses fundamental principles and analysis. It is generally focused on gene and protein structure and function.
Area: Natural Sciences

AS.020.699. CMDB Responsible Conduct in Research.
This course involves discussions of ethical conduct and the responsible practice of scientific research. Department signature only; restricted to graduate students in Biology PhD students only.

AS.020.753. Logic and Methods in Modern Biology.
The purpose of this course is to gain experience in critical thinking about the logic and methods used in modern biological research. The main approach will be the critical reading, presentation, and discussion of primary research papers, and the preparation and presentation of a research proposal. It is held once a week on the NIH Bethesda campus. Grad students only.
Prerequisite(s): AS.020.637 AND AS.020.668 AND AS.020.674
Area: Natural Sciences

AS.020.801. Research – Biological Problems.
Independent research for the Ph.D. dissertation. Biology Ph.D. students only

AS.020.802. Research-Biological Problems.
Biology Graduate students only.

AS.020.823. Introduction to Biology Research.
First year Biology Graduate Students only

AS.020.824. Introduction to Biology Research.
First year Biology Graduate Students only

AS.020.825. Introduction to Research.
Open to first year Biology graduate students only.

AS.020.826. Introduction to Biology Research.
Open to first year Biology graduate students only.
AS.030 (CHEMISTRY)

AS.030.101. Introductory Chemistry I. 3 Credits.
The fundamental principles of chemistry, including atomic and molecular structure, bonding, elementary thermodynamics, equilibrium and acids and bases, are introduced in this course. Can be taken with Introductory Chemistry Laboratory – I unless lab has been previously completed. Note: Students taking this course and the laboratory 030.105 may not take any other course in the summer sessions and should devote full time to these subjects. High school physics and calculus are strongly recommended as prerequisites. First and second terms must be taken in sequence. Students not enrolled in college (unless they are rising freshmen) may not take this course.

Area: Natural Sciences

AS.030.102. Introductory Chemistry II. 3 Credits.
Continuation of AS.030.101 emphasizing chemical kinetics, chemical bonding. Topics: energy levels and wave functions for particle-in-a-box and hydrogen atom and approximate wave functions for molecules including introduction to hybrid orbitals. Note: Appropriate adjusting caps should be used to ensure both sections are approximately the same size
Prerequisite(s): Students enrolled in AS.030.103 may not enroll in or receive credit for AS.030.102.,AS.030.101 OR AS.030.107
Area: Natural Sciences

AS.030.103. Applied Chemical Equilibrium and Reactivity w/lab. 4 Credits.
This course is designed for students who have scored a 4 or 5 on the AP Chemistry Exam or who have scored a 6 or 7 HL IB Chemistry Exam. This course will review an advanced introductory chemistry sequence in a single semester. Chemical equilibrium, reactivity and bonding will be covered. These topics will be explored through laboratory experiments and problem solving, and discussing these principles in the context of current research. For details on chemistry placement and exam credit policies, please see http://www.advising.jhu.edu/placement_chemistry.php Students who have previously enrolled in AS.030.101 or AS.030.105 may not earn credit for AS.030.103 and students enrolled in AS.030.103 may not enroll in or receive credit for AS.030.102/AS.030.106.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences

AS.030.105. Introductory Chemistry Laboratory I. 1 Credit.
Laboratory work includes quantitative analysis and the measurement of physical properties. Open only to those who are registered for or have successfully completed Introductory Chemistry 030.101.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences

AS.030.106. Introductory Chemistry Laboratory II. 1 Credit.
Laboratory work includes some quantitative analysis and the measurement of physical properties. Open only to those who are registered for or have completed Introductory Chemistry II (AS.030.102). Permission required for pre-college students.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.
Area: Natural Sciences

AS.030.107. Chemical Principles w/lab: An Integrated Studio Course. 4 Credits.
An introduction to the fundamental principles of chemistry. The main topics to be covered are fundamental chemical reactions, stoichiometry and the balancing of chemical equations, solutions, gas laws, chemical equilibrium, acids and bases, and elementary chemical thermodynamics. Laboratory experiments and laboratory techniques will be incorporated into the course. Course will be run in three 2 hour blocks per week some of which will be used for lab. This course is equivalent to AS.030.101 and AS.030.105.
Area: Natural Sciences

AS.030.109. Metals in Everyday Life. 3 Credits.
Metals are an integral part of the living kingdom and non-living world around us. Starting with the fundamental physical and chemical properties of metals, the course will encompass topics that include the environmental, biological, industrial and medicinal importance of metals, highlighting the interdisciplinary nature of their use. We will address the very basic questions that excite every child- what makes metals shiny, malleable and ductile and what makes them capable of conducting heat and electricity. Topics on coordination complexes and enzymes will help students understand the role of metals in biology. For the environmental chemistry aspect, we will focus on heavy metals and their toxicity, nuclear fission etc. Metals in industry roles of metals in metabolism, disease prevention and development of medicinal drugs will be covered in the final weeks of the course. There will also be several opportunities for students to present independent research, engage in group discussion, and after taking this exciting course, they would be able to understand why metals are so unique and an indispensable part of everyday life.

AS.030.112. Chemistry with Problem Solving I.
This course is for students who have had moderate or limited exposure to the subject. Special emphasis is placed on scientific problem-solving skills. There are two discussion sections per week, including one devoted exclusively to interactive quantitative problem solving. A typical student may have taken a year of descriptive chemistry as a high school sophomore, but has not been exposed to the problem-solving mathematical approach used in university-level science courses. Taken concurrently with AS.030.101 and AS.030.102. Students who have received an AP4 or higher are not considered eligible for this course and should not enroll.
Prerequisite(s): AS.030.101 OR AS.030.102
AS.030.113. Chemistry with Problem Solving II.  
This course is for students who have had moderate or limited exposure to the subject. Special emphasis is placed on scientific problem-solving skills. There are two discussion sections per week, including one devoted exclusively to interactive quantitative problem solving. A typical student may have taken a year of descriptive chemistry as a high school sophomore, but has not been exposed to the problem-solving mathematical approach used in university-level science courses. Taken concurrently with AS.030.101 and AS.030.102.

AS.030.114. Freshman Seminar: The Making of a Chemist. 3 Credits. 
Students will be introduced to professional culture and practice in academic and industrial chemical research laboratories. Through reading and analysis of a few series of seminal papers from the 1800's to the present leading to Nobel Prizes in Chemistry or Physics, students will learn how scientific inquiry and writing has evolved over time. Through discussion and practice, students will learn how to communicate chemistry in social media, scientific publications, scientific talks, and public lectures. 
Area: Natural Sciences
Writing Intensive

AS.030.115. Introduction to Forensic Chemistry: The Science of Crime-solving. 3 Credits. 
In this course, Introduction to Forensic Chemistry, The Chemistry of Crime-solving, students will gain knowledge on the basic chemical principles and various methods of chemical analysis that are employed to answer legal questions and solve crimes. They will be introduced to major forensic chemistry divisions (Controlled Substances, Toxicology, Trace Evidence, Prints, DNA analysis and Firearms), and the wide-range of routine procedures instrumental in analyzing different forms of evidence. For example, students will learn how chromatography and spectroscopy translates to forensic applications such as trace evidence analysis, as well as understand the underlying principles of fingerprinting or DNA profiling. Furthermore, these will be discussed with accompanying real-life case examples and additional simple hands-on laboratory experiments to create a more engaging atmosphere.

AS.030.117. Chemistry in Art and Archaeology. 3 Credits. 
From tracing trading routes to dating artifacts, explore the central science, chemistry, as it relates to the study of antiquities. Gain a general overview of non-destructive and destructive techniques for studying artifacts. Gain practical knowledge on how to implement quantitative and qualitative instrumentation in a laboratory and museum setting including. Visit a working museum laboratory to discuss the unique joys and challenges of archaeometry. Study recent advances with primary source analytical chemistry material and assess practical future implementation of new techniques. Learn to tune communication style based upon an audience within and without your main discipline. 
Area: Natural Sciences

AS.030.118. The Science of Color. 3 Credits. 
This course is designed to introduce students to the fundamental physical and chemical origins of color and how we perceive them - from the vivid palette provided by the natural world to the brightly colored clothing we wear. Beginning with the basic principles of light and color, we will embark on an interdisciplinary investigation of color, including, but not limited to: color chemistry; color in biology; the physiology of the eye; how color affects human psychology; the history of color and light; and the use of color in art. Discover the physical and chemical explanations behind several noteworthy phenomena such as sunsets, color-blindness, rainbows, fireworks, chameleons and the Aurora Borealis. 
Area: Natural Sciences

AS.030.204. Chemical Structure and Bonding w/Lab. 4 Credits.  
An introduction to the synthesis, structure, and reactivity of inorganic compounds. Modern approaches to chemical bonding, including molecular orbital, ligand field, and crystal field theories, will be applied to understanding the physical and chemical properties of inorganic materials. Other topics to be discussed include magnetic properties, electronic spectra, magnetic resonance spectra, and reaction kinetics. The integrated laboratory will cover basic synthetic, measurement, and calculation methods of inorganic chemistry. 
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module. AS.030.102 OR AS.030.103 OR an AP score of 5 
Area: Natural Sciences
Writing Intensive

AS.030.205. Introductory Organic Chemistry I. 4 Credits. 
The fundamental chemistry of the compounds of carbon. Methods of structure determination and synthesis. The mechanisms of typical organic reactions and the relations between physical and chemical properties and structures. 
Prerequisite(s): AS.030.102 OR AS.030.103 OR EN.510.101 OR AS.030.204. 
Area: Natural Sciences

AS.030.206. Organic Chemistry II. 4 Credits. 
Continuation of AS.030.205 Organic Chemistry I with special emphasis on organic synthesis and related synthetic methods. Students may not simultaneously enroll for AS.030.212 and AS.030.206. 
Prerequisite(s): AS.030.205 
Corequisite(s): Students may not simultaneously enroll for AS.030.212 and AS.030.206. 
Area: Natural Sciences

AS.030.207. Problem Solving Methodology in Organic Chemistry I. 2 Credits. 
This course will focus on the skills and strategies often utilized for solving problems in organic chemistry. In a seminar-style format, we will focus on a variety of strategies and techniques that students are otherwise expected to discover independently. This optional course is designed to help students succeed in Organic Chemistry I. The course is graded on a pass/fail basis, and is designed to be fun (believe it or not). Students work together in groups to solve challenging problems, focusing on the strategies necessary to solve each problem. This course is not required in order to succeed in Organic Chemistry I, but students in the past have found it to be helpful in guiding their study efforts for Organic Chemistry I. 
Area: Natural Sciences

AS.030.208. Problem Solving Methodology in Organic Chemistry II. 2 Credits. 
This course will focus on the skills and strategies often utilized for solving problems in organic chemistry. In a seminar-style format, we will focus on a variety of strategies and techniques that students are otherwise expected to discover independently. This optional course is designed to help students succeed in Organic Chemistry II. The course is graded on a pass/fail basis, and is designed to be fun (believe it or not). Students work together in groups to solve challenging problems, focusing on the strategies necessary to solve each problem. This course is not required in order to succeed in Organic Chemistry II, but students in the past have found it to be helpful in guiding their study efforts for Organic Chemistry II. 
Area: Natural Sciences
AS.030.212. Honors Organic Chemistry II with Applications in Biochemistry and Medicine. 4 Credits.
Second semester undergraduate organic chemistry from a more advanced prospective emphasizing connections to biochemistry (protein and DNA structure, chemical logic of metabolism, enzyme mechanisms) and medicine (how drugs work, their targets, infectious and genetic diseases). The standard topics of second semester organic chemistry (e.g. reactivity of aromatic and carbonyl-containing molecules) will all be covered, but amplified and enriched with topics as noted. Students may not simultaneously enroll in AS.030.212 and AS.030.206. Prereq: Must receive a B or better in the first semester (AS.030.205). Prerequisite(s): Must receive a B or better in the first semester (AS.030.205)

AS.030.225. Introductory Organic Chemistry Laboratory. 3 Credits.
Laboratory work includes fundamental laboratory techniques and preparation of representative organic compounds. Open only to those who are registered for or have completed Introductory Organic Chemistry. Note: This one-semester course is offered each term. Introductory Organic Chemistry I/II requires one semester of the laboratory. Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module. (AS.030.205) (AS.030.225 OR AS.030.227) (AS.030.206 OR AS.030.212) Area: Natural Sciences

AS.030.228. Intermediate Organic Chemistry Laboratory. 3 Credits.
Lab skills already acquired in AS.030.225 will be further developed for synthesis, isolation, purification, and identification of organic compounds. Spectroscopic techniques, applications will be emphasized. Recommended Course Background: AS.030.225 Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module. (AS.030.205 AND (AS.030.225 OR AS.030.227);(AS.030.206 OR AS.030.212) Area: Natural Sciences

AS.030.245. Quantitative Analytical Laboratory. 3 Credits.
This is a 3 credit lab that will serve as an introduction into analytical techniques and quantitative methods. There will be a 1 hour of pre-lab lecture component to this course to discuss the lab for that day. Prerequisite(s): ((AS.030.101 & AS.030.102) OR AS.030.103) AND AS.030.205 Writing Intensive

AS.030.301. Physical Chemistry I. 3 Credits.
The laws of thermodynamics, their statistical foundation, and their application to chemical phenomena. Students should have knowledge of general physics, general chemistry, and calculus (two semesters recommended). Freshmen by permission only. Area: Natural Sciences

AS.030.302. Physical Chemistry II. 3 Credits.
Introduction to quantum mechanics, its application to simple problems for which classical mechanics fails. Topics: Harmonic oscillator, hydrogen atom, very approximate treatments of atoms and molecules, and theoretical basis for spectroscopy. Recommended Course Background: AS.030.301 Area: Natural Sciences

AS.030.305. Physical Chemistry Instrumentation Laboratory I. 3 Credits.
This course is designed to illustrate the principles of physical chemistry and to introduce the student to techniques and instruments used in modern chemical research. Chemistry majors are expected to take this sequence of courses, rather than AS.030.307. Chemistry majors only. Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module. Area: Natural Sciences

AS.030.306. Physical Chemistry Instrumentation Laboratory II. 3 Credits.
Designed to illustrate the principles of physical chemistry, introduce the student to spectroscopic techniques and instruments used in modern chemical research. Chemistry majors are expected to take this course rather than 030.307. Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module. Area: Natural Sciences
AS.030.070. Experiments in Physical Chemistry for Engineers. 3 Credits.
This is a one-semester course which selects experiments that are most relevant to chemical engineering. Chemical Engineering majors only. Recommended Course Background: AS.030.301-AS.030.302 or equivalent.
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class.
Area: Natural Sciences

AS.030.315. Biochemistry I. 4 Credits.
Foundation for advanced classes in Biophysics and other quantitative biological disciplines. Lecture and computer laboratory. This class is the first semester of a two semester course in biochemistry. Topics in Biochemistry I include chemical and physical properties of biomolecules and energetic principles of catabolic pathways. Computer labs include extensive use of molecular graphics and modelling of reaction kinetics and pathway flux. Co-listed with AS.250.315
Prerequisite(s): Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module. AS.030.206 OR AS.030.212
Area: Natural Sciences

AS.030.316. Biochemistry II. 3 Credits.
Biochemical anabolism, nucleic acid structure, molecular basis of transcription, translation and regulation, signal transduction with an emphasis on physical concepts and chemical mechanisms. Format will include lectures and class discussion of readings from the literature.
Prerequisite(s): AS.030.315 OR AS.250.315 OR AS.020.305
Area: Natural Sciences

AS.030.356. Advanced Inorganic Lab. 3 Credits.
Laboratory designed to illustrate the principles and practice of inorganic chemistry through the synthesis and characterization of transition metal and organometallic compounds. Methods used include vacuum and inert atmosphere techniques. Instrumental approaches and modern spectroscopic techniques are applied to the characterization of compounds generated. It is strongly recommended that students have taken or are taking one of the following courses: AS.030.204, AS.030.442, AS.030.449, or AS.030.472.
Prerequisite(s): AS.030.228
Area: Natural Sciences

AS.030.370. Biophysical Chemistry. 4 Credits.
Course provides working understanding of physical chemistry of the cell, emphasizing problem solving. Topics include classical and statistical thermodynamics, thermodynamics of proteins and nucleic acids, protein folding, calorimetry, ligand binding thermodynamics, linkage, cooperativity and anticooperativity, allosteric models, lattice statistics, helix-coil transition, and polymer theory. When appropriate, students visit the laboratory to set up data collection and learn to analyze the resulting data computationally, using nonlinear least-squares methods.
Prerequisite(s): (AS.171.101 OR AS.171.103 OR AS.171.107) AND (AS.171.102 OR AS.171.104 OR AS.171.108) AND (AS.030.103 OR AS.030.102) AND (AS.110.106 OR AS.110.108) AND (AS.110.107 OR AS.110.109)
Area: Natural Sciences

AS.030.371. Chemistry for Connoisseurs. 3 Credits.
This course will survey the structural and physical properties of chemicals often considered as part of the “finer things in life” including topical discussions of the chemistries of food, drink, art, cosmetics and clothing, among others. Despite the pretentious name, the general theme of the course is to put chemical identities onto the things we interact with on a daily basis but most likely take for granted at a molecular level. Current event topics in consumer chemistry will also be covered as they arise. Students will have the chance to research topics of interest. The course material will be enriched by the contributions from special guest lecturers and occasional field trips.
Prerequisite(s): AS.030.205 or equivalent
Area: Natural Sciences

Writing Intensive

AS.030.402. Experimental Methods in Physical Chemistry. 3 Credits.
This course introduces the student to experimental methodologies used in gas phase physical chemistry. Topics to be covered include vacuum technology, charged particle optics, lasers, mass spectrometry, data acquisition, detectors, measurement of temperature and pressure, and design and fabrication of scientific apparatus. These topics will be tied together with examples of specific experimental studies.
Area: Natural Sciences

AS.030.403. Optoelectronic Materials and Devices: Synthesis, Spectroscopy, and Applications. 3 Credits.
This course provides an introduction to the vast chemistry and physics of solid-state materials. The course begins with a fundamental description of bonding in crystalline solids and calculation of electronic band structure. We then extend our discussion to methods for the synthesis of low-dimensional materials and hierarchical structures, including quantum dots (0D), nanowires (1D), graphene and graphene analogs (2D), and thin-film superlattices. An in-depth discussion of spectroscopic and characterization techniques for solid-state materials will follow and focus on some of the foundational studies of quantum devices and cooperative phenomena. At this stage we will describe recent advances in electron-microscopy (e.g. aberration-corrected and energy filtered TEM, atom-probe tomography) that are revolutionizing the structural, compositional, and electronic characterization of materials. The course will conclude with a survey of contemporary topics in solid-state and nanomaterials science, including functional devices and circuits, assembly, energy conversion and catalysis, and biological sensing. Recommended Course Background: AS.030.301 and AS.030.402 are preferred, but instructor approval may be granted in lieu of these courses.
Area: Natural Sciences
AS.030.404. Electrochemical Systems for Energy Conversion and Storage. 3 Credits.
This course will be focused on the fundamentals and applications of electrochemical methods in catalysis, charge transport, and energy conversion and storage. Topics that will be covered are basic electrochemical techniques, homogenous and heterogeneous (photo)electrocatalysis, fuel cells, and charge storage devices. The class will conclude with a group report and presentation on a recent development in the field of energy catalysis, conversion, and storage.
Course topics include: 1) Fundamentals of electrochemistry, 2) Potential sweep methods and current-controlled techniques, 3) Impedance analysis, 4) Electrochemistry coupled with other characterization methods, 5) Electrocatalysis and photoelectrochemical catalysis, 6) Basics in fuel cells and current technologies (alkaline, polymer exchange membrane, solid oxide...), 7) Basics in batteries and current technologies (Pb acid, Li-based, other metals...) Recommended Course Background: AS.030.204 or AS.030.449 or AS.030.472, or instructor approval for undergraduate students. No pre-requisites for graduate students.
Area: Natural Sciences.

AS.030.405. Introduction to Computational Chemistry. 3 Credits.
This course provides an introduction to the state-of-the-art computational chemistry. The course integrates the basics about molecular electronic structure theories and the corresponding computational aspects and practice in chemical applications. The discussions of theories cover the modern quantum-chemical methods, ranging from mean-field methods (Hartree-Fock method and density-functional theory) to post mean-field methods for treating electron-correlation effects (configuration interaction and coupled cluster). Demonstrative calculations and computer lab practice are designed to deal with the computation of energetic properties (e.g., heat of formation, bond dissociation energy, reaction activation energy, etc) and structural properties (geometry, vibrational frequencies, etc) of representative molecular systems using standard quantum chemistry program package (the Gaussian program, most probably). The class will conclude with a report and presentation on a piece of recent computational work pertinent to the student's research interests.

AS.030.407. Modeling Matter at Nanoscales: An Introduction to Theoretical and Computational Approaches. 3 Credits.
The course allows students to become familiar with the essentials of concepts for modeling the structure of matter at nanoscales and the depending properties, as well as the way that they relate with measurements at human scales. Concepts on modeling, computer representation of nanosystems, origin of interactions between bodies at nanoscales and the different ways of finding the corresponding potential energy surfaces, including both classical and quantum mechanical procedures and described and even detailed when relevant. Applications can be on life materials, or other nanoscopic environments. It is designed for advanced undergraduate and graduate students in Chemistry, Physics, Biology, Pharmacy and Biochemistry, as well as physicians and engineers. Attendants must handle an essential ground in Mathematics, General Physics, Chemistry and related matters.

AS.030.408. Theoretical Foundations of Computational Chemistry. 3 Credits.
The course allows students to become familiar with the essential concepts for modeling the structure and properties of matter at nanoscales, as well as the way that they relate with the corresponding experimental determinations. Concepts on modeling, computer representation of nanosystems, origin of interactions between bodies at nanoscales and the different ways of finding the potential energy surfaces, including both classical and quantum mechanical procedures are described and even detailed when relevant. Recent approaches and procedures as those based in Artificial Intelligence are outlined in the framework of the theoretical grounds of this kind of modeling. Applications can mostly be to life and material sciences, spectroscopy, as well as other fields. It is designed for advanced undergraduate and graduate students in Chemistry, Physics, Biology, Pharmacy and Biochemistry, as well as physicians and engineers. Attendants must handle an essential ground in Mathematics, general Physics, Chemistry and related matters. Test calculations will be performed for selected methods during lab times, normally at the student's laptops.

AS.030.415. Bioinorganic and Organometallic Chemistry. 3 Credits.
This course will cover key concepts of Bioinorganic chemistry (including metalloenzymes, synthetic catalysts, drugs, and molecular sensors) and Organometallic Chemistry (types of ligands, interactions with metals) and their applications in catalysis and bioinorganic chemistry. A background in organic chemistry and physical chemistry is strongly recommended.
Prerequisite(s): (AS.030.101 AND AS.030.102) AND (AS.030.205 AND AS.030.206)

AS.030.421. Data Science Tools for the Chemical and Materials Sciences. 3 Credits.
Advances in measurement techniques and simulations have driven an explosion in the variety, quality, and quantity of data collected when investigating chemical and materials processes. Advances in computing have led to the practicality of machine learning (ML) and related analytical methods to explore and extract meaning from this cornucopia of data, and data science has been called the fourth pillar of the scientific method. This course will provide an introduction to modern tools of data science, including the Python programming language, Jupyter notebooks, ML algorithms and their practical implementation, and high performance computing, with specific emphasis on applying these tools to data of chemical relevance, including UV/Vis, IR and NMR spectra, 3-D micro computed tomography, and physical property data including specific heat, magnetization, and resistivity.

AS.030.423. Nucleic Acids in Chemistry and Biotechnology. 3 Credits.
This course will explore nucleic acid chemistry, biochemistry, and biology from a chemical biology perspective. Our studies will always be grounded in the fundamental chemistry of nucleic acids. We will explore the structure, function, and reactivity of nucleic acids, as well as the mechanisms by which DNA is damaged and repaired, and how the chemistry governing nucleic acids dictates their biological activities. We will examine how nucleic acid chemistry is integrated into cutting edge biotechnologies and therapeutics, and how this impacts society. The knowledge gained from this course will allow for a broader understanding of how chemistry governs all aspects of our genetic code.
Prerequisite(s): AS.030.205 OR AS.030.206 OR AS.030.212

AS.030.424. Advanced Fuel Cells and Current Technologies. 3 Credits.
This class will conclude with a group report and presentation on a recent analysis, 4) Electrochemistry coupled with other characterization methods, 5) Electrocatalysis and photoelectrochemical catalysis, 6) Basics in fuel cells and current technologies (alkaline, polymer exchange membrane, solid oxide...), 7) Basics in batteries and current technologies (Pb acid, Li-based, other metals...) Recommended Course Background: AS.030.204 or AS.030.449 or AS.030.472, or instructor approval for undergraduate students. No pre-requisites for graduate students.
Area: Natural Sciences.
AS.030.441. Spectroscopic Methods of Organic Structure Determination. 3 Credits.
The course provides fundamental theoretical background for and emphasizes practical application of ultraviolet/visible and infrared spectroscopy, proton and carbon-13 nuclear magnetic resonance and mass spectrometry to the structure proof of organic compounds.
Area: Natural Sciences

AS.030.442. Organometallic Chemistry. 3 Credits.
An introduction to organometallic chemistry beginning with structure, bonding, and reactivity and continuing into applications to fine chemical synthesis and catalysis. Recommended Course Background: AS.030.449 or equivalent. Level: Upper level Undergraduate AND Graduate Students
Area: Natural Sciences

AS.030.446. Mathematica as a Tool for Chemists. 3 Credits.
A systematic, hands-on introduction to Mathematica. Covers Mathematica's basic 'language,' analytic and numerical calculations, data manipulation, graphical representation, interactivity, programming, and document production. Prerequisite: Calculus (including power series)
Area: Natural Sciences

AS.030.449. Chemistry of Inorganic Compounds. 3 Credits.
Physical and chemical properties of inorganic, coordination and organometallic compounds are discussed in terms of molecular orbital, ligand field and crystal field theories. Emphasis on structure and reactivity of these inorganic compounds. Other topics: magnetic properties, electronic spectra, magnetic resonance spectra, reaction kinetics.
Area: Natural Sciences

AS.030.451. Spectroscopy. 3 Credits.
Spectroscopy and structure of molecules starting from rotational, vibrational and electronic spectra of diatomic molecules and extending to polyatomic molecules as time permits. Recommended Course Background: AS.030.302 or permission of instructor.
Area: Natural Sciences

AS.030.452. Materials & Surface. 3 Credits.
The chemistry associated with surfaces and interfaces as well as a molecular level understanding of their essential roles in many technological fields. The first half of this course addresses various analytical techniques used to study surfaces including X-ray, photoelectron spectroscopy, and scanning tunneling microscopy. The second half of this course uses a number of case studies to illustrate the application of surface analytical techniques in contemporary research.
Area: Natural Sciences

AS.030.453. Intermediate Quantum Chemistry. 3 Credits.
The principles of quantum mechanics are developed and applied to chemical problems.
Prerequisite(s): ( AS.030.301 OR AS.030.370 OR AS.250.372 ) AND AS.030.302
Area: Natural Sciences

AS.030.456. Chemical Applications of Group Theory. 3 Credits.
The theory of the representations of finite and continuous groups will be applied to problems in chemistry.
Area: Natural Sciences

AS.030.501. Independent Research in Physical Chemistry I. 3 Credits.
Research under the direction of members of the physical chemistry faculty.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.030.502. Independent Research in Physical Chemistry. 0 - 3 Credits.
Research under the direction of members of the physical chemistry faculty.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.030.503. Independent Research in Inorganic Chemistry I. 3 Credits.
Research under the direction of members of the inorganic chemistry faculty.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.030.504. Independent Research in Inorganic Chemistry. 0 - 3 Credits.
Research under the direction of members of the inorganic chemistry faculty.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.030.505. Independent Research in Organic Chemistry I. 3 Credits.
Research under the direction of members of the organic chemistry faculty.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.030.506. Independent Research in Organic Chemistry I. 0 - 3 Credits.
Research under the direction of members of the organic chemistry faculty.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.030.507. Independent Research in Biochemistry. 3 Credits.
Research under the direction of members of the biochemistry faculty.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.030.509. Independent Research in Biochemistry II. 3 Credits.
Research under the direction of members of the biochemistry faculty.
Recommended Course Background: AS.030.507-AS.030.508 and permission of instructor.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.030.510. Independent Research in Biochemistry II. 0 - 3 Credits.
Research under the direction of members of the biochemistry faculty.
Recommended Course Background: AS.030.507-AS.030.508 and permission of instructor.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.030.511. Independent Research in Materials Chemistry. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.030.512. Independent Research in Materials Chemistry. 0 - 3 Credits.
Research under the direction of the materials chemistry faculty.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.030.513. Independent Research in Medical Science. 3 Credits.
Research under the direction of members of the medical faculty.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.030.514. Independent Research in Medical Science. 3 Credits.
Research under the direction of members of the medical faculty.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.030.516. Independent Research in Chemical Biology II. 1 - 3 Credits.
Research under the direction of Chemical Biology faculty. Permission of instructor required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.030.521. Independent Research in Inorganic Chemistry II. 3 Credits.
Research under the direction of the inorganic chemistry faculty. Recommended Course Background: AS.030.503-AS.030.504 and permission of instructor.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.030.522. Independent Research in Inorganic Chemistry II. 0 - 3 Credits.
Research under the direction of the inorganic chemistry faculty. Recommended Course Background: AS.030.503-AS.030.504 and permission of instructor.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.030.523. Independent Research in Physical Chemistry II. 3 Credits.
Research under the direction of the physical chemistry faculty. Recommended Course Background: AS.030.501-AS.030.502 and permission of instructor.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.030.525. Independent Research in Organic Chemistry II. 3 Credits.
Research under the direction of the organic chemistry faculty. Recommended Course Background: AS.030.505-AS.030.506 and permission of instructor.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.030.526. Independent Research in Organic Chemistry II. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.030.527. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.030.530. Independent Research in Inorganic and Materials Chemistry. 1 - 3 Credits.
Research under the direction of members of the Inorganic Chemistry faculty.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.030.540. Independent Research in Solid State and Materials Chemistry. 1 - 3 Credits.
Research under the direction of members of the Physical Chemistry faculty.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.030.551. Internship-Chemistry. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.030.593. Research-Organic Chemistry I. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.030.579. Research - Summer. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

An introduction to statistical mechanics of cooperative phenomena using lattice gases and polymers as the main models. Covered topics: phase transitions and critical phenomena, scaling laws, and the use of statistical mechanics to describe time dependent phenomena.

AS.030.610. Chemical Kinetics.
The molecular mechanism of elementary physical and chemical rate processes will be studied. Topics such as elastic scattering, collisional vibrational and rotational energy transfer, chemically reactive collisions, and the theory of unimolecular decay will be covered.

AS.030.613. Chemistry-Biology Interface Program Forum I.
Chemistry-Biology Interface (CBI) program students and faculty will meet weekly in a forum that will host presentations from CBI faculty and students as well as invited guest speakers. These meetings will serve as a valuable opportunity for students to develop presentation skills and interact with CBI students and faculty. Enrollment is required for first- and second-year CBI students, and is recommended for advanced-year graduate students.

AS.030.614. Chemical-Biology Program Interface Forum II.
Chemistry-Biology Interface (CBI) program students and faculty will meet weekly in a forum that will host presentations from CBI faculty and students as well as invited guest speakers. These meetings will serve as a valuable opportunity for students to develop presentation skills and interact with CBI students and faculty. Enrollment is required for first- and second-year CBI students, and is recommended for advanced-year graduate students.

AS.030.615. Bioinorganic Chemistry.
AS.030.619. Chemical Biology I.
Parts I and II constitute the core course of the Chemistry-Biology Interface (CBI) Program. An introduction to the structure, synthesis, reactivity, and function of biological macromolecules (proteins, nucleic acids, carbohydrates, and lipids) will be provided using the principles of organic and inorganic chemistry. Discussion will incorporate a broad survey of molecular recognition and mechanistic considerations, and introduce the tools of molecular and cellular biology that are utilized in research at the interface of chemistry with biology and medicine. Recommended Course Background: AS.030.206 or equivalent.

AS.030.620. Chemical Biology II.
Selected topics of current importance in chemical biology are covered. They include protein engineering and proteomics, cell signaling, protein-nucleic acid interactions (e.g. replication, transcription, DNA repair), catalytic RNA and the ribosome, biosynthesis of natural products, mechanisms of drug action, combinatorial chemistry and chemical genetics, and in vitro selection. Recommended Course Background: AS.030.619 or permission required.

AS.030.621. Literature-Organic Chemistry.

AS.030.622. Seminar: Literature of Chemistry.
Seminars are presented by advanced graduate students on topics from current chemical journals. Most first-year graduate students are expected to attend for credit. Undergraduates may take the course on a satisfactory/unsatisfactory basis.

Principles and methods for the design and optimization of new biological systems, from a molecular perspective. Topics include: introduction to genetic parts and modern methods for their assembly; synthesis and incorporation of nucleic acids at the level of nucleotides, genes, and genomes; design of genetic programs; library generation and screening; directed evolution and its application to create new proteins and metabolic pathways; computational design of protein and RNA?using physical and bioinformatic approaches; non-canonical amino acids and genetic code expansion. This course will also feature critical evaluation of the primary literature in this fast-paced field, and practical experience with relevant software and computational tools.

AS.030.625. Advanced Mechanistic Organic Chemistry I.
The course covers the application of techniques in physical chemistry to the study of organic reaction mechanisms. Topics include chemical bonding and structure, stereochemistry, conformational effects, molecular orbital theory, methods to determine reaction mechanisms, reactive intermediates, and photochemistry. Recommended Course Background: AS.030.205-AS.030.206

AS.030.626. Advanced Mechanistic Organic Chemistry II.
This course covers advanced organic reactions and their mechanisms. Emphasis is given both to methods of postulating mechanisms for rationalizing reaction results and to the use of mechanistic thinking for designing reactions and reagents. This course is intended to be taken in sequence with AS.030.425. Recommended Course Background: AS.030.205-AS.030.206

AS.030.630. Molecular Photophysics and Photochemistry.
This course will introduce fundamental physical, chemical, and analytical concepts underlying light-induced chemical and (molecular-based) material processes. The final weeks of this course will build from these core concepts to survey molecular photoresponses and their consequences or applications in environmental chemistry, chemical biology, and materials science.

Area: Natural Sciences

AS.030.634. Topics in Bioorganic Chemistry.
Selected topics in modern bioorganic chemistry will be treated in greater depth emphasizing natural products chemistry, biosynthetic reaction mechanisms and drug design. Carbohydrates, lipids, polyketides, polypeptides, terpenes and alkaloids will be discussed. Specific examples of drug design will be introduced throughout and methods of synthesis, combinatorial synthesis and genetics will be described.

This course develops the basic theoretical concepts underlying the fields of NMR (Nuclear Magnetic Resonance) and EPR (electron spin/paramagnetic resonance). From this foundation, a broad range of different applications will be surveyed. This includes applications to multidimensional solution state NMR spectroscopy, EPR spectroscopy, as well as hybrid electron/nuclear magnetic resonance applications such as dynamic nuclear polarization (DNP).

AS.030.652. A Theoretical and Experimental Approach to X-ray Crystallography.
The X-ray course will provide a complete approach to X-ray structure determination (mostly concerned with small molecules) and its uses in Chemistry. The first segment of this course will cover all theoretical aspects of X-ray crystallography, i.e. crystals and crystalization, the nature of X-rays, the diffraction phenomenon of X-rays by crystals, symmetry and space groups, crystal structure analysis. Additionally, the course will provide laboratory experience for the students, involving hands-on instrumentation, experimental methodology to X-ray structure determination, structure solution/refinement, data analyses and publishing data. The course is aimed for graduate students with a strong interest in organic/inorganic chemistry, materials sciences, and physics. Undergraduate students with a major in chemistry are also encouraged to participate.

Area: Natural Sciences

AS.030.677. Advanced Organic Synthesis I.
The reactions and principles involved in the synthesis of simple and complex organic compounds. Discussion of famous natural product syntheses and practice in developing rational designs for organic syntheses. Problems in the design of syntheses and in the use of chemical literature.

AS.030.678. Advanced Organic Synthesis II.
Advanced discussion of organic stereochemistry & its application to problems in asymmetric reactions and catalysis will be presented. Emphasis will be placed on the latest reports in the literature, especially with respect to the development of new catalytic, asymmetric processes.

The course is designed to provide the essential principles and concepts underlying the modern study of the structure and properties of solids in bulk crystals, thin films, and nanoscale objects. Topics include basic crystallography, structure determination by x-ray, neutron, and electron diffraction, fundamental concepts of bonding in solids, lattice dynamics, electronic band structure, magnetism, and strongly correlated electron behavior. Particular emphasis is placed on the impact of the structure, dimensionality, and electron count on electrical and magnetic properties (electric conduction, superconductivity, thermoelectricity, etc.). More course info available at a <a href="http://occamy.chemistry.jhu.edu">http://occamy.chemistry.jhu.edu</a>. Cross-listed with Physics and Astronomy.
**AS.030.693. Methods in Time-Resolved Spectroscopy.**
In this course we will survey common time-resolved spectroscopic methods used to interrogate the dynamic and static properties of chemical systems. We will explore theoretical treatments both of key molecular processes (e.g. radiative and non-radiative transitions, solvation, coherence dephasing) and the spectroscopic tools used to interrogate them. Furthermore, we will survey the technical developments that are now allowing us to capture events that occur on ever faster timescales (currently down to the attosecond regime) and across the electromagnetic spectrum (from X-rays to Terahertz). Previous or concurrent concentrated study of Quantum Mechanics (graduate level or from a physics course) would be helpful, but not strictly required. Recommended Course Background: AS.030.301-AS.030.302

**AS.030.802. Independent Research.**
Research under the direction of the chemistry faculty.

**AS.030.897. Dissertation Research.**
Open to AS Chemistry Graduate Students only.
AS.040 (Classics)

AS.040.102. The Art and Archaeology of Early Greece. 3 Credits.
This course explores the origins and rise of Greek civilization from the Early Bronze Age to the Persian Wars (ca. 3100-480 B.C.), focusing on major archaeological sites, sanctuaries, material culture, and artistic production.
Area: Humanities

AS.040.103. The Roman Empire. 3 Credits.
This introductory course examines the history, society, and culture of the Roman state in the Imperial age (ca. 31 BCE-ca. 500 CE), during which it underwent a traumatic transition from an oligarchic to a monarchical form of government, attained its greatest territorial expanse, produced its most famous art, architecture, and literature, experienced vast cultural and religious changes, and finally was transformed into an entirely different ('late antique') form of society. All readings in English.
Area: Humanities

AS.040.104. The Roman Republic: History, Culture, and Afterlife. 3 Credits.
This introductory level course history, society, and culture of the Roman state in the Republic period (509-31 BCE), during which it expanded from a small city-state to a Mediterranean empire. We also consider the Republic's importance for American revolutionaries in the 18th century. All readings in English.
Area: Humanities

AS.040.105. Elementary Ancient Greek. 4 Credits.
This course provides a comprehensive, intensive introduction to the study of ancient Greek. During the first semester, the focus will be on morphology and vocabulary. Credit is given only upon completion of a year's work. Cannot be taken Satisfactory/Unsatisfactory.

Prerequisite(s): AS.040.105

AS.040.106. Elementary Ancient Greek. 4 Credits.
Course provides comprehensive, intensive introduction to the study of ancient Greek. The first semester's focus is morphology and vocabulary; the second semester's emphasis is syntax and reading. Credit is given only upon completion of a year's work. Course may not be taken Satisfactory/Unsatisfactory.

Prerequisite(s): AS.040.105

AS.040.107. Elementary Latin. 3.5 Credits.
This course provides a comprehensive, intensive introduction to the study of Latin for new students, as well as a systematic review for those students with a background in Latin. Emphasis during the first semester will be on morphology and vocabulary. Credit is given only upon completion of a year's work. Course may not be taken Satisfactory/Unsatisfactory.

Prerequisite(s): AS.040.107

AS.040.108. Elementary Latin. 3.5 Credits.
Course provides comprehensive, intensive introduction to the study of Latin for new students as well as systematic review for students with background in Latin. The first semester's emphasis is on morphology and vocabulary; the second semester's focus is on syntax and reading. Credit is given only upon completion of a year's work. Course may not be taken Satisfactory/Unsatisfactory.

Prerequisite(s): AS.040.107

AS.040.109. Freshman Seminar: The Greeks and Their Emotions. 3 Credits.
This seminar is meant as an introduction to the study of ancient emotions, with a particular emphasis on how the ancient Greeks conceptualized, portrayed and lived their emotions through linguistic, literary and artistic expression. After an analysis of how the ancient Greek emotional experience differs from our own, we shall focus on the phenomenon of emotion as deeply rooted in the physical body, and in light of this we will contemplate (and question) its universality. You will also learn how to research and write a paper. Texts will be read in translation. No knowledge of ancient Greek required.
Area: Humanities Writing Intensive

AS.040.111. Ancient Greek Civilization. 3 Credits.
The course will introduce students to major aspects of the ancient Greek civilization, with special emphasis placed upon culture, society, archaeology, literature, and philosophy.
Area: Humanities

AS.040.121. Ancient Greek Mythology: Art, Narratives, and Modern Mythmaking. 3 Credits.
This course focuses on major and often intricate myths and mythical patterns of thought as they are reflected in compelling ancient visual and textual narratives. Being one of the greatest treasure troves of the ancient world, these myths will further be considered in light of their rich reception in the medieval and modern world (including their reception in the modern fields of anthropology and philosophy).
Area: Humanities

AS.040.123. Freshman Seminar: Values at Play: Identity and Greek Fiction in the Roman Empire. 3 Credits.
What is the role of fiction and play in expressing identity in a society? Play in the Greek world was synonymous with the values of 'high' intellectual pursuits, namely, paideia, the Greek word for education and culture. Works defined by playfulness make up an artistic epoch of Greek literature written under the Roman Empire commonly known as the 'Second Sophistic.' This course introduces students to this world and its cultural artifacts. It introduces students to specific categories of fiction as a way into understanding identity. The class examines a series of fictional genres and styles: Latin picaresque, Greek ideal erotic fiction, epistolary fiction, travelogues, and the autobiography. The purpose of the class is to be able to understand these works as cultural artifacts whose form and content express discourses about identity - of ethnicity and the 'home,' gender and sexuality, colonialism and class - while appreciating the rebellious fun of these works. All sources are provided in English and no experience or background in Classics is required to participate in the course. Dean's Prize Teaching Fellowship Course.
Area: Humanities

AS.040.126. Religion, Music and Society in Ancient Greece. 3 Credits.
Emphasis on ancient Greek ritual and mythology; on ancient music, religion, and society; and on cultural institutions such as symposia (drinking parties) and festivals.
Area: Humanities
AS.040.137. Freshman Seminar: Archaeology at the Crossroads: The Ancient Eastern Mediterranean through Objects in the JHU Archaeological Museum. 3 Credits.
This seminar investigates the Eastern Mediterranean as a space of intense cultural interaction in the Late Bronze Age, exploring how people, ideas, and things not only came into contact but deeply influenced one another through maritime trade, art, politics, etc. In addition to class discussion, we will work hands-on with artifacts from the JHU Archaeological Museum, focusing on material from Cyprus.
Area: Humanities
Writing Intensive

AS.040.140. Gender and Sexuality in Early Greece and the Eastern Mediterranean. 3 Credits.
In this course we will explore evidence and interpretations of gender and sexuality in the region of the Aegean and eastern Mediterranean during the third and second millennia BCE. Material investigated will include the “snake goddess” figures from Minoan Crete, anthropomorphic figurines from the Cyclades and Cyprus, wall paintings, etc. In each case we will consider the history of interpretation as well as investigate the objects’ archaeological and sociocultural contexts. Discussion topics will include representational ambiguity; the specific materialities of objects, and their possible roles in activities construing gender. The course will incorporate material from the JHU Archaeological Museum.
Area: Humanities

AS.040.145. Story and Argument from Homer to Petrarch. 3 Credits.
Stories entertain us, but we also tell them to make a point. This course will explore the ways that stories were used to make points by Greek and Latin authors from Homer to Petrarch, while also looking at, and comparing them to, the techniques of argument contemporaneous thinkers were developing. This is a course about narrative and rhetoric but also about how and in what way stories matter.
Area: Humanities

AS.040.147. Freshman Seminar: Art, Politics, and Propaganda in Ancient Rome. 3 Credits.
We will examine visual expressions of propaganda in the city of Rome, considering how emperors used public art to promote their political agendas and their ideological vision of power.
Area: Humanities

AS.040.152. Medical Terminology. 3 Credits.
This course investigates the Greek and Latin roots of modern medical terminology, with additional focus on the history of ancient medicine and its role in the development of that terminology.
Area: Humanities

AS.040.205. Intermediate Ancient Greek. 3 Credits.
Reading ability in classical Greek is developed through a study of various authors.
Prerequisite(s): AS.040.105 AND AS.040.106 or equivalent
Area: Humanities

AS.040.206. Intermediate Ancient Greek. 3 Credits.
Reading ability in classical Greek is developed through a study of various authors.
Prerequisite(s): AS.040.205
Area: Humanities

AS.040.207. Intermediate Latin. 3 Credits.
Although emphasis is still placed on development of rapid comprehension, readings and discussions introduce student to study of Latin literature, principally through texts of various authors.
Prerequisite(s): AS.040.107 AND AS.040.108 or equivalent
Area: Humanities

AS.040.208. Intermediate Latin. 3 Credits.
Reading ability in Latin is developed through the study of various authors, primarily Cicero (fall) and Vergil (spring).
Prerequisite(s): AS.040.207
Area: Humanities

AS.040.213. The Painted Worlds of Early Greece: Fantasy, Form and Action. 3 Credits.
This course explores the creation and role of early Aegean wall painting. Found primarily in palaces, villas and ritual spaces, these paintings interacted with architecture to create micro-worlds for social activities taking place in their midst. Their subjects range—from mythological to documentary, from ornamental to instructive. They depict dance and battle, fantastical beasts and daily life. We examine their complex relationship to lived reality as well as the activities that surrounded them, from their crafting, to performance of rituals, to their role in “international” relations.
Area: Humanities
Writing Intensive

AS.040.218. Celebration and Performance in Early Greece. 3 Credits.
Surviving imagery suggests that persons in Minoan and Mycenaean societies engaged in various celebratory performances, including processions, feasts, and ecstatic dance. This course explores archaeological evidence of such celebrations, focusing on sociocultural roles, bodily experience, and interpretive challenges.
Area: Humanities

AS.040.232. Island Archaeology: The Social Worlds of Crete, Cyprus and the Cyclades. 3 Credits.
Islands present highly distinctive contexts for social life. We examine three island worlds of the third and second millennia BCE through their archaeological remains, each with its particularities. These are places where water had a unique and powerful meaning, where boat travel was part of daily life, where palaces flourished and where contact with other societies implied voyages of great distance across the sea. Class combines close study of material culture and consideration of island-specific interpretive paradigms; students work with artifacts in the JHU Archaeological Museum.
Area: Humanities

AS.040.237. Myth and Metamorphosis. 3 Credits.
Beginning with close study of the poem itself, this course will examine the unequalled influence of Ovid’s Metamorphoses on subsequent literature and art, including theater and film.
Area: Humanities

AS.040.238. Freshman Seminar: Magic and Miracles from Antiquity to the Renaissance. 3 Credits.
This freshman seminar will explore concepts of magic and miracles and their different forms from ancient Greece and Rome and early Christianity through the Middle Ages up to the Renaissance. Dean’s Prize Teaching Fellowship Course.
Area: Humanities
Writing Intensive
AS.040.241. The Greeks and Their Emotions. 3 Credits.
This seminar is meant as an introduction to the study of ancient emotions, with a particular emphasis on how the Greeks of the Archaic, Classical and Hellenistic periods conceptualized, portrayed and lived their emotions through linguistic, literary and artistic expression. After an analysis of how the ancient Greek terminology for the emotions differs from our own, we shall focus on the phenomenon of emotion as deeply rooted in the physical body, and in light of this we will contemplate (and question) its universality. Texts will be read in translation. No knowledge of ancient Greek is required.
Area: Humanities
Writing Intensive

AS.040.245. Heroes: The Ancient Greek Way. 3 Credits.
Students will acquire more in-depth knowledge of Ancient Greek literature by reading and discussing its most important and famous texts, from the Iliad and the Odyssey to tragedy to philosophy. Knowledge of Greek is not required.
Prerequisite(s): AS.040.111 OR AS.040.121
Area: Humanities

AS.040.300. The Ancient Novel. 3 Credits.
In this course we will follow the fortunes of the ancient Greek and Roman novels.
Prerequisite(s): AS.040.103 OR AS.040.104 OR AS.040.111 OR AS.040.112 OR AS.040.121 OR AS.040.133 OR AS.040.245
Area: Humanities

AS.040.305. Advanced Ancient Greek. 3 Credits.
This course aims to increase proficiency and improve comprehension of the ancient Greek language. Intensive reading of ancient Greek texts, with attention to grammar, idiom, translation, etc. Reading of prose or verse authors, depending on the needs of students. Specific offerings vary. Co-listed with AS.040.705.
Prerequisite(s): AS.040.205 AND AS.040.206 or equivalent
Area: Humanities

AS.040.306. Advanced Ancient Greek. 3 Credits.
Reading of prose or verse authors, depending on the needs of students. Co-listed with AS.040.702.
Prerequisite(s): AS.040.205 AND AS.040.206 or equivalent
Area: Humanities

AS.040.307. Advanced Latin Prose. 3 Credits.
This course aims to increase proficiency and improve comprehension of the Latin language. Intensive reading of Latin texts, with attention to grammar, idiom, translation, etc. Specific offerings vary. Co-listed with AS.040.707.
Prerequisite(s): AS.040.207 AND AS.040.208 or equivalent
Area: Humanities

AS.040.308. Advanced Latin Poetry. 3 Credits.
The aim of this course is to increase proficiency and improve comprehension of the Latin language. Intensive reading of Latin texts, with close attention to matters of grammar, idiom, and translation. Co-listed with AS.040.710.
Prerequisite(s): AS.040.207 AND AS.040.208 or equivalent
Area: Humanities

AS.040.348. Worlds of Homer. 3 Credits.
Through texts, art, and archaeological remains, this course examines the various worlds of Homer–those recalled in the Iliad and Odyssey, those within which the epics were composed, and those born of the poet's unique creative work. Class will make museum visits. Ancient texts read in translation.
Area: Humanities

AS.040.366. The Archaeology of Ancient Cyprus: Investigating a Mediterranean Island World in the JHU Museum. 3 Credits.
This course explores the visual and material worlds of ancient Cyprus from the earliest human evidence through the Iron Age. Course topics will include the island’s unique position between the Aegean and Near East and how this has impacted both Cyprus’ ancient past and the way in which it has been conceived in the modern world. Class involves regular analysis of artifacts based in the Archaeological Museum.
Area: Humanities

AS.040.373. Propaganda and the Art of Visual Politics during the Roman Empire. 3 Credits.
We will examine visual expressions of propaganda in the city of Rome, considering how emperors used public art to promote their political agendas and their ideological vision of power. Dean's Teaching Fellowship Course
Area: Humanities

AS.040.377. The Other Life of the Doctor: Fiction, Identity, and the Intellectual in the Roman Empire. 3 Credits.
This course explores the role of fiction in the presentation of personal identity among the intellectual elite of the Roman Empire. Intellectuals in the so-called ‘Second Sophistic’ told stories which are ridiculous, bizarre, and clearly fictional. Some pretend to have visited utopias in the wilderness, of having seen scientific and medical marvels, and of communing with other dead intellectuals. This class focuses on stories of the unbelievable, paradoxical, and fake but which are written as first hand accounts by real historical intellectuals of the Roman Empire. The class will be broken down into providing background as to what a Greek intellectual or ‘sophist’ was exactly, what demands were placed on intellectuals to make up stories, such as in the performance of declamation, and how even from the early days of Greek history the boundaries between truth and fiction were at issue. After providing context to characters and settings of the Roman Empire's intellectual culture, we examine the voices of people, including physicians like Galen, who used the fictional motifs of utopias, adventures, romance, ghosts stories among others to construct their identities. These fictional elements often were the means by which issues of ethnicity, power, gender, and tradition were hashed out. All sources are provided in English and no experience or background in Classics is required to participate in the course.
Area: Humanities

AS.040.400. The Archaeology of Cyprus: Investigating a Mediterranean Island World in the JHU Museum. 3 Credits.
This course explores the visual and material worlds of ancient Cyprus from the earliest human evidence through the Iron Age. Class involves regular analysis of artifacts based in the Archaeological Museum.
Area: Humanities

AS.040.407. Survey of Latin Literature I: Beginnings to the Augustan Age. 3 Credits.
This intensive Latin survey is designed for very advanced undergraduate students—normally those who have completed two semesters of Advanced Latin (AS.040.307/308)—and PhD students preparing for their Latin translation exam. In this course, the first half of a year-long sequence, we will read substantial texts of major Republican and some Augustan authors. The weekly pace is designed to inculcate greater speed and accuracy in Latin reading, and provide significant coverage of various kinds of texts. Recommended background: AS.040.307-308 or equivalent
Prerequisite(s): AS.040.307 AND AS.040.308 or permission of instructor.
Area: Humanities
AS.040.408. Survey of Latin Literature II: Early Empire to the Post-Classical Period. 3 Credits.
This intensive Latin survey is designed for very advanced undergraduate students (normally those who have completed the regular undergraduate sequence through the advanced level) and PhD students preparing for their Latin translation exam. In this course, the second half of a year-long sequence, we will read substantial texts of major Imperial authors, as well as a selection of works from Late Antiquity and the Post-Classical period. The weekly pace is designed to inculcate greater speed and accuracy in Latin reading and to provide significant coverages of various kinds of texts. Prior completion of AS.040.407 preferred but not required. **Prerequisite(s):** AS.040.307 AND AS.040.308 or equivalent.
*Area: Humanities*

AS.040.414. Junior-Senior Seminar: The Art of Ancient Tragedy. 3 Credits.
This seminar explores the form and function of tragedy in the ancient Greek and Roman worlds by investigating the dramatic texts themselves, ancient and modern discussions about tragedy, and archaeological remains. As a Junior-Senior Seminar, this course includes instruction in core research methods within Classics and culminates in an individualized research project. Classics majors only.
*Area: Humanities*

AS.040.415. Junior-Senior Capstone: Odysseus Becomes an Ass. 3 Credits.
We shall focus on one Greek epic, The Odyssey, and one Latin novel, Apuleius’ Golden Ass: what do Odysseus and a donkey have in common? Do they experience similar adventures? How does magic play into the two stories? We shall read both texts in their entirety, including passages in the original languages, and unearth the connections between these two masterpieces of ancient literature.
*Area: Humanities*

AS.040.417. Survey of Greek Literature I: Homer to the Classical Period. 3 Credits.
We shall read an extensive selection of major texts of Greek literature from Homer to the classical period.
*Area: Humanities*

AS.040.418. Survey of Greek Literature II: Hellenistic Period to Imperial Period. 3 Credits.
We shall read, in the original Greek, major authors of Greek Literature from the Hellenistic period to the Imperial period.
*Area: Humanities*

AS.040.420. Classics Research Lab: The Symonds Project. 3 Credits.
This course gives participants a unique opportunity to engage directly in empirical research and its interpretation and dissemination. Topics vary. This semester’s offering is organized around a project to reconstruct digitally the library of the nineteenth-century writer John Addington Symonds, author of one of the first studies of ancient sexuality. No prerequisites, but potential students should contact instructor for permission to enroll.
*Area: Humanities*

AS.040.425. Classics Research Lab: Ancient Bodies of Modern Baltimore, The Peabody Cast Collection Project. 3 Credits.
The Peabody Cast Collection (PCC) Classics Research Lab project will revolve around a remarkable collection of plaster casts of classical Greek and Roman sculptures, created ca. 1879 for the Peabody Institute (now part of JHU). Such cast collections were a highly valued cultural resource in Europe and North America during the later 17th to early 20th centuries, produced for major museums, academic institutions and wealthy individuals. Because of the technical process of the cast formation, which is based directly upon the ancient sculptural surface, these collections brought contact with the actual classical artifacts into temporally and spatially distant contexts—including the burgeoning urban center of 19th century Baltimore. The PCC Lab’s initial objective is archival and field research of the cast collection—it's content, formation, access and usage by the people of Baltimore and its eventual disbanding and distribution. From this, we will aim to virtually reassemble its member objects, charting their biographies and, when extant, their current locations. This in part will be accomplished digitally, in a virtual reconstruction of the original display contexts of the casts within the Peabody Institute based on early hand-written ledgers, logs, and photographs. With this we will contribute a new open-access chapter to the collection’s biography.
*Area: Humanities*

AS.040.501. Independent Study. 3 Credits.
**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.040.502. Independent Study. 0 - 3 Credits.
**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.040.519. Honors Research. 3 Credits.
**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.040.520. Honors Research. 0 - 3 Credits.
**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.040.599. Independent Study. 3 Credits.
**Prerequisite(s):** You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

This course explores the visual and material worlds of ancient Cyprus from the earliest human evidence through the Iron Age. Class involves regular analysis of artifacts based in the Archaeological Museum.

AS.040.601. Italian Renaissance Humanism and Modern Humanities.
This course will reflect on certain key moments in the development of Latinate and Italian Renaissance humanism and will also include reading and discussion of certain recent landmark contributions to the history of the modern humanities.

AS.040.602. Heliodorus.
We shall read and discuss the writing of Heliodorus in the original Greek.
AS.040.603. Homer’s Odyssey.
This seminar proposes an in-depth exploration of Homer’s _Odyssey_. One of the monumental epics of ancient Greek and a foundational text of world-literature, the _Odyssey_ examines, through one man’s quest to make his way home, profound questions concerning the nature of identity, the meaning of suffering, the importance of sharing stories, and the strange allure of poetry itself. We will study the entire poem in the original Greek in order to gain advanced understanding of its language and style. Emphasis will also be placed on the study of commentaries and scholarship in order to enhance our understanding of the poem’s themes, the transmission of the text, and the historical, literary and social contexts in which—and in response to which—it grew.

AS.040.604. Heliodorus II.
We will read the second half of Heliodorus’ Aethiopica in the original Greek and integrate the reading with secondary literature.

AS.040.605. Orality and Writing in the Literary Culture of the Early Roman Empire.
This graduate seminar focuses on the oral practices that constitute “literary culture” in Rome in the first and second centuries CE: declamation, recitation, disputatum emerging from reading, and the relationship of these practices to both literary “publication” and to arenas of traditional oratory such as the courts and the Senate. Weekly assignments will include substantial readings in Latin.

AS.040.606. Topics in Classical Reception.
An exploration of recurring themes and recent trends in the reception of classical antiquity.

AS.040.607. Citations.
This course investigates the use of literary citation in ancient scholarly works, including issues of source and accuracy, as well as notions of literary authority (with focus on the use of digital tools for analysis).

This seminar will introduce participants to the reading, editing, translation, and interpretation of humanist Latin, with training in the ancillary skills of paleography, codicology, and textual criticism.

This seminar explores the topic of Petronius as a historical character in ancient Rome.

AS.040.610. Biography and the Hero.
This graduate seminar will involve a close reading and study Plutarch’s Life of Romulus, particularly in relation to the paired Life of Theseus. We will examine Plutarch’s frameworks and principles for “life writing” in general, as well as his understanding and application of the traditional concepts of the Greek “hero” and Roman exemplum, to shed light on his poetics in this mythistorical “biography.”

We shall look at several allegorical readings offered in antiquity to interpret myths and literary works, especially, but not only, the epics of Homer.

AS.040.615. Ovid’s Metamorphoses.
In this seminar, we will study Ovid’s Metamorphoses, paying special attention to the text’s generic playfulness and the author’s poetics of illusion. We will also survey recent critical trends in Ovidian studies.

AS.040.618. Around the Gracchi: Current Views on Late Republican Culture, Politics, and Economics.
This seminar explores and appraises the recent revolution in our understanding of the culture, politics, and economics of the late Roman Republic, with a thematic focus on how we now understand the Gracchi as historical actors and as cultural phenomena.

AS.040.623. Greek Wall Painting.
This seminar will examine wall painting of the Aegean from the Bronze Age to the Hellenistic period. Topics will include crafting, spatial and experiential dynamics, materiality, narrative, iconography and the relationship of the images to their worlds.

The Peabody Cast Collection (PCC) Classics Research Lab project will revolve around a remarkable collection of plaster casts of classical Greek and Roman sculptures, created ca. 1879 for the Peabody Institute (now part of JHU). Such cast collections were a highly valued cultural resource in Europe and North America during the later 17th to early 20th centuries, produced for major museums, academic institutions and wealthy individuals. Because of the technical process of the cast formation, which is based directly upon the ancient sculptural surface, these collections brought contact with the actual classical artifacts into temporally and spatially distant contexts—including the burgeoning urban center of 19th century Baltimore. The PCC Lab’s initial objective is archival and field research of the cast collection—its content, formation, access and usage by the people of Baltimore and its eventual disbanding and distribution. From this, we will aim to virtually reassemble its member objects, charting their biographies and, when extant, their current locations. This in part will be accomplished digitally, in a virtual reconstruction of the original display contexts of the casts within the Peabody Institute based on early hand-written ledgers, logs, and photographs. With this we will contribute a new open-access chapter to the collection’s biography.

AS.040.637. Competition in the Early Roman Empire.
A well-documented feature of the middle to late Roman republic is the ferocious competitiveness of the aristocracy, and the governing class in particular. These people competed for prestige and glory on the battlefield, for offices and honors in government and administration, for visibility in public building, in forensic oratory in the courts, in deliberative oratory in various assemblies, and sometimes in literary production. Less well-understood is how the competitiveness of this group manifested itself in the early imperial age, as the emergence of the emperor shut down competition in some of these arenas and fundamentally changed the character of the competition in others. This seminar considers how some old arenas changed under the Imperial regime, and examines new forms that aristocratic competition assumed to make up for the arenas that had altogether disappeared.

AS.040.641. Reception of the Greek Novel.
In this course, we will follow the fortunes of the Greek novels from the Byzantine period onward, focusing especially on Heliodorus’ _Aethiopica_. Knowledge of Greek is highly desirable but not required.

AS.040.665. Survey of Greek Literature.
An intensive survey of Greek poetic and prose texts, which emphasizes reading for comprehension and speed. Texts range from Homer to Lucian. Area: Humanities

AS.040.702. Reading Ancient Greek Poetry.
This reading seminar is intended to train graduate students in direct and critical work on primary sources. Co-listed with AS.040.306.
AS.040.705. Reading Ancient Greek Prose.
This reading seminar is intended to train graduate students in direct and critical work on primary sources. Co-listed with AS.040.305.
Recommended Course Background: AS.040.205-AS.040.206.
Area: Humanities

This reading seminar is intended to train graduate students in direct and critical work on primary sources. Co-listed with AS.040.307.

AS.040.710. Reading Latin Poetry.
This reading seminar is intended to train graduate students in direct and critical work on primary sources. Co-listed with AS.040.308.
Recommended Course Background: AS.040.207-AS.040.208.
Area: Humanities

AS.040.801. Independent Study.

AS.040.802. Independent Study.

AS.040.809. Exam Preparation.
Study in preparation for a comprehensive oral exam, required to become a PhD candidate, and consisting of three fields in classics and related areas.

AS.040.810. Exam Preparation.
Study in preparation for a comprehensive oral exam, required to become a PhD candidate, and consisting of three fields in classics and related areas.

No Audits.

AS.040.815. Dissertation Research.
No Audits.
AS.050 (COGNITIVE SCIENCE)

AS.050.102. Language and Mind. 3 Credits.
Introductory course dealing with theory, methods, and current research topics in the study of language as a component of the mind. What it is to 'know' a language: components of linguistic knowledge (phonetics, phonology, morphology, syntax, semantics) and the course of language acquisition. How linguistic knowledge is put to use: language and the brain and linguistic processing in various domains.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.105. Introduction to Cognitive Neuropsychology. 3 Credits.
When the brain is damaged or fails to develop normally, even the most basic cognitive abilities (such as the ability to understand words, or perceive objects) may be disrupted, often in remarkable ways. This course explores a wide range of cognitive deficits, focusing on what these deficits can tell us about how the normal brain works. Topics include brain anatomy and causes of brain damage, reading and spelling deficits, unilateral spatial neglect, hemispheric disconnection, cortical plasticity, and visual perception of location and orientation. Students read primary sources: journal articles that report deficits and discuss their implications.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.107. Language and Advertising. 3 Credits.
Advertising pervades our culture; interactions with advertising are an unavoidable fact of modern life. This class uses tools from linguistics and cognitive science to analyze these interactions, and understand the impact of advertising on its viewers. A central theme is to treat ads as communicative acts, and explore the consequences -- what can theories of communication (from linguistics, psychology, and philosophy) tell us about ads? How do ads use central features of human cognition to accomplish their aims? Do ads manipulate, and if so, how successfully? The theories of communication we explore include Gricean pragmatics, theories of speech acts, linguistic theories of presuppositions, and more. Students will collect, analyze, and discuss advertisements in all mediums.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.116. Visual Cognition. 3 Credits.
How do humans make sense of the visual world around them? This course will provide an introductory survey of current research, methods, and theories in visual cognition. We will draw upon topics in cognitive psychology, cognitive neuroscience, cognitive neuropsychology, and artificial intelligence.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.121. Freshman Seminar: Theory of Mind and the Science of "Mindreading". 3 Credits.
Fundamental to nearly all of human social behavior -- including the use of language, the development of complex societies and cultures, pretending and storytelling -- is the understanding that others have their own thoughts, beliefs, and intentions guiding their behavior. This capacity for "mindreading" is known as theory of mind. This course will explore what it means to have a theory of mind. Are humans born with a theory of mind? Does theory of mind interact with other aspects of cognition? How and why did theory of mind evolve in humans? Are humans unique amongst animals in having a theory of mind? The course will examine basic concepts of the mind and intention in philosophy and psychology, and review research from psychology, cognitive science, and neuroscience on topics including the development of theory of mind in children, the relationship between language and theory of mind, neurological correlates of theory of mind, links between theory of mind and autism, and theory of mind in non-human animals.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.201. Language and Mind Honors Section. 1 Credit.
This honors section, open to selected students concurrently enrolled in AS.050.102 Language and Mind, will introduce more advanced material in theoretical linguistics through instruction and guided problem solving. Content areas will include sound patterns, word formation, sentence structure, meaning representation, as well as processing and acquisition evidence bearing on the mental nature of language. Prior linguistics or cognitive science coursework is not required; weekly attendance and assignments will be mandatory.
Corequisite(s): Students must be enrolled in AS.050.102.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.202. Introduction to Computational Cognitive Science. 3 Credits.
How does the mind work? Cognitive science addresses this question from a multidisciplinary perspective, drawing upon methods and ideas from psychology, neurophysiology, neuroscience, philosophy, linguistics, and computer science. Within this framework, computational cognitive science has two related goals. The first is to create computational models of human cognition, computer programs that simulate certain aspects of the mind. The second is to understand how to produce intelligent behavior in machines, taking cues from humans. The computational frameworks we will discuss include symbolic structured representations, probabilistic inference and artificial neural networks, as applied to concept learning, language and vision. While this class does not have formal prerequisites, some programming experience (e.g., AS 250.205 Introduction to Computing or equivalent) and mathematical preparation (e.g., AS.110.107 Calculus II or equivalent) are essential. An optional, hands-on lab (AS.050.212) is offered to supplement this course. It is highly recommended that students with less extensive computational and mathematical experience register for this lab.
Area: Quantitative and Mathematical Sciences
AS.050.203. Neuroscience: Cognitive. 3 Credits.
This course surveys theory and research concerning how mental processes are carried out by the human brain. Currently a wide range of methods of probing the functioning brain are yielding insights into the nature of the relation between mental and neural events. Emphasis will be placed on developing an understanding of both the physiological bases of the techniques and the issues involved in relating measures of brain activity to cognitive functioning. Methods surveyed include electrophysiological recording techniques such as EEG, ERP, single/multiple unit recording and MEG; functional imaging techniques such as PET and fMRI; and methods that involve lesioning or disrupting neural activity such as cortical stimulation, animal lesion studies, and the study of brain-damaged individuals. It's strongly recommended that students have background in one of the following courses: AS.050.101 OR AS.050.105 OR AS.200.141.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.206. Bilingualism. 3 Credits.
Do children get confused when they grow up exposed to more than one language? Is it possible to forget one's native language? Are the first and second language processed in different areas of the brain? How does brain damage impact the different languages of a polyglot? Does knowing a second language affect non-linguistic cognitive processing? This course will address questions such as these through an exploration of mental and neural processes underlying bilingual and multilingual language processing. Also offered as AS.050.606.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.212. Introduction to Computational Cognitive Science Lab. 0.5 Credits.
This course is a hands-on lab supplement for Introduction to Computational Cognitive Science. While this lab is optional, it is highly recommended to students with less extensive computational and mathematical experience.
Corequisite(s): Must be registered for AS.050.202 in order to register for this optional lab.

AS.050.240. World of Language. 3 Credits.
This hands-on course exposes students to the fascinating variety – and uniformity – to be found among the world's 6000 languages through group lectures on a variety of topics as well as actual linguistic fieldwork conducted in small groups with a native speaker of a language unknown to the participants. This course is a good preparation for upper-division linguistics courses.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.311. Written Language: Normal Processing and Disorders. 3 Credits.
This course surveys both the historical development of written language as well as current cognitive theories that account for the manner in which the written language is represented and processed by readers/writers of a language. Issues regarding the relationship between the written and spoken language, the neural bases of written language, the acquisition of written language skills, as well as acquired and developmental disorders of reading and writing will be examined.
Prerequisite(s): AS.050.102 OR AS.050.105 OR AS.050.203 OR AS.080.203
Area: Natural Sciences, Social and Behavioral Sciences

Writing Intensive

When we think about our ability to see, we tend to think about our eyes, but in fact vision happens mostly in the brain. This course explores the remarkable perceptual deficits that occur when the visual regions of the brain are damaged or fail to develop normally, focusing on what these perceptual malfunctions tell us about normal visual perception. Topics include visual system anatomy and physiology; functional specialization in the lower visual system as revealed by cerebral achromatopsia (color blindness resulting from brain damage) and akinetopsia (impaired motion perception); cortical plasticity in the visual system; spatial deficits in perception and action; and the implications of high-level visual deficits, including prosopagnosia (impaired face recognition), Charles Bonnet syndrome (complex visual hallucinations in blind areas of the visual field), blindsight (accurate responding to visual stimuli despite apparent inability to see them), and aphantasia (lack of visual imagery).
Prerequisite(s): AS.050.105 OR AS.050.203 OR AS.080.203 OR AS.050.101 OR AS.200.110 OR AS.200.211 or instructor’s permission.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.317. Semantics I. 3 Credits.
This is an introduction to the study of meaning in natural language. We address the conceptual and empirical issues in semantic theory and introduce some formal machinery that has been developed to deal with such problems. After discussing foundational questions, we turn to formal semantics and pragmatics, as well as their interfaces with syntax and the lexicon. Specific topics include presupposition, type-driven composition, quantification, lexical aspect, argument structure, and lexical representations of meaning.
Prerequisite(s): AS.050.107 OR AS.050.102 or AS.050.240 or instructor’s permission.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.318. Practicum in Language Disorders- Community Based Learning. 2 Credits.
This course provides the opportunity to learn about adult aphasias, language disorders which are one of the most common consequences of stroke. You will receive training in supportive communication techniques and work as a communication partner with an individual with aphasia for two hours per week. Three class meetings for orientation and reading assignments will be held on campus; training and practicum will be conducted at a local aphasia support center. Independent mode of transportation required. Co-listed as AS.080.400 in Neuroscience. Find out more about the practicum site at https://www.leagueforpeople.org/
Prerequisite(s): A- or Better in AS.050.105 OR AS.050.203 OR AS.080.203 OR AS.050.311 or instructor’s permission.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.320. Syntax I. 3 Credits.
Introduces the basic methods and means of analysis used in contemporary syntax investigations, practicing with data from different languages. Also offered as AS.050.620.
Prerequisite(s): AS.050.102 OR AS.050.240 or equivalent/see instructor.
Area: Natural Sciences, Social and Behavioral Sciences
AS.050.325. Phonology I. 3 Credits.
An introduction to the basic principles underlying the mental representation and manipulation of language sounds and their relation to human perception and vocal articulation: how units of sound are both decomposable into elementary features and combined to form larger structures like syllables and words. The role of rules and constraints in a formal theory of phonological competence and in accounting for the range of variation among the world's languages. Also offered as AS.050.625.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.326. Foundations of Cognitive Science. 3 Credits.
This course explores general issues and methodologies in cognitive science through the reading of classic works (from Plato and Kant through Skinner and Turing) and recent research articles to begin construction of a coherent picture of many seemingly divergent perspectives on the mind/brain. Recent brain-based computational models serve to focus discussion. Also offered as AS.050.626.
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive

AS.050.332. Developmental Cognitive Neuroscience. 3 Credits.
In-depth examination of the current literature on cognitive development in the context of developmental cognitive neuroscience. Please see course prerequisites. Meets with AS.050.632.
Prerequisite(s): AS.050.101 OR AS.050.339 OR AS.200.132 OR AS.050.105 OR Instructor’s Permission.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.333. Psycholinguistics. 3 Credits.
This course provides a broad survey of current research on language processing in adult native speakers and language learners. Topics include speech perception, word recognition, and sentence production and comprehension. We will discuss the nature of representations that are being constructed in real-time language use, as well as how the mental procedures for constructing linguistic representations could be studied by various behavioral and physiological measures. Also offered as AS.050.633.
Prerequisite(s): AS.050.102 OR AS.050.240 OR AS.050.317 OR AS.050.320 OR AS.050.325 or instructor’s permission.
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive

AS.050.339. Cognitive Development. 3 Credits.
This is a survey course in developmental psychology designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature, and development psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.346. Decoding the Brain: Multivariate Analysis in Cognitive Neuroscience. 3 Credits.
Neural decoding through Machine Learning has become an ever-important tool for neuroscientists to understand how the brain processes information. This course introduces students to this exciting field with seminar-style lectures and hands-on practice sessions. The course will be organized around a number of corner-stone applications of neural decoding in Cognitive Neuroscience, topics include face recognition, concept knowledge representation, and bridging language model and the brain. In the practice sessions, students will learn to analyze actual neuroimaging data and replicate the published findings with off-the-shelf software. By the end of the course, students will be familiar with the basic methods of neural decoding, and acquire hands-on experience of data analysis. Prior programming knowledge is not required and programming skill per se is not part of the evaluation, yet students are expected to familiarize themselves with the scripting interface and understand the basics through the practice sessions. If an interested student has taken a statistics course comparable to one of the listed prerequisite courses, contact the instructor and include the course number and description.
Prerequisite(s): EN.553.111 OR EN.553.112 OR EN.550.111 OR EN.550.112 OR EN.550.230 OR EN.550.310 OR EN.550.311 OR Instructor Permission
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.348. First Language Acquisition. 3 Credits.
This course provides an introduction to the fields of first and second language acquisition by looking at questions such as the following: Can the grammar of a native language be learned solely on the basis of noticing statistical correlations among words? How does native language acquisition explain — or is explained by — the universal properties, shared by all languages, of words and grammars? How does being exposed to multiple languages from birth affect language acquisition and what happens when a child is not exposed to any language early in life? Does the same cognitive mechanism guide language learning in children and adults? What factors account for individual differences in ease and ultimate attainment when a second language is learned later in life? Is it possible to become indistinguishable from a native speaker in a foreign language? What changes take place in the brain when a new language is learned? Also offered as AS.050.648.
Prerequisite(s): (AS.050.240 OR AS.050.320 OR AS.050.325) AND AS.050.102 OR AS.050.206
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.349. Second Language Acquisition. 3 Credits.
First language acquisition is natural and seemingly effortless. The situation is reversed when one tries to learn another language. This course discusses in what ways first and second language acquisition (SLA) differ and how individual differences of the learners as well as external factors contribute to the variability observed in rates and ultimate proficiency of second language learning in children and adults. We will discuss such topics as Universal Grammar access in early and late SLA, first language influence, critical periods, possibility of native-like attainment, and language attrition.
Prerequisite(s): (AS.050.240 OR AS.050.320 OR AS.050.325) AND (AS.050.348 OR AS.050.102 OR AS.050.206)
Area: Natural Sciences, Social and Behavioral Sciences
AS.050.358. Language & Thought. 3 Credits.
Have you ever wondered about the relationships between language and thought? Philosophers, linguists, psychologists, evolutionary theorists and cognitive scientists have too and this course will survey the current thinking on this matter. Classical papers such as those by Whorf and Sapir, more recent philosophical papers by people such as Fodor and Dennett, and recent empirical work by linguists and psycholinguists on the relationship between language and thinking in development and in adults will be covered. Discussions will focus on the theoretically possible relationships between language and thought and the empirical data that speak to these. Juniors and seniors only. Freshmen and sophomores by permission of instructor only.
Prerequisite(s): AS.050.102 OR AS.050.320 OR AS.050.325 or instructor permission.
Area: Humanities, Natural Sciences, Social and Behavioral Sciences

AS.050.360. Computational Psycholinguistics. 3 Credits.
How do we understand and produce sentences in a language we speak? How do we acquire the knowledge that underlies this ability? Computational psycholinguistics seeks to address these questions using a combination of two approaches: computational models, which aim to replicate the processes that take place in the human mind; and human experiments, which are designed to test those models. The perspective we will take in this class is that the models and experimental paradigms do not only advance our understanding of the cognitive science, but can also help us advance artificial intelligence and language technologies. While computational psycholinguistics spans all levels of linguistic structure, from speech to discourse, our focus in this class will be at the level of the sentence (syntax and semantics). The course will assume familiarity with programming and computational modeling frameworks in cognitive science, as covered by Introduction to Computational Cognitive Science or equivalent. Also offered as AS.050.660. An optional, hands-on lab (AS.050.361) is offered to supplement this course. It is highly recommended that students with less extensive computational and mathematical experience register for this lab.
Prerequisite(s): (AS.050.102 OR AS.050.240 OR AS.050.317 OR AS.050.320) AND (AS.050.202 OR EN.601.465) or Instructor Permission.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.361. Computational Psycholinguistics Lab. 0.5 Credits.
This course is an optional hands-on lab supplement for Computational Psycholinguistics. While this lab is optional, it is highly recommended to students with less extensive computational and mathematical experience.
Corequisite(s): Must be registered for AS.050.360 or AS.050.660 in order to register for this optional lab.

AS.050.365. Cracking the code: Theory and modeling of information coding in neural activity. 3 Credits.
One of the most foundational concepts in neuroscience is the idea that neural activity encodes information about an animal’s sensory environment and internal mental states. This idea is closely connected to the concept of mental representation in cognitive science and philosophy, whereby the mind is proposed to contain internal symbols that represent things in the external world. There have been many fascinating discoveries about how neural signals encode information, but we are still far from a comprehensive theory of neural representation. Recent major developments in neuroscience and machine learning have opened up a new world of possibilities for investigating the underlying principles of information coding in the brains of humans and other animals. In this course, we will discuss primary research articles on neural representation and information processing, and students will implement computational analyses that address issues in these domains. We will mostly focus on vision as a system that illustrates broader principles of information processing in the human brain. The reading material will include work from philosophy, neuromaging, electrophysiology, and computational modeling. The topics covered include mental and neural representation, neural tuning, population coding, information theory, encoding and decoding models, dimensionality reduction, computational models, deep learning, and other applications of machine learning in neuroscience. Enrollment is limited to Juniors and Seniors. While this class does not have formal prerequisites, programming experience (e.g., AS.250.205 Introduction to Computing) and mathematical preparation (e.g., AS.110.107 Calculus II) are essential. It is also highly recommended that students have previously taken introductory courses in cognitive or systems neuroscience (e.g., AS.050.203 Neuroscience: Cognitive) and machine learning or neural network modeling (e.g., AS.050.372 Foundations of Neural Network Theory).
Area: Natural Sciences, Quantitative and Mathematical Sciences

AS.050.370. Mathematical Models of Language. 3 Credits.
This course will be devoted to the study of formal systems that have proven useful in the cognitive science of language. We will discuss a wide range of mathematical structures and techniques and demonstrate their applications in theories of grammatical competence and performance. A major goal of this course is bringing students to a point where they can evaluate the strengths and weaknesses of existing formal theories of cognitive capacities, as well as profitably engage in such formalization, constructing precise and coherent definitions and rigorous proofs. Also offered as AS.050.670.
Prerequisite(s): AS.050.102 OR AS.050.202
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.371. Bayesian Inference. 3 Credits.
This course introduces techniques for computational modeling of aspects of human cognition, including perception, categorization, and induction. Possible topics include maximum likelihood and Bayesian inference, structured statistical models (including hierarchical and graphical models), nonparametric models. The course emphasizes the close connections among data analysis, theory development, and modeling, with examples drawn from language and vision. Also offered as AS.050.671.
Area: Natural Sciences, Social and Behavioral Sciences
AS.050.372. Foundations of Neural Network Theory. 4 Credits.
Introduction to continuous mathematics for cognitive science, with applications to biological and cognitive network models: real and complex numbers, differential and integral multi-variable calculus, linear algebra, dynamical systems, numerical optimization. Also offered as AS.050.672.
Area: Natural Sciences, Quantitative and Mathematical Sciences

AS.050.375. Probabilistic Models of the Visual Cortex. 3 Credits.
The course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modeling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks. Required Background: Calculus I and experience in a programming language (Python preferred).
Prerequisite(s): AS.110.106 OR AS.110.108
Area: Quantitative and Mathematical Sciences

AS.050.501. Readings in Cognitive Science/Freshmen. 1 - 3 Credits.
Assigned readings on current topics in cognitive science. Instructor approval required. Letter-graded.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.502. Readings in Cognitive Science-Freshmen. 1 - 3 Credits.
Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.503. Research in Cognitive Science/Freshmen. 1 - 3 Credits.
Research current topics in cognitive science. Instructor approval required. Graded S/U.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.504. Research Cognitive Science-Freshmen. 1 - 3 Credits.
Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.505. Readings in Cognitive Science/Sophomores. 1 - 3 Credits.
Research current topics in cognitive science.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.506. Readings Cognitive Science-Sophomores. 1 - 3 Credits.
Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.507. Research in Cognitive Science/Sophomores. 1 - 3 Credits.
Research current topics in cognitive science. Instructor approval required. Graded S/U.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.508. Research Cognitive Science - Sophomores. 1 - 3 Credits.
Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

Research current topics in cognitive science.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.511. Readings in Cognitive Science/Juniors. 1 - 3 Credits.
Assigned readings on current topics in cognitive science. Instructor approval required. Letter-graded.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.512. Readings Cognitive Science-Juniors. 1 - 3 Credits.
Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.513. Research in Cognitive Science/Juniors. 1 - 3 Credits.
Research current topics in cognitive science. Instructor approval required. Graded S/U.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.515. Readings in Cognitive Science/Seniors. 1 - 3 Credits.
Assigned readings on current topics in cognitive science. Instructor approval required. Letter-graded.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.516. Readings Cognitive Science - Senior. 1 - 3 Credits.
Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.517. Research in Cognitive Science/Seniors. 1 - 3 Credits.
Research current topics in cognitive science. Instructor approval required. Graded S/U.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.518. Research Cognitive Science - Seniors. 1 - 3 Credits.
Permission Required.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.050.519. Research-Cognitive Science. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.
AS.050.332. Intro to Bilingualism.
Do children get confused when they grow up exposed to more than one language? Is it possible to forget one's native language? Are the first and second language processed in different areas of the brain? How does brain damage impact the different languages of a polyglot? Does knowing a second language affect non-linguistic cognitive processing? This course will address questions such as these through an exploration of mental and neural processes underlying bilingual and multilingual language processing. Also listed as AS.050.206.

AS.050.617. Semantics I.
Also offered as AS.050.317. This is an introduction to the study of meaning in natural language. We address the conceptual and empirical issues in semantic theory and introduce some formal machinery that has been developed to deal with such problems. After discussing foundational questions, we turn to formal semantics and pragmatics, as well as their interfaces with syntax and the lexicon. Specific topics include presupposition, type-driven composition, quantification, lexical aspect, argument structure, and lexical representations of meaning.

This course provides an introduction to the fields of first and second language acquisition by looking at questions such as the following: How does the grammar of a native language be learned solely on the basis of noticing statistical correlations among words? How does native language acquisition explain — or is explained by — the universal properties, shared by all languages, of words and grammars? How does being exposed to multiple languages from birth affect language acquisition and what happens when a child is not exposed to any language early in life? Does the same cognitive mechanism guide language learning in children and adults? What factors account for individual differences in ease and ultimate attainment when a second language is learned later in life? Is it possible to become indistinguishable from a native speaker in a foreign language? What changes take place in the brain when a new language is learned? Recommended background: An introductory course in a linguistic course such as world of language, phonology, or syntax as well as a linguistics course such as language and mind or bilingualism. Also offered as AS.050.348.

Also offered as AS.050.333. This course provides a broad survey of current research on language processing in adult native speakers and language learners. Topics include speech perception, word recognition, and sentence production and comprehension. We will discuss the nature of representations that are being constructed in real-time language use, as well as how the mental procedures for constructing linguistic representations could be studied by various behavioral and physiological measures.

Also offered as AS.050.339. This is a survey course in developmental psychology designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature, and development psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning.

AS.050.648. First Language Acquisition.
This course provides an introduction to the fields of first and second language acquisition by looking at questions such as the following: Can the grammar of a native language be learned solely on the basis of noticing statistical correlations among words? How does native language acquisition explain — or is explained by — the universal properties, shared by all languages, of words and grammars? How does being exposed to multiple languages from birth affect language acquisition and what happens when a child is not exposed to any language early in life? Does the same cognitive mechanism guide language learning in children and adults? What factors account for individual differences in ease and ultimate attainment when a second language is learned later in life? Is it possible to become indistinguishable from a native speaker in a foreign language? What changes take place in the brain when a new language is learned? Recommended background: An introductory course in a linguistic course such as world of language, phonology, or syntax as well as a linguistics course such as language and mind or bilingualism. Also offered as AS.050.348.

First language acquisition is natural and seemingly effortless. The situation is reversed when one tries to learn another language. This course discusses in what ways first and second language acquisition (SLA) differ and how individual differences of the learners as well as external factors contribute to the variability observed in rates and ultimate proficiency of second language learning in children and adults. We will discuss such topics as Universal Grammar access in early and late SLA, first language influence, critical periods, possibility of native-like attainment, and language attrition. Recommended background in AS.050.102 Language and Mind, AS.050.348 Language Acquisition, AS.050.206 Bilingualism or equivalent.

AS.050.325. Syntax I.
Introduces the basic methods and means of analysis used in contemporary syntax investigations, practicing with data from different languages. Also offered as AS.050.320.

AS.050.622. Semantics II.
Co-taught with AS.050.322. This course extends the material in AS.050.317 to cover advanced but central topics in semantic and pragmatic theory, focusing on intensional semantics (especially possible world semantics and situation semantics). Empirical domains of interest in this class include modality, tense, grammatical aspect, conditionals, attitude and speech reports, questions, and free choice phenomena. Three core theoretical issues addressed in this class are the nature of a compositional account of the above intensional phenomena, the representations of possibilities involved, and the role of the syntax/semantics/pragmatics interface in such an account.

Prerequisite(s): AS.050.617
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.625. Phonology I.
An introduction to the basic principles underlying the mental representation and manipulation of language sounds and their relation to human perception and vocal articulation: how units of sound are both decomposable into elementary features and combined to form larger structures like syllables and words. The role of rules and constraints in a formal theory of phonological competence and in accounting for the range of variation among the world's languages. Also offered as AS.050.325.

Area: Natural Sciences, Social and Behavioral Sciences

Also offered as AS.050.326. This course explores general issues and methodologies in cognitive science through the reading of classic works (from Plato and Kant through Skinner and Turing) and recent research articles to begin construction of a coherent picture of many seemingly divergent perspectives on the mind/brain. Recent brain-based computational models serve to focus discussion.

Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive

In-depth examination of the current literature on cognitive development in the context of developmental cognitive neuroscience. Meets with AS.050.332.
AS.050.658. Language & Thought.
Have you ever wondered about the relationships between language and thought? Philosophers, linguists, psychologists, evolutionary theorists and cognitive scientists have too and this course will survey the current thinking on this matter. Classical papers such as those by Whorf and Sapir, more recent philosophical papers by people such as Fodor and Dennett, and recent empirical work by linguists and psycholinguists on the relationship between language and thinking in development and in adults will be covered. Discussions will focus on the theoretically possible relationships between language and thought and the empirical data that speak to these.

AS.050.660. Computational Psycholinguistics.
How do we understand and produce sentences in a language we speak? How do we acquire the knowledge that underlies this ability? Computational psycholinguistics seeks to address these questions using a combination of two approaches: computational models, which aim to replicate the processes that take place in the human mind; and human experiments, which are designed to test those models. The perspective we will take in this class is that the models and experimental paradigms do not only advance our understanding of the cognitive science, but can also help us advance artificial intelligence and language technologies. While computational psycholinguistics spans all levels of linguistic structure, from speech to discourse, our focus in this class will be at the level of the sentence (syntax and semantics). The course will assume familiarity with programming and computational modeling frameworks in cognitive science, as covered by Introduction to Computational Cognitive Science or equivalent. Also offered as AS.050.360. An optional, hands-on lab (AS.050.361) is offered to supplement this course. It is highly recommended that students with less extensive computational and mathematical experience register for this lab.

One of the most foundational concepts in neuroscience is the idea that neural activity encodes information about an animal's sensory environment and internal mental states. This idea is closely connected to the concept of mental representation in cognitive science and philosophy, whereby the mind is proposed to contain internal symbols that represent things in the external world. There have been many fascinating discoveries about how neural signals encode information, but we are still far from a comprehensive theory of neural representation. This course will be devoted to the study of formal systems that have proven useful in the cognitive science of language. We will discuss a wide range of mathematical structures and techniques and demonstrate their applications in theories of grammatical competence and performance. A major goal of this course is bringing students to a point where they can evaluate the strengths and weaknesses of existing formal theories of cognitive capacities, as well as profitably engage in such formalization, constructing precise and coherent definitions and rigorous proofs. Recommended background in language and mind or computational cognitive science. Also offered as AS.050.370
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.671. Bayesian Inference.
Also offered as AS.050.371. This course introduces techniques for computational modeling of aspects of human cognition, including perception, categorization, and induction. Possible topics include maximum likelihood and Bayesian inference, structured statistical models (including hierarchical and graphical models), nonparametric models. The course emphasizes the close connections among data analysis, theory development, and modeling, with examples drawn from language and vision.
Area: Natural Sciences, Social and Behavioral Sciences

AS.050.672. Foundations of Neural Network Theory.
Introduction to continuous mathematics for cognitive science, with applications to biological and cognitive network models: real and complex numbers, differential and integral multi-variable calculus, linear algebra, dynamical systems, numerical optimization. Recommended course background in Calculus I. Also offered as AS.050.372.

The course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modelling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks. Also offered as AS.050.375.

Directed readings on current topics in cognitive science. Instructor approval required.

Participants in this graduate seminar will read and discuss current research articles in cognitive neuropsychology of vision or language, and present their own research.

Permission required. Current issues and ongoing research on human cognition are discussed.

Participants in this seminar will read and discuss current research articles in the fields of cognitive neuroscience, computational neuroscience, machine learning, and artificial intelligence. The seminar will focus on research that provides insights into the representations and algorithms of the human brain, with an emphasis on vision and natural semantic understanding.
This seminar is on computational models for vision and its interaction with language. For Cognitive Science, computational models, like Deep Nets, offer the possibility of developing computational theories which can be tested on natural, or realistically synthetic images. But Deep Nets by themselves are unable to capture the richness and flexibility of human perception, so we will discuss other classes of model with more compositional structure and ability to represent the physical properties of the 3D world. These will be related to, and motivated by, behavioral and electrophysiological experiments.

A specialized research seminar for individuals researching language acquisition, cognitive development and the interface between language and cognition. Students must actively carry out empirical or theoretical research in these areas. Permission required.

This seminar will discuss papers and ongoing research in the areas of computational cognitive neuroscience, with a focus on different areas of visual and social perception.

AS.050.814. Research Seminar in Computer Vision.
This seminar is based on topics in computational vision with the option of attending additional subgroup meetings on specific topics.

Participants in this graduate seminar will read and discuss current research articles in language development and present their own research. Permission required.

Discussion of current computational and experimental research on human language processing.

A critical analysis of current issues and debates in theoretical syntax. Discussion of on-going research.

AS.050.825. Research Seminar in Optimality Theory.
A specialized research seminar on constraint based theories of human language, including Optimality Theory, Harmonic Grammar, and Maximum Entropy models.

Readings and research presentations on varying topics in mathematics, computation, and formal linguistics with bearing on cognitive science.

AS.050.827. Research Seminar in Language Acquisition.
Focus is on current research in acquisition of syntax.

Topics range from mathematical analysis of neural networks to computational studies of linguistic structure. Focus is ongoing research and current literature.

Current topics in any area of cognitive science, including language and vision, with discussion of recent developments in theory, experimental study, and computational modeling.

AS.050.849. Teaching Practicum.
Permission required. Essential for Teaching Assistants.

Instructor permission required. Addresses professional issues such as research ethics, success on the job market and in an academic career, teaching and mentoring and differing professional standards in the sub-disciplines of cognitive science.

Independent study. Intended for graduate students who have completed all degree requirements except for their dissertation but must remain or return to residency status in order to fulfill other obligations. Advisor or department approval required.
AS.060 (ENGLISH)

AS.060.100. Introduction to Expository Writing. 3 Credits.
Introduction to "Expos" is designed to introduce less experienced writers to the elements of academic argument. Students learn to recognize "The Fundamental Structure of Academic Argument" as they learn to read and summarize academic essays, and then they apply the fundamental structure in academic essays of their own. Classes are small, no more than 10 students, and are organized around three major writing assignments. Each course guides students' practice through pre-writing, drafting, and revising, and includes discussions, workshops, and tutorials with the instructor. In addition to its central focus on the elements of academic argument, each "Intro" course teaches students to avoid plagiarism and document sources correctly. "Intro" courses do not specialize in a particular topic or theme and are available to freshmen only.
Area: Humanities
Writing Intensive

AS.060.107. Introduction to Literary Study. 3 Credits.
This course serves as an introduction to the basic methods of and critical approaches to the study of literature. Some sections may have further individual topic descriptions; please check in SIS when searching for courses.
Area: Humanities
Writing Intensive

AS.060.108. Time Travel. 3 Credits.
Why is time travel such a consistent and perplexing theme in literature and film over the last 150 years? Why is modernity so concerned with peeking backwards or forwards? This course will examine the history of time-travel fiction, from its beginning in utopian fiction through its box-office dominance in the 1980s, and into today. Writers will likely include Mark Twain, Edward Bellamy, Harold Steele Mackay, Ray Bradbury, Robert Heinlein, and Philip K. Dick. Movies will include *The Terminator*, *Back to the Future* and *Primer*.
Area: Humanities
Writing Intensive

AS.060.111. Freshman Seminar: How Not to Be Afraid of Poetry. 3 Credits.
What is poetry? And why don't we like it? This course will explore what makes poetry turn ordinary language into something extraordinary, into shapes and sounds so that sometimes we find it difficult to understand and sometimes we find it gives us great delight. This seminar will open up a range of poetry written in English, including some of the greatest writers of the English language. This course is designed for the students without a strong background in reading poetry but who have the desire to gain it; the main emphasis is exploration of the world and words of poetry and developing an appreciation and analytical understanding of the ways poetry can express, advocate, record, and move. Assignments will include reading poems, becoming an expert about a single poet, attending public poetry readings, creating poems, and writing short weekly assignments about poems. You will be expected to be an active member in classroom discussion and activities. Pre 1800 course.
Area: Humanities
Writing Intensive

AS.060.112. Major Authors: Dickens and Film. 3 Credits.
From the earliest moments of cinema, Charles Dickens' writing has proven extraordinarily stimulating for film-makers. Why might this be? What does it tell us about Dickens—and what does it tell us about the pleasures and demands of both fiction and film? To address these complex questions we'll read a handful of Dickens' works (most likely Oliver Twist, Great Expectations, Christmas Carol and Little Dorrit), watch their adaptations, and read a small set of critical essays. Requirements are likely to include two papers, response papers, and a class presentation.
Area: Humanities

AS.060.113. Expository Writing. 3 Credits.
"Expos" is designed to introduce more confident student writers to the elements of academic argument. Students learn to apply "The Fundamental Structure of Academic Argument" in academic essays of their own. Classes are capped at 15 students and organized around three major essay assignments. Each course guides students' practice through pre-writing, drafting, and revising, and includes discussions, workshops, and tutorials with the instructor. In addition to its central focus on the elements of academic argument, each "Expos" course teaches students to document sources correctly and provides its own topic or theme to engage students' writing and thinking. Please see the following list of individual course descriptions to decide which sections of "Expos" will most interest you. "Expos" courses are available to freshmen, sophomores, and juniors, and to seniors by special permission.
Area: Humanities
Writing Intensive

AS.060.114. Expository Writing. 3 Credits.
"Expos" is designed to introduce more confident student writers to the elements of academic argument. Students learn to apply the paradigm of academic argument in academic essays of their own. Classes are capped at 15 students and organized around four major writing assignments. Each course guides students' practice through pre-writing, drafting, and revising, and includes discussions, workshops, and tutorials with the instructor. In addition to its central focus on the elements of academic argument, each "Expos" course teaches students to document sources correctly and provides its own topic or theme to engage students' writing and thinking. Please see the Expository Writing Program's website for individual course descriptions to decide which sections of "Expos" will most interest you. "Expos" courses are available to freshmen, sophomores, and juniors, and to seniors by special permission from the English Department.
Area: Humanities
Writing Intensive
AS.060.120. Realism Unsettled: The Colonial and Postcolonial Novel at Sea. 3 Credits.
A haloed claim about the realist novel is that it tells us stories that help make sense of the world—but is it possible to represent the complexity of social life under global capitalism? How do novels engage with the problem of knowledge posed by empire and colonization? We will look at writers from within the imperial metropolis as they struggle to imagine the totality of the geopolitical world, and also at writers from formerly colonized regions who “write back” to the imperial center, bending novelistic conventions along the way. The course starts by asking how new conventions and quirky techniques of novel-writing emerge when novelists try leaving the certainty of their national and regional boundaries to enter the confusion of uncharted territories. It then turns to postcolonial novels, to consider how these write against, or claim power through, the notion that their regions are chaotic and undecipherable. Primary texts: Moby Dick, Lord Jim, A Passage to India, Sea of Poppies, The White Tiger.
Area: Humanities

AS.060.124. Politics, History and Autobiography. 3 Credits.
Students will write a mini-autobiography in the form of seven 3000 word essays, work shopped in class. Readings include A Small Place by Jamaica Kincaid and Brothers and Keepers by John Edgar Wideman.
Area: Humanities Writing Intensive

AS.060.126. Feminist Fiction: Fundamentals. 3 Credits.
Area: Humanities

AS.060.129. Writing Africa Now. 3 Credits.
This course surveys post-2000 literary and cultural production from sub-Saharan Africa. Topics will include debates over genre and fiction’s relevance to African experience, legacies of canonical writing about independence, urban Africa as violent or “tragic” landscape, and problems of scale and geographical context. Readings by authors such as Adichie, Wainaina, Duiker, and Vladislavic, and students will be introduced to the main print and online arteries of African intellectual discussion. This class is for non-majors and does not count towards the English major or minor.
Area: Humanities Writing Intensive

AS.060.131. Race and Pop-Culture in America. 4 Credits.
How does American pop-culture deal with race? Through primary sources like Fresh Off the Boat and Jane the Virgin, comic books like Ms. Marvel, and books like The Hate U Give and Crazy Rich Asians, and their filmic adaptations, we examine and question how race is represented and used in recent popular media. Short secondary sources supplement our thinking and provide background to vital pieces of our culture often overlooked under the label of entertainment.
Area: Humanities

AS.060.135. American Nightmares: Burroughs, Highsmith, Dick. 3 Credits.
These three authors share a common starting point: Patricia Highsmith, William S. Burroughs and Philip K. Dick all began their careers writing mass market genre fiction in pre-Stonewall, pre-civil rights, Cold War 1950s America. Absorbing the stylistic codes of their respective marketplaces of suspense writing and lesbian romance, ‘drug fiend’ confessional, and science fiction, each writer’s conformist apprenticeship in pulp resurfaces in increasingly nightmarish forms in the violent and paranoid scenarios that dominate their mature work. Reading broadly in each author’s short fiction, novels, and prose, we will sequentially examine Burroughs’ ‘cut-up’ techniques and ‘routines’, Highsmith’s free indirect discourse gone wrong, and Dick’s disorienting temporal experiments as inflamed allergic reactions to generic codes. We will also examine the cinematic afterlives of these authors by looking at key scenes from three adaptations of their work: Alfred Hitchcock’s Strangers on a Train (1951), David Cronenberg’s Naked Lunch (1991), and Richard Linklater’s A Scanner Darkly (2006).
Area: Humanities

AS.060.137. Doctors Without Borders: Literature, Medicine, and the Human Condition. 3 Credits.
Doctors play a significant role in shaping literary history as both writers and fictional subjects. From Chekhov to Sherlock Holmes, W. Somerset Maugham to Middlemarch, medical practice is imagined to bestow a privileged understanding of humanity in confrontation with questions of life and death. This course explores how writing about medicine connects long-established themes of mortality, authority, and ways of knowing to timely questions of global migration, cultural contact, and social justice. We will read literary writing by physicians as well as writing that depicts their work in detail, by authors including Nawal El Saadawi, Atul Gawande, Abraham Verghese, Damon Galgut, and Taiye Selasi.
Area: Humanities

AS.060.139. Expository Writing: The Narrative Essay. 3 Credits.
Telling stories is one of the first and most important ways that human beings try to make sense of the world and their experience of it. The narrative art informs fiction and nonfiction alike, is central to the writing of history, anthropology, crime reports and laboratory reports, sports stories and political documentaries. What happened? The answer may be imagined or factual, but it will almost certainly be narrative. This course focuses on the narrative essay, a nonfiction prose form that answers the question of “what happened” in a variety of contexts and aims to make sense not only of what happened but how and why. We will begin by summarizing narrative essays, will move to analyzing them, and in the second half of the course you will write two narrative essays of your own, the first based on a choice of topics and sources, the second of your own design. Authors may include James Baldwin, Annie Dillard, Chang Rae Lee, Danielle Ofr, George Orwell, Richard Rodriguez, Richard Selzer, and Abraham Verghese. You will learn the power of narrative to inform and persuade as you test that power in your own writing.
Area: Humanities Writing Intensive

AS.060.141. Nineteenth Century Narrative and Early Film. 3 Credits.
This course will situate the birth of the movies within the context of 19th century fiction and visual technology. Filmmakers are likely to include Georges Melsies, Sergei Eisenstein, D. W. Griffiths, Charlie Chaplin, Buster Keaton, King Vidor, and Rouben Mamoulian; novelists are likely to include Charles Dickens (Christmas Carol or Oliver Twist), Robert Louis Stevenson (Jekyll and Hyde), and perhaps Virginia Woolf (Mrs. Dalloway).
Area: Humanities Writing Intensive
AS.060.124. Indigenous Science Fiction: (Re)making Worlds. 3 Credits.
This discussion-based seminar will survey science fiction written by indigenous authors in what are now the United States, Canada, and Australia. We will investigate by what means and to what ends this particular genre has been taken up by indigenous peoples both to reflect on their settler-colonial pasts and presents and to imagine decolonial futures. Texts may include: Leslie Marmon Silko, Almanac of the Dead; William Sanders, 'The Undiscovered'; Daniel Heath Justice, The Way of Thorn and Thunder; Blake Hausman, Riding the Trail of Tears; Waubgeshig Rice, Moon of the Crusted Snow; Claire Coleman, Terra Nullius; Tanya Tagaq, Split Tooth. Fulfills the Global and Minority Literatures requirement.
Area: Humanities
Writing Intensive

AS.060.146. Detective Fiction. 3 Credits.
This course will look at the history of English-language detective fiction through the nineteenth and twentieth centuries. We will pay special attention to the way clues and suspense operate, the role of the reader in figuring out the mystery, and the complicated relationship of the detective with official authority. Authors will likely include some selection of Wilkie Collins, Edgar Allan Poe, Arthur Conan Doyle, Agatha Christie, Dashiell Hammet, and Raymond Chandler. This class is for non-majors.
Area: Humanities
Writing Intensive

AS.060.151. Doubles, Demons, and Dummies: The Literature of the Fantastic. 3 Credits.
Talking reflections. Dolls with knives. Dancing automatons. They are all part of the strange and dangerous world of the fantastic. This course examines the literature of the fantastic, or what we can refer to as creepy double, demon, and dummy stories. We'll look at everything from Poe to American Psycho in an attempt to figure out what just happened, why and how it relates to literary meaning.
Area: Humanities

AS.060.155. Expository Writing: Introduction to the Research Paper - Controversies in Adolescence. 3 Credits.
"Introduction to the Research Paper" is designed to introduce more experienced student writers to the fundamental skills of the research process. These include asking research questions, evaluating the usefulness of sources to answer them, synthesizing sources, reading sources critically, and developing arguments that deliver an original thesis. Students will work with a research librarian at the Eisenhower Library, with whom they will learn to navigate traditional databases as well as new media sources. The Research Paper is topic-based and divided into three linked units of instruction. The course culminates with a paper of 10-12 pages that draws upon the cumulative skills of the semester. Each course is capped at ten students and available only to those who have taken "Expository Writing" (060.113/114)
Prerequisite(s): AS.060.113 OR AS.060.114
Area: Humanities
Writing Intensive

AS.060.201. The Nineteenth Century British Novel. 3 Credits.
Reading major novelists from the nineteenth century including Austen, C. Brontë, Dickens, Eliot, Hardy, and Conrad. We will pay attention to formal conventions, and relation to social and historical context.
Area: Humanities

AS.060.203. Bible as Literature. 3 Credits.
This course looks at the ways in which the Bible has and can be read as literature.
Area: Humanities

AS.060.205. Feminist Fiction: Violence, Sex and Gender. 3 Credits.
This course will start with passages from Lysistrata and the Book of Judges, and have as a running concern the overlapping structures of violence, race and gender. Novels will include the following pairs: Jane Eyre and Wide Sargasso Sea, The Bluest Eye and Bastard Out of Carolina, The Handmaid's Tale and Octavia Butler's novella Bloodchild.
Area: Humanities

AS.060.207. Shakespeare. 3 Credits.
Reading the major comedies, histories and tragedies alongside the narrative poem "Venuses and Adonis" and the sonnets, this survey course considers Shakespeare's hybrid career as poet and playwright. Pre 1800 course.
Area: Humanities

AS.060.208. English Literature from Beowulf to Milton. 3 Credits.
British Literature I is a survey of English writing on the isle of Britain from the seventh to the seventeenth centuries. It traces the formal experimentation in poetry and prose, and in narrative, lyric, and drama, through which that writing eventually became pre-eminent in Britain. It will also attend to the social and cultural circumstances—in the court, in church, and in the evolving public and private spheres—that shaped the many genres that emerged in this rich 1000 years and developed a definition of 'literature' itself. Author's read include Chaucer, Langland, Kempe, Spenser, Shakespeare, Lanyer, Donne Herbert, Marvel, and Milton. Through lectures, class discussion, written responses, and longer essay assignments, students will master the fundamentals of English literary history as well as the techniques of critical reading and writing.
Area: Humanities

AS.060.209. The Literary History of the Devil to 1800. 3 Credits.
This course reads major works in European literature before 1800 (give or take) depicting the devil. It examines the history of the various social, cultural and political guises under which the devil appears, and the function that representing radical evil performs, in literature and society. Among our readings will be Dante's Inferno; Milton's Paradise Lost; Goethe's Faust, Part One, and many other major Satanic works.
Area: Humanities

AS.060.210. British Literature II. 3 Credits.
This course provides a framework for grasping the dazzling variety and explosive innovation of literature in English during the last quarter-millennium. Attending both to textual details and to historical contexts, we will see how Wordsworth, Austen, Keats, Tennyson, Dickens, Wilde, Woolf, Rushdie, and other writers extend and undo tradition, illuminate their times and places as well as our own, and conspire to bring to us the intense experience distinctive to great literary art.
Area: Humanities

AS.060.211. How Not to be Afraid of Poetry. 3 Credits.
What is poetry? And why don't we like it? This course will explore what makes poetry turn ordinary language into something extraordinary. Opening up a range of poetry in English, the course will involve reading poetry aloud, thinking about poetry and its forms, and gaining experience in understanding poetry. Assignments will include attending to details small and large in poems, becoming an expert about a single poet, debating aesthetic issues, and composing short analytical papers about poems. There are two required written assignments, a midterm and a final examination.
Area: Humanities
AS.060.214. Jane Austen. 3 Credits.
An in-depth study of Austen's writing, from her juvenilia through her posthumously published novels, with an occasional glance to movie adaptations. The course will focus on persistent questions about Austen's relationship to feminism, and issues of gender and sexuality, as well as issues of style and technique.
Area: Humanities

AS.060.216. Zombies. 3 Credits.
This lecture survey will attempt to answer why the zombie has become such a fixture in contemporary literature and cinema. We will track this figure across its many incarnations— from its late-eighteenth-century appearance in ethnographic fictions growing out of the modern cultures of racialized slavery in the Americas up to twenty-first-century Hollywood blockbusters in which the origins of the figure in the cultures of racialized slavery are perhaps not overt yet continue to manifest. What are the implications of the zombie's arc from a particular human being targeted for domination by a sorcerer to a living-dead horde created by radiation or epidemic? 'Texts' may include: Mary Shelley, Frankenstein; Edgar Allan Poe, 'The Man Who Was Used Up'; H. P. Lovecraft, 'Herbert West–Re-Animator'; Zora Neale Hurston, Tell My Horse; Victor Halperin, dir., White Zombie; George Romero, dir., Dead series; Edgar Wright, dir., Shaun of the Dead; Alejandro Brugués, dir., Juan de los Muertos; Colm McCarthy, dir., The Girl with All the Gifts; Colson Whitehead, Zone One; Jordan Peele, dir., Get Out. Fulfills the Global and Minority Literatures requirement.
Area: Humanities

AS.060.219. American Literature to 1865. 3 Credits.
A survey course of American literature from contact to the Civil War.
Area: Humanities

AS.060.222. American Literature, 1865 to today. 3 Credits.
This course is a survey of major developments in American poetry and narrative fiction from the end of the Civil War to the present day. Authors to be covered may include Mark Twain, Willa Cather, Henry James, James Baldwin, Toni Morrison, Emily Dickinson, Walt Whitman, Wallace Stevens, and John Ashbery.
Area: Humanities

AS.060.223. African American Literature from 1900 to Present. 3 Credits.
A survey of the major and minor texts written by African Americans during the twentieth century, beginning with Charles Chesnutt's The Marrow of Tradition and concluding with Toni Morrison's Beloved.
Area: Humanities

AS.060.224. The Essay Form and Creative Non-Fiction. 3 Credits.
This lecture will trace the history of English-language detective fiction through the nineteenth and twentieth centuries. Why does the figure of the detective appear when it does? How does it change over time, and what can we learn from that? We will pay special attention to the way clues and suspense operate, the role of the reader in figuring out the mystery, and the complicated relationship of the detective with official authority. Authors will likely include some selection of Wilkie Collins, Edgar Allan Poe, Arthur Conan Doyle, Agatha Christie, Dashiell Hammet, and Raymond Chandler.
Area: Humanities

AS.060.226. Nineteenth Century British Novel. 3 Credits.
Reading major novelists from the nineteenth century including Austen, C. Bronté, Dickens, Eliot, Hardy, and Conrad. We will pay attention to formal conventions, and relation to social and historical context.
Area: Humanities

AS.060.227. The Historical Novel. 3 Credits.
We're in the middle of dramatic social, technological and political change: how are we to understand it? This course will address this question by studying the historical novel. We're likely to start by reading Scott's Waverley and end with contemporary fiction. Throughout our focus will not be on particular historical facts or events but on the idea of history itself, the role of institutions and individuals within it, and the powers and limits of literary narrative.
Area: Humanities

AS.060.228. Training Writing Consln. 1 Credit.
A one credit course for those undergrads who have been nominated as Writing Center tutors. Permission required.
Area: Humanities

AS.060.230. Literary Theory. 3 Credits.
This course serves as an introduction to a wide range of critical approaches to literature through various canonical theoretical studies of the Book of Genesis.
Area: Humanities

AS.060.231. Sir Philip Sidney. 3 Credits.
Courtier, theorist, diplomat, soldier, and martyr, Sir Philip Sidney exemplified but also changed the cultural ideals of his Elizabethan moment. Hoping to evaluate Sidney's extravagant claim that "the poet, lifted up with the vigor of his own invention doth grow, in effect, into another nature", this course reads Sir Philip Sidney's innovations across a range of genres: literary theory ("An Apology for Poetry"), poetry ("Astrophel and Stella"), scriptural translation ("The Sidney Psalms") and prose romance ("The Countess of Pembroke's Arcadia"). The course concludes with an examination of his many afterlives as exemplary subject for biography, adaptation, homage and critical argument.
Area: Humanities

AS.060.232. Detective Fiction. 3 Credits.
As the all-20-21_v3.pdf 2361
**AS.060.309. Slavery in Renaissance Literature. 3 Credits.**
Against the backdrop of the rise of the European slave trade, how were slaves represented in early modern English literature? How was the condition of enslavement inflected by emergent nationalism, colonialism and theological constructions of difference? This course puts Renaissance literature into conversation with comparative histories of slavery and critical race theory. Authors include Aristotle, Terence, Epictetus, Christopher Marlowe, William Shakespeare, John Milton, Aphra Behn, Orlando Patterson, Kim Hall, Stephen Greenblatt, Mary Nyquist, Moses Finley and others.

Area: Humanities
Writing Intensive

**AS.060.310. A Century of Queer Literature. 3 Credits.**
This course is designed to offer a broad, non-exhaustive overview of queer literature written in the past hundred years. Although not every text on the syllabus was published in the U.S., the relation of these works to U.S. LGBTQ culture and politics will be our main interest. Individual weeks are designed to focus on particular facets of queer experience—how place (urban or rural), class stature (wealthy or working class), and race inform what is possible for queer individuals, relationships, and larger communities. Students will be encouraged to pursue their own larger critical questions around queer literary canon formation, but discussions will return to the question of how queer life and literature changes in the transition from the margins to the mainstream. What possibilities and what constrictions emerge as queerness seems to become more legible to larger numbers of people? Other routes of inquiry will address the varying ways these works address the relation between gender and sexuality, and whether there is such a thing as a cohesive queer narrative style or form. While our reading list primarily is composed of shorter works of fiction (usually <200 pages) by lesbian, gay, queer, and trans writers, the syllabus also includes memoir, drama, and poetry.

Area: Humanities
Writing Intensive

**AS.060.311. Literature in the Age of Mass Incarceration. 3 Credits.**
The United States in 2018 held more than two million people behind bars, and each year it imprisons more people per capita than any other nation in the world. Understood in terms of “mass incarceration,” a “new Jim Crow,” or “carceral capitalism,” scholars and activists have come increasingly to characterize contemporary U.S. society in light of these facts. Despite this, there has been only sporadic attention within literary studies to the prison as a driving force in American literature, even as canonical works in world literature, from Antigone to Les Misérables to Native Son, feature prominent prison plots. This course in American literature aims to examine how writers, both within and beyond the walls of the prison, have responded to the shifting role of incarceration in the U.S. We will read examples of both “prison literature” and literature that thematizes the prison as an institution across the period of explosive growth in imprisoned populations in the U.S. We will ask what kinds of writing—what genres, modes, styles, and forms—emerge from experiences of incarceration and the literary history of its representation. And we will investigate how a focus on the history of the prison might reshape readings in American literature. Finally, we will consider the role of writing and reading in political struggles against racism, militarism, and heteropatriarchy in the U.S. By developing a critical account of the prison through the kaleidoscope of literature, we will look to develop tools to better understand a central feature of contemporary social life in the U.S. Authors covered may include: Chester Himes, Malcolm X, Jimmy Santiago Baca, Audre Lorde, Piper Kerman, Mohamedu Ould Slahi, and Colson Whitehead, among others.

Area: Humanities
Writing Intensive

**AS.060.312. Bad Mothers: Nineteenth-Century Novels and Contemporary Theories of Maternity. 3 Credits.**
What makes a “bad” mother? Are bad mothers doomed to be bad, or are they produced by their circumstances? Why did so many nineteenth-century texts fixate on the different ways in which maternity could be flawed? This course pursues these questions in order to consider the psychology and politics of motherhood, an identity and a performance that for some has been synonymous with womanhood itself. Even as our primary texts naturalize and idealize motherhood, they encounter again and again maternity’s instability, its undesirability, its pain, its banality, and its failures. To dive into these questions, we will turn to twentieth- and twenty-first century theorists—including Sigmund Freud, Audre Lorde, Adrienne Rich, Jacqueline Rose, and bell hooks—for their insights about how individuals and societies think about mothers. Starting with maternal archetypes like the Grimms’ Evil Stepmother and the classical infanticide Medea, our primary texts will include works by Charles Dickens, Elizabeth Barrett Browning, Thomas Hardy, Virginia Woolf, Amy Tan, and at least one recent film/TV episode (TBD). Assignments include short reflections, one presentation, and one final research paper.

Area: Humanities
Writing Intensive

**AS.060.313. Social Media Fictions. 3 Credits.**
Writers around the world are now searching for ways to incorporate new modes of social interaction—e.g. Facebook, Twitter, text messaging, and Skype—into their print work. This course explores the various techniques they have adopted for this purpose, with an eye to critically evaluating their implications for narrative structure and its ‘reality effect.’ From Teju Cole’s very public experiments with the Twitter novel to a Zimbabwean writer’s attempt to capture plot turns through SMS, we will discuss the ways in which narrative is helped or hindered by the ubiquity of social media. Writers studied will include Tendai Huchu, Zadie Smith, Jonathan Franzen, and Eben Venter.

Area: Humanities
Writing Intensive

**AS.060.314. Mapping the Global Metropolis. 3 Credits.**
Cities have long taken on a central role in literature, but much of our reading about urban space is confined to a few Western hubs. And while the city has traditionally been a space for fictional characters to develop into national subjects, much of the most innovative contemporary writing sees the city as a character of its own. This course will address the representational challenges of globalization through fiction and genre-bending memoir about contemporary metropolises that act as its microcosm: Johannesburg, Lagos, Delhi, London, and New York. We will read primary works by Ivan Vladislavic, Chris Abani, Aravind Adiga, Zadie Smith, and Teju Cole, as well as supplementary excerpts from books including Capital, by Rana Dasgupta, Mike Davis’ Planet of Slums, Ato Quayson’s Oxford Street, Accra, and Loren Kruger’s Imagining the Edgy City. Finally, the course will include theoretical readings about globality and representation, such as Fredric Jameson’s essay on “Cognitive Mapping” and Arjun Appadurai’s seminal book Modernity at Large.

Area: Humanities
Writing Intensive
AS.060.317. Jane Austen Beyond England. 3 Credits.
This will be an in-depth study of Austen's novels with an emphasis on how they have traveled outside of the country of her birth – e.g. to the United States, India, and East Asia—through the work of individuals and the flows of global capitalism. Students will gain perhaps a disorienting sense of what Austen means in different cultures at different historical moments, and conduct individual research to learn more. Knowledge of another language is not necessary but could prove useful. The course will include a field-trip to the Alberta Burke Austen collection at Goucher College.

AS.060.318. Contemporary Literature and Climate Change. 3 Credits.
In this course we will study the ways literary texts have imagined and addressed climate change, from the turn of the 20th century until to day. We will primarily focus on novels, but I will provide non-fictional background reading on the history of how we've conceptualized "climate," and we will also read some poetry. We'll think a lot about genre: how does climate change look in realistic fiction? Science fiction? Poetry? Is apocalypse the only framework in which to view it? How do race, gender, class and geopolitics alter writers' views on climate? Texts will include HG Wells, The Time Machine; Kim Stanley Robinson, New York 2140; Octavia Butler, Parable of The Sower; Emily St. John Mandel, Station Eleven; Brenda Hillman, Seasonal Works with Letters on Fire; and Allison Cobb, After We All Died. We'll also draw on the Yale University Press anthology of climate writing, The Future of Nature.
Area: Humanities
Writing Intensive

AS.060.319. Introduction to Disability Studies. 3 Credits.
Disability has historically occupied a very narrow place in our cultural imaginations. In modern times, disability is almost always considered a medical issue. Yet, seemingly able-bodied, normal observers often exhibit a wide range of reactions when they encounter a disabled body. What would happen, therefore, if we shifted our focus away from the medical and toward these aesthetic and affective reactions? What if we focused on the pity, fear, and horror that encountering disability engenders in a so-called normal person? What if we considered normalcy itself as something that is socially constructed? In pursuit of answers to these questions, this course introduces students to the field of disability studies. Through an investigation of how disability is represented across a wide range of different media, the course will challenge students to rethink what they may think they know about culture, embodiment, and the politics of medical categories. Readings for this course may include Cece Bell, Ken Kesey, Virginia Woolf, Jordan Scott, Carson McCullers, Nina Raine, Lennard J. Davis, Ellen Jean Samuels, Tobin Siebers, Anlor Davin, Robert McRuer, Mladen Dolar, Jasbir K. Puar, Melanie Yergeau, Marilyn Wann, and April Herndon.

Writing Intensive

AS.060.320. Icons of Feminism. 3 Credits.
This course looks at four crucial figures who have haunted feminist thought and responses to feminism over the centuries. Sappho, known as the first female poet, remains an enigmatic icon of feminine desire and creativity; Antigone, the daughter of Oedipus and the heroine of Sophocles's play Antigone, still inspires feminist analyses of women's relationship to law, the state and civil society; and Joan of Arc, the militant maid of Orleans, troubles thinking about women and violence as well as women, religion and spirituality. The last figure is Mary Wollstonecraft, often cited as the first modern feminist. The course will examine literary works written about these iconic figures, as well as contemporary feminist writing about their influence and viability as models for the future of feminism.
Area: Humanities
Writing Intensive

AS.060.321. Literature and Anti-Slavery in the Caribbean and Beyond. 3 Credits.
This course provides an introduction to the texts and rhetoric of the movement to abolish slavery in the Caribbean. Our exploration of the literary and discursive patterns that bind the struggle against slavery in this diverse region (including the British West Indies, Cuba, and Haiti) will be guided by several questions. How did the formerly enslaved represent their experiences and level critiques against the slave system? What arguments did abolitionists - black and white, enslaved and free - make against slavery, and how did they imagine emancipation? What techniques do novelists, poets, and other artists use to represent the horrors of slavery and emancipatory struggles? To explore these and other problems, this class focuses on novels, poems, images, films, political treatises and first-person histories produced (mainly) by individuals who had either experienced Caribbean slavery or participated in the network of Transatlantic abolition. These texts to chart a complex journey, from the middle passage and eighteenth-century plantation life to international abolition, resistance to slavery, and the memories of racial slavery. The final section considers how the cultural legacy of Caribbean slavery and antislavery are taken up by artists from the Harlem Renaissance and various anti-colonial movements, and more recently by critics of mass incarceration in the US. Authors include, among others: Olaudah Equiano, Mary Prince, Esteban Montejo, Cirilo Villaverde, Frederick Douglass, Herman Melville, Langston Hughes, Aimé Césaire, and Ava DuVernay (all texts will be available in English).

Writing Intensive
AS.060.323. Mind, Body, and Materialist Science in Victorian Literature. 3 Credits.
What was the relationship between mind and body in Victorian discourses of science? In 1875, William B. Carpenter gave a lecture entitled "Is Man an Automaton?" claiming that the human mind was reducible to material processes that were independent of the higher faculty of the will. Prior to Carpenter, however, nineteenth-century thinkers had already been exploring the possibility of the material foundation of human existence. Was the mind an extension of the body? How could scientific theories explain unknown, hidden domains of the mind? How far could evolutionary science go to challenge the foundation of human existence by locating psychological phenomena in biological life and in physical adaptations to the material environment? To explore these questions, this course examines the discourses of the mind and body in the Victorian era that were shaped by both literary and scientific texts. Starting with the pseudo-scientific discourse of mesmerism, we will examine the growing interest in observing mental life through outward bodily signs. We will then investigate discourses surrounding mental illness, automatic behavior, the unconscious workings of memory, evolutionary and hereditary ideas, and the relationship between human and nonhuman organisms. As we read texts written by Charles Darwin, Herbert Spencer, George Eliot, Wilkie Collins, Thomas Hardy, and Olive Schreiner, we will explore how such scientific discourses challenged traditional notions of dualism, identity, agency, and ethics.
Area: Humanities
Writing Intensive

AS.060.325. George Eliot. 3 Credits.
In this course we will read the major novels (and some essays) by George Eliot, one of the most intellectually engaging of British novelists. Her fiction explores ethical, social, and aesthetic issues concerning sexual politics, the limits of morality, the demands of family, the desperation of skepticism, and the capacities of the novel form. Students should leave the course with a heightened sense of the powers of the novel and the seriousness of its ambitions. Texts are likely to include Adam Bede and The Mill on the Floss, but our focus will be on her two last and most ambitious novels, Middlemarch and Daniel Deronda.
Area: Humanities
Writing Intensive

AS.060.326. Shakespeare: The Novel. 3 Credits.
What if King Lear had been a mother? What if the we thought about Othello through the lens of the holocaust? What if the indigene Caliban was the hero, not the villain? What if Miranda chose Caliban over her European suitor? (The Tempest) Could a modern-day Kate be tricked into marriage and "tamed" (The Taming of the Shrew)? When contemporary novelists rewrite Shakespeare, they pose questions left hanging in the play and bring the plays into our own world. In this course, we will read Shakespeare plays (King Lear, The Tempest, The Taming of the Shrew, Merchant of Venice) along with contemporary novels that rewrite — and confront — those plays (Jane Smiley, Caryl Phillips, J. M. Coetzee, Anne Tyler). Students will take up important literary questions about kinds of literature (plays vs novels), the canon, imitation, adaptation, and also address the themes of power, gender and sexuality, family dynamics, authority, colonization and the environment.
Area: Humanities
Writing Intensive

AS.060.327. 'All Art is Propaganda'. 3 Credits.
This course will explore black literature written as protest. We will examine how, in the face of threats to black life, Frances E.W. Harper, Richard Wright, Amiri Baraka, and others have realized versions of W.E.B. Du Bois's objective: "all art is propaganda and ever must be, despite the wailing of the purists."
Area: Humanities
Writing Intensive

AS.060.328. Malcolm and Martin: An Introduction to the Lives and Thought of Two Icons of the Black Freedom Struggle. 3 Credits.
Using their recorded speeches, written lectures and published writings and drawing from their biographies, this course will explore the important life work of Malcolm X and Martin Luther King Jr. We intend to upend traditional conversations about political radicalism and ethnic politics by analyzing these spokesmen associated most indelibly with black nationalism and racial integration, respectively.
Area: Humanities
Writing Intensive

AS.060.329. Fantasy and Failure: Inventing Worlds in the English Renaissance. 3 Credits.
What did the English Renaissance think humans were capable of?
What worlds could they build, how far could they travel, and what limits could they transgress? In his Oration on the Dignity of Man, Pico della Mirandola asserted that, in contrast to vegetables, animals, or even angels, "man is granted to have what he chooses, to be what he wills to be." While Renaissance humanism was enthusiastic about the seemingly limitless abilities of the "Renaissance man," English literature of the period from roughly 1500-1700 is often more skeptical of this optimism. If humans could activate their divine potential and achieve godlike status, they were still always in danger of regressing into one of the baser states of animality or vegetation. This course examines literary explorations of the ways that individual ambition fails or the ideal society proves unattainable. The course is divided into three units: utopia and early science fiction, theater, and poetry. Topics for discussion may include political ambition, gender inequality, ecological dangers, and Renaissance magic; authors will include Thomas More, Margaret Cavendish, William Shakespeare, Christopher Marlowe, Amelia Lanyer, and John Donne, among others.
Area: Humanities
Writing Intensive

AS.060.330. Literature and the Environment: 1500-1700. 3 Credits.
This is an introduction to study of literature and the environment with a focus on early modern literature. During the period 1500-1700, the ground was laid for a modern understanding of the relationship between humans and their environment, and we will explore how literature shaped that relation. Topics and authors may include: Nature v. Nurture (Sidney, Spenser, Shakespeare); Environmental genres (pastoral, georgic, creation stories); Nature v. Civilization (Montaigne, Bacon, Milton); Climate, Extreme Weather, the Little Ice Age (The Tempest, Dekker, Heywood's Play of the weather); Land management, gardens, forestry, rivers (Marvell, Denham, Herrick, Jonson, Lanyer); Health and plague (Nashe, Defoe, Dekker); Country v. City (Philips). We will take up current discussions in ecocriticism, and students should be ready to engage with some critical reading and theory.
Area: Humanities
Writing Intensive
AS.060.331.  The Literature of the Atlantic Slavery.  3 Credits.
This seminar will trace the historical development of the slavery debate in the Atlantic world through examination of key texts from a host of genres and locations—Quaker religious tracts, political documents like the Haitian Declaration of Independence, Cuban antislavery novels, slave narratives, and “classics” of American literature like Melville’s Benito Cereno. We will consider how the institution of Atlantic slavery was variously represented, justified, and criticized, discovering in the process the deep structures of modern slavery discourse.
Area: Humanities  
Writing Intensive

AS.060.333.  God on Trial.  3 Credits.
This course traces an illustrious literary tradition, spanning centuries, that dramatizes the subjection of a deity to a human legal inquiry. We will especially attend to how and with what implications massive theological and philosophical questions such as the existence and nature of the divine and the meaning of and proper ethical response to suffering are worked out through this very specific representational gambit. Texts may include: The Book of Job; Voltaire, Candide; Herman Melville, Moby-Dick; Fyodor Dostoevsky, The Brothers Karamazov; Rebecca Harding Davis, Life in the Iron-Mills; Elie Wiesel, The Trial of God; Tony Kushner, Angels in America; Margaret Atwood, The Handmaid’s Tale; James Morrow, Blameless in Abaddon; OMG: Oh My God! dir. Umesh Shukla; graphic novelists Jonathan Hickman et al., God is Dead.
Area: Humanities  
Writing Intensive

AS.060.335.  Black Satire.  3 Credits.
In this course, we will explore the use of satire in black literary and artistic traditions. Reading will likely include poems and novels by Paul Laurence Dunbar, George S. Schuyler, Claude McKay, William Melvin Kelly, Ishmael Reed, Fran Ross, Percival Everett, and others. In addition, we will venture into the genres of film (“Get Out”) and visual art (work by Glenn Ligon and Kara Walker; the latter currently on exhibit at the BMA). The politics of satire emerge in these texts particularly through the treatment of racial uplift and respectability ideologies, race relations, the legacies and histories of slavery, visions of utopia and dystopia, and the concept of the “post-racial.” With attention to the historical and cultural conditions under which these works were produced, we will address the ways in which satire can (or cannot) effect change in the world.
Area: Humanities  
Writing Intensive

AS.060.337.  James Joyce’s Ulysses.  3 Credits.
A careful semester-long reading of James Joyce’s masterpiece Ulysses, one of the greatest and most intimidating novels in world literature.
Area: Humanities  
Writing Intensive

AS.060.341.  Milton.  3 Credits.
This class will study Milton’s poetry and prose across the whole of his writing career, with special attention to Paradise Lost, the great epic poem retelling the story of the fall of humankind. We will consider Milton’s literary background, his contemporary political and social milieu, as well as critical debates that surrounding the poet, who was accused of being ‘of the devil’s party.’ Pre-1800 course.
Area: Humanities  
Writing Intensive

AS.060.342.  Contemporary Novel of Ideas.  3 Credits.
The novel of ideas is often traced to 18th century French or 19th century Russian writing, but it has come broadly to signify works of robust philosophical contemplation. The inherently slippery term seems to indicate a work in which “form” is subsidiary to “content;” or at least, in which narrative structures adapt to prioritize thought rather than style, image, or even character. But how, exactly, and about what, do novels “think?” In large part, the novel of ideas is now conflated with a rote and recognizable brand of social realism. This course asks what might qualify as a novel of ideas today, both in terms of the novel’s changing relation to geographical space (and thereby the formal spaces in which philosophy might lurk), and of the particular “ideas” it critiques or puts forth. We will read novelists including J.M. Coetzee, Marlene van Niekerk, Jonathan Franzen, Teju Cole, and Ronan Bennett within a longer literary-philosophical tradition, with reference to works such as Candide, War and Peace, Thus Spoke Zarathustra, and Kierkegaard’s Diary of a Seducer.
Area: Humanities  
Writing Intensive

AS.060.343.  Marxism and Literature.  3 Credits.
This course will provide a survey of some of the concepts in Marx’s work, especially those to be found in volume 1 of Capital, that might help us get a clearer sense of 21st-century politics and culture. We will move outward from reading Marx to reading recent and classic texts in the Marxist critical tradition. We will discuss explicitly economic ideas about commodities, surplus value, and concrete and abstract labor, as well as historical and political ideas like “primitive accumulation” and the “uneven and combined development” of nations. We will think about what reading Marx and the Marxist tradition can help us see about colonialism, gender, race, technology, and the environment, as well as how it can clarify the character of economic crises. Toward the end of the term we will turn to literary texts, not necessarily “Marxist” themselves, to help us understand important questions that Marxism cannot tackle by itself, like: who are people, anyway? What do they hope for, when they write? Is there a Marxist idea of beauty, and is it different than everybody else’s? Along with Marx, and anti-colonial, anti-racist and feminist writers in the Marxist tradition, we’ll read work by the novelist NK Jemisin, and the poet Stephanie Young.
Area: Humanities  
Writing Intensive

AS.060.345.  Sympathy and the Machine.  3 Credits.
Is the rise of the machine eroding human connection? How does literature imagine the place of human connection in a world marked by the rise of the machine? This course thinks about Industrial Age fiction, which swims in a heady mixture that’s part-dream and part-nightmare: Are machines bettering us, are they replacing us, will they miss us? We will look at how nineteenth century British writers tried to come to terms with an increasingly mechanized world: Literature of this time attempts new ways of articulating how machines were reshaping people’s lives, their sense of self, their ideas of love, personal growth, community, and social order. The three novels we will read for this course—Charles Dickens’s Hard Times, Elizabeth Gaskell’s Mary Barton, and George Eliot’s Mill on the Floss—are enmeshed in larger conversations and debates about the machine and the human. Readings of each novel will be paired with surrounding sociological, political, and critical discussions, in order to develop a richer understanding. A Dean’s Teaching Fellowship Course.
Area: Humanities  
Writing Intensive
AS.060.346. The American Romance. 3 Credits.
Reviewers in the nineteenth century noted that narrative fiction on either side of the Atlantic seemed to be moving in different directions—the social-realist panoramas of Charles Dickens and George Eliot were confronted by the metaphorical puzzle-boxes, allegorical curios, and sentimental interfaces of Edgar Allan Poe, Nathaniel Hawthorne, Herman Melville, Lydia Maria Child, and Harriet Beecher Stowe. In the period, this divergence was often characterized by reference to a generic or modal distinction between the novel—the very name of which advertised its modernity—and the romance, which was associated with medieval literary traditions. British novelists sensibly confined themselves to representing and anatomizing that which was probable in contemporary social reality, whereas American romancers insisted on violating verisimilitude via flights of fancy (e.g., deathless black cats and white whales), whether out of political activism, aestheticist indulgence, or esoteric exploration. The twofold objective of this course is, first and foremost, simply to engross ourselves with a series of compellingly weird narrative fictions by American writers that self-identify as—and self-consciously theorize—modern romance—a reward in itself; and, second, to trace the history of the romance/novel distinction from early nineteenth-century reviews to contemporary criticism, discovering in the process the cultural work this distinction—and its elision—has been made to do. Primary texts may include: Lydia Maria Child, Hobomok; Catharine Maria Sedgwick, Hope Leslie; Edgar Allan Poe, tales, Narrative of Arthur Gordon Pym; Nathaniel Hawthorne, tales, The House of Seven Gables. The Blithedale Romance; Herman Melville, Mardi; Harriet Beecher Stowe, The Minister’s Wooing.
Area: Humanities
Writing Intensive

AS.060.348. Virginia Woolf and Bloomsbury. 3 Credits.
An exploration of the achievements and investments of one of the most influential coteries in the history of Britain. In addition to delving into key fictions by Virginia Woolf, we will examine novels by Leonard Woolf and E. M. Forster, art criticism by Roger Fry and Clive Bell, biographical essays by Lytton Strachey, economic writings by John Maynard Keynes, and poetry by T. S. Eliot.
Area: Humanities
Writing Intensive

AS.060.349. Clint Eastwood, Race, and the American Western. 3 Credits.
Drawing from the body of work reflecting the Hollywood gunfighter and outlaw folk-hero Clint Eastwood, the course will investigate American cinematic representations of slavery (and more specifically its absence), the Civil War and racial formation along the United States’ southwestern frontier in films produced from the 1950s through the contemporary period. A focus on the cultural icon Clint Eastwood enables a close examination of American cinematic fantasies of the frontier, frontier violence and the desire to escape or erase the tensions of race and slavery that have deeply permeated the American cultural consciousness, particularly the creation of American masculine ideals. The course will also take decided note of the national shift from liberal “Great Society Programs” of the 1960s to the conservative “neoliberal” social and cultural ideals in the 1980s and 1990s. Our purpose is to consider the organization and reformation of hegemonic power by way of the complex morality play the western film evokes, typically considering the interstitial geographies between civilization and savagery, belonging and alienation, and metropolitan and colonial outpost. We will privilege in our discussions the contested frontiers of racial dominion. The curriculum is complicated by several significant points of departure from the traditional category of the Hollywood-based American western: a film to frame the question of colonialism and resistance, as well as examples of black cinematic efforts re-drawing boundaries of the racial frontier. (Are they formed at the Caribbean, the easternmost littoral? The postindustrial city? Do they correspond to the romance of organized crime and its fantasy of empire?)
Area: Humanities
Writing Intensive

AS.060.352. John Keats’ Guide to City Living. 3 Credits.
This course will take John Keats’ poems and letter as a guide to London in the 1810’s, from the anatomy theaters of the hospitals where he trained, to the raucous parties and poetry slams of his radical literary friends; from museums and theaters to brothels and sickrooms. Keats’ intensely sensual poems are at once bookish and attuned to his environment: they provide lessons on how to abide in a large urban center. For his writing is intensely urban, even when it ventures far from the gloom of the metropolis. Reading the letters he wrote to his brother on the (then-) frontier in Kentucky, we can find yet another key to how he shaped London. We will look at maps of the city, see where the new housing developments were being constructed as old buildings were torn down, visit the jail where his friend, Leigh Hunt, was incarcerated for ridiculing the Prince Regent, see the theater posters and pamphlets Keats saw, as well as the parks and squares he could not enter. The goal for this course is to learn about Keats’ work, but also to try to reconstruct how his city looked and sounded and felt and what, finally, it meant to the poet. Ideally, the course will collectively create a digitized map of Keats’s London that serves as well as a guide to his poems.
Area: Humanities
Writing Intensive

AS.060.360. Politics, History and Autobiography. 3 Credits.
This is an intensive seminar exploring the political and historical dimensions of personal experience. The class is designed to introduce students to writing critically about their own lives and to understanding the function of autobiographical writing in the lives of black Americans. We function partly as a writers’ workshop and partly as a critical review. The final goal of the seminar is a polished 15-20 page autobiographical essay and a 5-7 page critical review of an autobiography, such as would be found in the New York Review of Books.
Area: Humanities
Writing Intensive
AS.060.363. Henry James. 3 Credits.
This seminar will focus on the novels and short fiction of one of the most brilliant crafters of prose and plot ever to write in English. Extensive attention will be devoted to the intricacies of James's language; to his transatlantic situation; to his relationship to other authors; and to his place in the histories of literature, criticism, and theory. In a few instances, we will read his work in relation to writing by his brother, the pioneering philosopher and psychologist William James.
Area: Humanities
Writing Intensive

AS.060.367. The Fallen Woman in Victorian Literature and Culture. 3 Credits.
This course aims to trace how Victorian literature and culture created, negotiated, or even contested "the fallen woman," the stereotype of a woman who transgressed the norms of appropriate sexual conduct. A fallen woman was a figure of illegitimacy: an adulteress, an unmarried mother, a seduced maiden, a prostitute, or even just a woman who didn't meet the norms of gender and sexuality. Although such a phrase itself has disappeared today, we continue to see similar stereotypes of women in our own cultural imagination. By looking at a range of Victorian fiction, poems, and images, we will trace how representations of the fallen woman created, negotiated, or even contested stereotypes that were circulating around them. Students will read novels that address questions of gender and sexuality in Victorian discourse, including Elizabeth Gaskell's Ruth, George Eliot's The Mill on the Floss, and George Moore's Esther Waters. Shorter texts will include Gaskell's short stories, and poems by Christina Rossetti, Augusta Wester, and Thomas Hardy.
Area: Humanities
Writing Intensive

AS.060.370. The Nineteenth Century Novel. 3 Credits.
In this course we will read some of the most significant—and enjoyable—of nineteenth-century novels, focusing on the questions they presented for their first readers and present for readers today. Our focus will be on the technical means by which the novelists achieve their effects. How do they convey the thoughts and feelings of their characters, for instance? How do they represent the interactions between their characters within broader social environments? How do these novels represent history? How do they represent different genders? By means of what literary devices do they do all this? Our aims in the course will be to understand the fiction of the period and to see how the devices used by these authors to conceive their psychological, ethical and political worlds continue to inform our conception of our world.
Area: Humanities
Writing Intensive

AS.060.371. Race and Space. 3 Credits.
Though we often think of the human fascination with the cosmos and the stars as universal and timeless, it has a history, including a literary one. This becomes especially vivid when we pay attention to the history of race. In this course we will explore the crucial role the cosmos and outer space have played in shaping understandings of emancipatory struggle, past and present.
Area: Humanities
Writing Intensive

AS.060.372. 'Things of Darkness': Shakespeare and the Legacy of Early Modern Racialization. 3 Credits.
How and why do Shakespeare's works channel racism and supremacist ideologies? How and why is it that they have also been used for inspiration and aspiration by people of color and thinkers on the political left? This course uses performance history from the Elizabethan moment to the present to explore how early modern topics such as anti-Semitism, bodily monstrosity, blood lineage, colonialism, and religious concession have allowed Shakespeare's plays to function as vehicles for thinking about race across time. Case studies include anti-Semitism in The Merchant of Venice at a time when it was illegal for Jews to be in England, the eighteenth-nineteenth-century blackface traditions of Othello and the careers of Edmund Kean and Ira Aldridge; Duke Ellington's exploration into Shakespeare in his 1957 jazz album Such Sweet Thunder; and Julie Taymor's 1994 Titus Andronicus, which was optioned and championed by Steve Bannon, former executive chairman of Breitbart News. Each unit of the course features an early modern play, readings about the performance tradition of that play, and an article or book chapter on that play.
Area: Humanities
Writing Intensive

AS.060.378. Advanced Introduction to African Literature. 3 Credits.
This course reaches beyond the much-taught postcolonial African realist canon to explore less-studied, more formally challenging works from across the continent, focusing on long-form prose and poetry. While texts will be clearly placed in an historical context, the emphasis in our readings will be on the inception, evolution, and intermingling of literary genres. How do seminal moments in African literary history complicate our received understandings of periodicity, mimesis, and the relation among selfhood, collectivity, and narration? What possibilities exist for theorizing African literature as a corpus, and what, conversely, are the descriptive and institutional limitations of "African Literature"? Primary texts will include "Ethiopia Unbound" (J.E. Casely Hayford); "Chaka" (Thomas Mofolo); "The Wrath of the Ancestors" (A.C. Jordan); "Song of Lawino" (Okot p'Bitek); and "The Promised Land" (Grace Ogot), as well as poetry by Shaaban bin Robert and H.I.E. Dhlomo, among others. We'll pay some attention, too, to critical trends and contextualization.
Area: Humanities
Writing Intensive

AS.060.380. Romantic Poetry: Imagining the People. 3 Credits.
Perhaps the most influential moment in modern letters, the Romantic period not only straddled the age of democratic revolutions, abolition, mass media and industrialization, it ushered in the modern concept of Literature and its social role. Among the most pressing issues of Romantic poetry were those related to representing, speaking for and speaking to an imaginary creature called The People, not wholly commensurate with that other imaginary creature, The Nation or its Citizens. So for instance, the Ballad revival of the period brought into print the ancient songs of "the folk," but the movement was riddled with fakes and forgeries. Rising literacy inspired working class poets, women and ethnic minorities to reshape the English language through poetry. Yet at the same moment, literary gentlemen began to produce their own version of a marginalized and dispossessed "people." All these efforts can be set against a State effort to introduce the first national census, to account for all subjects of the crown. A struggle over who "counts" in the realm of literature clashed with fights over political institutions and the new science of political economy.

Writing Intensive
AS.060.383. Contemporary Russian Novel in English. 3 Credits.
Russia is back in the headlines, and its resurgence seems unlikely to waver anytime soon. But while many students are familiar with nineteenth-century novelists like Tolstoy and Dostoevsky, more recent Russian writing is often a mystery. This course approaches contemporary Russia through the careers of its two major living novelists, Vladimir Sorokin and Ludmila Ulitskaya, both of whose work spans the late Soviet period (1980s and 90s) through today. In addition to questions of genre, translation, and contemporary Russian literary culture's relation to Soviet models, we will consider how Sorokin and Ulitskaya have brokered Russia’s intellectual standing on a world stage. Works studied will include Ulitskaya’s Sonechka, The Funeral Party, and Daniel Stein, Interpreter, and Sorokin’s The Queue, Day of the Oprichnik, and The Blizzard.
Area: Humanities
Writing Intensive

AS.060.384. The Contemporary Novel. 3 Credits.
In the first two decades of the twenty-first century, writers of narrative fiction have been working furiously to keep up with the turbulence that global capitalism has visited on the world — war, political chaos, environmental catastrophe, massive forced migration and displacement — while trying to maintain ties to the techniques of narrative that gave the 19th century reality novel its successes and its prestige. In this course we will read a range of texts, mostly in translation, that stretch and deform those conventions in order to represent the lives and struggles of characters who are caught up in immense historical change. More and more often, novelists are choosing to depict characters drawn from what Marx would have called “surplus populations” — people for whom economic stability and personal safety are out of reach, partly because they are seen as not worth employing (or exploiting). Under these conditions, we will ask, is it only possible to tell tragic stories? What do happy endings look like? What do changes do character development and point of view have to undergo, for instance, to keep up with 21st century history? Is realism still the best vehicle for telling these stories? Readings will include novels by Sally Rooney, Eduard Louis, Fernanda Melchor, Elena Ferrante, Marlon James, and Manoranjan Byapari, as well as secondary material by Sarah Chihaya, Merve Emre, Katherine Hill, Jill Richards, and the Endnotes collective.
Area: Humanities
Writing Intensive

AS.060.386. Reading the American Swamp. 3 Credits.
The Shape of Water, Creature from the Black Lagoon, Swamp Thing — what is it about the terrain of swamplands that inspires us to dream up hybrid creatures that live within them? This course takes a long view of the American fearful fascination with these amphibious landscapes, from the 18th century to today. In the 19th century especially, swampy landscapes came to evoke anxious fear of revolt and rebellion among white slaveholders while as many as two thousand escaped slaves found shelter and sustenance in the swamp's mazy topography. Who and what was lurking just beyond the swamp's wall of vines and veil of mist? Though the swamp of the 20th and 21st centuries retains a sense of dreary, forboding mystery, a relatively new ecological discourse on swamplands (now called “wetlands”) has emerged calling for protection of the strange and delicate balance of marsh life. The precarity of such ecosystems as the Florida Everglades comes to represent the toll two and a half centuries of environmental plunder has taken on the American landscape. At the same time, the 2016 presidential election saw the reemergence in American political rhetoric of calls to “drain the swamp” of the federal government. By turns, the swamp has represented growth and abundance, stagnation and decay, moral depravity, organic sanctuary, and has played the roles of both harbinger of devastation and safe-haven of the oppressed. At each twist, texts imagining swamplands give us a unique glimpse into the aesthetic, social, and political anxieties and struggles of the moment. This course aims to track these historical shifts and develop an understanding of precisely how and why they occur, all the while asking what it is about swamplands that attracts our deepest worries and our eeriest curiosities.
Area: Humanities
Writing Intensive

AS.060.387. Black Empire. 3 Credits.
This course examines the transnational visions of Black Empire as articulated and framed by black thinkers, writers, and visual artists around the world, roughly between 1850 and 1950. We will consider how both individuals and groups (such as the United Negro Improvement Association) responded to imperialist maneuvers through discourses of Ethiopianism, Pan-Africanism, and anti-colonialism, and how these discourses interacted with one another in surprising ways, ways that reveal the black world's simultaneous attraction to and rejection of the imperial model in the nineteenth and twentieth centuries. Our reading will include novels, poems, essays, and critical texts—at least two of which share a title with this course—by W. E. B. Du Bois, Pauline E. Hopkins, Sutton E. Griggs, J. A. Rogers, Langston Hughes, George S. Schuyler, Claude McKay, Brent Hayes Edwards, Paul Gilroy, Wilson Jeremiah Moses, Michelle Ann Stephens, and others.

AS.060.388. Old World/New World Women. 3 Credits.
The course considers the transatlantic writing of three women in the early modern period, Anne Bradstreet, Aphra Behn, and Phillis Wheatley. We will consider issues of identity, spatiality, religion, commerce, enforced labor, sexuality, race, and gender, along with literary tradition, formal analysis and poetics. We will read a good deal of these early women writers. Foremost in our mind will be the question of how perceptions of space and time are mediated through the global experiences of early modernity.
Area: Humanities
Writing Intensive
AS.060.389. Emily Dickinson. 3 Credits.
Dickinson’s poetry, more than most, has seemed to prompt creativity in others. In the past two decades, especially, poets, writers, critics, and filmmakers have found their own voices in response to hers. We will focus on the formal, aesthetic, historical and gendered aspects of her poetry as we try to understand, and benefit from, this power to elicit response. Exams are unlikely. Instead, expect close attention to your own writing, as we pay close attention to hers.
Area: Humanities
Writing Intensive

AS.060.390. Literature and Visual Modernity. 3 Credits.
This course will study the idea of modernity, a term that has been of continuing use in trying to understand ourselves and our society. We will focus on the major works of prose, poetry, and painting that attempted to come to terms with modernity in the nineteenth century. Texts are likely to include non-fiction prose by Mill, Baudelaire, Darwin, and Benjamin; fiction by Henry James, Conrad, and Vernon Lee; poetry by the Brownings, Tennyson, and Hardy; and paintings (some at the BMA) by D.G. Rossetti, Turner and Cezanne
Area: Humanities
Writing Intensive

AS.060.391. Early American Literature. 3 Credits.
This course is an introduction to literatures drawn from across the Americas, although primarily the British North American colonies that would eventually become the United States, from first contact in 1492 up through the American wars of independence. Our readings are roughly organized according to chronology and genre. We will think about the adapted and emergent generic forms through which “the New World” was ongoingly invented, including genres like the Indian captivity narrative and the slave narrative that arguably make their debut in world literary history in the Americas during this time frame. We will conclude by attending to the rather late emergence of the novel in American literary history, reading four novels that appeared in the early US national period. The objective of the course is simply to contextualize and analyze a wide array of texts, each of which richly rewards the engaged reader, in order to trace the origins of American literatures. Course texts may include contact narratives (Columbus, Caminha, Smith, Hennepin); conquest narratives (Mather, Las Casas, Poma de Ayala); Indian captivity narratives (Cabeza de Yaca, Rowlandson, Staden); slave narratives (Groniosaw, Jea, Cugueno); revolutionary polemics (Paine, Bolívar); and the earliest American novels: William Hill Brown, The Power of Sympathy; Hannah Webster Foster, The Coquette; Leonora Sansay, Secret History or, the Horrors of Santo Domingo; Charles Brockden Brown, Arthur Mervyn.
Fulfills the pre-1800 requirement.
Area: Humanities
Writing Intensive

AS.060.392. Reading Ayn Rand. 3 Credits.
This course will investigate Ayn Rand, both as a novelist and as an enormously influential thinker. Special attention will be paid to the Soviet and American contexts that produced Rand’s work, as well as her place in a lineage of conservative thought, and the influence she has had on American politics. The approach of this course will be critical, but, I hope, fair. Readings will likely include Anthem and Atlas Shrugged, as well as selections from Rand’s philosophical works: Capitalism: The Unknown Ideal and The Virtue of Selfishness.
Area: Humanities
Writing Intensive

AS.060.393. Geoffrey Chaucer: Ribaldry, Romance and Radical Religion. 3 Credits.
Geoffrey Chaucer is sometimes called the ‘father of English literature’, but the deftness with which he captured the variety of the human condition, in poetic forms that were each, in themselves, startlingly new, was in so many ways an inheritance too rich for literary tradition to absorb. One reason to return to Chaucer’s writing now is to see how funny (and even obscene) verse narrative can be, and how compelling a fourteenth-century love story remains. It is also to open a window onto a culture entirely different from our own but in which the power of language (the role of free speech), the freedom of the individual, the status of women, violent tensions between cultures and ethnicities and the role of religion in civil society were not only topical, but made the more so by Chaucer’s powerful political vision and thought. Chaucer is timeless because he wrote so well that he always rewards reading (and the Middle English in which he wrote is very easy to master) but he is always worth reading because reading him is at once so eye-opening and such a pleasure, a way of stretching one’s sense of the present by understanding (really understanding) a particular moment in the past. This class will pursue such understanding by paying particular attention to Chaucer’s masterpieces, Troilus and Criseyde and The Canterbury Tales. But we will begin with a quick and easy workshop on Chaucer’s language, and try to define, along the way, some of the more interesting aspects of his style. Our goal will be to learn to enjoy Chaucer’s poetry by reading it carefully enough to take the full measure of what exactly it was about.
Area: Humanities
Writing Intensive

AS.060.394. Class Fictions. 3 Credits.
This seminar investigates one of the central concerns of nineteenth-century fiction: social and economic class. Why did raising oneself from humble beginnings, and falling into poverty, become such familiar stories? And why are they still so familiar today? We will look at how a number of writers approached the topic of class mobility, each with a unique blend of excitement and anxiety. Authors will likely include Jane Austen, Honoré de Balzac (in translation), Charles Dickens, and William Dean Howells. In order to understand our topic better, we will also look at a selection of theoretical work on the nature of class.
Area: Humanities
Writing Intensive

AS.060.397. Thomas Pynchon. 3 Credits.
Intensive reading of two major Pynchon novels, along with theories of modernity, postmodernity, etc.
Area: Humanities
Writing Intensive
AS.060.400. Billie Holiday’s Baltimore 1870-1960: A Reverse Classroom Journey in the Archives. 3 Credits.
This course will use the tools of the historical archive to etch a social history of Baltimore during the long Billie Holiday (1915-1959) era from the Reconstruction through post-World War II. Holiday's remarkable and unique art has earned her the title of the premier jazz singer of all-time, but unknown to most, her voice and experience were strongly shaped by her early life in Baltimore City, the city's black habitation and migration, its musical culture, its black middle and lower class, its urban density, as well as its cabaret and underworld life. Our task is to examine the city as an unfolding, racializing process, and to glean the evidence from multiple local archival sources to reconstruct some of the rough margins of possibility for the lived experience of Holiday's grandparents and parents, all born in Baltimore, as well as her own experience as truant, orphan, and sex assault victim in the 1920s. Two questions will occupy our interests intensely. How did the two black communities she lived in extensively evolve from the late 19th through the early 20th centuries? Second, what information can be unearthed about black musical culture—ragtime, marching bands, banjo and fiddle ditties, riverboat music—as it evolved in the post-World War I “jazz” age of sound recording and broadcasting? What was the artist's relationship to her urban geography? How did it change over space and time? What dimension of shared fate did she have with the community of black Baltimore domestic workers, laborers, artisans, and small business people from the first half of the twentieth century? In what manner did Baltimore’s racial segregation and racism define her life and art? How was her consciousness as a vocal opponent to segregation shaped by her grooming in the city?
Area: Humanities
Writing Intensive

AS.060.402. The Computer in Modern Literature. 3 Credits.
How have computers, and human interactions with computers, been represented in twentieth- and twenty-first-century literature? How have attitudes toward computers changed over that time? Now most books are written on computers, and many are read on them as well: what traces of these forms of production and consumption can we find in literary texts?
Area: Humanities
Writing Intensive

AS.060.405. Psychoanalysis and Literature. 3 Credits.
In this course we will read some foundational texts by Sigmund Freud, and pair them with a select group of literary works—Sophocles’ “Oedipus the King” and “Oedipus at Colonus”, William Shakespeare’s “Hamlet”, Edgar Allan Poe’s “The Purloined Letter”, Wilhelm Jensen’s “Gradiva”—which have inspired psychoanalytic ideas and generations of psychoanalytic literary interpretation.
Area: Humanities
Writing Intensive

AS.060.406. Transfiguring the Renaissance. 3 Credits.
Tracing the poetics of bodily transformation then and now, this course puts early modern literature into dialogue with medical epistemologies of the sexed body and contemporary critical reflections upon transgender experience, embodiment and transition. Early modern texts might include Arthur Golding’s translation of Ovid’s “Metamorphosis”, John Lyly’s “Gallathea”, Francis Beaumont’s “Salmacis and Hermaphroditus”, Ben Jonson’s “Epicoene, or The Silent Woman”, Middleton & Dekker’s “The Roaring Girl” and John Milton’s “Paradise Lost.”

AS.060.509. Senior Essay. 3 Credits.
The English Department offers qualified majors the option of writing a senior essay. This is to be a one-semester project undertaken in the fall of the senior year, resulting in an essay of 30-35 pages. The senior essay counts as a three-credit course which can be applied toward the requirements for the major. Each project will be assigned both an advisor and a second reader. In addition, students writing essays will meet as a group with the Director of Undergraduate Study once or twice in the course of the project. The senior essay option is open to all students with a cumulative GPA of 3.6 or higher in English Department courses at the end of the fall term of their junior year. Project descriptions (generally of one to two pages) and a preliminary bibliography should be submitted to a prospective advisor selected by the student from the core faculty. All proposals must be received at least two weeks prior to the beginning of registration period during the spring term of the junior year. Students should meet with the prospective advisor to discuss the project in general terms before submitting a formal proposal. The advisor will determine whether the proposed project is feasible and worthwhile. Individual faculty need not direct more than one approved senior essay per academic year. Acceptance of a proposal will therefore depend on faculty availability as well as on the strength of the proposal itself. When completed, the senior essay will be judged and graded by the advisor in consultation with the second reader. The senior essay will not be part of the Department’s honors program, which will continue to be based solely on a cumulative GPA of 3.6 in English Department courses.

Registration & Online Forms.
AS.060.604. Philology.
An examination of the many ways (both as old and then 'New', but also as the subject of a key 'return') that 'philology' has been claimed as the master category of literary study. The nuts and bolts of older philological procedures as well as the broadest theoretical claims for the term will be attended to.
Area: Humanities
Writing Intensive

AS.060.605. The Decolonial Intellectual.
A recent resurgence of interest in decolonial theory raises important questions about the relationship between postcolonial literature and the institutions, as well as disciplinary frameworks, by which it's advanced. From Ngugi wa Thiong'o, to the writers of South Africa's Drum generation, to the contemporary Afropolitan theorist Achille Mbembe, U.S. universities have been host to many of decolonization's notable intellectuals. This seminar takes a synthetic approach to understanding the forms and histories by which decolonization has been articulated: we'll survey fiction, personal and political essays, and "theory" to make sense of the various tensions at decolonization's core (e.g. territorialization vs. de-territorialization, internationalism vs. cosmopolitanism, or text vs. context). Writers studied will include Frantz Fanon, Lewis Nkosi, Ayi Kwei Armah, Ngugi wa Thiong'o, Walter Mignolo, An Yountae, Kwame Nkrumah, Hamid Dadashi, Buchi Emecheta, and Sylvia Wynter, among others.
Area: Humanities
Writing Intensive

AS.060.607. Fiction and Doubt After 1888.
Examines the interrelation between fiction and doubt since the late nineteenth century. Authors may include Ward, Conrad, Joyce, Eliot, Stevens, Woolf, Baldwin, Flannery O'Connor, Ishmael Reed, Sefi Atta, R. O. Kwon.
Area: Humanities
Writing Intensive

AS.060.608. The Idea of Tradition.
The idea of tradition -- of a body from texts from the past that helps explain the genealogy of the present -- is central to literary criticism, and indeed to all of the humanities. But where did we get the idea that the present could be understood best through texts from the past? Can we imagine a humanities without it? This course will look at the development of the idea of tradition in the eighteenth and nineteenth centuries. We will pay particular attention to the connections between the developing ideas of tradition and the changing forms of literary expression in those periods--particularly the developmental novel. Novelists will likely include Goethe, Scott, Austen, Eliot and James. In terms of theory we will pay particular attention to questions of historicity and presentism in historiography, hermeneutics and Marxist theory. Theorist will likely include Vico, Shaftesbury, Dilthey, Lukacs, Heidegger, Adorno, Horkheimer, Gadamer, Jauss, Kosseleck, and T.S. Eliot.
Area: Humanities
Writing Intensive

AS.060.609. Extreme Criticism.
“How far can I go?” It is a question (memorably posed by Neil Hertz) of what we might call interpretive tact: what will your readers or listeners accept? How far can you take them with you as you enter into the interpretive possibilities that have come to matter to you, that you believe to be true, meaningful, important, interesting . . . When, eyes slowly unfocusing, do they start drifting away?That most of the critics we read are determinedly tactful is an occasionally dismaying thought. This seminar, by contrast, will engage the issue of interpretive tact by reading critics who might be thought to violate it. I’d like to think about the issue with a collection of interested students. Among the potentially tactless works we might discuss are Stanley Cavell’s essay on King Lear, Laura Kipnis’s Against Love: A Polemic T.J. Clark’s The Sight of Death, Michael Fried’s Flaubert’s ‘Gueuleï’, Avita Ronnell’s Telephone Book (or perhaps her less extreme Stupidity), Roland Barthes’ S/Z, Garrett Stewart’s Reading Voices, Franco Moretti’s Distant Reading, Lauren Berlant’s Desire/Love, William Empson’s Seven Types of Ambiguity, Lee Edelman’s No Future, Barbara Johnson’s “Bringing Out D. A. Miller” I’d be open to other suggestions by seminar members.
Area: Humanities
Writing Intensive

AS.060.612. Poetry and Poetics After the Linguistic Turn.
This course is a survey of recent critical work on English-language poetry, mostly North American. Much of the work is by younger scholars. I have chosen to highlight this recent body of writing because I think that, taken together, it signals a shift away from what since the 1980s had been the dominant model for “reading” poetry, which was under the sign of “Theory.” Readings will include work by Jasper Barnes, Joel Nickels, Nadia Nurhussein, Margaret Ronda, Daniel Tiffany, and others.
Area: Humanities
Writing Intensive

AS.060.613. American Movement.
This seminar will examine representations of people in motion in U.S. writing from 1900 to the present. Migration, international and intranational, will be central to our study, but we’ll also consider other forms of travel, transits of authorial and readerly attention, the policing and pleasures of vagrancy, and predicaments of stasis in both primary texts and critical/theoretical work around mobility. Our syllabus is still in process, but authors and directors studied may include Henry James, Anzia Yezierska, Claude McKay, Gertrude Stein, Muriel Rukeyser, John Steinbeck, John Ford, Simone de Beauvoir, Victor Villaseñor, Juliana Spahr, and Jayne Anne Phillips.
Area: Humanities
Writing Intensive

The field now known as “global Anglophone literature” has emerged from a complicated and rapidly advancing disciplinary lineage. A host of past and present recordings -- including postcolonial, Commonwealth, Third World, global, transnational, world, and the Global South -- provide a record of the wider profession’s anxieties in relation to non-Western literary traditions. This course prepares graduate students to be able to articulate some of the subtle differences in approach that this nexus of closely related terms may obscure, from the heyday of postcolonial theory in the 1980s and 90s to contemporary subfields like Indian Ocean studies. In addition to key critical texts by theorists including Edward Said, Gayatri Spivak, Franco Moretti, Peter Hallward, and Emily Apter, students will be introduced to some outstanding recent methodologies and critiques from the adjacent body of work on comparative literature.
Area: Humanities
Writing Intensive
AS.060.616. Milton.
A seminar covering the career of John Milton, including all his major poetry and much of his prose. There will be attention to the history of printing, publication and concepts of reading and writing, as well as to current issues and topics within early modern studies that bear on Milton (e.g. materialism, secularization, ‘surface’ reading, political theology, quantitative vs hermeneutic methods, actor-network theory). As such, the course will also be an introduction to various methods in early modern studies.
Area: Humanities
Writing Intensive

AS.060.617. Black Print Culture.
Students interested in black print culture will engage in intensive archival research, both collaborative and individual, using the Sheridan Library’s Rare Book and Manuscript collections. Texts include poems, printed lectures, pamphlets, novels, periodicals, ephemera, correspondence, etc., alongside relevant critical and theoretical reading.
Area: Humanities
Writing Intensive

AS.060.619. Sentimental Reasons.
Recent work in cognitive approaches to literature have led critics to return to the sentimental novel of the eighteenth-century as a “laboratory,” in Daniel Goss’s words, for the investigation of human emotion. There is no easy “fit” between these literary narratives and the narratives of cognitive science, nor between them and the regnant moral philosophy of the age (built upon the mechanism of human sympathy or upon “nervous” association). There is rather a discomfort that reveals social inequities as well as alternative possibilities for both thinking and feeling. The sentimental mode took hold in the circuits of the Atlantic world.
This course will study several sentimental narratives that traveled promiscuously through those circuits: Bernardin de St. Pierre’s Paul and Virginia, Sterne’s Sentimental Journey, Mackenzie’s Man of Feeling; Equiano’s Interesting Narrative; Williams’ Peru; and Brown’s The Power of Sympathy. Alongside these works we will read studies by critics working the seams between affect and cognition, philosophy and literature, rhetoric and science. The course will provide a broad history of the sentimental mode, stretching to reflections on the links between the sentimental and the melodramatic. It will simultaneously attend to the experience of reading for sentiment, to forms of feeling and what those feelings know.
Area: Humanities
Writing Intensive

AS.060.620. Thinking with Scale: Frameworks in Early Modernity.
Concepts include expansion, crowding, data collection, the miniscule, temporality, the planetary and the cosmic in the first age of European mercantile activity and colonial expansion. With readings from world-systems theory and theories of the anthropocene, our case studies will comprise pre-modern European literary texts, including Milton, Paradise Lost, Anne Bradstreet, The Four Monarchies, early modern science (Hooke, Newton), Defoe, The Storm, and early British and colonial American holdings in the Garrett Library. The class will be hands-on, working with material from Special Collections, and will include working towards a digital project (no digital project background necessary).
Area: Humanities
Writing Intensive

AS.060.621. The Cultures of the Sonnet in the English Renaissance.
This is a course on lyric theory in the Renaissance and as such is a good introduction to early modern literary study. We will take up the early modern form of the sonnet as a test case for the interaction between vernacularity and globalization. We will consider early modern topics including “invention,” “imitation,” and rhetoric, as well as explore formal concerns that are intertwined with political, social, cultural and economic experiences of early modernity. Along with the consideration of the emergence of literatures in new languages and nationalist differentiation, we will also consider mechanization (whether in print or literary trope) that produced both early modern literature and political life in an international system. We will consider such topics as sequence; modes of address; vernacularity and linguistic nationalism; the themes of love v. empire; the social role of the sonnet; the nature and materiality of writing; patronage and circulation; the question of private, occasional, and public poetry; the place of sonnets in manuscript collections; the histories of books; poetic subjectivity and objective thought; and we will also read a good many sonnets, largely in English, through close attention to language, media and transmission histories. Some contemporary literary history on the sonnet will be introduced, as well as sonnets in European languages other than English, depending on the students’ interests and proclivities. Students will be expected to work in the manuscript and print collections of the Bodleian library to prepare a class report on their chosen topics. The class puts the sonnet in relation to other forms in Renaissance literature and thus should serve as a good survey of the period and its issues.
Area: Humanities
Writing Intensive

AS.060.624. Romanticism and the Ends of Affect.
This seminar will consider both what affect studies have learned from Romanticism and the limits—practical, ethical, intellectual—of reading Romantic poetry within the framework that has been constructed by affect studies over the past two decades. It will provide a general survey of scholarship on affect, of criticism attending to the self-consciously affecting literary experiments of the age, and to primary works by a select number of romantic writers, most probably Wordsworth and Coleridge’s Lyrical ballads, Joanna Baillie’s Plays and the letters and poems of John Keats.
Area: Humanities
Writing Intensive

AS.060.625. Theory of the Novel.
This course will look at the development of novel theory from the eighteenth century until the present. Authors will include Scott, Barbauld, Dallas, Lewes, Eliot, James, Shklovsky, Tomasevsky, Jakobson, Bakhtin, Lukács, Auerbach, Barthes, Jameson, Girard, Sedgwick, Moretti, Armstrong, Miller, Hale, Lynch, and Woloch. Novelists will likely include Madame de Lafayette, Austen, Goethe, and Wolfe.
Area: Humanities
Writing Intensive

AS.060.626. Reading for Race at the Movies and on TV, in the years 2015-16.
2015-16 was a radical, decisive two-year period for many things, including film by and about African-Americans. This course seeks to understand this phenomenon through current events, wider aesthetic and historical trends, and the body of critical work devoted to reading filmic representations of cultural and political ideologies. 2015-16 films and TV shows under consideration will include: Moonlight; Creed; Hidden Figures; Fences; Birth of a Nation; Straight Outta Compton; OJ: Made in America; Atlanta; Black-ish; This Is Us; Luke Cage; The People v. OJ Simpson.
AS.060.627. Poetry and Performance.
This course will be devoted to the histories and theories of 19th-, 20th-, and 21st-century poetry and performance, beginning with William Wordsworth's and Samuel Taylor Coleridge's Lyrical Ballads. Upon hearing the poets read, William Hazlitt remarked that “[t]here is a chaunt in the recitation both of Coleridge and Wordsworth, which acts as a spell upon the hearer, and disarms the judgment.” This early instance of reception history will provide the backdrop for our discussion throughout the semester. Besides Wordsworth and Coleridge, our reading list will include verse, theory, and criticism by Robert Browning, Walt Whitman, T.S. Eliot, James Weldon Johnson, Langston Hughes, William Carlos Williams, Charles Olson, Allen Ginsberg, Norman Pritchard, Amiri Baraka, Tracie Morris, Christian Böök, Lisa Gitelman, Frederick Kittler, Peter Middleton, John M. Picker, Susan Stewart, and others.
Area: Humanities
Writing Intensive

Today human rights and capabilities are two intertwined concepts. In the early modern period, these were much debated and literature was a key site for the development of these imperfect, variable and contested discourses. Reading literary works from the European tradition, in particular in Europeans’ engagement with dissident groups both within and outside Europe, we will explore themes of embodiment, power, risk, vulnerability and the languages and practices of equivalence and domination in the variable discourses of humanitarianism, natural law, and rights in authors including Shakespeare, Grotius, Montaigne, Hobbes, Milton, Behn, Locke, Swift, Montagu and Defoe.
Area: Humanities
Writing Intensive

AS.060.629. The History of the Book.
The course will account for the major transformations in the media used for writing from the scroll to the web as well as the rich account of this history and its theorizations.
Area: Humanities
Writing Intensive

AS.060.630. Mapping Frederick Douglass's Escape: An Historic Maryland Odyssey.
This course provides an in-depth portrait of the historic Marylander Frederick Douglass, born near Hillsboro in Talbot County, Maryland around 1818, and who successfully escaped slavery in Baltimore in September 1838. We will read Douglass’s three autobiographies and other writings, as well as two biographies of Douglass to understand his importance in American life over time. The course includes three “living classroom” components. At the Douglass/Meyers Museum at Fells Point, Baltimore, students will learn 19th century techniques to build a sailing such as Douglass learned when he worked in the shipyards. Students will tour the Anacostia, DC Frederick Douglass Museum. The course culminates with a sailing trip from Baltimore’s Fells Point to historic St. Michael’s, kayaking along the Tuckahoe and Miles Rivers, and overnight camping on the grounds of a former plantation on Maryland’s Eastern Shore.
Area: Humanities
Writing Intensive

AS.060.631. Tyranny in Early Modern Literature.
In the Epistle to the Romans, Paul writes: “Let every soul be subject unto the higher powers: for there is no power but of God: and the powers that be, are ordained of God.” In the wake of such a declaration, what constitutes tyranny? When is resistance to tyranny justified? What forms of recourse are compatible with the Christian obedience enjoined by Paul? How did early modern literature offer a means of leverage, redress and coping with the depredations of “the powers that be”? In search of provisional answers to these questions, this course tracks the representation and rhetorical evaluation of the tyrant figure at the intersection of political philosophy and literature. Political writings by Aristotle, Plato, Marsilius of Padua, Dante, Jean Bodin, James I, John Milton and Hanna Arendt are placed in dialogue with historical and theoretical writing by Greg Walker, Stanley Cavell, Mary Nyquist and Terri Snyder on tyranny, slavery, resistance theory and biopolitics. Literary texts, principally drama and prose romances, will include The Wakefield Master’s “Herod the Great”, Sir Philip Sidney’s “The New Arcadia”, Christopher Marlowe’s “Tamburlaine”, Robert Greene’s “Planetomachia”, William Shakespeare’s “Richard III” and “The Winter’s Tale”, Ben Jonson’s “Sejanus His Fall”, and Elizabeth Cary’s “The Tragedy of Mariam, Fair Queen of Jewry”.
Area: Humanities
Writing Intensive

AS.060.633. Biography and African American Subjects from the 19th and 20th Centuries.
This course will read through contemporary biographical treatments of prominent 19th and 20th century African American writers to explore the prominent ideological predispositions as well as the structure of archival sourcing in the creation of life-writing on black subjects. Students will make research trips to the Library of Congress, the University of Delaware, Morgan State University and other local archives for instruction in research methodology and the collection of primary source materials. Student final projects will use primary archival sources to intervene in debates about the interpretation of historical subjects and historical events.
Area: Humanities
Writing Intensive

In recent years, the literature of the middle of the twentieth century has come into its own. Now recognized as a period of exceptional invention, not merely the weak successor to the great age of high modernism, the 1930s through the 1960s gave us texts that, among other things, offer windows onto the birth of the postwar order. This course will examine challenging, fascinating, sometimes infuriating writing about World War II, the rise of the welfare state, and the “colonization in reverse” that brought the Windrush writers from the Caribbean to England. Authors studied may include Elizabeth Bowen, Anthony Burgess, T.S. Eliot, H.D., Richard Hoggart, George Lamming, Philip Larkin, Marghanita Laski, Sam Selvon, Alan Sillitoe, John Wain, Virginia Woolf, and John Wyndham.
Area: Humanities
Writing Intensive
This seminar offers an introduction to a key concept in contemporary critical theory and literary and cultural studies: settler colonialism, understood as a specific form of colonialism focused on the appropriation of land rather than the exploitation of labor and thereby involving the attempted elimination and replacement of indigenous polities and societies by an invading force. The course will have a dual focus: 1) tracing the theoretical distinction of settler colonialism from other forms of colonialism and tracking the critique implicit in this distinction of dominant forms of leftism that arguably presuppose a settler-colonial frame of reference; 2) tracking the history of what James Belich has called the "Anglo settler revolution" of the nineteenth century and engaging in a comparative analysis of the literatures produced in the course of that revolution in what are now Ireland, the United States, Canada, Australia, and elsewhere in the Pacific. We will especially attend to narrative fictions—often (self-) identified as "romances"—that chronicle settlement and register the temporal disruption of indigenous persistence and resistance. Secondary texts may include: Belich, Replenishing the Earth; Glen Coulthard, Red Skin, White Masks; Aileen Moreton-Robinson, The White Possessive; Eve Tuck and K. Wayne Yang, "Decolonization is Not a Metaphor"; Patrick Wolfe, Settler Colonialism and the Transformation of Anthropology. Primary texts may include: Charles Brockden Brown, Edgar Huntly; S. Alice Callahan, A Child of the Forest; Marcus Clarke, His Natural Life; Susanna Moodie, Roughing It in the Bush; Herman Melville, Typee; Sydney Owenson, The Wild Irish Girl; Simon Pokagon, Ogimawkke Mitigwaki (Queen of the Woods); John Richardson, Wacousta or, The Prophecy; Catharine Maria Sedgwick, Hope Leslie; and the FX television series, Taboo.
Area: Humanities
Writing Intensive

AS.060.637. Counterfactual Literature.
This course will focus on the formal, affective, ethical, and conceptual issues associated with forking-path texts—poems, fictions and films that openly offer alternative paths to the experience of individuals.
Area: Humanities
Writing Intensive

AS.060.638. Whitman and the Whitmanian.
This course will take the occasion of the bicentennial of the birth of Walt Whitman as an occasion to think about the legacies of his poetry in American literary history, especially in contemporary poetry. We will read key texts of Whitman's then move to more recent writing, paying attention to the key scholarship on Whitman from the last few decades, as well as to recent scholarship on poetry that is in dialog with the questions of democracy, capitalism, on the one hand and form and address, on the other, that have shaped our reading of Whitman and of poetry in the Whitmanian mode.
Area: Humanities
Writing Intensive

This seminar will provide an intensive introduction to antebellum nineteenth-century U.S. literature by way of tracking a critical formulation foundational to the field of American studies as whole: 'the American Renaissance.' Coined by F.O. Matthiessen in 1941, 'the American Renaissance' initially referred to a canon of five white male writers (Ralph Waldo Emerson, Nathaniel Hawthorne, Herman Melville, Henry David Thoreau, and Walt Whitman) alleged to have produced work of distinction in two interrelated senses—the first specifically 'American' literature deserving of academic study. We will follow the fortunes of this critical formulation, tracking how some of the authors in Matthiessen's canon have subsequently been reinterpreted and repositioned as well as how 'the American Renaissance' canon has been expanded and its very conceptualization contested. Primary authors whose work may be examined include William Apess, William Wells Brown, Lydia Maria Child, Frederick Douglass, Emerson, Margaret Fuller, Hawthorne, Harriet Jacobs, Melville, Harriet Beecher Stowe, and the anonymous author of Xicotencatl. Secondary works may include: Matthiessen, The American Renaissance (1941); Reynolds, Beneath the American Renaissance (1988); Michaelis and Pease, The American Renaissance Reconsidered (1989); Crews, 'Whose American Renaissance?' (1988); Colacurcio, 'The American-Renaissance Renaissance' (1991); Avallone, 'What American Renaissance?' (1997); Grossman, Reconstituting the American Renaissance (2003); Brickhouse, Transamerican Literary Relations (2004); Fluck, Romance with America (2009); Hager and Marrs, 'Against 1865' (2013).
Area: Humanities
Writing Intensive

How much can you say about a novel? How much of a novel can a critic interpret? The large scale of the novel form seems to resist the interpretive techniques of literary criticism, which look closely at a small number of textual examples. But what if we tried to read every word of a novel, and see in it all its forms: genre, structure, history, politics, biography, and so on? This seminar will look closely at a small number of Victorian novels (probably Dickens' *David Copperfield* and Eliot's *Daniel Deronda*, subject to change). We will approach these novels through a variety of theoretical lenses. There will be a special emphasis placed on the relations between form, history, and politics. This seminar will also offer students a chance to apply theories of literature and the novel often considered in abstract.

AS.060.642. Reading Capital Now.
Since the 2008 financial crash, there's been rising popular consciousness of capitalism's crisis-bound character and, therefore, its vulnerability. But finance isn't the only thing that capitalism has brought to a boiling point: for attentive readers of Marx, the mounting climate disaster, the COVID pandemic, and the struggle for Black Lives have only further highlighted the complex interconnections among our energy and food infrastructures, histories of racist and settler-colonial violence, the patriarchal organization of sexuality, and the maintenance of capitalist profitability no matter the social cost. The aim of this seminar is, first, to show how a thorough reading of the first volume of Marx's Capital goes a long way toward helping us see all these histories and crises as part of a single, many-faceted dynamic, and second, to highlight 20th- and 21st-century Marxist work that takes Marx in new directions, from critiques of racial capitalism, colonialism, and the patriarchy of the wage, to studies of climate crisis and the global recomposition of the labor pool. Along with Marx, we'll read work by WEB DuBois, James Boggs, Silvia Federici, Thiti Bhattacharya, Jairus Banaji, Nikhil Singh, Andreas Malm, the Endnotes collective, James Parisot, and others.

Writing Intensive

This course will read the major writings of William Wordsworth as experiments in tracking feeling between individual and multitude. It will take advantage of two currents in recent criticism to work through the problem of how one feels with and for large numbers. On the one hand, this requires taking up models of sympathy and feeling that depart from those established since the eighteenth century, where models of sympathy relied on a 1-1 relationship between human persons. These alternative models attend to “multitudes,” and thus a different scale of life, human and not (e.g. Spinoza, Virno, Hardt and Negri). On the other hand, reading Wordsworth in this light requires a reconsideration of the art of numbers – that is, poetry – alongside and sometimes in opposition to the science of numbers called political economy.

Writing Intensive

AS.060.644. Oceanic Studies & the Black Diaspora.
In this course, we take up Hester Blum’s blunt observation that “the sea is not a metaphor” in order to consider the visions and hopes black writers have associated with the sea, as well as the despair and trauma transatlantic slavery has left “in the wake,” to quote Christina Sharpe. Area: Humanities
Writing Intensive

AS.060.647. Capitalism for Humanists.
Recent global crises of capital accumulation have obliged both scholarly and journalistic accounts of capitalism to become more sophisticated and comprehensive. This course will be an introduction to some of those accounts. We will approach the problem of describing capital and its dynamics from several angles: conversations about combined and uneven development; about the racialization of enslaved and “surplus” populations; about the forms of social reproduction (often gendered) proximate to the wage; about technological change, robotification, and its implications for the production of capitalist value; about theories of the value-form itself. One aim of this course will be to think about how a better understanding of capital — its history and its mechanics — can make us better scholars of literature, so we will also devote ourselves to assessing the resources and the limits of earlier literary-critical accounts of literature’s relationship to capital accumulation.
Area: Humanities
Writing Intensive

George Eliot’s novels have been the focus of some of the most deeply thought criticism of the Victorian period. In this seminar we’ll read a selection of those novels as they have invited the study of topics which may include the theory of the novel and of narrative; aesthetics and continental philosophy; representation and the nature of individuation; sympathy; the history of affect; formalism, politics, and ethics; the novel and emergent sciences. We’ll spend most of our time on Middlemarch and Daniel Deronda, along with her non-fiction prose and some of her translation work of Spinoza and Feuerbach. We’re likely to read criticism by Gallagher, Hertz, Woloch, Plotz, Anderson, and Duncan. Depending on student interest, we may also take up Eliot’s relation to earlier literary figures—Wordsworth being a likely candidate.
Area: Humanities
Writing Intensive

AS.060.668. The Slavery Debate in the Atlantic World.
This graduate seminar will trace the historical development of the slavery debate in the Atlantic world through examination of key texts from a host of genres and locations—Quaker religious tracts, political documents like the Haitian Declaration of Independence, Cuban antislavery novels, slave narratives, and “classics” of “American” literature like Melville’s Benito Cereno. Our historical investigations into the rhetorical field of anti- and proslavery will be framed by a theoretical interest in political theology. How might critical reflection on sovereignty, recent and not so recent—from Derrida back to Bodin (widely acknowledged as having provided one of the first philosophical defenses of antislavery)—help us recast the intellectual history of the slavery debate and Atlantic radicalism, more generally?
Area: Humanities
Writing Intensive

AS.060.692. The Enlightenment, Aesthetics and Race.
This course examines the philosophical interplay between Enlightenment aesthetics and the construction of the concept of race. We will read texts in aesthetics and on human difference by Rousseau, Voltaire, Condorcet, Kant, Herder, Jefferson, Burke, Hume and others, in an attempt to see the points at which reflections on art and notions of human biological hierarchy intersect. Particular attention will be paid to the idea of the sublime as it pertains to early anthropological thought.
Area: Humanities

AS.060.800. Independent Study.
This course is a semester-long independent research course for graduate students. Students will have one-on-one assignments and check-in’s with designated faculty throughout the semester.

AS.060.801. Teaching Practicum.
Area: Humanities

AS.060.893. Individual Work.

AS.060.894. Independent Reading.
Area: Humanities

AS.061 (FILM AND MEDIA STUDIES)

AS.061.102. The Cannes Film Festival: Introduction and History. 1 Credit.
In recent decades, film festivals have become important venues for generating international audiences by simultaneously fostering aesthetic communities and creating marketing opportunities. This course considers the purpose and function of the film festival by examining the singularly influential festivals of Cannes. We will read about the culture, politics, and commerce of the festival, and compare Official Selection films with more the more unorthodox choices of the parallel sections: A Certain Regard and Directors’ Fortnight. Meets 5x during the semester. Required for students participating in the Cannes Study Abroad. Open to all.
Area: Humanities

AS.061.105. Freshman Seminar: The Films of 1968. 2 Credits.
1968 was a year of protest and revolution around the globe, and a new audience of youthful cinephiles was hungry for movies that reflected the changing political and cultural landscape. The films of 1968 rose to the challenge, comprising a remarkable document of the times that collectively upended cinematic traditions and old ways of viewing with bold new forms and content. This course examines those cinematic visions—from classics like 2001: A Space Odyssey, Once Upon a Time in the West and Night of the Living Dead to influential groundbreakers like John Cassavetes’ Faces, Jean-Luc Godard’s La Chinoise and Lindsay Anderson’s If... —looking closely at individual films and examining both their contemporary contexts and their relevance today. Films will be viewed and discussed in class.
Area: Humanities

AS.061.138. Acting for Filmmakers. 1 Credit.
This is a series of 3 workshops. 1. ACTORS’ HOMEWORK & CAMERA AS OBSERVER—Students will discuss and experiment with different methods of preparing for a role. Trying different methods, feel what works for them. We will work on short scenes and have an open discussion about goals, believability, emotional fatigue, distractions of the filming process. ~On the Sound Stage working in front of the camera: ~show how the camera watches performers’ thoughts. ~differences between working in front of a camera and playing to a live audience. ~Shooting: coverage continuity eye lines & marks blocking & restricted movement 2. AUDITIONS AND CASTING: ~Students will be given a variety of scripts to audition for. ~Discussion of casting: from actors’, directors’ and casting directors’ perspectives. ~How others perceive you— an exercise in diplomacy and self awareness. ~Preparing for an audition. both cold and rehearsed. ~Improvis during auditions. ~Memorization (quick) for auditions. ~We will rehearse and film auditions. ~Review and analyze audition videos. 3. ACTORS DIRECTING DIRECTORS. Working in groups and/or pairs, students will explore what kinds of direction works for them and for others. Students will have an open discussion as to what they need to hear from their director. This will be a class where it is safe to learn what does and doesn’t work when communicating with actors—from the actors’ perspective. The goal is not to deliver a professional performance in the class, but to explore how it feels to be directed.
Area: Humanities

AS.061.140. Introduction to Cinema, 1892-1941. 3 Credits.
This course explores the fundamentals of film analysis and encourages students to embark on an exploration of the first half of our first century of movies. It teaches the basic elements of film form, as well as their use in films across the globe from the turn of the twentieth century through the start of World War II. Movements discussed include the silent comedy of Charles Chaplin, Buster Keaton, and Harold Lloyd, moody German Expressionism, the playful anarchy of Surrealism, the fundamentals of editing with Soviet Montage, the beauty of French poetic realism, the rule-breaking of Pre-Production Code cinema, the work of the young Alfred Hitchcock, and, of course, highlights of classical Hollywood filmmaking. $50 lab fee.
Area: Humanities

AS.061.141. Introduction to Cinema, 1941-present. 3 Credits.
Introduction to Cinema provides an overview of American and international cinema from the post World War II era to the present. Through lectures and discussion, weekly screenings, and intensive visual analysis of individual films, we will explore the aesthetic, cultural, political, and economic forces that have shaped the art and industry of film over the past 70 years. Regular quizzes, writing assignments, class participation required. Mandatory film screenings. Lab Fee $50.
Area: Humanities

AS.061.145. Introduction to Digital Video Production: Visual Language. 3 Credits.
This course is a study of the visual language used to create a moving picture. Through screenings and discussion of films, videos, and related readings, students will develop a visual critical facility and will demonstrate this facility in a few response papers to screenings and video projects. The course will focus on image construction, including composition, framing, movement inside the frame and use of light as well as use of sound. Students will learn to be attentive to rhythm and tempo in picture editing and sound. In-class video assignments included, in which students will work in small groups of three. Lab fee: $100
Area: Humanities

AS.061.148. Storytelling for Film and Fiction. 3 Credits.
Through the analysis of narrative films, short fiction, myths, fairy tales, and ghost stories, and through the workshopping of their own creative writing, students will explore the art and science of ‘a good story well told.’ The course will offer an introduction to dramatic and visual storytelling, and is an essential primer for upper-level screenwriting. Lab fee $50.
Area: Humanities

AS.061.150. Introduction to Film Production. 3 Credits.
This course introduces students to basic considerations of shooting 16mm film. Through lectures and practice, the course approaches the basics of light meter readings, basic camera operations and shot composition. The course also highlights specific readings from classical film theory to augment weekly shooting exercises. Each week students, working in groups, shoot film exercises, providing a general overview of film production. For the final project, each group shoots and edits (physical edits) a short (3-5 minutes) film on 16mm black and white reversal film stock. Lab fee: $200
Area: Humanities
AS.061.152. Introduction to Digital Video Production. 3 Credits.
This course introduces students to the world of digital filmmaking. Through screenings, production assignments, and in-class labs, students will develop proficiency in digital cameras, sound recording devices, and software. Students will work individually and in groups to produce several video projects. For their final projects students will pitch an idea and develop a more complex film. Lab fee: $100
Area: Humanities

AS.061.154. Lights, Camera, Action: Bogart. 1 Credit.
This mini-course will offer an introduction to the basics of film analysis through a survey of films starring the legendary Humphrey Bogart. Short weekly written responses. No prior experience in film studies required; non-majors welcome. This one-credit course will meet September 3, 10, 17, 24, and will be graded Pass/Fail. Due to the limited number of meetings, perfect attendance is required.
Area: Humanities

AS.061.156. Lights, Camera, Action: On Location. 1 Credit.
This mini-course will explore the role of place in film; location not merely as setting, but as character, condition, mode of thought. Real and imagined, found and constructed worlds will be considered. All cinematic worlds virtual? In-class screenings and an emphasis on discussion over lecture. No prior experience in film studies required. This one-credit course will meet September 5, 12, 19, 26, and will be graded Pass/Fail. Due to the limited number of meetings, perfect attendance is required.
Area: Humanities

AS.061.158. Lights, Camera, Action: David Lynch. 1 Credit.
An introduction to the basics of film analysis, through the work of contemporary American film and television director David Lynch. Though essentially cinematic, Lynch's mysterious, dreamlike style, as evidenced by movies like Wild at Heart, Blue Velvet, Mulholland Drive, and Twin Peaks: Fire Walk With Me, invites a multitude of entry points for discourse. Short weekly written responses, in-class screenings, and emphasis on discussion over lecture. No prior experience in film studies required.
Area: Humanities

AS.061.159. Lights, Camera, Action: Hitchcock. 1 Credit.
An introduction to the basics of film analysis, focusing on the work of the 'Master of Suspense,' Alfred Hitchcock. Short weekly written responses, in-class screenings, and emphasis on discussion over lecture. No prior experience in film studies required. This one-credit course will meet on Sept. 21, Sept. 28, Oct. 5, and Oct. 12 and will be graded pass/fail.
Area: Humanities

AS.061.161. Introduction to Short Film Making. 3 Credits.
In this introductory course, students will create short films using digital camera equipment, sound recording devices and the film editing software program, PremierePro. We will watch a variety of films in class; hold readings and discussions based on assigned text, take technical workshops on sound, lighting and hold a short workshop on 16mm film. We will study the history of filmmaking, with a strong focus on the avant-garde and experimental genres. We will also learn about current movements and trends that have developed throughout the world and have the opportunity to meet with Baltimore filmmakers in class. Students will finish the course with a greater understanding of the lineage of cinema and will have learned a range of techniques to create, experiment and develop their own language of visual storytelling. We will discuss, engage, explore and most of all have fun! No prior experience with film or video required.
Area: Humanities

AS.061.201. Intermediate Video Production: Sound Art for Filmmakers. 3 Credits.
David Lynch once said 'Films are 50 percent visual and 50 percent sound. Sometimes sound even overplays the visual!' This course is dedicated to challenging young filmmakers to conceptualize sound as sculpture and mine the evocative potential of sonic arts. Students will learn and create with a variety of modular synthesizers, digital recorders, and samplers. We will listen to a diverse spectrum of audio content such as musique concrète, plunderphonics, sound collage, and sound design for radio and cinema. Throughout the semester students will create several "imageless films." In the final month of the semester, students will choose one sound project to refine and incorporate moving image. $100 Lab Fee.
Prerequisite(s): AS.061.150 OR AS.061.152
Area: Humanities

AS.061.202. Intermediate Film Production: Personal Essay Film. 3 Credits.
In this course students will consider variations of the personal essay film, wherein filmmakers explore their own experiences, both real and imagined. These films constitute dialogues between filmmaker and world using subjective approaches, including but not limited to first person narration. Students will make a short (4-6 minutes) 16mm film from original and possibly archival footage; their own filmic essays based upon personal experiences. We will look at the works of several essay filmmakers including Ross McElwee, Jean Luc Godard, Chris Marker, and Su Friedrich.
Area: Humanities
AS.061.205. Introduction to Screenwriting. 3 Credits.
In this course we will explore the basic principles of visual storytelling in narrative film as they apply to the design, creation, and revision of the screenplay. Specifically, we will focus on learning the craft of screenwriting — strategies, processes, and philosophies that writers can develop, practice, and rely upon as they progress through a series of screenwriting exercises and write three short screenplays, which will be critiqued in-class during weekly table reads and with the Instructor (one-on-one) during office hours. Select professional screenplays will be read and analyzed — and clips from select films viewed — to further explore what works well on the page, and how it translates to working well onscreen. Final Draft screenwriting software is required; a FREE 18-week trial will be made available for all students who don’t already have Final Draft.
Area: Humanities
Writing Intensive

AS.061.211. Intermediate Film Production: First Person/Third Person Essay Film. 3 Credits.
Each student shoots an essay film (16mm color and/or black and white) written either in first person or third person, or perhaps, both. The third person essay incorporates the ideas of various authors while the first person film is written chiefly from personal experience. Each film should run between 4-8 minutes. Lab Fee: $200. This course satisfies the Intermediate Film Production requirement.
Prerequisite(s): AS.061.150
Area: Humanities

AS.061.212. Assembling an Idea: The Documentary Process. 3 Credits.
A compelling documentary begins with a compelling idea. (The term “documentary,” for our purposes, resists categorization.) But by the time that documentary is completed, the initial idea has likely gone through a radical and rigorous exploration. The initial idea may emerge from a sudden thought, a chance encounter. It is the moment when a constellation begins to form. The final driving idea behind a documentary may bear little resemblance to that first thought. We will begin with each of your ideas, perhaps, little more than a vague feeling. The painter, Paul Klee, wrote that “drawing is taking a line for a walk.” In this course we will take each of your ideas for a walk, imagining why and how the idea might be realized. The why and the how will involve imaginative thinking, seeking additional ideas that coalesce with that first thought. In this way we begin to assemble the constellation that is your idea. To some degree we are less concerned with the initial idea than the subsequent ideas it suggests. The process may involve archival image research, readings, your own writing, listening to music and sounds, and sometimes, just letting your idea wander off on its own. Our goal is to experience the growth of an idea into an articulated intention. That intention is then expressed through a plan incorporating visual style, sound design, and, if appropriate, text. There is no production requirement for this course. There is no requirement of film or video experience. You are required to bring with you an idea that has found you. The point of all of this is for each of you to engage, on a deep and thoughtful level, with an idea that has asked for your help.
Area: Humanities
Writing Intensive

AS.061.213. Screening Difference: Race in American Film. 3 Credits.
This course will explore how race and ethnicity have been represented in American film from the early 20th century to the present. Through in-class screenings, open discussion, and, short, analytical written responses, students will learn the basics of film analysis and improve their critical thinking skills. No prior experience in film studies required.
Area: Humanities
Writing Intensive

AS.061.214. Demystifying the Entertainment Business. 3 Credits.
For many, the entertainment business is alluring. For all, it’s pretty confusing. Demystifying the Entertainment Business is a two-week online course that offers students insight into: behind-the-camera careers in the field (specifically writing, directing, producing, and developing); how to best prepare for those careers; and how to break into the industry once graduation finally comes. Students should be prepared to write and read scripts, offer feedback to their fellow students, shoot and edit videos, and create career goal maps and resumes. (Note: some level of basic shooting and video editing acumen will be necessary, as a short film deliverable will be required for successful course completion.) By the end of the course students will understand the basic mechanics of the entertainment industry and where they might like to fall within it, and they will walk away with a complete short film they've written and directed.
Area: Humanities

AS.061.218. Modernist Literature and Film. 3 Credits.
This course explores the exchange of ideas and techniques between literary modernism and modernist cinema: how Virginia Woolf’s writings on the cinema connect with her use of shifting points-of-view as literary devices, how James Joyce influenced the Soviet filmmaker Sergei Eisenstein and how Eisenstein in turn influenced the American novelist John Dos Passos, how Franz Kafka’s frequent trips to the movies reflect in his fiction, and how artists ventured broadly to develop experimental languages for expressing the new speeds and scales of modern life. Additional texts will be drawn from novels, essays, poems, and films from Ezra Pound, T. S. Eliot, Charlie Chaplin, Claude McKay, Zora Neale Hurston, Anita Loos, Andrei Bely, Dziga Vertov, Gertrude Stein, Louis Aragon, and Rene Clair. The course fulfills the writing intensive requirement and involves a series of essays on literature and cinema from a critical perspective.
Area: Humanities
Writing Intensive

AS.061.219. Special Topics: Animation Workshop. 3 Credits.
Students will produce several animations using hand-made techniques, including drawing animation, paper puppets and stop-motion. Screenings and readings will provide a historical and conceptual context to the exploration of animation as an experimental technique within both narrative and non-narrative works.
Area: Humanities
Writing Intensive

AS.061.220. Special Topics: Silent Classics. 3 Credits.
A survey of silent era masterpieces. From Murnau’s horror film Nosferatu to Keaton’s slapstick comedy Sherlock Jr to Dreyer’s great tragedy The Passion of Joan of Arc, these are films of exceptional beauty and artistry. Chaplin, Eisenstein, von Sternberg, and others also considered. Recommended course background: AS.061.140 or AS.061.141 or AS.061.145. Lab Fee: $50. Counts toward 200-Level critical studies requirement.
Area: Humanities
Writing Intensive

AS.061.221. Special Topics: Producing the Independent Film. 3 Credits.
This class will guide students through the process of producing an independent film in the United States. The chronology of lectures and coursework will follow the timeline of a project, from conception through financing and development, production, postproduction, marketing, and exhibition. Students will learn how to package and pitch projects, budget and schedule a screenplay, develop a financing plan, supervise production and post-production, and mount a viable festival and distribution strategy. Lab Fee: $40
AS.061.222. Analyzing Popular Culture. 3 Credits.
This course provides an introduction to the critical analysis of popular culture through the major theoretical paradigms of media and cultural theory. The teaching method uses a combination of media studies and sociology to explore popular culture and is designed to encourage students to become more active critics. The course presents a range of media from contemporary popular music to film and television. Smaller subjects include the teen 'pop' love song, the politics of representation, and the forming of subcultures.

Area: Humanities
Writing Intensive

AS.061.224. Special Topics: The Business of Film. 3 Credits.
Law and economics shape the movie business. This course will survey the legal doctrine and financial concepts of film production and distribution, providing both an overview of one particular industry (i.e., Hollywood) as well as an introduction to fundamental principles applicable to any industry. $40 Lab fee

Area: Humanities

AS.061.226. Special Topics: Writing About Film. 3 Credits.
A workshop that focuses on writing critical and analytical essays about movies recent and classic. Students will write progressively longer and more complex essays—submitting working drafts and making revisions—and participate in critiques and discussions of one another's writings. Fulfills Film and Media Studies expository writing requirement. Lab Fee: $50

Area: Humanities

AS.061.228. Almost Grown. 3 Credits.
An introduction to the basics of film analysis through a survey of American coming of age films from the mid 20th century to the present. Attention to questions of race, class, and gender. A variety of genres considered. No prior experience in film studies required. In-class screenings and emphasis on discussion over lecture. Each student will write regular film responses, give an oral presentation, and write a short essay, 8-10pp., with a revision.

Area: Humanities
Writing Intensive

AS.061.229. French New Wave. 3 Credits.
An exploration of the major films and directors of the French New Wave that is also designed to help students consolidate their skills in the analysis of film. The course will examine the origins of the French New Wave, looking at the directors as critics and as passionate film fans, along with the institutional and historical context of the films. It will also ask how the French New Wave changed the process of filmmaking, and transformed the way we think about the work of the director—inspiring more vocations in filmmaking than any other movement in cinema history. Film screenings T 7:30-10:00PM. $40 lab fee.

AS.061.232. Intermediate Video: Dreams, Psychosis, and Altered States in Cinema. 3 Credits.
In this production course, students will create multiple video projects that reflect the representation of dreams, psychosis, and altered states in cinema. We will screen and deconstruct a variety of feature films, video artworks, and music videos to understand the mechanics and language of subjective realism as a narrative form. We will trace this stylistic lineage from its roots in art house cinema to its rise as an accepted Hollywood modality. We will also explore editing and software techniques that will further students' ability to create stunning works of strange beauty. Basic proficiency with digital cameras and editing is required. This class fulfills the intermediate film production requirement.

Area: Humanities

AS.061.233. Intermediate Digital Video Production: Adobe After Effects. 3 Credits.
This course will serve as an introduction to Adobe After Effects. Students will learn a variety of motion graphics techniques such as digital character animation, rotoscoping, motion tracking, chroma key compositing and automating 3D cameras. Through screenings and discussions students will gain insight into the myriad of ways After Effects is used in Film and Television. Through the semester students will complete several short video art projects.

Prerequisite(s): AS.061.152 OR AS.061.145
Area: Humanities

AS.061.234. Intermediate Digital Video Production: Experimental Forms. 3 Credits.
This Production course focuses on key movements in both Experimental Film and Video Art. Production assignments will arise from: Structural Film, Performance Art, Lyrical Film, Psychedelic Video, and Experimental Ethnography. Students will explore how these movements developed outside (and at times in opposition to) the mainstream, and became integral to the aesthetics of contemporary art, film, and television. Students will think critically about the personal and societal function that video artwork serves, and gain insight into the history of Experimental Film. At the end of this course, students will have a more nuanced understanding of contemporary media art, and they will be more proficient in video editing and cinematography, which they can apply to future work on: commercials, music videos, webcasts, and feature films.

Prerequisite(s): AS.061.152 OR AS.061.145
Area: Humanities

AS.061.235. Intermediate Digital Video Production: Advanced Camera. 3 Credits.
In this production course students will gain proficiency on a variety of Digital Cinema Cameras. Students will work with the Canon C300, C500, and FS7. We will discuss picture profiles, different lens options, external capture devices, and shotgun microphones. We will thoroughly explore the various unique functionality of each camera. Throughout the semester students will complete several cinematography focused video projects.

Prerequisite(s): AS.061.145 OR AS.061.152
Area: Humanities

AS.061.238. Reading the Moving Image. 3 Credits.
This course will emphasize close observation and critical thinking. Through weekly screenings and class discussion, students will practice noticing; seeing and hearing with fresh eyes and ears, and taking nothing on screen for granted. And they'll learn to reflect on and contextualize what they find, drawing evolved conclusions about how film texts communicate ideas and what those ideas may be. They'll consider all elements of cinematic form; an array of analytical frameworks including genre, historical era, authorship, and modes of production; and representations of gender, race, and class. Regular quizzes, a short oral presentation, and a short written analysis. No prior experience in film studies required; majors and non-majors welcome.

Area: Humanities
Writing Intensive
AS.061.239. Film in the Age of Trump. 3 Credits.
As the unprecedented ascendency of Donald Trump has changed the world in record time, so has it changed the way we look at the world. Along with the attendant political and social implications, the rise of Trump has engendered altered perspectives on art and entertainment, posing questions about the power of film in an age of protest. This course will explore how films speak to us differently in this time of political and social upheaval. Through weekly screenings and discussion, a range of JHU faculty will look with fresh eyes at both classic and recent films—from Casablanca to Selma—whose narratives take on new meaning in the age of Trump. In addition, a series of renowned contemporary filmmakers will share their recent work and address how film and filmmaking have changed since the 2016 election. Course requirements are attendance, participation, and 3-4 short response papers. Screening and discussion will take place Wednesdays in the beautifully restored Parkway Film Center, a historic 1915 movie theater that opens in Station North in spring, 2017. $50 lab fee.

AS.061.244. Film Genres. 3 Credits.
$40 lab feeA survey of American genres: the Western, the Gangster Film, Science Fiction, Horror, Comedy, Melodrama, and others. Twice-weekly screenings. Short film responses and a final paper, 10pp.
Area: Humanities
Writing Intensive

AS.061.245. Introduction to Film Theory. 3 Credits.
This course offers an introduction to the major paradigms of film theory, covering how significant thinkers have conceived of the medium from its inception to the present day. Frequent film screenings help to illustrate key concepts. Topics include the classical opposition between formalist and realist film theories as well as critical approaches to narrative, spectatorship, and representation. Students are expected to enter the course ready to engage in discussion. Weekly film screenings. $50 lab fee.
Prerequisite(s): AS.061.140 OR AS.061.141
Area: Humanities
Writing Intensive

AS.061.252. School Daze. 3 Credits.
Teen angst and togas in comedies of American youth from The Graduate to Animal House to Lost in Translation. Course will provide an introduction to the basics of film analysis with an emphasis on discussion over lecture. Several short film responses and an essay with optional revision. No prior experience in the subject required.
Area: Humanities
Writing Intensive

AS.061.263. Poetry and the Moving Image. 3 Credits.
Using P. Adams Sitney's text: The Cinema of Poetry, this course will explore the relationship between poetry and the moving image. When experimental film began to define itself in the 1950s and 60s the terms cine-poem and film-poem were ubiquitous as identifying avant-garde cinema. Poetic structures in the moving image will be studied in relation to language, images and formation of meaning. Students will independently research a poet who greatly inspired and influenced a filmmaker/moving image artist and write on that filmmaker's work. One moving image project will be undertaken and completed during the semester as well. Weekly assignments will include screenings, reading, writing, and or video work.
Area: Humanities
Writing Intensive

AS.061.264. Acting in Film. 3 Credits.
This class is intended for all students of film with the goal of providing them with the experience of acting in film, in both dramatic and comedic roles. The ability of the students as actors is not the focus. Instead they will understand how the writer, director and cinematographer can influence, inhibit or enhance performance. The students will explore practical methods used on set, different approaches to acting and working with directors, writers and crew. It will also include discussions of professional performances and screenings. Students must have strong verbal skills and be prepared to actively and regularly engage in acting exercises, including improvisation and reading aloud.
Area: Humanities

AS.061.265. Comedic Storytelling for Page and Screen. 3 Credits.
A workshop devoted to the art and science of a funny story well told. Students will analyze comic fiction, film, and classic television, and create their own short, comic works. 220.105, 220.106, or 061.148 recommended. This course satisfies the Film and Media Studies screenwriting requirement.
Area: Humanities
Writing Intensive

AS.061.266. Introduction to Writing for Television. 3 Credits.
This course will teach the basics of dramatic structure and plotting for the television series, with a focus on content designed for serial formats. Students will read analytical work on what makes a successful television series; dramatic structure; and effective characterization, and will engage in both critical written responses to readings and the creation of their own original five-episode series arc that will be drafted and redrafted, creating a complete mini-series with which they will leave the course.
Prerequisite(s): AS.061.205
Area: Humanities
Writing Intensive

AS.061.267. Cultural History of the Internet. 3 Credits.
This course offers an introduction to internet studies through the many ways digital culture has touched our everyday lives: memes, blogs, gaming, social networking, instant messaging, and more. From its origins in connecting scientific researchers to its present form as a multi-device, multi-platform web connecting us to everything from each other to our smart homes, the internet has proven that nearly our entire social world can be processed as data and linked up. While this has meant greater connection, it has also raised questions about how we learn, communicate, behave, and organize. The internet has long promised new avenues of personal expression, but it has also brought with it the quandaries of echo chambers, information silos, and disinformation campaigns. In response to these complicating effects, the course offers an opportunity for students to develop the critical mapping tools necessary to orient oneself within this vast cultural network and its rapid historical unfolding.
Area: Humanities
AS.061.269. Feminist Filmmaking: A Theory and Practice Workshop. 3 Credits.
In this workshop for 10 students (no gender preference) documentary filmmaker and media theorist Bernadette Wegenstein and filmmaker and director of the Saul Zaentz Film Innovation Fund co-teach the fundamental principles of gender theory and feminism as applied to practical filmmaking. We will cover the history of women filmmakers, as well as embark on a concrete mini-production where students will be placed in the roles of writers, directors, producers, cinematographers, and editors to make a feminist film. The anthology Feminist Film Studies (Hollinger) and Feminism and Documentary (Waldman/Walker) will be among the readings that our workshop is based on.
Prerequisite(s): AS.061.145 OR AS.061.152
Area: Humanities

AS.061.301. Advanced Film Production: The mongrel film. 3 Credits.
In this course, each student is responsible for the design and production of a short 16mm film. The film may be shot on color and/or black and white negative stock. The format is Super 16mm. The film may include sync and/or non-sync sound. The idea behind the “mongrel” film is for the student to incorporate a variety of genres within this project. These may include stylistic elements typically associated with documentaries, experimental, narrative, animation, and lost and found films. Students are expected to have previously completed AS.061.150 and an intermediate level film production class.
Prerequisite(s): AS.061.150
Area: Humanities

AS.061.303. Podcasting: Critical and Creative Practice. 3 Credits.
In this critical studies course with a creative component, students will learn about the history and cultural significance of podcasting, develop tools for critically listening to and analyzing podcasts, and learn how to research, write for, and produce podcasts. Examples will come from a broad sample of narrative, documentary, interview, and discussion-based podcasts. While no formal training in audio production is necessary to take the course, students will be expected to learn the necessary skills to create their own podcasts. In-class demonstrations of microphones, editing software, and approaches to sound design will be offered, and students are encouraged to take advantage of office hours for further help with audio production.
Area: Humanities

AS.061.304. After Effects: Intermediate and Advanced Technique. 3 Credits.
This hybrid After Effects course will offer two simultaneous tracks of study. One for students using After Effects for the first time, the other for intermediate After Effects users who are looking to master the program. The class will meet to learn new techniques and to discuss each other’s work and the instructor will regularly introduce exciting new material applicable for all skill levels. Students will have the option to create a motion graphics reel for their final project, a valuable asset when applying for any post-production job. The coursework will be supported with robust video tutorials, weekly group instruction, and critique as well as periodic individual meetings with the instructor. Additionally, the entire class will gather for several Zoom sessions with professionals working in the industry.
Area: Humanities

AS.061.309. Advanced Video Production: Influence and Anxiety. 3 Credits.
This is an advanced production course focusing on artistic influence. Each student will be working with and around a filmmaker who greatly inspires and influences their work. The evolution of style will be considered. The work will include screenings, readings, and short projects all feeding into a final movie. This course fulfills the advanced production requirement. Students should have completed a Introductory and Intermediate Digital Video Production course prior to enrollment. $100 Lab fee.
Area: Humanities

AS.061.314. Screenwriting: Introduction to Scene. 3 Credits.
In the first half of the semester, students will be presented with prompts from a variety of media photography, literature, popular music, et al. intended to stimulate the imagination and spark ideas. These ideas will be explored, cultivated, and mined for their visual information, with emphasis on information that might appear in their filmic representation. In the second half of the semester, students will search independently for cinematic ideas with an eye toward the details of a scene. As students identify scenic elements, their ideas will be developed and carried through the traditional workflow: outline, scenario, and screenplay. At the end of the semester, students will have prepared short scripts ready for pre-production. Lab fee: $50
Area: Humanities
Writing Intensive

AS.061.315. Screenwriting By Genre. 3 Credits.
Story design for the screenplay with special attention to the genres of comedy, horror, melodrama, and adventure. Regular workshops, short written exercises, and a longer final project.
Prerequisite(s): AS.061.148 OR AS.061.205 OR AS.061.270 OR permission of the instructor.
Area: Humanities
Writing Intensive

AS.061.316. Characters for the Screenplay. 3 Credits.
A workshop devoted to creating complex characters for the screen. Students will examine memorable film characters from the silent era to the present, with attention to how these characters are revealed through both the drama and the mise en scene. Weekly screenings. Short critical and creative written exercises and a longer, creative final project. Recommended Course Background: AS.061.148 OR AS.061.205 OR AS.061.265
Area: Humanities
Writing Intensive

AS.061.321. Environmental Cinema. 3 Credits.
An exploration of cinema’s unique capacity to reveal the world, this course presents an international and richly historical survey of environmental films. Examples come from narrative, documentary, and experimental filmmaking, including blockbusters, exposés of waste and pollution, guerrilla media projects, and poetic contemplations of landscapes and oceans. Filmmakers and artists include Andrei Tarkovsky, Angès Varda, Jia Zhangke, Lucy Walker, Ai Weiwei, Edward Burtynsky, and Werner Herzog.
Area: Humanities

AS.061.322. Women in Popular Film and Television. 3 Credits.
A survey of female beauty, villainy, comedy, and humanity in film and television from the silent era to the present. $50 lab fee.
Prerequisite(s): AS.061.140 OR AS.061.141 or permission of instructor.
Area: Humanities
AS.061.328. Gangster Films. 3 Credits.
The bad guy as hero from Little Caesar to Goodfellas. Film screenings Th 7:30-10:00 PM, Sun 7:00-9:30 PM. Lab fee: $40. Area: Humanities

AS.061.329. Left-Handed Endeavors: Crime Film. 3 Credits.

AS.061.335. Monster Films. 3 Credits.
$50 and one core course or permission required. Monstrous others and monstrous selves in classic 20th century horror. One core course or permission required. Prerequisite(s): AS.061.140 OR AS.061.141 OR AS.061.238 or permission of instructor is required. Area: Humanities

AS.061.336. American Landscapes on Film. 3 Credits.
American setting and identity: the frontier, the city, the highway, the sea, the small town, the suburb, and outer space as represented in popular film from the silent era to the present. Prerequisite(s): AS.061.140 OR AS.061.141 OR AS.061.238 OR AS.061.244 or instructor permission. Area: Humanities

AS.061.339. A Cinema Of Anxiety: Film Noir. 3 Credits.
Postwar film noir: Fuller, Huston, Lang, Mann, Tourneur, and others. Area: Humanities

AS.061.340. The Body in French Cinema; Sexuality, Physicality, Vulnerability. 3 Credits.
This course explores how French films have interrogated the body. We will ask how they have attempted to come to terms with human physicality, desire, and fragility—and with the ability of cinema itself to move spectators emotionally and even physically. Themes explored will include sexuality, gender identity and disability. AS.061.140 or AS.061.141 or permission of instructor. $50 lab fee. Prerequisite(s): AS.061.140 OR AS.061.141 OR AS.061.238 or permission of instructor. Area: Humanities

AS.061.341. The Wilderness Within and Without. 3 Credits.
Savage landscapes and savage states of mind in films by Ford, Herzog, Boorman, Weir, and others. Lab fee: $50 Counts toward 300 or 400-level critical studies requirement. Area: Humanities

AS.061.346. Persistence of Vision: Time, Memory and the Past in Recent Global Cinema. 3 Credits.
This course will examine the ways film represents, remakes, and re-visions cultural and personal memory in a range of recent national and international films, including those by Chantal Akerman, Pedro Almodóvar, Lee Chang-dong, Claire Denis, Joanna Hogg, Hirokazu Koreeda, Terrence Malick, Joshua Oppenheimer, Christian Petzold, Sarah Polley, Hong Sang Soo, and Jia Zhangke. Area: Humanities

AS.061.347. Teens On Screen. 3 Credits.
This course will explore changing representations of adolescence in films from the 1950s to today across a range of mainstream Hollywood, independent, and international films. We'll examine how this dynamic and misunderstood genre shapes and reshapes perceptions of youth, and we'll discuss the frank and sometimes explosive ways teen films address difficult questions of race, class and sexual identity, often in the guise of "pure" entertainment. Recommended Course Background: Introduction to Cinema I or Introduction to Cinema II, or permission of instructor. Area: Humanities

AS.061.348. Acting and Screenwriting for Narrative Productions. 3 Credits.
This pre-production course brings together student filmmakers from Maryland Institute College of Art (MICA) and from Johns Hopkins University (JHU), providing intensive training in the crucial aspects of preparing to shoot a successful narrative film. Students work with a professional screenwriter, allowing students to hone and improve their existing screenplays, practice the elements of writing for film, and learn how to do a script breakdown. Workshops on working with actors, taught by a professional actor, will teach students the ins and outs of casting and directing. Supplemental workshops will cover elements of pre-production such as budgets, production schedules, call sheets, and legal issues. Film screenings will train students to see films as festival curators do, with an eye toward what constitutes exciting, innovative filmmaking. This course is the prelude and prerequisite to Narrative Filmmaking II, a production course during which students will collaborate to shoot a short narrative film based on student screenplays. Area: Humanities

AS.061.350. Media Workshop. 4 Credits.
Media Workshop mixes the theory and practice of media-making in a workshop environment that allows upper-level students to hone their craft as filmmakers. Based upon the idea of a creative community, the workshop is an advanced lab designed to give students a place to share ideas, create new work, and receive intensive and supportive critique. Work produced in this class will consist of non-narrative experimental exercises, exploring issues of the image, editing, perception, and sound. Students will read filmmaker-theorists like Sergei Eisenstein, Robert Bresson, Stan Brakhage, Maya Deren and Wim Wenders and will produce creative work inspired by the texts. Area: Humanities

AS.061.352. Documentary Film Production. 6 Credits.
'7 in the City' is a multimedia journalism project that explores what it is like to be a seven-year-old growing up in Baltimore today. The project is modeled after the legendary British documentary Up series. The goal is to screen and publish the resulting documentaries and articles in partnership with a major media outlet. The class is being taught in partnership with the Hopkins MA in Writing Program. Students in this class will produce short documentaries (4 to 6 minutes) while the writing students will produce a series of articles and in-depth written profiles of seven year olds in different neighborhoods across Baltimore—focusing on public health issues, race, class, educational and economic disparities. With an eye toward documenting the ethics and social justice issues surrounding disparate childhoods in the city, film students will gain hands-on practical experience in filming, editing, and producing a short documentary about a particular 7 year old living in the city. This course counts toward the advanced production requirement for FMS majors and minors in the production track. Students should anticipate extensive work outside of the scheduled class time. Area: Humanities
AS.061.356. Narrative Productions. 6 Credits.
Narrative Productions is a joint production course for JHU and MICA undergraduates who have completed Acting and Screenwriting for Narrative Productions (AS.061.348). Students work in teams to produce a narrative short from a script written in AS.061.348. Students are assigned a primary and a secondary role on the production or post-production of their chosen film. Students fill all roles from casting, producing, direction, design, cinematography, sound recording and editing. Throughout the course, instructors will facilitate contact with relevant films and film professionals to illuminate the key creative roles necessary in the making of a successful narrative film. Instructors serve in an advisory role in the production of student projects, offering technical information and guidance throughout the filmmaking process. Students should be prepared to spend a significant amount of time outside of class working on their films.
Prerequisite(s): AS.061.348
Area: Humanities

AS.061.357. Writing Intensive Area: Humanities

AS.061.361. Documentary Film Theory. 3 Credits.
Documentary Film Theory: The Work of Documentary in the Age of Reality Reproduction This course explores contemporary documentary film and video with an emphasis on selected directors and the theoretical implications suggested by their work. In particular, we look at the notion of the 'real' as it is constructed and maintained through and by documentaries. This inquiry necessarily involves a reflection that is philosophically as well as politically motivated. Directors include Errol Morris, Trinh Minh-ha, Ross McElwee, and Werner Herzog. Readings are eclectic, ranging from Annie Dillard to Martin Heidegger. Counts toward 300 or 400-level critical studies requirement.
Area: Humanities

AS.061.364. The Films of Alfred Hitchcock. 3 Credits.
Close examinations of Hitchcock's films from the Lodger to Frenzy. $40 lab fee.
Area: Humanities
Writing Intensive

AS.061.365. The New Hollywood: American Films of the Seventies. 3 Credits.
This course will explore the extraordinary renaissance in American film that arose from the death of the studio system and ended with the advent of the blockbuster. We'll discuss how the political and cultural struggles of the Vietnam era affected what came to be called New Hollywood cinema; how classical Hollywood narrative was (or wasn't) upended by the likes of Altman, Scorsese, Coppola, and Peckinpah; and how the films of this crucial period addressed or failed to address race, class and gender. Lab fee $50.
Area: Humanities
Writing Intensive

AS.061.366. Theorizing Popular Culture. 3 Credits.
This course examines popular culture's role in everyday life, tracing its path from its origins to the present. It explores the aesthetics, politics and theory of cinema, television, popular music and internet culture, as well as the study of subcultures and fandom. The endpoint of the experience is to draw students into a more complex and conscious relationship to the mediascape that surrounds them. It also encourages the cultivation of an active practice of cultural critique. Students will debate issues central to a long history of dealing in popular culture, including the potential 'dumbing down' of mass culture, the use of artistic formulas in the creation of popular works, the celebration of the popular in the notion of 'popular art,' representations of race, gender, and sexuality in media, power and the question of the popular, and the basis of taste in media. It will apply to a range of media as diverse as films, television programs, the punk and 'pop' movements, and internet phenomena. A background in writing on media is encouraged. Lab fee: $40
Area: Humanities
Writing Intensive

AS.061.367. Intermediate Screenwriting. 3 Credits.
This course will explore strategy and process for developing a short screenplay from pre-existing literary or journalistic source material (short story, news/feature article, etc.). By exploring several "case studies" — feature films and the source material that inspired them — students will identify the practical strategies employed by professional screenwriters with the goal of employing such strategies with their own screenplay adaptations. Bulk of class will focus on designing, writing, and rewriting a 20-30 page screenplay, and sharing multiple drafts with the class (and with the professor one-on-one) for critique over the course of the semester. Each student should have 2-3 pieces of material under consideration for possible adaptation by the start of class. Discussions from time to time will also touch on the business of screenwriting. Students will be required to purchase a license for Final Draft screenwriting software for $99. Students are expected to have previously completed AS.061.205 or another lower level screenwriting class.
Area: Humanities
Writing Intensive

AS.061.370. Terrence Malick: The Poetics of Space. 3 Credits.
This course will closely examine Malick's films, with particular emphasis on his visionary manipulation of the epic vastness and lyrical intimacies of screen space. With this primary concern in mind, we will consider his films' engagement with philosophies of history and time; their increasingly experimental approach to narrative and stylistic conventions; and their enduring fascination with the interaction among the human, natural, and spiritual worlds. We will also look at recent films influenced by his work, including Carlos Reygadas's Silent Light and Shane Carruth's Upstream Color, addressing the question of what constitutes a 'Malickian' cinema.
Prerequisite(s): AS.061.140 OR AS.061.141
Writing Intensive
AS.061.375. Surrealism and Film. 3 Credits.
We will define Surrealism through primary texts, including those of Andre Breton, Antonin Artaud and Rene Daumal and other works that defined and influenced the movement in the early part of the 20th century. Using an understanding of the practice of surrealism found in the readings, as well as in surrealist games and automatic writing, we'll study a diverse group of filmmakers influenced by the practice, including Luis Buñuel, Joseph Cornell, Raul Ruiz and contemporary artists such as David Lynch. Assignments include weekly papers and one final creative project. Weekly film screenings Thursday 7:30-10:00 PM. $50 lab fee. Media, Online Writing Intensive

AS.061.378. Automatic Animation. 3 Credits.
A hand-made, 2-D animation course based on ideas of automatism. Students will create their own animated movie during the semester with in-class animation exercises. Readings will include Dada and Surrealist texts, poetry and theory of poetics. Sounds ideas will be discussed and pursued related to the ideas explored throughout the semester. $125 lab fee.

Prerequisite(s): AS.061.145 OR AS.061.152

AS.061.380. French Cinema of Immigration, Cultural Identity, and Difference. 3 Credits.
An exploration of a series of contemporary French films that bear witness to the contemporary reality of France as a multi-ethnic society and ask essential questions about cultural identity. Is cultural and ethnic identity something that you are born into or is it a role that you elect or perform? How should individuals living today understand their relation to historical injustices? Are there things that we can learn only through relationships with people from other cultures? Screenings include works of Abdellatif Kechiche, Jacques Audiard, Claire Denis, Céline Sciamma, Michael Haneke, Mathieu Kassovitz, the Dardennes. $50 LAB FEE Area: Humanities

AS.061.381. Sound on Film. 3 Credits.
This 3-credit upper-level course will offer undergraduates from both JHU and MICA an unprecedented opportunity to collaborate on all aspects of designing soundtracks for film. Utilizing a combination of pre-existing and in-progress pieces, student filmmakers will create soundtracks, from the initial phases of concept, 'spotting', and 'temping' through to composition and scoring in the final stages of recording, sound syncing and mixing. Students will work in small teams in a lab setting to create their soundtracks, exploring a variety of scenarios, following the post-production process typical of today's film industry. Lab work will be supplemented by guest lecturer presentations on various aspects—practical, theoretical, and historical—of applying sound to film. Guests may include sound designers and engineers, composers, editors, and filmmakers working in live action, animation, and documentaries. At weekly screenings of classic and contemporary cinematic masterpieces students will analyze the evolving art and craft of the film soundtrack, applying the principals in their lab exercises. Lab fee: $50 Area: Humanities

AS.061.384. Fabric of the Real. 3 Credits.
Maurice Merleau-Ponty writes, "the real is a closely woven fabric". In this course we will consider how several artistic disciplines weave their own version of that fabric. These disciplines include documentary film, prose poetry, landscape painting, literature, and music. The course will be precipitated upon Martin Heidegger's essay, "The Age of the World Picture" and follow the lead of Roland Barthe's essay on the "effect of the real". We will also highlight various hybrid forms within these disciplines, with particular attention to the work of W.G.Sebald and Steven Reich.

Prerequisite(s): AS.061.140 OR AS.061.141
Area: Humanities

AS.061.388. Cinema Workshop - Cannes Film Festival. 3 Credits.
This workshop provides students with access to professional events at the Cannes Film Festival, including screenings, non-competitive programs, tributes, master classes and directors' showcases. Students are expected to participate in festival events and take an active role in organized discussions, critiques and dialogues. Written and oral assignments. Special Application: Open to JHU Cannes Program participants only.

Area: Humanities

AS.061.389. Women Making Movies (Europe). 3 Credits.
This course introduces students to some of the most exciting female directors of the 20th century, asking how gender shaped the production and reception of their films. Do particular directors attribute any significance to the fact of being a woman? Does a director's gender shape her choice of subject or how she represents it? Does wider knowledge of works directed by women change our sense of the canon and authorship? Covers non-U.S. films, strongly encouraged for FMS majors and minors. Cross-listed with WGS. No pre-requisite.
Area: Humanities

AS.061.391. Love and Film. 3 Credits.
In this course, we explore different understandings of 'love' and the way that film has dealt with the concept as a medium. We explore a variety of approaches to the question of 'love' - from the agapic to the familial to the romantic - through a series of interdisciplinary readings ranging from philosophy to anthropology. We will also equally explore the question of how film has engaged with the question of love as a concept, and what depictions of human affection - from the general to the personal - it has offered us. Screenings are required for this course. Lab fee: $50 Area: Humanities Writing Intensive

AS.061.393. Violent Attractions. 3 Credits.
Violence, ritualized and anarchic, celebrated and deplored in popular film from silent era melodrama and slapstick comedy to contemporary sports, crime, and combat films. Twice-weekly screenings; oral presentation; two essays, 6 & 12 pp. Lab fee: $50 Area: Humanities

AS.061.396. Modern Paris on Film. 3 Credits.
This course uses French film to examine the history of twentieth-century Paris. We will consider how filmmakers interpreted the social, political, and technological transformations that shaped Paris in the modern era, treating movies as expressions of change and means by which filmmakers comment on it. Taught in English. $50 lab fee.
Area: Humanities

AS.061.397. French Masculinities. 3 Credits.
Examines changing ideals of masculinity in France after 1960 as they found expression on film, rooting the work of iconic stars and directors in their cultural, political and historical contexts.
Area: Humanities

AS.061.399. Stop-Motion Puppet Animation. 3 Credits.
Students will create their own stop-motion models (puppets) based on a wire armature model. In small groups, students will design and create a simple set and make a short stop-motion movie using a DSLR camera. The question of 'why animate' will be explored in student projects and responses to screenings. We will study the history of stop-motion puppet animation from Starewicz to Svankmajer to Nick Park.
Area: Humanities
AS.061.404. Advanced Screenwriting. 3 Credits.
Intensive workshop course where students will write a first draft of a feature-length screenplay. Classes will focus on the specific challenges of the students' works-in-progress, with an emphasis on developing a story idea that is suitable for a feature, and the craft to see it through to completion. Particular emphasis will be placed on the feature screenwriter's central challenge: creating enough of a structure in the early writing stages to keep the screenplay on track, while remaining open to new ideas for scenes and sequences that inevitably arise as the characters come to life. Select professional screenplays will be read and analyzed — and clips from select films viewed—to explore what works well on the page, and how it translates to working well on screen. Students will aim to have a solid and workable first draft at the end of the semester, at which point avenues for further revision may be discussed. Throughout the course, Instructor will also devote a portion of class time to discuss the business of screenwriting. Students will be required to purchase a license for Final Draft screenwriting software for $99.
Writing Intensive

AS.061.405. Deep Listening: Sound Studies in Film and Media. 3 Credits.
This course explores the sonic elements of film and media studies, and encourages a form of deep and attentive listening in students. Analyzing film, television, music, sound art, and the newer platforms for sound media, it teaches students the tools for sound analysis as well as the basics of sound theory. This course is designed to allow a deeper sonic appreciation of the media created that is created with the ears in mind, even more than the eyes. In this way, it works to 'fill in' what is often missing from an education in media studies - a focus on the other sense of the audio-visual media we experience every day. Lab fee: $50 Counts toward 300 or 400-level critical studies requirement.
Area: Humanities

AS.061.406. Animating Cartoons. 3 Credits.
Animating Cartoons: This class will focus on character animation.
Through weekly screenings of cartoons and animations and reading comics, the form will be analyzed in class discussions and short papers. Students will create their own hand drawn character and create an extensive story board for an animation involving their character. A scene will be chosen and a short hand-drawn animation from the storyboard will be created.

AS.061.409. The Films of P. T. Anderson: Innovation and Influences. 3 Credits.
This course will investigate Paul Thomas Anderson's stylistic and narrative innovations, as well as cinematic influences such as Altman, Kubrick, Scorsese, and Welles.
Area: Humanities

AS.061.413. Lost & Found Film. 3 Credits.
This course explores various elements of film production and filmic expression through a somewhat nebulous field typically described as lost films. Lost films (or as they are sometimes called, 'orphan' films) can be generally described as films that have, for a variety of reasons, fallen out of the public view. They frequently come from educational, scientific, medical, or industrial films from the 1950s and 1960s. Using these films as source materials, lost film filmmakers explore and expose cultural conventions, visual icons, and historical value materials. Each week, students are responsible for re-editing sources found on an internet archive site. The assignments follow thematic concerns related to film editing. Students complete a final project (4-8 minutes). All editing for the course is accomplished with non-linear software, generally Adobe Premiere or Final Cut.
Area: Humanities

AS.061.421. History and Film. 3 Credits.
How do films inform, shape, or fundamentally alter our sense of the past? What are the strengths and limitations of cine-history? This course pairs traditional and avant-garde cinema with essays about history, historiography, memory and the political uses of the past to investigate fast-changing relationships between image and text, film and history. Lab fee: $50 Counts toward 300 or 400-level critical studies requirement.
Area: Humanities
AS.061.596. Ind Study - Film & Media. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.061.599. Internship-Film & Media. 1 Credit.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
AS.070 (ANTHROPOLOGY)

AS.070.109. Introduction to Environmental Anthropology. 3 Credits.
What is an “environment,” socially speaking? How have pipelines, animals, conservation, and capitalism shaped the way we talk about “nature” and “society” in the present day? This course examines the mutual transformation of humans and their environments through ethnography, environmental history, cultural and political ecology, human geography, and social theory.
Area: Humanities, Social and Behavioral Sciences

AS.070.113. Freshman Seminar. 2 Credits.
Various Topics
Area: Humanities, Social and Behavioral Sciences

AS.070.124. Freshman Seminar Anthropology. 3 Credits.
Freshman Seminar in Anthropology will cover a wide variety of topics. This course is intended for freshman only and is meant as a broad survey course. Topics are approved by the department and dean’s office, and may change frequently. Each section will be a unique topic. To learn more about each topic, view the section description found in class search.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.125. Technology and Politics in Native North America. 3 Credits.
How have biodiversity protection measures, cultural heritage NGOs, genomic science, and transnational media altered the lives of Indigenous groups in North America in the twenty-first century? What does “recognition” mean for these people, and how does it actually work in practice? This course will explore the emergence of new spaces and technologies of Indigenous politics and their new roles in shaping everyday experiences, from Inuit communities in Arctic Canada to urban centers in the United States.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.126. Photography in Anthropology. 3 Credits.
We will examine historical uses of photographs, critiques of them and more recent creative uptakes of photography in anthropology. We will learn from the use of photographs by anthropologists in the Hopkins department. We will also undertake independent projects. Students will learn to critically engage and mobilize images through the history of its use in anthropology.
Area: Humanities, Social and Behavioral Sciences

AS.070.132. Invitation to Anthropology. 3 Credits.
Click. The screen that brings you last night’s Instagrams and celebrity gossip also flashes glimpses of melting icecaps and burning rubble. These are complex times for human beings, both exciting and unsettling. This course introduces anthropology as a way of reflecting on the challenges of contemporary life around the globe, focusing on themes such as migration, warfare, ecology, inequality, and addiction.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.135. Freshman Seminar: Human Nature Under Capitalism. 3 Credits.
Think about the wide range of lives people lead today. Financial traders, stay-at-home parents, tech entrepreneurs, slum dwellers, corporate office drones, migrant workers, indebted college students. Our identities, aspirations, and anxieties are reflections of a capitalist system that has always relied on claims to what it means to be human. In this course we treat capitalism not as an abstraction for political debate but as a social force shaping the human lives and the planet. Departing from a conception of human nature not as fixed and universal but as formed by the totality of social relations, we explore how capital shapes human needs, desires, and relations to each other and the world.
Area: Humanities, Social and Behavioral Sciences

AS.070.140. Anthropology of Food. 3 Credits.
This introductory course investigates what we eat and, as a consequence, who we are. By taking a cross-cultural perspective, students will examine the politics of food production, the values associated with food preparation, and the material and social dynamics of food consumption. Through readings, films, field trips, demonstrations, and tastings, the course offers an interdisciplinary and dynamic pedagogical approach to analyzing cooking and eating—activities central to daily life and social forms more broadly. Local- and global-level issues will be addressed as students explore histories, economics, social issues, and identity formation related to food.
Area: Humanities, Social and Behavioral Sciences

AS.070.143. Anthropology of Markets. 3 Credits.
Capitalism is built on social and cultural processes. In this course, we explore the culture of capitalism across diverse settings — a fish market in Tokyo, an investment bank in Wall Street, and the organ donation economy in China, among many others. We ask what motivates the makers of markets today, as well as their critics.
Area: Humanities, Social and Behavioral Sciences

AS.070.145. Freshman Seminar: The Idea of America. 3 Credits.
This course takes an anthropological look at the idea of America and everyday American life. Relying on ethnographic studies, selected works of popular writing, as well as films and fiction, we will explore themes such as settlement and displacement, aspiration and advancement, racial and cultural difference.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.154. Maps and Mapping. 3 Credits.
This course explores maps as cultural documents and ethnographic sites. Students will learn how cultural understandings of space, time, and the visible world shape cartographic conventions. Through mapping exercises we will explore how ethnographer can use maps to theorize the nature of political, cultural, and economic life.
Area: Humanities, Social and Behavioral Sciences
AS.070.204. An introduction to Islamic Intellectual History. 3 Credits.
This course will study the vibrant world of the Seljuks, an Islamic empire that flourished between 1037 and 1157 AD, from Khorasan across Baghdad to Hijaz and Anatolia. As an exploration in intellectual history, we will attempt to understand the social world of the Seljuk Turks through political, religious, and literary texts. We will first read a political treatise, Siyasatnama (The Book of Government), written by Nizam al-Mulk (1018-1092), the formidable minister of the Seljuk Empire, who oversaw the reign of three successive sultans during the second half of the eleventh century and created a strong bureaucratic state for the Seljuks. During his administration, he commissioned the development of madrasas, colleges dedicated to the teaching of Islamic law, theology, literature, and history. The most famous of these madrasas was the Baghdad Nizamiyya where Al-Ghazali (1058-1111) taught from 1190 and 1194. We will read Al-Ghazali’s Deliverance from Error in order to explore the state of religious learning at the peak of the Islamic Golden Age. Having discussed the political and religious foundations of Islamic orthodoxy in the eleventh century, next we turn to the rise of heterodox movements that challenged the authority of the Seljuk state. We will briefly examine the history of the Ismaili branch of Shia Islam, focusing on the politico-religious ideas of its most potent representative, Hassan-i Sabbah (1050s-1124). Finally, we will end our class with the Rubaiyat of Omar Khayyam (1048-1131), the prominent poet and polymath of the eleventh century.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.205. Post-Soviet Russia: An Anthropological Perspective. 3 Credits.
This course is designed to introduce students to anthropology’s contribution to ongoing conversations about Russia’s political and economic system, social life, as well as Russia’s place in the world since the fall of the Soviet Union. Students will be encouraged to think beyond easy distinctions between socialism and post-socialism, Putin’s Russia and the West, often starkly and reflexively established by commentators and in the media. Topics will include post-socialist transition, memory, violence and war, gender and sexuality.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.207. Resilience and its Critics: Change in Environment and Society. 3 Credits.
Resilience – the idea that environmental systems and social forms can be designed to “bounce back” from disasters and other disruptive changes – has influenced a rapidly growing range of sustainability policies, urban planning strategies, and academic disciplines. In some areas, though, the term signifies neoliberal reform and a shrinking state. This course will trace debates over the many practical and theoretical meanings of resilience, from its origins in military planning and security to its ambivalent connotations for climate change science and disaster preparedness.
Area: Humanities, Social and Behavioral Sciences

AS.070.209. Urban Citizenship in Latin America. 3 Credits.
Latin American cities are among the largest in the world, but also among the most unequal. Significant proportions of the urban populations reside informally on the fringes of metropolitan areas without access to services or amenities, secure tenure, or adequate sanitary conditions. This course will study several ethnographies to examine the intricacies of the notion of ‘urban citizenship’ and how the ‘right to the city’ has been imagined, demanded and struggled for in Latin American cities. Cases will include Sao Paulo in Brazil, El Alto in Bolivia, or Bogota in Colombia.
Area: Humanities, Social and Behavioral Sciences

AS.070.210. Trauma: institutions, violence, and everyday life. 3 Credits.
How are catastrophe and forms of everyday violence responded to in the clinic, law, in publicity, and in the domestic? In this course, we ask how trauma discourse has transformed institutional responses to violence. We will engage such issues as humanitarian intervention, rape and the law, the use of trigger warnings on college campuses, the clinical description of trauma and its treatment. Through ethnography, fiction, and film, we explore how the subjective experience of violence moves beyond and pushes the limits of institutional discourses on trauma.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.212. Minorities in South Asia. 3 Credits.
This course will introduce first-year students to the anthropology of modern South Asia from the lens of its varied minorities. We will interrogate ideas of nation, community, tradition, and belonging across the region to understand contemporary dilemmas of diversity, heterogeneity, and cultural citizenship.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.213. Data and Society. 3 Credits.
This course explores the context, experience, and consequences of data proliferation in the contemporary moment. Both experts and laypeople generate and study data at unprecedented rates to make decisions, communicate with each other, and process their environments. How do data advance or constrain our social, political, and economic relationships at large? How is knowledge transformed when it is mediated by large volumes of data? What are the consequences of trusting sociopolitical decisions to data-processing algorithms? What happens when everyday users generate data about themselves and volunteer their data to for-profit entities? The course consists of different modules zeroing in on topics ranging from the economy, to public health, climate change, media, and the law. Each module consists of lectures and seminar-type discussions, as well as interactions with invited speakers. Students will be expected to actively participate in all discussions and develop one independent project. The course content and activities tie into the 2019-2021 Sawyer Seminar on “Precision and Uncertainty in a World of Data” led by the Departments of Anthropology and the History of Medicine.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.214. Politics and Poetics of Mobility in Africa. 3 Credits.
This course considers a broad survey of contemporary themes in African mobility, displacement, and re-settlement. Drawing on historical, anthropological, and literary texts and film, the course uses mobility as a window into a range of topics that are of scholarly interest in contemporary African studies: from urbanization and labor, to violence, political subjectivity and the changing nature of the state, formal and informal economy, gender and domesticity, and religious movements.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.070.221. Freshman Seminar: Urban Citizenship. 3 Credits.
In our present ‘urban age,’ the city appears as the privileged framework to claim citizenship rights. This demand, however, clashes with issues of urban renewal and development, security and circulation, as well as conditions of stark inequality that relegate vast sectors of the urban population around the globe to informality and precarious residence, without access to adequate healthcare, sanitary services and amenities, or secure housing tenure. This course examines the intricacies of the notion of ‘urban citizenship’ and how the ‘right to the city’ is imagined and demanded in struggles for belonging and inclusion in cities throughout the world.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.226. Chemical Pollution and Social Life. 3 Credits.
The present is marked by a ubiquitous exposure to different sorts of toxic chemicals: from disasters that affect entire communities to the built environments in which we live and work, from the traces of pesticides in our food to the worldwide disrupting effects of oil production. Drawing from social theory, ethnography, environmental history, policy documents, newspaper articles, commercial ads, and documentaries, this course will introduce anthropothe as a way of thinking through the interactions between processes of chemical pollution and social worlds.
Area: Humanities, Social and Behavioral Sciences

AS.070.228. Photography and Writing: Crafting an Anthropological Text. 3 Credits.
This course explores resonances between photography and anthropological writing. Students will be introduced to basic techniques in photographic composition. How do photography and anthropology share techniques of rendering people, places, and things? Other topics include the role of sensation, reflection, and creativity in depicting a scene, as well as care and ethics. Students will develop an individual project that folds photographic sensibilities into the writing process.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.230. From Jihad to Revolution: The Political Struggles of Women in the Middle East. 3 Credits.
The course explores the role of women as political prisoners, combatants and activists in the modern history of the Middle East using a multidisciplinary approach. It explores the history of women's engagement in political struggles in the Middle East over the long durée starting with anti-colonial movements in the 20th century up until the recent uprisings known as the “Arab Spring”. The course is geared towards the examination of the ways in which politics, in a broad sense, is gendered in the Middle East by examining how the social and political construction of women as political subjects influence the nature and practice of political life, as well as the ways in which sexual difference has served as a basis for social and political organization.
Area: Humanities, Social and Behavioral Sciences

AS.070.233. Africa as Laboratory. 3 Credits.
Africa, as anthropologists have noted, has long been a “laboratory of the future.” By tracing the intersections of technology and politics, this class considers the various experiments in oppression and liberation that have unfolded within it. Following a broad historical arc, we begin with colonial medicine, racial science, and urban planning; move to national infrastructures and postcolonial resource extractions; and finally consider contemporary African engagements with consumer technology.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.235. Anthropology of Christianity. 3 Credits.
This course introduces students to the study of Christianity from the Anthropological perspective. Among the themes discussed are: Christian conversion, theology, practice, and knowledge in a range of national contexts. The course considers broad trends in global Christianity, including the retreat of traditional Catholicism and the surge of charismatic forms of Christianity, such as Pentecostalism and Charismatic Catholicism.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.237. Conflict and Environment. 3 Credits.
How do conflicts in and over environments shape our understandings of identity and belonging? Violence, resource loss, and resettlement may shape landscapes through physical infrastructures or sites of extraction, but they also live on in memory, art, and other social practices. From the fencing of the American west to attempts to save Andean glaciers through the legal recognition of “earth beings,” this course examines the many ways environments and conflict co-shape one another.
Area: Humanities, Social and Behavioral Sciences

AS.070.241. African Cities. 3 Credits.
Over the past two decades, African cities have absorbed rapid population increase without accompanying economic growth. Students will review the major challenges of this mode of urbanization and explore the vibrant ways residents have sought to meet them. Following anthropology’s commitment to lived experience, we will track these issues through the twists and turns of everyday life, and consider what they may say about urbanity more broadly in the 21st century. Topics include livelihood, the built environment, conflict and membership, and popular culture.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.249. Latin American Cities: Public Spaces and Private Lives. 3 Credits.
This course will explore the relationship between public space and forms of political expression as well as the cultural implications of various senses of privacy and domesticity in contemporary Latin American cities. Drawing on recent anthropological and historical texts, we will study the formation of urban public space in the region, as well as its use and representation by different social, political and ethnic groups.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.251. Aliens, iPads, and Neurotribes: An Introduction to the Anthropology of Autism. 3 Credits.
This course is an overview of the emerging anthropology of autism. It surveys the history of the autism diagnosis – from its original formulation at Johns Hopkins in 1943 to its rapid expansion into a ‘spectrum’ condition in the late 1990s – and the ways in which social scientists of different disciplines have tried to analyze the role of social and cultural factors in its evolution. The course also looks at a range of ethnographic studies that have asked what it means to be autistic in today’s world.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.070.253. Introduction to Medical Anthropology. 3 Credits.
Is illness bound within an individual body, or is it entangled with our relations? What are the ethics and politics of the doctor/patient relation? How are medical technologies changing the way we experience illness and healing? How have global institutions responded to the problems posed by disease and development? Drawing on ethnography, film, and literature, this course introduces students to how anthropologists have explored and researched problems related to health and illness.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.267. Culture, Religion and Politics in Iran. 3 Credits.
This is an introductory course for those interested in gaining basic knowledge about contemporary Iran. The focus will be on culture and religion and the ways in which they become interwoven into different kinds of political stakes.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.268. Police in Ethnographic Perspective. 3 Credits.
This course examines policing throughout history and across the world. Course readings will provide an empirical account of the many diverse forms of police and the issues associated with them.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.273. Ethnographies. 3 Credits.
What does it mean to translate the field onto the page? This course explores the craft of ethnography and its relationship to anthropological knowledge. Reading a series of classic and contemporary works, and engaging in our own writing experiments, we attend to the knotty problem of rendering lived experience, attending to narrative, voice, structure, and the relationship between description and analysis.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.296. Introduction to Migration Studies. 3 Credits.
How can we understand the city from positions of marginality and risk? What challenges does urban living pose to its most vulnerable residents? We will examine these questions, and methodological and conceptual issues they raise, with anthropological research from five cities: Johannesburg, São Paulo, Ibadan, New York, Kuala Lumpur. We will explore each city from the perspective of particular residents and the specific struggles they face, including crime and security, economic uncertainty, and sexual discrimination.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.297. Medicine, Sports, and Culture. 1 Credit.
This course examines how medicine is practiced in different cultures around the world. In particular, we draw on theories and concepts from medical anthropology to study how these differences reveal alternative perspectives on the body, its health and its capabilities. To sharpen our inquiries into cultural differences surrounding bodily health, we look comparatively at the anthropology of sports and bodily performance. In looking at how concepts including illness, wellness, and injury differ across cultures, we consider, for example, how the bodily experience of pain not only varies according to societal beliefs and behaviors, but also changes as one pursues the limits of athletic performance. In addition to introducing how cultural anthropology engages with medicine and sports performance, this course enriches scientific interest in medicine by teaching students techniques of critical reasoning that powerfully investigate both how medicine is practiced and the cultural phenomenon of bodily health. Prior study in anthropology is not required. We anticipate talks from two current medical residents who were undergraduate majors in anthropology, a high-level athlete, and a field trip to speak with physicians at the Maryland Medical Center.
Area: Social and Behavioral Sciences

AS.070.298. The Family at War: Crisis & Ambivalence in the Study of Kinship. 3 Credits.
This course will introduce students to one of the foundational concerns of anthropology and bring to the fore critiques that bear upon what it means to relate to one another. Students will be introduced to theories of kinship and the myriad challenges to fixed notions of the family. Specifically, course readings will consider interventions in anthropological studies of kinship, such as in studies of new reproductive technologies and queer kinship. In addition, course readings will consider the notion of the family in colonial and “post”-colonial contexts, as well as in “post”-conflict societies. A primary concern of the course will also be to encourage students to think critically about the ways in which knowledge is produced, institutionalized, and disseminated.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.070.299. From Palestine to the Pipeline: Land, Property, and Indigenous Politics. 3 Credits.
What are the ideas, histories, and forces that set the conditions of possibility and foreclosure of indigenous politics today? We will explore this question through the lens of property through readings from anthropology, political theory, history, and geography. As is well known, control over land (and its resources) has historically constituted the core of the struggle between settler and native. Within settler colonies, however, land is governed and regulated as property by the settler state. As such, the imagining, making, regulating, and exchanging of property all have important implications for indigenous territory and sovereignty. Focusing on North America, Australia, and Israel/Palestine, this course considers the following questions: how did ideas about rights and ownership develop in settler colonies in relation to the native inhabitants? How do these ideas shape market relations, regulations, and property law? And how does indigenous land struggle navigate the constraints and possibilities of property in the struggle for territory?
Area: Humanities, Social and Behavioral Sciences

AS.070.300. The Global Artwork. 3 Credits.
This course is about art practice in a postcolonial context, where the techniques and pictorial concepts formed by a European history of art are confronted by other traditions of representation, beset by different kinds of political struggles, and posed against the background of religious traditions other than that of Christianity. What problems of history, difference and the self arise in this context, and what forms of art practice emerge to address these problems? In what ways do these forms of art practice draw upon religious traditions, and how do we think about the displacement of religious traditions in modern art? In this course, we will explore these questions by examining the modern art of the Middle East, South Asia, and China, in conjunction with readings from anthropology, art history, comparative literature, philosophy and religious studies.
Area: Humanities, Social and Behavioral Sciences

AS.070.302. Crisis and Futurity: New Ethnographies of Africa. 3 Credits.
‘Africa Rising’ or ‘The Hopeless Continent?’ Within the span of a decade, The Economist magazine famously declared each to be true. In this class we turn to the genre of ethnography, with its focus on lived experience and critical nuance, to make sense of this seeming contradiction. We explore the themes of crisis and futurity through new works by Mbembe, De Boeck, Obarrio, and others.
Area: Humanities, Social and Behavioral Sciences

AS.070.314. Activism and Assembly, Local and Global Connections. 3 Credits.
This course offers an anthropological perspective on political mobilization and struggles for social change and citizenship rights in several regions of the world. It charts collective action among the urban poor, indigenous peoples, queer rights activists, feminists, environmentalists and grassroots groups in various cultural and political contexts, to examine methodologies, representations, and local and global networks.
Area: Humanities, Social and Behavioral Sciences

AS.070.317. Methods. 3 Credits.
This course aims to teach basic fieldwork skills: Choosing and entering a community; establishing contacts; learning to listen and to ask questions and locating archival material that might be relevant. It is a hands-on course that increases student familiarity with various neighborhoods such as the Arts District in Baltimore. Recommended Course Background: two or more prior courses in anthropology (not cross-listed courses). Course is a requirement for anthropology major.
Area: Humanities, Social and Behavioral Sciences

AS.070.318. The Atlantic World. 3 Credits.
This seminar explores the formation of the South Atlantic through a reading of historical and ethnographic texts. We examine the making of history and culture as contentious fields of struggle.
Area: Humanities, Social and Behavioral Sciences

AS.070.329. An Introduction to Reality. 3 Credits.
Reality is a key concept we often think with more than we think about. And yet reality is not a self-evident thing. This seminar explores a central paradox in the concept of reality: as a totality—an ‘everything’—nonetheless produced and maintained from a partial and situated practice of making. The course begins with historical examinations of reality-making and undoing then proceeds to approaches from anthropological theory and ethnography. It looks critically at the role of scientific knowledge, technological development, and capitalist and socialist ideological regimes in making realities in their own image. The course puts forth the case that anthropology is uniquely situated to understand how systems of knowledge come into being and stabilize a social order while investigating the inherent contestability and fragility of those systems.
Area: Humanities, Social and Behavioral Sciences

AS.070.333. Theologies of Political Life. 3 Credits.
This course explores the relationship between modern political forms and theological traditions. Looking at developments both in the West and the postcolonial world, we will examine the multiple ways in which theological traditions have continued to inform how political life is conceived and pursued. In particular, we will focus on the relation between liberalism and the Christian tradition; the turn to messianism in critical theory; the transformation of the shari?a into a legal form; and its imbrication in anti-colonial politics.
Area: Humanities, Social and Behavioral Sciences

AS.070.334. Contemporary Anthropology. 1 Credit.
Students are invited to attend, for credit, the departmental research colloquium in anthropology. The colloquium meets most (but not all) Tuesday afternoons during the semester. Students are expected to attend and listen, encouraged to ask questions when they wish, and to write one brief reflection on contemporary trends in the field, based on what they have observed during these sessions. Prerequisite: Students must have completed one Anthropology course previously.
Area: Humanities, Social and Behavioral Sciences
AS.070.336. **Enthographic Perspectives on Brazil. 3 Credits.**
This seminar offers an examination of Brazilian culture and politics through close readings of classic and contemporary ethnography. The course will track how anthropologists have approached the complexities and contradictions of Brazilian society. And, conversely, we investigate how studies in Brazil have prompted challenges to and generated innovations in anthropological thought.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.340. **The Elementary Forms of American Religious Life. 3 Credits.**
In the United States, the nation that in its infancy so famously erected a “wall between Church and State,” religion remains a persistent, and insistently public concern today, occupying our literary imagination, filling dockets and riding the national airwaves. Far from dropping out of a rapidly secularizing public sphere, specific forms of religious life have become deeply embedded in America, while the nation has also impressed its own particular institutional character upon religious expression. This course takes an anthropological lens to the particularity of American forms of religious life, asking what claims they make on the liberal subject, and through what enduring institutional forms and channels.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.343. **On Seeing: Between Religion and Art. 3 Credits.**
This course reflects on what it is to see, by examining how different religious traditions have conceived of seeing, and then considering how seeing is organized by modern forms of art practice. Our inquiry will range across a variety of cases—from devotional practices in Christianity and Hinduism; to concepts of vision in the Islamic tradition; to the critique of images during the Protestant Reformation and the legacy of that critique in modernism; and to the development of new technologies like photography and film—and it will draw on readings from anthropology, art history, critical theory and religious studies.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.359. **Korean War. 3 Credits.**
This course takes the Korean War as a site to both explore: 1) contemporary historical and political transformations in East Asia and globally and 2) the ways in which violence, catastrophic loss, and separation are woven into everyday life. It will explore the Korean War through film, fiction, historiography, and draw on comparative materials in anthropology.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.363. **Religious Freedom and Prisons in America. 3 Credits.**
Although we often think of religious freedom as a fixed philosophical doctrine of Enlightenment liberalism, it is a concept continually being (re)made from the ground up in increasingly important ways that today affect national politics and the judiciary. Nowadays, religious freedom has cultivated oppositional meanings: it holds together both a freedom from and to supersede government regulation; where actions in the name of religious freedom seek both to separate from government and to radically engage it as a theological force. We begin by taking this tension as a provocation to look locally and draw widely from a variety of ethnographic, historical, philosophical, literary, and other present-day texts and media, which will deepen how we understand the significant scope of what is at play and at stake in contemporary America and its politics. Through our readings and discussions, we will better grasp how religious freedom and its legal interpretations have grown from the bottom up, moving through local policies, social geographies and institutions, such as churches and prisons, as much as through any singular adherence to transcendent philosophical doctrine. While this class is an overarching exploration of how American Christianity has developed, it will pay particular attention to the Alabama and Louisiana prison systems and their distinctive religious histories. And we will focus on how the varied conceptual forms of religious freedom relate to the social geographies, religious discourses, literary texts, and media produced in and through ideas of the American South.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.366. **Speculative Anthropology. 3 Credits.**
Anthropology has always been a speculative enterprise, an attempt to think beyond some familiar idea of the human. We will explore this speculative dimension by looking at crossovers between anthropology and contemporary art, science fiction, philosophy, and environmental politics. Working with texts, films, drawings and other media, we will examine the experimental and imaginative nature of anthropology.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.372. **Religion and Media. 3 Credits.**
This course examines the ways in which conventional and non-conventional media recreate or transform religious experience in modern life. Increasingly, religion is experienced not only in sacred spaces and as ritual prescriptions, but also through the information that is disseminated through radio, TV, and the Internet, as well as in consumer culture and political speeches. Beginning with this proposition that our ideas about religion are shaped not only by historical and scriptural legacies, but as well as by material practices and other sundry conditions of mediation, of which our present times supply many, we will reexamine how questions of revelation, belief, spirituality, otherworldliness, and ritual practice are constituted by these irreducible ways, thus complicating the neat separation of religion and secularism, or, for that matter, religion and culture.
Area: Humanities, Social and Behavioral Sciences
AS.070.373. Housing Matters. 3 Credits.
This course will collectively craft an anthropological critique of housing, both as a social concern and as an object of public policy and urban planning. As a key component of the structure and functioning of cities, housing is instrumental to urban governance, segregation, and citizenship, as well as to cultures of consumption and class formation, identities, solidarities and the imagination of alternative social orders. We will study several ethnographies to examine how the material and social effects of housing shape the politics of difference, rights, markets and property relations, consumption and activism in the US urban context.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.070.374. What Does it Mean to be Religious?. 3 Credits.
What do we mean when we say that something or someone is “religious?” We unpack this question in a comparative approach, and pay special attention to the ways in which this term has been applied to the study of Islamic cultures and Muslim experience. Through an exploration of the categories of experience, creativity and the individual, we offer a more capacious way of imagining what it means to be religious.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.070.375. Technology, Trust, and Expertise. 3 Credits.
How does an idea or an observation become a “fact”? How does one study 'science' anthropologically? This course will introduce students to the field of science and technology studies (STS) by asking how different societies have defined the relationship between experimentation, knowledge, and power. Through ethnographic portraits of laboratories, clinics, toxic landscapes, and virtual simulations, we will explore how scientists and other experts have understood their relationships with other citizens, the state, and the physical environment.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.070.376. Social Ecology. 3 Credits.
This course will explore social and cultural dimensions of contemporary ecological problems, thinking between ecological anthropology, environmental philosophy, and activist literature and media. It will be taught as a community-based learning course in partnership with the Center for Social Concern and a Baltimore environmental organization. Coursework will be organized on a collaborative studio basis and a project-based approach. Recommended Course Background: One prior course in either Anthropology or Environmental Studies.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.070.377. Social Ecology Studio. 3 Credits.
This course will grapple with the social and cultural dimensions of contemporary ecological problems through a local, project-based approach. Coursework will be organized on a studio basis in partnership with a local environmental organization, Friends of Stony Run. Continuing a collaborative project initiated in the fall of 2019, we will work together to develop interpretive materials for the Stony Run stream and urban watershed adjoining our campus.
Area: Humanities, Social and Behavioral Sciences

AS.070.378. Anthropology of the Biosciences. 3 Credits.
What is life? How do scientists shape and define this crucial concept, and for what uses? This course uses historical and anthropological accounts of the biological sciences to ask how the study of life is changing interactions with the world around and within us. In it, we will examine studies of synthetic biology, genetic engineering, genomics, biotechnology, biodiversity conservation, bioprospecting, medical biology, and artificial life. Guiding themes explore fundamental questions about biopower, biocapital, planetary change, bodies, and the nature of “life.” The course takes a global approach to the study of biology, including studies of bioscience and technology from the global South.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.070.379. Precarity in South Korea through TV and Film:Aesthetics and everyday life. 3 Credits.
This seminar explores how precarity in South Korea gains expression in the medium of TV and film. In particular, this seminar will focus on how the moving image brings the viewer into the texture of everyday life. We will focus on the TV show Misaeng and include films such as Parasite and Burning. TV and film will be paired with readings on the transformations of intimate life in contemporary South Korea and comparative work on precarity.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.070.380. Slumworld: Life in informal Settlements. 3 Credits.
One quarter of the planet’s urban population lives today in slums, shantytowns, favelas, chawls, colonias and other forms of rudimentary settlements (according to UN Habitat). Despite their prevalence throughout the world, these places are still depicted as spaces of informality and abjection, rather than as sites of emergence of innovative - even if disadvantaged-, makeshift ways of producing the city. This course will combine ethnographic and geographical literature, as well as works of fiction and film to explore the lives of squatters and slum-dwellers in many regions of the world and examine in what way their practices, forms of dwelling, sociality, conflict and cooperation are constitutive of the urban experience.
Area: Humanities, Social and Behavioral Sciences Writing Intensive

AS.070.381. Writing Intensive

AS.070.382. Social Ecology Studio. 3 Credits.
AS.070.407. Design Anthropology. 3 Credits.
From casinos to canoes, algorithms to animal traps, our worlds are bursting with intentional objects. The word design has come to evoke the prestige of such objects, and their power to shape our collective habits and sensations. This course explores the anthropology of designed artifacts and their complex social trajectories. Beginning with philosophical investigations into the relationship between materials, form, and craft, we will proceed through ethnographic case studies of design as expert discourse and ordinary practice. Ultimately we will consider the affinities between the ethnography and design as open-ended and not entirely predictable engagements with the world.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.413. Reading Marx. 3 Credits.
This seminar offers a close reading of selected works of Karl Marx, along with supplemental secondary literature. We will explore how the central pillars of Marx’s thought—including dialectical materialism, critical political economy, and utopian socialist thought—shape his critical method in interrogating the logic of capital.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.419. Logic of Anthropological Inquiry. 3 Credits.
Anthropology is an endeavor to think with the empirical richness of the world at hand, a field science with both literary and philosophical pretensions. This course grapples with the nature of anthropological inquiry, reading classic works in the discipline as well as contemporary efforts to reimagine its foundations. Required for anthropology majors.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.423. Anthropology of Poetry and Prayer. 3 Credits.
What kind of activity is prayer? Are we talking to God(s), to our ancestors, to ourselves? What are the differences between choosing our own words and repeating the words of an established prayer? The course will explore these and similar questions with particular attention to the language of prayers across a number of religious traditions.
Area: Humanities, Social and Behavioral Sciences

AS.070.424. Normal and Pathological. 3 Credits.
This seminar explores the shifting lines of the normal and the pathological and the constitution of disease in the complex of medicine, public health, and the social. Readings include the works of Canguilhem and Foucault, historical monographs and ethnographies. Students will have the opportunity to develop substantial research or review papers throughout the course of the seminar.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.425. Anthropology of Epidemics. 3 Credits.
In this course we will examine how forms of governance, politics, expert knowledge, and citizen actions are implicated in the emergence and management of epidemics.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.426. Kinship: Old and New. 3 Credits.
We will track the transformations in kinship theory in relation to wider changes in legal theory, biomedicine, and the relation between state and family. In particular we will ask how the concepts of sovereignty, gift, exchange, human and non-human milieus affect notions of relations. Co-listed with AS.070.639
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.433. Sustainable Design. 3 Credits.
Sustainable design involves the development of socially engaging and ecologically sensitive interventions and alternatives, a task both social and technical in nature. Through interdisciplinary readings and collaborative workshops in social science, environmental engineering, and planning and design, this seminar focuses on both theoretical and practical dimensions of this challenge. The first of a two-course sequence, to be followed by a studio practicum in the spring semester.
Area: Humanities, Social and Behavioral Sciences

AS.070.436. Vulnerability. 3 Credits.
Many in the contemporary world live in states of acute vulnerability. In this course, we will look closely at situations like forced displacement, experience of poverty and injury, environmental devastation, and the politics of social protest. Thinking with ethnography, feminist philosophy, fiction, and film, we will explore whether vulnerability may be taken as a condition to live with rather than one to overcome at any cost.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.465. Concepts: How to Read Hindu and Islamic Texts. 3 Credits.
What is the nature of anthropological concepts and what relations do they bear to concepts internal to a society? We invite students to think with key ideas from Hindu and Islamic traditions, asking if anthropological concepts are best seen as abstractions from the particular or as intertwined with ongoing lines of inquiry, say into the nature of the real and continual efforts to test it? Topics in ritual theory, grammar, aesthetics, translation, revelation, luminosity, figuration and the mythological among those to be considered.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.473. Readings of Foucault. 3 Credits.
We will do a close reading of selected texts of Foucault to track the concepts of power, subjectivity, government, and care of the self.
Area: Humanities, Social and Behavioral Sciences

AS.070.485. About Time. 3 Credits.
This course will explore time from an anthropological perspective. What is time? An object, a dimension, a sensation? Can we “have” time? What is the relation between power and the control of time? Through readings and discussions of classical and current anthropological theories and ethnographies, we will analyze the meaning, experience and textures of time in different cultural settings. Case studies will explore the US, the West and the Global South, with special emphasis on conceptions of the future: expectations, anticipations, preemption, emergence, possibility. We will study imaginations of temporality and futurity in relation to fields such as politics, custom, finance, security, labor, climate change and so on, looking into the role that emotions play in relation to time.
Area: Humanities, Social and Behavioral Sciences

AS.070.493. Precarity. 3 Credits.
How do we understand and engage precariousness and vulnerability in the contemporary world? This seminar explores the notion of precarity in anthropology and social theory. We will explore this notion genealogically asking such questions as: what are the forms of politics arising in relation to new transformations of labor? What are the regional debates in which the notion of precarity has arisen? We will then explore how anthropology has responded to ongoing destruction of whole forms of life, through war, settler colonialism, displacement, and poverty.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive
AS.070.495. Householding on a Warming Earth. 3 Credits.
The household appears as commonsensical to us. It is where people, most often those of a family, reside together, sharing its resources, labor and collective fate. However, anthropologists have been arguing against this commonsense since it emerged in the 1950s. Yet the household is back again in climate change policy discussions as being most vulnerable to the problems associated with climate change, such as, temperature extremes, food insecurity, exacerbated disease, enhanced competition and violence. How might anthropological debates and controversies relating to households and householding as an activity within the context of war, famine and migration, provide important insights into today’s urgencies?
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.503. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.070.504. Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.070.505. Directed Research-Fall. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.070.506. Directed Research. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.070.507. Directed Readings. 3 Credits.

Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.070.596. Independent Study. 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration & Online Forms.

AS.070.613. Reading Marx.
This seminar offers a close reading of selected works of Karl Marx, along with supplemental secondary literature. We will explore how the central pillars of Marx's thought—including dialectical materialism, critical political economy, and utopian socialist thought—shape his critical method in interrogating the logic of capital.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.616. Proseminar.
The seminar will offer a forum for students to reflect on preliminary field research and think further about problems of ethnographic method. We will proceed in the manner of a workshop for ongoing projects. Open to anthropology graduate students only.

AS.070.620. Space and Place.
This course explores how concepts of emplacement, location, space, place, and belonging shape—and are shaped by—cultural formations and political imaginations. Readings and class discussions include ethnographies and theoretical texts on planning and struggles over territory, aspirations regarding land and the environment, nature/culture distinctions, housing and the right to the city by authors such as Lefebvre, Massey, Harvey, Foucault, Ingold, Virilio, Bachelard, Tsing, Escobar, and others.

What kind of activity is prayer? Are we talking to God(s), to our ancestors, to ourselves? What are the differences between choosing our own words and repeating the words of an established prayer? The course will explore these and similar questions with particular attention to the language of prayers across a number of religious traditions.
Area: Humanities, Social and Behavioral Sciences

AS.070.624. Normal and Pathological.
This seminar explores the shifting lines of the normal and the pathological and the constitution of disease in the complex of medicine, public health, and the social. Readings include the works of Canguilhem and Foucault, historical monographs and ethnographies. Students will have the opportunity to develop substantial research or review papers throughout the course of the seminar.
Writing Intensive
AS.070.625. Anthropology of Epidemics.
In this course we will examine how forms of governance, politics, expert knowledge, and citizen actions are implicated in the emergence and management of epidemics.
Area: Humanities, Social and Behavioral Sciences

AS.070.633. Sustainable Design.
Sustainable design involves the development of socially engaging and ecologically sensitive interventions and alternatives, a task both social and technical in nature. Through interdisciplinary readings and collaborative workshops in social science, environmental engineering, and planning and design, this seminar focuses on both theoretical and practical dimensions of this challenge. The first of a two-course sequence, to be followed by a studio practicum in the spring semester.
Area: Humanities, Social and Behavioral Sciences

AS.070.634. The End of Nature?.
The End of Nature? We have been hearing critiques of the concept of nature as too pristine since at least Donna Haraway’s Cyborg Manifesto and Bruno Latour’s We Have Never Been Modern. The call has been for a mode of ecological thinking without the encumbrance of nature. Through an examination of some of the tracks that nature has left within the anthropological archives and kindred debates within philosophy, this course attempts a revivification of nature for our present. Readings include Mauss, Rappaport, Levi-Strauss, Bateson, Emerson and Whitehead.

AS.070.636. Vulnerability.
Many in the contemporary world live in states of acute vulnerability. In this course, we will look closely at situations like forced displacement, experience of poverty and injury, environmental devastation, and the politics of social protest. Thinking with ethnography, feminist philosophy, fiction, and film, we will explore whether vulnerability may be taken as a condition to live with rather than one to overcome at any cost.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

We will track the transformations in kinship theory in relation to wider changes in legal theory, biomedicine, and the relation between state and family. In particular, we will ask how the concepts of sovereignty, gift, exchange, human and non-human milieus affect notions of relations. Open to undergraduate anthropology majors with instructors approval. Co-listed with AS.070.426
Area: Humanities, Social and Behavioral Sciences

AS.070.642. Design Anthropology.
From casinos to canoes, algorithms to animal traps, our worlds are bursting with intentional objects. The word design has come to evoke the prestige of such objects, and their power to shape our collective habits and sensations. This course explores the anthropology of designed artifacts and their complex social trajectories. Beginning with philosophical investigations into the relationship between materials, form, and craft, we will proceed through ethnographic case studies of design as expert discourse and ordinary practice. Ultimately we will consider the affinities between the ethnography and design as open-ended and not entirely predictable engagements with the world.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.070.658. Intimacy and Corruption.
Course takes problem of corruption as an ethnographic site from which we can explore how concepts of visibility, secrecy, intimacy and transgression inform political life. We will examine how ideas of intimacy and propriety are expressed in public scandals of corruption, as well as the forms of anxiety that surround routine practices of bribery, influence-peddling and enticement.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.070.659. Proposal Writing.
The seminar will offer a forum for students to discuss research projects, prepare grant proposals and think further about issues of ethnographic methodology and writing. Open to Anthropology graduate students only.
Writing Intensive

What is the nature of anthropological concepts and what relations do they bear to concepts internal to a society? We invite students to think with key ideas from Hindu and Islamic traditions, asking if anthropological concepts are best seen as abstractions from the particular or as intertwined with ongoing lines of inquiry, say into the nature of the real and continual efforts to test it? Topics in ritual theory, grammar, aesthetics, translation, revelation, luminosity, figuration and the mythological among those to be considered.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

In the forty years since laboratories were first treated as ethnographic field sites, the core questions guiding anthropology and science and technology studies (STS) have grown increasingly intertwined. How does knowledge get made, and how does it come to matter? How do the objects of technoscience become embedded in everyday practice and in our senses of self, and how do shared imaginaries influence the kinds of futures technologists strive to produce? This course will explore critical moments in the development of STS through texts that blur the lines between experts and kin in biomedicine, finance, industrial agriculture, drone warfare, transnational surrogacy, and other technoscientific spaces.
Area: Humanities, Social and Behavioral Sciences

AS.070.671. Political Anthropology.
This course explores anthropological debates regarding politics and the political. Through readings drawn from both recent and ‘classic’ ethnographies of the political, we will trace how anthropologist have engaged issues of hierarchy, differentiation, power, suasion, command, collectivity, and voice in their accounts of social and cultural worlds.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.070.673. Readings of Foucault.
We will do a close reading of selected texts of Foucault to track the concepts of power, subjectivity, government, and care of the self.
Area: Humanities, Social and Behavioral Sciences

How do different ways of harnessing energy shape life and environment? This course delves into the social, political, even philosophical properties of oil, coal, sunlight sugar, and other sources that fuel human activity. Through these topics, we will consider the cultural meaning of concepts such as charge and expenditure, work and waste.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive
AS.070.682. Readings in Anthropology.
This course introduces classical texts from the anthropological archives in relation to contemporary debates in the discipline. In this year's iteration, our readings and discussion will explore the idea of a public and engaged anthropology. 
Area: Humanities, Social and Behavioral Sciences

AS.070.685. About Time.
This course will explore time from an anthropological perspective. What is time? An object, a dimension, a sensation? Can we "have" time? What is the relation between power and the control of time? Through readings and discussions of classical and current anthropological theories and ethnographies, we will analyze the meaning, experience and textures of time in different cultural settings. Case studies will explore the US, the West and the Global South, with special emphasis on conceptions of the future: expectations, anticipations, preemption, emergence, possibility. We will study imaginations of temporality and futurity in relation to fields such as politics, custom, finance, security, labor, climate change and so on, looking into the role that emotions play in relation to time.
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.070.687. Romanticism and Anthropology.
The word ‘romantic’ has long carried negative connotations within anthropology meaning the tendency to idealize, exoticize, or seek out the irrational. Instead, through a focus on the themes of magic, art, myth, nature and creativity, we suggest that romantic philosophy has offered and continues to offer much of interest for contemporary anthropology. Drawing on select readings in philosophy and anthropology, we will explore the suppressed romantic legacy of anthropology. This is an undergraduate and graduate combined course. Recommended Course Background: Undergraduates have to have taken at least one anthropology course (any level) to register. Or else they need the permission of the instructor.
Writing Intensive

AS.070.688. Senses of State.
This course examines how anthropologists study the temporal, material and sensory domains through which people make sense of the state as a bureaucratic, governmental and sovereign presence in their lives.
Area: Humanities, Social and Behavioral Sciences

AS.070.691. The Anthropological Tone in Philosophy.
This course will ask: what constitutes an anthropological tone in philosophy? We will take up classical topics such as rule following, everyday life, skepticism, concept formation, realism, and signification in selected texts of anthropology and philosophy for understanding if these crisscross and overlap.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.693. Precarity.
How do we understand and engage precariousness and vulnerability in the contemporary world? This seminar explores the notion of precarity in anthropology and social theory. We will explore this notion genealogically asking such questions as: what are the forms of politics arising in relation to new transformations of labor? What are the regional debates in which the notion of precarity has arisen? We will then explore how anthropology has responded to ongoing destruction of whole forms of life, through war, settler colonialism, displacement, and poverty.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive

AS.070.694. Region in Anthropology.
This course, designed for second-year anthropology students, focuses on the idea of region in contemporary anthropology. We will explore what region means now for anthropology, the relationship between geographic and conceptual delineations, and how to frame a problem in regional terms. Working collaboratively in the manner of a workshop, we seek to make drafts of the regional essay for comprehensive exams.
Area: Humanities, Social and Behavioral Sciences

AS.070.695. Householding on a Warming Earth.
The household appears as commonsensical to us. It is where people, most often those of a family, reside together, sharing its resources, labor and collective fate. However, anthropologists have been arguing against this commonsense since it emerged in the 1950s. Yet the household is back again in climate change policy discussions as being most vulnerable to the problems associated with climate change, such as, temperature extremes, food insecurity, exacerbated disease, enhanced competition and violence. How might anthropological debates and controversies relating to households and householding as an activity within the context of war, famine and migration, provide important insights into today’s urgencies?
Area: Humanities, Social and Behavioral Sciences

Writing Intensive

AS.070.698. Defining Region.
This course is open to anthropology graduate students only and is to be run on a workshop model. It is to help those students writing their regional essay for the comprehensive exams to acquire expertise in regional debates and literature relevant to their field research. Our understanding of regions is one of cross-cutting concepts and questions rather than geographical framings alone. After identifying a concept or question, each student will create an annotated bibliography, trace the shape of arguments as they emerge within the readings, create an outline and work toward a draft of the final essay.
Area: Humanities, Social and Behavioral Sciences

AS.070.801. Dissertation Research.

AS.070.866. Directed Readings and Research.

AS.070.867. Directed Reading and Research.

AS.070.869. Directed Reading and Research.

AS.070.870. Directed Readings and Research.
Area: Humanities, Social and Behavioral Sciences

AS.070.871. Directed Reading and Research.

AS.070.872. Directed Readings and Research.

AS.070.874. Directed Readings and Research.

AS.070.885. Directed Reading and Research.

AS.070.886. Dir Readings & Research.

AS.070.892. Directed Readings and Research.
AS.080 (NEUROSCIENCE)

AS.080.250. Neuroscience Laboratory. 3 Credits.
This course will give students the 'hands-on' experience of the inter-disciplinary nature of neuroscience. Students will use anatomical and neuro-physiological techniques to understand the basic underlying principles of neuroscience.
Prerequisite(s): (AS.080.305 AND AS.080.306) OR AS.200.141
Area: Natural Sciences

AS.080.260. Bridging the gap between Biology and Statistics. 1 Credit.
This course is designed to support the lectures and assignments in Probability and Statistics in Life Sciences, EN.553.211. This one-hour a week course is led by a behavioral biology professor with extensive expertise in statistics and mathematics. The primary goal of this course is to increase success and understanding of EN.553.211 by bridging the gap between theoretical statistics and biological thinking. In addition, when possible, examples and direct applications in neuroscience and behavioral biology will be presented to provide a context for EN.553.211 materials.
Corequisite(s): Students must also enroll in EN.553.211.

AS.080.301. Behavioral Assessment of Animal Models of Cognition and Neuropsychiatric Disorders. 3 Credits.
What does a rat exploring it's environment tell us about memory? How can a mouse help us better understand schizophrenia? This course will focus on procedures that are routinely used to study behavior in animal models of cognition and neuropsychiatric disorders. Topics will include motor function, emotional and motivational states, disorders such as dementia and schizophrenia, among others. Throughout the course, we will read and discuss original research articles to illustrate and compare some of the measures and results from the various procedures.
Prerequisite(s): Students may not have taken AS.200.302;AS.200.141 OR (AS.080.305 and AS.080.306), OR by instructor permission.
Area: Social and Behavioral Sciences

AS.080.303. Structure of the Nervous System. 3 Credits.
This course takes a structural biological approach to studying the nervous system. In using a systems approach it provides students of cellular-molecular and computational neuroscience with a thorough introduction to functional, microscopic and submicroscopic organization of the brain, spinal cord and peripheral nervous system.
Prerequisite(s): AS.080.305 AND AS.080.306
Area: Natural Sciences

AS.080.304. Neuroscience Learning and Memory. 3 Credits.
This course is an advanced survey of the scientific study of learning and memory. Different perspectives will be used to review the science of learning and memory including the cellular-molecular basis of synaptic plasticity, the functional circuitry involved in learning and memory and memory systems in the brain. The course is designed to provide a deep understanding of the issues and current debates in learning and memory research and focuses specifically on animal models of memory and memory impairment. This is an interactive lecture course with a strong emphasis on student participation.
Prerequisite(s): AS.200.141 OR (AS.080.305 AND AS.080.306) OR (AS.020.312 AND AS.020.306) or instructor permission.
Area: Natural Sciences

AS.080.305. Neuroscience: Cellular and Systems I. 3 Credits.
(Formerly Nervous Systems I) Neuroscience: Cellular and Systems I is a fully integrated, two-semester course that surveys the cellular and molecular biology of neurons as well as the structure and function of the nervous system. Students must register for Neuroscience: Cellular and Systems II offered in the second term. Course open to JHU undergraduates only.
Prerequisite(s): AS.080.203 OR AS.050.203 OR AS.200.141 OR AS.080.105 OR AS.050.105 or instructor permission.
Area: Natural Sciences

AS.080.306. Neuroscience: Cellular and Systems II. 3 Credits.
(Formerly Nervous Systems II) Neuroscience: Cellular and Systems II uses the functional organization of the somatosensory system as a means to examine mechanisms of neural development. Generation and maturation of neurons, guidance of axons, formation of synapses and the regressive events that shape the adult nervous system will be examined. At the same time we will explore the structure and function of brain regions that allow us to feel pain and temperature, detect vibration, recognize shape and perceive where we are in space. Finally, the single-neuron events that lead to adaptive changes in function will be explored in the context of central nervous system control of movement and of higher order functions of speech and memory. Students who do not register for Neuroscience: Cellular and Systems I offered during the first term should not register for this class.
Prerequisite(s): AS.080.305
Area: Natural Sciences

AS.080.308. Neuroeconomics. 3 Credits.
Every day decisions often require us to weigh the costs and benefits of engaging in a particular course of action in order to obtain some expected outcome. Unfortunately, we often lack the information necessary to obtain our desired goal with complete certainty. Economists have long been interested in understanding human decision-making under these circumstances. In parallel, neuroscientists have made great strides at describing the underlying neural basis of simple decision-making. However, despite much progress in both fields, our understanding of how the brain makes decisions is incomplete. In order to strengthen and further research in both fields, the interdisciplinary field of Neuroeconomics arose. This course will survey the field of Neuroeconomics focusing on theoretical concepts developed by economists and the role these theories are playing in guiding current experimental neuroscience.
Prerequisite(s): AS.080.306 OR AS.200.141 OR AS.020.312
Area: Natural Sciences

AS.080.310. Synaptic Function and Plasticity. 3 Credits.
The function of the nervous system is based on synaptic transmission between neurons. Synapses are not static structures, but dynamically change with experience. Experience-dependent synaptic plasticity not only allows proper development of the nervous system in tune with the environment, but also is the basis for learning and memory. This course will cover the structure and function of synapses, and how they are altered by experience to encode information.
Prerequisite(s): (AS.020.305 AND AS.020.306) OR (AS.080.305 AND AS.080.306)
Area: Natural Sciences
AS.080.316. Prefrontal Cortex-Computational Models and Neurophysiology. 3 Credits.
The course will cover the function of the prefrontal cortex. We will discuss various computational models of prefrontal function and neurobiological evidence for these models. The class will consist of lectures, student presentations, and discussions.
Prerequisite(s): AS.080.305 AND AS.080.306 or Instructor Permission.
Area: Natural Sciences

AS.080.320. The Auditory System. 3 Credits.
This course will cover the neuroanatomy and neurophysiology of the human auditory system from the ear to the brain. Behavioral, electrophysiological, and neuroimaging methods for assessing peripheral and central auditory function will be discussed. Acquired and developmental disorders of auditory function will be reviewed using clinical case studies.
Prerequisite(s): AS.080.305 OR AS.080.203 OR AS.050.203 OR AS.200.141 OR AS.020.312 or instructor permission.
Area: Natural Sciences

AS.080.321. Computational Neuroscience. 3 Credits.
This course is designed to give students an overview of computational neuroscience. The topics discussed will cover many exciting domains of the field including neural coding, decision-making, learning, attention and connectomics. Lectures will be complemented with hands-on experience working with computational models using Matlab and/or other programming language. The overarching goal of the course is to increase overall literacy in the field of computational neuroscience and to gain an appreciation of the interplay between experimental and theoretical neuroscience.
Prerequisite(s): AS.080.306 OR AS.200.141. Familiarity with programing in Matlab will be helpful but not necessary.
Area: Natural Sciences

AS.080.322. Cellular and Molecular Biology of Sensation. 3 Credits.
Leading scientists in sensory biology from the Johns Hopkins community will present the most current knowledge in the cellular and molecular biology of sensation. A lecture and a student presentation of an exemplar manuscript will be presented each week on a different topic of sensory systems.
Area: Natural Sciences

AS.080.326. Neurobiology and Diseases of the Peripheral Nervous System. 3 Credits.
This course will cover neurobiology and disorders of the peripheral nervous system (PNS). A particular emphasis will be on cellular interactions within the PNS and with target tissues. For example, the two principal components of the peripheral nerves-axons and Schwann cells-have intimate and continuous cellular communications that are critical for physiological function of the PNS. The course will teach how these cellular interactions are developed, maintained throughout life, and are impacted by injury and diseases.
Prerequisite(s): AS.080.305 AND AS.080.306
Area: Natural Sciences

AS.080.328. Behavioral Neuroscience Lab. 3 Credits.
Class designed to give students first-hand knowledge of the behavioral procedures and techniques used to study behavior in the field of neuroscience. Students will gain hands-on experience by carrying out some of the behavioral tasks used to assess animals under specific behavioral domains, discuss why certain aspects (i.e. genotype, environment conditions, group size, etc.) are important factors to consider when designing, planning, and carrying out such experiments, and learn the relevance of behavioral research in translational medicine.
Prerequisite(s): AS.200.141 OR AS.200.302 OR AS.080.301 OR AS.080.305 AND AS.080.306 or permission by instructor.
Area: Natural Sciences

AS.080.334. Unraveling Circuits in Systems Neuroscience- Emerging Techniques. 3 Credits.
Rapid technological development in neuroscience provides researchers with new tools and strategies to ask important questions about the neural basis of behavior. In this course, we will examine some of these emerging techniques, along with a sampling of the questions they have allowed scientists to answer. We will consider the conceptual insights that arise from answering these questions, as well as investigate the fundamental science behind the cutting-edge techniques that allow us to understand brain function in health and disease.
Prerequisite(s): AS.080.305 AND AS.080.306 or Instructor Approval.
Area: Natural Sciences

AS.080.336. Brain-Body Interactions in Health and Disease. 3 Credits.
Both classical and recent primary research papers that deal with cross signaling of other major organs with the nervous system, particularly the central nervous system, will be discussed. Students will be exposed to emerging literature on how peptides, signaling molecules, and hormones effect the nervous system function both in health and in diseases.
Prerequisite(s): AS.080.305 AND AS.080.306
Area: Natural Sciences

AS.080.345. Great Discoveries in Neuroscience. 3 Credits.
This course examines the historical and intellectual context of selected, key advances in neuroscience, how they were made and the impact they had on an understanding of the nervous system. Particular attention will be paid to advances in cellular and molecular neuroscience. Among the topics covered will be the discovery of monoamine neurotransmitters and of endocannabinoids, the role of neurotrophins in neural development, and prion-based diseases of the brain.
Prerequisite(s): AS.080.306
Area: Natural Sciences
AS.080.355. Computational Principles of Biological Vision. 3 Credits.
Even though we take it for granted, vision is a superpower. It is so central to how most of us interact with the world, and so effortless, that we are unaware of the astronomically complex computations that underlie it. There are no computer vision programs that can match the performance of the human visual system in understanding the real, physical, 3D world. On the biological side, vision is the most thoroughly studied sensory system. As such, vision is a rich target for computational understanding of the brain. Vision is the topic that both of us actively study, and remain passionately excited about. In this course, we present our up-to-the-minute synthesis of what we consider to be the most important insights into how vision, especially object vision, works, at the level of biological information processing. We believe the result is a coherent, mechanistic account of how the brain transforms images into visual understanding. We know of no textbook that provides a comparable viewpoint. In addition to presenting this visual information processing framework, we hope to teach you how to critically evaluate current research papers within that framework. To this end, we will be incorporating discussions of current research papers into our lectures and assignments. The course will feature a series of weekly lectures (delivered as videos) and a weekly assignment. The weekly assignment will be an essay, and will make up the largest portion of your grade. The remainder of your grade will come from one larger final essay. We will offer 2 weekly, voluntary Zoom meetings to discuss any questions about the material that might have come up.
Prerequisite(s): AS.080.306
Area: Natural Sciences

AS.080.360. Diseases & Disorders of the Nervous System. 3 Credits.
Prerequisite(s): (EN.580.421 AND EN.580.422) OR (AS.020.305 AND AS.020.306) OR AS.080.306 or instructor permission.
Area: Natural Sciences

AS.080.362. Neurobiology of Hearing. 3 Credits.
The course focuses on sound processing, including current research topics in Auditory Neuroscience, including synaptic physiology, neural circuitry, acoustics, physiology, and behavior. Course taught in Salamanca. This course fulfills upper-level Neuroscience electives. Course must be taken for a grade.
Area: Natural Sciences
Writing Intensive

AS.080.366. Neuroscience of Pain. 3 Credits.
This course is a systems-oriented course focusing on the basic neural processing of pain signals in both the spinal cord and the brain. Class lectures will cover the anatomical and molecular basis for the transmission and perception of pain signals, basic concepts such as allodynia, hyperalgesia, peripheral and central sensitization, remodeling, the pathophysiology of chronic pain disorders and the cognitive and emotional aspects of pain. We will also discuss the regulation of pain signals by descending systems, and current practices and new advances in the treatment of pain.
Prerequisite(s): AS.080.305 OR AS.080.306 OR AS.020.312 or permission of instructor.
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive

AS.080.370. The Cerebellum: Is it just for motor control?. 3 Credits.
The cerebellum is traditionally thought to be involved in movement and motor control, and observations of patients with cerebellar damage do in fact show motor deficits. However, since the proliferation of functional MRI, cerebellar activations have been observed in a surprising number of brain activation studies that were designed to investigate the neural correlates of cognitive function. Over the past 2 decades, an increasing number of investigators have tried to characterize the role of the cerebellum in cognitive function. Through lectures and reading discussions this course will survey cerebellar circuitry, neuroimaging and neuromodulatory methods for investigating the cerebellum, and traditional and non-traditional functions of the cerebellum, including cerebellar involvement in cognitive functions such as language, working memory, and executive control.
Prerequisite(s): (AS.080.306 AND AS.080.203) OR AS.050.203
Area: Natural Sciences, Social and Behavioral Sciences

AS.080.400. Research Practicum: Language Disorders-Community Based Learning. 2 Credits.
This course provides the opportunity to learn about adult aphasias; language disorders which are one of the most common consequence of stroke. You will receive training in Supportive Communication Techniques and work as a communication partner with an individual with aphasia for two hours per week. Three class meetings for orientation and reading assignments will be held on campus; training and practicum will be conducted at a local aphasia support center. Transportation required. A valid driver’s license for zip car use. This is a two (2) credit practicum.
Area: Natural Sciences, Social and Behavioral Sciences

AS.080.411. Advanced Seminar: Neuroscience I. 3 Credits.
For students in the first semester of the BS/MS Program. Instructor permission required.
Area: Natural Sciences

AS.080.412. Advanced Seminar: Neuroscience II. 3 Credits.
For students in the 2nd semester of the BS/MS Program.
Area: Natural Sciences

AS.080.413. Advanced Seminar: Neuroscience III. 3 Credits.
For students in the 3rd semester of the BA/MS Program.
Area: Natural Sciences

AS.080.500. Scientific Communication: Neuroscience. 0.5 Credits.
Scientific communication is crucial to advancing science. The Scientific Communication section is taken concurrently with Neuroscience Research and consists of a two hour research orientation session held at the beginning of the semester and a two hour exit session held at the end of the semester. The student is also expected to meet with their lab supervisor or attend a lab meeting once a week to understand the research the lab is currently working on and receive feedback on the work they are doing. See special notes section for specific meeting day/time.Students must sign up for Scientific Communication prior to signing up for NS Research until they complete their 6 credits of research. See Neuroscience Research website for more details.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service:
Registration &gt; Online Forms.
Corequisite(s): AS.080.531 OR AS.080.541 AS.080.551 OR AS.080.561
AS.080.511. Independent Study. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service:
Registration &gt; Online Forms.
AS.080.531. Research Neuroscience – Freshmen. 1 - 3 Credits.
Students must register for AS.080.500 (Scientific Communication) until you have reached 6 credits of required neuroscience research.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Corequisite(s): AS.080.500

AS.080.541. Research Neuroscience – Neuroscience Majors. 1 - 3 Credits.
Students must register for AS.080.500 (Scientific Communication) until you have reached your 6 credits of required neuroscience research.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.
Corequisite(s): AS.080.500

AS.080.550. Neuroscience BS/MS Summer Research - Seniors.
This summer research course is only for Neuroscience BS/MS students that are seniors in the program over the summer.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.080.572. Direct Readings/Independent Study. 0 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.080.582. Neuroscience: Internship. 1 - 3 Credits.
Prerequisite(s): You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration &gt; Online Forms.

AS.080.601. Neuroeconomics -Graduate Level.
Every day decisions often require us to weigh the costs and benefits of engaging in a particular course of action in order to obtain some expected outcome. Unfortunately, we often lack the information necessary to obtain our desired goal with complete certainty. Economists have long been interested in understanding human decision-making under these circumstances. In parallel, neuroscientists have made great strides at describing the underlying neural basis of simple decision-making. However, despite much progress in both fields, our understanding of how the brain makes decisions is incomplete. In order to strengthen and further research in both fields, the interdisciplinary field of Neuroeconomics arose. This course will survey the field of Neuroeconomics focusing on theoretical concepts developed by economists and the role these theories are playing in guiding current experimental neuroscience. Only graduate students can register for this course. Instructor signature is required.

This experiential learning experience provides the opportunity to learn and interact with children recovering from brain, spinal, and musculoskeletal injuries. Students will travel to the Kennedy Krieger Institute to volunteer in the Child Life Department where they will participate in a variety of therapeutic activities including playing with the children and helping them achieve goals on Saturdays (days/times TBA). Students will gain valuable clinical experience while learning patient empathy. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Transportation will be provided by the JHMI shuttle. No credit - S/U Grading Only

In this experiential learning experience, students will work with children who have a variety of neurological disabilities, including autism, cerebral palsy and Down syndrome through exercise and recreational activities. We partner with the KEEN (Kids Enjoy Exercise Now), a nonprofit organization. Student "coaches" will receive a profile for the KEEN athlete that they will pair up with during a session. Students will receive initial training and then select 4 sessions to attend. Sessions are held on the first and third Sunday of each month during the semester at KEEN centers in Maryland. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Transportation will be via student carpools using Zipcars, personal vehicles or Hop Vans. No credit - S/U Grading Only

AS.080.614. Experiential Learning: STEM in the Classroom.
STEM subjects are particularly important in today's society and getting students interested in these areas early is crucial. Working with Making Neuroscience Fun (MNF), a community outreach program, which brings age-appropriate interactive presentations about the brain and nervous system to Baltimore city and county elementary school students, our students share their love of the sciences with young children. The elementary school students learn about the nervous system and our students learn valuable communication skills. Hopkins students will receive initial training prior to participating and will select and present 6, 45-minute presentations. In order to participate, students must be available either 7am-11am or 11am-3pm at least one day per week, Monday-Friday. Students MUST attend a mandatory orientation, a mandatory training and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Students will also be given the opportunity to work with the faculty to develop new materials for the program. Presentations will take place at Baltimore city and county elementary schools. Transportation to the schools will be via student carpools using Zipcars or personal vehicles. No credit - S/U Grading Only
AS.080.616. Experiential Learning: Working with Children in the Clinic. 
This experiential learning experience provides students the opportunity to learn, play and interact with children receiving treatment in over 20 different specialties including dermatology, endocrine, GI, immunology, urology, plastics and hematology. Students will volunteer in outpatient clinics at the Johns Hopkins Children’s Center where they will encourage, provide developmentally supportive play for children and participate in a variety of activities including art projects, coloring, board games, and reading. Students will gain valuable clinical experience and be exposed to a wide range of children with a variety of diseases/illnesses. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students will sign up for 5 shifts on a first-come, first-serve basis after the mandatory orientation. Shifts are Mondays 1 pm-3pm, Tuesdays 10am-12pm, Wednesdays 1 pm-3pm, Thursdays 10am-12pm and Fridays 10am-12pm throughout the semester. Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Volunteer shifts will take place at outpatient clinics in the Rubenstein Child Health Building. Transportation will be provided by the JHMI shuttle. No credit - S/U Grading Only

This experiential learning opportunity provides a hands-on experience, working side-by-side with elderly individuals at the Keswick Multi-care Center and the Roland Park Place. Students will have a chance to interact with residents that have both short-term and long-term cognitive and physical impairments. The residents typically live on the premises but may also be participating in a daytime care only program. Students will interact with the residents in various enriching ways in order to develop a better understanding of how our mind and body ages with time. Students will gain hands-on experience working with residents with dementia, Alzheimer’s and other cognitive impairments that effect the body and the brain. 4 students per semester. Students MUST attend a mandatory orientation and a mandatory exit session to be held onsite (Day/Time TBD). Students are required to provide a written description of their experiences and to discuss their experiences at the exit session. Time Commitment: 2-3 hours a week for the entire semester. Must provide medical immunization records to include- flu shot and PPD (tuberculosis). Transportation will be provided by the JHMI shuttle. No credit - S/U Grading Only

AS.080.620. Theoretical Neuroscience. 
Topics of theoretical neuroscience and computational neuroscience will be discussed based on the original literature. Students are expected to actively participate in the discussion and also to present selected material to the class.

AS.080.630. Bodian Seminar Series. 
The Bodian Seminar is an interdisciplinary colloquium for discussion of current research into the neural basis of mental processes. Leading researchers, generally from outside the University, are invited to give lectures, which will be announced per e-mail. Undergraduate students who register for this course are asked to study a publication by the speaker, as provided with the announcement, and to prepare a question for each speaker together with a brief discussion of the possible answers. Permission required for undergraduate students.

Graduate students and Seniors with instructor permission. The Bodian Seminar is an interdisciplinary colloquium for discussion of current research into the neural basis of mental processes. Leading researchers, generally from outside the University, are invited to give lectures. About 12 lectures are scheduled per semester (see http://www.mb.jhu.edu/seminars.asp). Speakers, titles of lectures, and dates are announced to participants per e-mail (contact Debby Kelly, 410 516-8640). The announcements also include links to one or two recent publications of the speaker. Undergraduate students who register for this course are asked to study these papers and to prepare a question for each speaker together with a brief discussion of the possible answers. Question and discussion have to be in writing and turned in the day before the lecture. Undergraduates must e-mail the instructor for permission (von.der.heydt@jhu.edu) prior to registering for the course.

AS.080.660. Commencement Project. 
This course is for BA/MS students that have completed their year of research and are now working on their final thesis. In this course, students devote their semester to preparing their final thesis documentation and move forward with their Master’s Thesis Defense which is the last piece to the program. This course is for BA/MS student only and students should only register for this course in their last semester in the program.

AS.080.849. Teaching Practicum. 
Permission required. Graduate students only.

AS.080.850. Mentored Research: Neuroscience I. 
For students in the BA/MS Program first semester. Permission required.

Writing Intensive

AS.080.852. Mentored Research: Neuroscience II. 
Permission Required. For students in the BA/MS Program.

AS.080.854. Mentored Research: Neuroscience III. 
For students in the BA/MS Program Permission required.

ME.440.300. Research Practicum in Neuroscience. 
Provides an opportunity for students to actively conduct research in Neuroscience.

ME.440.301. Research in Neuroscience (Undergraduate). 
Provides an opportunity for undergraduate students to actively conduct research in Neuroscience.

For Medical Students only. Specialized Topics in Neuroscience. Refer to Medical Student Electives Book located at https://www.hopkinsmedicine.org/som/students/academics/electives.html.

ME.440.705. Cellular and Molecular Basis of Neural Development II: Regulation of Neural Connectivity. 
This is a seminar and reading course devoted to the discussion of the cellular and molecular processes underlying neuronal development.

An advanced seminar and reading course devoted to the molecular and cellular mechanisms underlying synaptic transmission and the regulation of synaptic plasticity. We will discuss fundamental discoveries in the areas of synapse formation, transmitter release, vesicle recycling, ribbon synapses, dendritic modulation, LTP/LTD, and homeostatic regulation. Students will present two papers and provide written answers to questions about the assigned reading.
The course will illustrate the use of diverse approaches (molecular, biochemical, electrophysiological and behavioral) to decipher how psychotropic drugs impact the brain. The course will utilize a lecture format for the first two classes and then switch to a "journal club" format in which students will present classic and recent articles. Topics to be covered include: opiates, benzodiazepines, antipsychotic drugs, and antidepressant drugs.

ME.440.711. Cellular and Molecular Basis of Neural Development I: Neuronal Differentiation.
A seminar and reading course devoted to the discussion of the cellular and molecular processes underlying neuronal development. Topics include cell proliferation and migration, nervous system patterning, differentiation of neurons and glia, morphogen and growth factor signaling mechanisms, neuronal polarity, and neural stem cell biology. Examples from vertebrate and invertebrate model systems will be covered. This course is designed to complement The Cellular and Molecular Basis of Neural Development II: Axon Guidance and Synaptogenesis, offered alternate years.

This course will review recent research progress in the fields of aging and neurodegenerative disorders with coverage of cellular, molecular, and systems neuroscience.

From outer segments of photoreceptors to the Fusiform Face Area of the cerebral cortex we have come to understand how the visual system works at each of many fundamental levels. This course examines the basis for perception of visible objects at each of these levels. We will use the secondary literature (scientific reviews) to accent the hard-won truths about visual system functional organization and to highlight ongoing controversies. Students will be led through carefully chosen reviews in a series of lectures and written summaries prepared by faculty. Three exams and a final exam will test students not on their memorization of minutiae but on their understanding of fundamental principles.

ME.440.723. Writing About the Brain.
The goal of this course is to train working neuroscientists to effectively and clearly communicate ideas about nervous system function of a general audience.

This course is intended to help graduate students in the Neuroscience Graduate Program obtain an appreciation of options, challenges, and steps towards careers in the field of neuroscience.

ME.440.800. Research in Neuroscience.
Research in Neuroscience.

ME.440.801. Readings in Neuroscience (Journal Club).
A weekly talk on current literature topics of special interest. Students present either journal articles or their own research depending on their year in the program.

ME.440.802. Current Topics in Neuroscience (Research Seminar).
Weekly lecture on current research by active researchers. Topics are chosen so that an overall balance of subjects in neuroscience are covered in the course of a year. Students receive a reading list before the seminar and will be given an opportunity to meet with outside speakers.

ME.440.808. Physiology of Sensory Transduction.
A reading/presentation course focusing on visual and chemical transductions. The electrophysiological approach will be emphasized. A couple of long or several short papers will be presented and discussed by students each week.

ME.440.810. Readings In Systems Neuroscience.
